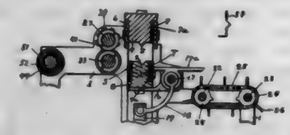
1. A container having overlapping portions, the underlying portion having cut lines forming a pattern of the side and top walls of a dispensing spout, the base of said dispensing spout articulated to the underlying portion, said cut lines out of register with cut lines forming a pattern of a withdrawal flap in the overlying portion and means for sealing said cover flap to said pattern of a dispensing spout whereby adhesive applied to seal said underlying and overlying portion of the container shall seal said pattern of a withdrawal flap to said pattern of a dispensing spout.

1,539,986. CASKET-CARRIAGE ATTACHMENT. ROBERT JAS. BEATTY, Dodge Center, Minn. Filed Dec. 16, 1924. Serial No. 756,257. 4 Claims. (Cl. 280—35.)

1. In an attachment for casket carriages, wherein the latter include the usual corner posts, of means associated with the corner posts for preventing the accidental displacement of the casket from the carriage, said means comprising arms rotatably mounted on the upper ends of said posts and adapted to extend outwardly therefrom.

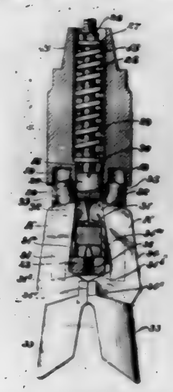
1,539,987. ADJUSTABLE WRENCH. JOHN A. BELL, Detroit, Mich. Filed Feb. 11, 1924. Serial No. 692,151. 1 Claim. (Cl. 81—130.)



A wrench comprising a handle provided at its end with a plate portion having a series of rack teeth mounted upon the edge thereof and disposed in a line transversely of the handle, said plate portion being provided at one end with a surface which is disposed at an acute angle to the line of the rack teeth, said plate portion being provided in the vicinity of its ends with transverse slots which diverge from each other from the intermediate portion of the plate toward the ends thereof, side plates having grooves and disposed at the opposite sides of said plate portion of the handle, cross pins carried by the side plates and passing through the said slots, a jaw carried by the side plates and having an end portion disposed opposite the inclined end surface of the plate portion of the handle, a jaw slidably mounted in the grooves of the side plates and having teeth adapted to engage the teeth mounted upon the plate portion of the handle and a spring interposed between the jaws to normally urge the movable jaw toward the stationary jaw.

1,539,988. FLOOR CONSTRUCTION. OLIVER S. BOWMAN, Colorado Springs, Colo. Filed July 28, 1924. Serial No. 728,709. 3 Claims. (Cl. 94—13.)

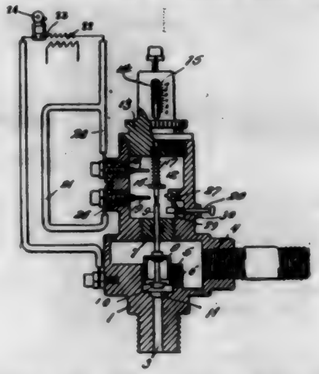
1. A floor of the class described comprising a flexible wood base; water proof material, as tar paper, disposed on said base; sheet metal angles, having notches in their horizontal legs and longitudinal corrugations with holes therein in their vertical legs, bent at said notches and holes disposed on said water proof material to form polygonal molds, and fixed on said flexible base; and concrete disposed in said molds; for the purposes set forth.



1,539,989. FORMING MACHINE. OLIVER S. BOWMAN, Colorado Springs, Colo. Filed Nov. 15, 1924. Serial No. 750,196. 13 Claims. (Cl. 153—2.)

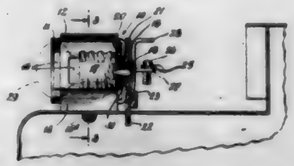
1. In a machine of the class described, the combination of a frame having two guideways; a fixed die, having a longitudinal rib, mounted on said frame above said guideways; a movable die, having a longitudinal groove adapted to receive said longitudinal rib, mounted in said guideways; a main shaft journaled in said frame; a drive wheel mounted on said main shaft; an upper feed roller shaft journaled in said frame; a ratchet wheel mounted on said upper feed roller shaft; a lever, carrying a pawl adapted to engage said ratchet wheel, mounted on said upper feed roller shaft; a crank mounted on said main shaft; a link bar connecting said lever and said crank; a lower feed roller shaft journaled in said frame directly below said upper feed roller shaft; two slitting

and perforating rollers mounted on said upper feed roller shaft, each roller comprising a cylinder having rectangular radial grooves in one end and similar semicircular radial grooves in the other end, a collar having similar rectangular radial grooves, disposed with its rectangular grooves adjacent to the rectangular grooves of said cylinder, a collar, having similar semicircular radial grooves, disposed with its semicircular radial grooves adjacent to the semicircular radial grooves of said cylinder; knives, having two slitting segments, disposed in said rectangular grooves and pins disposed in said semicircular grooves and firmly clamped therein; two feed rollers mounted on said lower feed roller shaft and having peripheral grooves adapted to receive the knives and pins of said slitting and perforating rollers; two perforating rollers mounted on said upper feed roller shaft, each of said perforating rollers comprising two collars, each having semicircular radial grooves, disposed with the grooves of one collar adjacent to the grooves of the other, and pins disposed in said grooves and firmly clamped therein; and two feed rollers mounted on said lower feed roller shaft adjacent to said perforating feed rollers and each having a peripheral groove adapted to receive the points of said pins.



1,539,990. UNDERREAMER. JACOB S. BROWN, Los Angeles, Calif., assignor, by direct and mesne assignments, of one-half to Walter F. Eichenhofer, Los Angeles, Calif. Filed Mar. 24, 1922. Serial No. 546,850. 7 Claims. (Cl. 255—75.)

1. An underreamer comprising a stock having slipways formed therein and sockets at one end of the slipways, a head between the slipways, a plunger movable in the stock and having an opening formed therein, cutters mounted in the slipways and including shanks and heads formed on the shanks adapted to fit in said sockets, lugs formed on the shanks and engaging within the opening of said plunger, thrust shoulders formed on the shanks and engageable with said head to effect expansion of the cutters when the plunger is moved in one direction, and means for urging the plunger to a definite position wherein the cutters are held in expanded position.

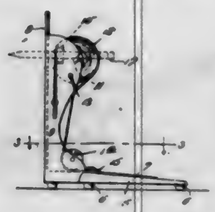


1,539,991. PRESSURE-RESPONSIVE SWITCH FOR GAS-FLOW ALARMS. HARRY CAPPELLANTI, Morgantown, W. Va. Filed Feb. 13, 1924. Serial No. 692,570. 3 Claims. (Cl. 200—82.)

1. A pressure responsive switch for a gas flow alarm comprising a body having an inlet and an outlet opening, a plug located within the body and dividing the interior thereof into upper and lower compartments, a septum wall located in the lower compartment and partially surrounding the inlet opening, said septum wall being provided with a transversely disposed opening, a piston mounted for movement over the opening in the septum wall, a stem connected with the piston and passing through the plug, a valve carried at the lower end of the stem and adapted to close over the inlet opening, a cap connected with the body and forming a side of the upper compartment, said rod passing through the cap,

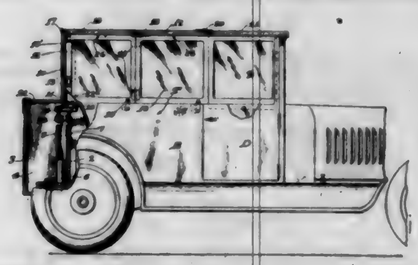
the cap having a slot through which the rod may be observed, there being provided at the edge of the slot, a series of graduations, a contact carried by the rod, and spaced terminals carried by and insulated from the body and having their extremities disposed in the path of movement of the disk.

1,539,992. TOY HEADLIGHT. MARIO CARUSO, Irvington, N. J., assignor to The Lionel Corporation, a Corporation of New York. Filed Mar. 6, 1924. Serial No. 697,271. 6 Claims. (Cl. 240—7.)



1. A toy headlight for toy locomotives comprising a hollow cylindrical body piece having two rectangular shaped openings positioned diametrically opposite one another, and a substantially rigid U-shaped supporting member fitted through the said openings and interlocking with said cylindrical body.

1,539,993. IMPRESSION METAL. EDWIN J. CONLEY, New York, and GEORGE W. MULLEN, Flushing, N. Y., assignors, by mesne assignments, to Lehmaier Schwartz & Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 22, 1923. Serial No. 658,748. 5 Claims. (Cl. 204—6.)

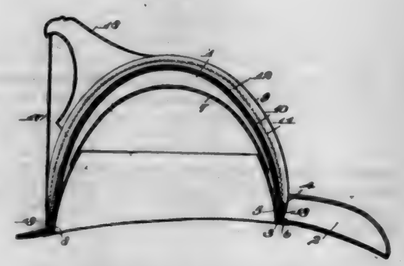


1. As a new article of manufacture, lead impression plates for electrotyping, having a surface thereof provided with a protective coating of lead bichromate.

1,539,994. ORDER OR NOTE PAPER ROLL MACHINE. DOCTOR L. COOPER, Newton, Miss. Filed Aug. 31, 1923. Serial No. 660,282. 1 Claim. (Cl. 281—11.)

A device of the class described comprising a base, an upright rising from one side thereof, said upright being of a predetermined width and having vertically extending flanges formed on its opposite vertical edges, the inner faces of said flanges being provided with the inclined open ended recesses adapted to receive the journals of a paper holding roll, clips for retaining said journals in position, a paper tension and guiding roll rotatably mounted between the lower portions of said flanges at a point beneath the journals of the paper holding roller, the paper being adapted to be trained over said guiding roller in the manner to dispose it between the adjacent portions of the flanges, permitting the latter to function additionally for confining the paper therebetween.

1,539,995. FOLDING TOP FOR MOTOR VEHICLES. EDWIN DICKMAN, Riverside, Calif. Filed May 10, 1923. Serial No. 637,969. 3 Claims. (Cl. 296—108.)



2. The combination with a vehicle body, of a receptacle including a front wall, a rear wall, end walls connecting the front and rear walls, a counter-weight guide inside of the front wall, a counter-weight in the guide, a counter-weight pulley extending backwardly from the front wall above the guide, a flexible connection attached to the counter-weight and extending over the pulley, a second pulley above the first pulley and over which the flexible connection extends, a cover hinged to the back wall to swing forwardly and rest upon the end walls, and a sectional folding top having one element attached to the flexible connection and adapted to fold and be placed in the receptacle.

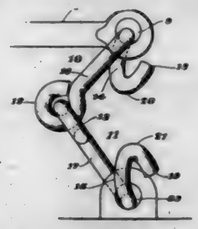
1,539,996. PROCESS OF RECOVERING TITANIC OXIDE FROM TITANIUM-NITROGEN COMPOUNDS. PEDER FÆRUP, Vestre Aker, Norway, assignor to Titan Co. A/S., Fredrikstad, Norway. Filed Dec. 20, 1922. Serial No. 608,094. 1 Claim. (Cl. 23—202.)

The process of recovering titanic oxide from titanium nitrogen compounds which comprises mixing the compound with a quantity of sulphuric acid not materially exceeding that required to combine with the constituents of the compound other than titanium and heating the mixture in excess of atmospheric pressure whereby the titanium contents of the material is obtained as an insoluble precipitate while its impurities as well as its iron and nitrogen contents are obtained as water soluble sulphates.

1,539,997. FIREMAN'S HAT. ARTHUR FENICHEL, Oakland, Calif. Filed Sept. 20, 1924. Serial No. 738,855. 2 Claims. (Cl. 2—5.)

2. A hat of the character described comprising a crown made in a single piece, a brim made in a single piece and having an opening receiving the rim portion of the crown, a band encircling the crown at the upper end of the opening in the brim, said band having the upper end portion thereof secured to the crown and then being folded downwardly upon itself so that the lower end portion thereof overlaps said brim, the lower end portion of said band being attached to said brim.

1,539,998. VENTILATOR FOR PASSENGER VEHICLES. ERNEST LEONARD FORD, Darlington, England. Filed Sept. 11, 1922. Serial No. 587,486. 7 Claims. (Cl. 98—22.)

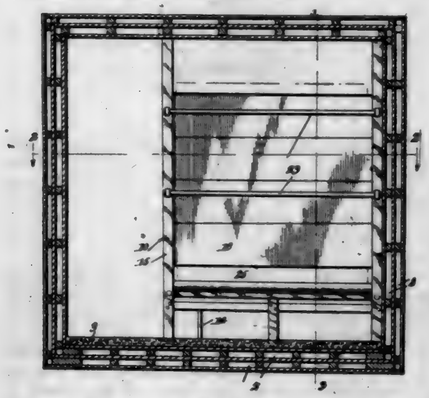


1. A ventilator for closed or partially closed vehicles, comprising a frame adapted to encircle an aperture in the roof of the vehicle, a flap valve pivoted to the front of said frame in advance of the aperture therein, a deflector depending from the underside of said frame from the back edge of the aperture therein and co-acting with said valve so that the current of air caught by said deflector will cause it to open the aperture in the roof automatically when the vehicle is moving in a forward direction.

1,539,999. RELEASE RIGGING. GARTH G. GILPIN, Riverside, Ill., assignor to Walter P. Murphy, Chicago, Ill. Filed Sept. 19, 1921. Serial No. 501,579. 2 Claims. (Cl. 213—166.)

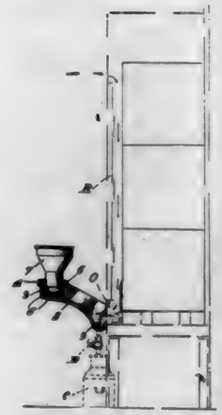
1. In a release rigging for a car coupler comprising an operating rod having a horizontally disposed eye, a coupler lock pin having a horizontally disposed eye, and

a connector operatively connecting said eyes composed of two links flexibly connected at their adjacent ends, each link formed at its opposite end into a spiral hook,



said spiral hooks so positioned that a rotative motion of the two connected links would thread one link into its adjacent eye and the other link out of its adjacent eye.

1,540,000. CARTRIDGE-FUSE FERRULE TYPE FOR REMOVABLE FUSE ELEMENTS. JOHN B. GLOWACKI, Chicago, Ill. Filed Feb. 1, 1922. Serial No. 538,194. 2 Claims. (Cl. 200—132.)



1. In a fuse cartridge, a cylindrical housing of compressible material, thimbles, one in each end of said housing, each of said thimbles having a portion of its walls displaced so that it penetrates into the material of the housing from the interior thereof, the displaced portions of one only of said thimbles extending to the edge of the thimble.

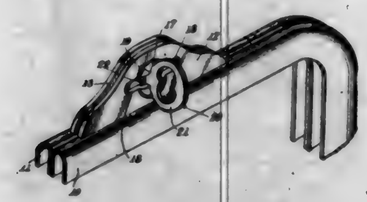
1,540,001. REFRIGERATOR. HUGHT ALEXANDER GRANT, Malone, N. Y. Filed Apr. 7, 1924. Serial No. 704,807. 3 Claims. (Cl. 62—61.)

3. The combination with a cooling chamber having an ice rack mounted therein above the floor thereof, standards rising from the front corners of said rack, said standards being composed of angle iron one member of which has inwardly projecting stops, each of said standards having a seat formed therein, boards mounted edgewise in said standards and resting on said seats, said stops operating to hold the boards against inward movement, and a space formed between said seats and the rack to provide an outlet for the cold air from the ice chamber.

1,540,002. MILK-COOLING PAN. HUGHT ALEXANDER GRANT, Malone, N. Y. Filed May 2, 1924. Serial No. 710,591. 3 Claims. (Cl. 31—4.)

1. An elongated trough-like pan having a convexo-concave bottom and provided with upstanding side and end flanges, a longitudinally extending trough located adjacent one side flange having a valve controlled spout leading therefrom, a trough removably mounted on the other side flange and extending throughout the length of the pan, said trough being provided with a plurality of apertures in the bottom thereof with the bottom spaced above the pan bottom.

1,540,003. DETACHED GARMENT BAND. LILLIE M. HALLER, San Pedro, Calif. Filed Feb. 8, 1923. Serial No. 617,759. 1 Claim. (Cl. 2—236.)

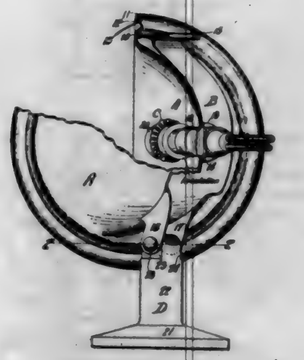


As an article of manufacture, a garment band for attachment to the tops of pants and bloomers for children, consisting of inner and outer layers of material closed at each end by transverse lines of stitching, buttonholes formed at the ends of said band oblique to the length of the band, and reinforcing pieces inserted between said inner and outer layers and having slits registering with said buttonholes, the threads in said reinforcing pieces being oblique to said button holes and reinforcing the latter.

1,540,004. BAG FASTENER AND METHOD OF MAKING SAME. WILLIAM C. HIBBING, Newark, N. J., assignor to J. E. Mergott Co., Newark, N. J., a Corporation of Delaware. Filed Apr. 10, 1924. Serial No. 705,718. 6 Claims. (Cl. 113—116.)

1. Method of making bag fasteners which consists in forming a bar with open cusps at its ends and prongs between said cusps, cutting said bar into homogeneous parts, plating the said fasteners and closing said cusps.

1,540,005. BAG-FRAME FASTENER. WILLIAM C. HIBBING, Newark, N. J., assignor to J. E. Mergott Co., Newark, N. J., a Corporation of Delaware. Filed July 31, 1924. Serial No. 729,235. 4 Claims. (Cl. 292—202.)

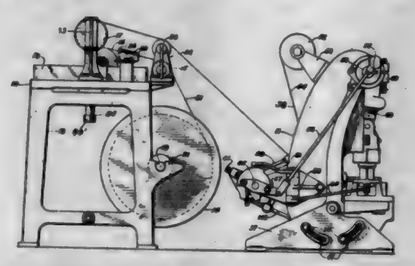


1. A bag lock comprising a pair of frame sides, plates rigid therewith and extending upwardly in parallel position therefrom, one of said plates having a spherically curved lateral extension, and an elongated slot therethrough, a key having a stem rotatably mounted in the mating plate, the head of said key being adapted to pass through the slot, and means for tensionally retaining the key in an adjusted position.

1,540,006. METALLIC ALLOY. FRANK S. HODSON, Philadelphia, Pa. Filed Oct. 7, 1920. Serial No. 415,267. 2 Claims. (Cl. 75—1.)

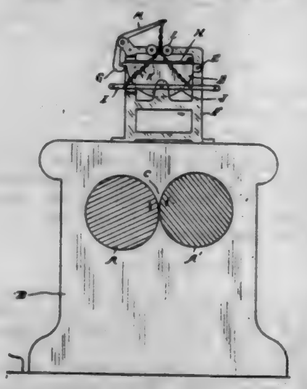
1. The method of making a metallic alloy which consists in first making a hardening alloy of approximately 51 parts aluminum, 49 parts copper, one part manganese and one half part titanium; adding approximately 5 parts of the hardening alloy to approximately 12½ parts of molten aluminum, and adding this co-mixture to approximately 83 parts of molten zinc.

1,540,007. REFLECTOR HEATER. CHARLES W. HOMETER, Cleveland, Ohio. Filed Sept. 15, 1924. Serial No. 737,716. 11 Claims. (Cl. 219—34.)



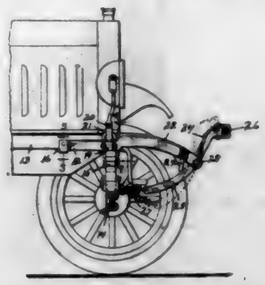
1. A reflector heater comprising, a heat reflector, a bracket mounted on said reflector to support the same on a base, the middle portion of said bracket contacting the back of said reflector and the rear portion of the heating element of the heater extending therethrough, the upper portion of said bracket bent outwardly, and the upper end of said bracket curved outward and downward to form a handle to carry the heater.

1,540,008. ELECTRICAL CONNECTER. CHARLES L. HOPKINS, River Forest, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 2, 1922, Serial No., 565,350. Renewed Nov. 6, 1924. 12 Claims. (Cl. 173—361.)



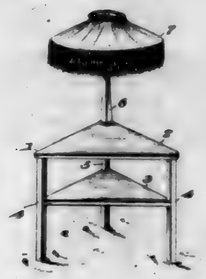
2. A cap for electrical connecters comprising an insulating base, conducting blades rotatably mounted on said base, and means for rotating said blades comprising an extension handle supported on said base.

1,540,009. CAN-CAP-LINING APPARATUS. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 5, 1923. Serial No. 622,732. 13 Claims. (Cl. 113—80.)



1. A machine for lining container covers, comprising means for feeding liner material, means for feeding covers to be lined, means for cutting liners from said material and applying them to the covers, and means for preventing the feeding of the liner material in the absence of a cover in position to be lined.

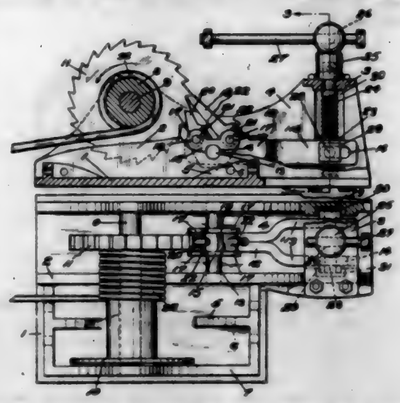
1,540,010. METHOD AND MEANS FOR PREVENTING ACCIDENTS WITH ROLLING MILLS. JOSEPH H. HUNTER, Detroit, Mich. Filed Mar. 5, 1923. Serial No. 623,064. 5 Claims. (Cl. 18—2.)



5. A safety device for rolling mills and the like, comprising means for storing lubricant in proximity to the machine, and means for discharging said lubricant to coat the surface of a member to be guarded from said machine.

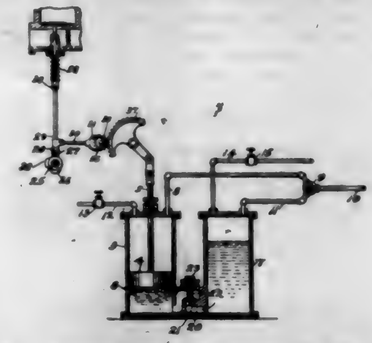
1,540,011. AUTOMOBILE BUMPER. FREDERICK E. HUTCHINGS, Brooklyn, N. Y., assignor to Hutchings Manufacturing Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 6, 1922. Serial No. 541,444. 7 Claims. (Cl. 293—55.)

4. A bumper for automobiles of the type in which there are no frame parts projecting forwardly materially beyond the axle and in which the front body bolster is connected to the axle by a transversely extending semi-elliptical spring in the vertical plane of said axle and bolster, said bumper including a pair of bars rigidly secured to the body and projecting forwardly from the ends of the bolster, levers pivoted intermediate of their ends to the front ends of said bars and movable in parallel vertical planes, a bumper bar carried by the front upper ends of said levers, and springs connected to the lower rear ends of said levers for resisting rearward movement of said bumper bar.



1,540,012. COMBINED TABLE AND LAMP STANDARD. GARNETT JANUARY, Washington, D. C. Filed Mar. 21, 1924. Serial No. 700,850. 8 Claims. (Cl. 45—31.)

1. As a new article of manufacture, a horizontal top member, having a plurality of supporting legs secured thereto, one leg of which extends upward above said member to provide and constitute a supporting standard for lamp fixtures.

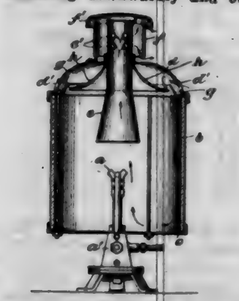


1,540,013. STUMP PULLER. GEORGE HENRY JENKINS, Salmon Arm, British Columbia, Canada. Filed Mar. 20, 1923. Serial No. 626,365. 2 Claims. (Cl. 254—180.)

1. In a stump puller, the combination with a journalled drum, of a ratchet wheel thereon, a fulcrumed arm, a ratchet wheel engaging pawl pivotally connected to the arm on one side of the fulcrum, a second ratchet wheel engaging pawl pivotally connected to the arm on the other side of the fulcrum, a nut having laterally extending lugs, the opposite end of the arm to the end upon which the pawls are mounted being bifurcated and its legs provided with longitudinally extending slots receiving the lugs of the nut, a vertically journalled

spindle threaded through the nut, means for rotating the spindle, and means for preventing the partial rotation of the nut in the bifurcated end of the arm.

1,540,014. POWER-TRANSMITTING DEVICE. OLAV ESKIL JÖRGENSEN, New York, N. Y. Filed June 17, 1920. Serial No. 389,575. 5 Claims. (Cl. 123—41.)

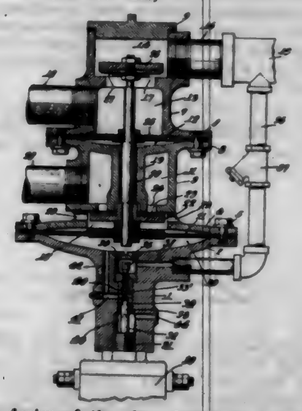


1. In a reversing device for engines, and the like, a cam roller, a shiftable support for said cam roller, a piston, a cylinder in which said piston reciprocates and which contains a liquid below the piston, a second cylinder communicating with the first cylinder and also containing a liquid, connections for supplying a fluid under pressure to either cylinder and opening the other cylinder to exhaust, an operating connection between the piston rod and said shiftable support, and means for normally preventing a flow of the liquid from one cylinder to the other.

1,540,015. GAS-FLAME PROTECTOR FOR FLASHERS. GUSTAV V. KARLSON, Elizabeth, N. J., assignor to Chillingworth Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 6, 1923. Serial No. 623,100. 1 Claim. (Cl. 240—51.)

In a lantern, a gas flame protector for flashers including imperforate bottom and side walls, a top supported above said side walls and extending upwardly and inwardly and having a plurality of openings adjacent the lower edge thereof, a burner disposed centrally of the protector, a duct communicating with the atmosphere, supported centrally of the top over the burner,

an upwardly inclined baffle mounted in juxtaposition to the openings in the top against which all the air entering through the openings impinges and is deflected upwardly against the top, a baffle supported centrally of said top extending downwardly and outwardly to a

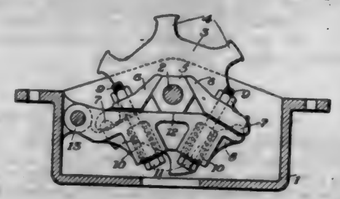


point below the upper edge of said first named baffle against which the air flowing along the top impinges and is deflected downwardly along the side walls, and an annular guide and cap enclosing the openings of the duct.

1,540,016. MOUNTING OF STORE WINDOWS. MARTIN KATZ, Brooklyn, N. Y. Filed Mar. 17, 1924. Serial No. 699,876. 10 Claims. (Cl. 20—56.4.)

1. In a window, a sill, a glass pane supported thereby, said pane being arranged to leave passages extending transversely thereunder, inner and outer retaining strips on said sill engaging opposite faces of said pane, the inner retaining strips being formed with a number of vertical recesses on the side thereof adjacent the pane, and the outer strips being formed with a number of transversely extending recesses on its under side.

1,540,017. DIAPHRAGM RESERVOIR AND BRAKE VALVE. ALLEN B. KENDALL, Maywood, Ill., assignor to Regan Safety Devices Company, Inc., a Corporation of New York. Filed Feb. 7, 1921. Serial No. 443,046. 13 Claims. (Cl. 303—20.)



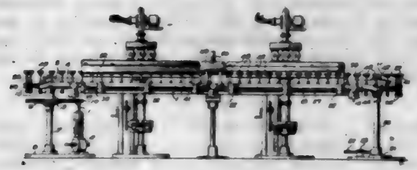
1. In a device of the class described, a main casing having a plurality of superposed inter-communicating chambers, a diaphragm controlled valve stem mounted concentrically of all the chambers, two valves carried by said stem and forming a controlling means between certain of said chambers, one of said valves being normally open and the other normally closed, a diaphragm mounted upon the lower end of the stem and secured to the casing, and an electromagnetically controlled valve for effecting the introduction or escape of air relative to the diaphragm and for consequently effecting the movement of the valves.

1,540,018. PENCIL. CHARLES R. KERRAN and JOHN P. LYNN, Chicago, Ill., assignors to Realite Pencil Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 31, 1922. Serial No. 548,273. 3 Claims. (Cl. 120—18.)

1. In a pencil, a body having a tip, the tip and body having telescoping portions and being adapted for relative rotation, a threaded axial tube fixed to the tip, a second axial tube mounted in the body and being open from end to end thereof, the upper portion of the last named tube being non-circular in cross section, while the lower end is of increased diameter and is adapted to receive in telescoping relation the upper end of the threaded axial tube, and a plunger adapted to engage with said threaded tube and having a lateral projection adapted to engage with the non-circular portion of said tube, the enlarged lower end portion of said tube being of such diameter as to permit the projection on the plunger to rotate therein.

1,540,019. AXLE COUNTER FOR MINING AND OTHER VEHICLES. ARTHUR G. KERSHAW and FREDERICK J. RAYMER, London, England, assignors, by mesne assignments, to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Feb. 16, 1924. Serial No. 693,401. 1 Claim. (Cl. 235—91.)

An axle counter comprising a rotatable wheel provided with a polygonal element secured thereto for accurately defining the angular position of the wheel at each stage of its rotational movement, a bracket pivotally mounted

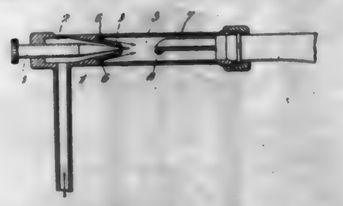


on the frame of the device and having a portion arranged to engage said polygonal element, and a pair of fingers resiliently mounted on said bracket and arranged to resiliently engage said polygonal element.

1,540,020. SOCK OR HALF HOSE. HARRY LOVELAND KINNE, Oak Park, Ill. Filed Oct. 6, 1924. Serial No. 741,959. 1 Claim. (Cl. 2—240.)

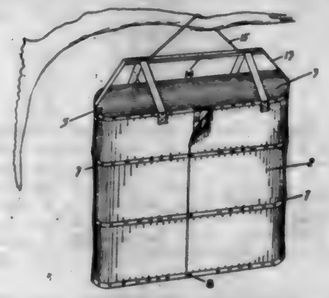
A sock comprising solely a foot, and an elastic self-retaining cuff located immediately above said foot, the cuff being knitted and provided with longitudinally extending stiffening ribs throughout its length, and also provided with spaced, circularly arranged knitted ribs at different heights defining folding regions for the plurality of overlying sections which compose the cuff.

1,540,021. CONVEYER. ALBERT BREAKENRIDGE KNIGHT, Fairmont, W. Va. Filed Dec. 13, 1923. Serial No. 680,517. 8 Claims. (Cl. 198—181.)



1. In an apparatus for conveying glassware, a chain, means for driving said chain, glass supporting spindles carried by said chain, pinions carried by said spindles, and a stationary rack arranged adjacent and extending throughout a portion of one side of said chain and adapted to mesh with said pinions, one end of said rack being provided with a yielding portion.

1,540,022. ANNEALING PROCESS. IRVIN J. KOEHNLINE, Bridgeport, Ohio. Filed Apr. 24, 1924. Serial No. 708,805. 4 Claims. (Cl. 148—4.)

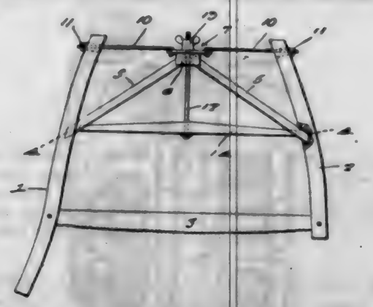


2. The process of annealing mild steel sheets after pickling the same, which consists in forming piles of said sheets subjecting said piled sheets to a temperature sufficient to drive off all water present but insufficient to decompose said water when in contact with iron; and subjecting the water free piled sheets thus obtained to an annealing treatment.

1,540,023. AIR-OPERATED SOUNDING HORN. THEODOR KOLLINEK, Berlin, Germany, assignor to Handelmaatschappij H. Albert De Bary & Co., Amsterdam, Netherlands. Filed Mar. 11, 1925. Serial No. 14,610. 1 Claim. (Cl. 116—187.)

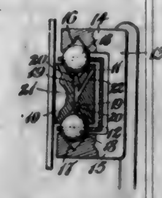
In a horn of the kind set forth, a high pressure air feed pipe, a tongue chamber, an adjustable valve adapted to control the delivery of air from said pipe into said chamber at a high speed but in a thin jet, said chamber having perforations to admit atmospheric air to said chamber to provide a sufficiently large current of partially expanded air past the tongue in said chamber, said perforations being also adapted to serve as relief outlets in case of excessive pressure occurring in said chamber.

1,540,024. COLLAPSIBLE CABINET. MADS M. LARSEN, Colton, Calif. Filed Sept. 22, 1922. Serial No. 589,824. 1 Claim. (Cl. 45—102.)



A collapsible cooling cabinet, comprising a plurality of superposed shelves, a fabric wall secured to the edges of such shelves, suspending loops having their ends secured to the fabric wall and to the uppermost shelf and extending transversely there across, a top bar secured to the centers of said loops, fabric members secured to the ends of said top bar and to the ends of the uppermost shelf, and a rope hanger secured adjacent the ends of said top bar.

1,540,025. CHRISTMAS-TREE HOLDER. SIMEON J. LEMAY, Lowell, Mass. Filed Apr. 2, 1924. Serial No. 703,809. 2 Claims. (Cl. 248—38.)



2. A Christmas tree stand comprising a head; three legs pivoted thereto on vertical pivots and extending diagonally downward; hooks pivoted medially and detachably connecting adjoining legs; and brace rods each so pivoted to a leg and of such length as to extend above and beyond the head and terminating in a bent pointed prong.

1,540,026. BUCKSAW FRAME. ALBERT LEWIS, Boothbay Harbor, Me. Filed Mar. 3, 1925. Serial No. 12,880. 4 Claims. (Cl. 145—32.)

1. In a saw structure, a pair of end bars, a saw blade connected at its ends to the lower portions of the end bars, a pair of bolts having their outer threaded ends connected with the upper portions of said end bars, means connecting the inner ends of said bolts together, fulcrums for the intermediate portions of said end bars, the upper ends of said fulcrums being in association with said connecting means, and additional means acting on the first named means for moving the latter downwardly to rock said end bars about said fulcrums and to move the upper ends of said end bars toward each other.

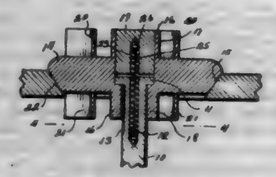
1,540,027. DOOR HANGER. ULYSSES GRANT MCQUEEN, New York, N. Y. Filed Apr. 19, 1923. Serial No. 633,197. 4 Claims. (Cl. 16—88.)

1. A structure of the class described comprising a plurality of relatively sliding members, anti-friction bodies interposed between said members, and a wick of absorbent material extending lengthwise of the members and positioned with respect to said bodies so that the latter are in constant free rolling contact therewith, and means for supplying the wick with a lubricant.

1,540,028. TOBACCO PIPE. RINSAI MARDA, Seattle, Wash. Filed Apr. 7, 1923. Serial No. 630,566. 1 Claim. (Cl. 131—12.)

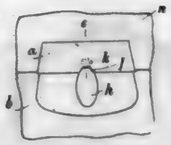
An attachment for tobacco pipes comprising a disk radially indented to constitute prongs and a strap centrally pivoted to and at the center of the disk, said disk, prongs and strap being constructed of flexible material, whereby said disk and prongs may be flexed and forced downwardly into the bowl of the pipe to constitute a dished grate with the prongs extending upwardly and said strap will be flexed to closely engage said flexed disk and prongs and the bowl of the pipe above the same.

1,540,029. CLOSURE FASTENER. ALFRED MARKS, Brooklyn, N. Y. Filed June 11, 1924. Serial No. 719,380. 1 Claim. (Cl. 292—73.)



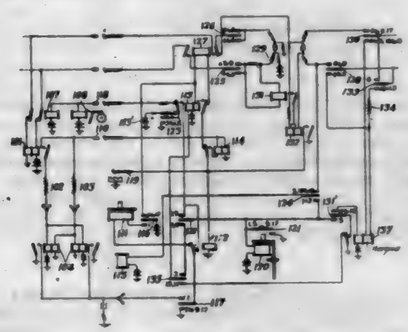
In combination, a movable member, a stationary member, both of said members provided with openings registrable with each other, a sphere in one of the said openings for engaging the other opening so as to hold the movable member locked in relation to the stationary member, a pair of bolts on the member having the sphere in its opening, one on each side of the opening, and a flat spring held by one of said bolts and slidable on the other of said bolts and provided intermediate its ends with a pocket for receiving the sphere.

1,540,030. SAFETY HOOK. ROBERT MESTARS, Los Angeles, Calif., assignor of one-half to Carrie Contreras, Los Angeles, Calif. Filed Sept. 1, 1922, Serial No. 585,640. Renewed Apr. 13, 1925. 5 Claims. (Cl. 24—242.)



1. A snap hook comprising a body having hooks formed thereon, and a lever pivotally associated with the body and having hooks formed thereon, the arrangement of the hooks of the body and lever being such that an element can be applied to engage certain of the hooks by moving the element transversely of the body, while another element can be applied to engage the remaining hooks by moving the element longitudinally of the body.

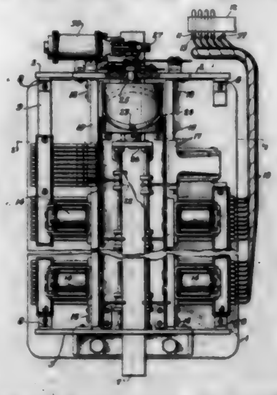
1,540,031. SELF-SEATING VALVE FOR INTERNAL-COMBUSTION ENGINES. HERMAN E. NEITZ, Chicago, Ill. Filed Aug. 2, 1924. Serial No. 729,747. 8 Claims. (Cl. 251—129.)



3. A valve of the character described comprising a stem and a head mounted thereon for rotation, the head having vanes whereby the passage of fluid past the head will cause a rotation of the head, the head and stem being formed with opposed bores, a compression spring disposed in said bores, and pointed heads bearing against the ends of the bores and against which the compression spring bears.

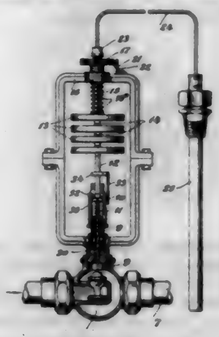
1,540,032. CATCH FOR THE FLAPS OF PURSES AND BAGS. SIMON ORTWEILER, London, England. Filed Apr. 18, 1923. Serial No. 632,838. 2 Claims. (Cl. 292—175.)

2. A catch for the flap of a purse or bag comprising a lower part attached to the body of the purse or bag, an upper part attached to the edge of the flap, a grooved stud attached to the said upper part and projecting from it at right angles and passing into the lower part, a spring pressed bolt adapted to slide in or on the lower part at right angles to the edge of the flap to engage with the groove in the stud, a thumb-piece attached to the bolt by means of which the bolt can be actuated, and an extension of the thumb piece adapted to retain the upper part referred to above by engaging with its upper surface, the said projection being of such a length that it acts as a guide to locate the pin attached to the upper part in the hole in the lower part.



1,540,033. MACHINE-SWITCHING TELEPHONE-EXCHANGE SYSTEM. LIPA POLINKOWSKY, London, England, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 18, 1918. Serial No. 258,682. 7 Claims. (Cl. 179—27.)

1. A telephone exchange system comprising a main exchange and satellite exchanges, calling lines terminating at said exchanges, an operator's position in said main exchange, trunk lines between said main exchange and said satellite exchanges, automatic means at said satellite exchanges for extending a calling line over one of said trunk lines from one of said satellite exchanges to said operator's position in said main exchange, controlling means at said operator's position, and means responsive to the operation of said controlling means for holding an automatic switch in a satellite exchange in the connection as established while the calling line is rendered free to call and to be called.



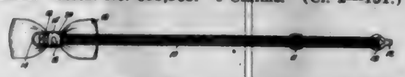
1,540,034. TELEPHONE-EXCHANGE LINE SWITCH. CHARLES DONAT RICHARD, New Brighton, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 3, 1920. Serial No. 407,959. 9 Claims. (Cl. 179—225.)

1. In a switching mechanism, a contact operating mechanism and a terminal bank, comprising two groups of multiple contact strips, each group comprising two strips, each strip comprising a plurality of sets of contacts, the two strips in each group occupying an

identical angular position and the two groups arranged in parallel relation on opposite sides of said operating mechanism.

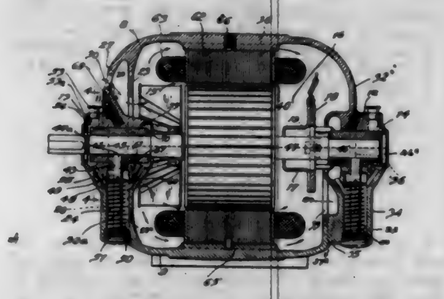
1,540,035. AUTOMATIC REGULATOR. ALFRED ROESCH, deceased, late of Brooklyn, N. Y., by Emma Roesch, administratrix, Brooklyn, N. Y., assignor to Charles J. Tagliabue Manufacturing Co., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 9, 1921. Serial No. 491,048. 9 Claims. (Cl. 236—99.)

1. An automatic regulator comprising a valve controlling the flow of an element, adjusting mechanism operated independently of said valve for adjusting the same to variable set positions to regulate the flow of said element in accordance with a predetermined regulation to be maintained, an expansible and contractible device included in said adjusting mechanism and having an inherent elasticity, said device responding to variations in said element and actuating said adjusting mechanism accordingly whereby the valve is automatically shifted from any given set position in accordance to increase or decrease the flow of the latter to correct deviations from said predetermined regulation, and means independent of said adjusting mechanism for indicating the position of said valve.



1,540,036. BURNER FOR HAND LANTERNS. GEORGE H. ROLFES, St. Louis, Mo., assignor to Handian-Buck Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 13, 1923. Serial No. 631,806. 6 Claims. (Cl. 67—65.)

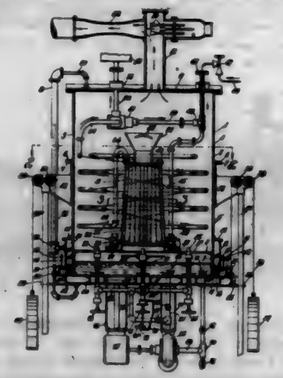
1. A lantern burner comprising a body portion, a wick passing through said body portion, a stem for adjusting said wick, said stem being extended through an opening in the wall of said body portion, a member arranged on the inside face of the wall of said body portion and spaced apart in a horizontal direction from



that portion of the wall of said body portion adjacent to said opening, and packing material interposed between said wall of said body portion and said spaced apart member whereby oil is prevented from passing through said opening.

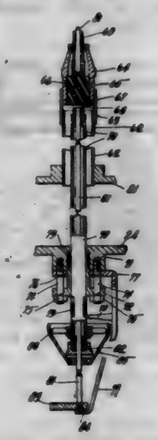
1,540,037. NECKTIE. WILL F. SMITH, Brooklyn, N. Y., assignor to The Governor Fastener Company, New York, N. Y., a Copartnership consisting of Kate Scheinman and Louis J. Scheinman. Filed Feb. 16, 1924. Serial No. 693,165. 4 Claims. (Cl. 2—151.)

1. A neckband for ties comprising a band, a compound fastening device at one end of said band, consisting of a loop and an off-set recessed member, a rivet for connecting said fastening device with said band and a hook slidably mounted upon said band at its other end for detachable connection with said loop.



1,540,038. ELECTRIC MOTOR. MILTON H. SPIELMAN, Cleveland, Ohio, assignor to The Domestic Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 18, 1921. Serial No. 485,684. 1 Claim. (Cl. 172—36.)

A motor frame formed of a top member and a base member joined along a horizontal plane through the center of the frame, said members each having longitudinally extending ribs formed along the joining edges thereof and a similarly extending rib formed intermediate the edge ribs and having outer end walls terminating in bearing portions, the upper member having an annular inner wall spaced apart from the bearing structure of the frame and the base member having an annular inner wall at the opposite end of the frame spaced apart from the bearing structure.

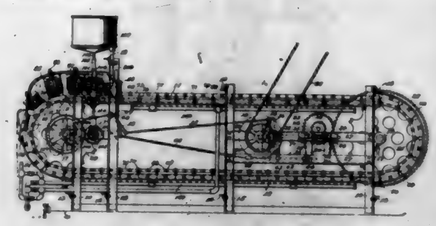


1,540,039. DIRECT-EXPANSION ICE-MAKING MACHINE. WILLIAM STEWART, Portland, Me. Filed Nov. 17, 1921. Serial No. 515,790. 13 Claims. (Cl. 62—152.)

2. In a device of the class described, a casing, a hollow walled cell open at its lower end positioned within said casing, means for spraying a liquid to be congealed upwardly into the open end of said cell, means for circulating a refrigerant through the walls of said cell, and means within said casing and external

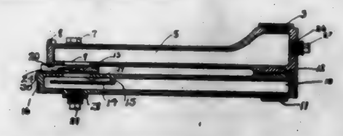
to said cell and through which said refrigerant passes for condensing vapors arising from said sprayed liquid to reduce the pressure within said casing.

1,540,040. SPRAY NOZZLE FOR REFRIGERATION MACHINES. WILLIAM STEWART, Portland, Me. Original application filed May 16, 1921, Serial No. 469,903. Divided and this application filed Nov. 27, 1923. Serial No. 677,240. 7 Claims. (Cl. 62—107.)



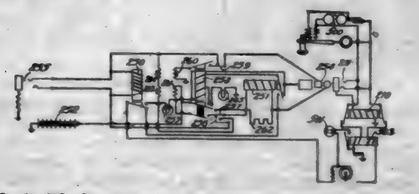
7. A device of the class described comprising a nozzle, a sprayer having flutes inclined to the axis thereof fixed in said nozzle to define inclined fluid passages toward the end of said nozzle, a needle valve adjustable axially of said sprayer and having a conical end cooperating with said end of said nozzle, and a rod axially movable through said valve projectable and retractable beyond the conical end thereof.

1,540,041. MACHINE FOR BAKING SUGAR CONES. HARRY G. TATOSIAN, Bridgeport, Conn., assignor, by mesne assignments, to Ice Cream Cone Machinery, Inc., Bridgeport, Conn., a Corporation of Connecticut. Filed May 29, 1923. Serial No. 642,201. 12 Claims. (Cl. 107—58.)



1. In a machine of the character described, a continuous conveyor comprising parallel spaced shafts and links connecting the ends of said shafts, book-molds sup-

ported in the space between each pair of shafts and the connecting end links, heating means for heating said molds, cam means engaging the forward swinging ends of the upper section of said book-molds for opening and closing said molds at one point in the traverse of the conveyor and means for supplying batter to the molds during said open period.

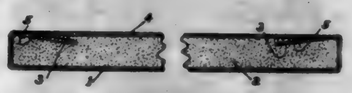


7. In a machine of the character described, a frame, a pair of sprocket wheels at each end of said frame, upper and lower pairs of horizontal tracks extending between said sprockets, and substantially tangential thereto, a continuous conveyor extending over said sprocket wheels and said tracks, a plurality of book-molds independently and removably secured to said conveyor, heating means for heating said molds, means for opening and closing said molds at one point in the traverse of the conveyor, and means for supplying batter to the molds during said open period.

1,540,042. OIL BURNER. EDWARD W. THOMAS, Houston, Tex. Filed Sept. 9, 1922. Serial No. 587,182. 4 Claims. (Cl. 158—78.)

1. An oil burner comprising two separable chambers, an upper oil chamber connected at its rear end to a source of supply of oil and having a downwardly directed discharge opening at the forward end, a lower chamber connected with a source of steam and having an upwardly directed opening at its forward end, a removable spray plate between said openings, there being an oil conducting passage the lower side of which terminates in a spray lip on the upper side of said plate, and a constricted passage below said lip for the steam, said burner having a fan-shaped flattened orifice at the mouth of the burner for the discharge of the spray.

1,540,043. TELEPHONE SYSTEM. HUBERT S. TURNER, Brooklyn, N. Y. Original application filed Feb. 27, 1915, Serial No. 11,046. Divided and this application filed Feb. 6, 1923. Serial No. 617,239. 5 Claims. (Cl. 179—47.)

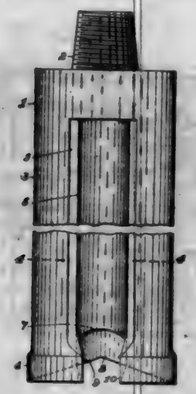


3. A telephone exchange system including telephone lines extending from substations having calling signal apparatus to an exchange, an answering switchboard and a trunking switchboard, means for connecting said switchboards comprising a cord circuit at said answering switchboard, a source of signaling current associated with said cord circuit at said answering switchboard, a trunk circuit at said trunking switchboard to connect to a called substation, means to impress signaling current from said source over said cord circuit and trunk circuit upon the line of said substation to actuate said calling signal apparatus, and means under control of apparatus at a calling substation connected to said cord circuit at said answering switchboard to discontinue said impression of signaling current from the cord circuit but maintaining the trunk circuit portion of the ringing current path complete.

1,540,044. WHEEL TIRE. MAX C. UEKMAN, St. Louis, Mo. Filed June 18, 1923. Serial No. 646,012. 2 Claims. (Cl. 152—8.)

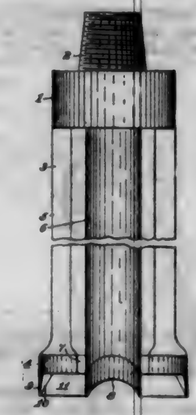
2. The combination with a wheel, of a hollow split tire body mounted on the wheel, a spring tube composed of coiled wire within and holding the tire body expanded, a plate within the spring tube overlapping adjacent coils thereof, and a clamping wire passing through the spring tube and through said plate and being clamped against said tube.

1,540,045. BOUND-EDGE PLASTER WALL BOARD. CLARENCE W. UTZMAN, Chicago, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 14, 1923. Serial No. 624,931. 4 Claims. (Cl. 154—45.9.)



1. A plaster wallboard having a composition body with fibrous cover sheets thereon, one of said cover sheets enveloping the edges thereof and engaging the other, the margins of one of the sheets formed to provide means to bring the exterior surfaces thereof into the plane of the corners of the edges of the board on that side.

1,540,046. RUG AND STRAND THEREFOR. OSSIAN T. WAITE, Oshkosh, Wis., assignor to Waite Grass Carpet Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed May 31, 1923. Serial No. 642,420. 3 Claims. (Cl. 117—52.)

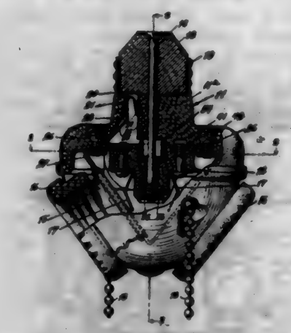


1. A strand for use in rug making, comprising a core consisting of a bundle of relatively stiff fibrous material in overlapping relation, a sheath of closely woven fabric, and a binding cord wrapped around the sheath to hold the same firmly around the core, substantially as described.

1,540,047. DRILL BIT. GEORGE R. WATSON, Waterloo, Iowa, assignor to Armstrong Manufacturing Company, Waterloo, Iowa. Filed June 19, 1924. Serial No. 720,976. 2 Claims. (Cl. 255—63.)

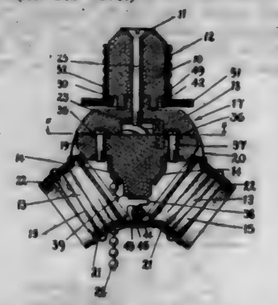
1. A drill-bit having a longitudinally grooved body and a crushing reaming head of larger diameter, the crushing face of said head being upwardly hollowed and having a cross groove uniting the lower ends of the other grooves at a diametrical ridge.

1,540,048. DRILL BIT. GEORGE R. WATSON, Waterloo, Iowa, assignor to Armstrong Manufacturing Company, Waterloo, Iowa. Filed June 19, 1924. Serial No. 720,977. 3 Claims. (Cl. 255—63.)



1. A drill-bit having a flat crushing face interrupted by a transverse hollow whose middle shapes and limits a diametrical upwardly arcuate cutting ridge, said bit having depending cutters extending toward said arcuate ridge and diminishing in width from their outer ends inwardly.

1,540,049. PLASTIC COMPOSITION. ROBERT R. WILLIAMS, Roselle, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 30, 1921. Serial No. 481,640. 15 Claims. (Cl. 106—13.)

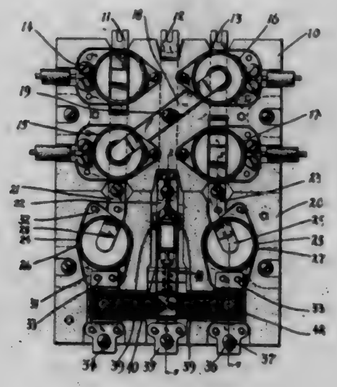


1. Rubber composition containing a rubber matrix and a filler which has been treated with gas soluble in the matrix.

1,540,050. ELECTRICAL RECEPTACLE. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 10, 1919. Serial No. 343,757. 5 Claims. (Cl. 173—336.)

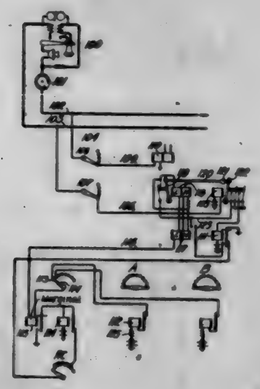
1. A plug switch receptacle comprising plug contacts and receptacle contacts, said receptacle contacts comprising shell and center contacts, an insulating base on which the plug contacts are mounted, a second integral insulating base on which the shell contacts are mounted and a third integral insulating base on which the center contacts are mounted, means for mechanically connecting said bases with respect to each other, and means mounted on said third insulating base for controlling the electrical connection between said contacts.

1,540,051. PLUG CLUSTER. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 6, 1920. Serial No. 356,672. 6 Claims. (Cl. 173—336.)



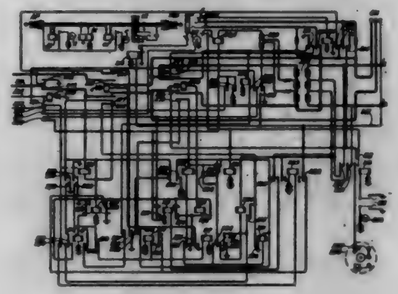
1. A pull switch plug cluster comprising a plug portion and a receptacle portion, said plug portion comprising an insulating base and shell and center contacts supported thereby, said receptacle portion comprising a two part insulating base supported from the plug base, said parts being substantially circular and coaxial with said plug portion, and materially larger in diameter than said plug portion, and having a chamber therebetween; shell and center receptacle contacts supported by the lower base part and switch mechanism housed in said chamber between said upper and lower base parts.

1,540,052. PANEL BOARD. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 14, 1920. Serial No. 388,829. 16 Claims. (Cl. 175—369.)



5. In a panel board, an interchangeable switching unit comprising a base, conducting members mounted at the

ends thereof and embodying means whereby said unit may be connected to another unit, receptacles on said base, some of said conducting members being formed integral with the receptacle center contacts, downwardly bent conducting portions associated with the receptacle



shell contacts, and a switching element comprising a plurality of U-shaped blades adapted to connect the shell-contact conducting members with still other conducting members, the conducting members so connected being formed with downwardly extending portions to closely engage said U-shaped switch blades.

1,540,053. IMPULSE-RECEIVING CIRCUIT. PERRY H. BURTON, Floral Park, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 26, 1923. Serial No. 634,706. 17 Claims. (Cl. 179—18.)

1. The combination with a line of a relay controllable over said line, contacts controlled by said relay, an auxiliary relay, means to energize said auxiliary relay while said first relay is operated, and means under the control of said auxiliary relay for assisting in the opening of said contacts on the release of said first relay.

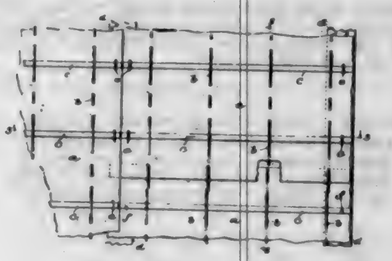
1,540,054. TELEPHONE-EXCHANGE SYSTEM. WARREN W. CARPENTER, Queens, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 21, 1923. Serial No. 663,962. 10 Claims. (Cl. 174—27.)

1. In a telephone exchange system, a trunk line, an operator's position at each end of said trunk line, a cord circuit at each of said operators' positions connected to the trunk line, a signal for each of said cord circuits, a bridge at each end of said trunk line for controlling its associated signal, means including electrical current for controlling said bridge, and means controlled by the operator originating the connection for causing the application of the current to be shifted from one end of the trunk to the other.

1,540,055. NUT AND BOLT STRUCTURE. HENRY J. CHILTON, Chicago, Ill. Filed Sept. 5, 1922. Serial No. 586,087. 6 Claims. (Cl. 151—5.)

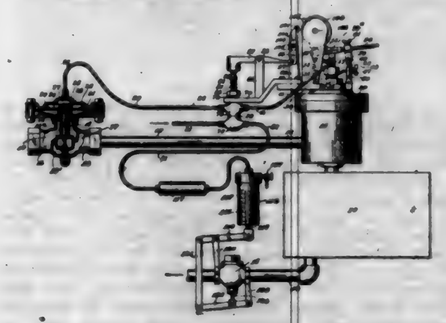
1. The combination with a bolt formed with a transverse hole, of a polygonal nut formed with radial slots in one face thereof intersecting the corners of the periphery, and a cotter-pin engaged with said slots and hole, said slots being of a depth such that a radial cross-section through the unslotted portion of a corner of the nut is substantially equal in area to a radial cross-section through the wall of the nut between the bore and a point in the periphery midway between adjacent corners.

1,540,056. PROPULSION OF SHIPS AND LIKE VESSELS. HENRY CLAY, London, England. Filed Apr. 12, 1921. Serial No. 460,617. 2 Claims. (Cl. 114—67.)



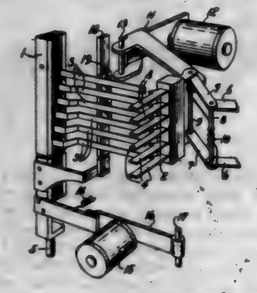
1. In the propulsion of a vessel, the combination with an air chamber located beneath the bottom of the vessel, of a power-driven device for propelling the vessel, a hollow casing separate from but attached to the extreme bow end of the vessel having an upper portion above the water line and a lower portion extending beneath the

vessel, an air inlet in the upper portion and an outlet in the said lower portion directed towards the stern and issuing into the water a suitable distance in front of



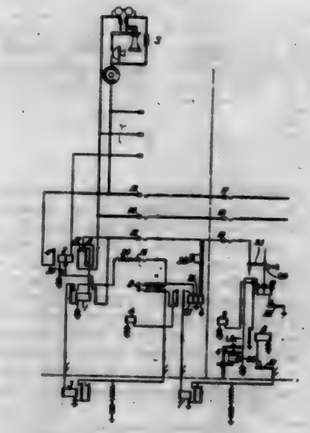
the said air chamber, and means for varying the position of the outlet opening relatively to the bottom of the vessel.

1,540,057. REENFORCED BUILDING FABRIC. EDWIN D. CODDINGTON, North Milwaukee, Wis. Filed Feb. 20, 1922. Serial No. 537,717. 9 Claims. (Cl. 72—116.)



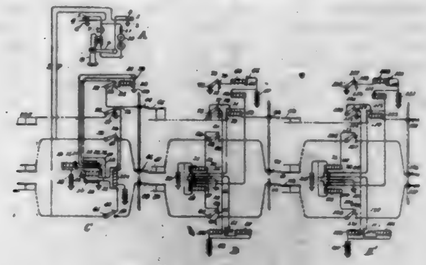
1. A reenforced building fabric comprising a flexible sheet of fibrous material, reenforcing wires woven at intervals through the sheet, and auxiliary stiffening strips of greater cross section than the wires inserted between the wires and sheet.

1,540,058. AUTOMATIC THERMOSTATIC AND TIME CONTROLLED DEVICE. GEORGE W. COLLEN, Bridgeport, Conn. Filed July 15, 1922. Serial No. 575,395. 13 Claims. (Cl. 236—46.)



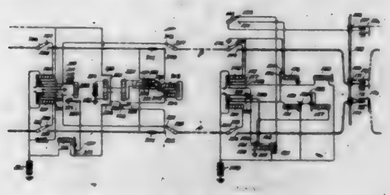
1. In a control device, the combination with a heating chamber and a supply pipe, of an inlet valve therefor having a fluid-pressure actuated diaphragm, a fluid-pressure conduit between said heating chamber and said diaphragm, of a thermostatically operated control valve for said fluid-pressure conduit in proximity to the heating chamber, a thermostat within the heating chamber for directly operating the valve by the rise and fall of temperature in the heating chamber, and automatic regulating means for determining the temperature at which said control valve will operate.

1,540,059. SELECTIVE SWITCH. ROY D. CONWAY, Bernardsville, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Dec. 5, 1921, Serial No. 519,864. Divided and this application filed Oct. 16, 1923. Serial No. 668,732. 7 Claims. (Cl. 174—27.5.)



1. A cross-bar switch comprising a bar carrying contact means and bridging means carried by said bar for electrically connecting certain of said contact means together in one position of said contact means and breaking said connections in another position of said contact means.

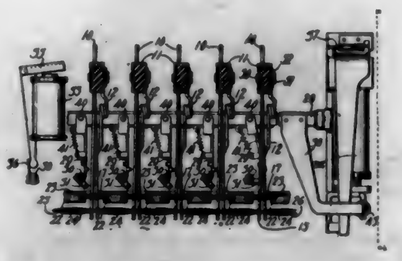
1,540,060. TELEPHONE-CALL DISTRIBUTION SYSTEM. GERALD DEAKIN, Antwerp, Belgium, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 29, 1922. Serial No. 603,923. 9 Claims. (Cl. 179—27.)



1. In a telephone system, a telephone line, a line finder switch for extending said line, a relay associated with said line finder switch arranged to respond to a test indicating the arrival of said line finder on the terminals of said line, and means under the direct control of said relay for thereupon stopping the movement of said line finder and for thereafter marking said line as busy.

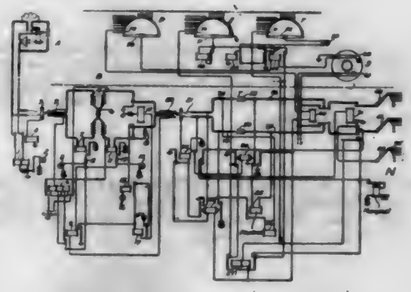
1,540,061. TELEPHONE SYSTEM. ALFRED H. DYSON, Chicago, Ill., assignor, by mesne assignments, to Kellogg Switchboard & Supply Company, a Corporation of Illinois. Filed Mar. 13, 1905. Serial No. 249,804. 187 Claims. (Cl. 179—18.)

1. An automatic telephone system including a plurality of subscribers' lines connecting substations with the central office, an equal plurality of automatic switches, each switch individual to one of said lines, a smaller plurality of selector switches associated with said automatic switches, each of said selector switches being common for connection to and connection from each of said telephone lines, switching mechanism associated with the line of a calling subscriber adapted to perform a preliminary switching operation for causing the automatic switch of said line to bring said line into operative relation with an idle one of said selector switches, and a central source of current and bridges adapted to supply talking current to subscribers' lines therefrom when connected.



1,540,062. TELEPHONE SYSTEM. ALFRED H. DYSON, Chicago, Ill., assignor, by mesne assignments, to Kellogg Switchboard & Supply Company, a Corporation of Illinois. Filed July 20, 1905. Serial No. 270,492. 111 Claims. (Cl. 179—18.)

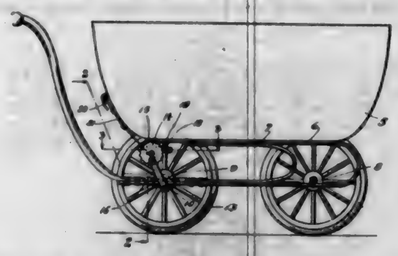
1. In a telephone exchange system provided with switches at the exchange adapted to be operated under direction of subscribers to connect their lines for conversation, the combination with calling and called subscribers' lines, of a connector switch for making connection directly with the called subscriber's line, a central source of current, apparatus for establishing a circuit of said source in the line of the calling subscriber to supply talking current thereto, actuated when connection is made with the called subscriber's line and apparatus for reversing the connections of said source to the calling subscriber's line, operated upon the response of the called subscriber.



1,540,063. SWITCHING MECHANISM. OSCAR F. FORSBERG, Yonkers, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 28, 1922. Serial No. 609,378. 4 Claims. (Cl. 179—225.)

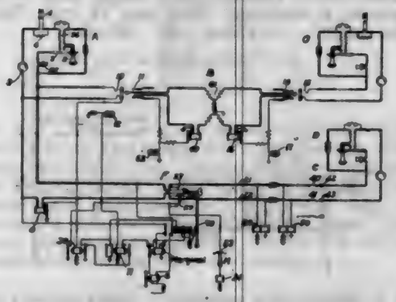
4. In a switching mechanism, the combination with cooperating operating members of a cam associated with one of said members, an extending finger member associated with the other of said members and cooperating with said cam, a spring arranged to hold said finger member in engagement with said cam with slight pressure, the pressure increasing negligibly with any slight

tension of the spring caused by the camming action of said cam, an active contact, and a spring wire for operating said contact, said wire being adapted to be engaged by the said finger member.



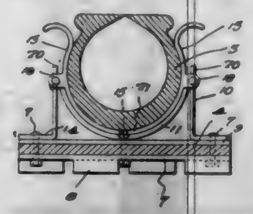
1,540,064. TELEPHONE-EXCHANGE SYSTEM. CLARENCE B. FOWLER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 16, 1920. Serial No. 410,592. 15 Claims. (Cl. 179—27.)

1. In a telephone exchange system, a calling line, a cord circuit, an operator's telephone set, means for automatically connecting said set with said cord circuit when said cord circuit is connected to said calling line, a plurality of trunk circuits, a non-numerical switch for each of said trunk circuits, numerical switches accessible to each of said non-numerical switches, an impulse sender normally in inoperative relationship with said trunk circuits, and means responsive to the connection of said cord circuit with one of said trunk circuits for disconnecting said operator's telephone set from said cord circuit, placing said impulse sender in operative relationship with the engaged trunk circuit and for operating said non-numerical switch to extend the calling line to an idle numerical switch.



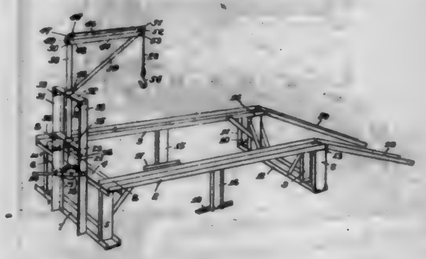
1,540,065. BABY CARRIAGE. LEWIS FRITZ, Chicago, Ill. Filed Aug. 28, 1922. Serial No. 584,814. 3 Claims. (Cl. 280—31.)

1. In a carriage of the class described including in combination with a body, a running gear for the body, the same including an axle having a crank, a gear wheel on the body, means for driving said gear wheel from said crank, a spring-urged dog normally out of engage-



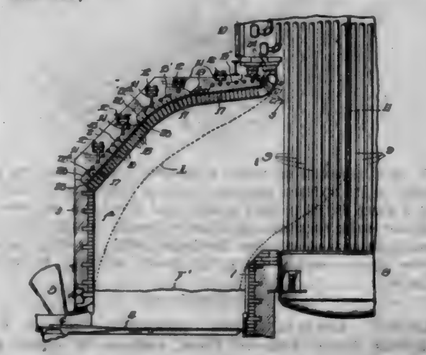
ment with said wheel, and means supported on the body and connected with the dog for moving the latter into engagement with said wheel.

1,540,066. TELEPHONE-EXCHANGE SYSTEM. CHARLES L. GOODRUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 25, 1920. Serial No. 419,214. 11 Claims. (Cl. 179—27.)



1. In a telephone exchange system, a subscriber's station, a key and a resistance thereat, a pair of line conductors extending from said station to an exchange, a line jack and a line signal for said station at said exchange, a line switch for said station at said exchange, and means at said exchange controlled by said key and resistance over the pair of line conductors in series for selectively operating said line signal or said line switch.

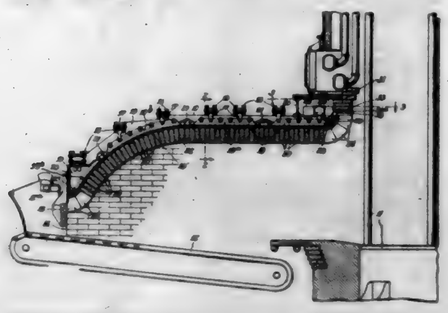
1,540,067. TRACTION-BELT ATTACHMENT FOR AUTOMOBILES. ROY H. GRIMORD and EDGAR H. GRIMORE, Homestead, Wis. Filed Apr. 14, 1924. Serial No. 706,495. 2 Claims. (Cl. 305—10.)



2. A traction belt attachment for automobiles including an endless belt adapted to be positioned over the front and rear wheels of the vehicle for travel therebetween, a plurality of bracket members mounted in spaced relation on the inside of said belt, cooperating resilient gripping members carried by said bracket members for gripping engagement with the wheels of the automobile to mount the belt thereon and transmit the traction of the drive wheels of the automobile thereto, a plurality of cleats mounted in spaced relation on the outer surface of the belt, and securing means adapted to secure the respective cleats and brackets to the belt.

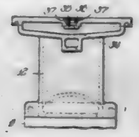
1,540,068. AUTO TABLE AND CRANE. KELLY B. HARVEY, New York, N. Y. Filed Oct. 31, 1922. Serial No. 598,101. 1 Claim. (Cl. 212—61.)

A crane composed of two upright angle bars, a cross plate at the top of the bars provided with a journal portion, a cross plate connecting the angle bars below said plate and having a socket portion, an upright tubular mast mounted to turn in said socket and in said journal, a bracket having a collar surrounding said mast on top of said upper cross plate, a tubular extension on said bracket inserted in the boom, a tubular boom engaging said bracket extension, a sheave bracket on the upper end of the boom inserted in the tubular boom, a sheave bracket at the upper end of the mast, a pair of bars connecting the upper end of the mast with the outer sheave end of the boom, a cross bar connecting said angle bars and a winch on said cross bar arranged to operate its cable passing up through the said mast and over the said two sheaves on the said mast and boom.



1,540,069. FURNACE CONSTRUCTION. LOUIS H. HOARBIN, Chicago, Ill., assignor to M. H. Detrick Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 5, 1922. Serial No. 527,248. 17 Claims. (Cl. 110—99.)

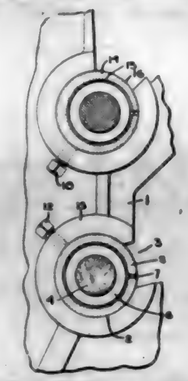
1. In a furnace construction including front and side walls, an arch comprising the combination of a series of rear arch bars extending longitudinally of the furnace and suspended in sloping position with their lower extremities in association with the front wall, a series of rear arch bars extending longitudinally of the furnace and suspended at the rear portion thereof at an



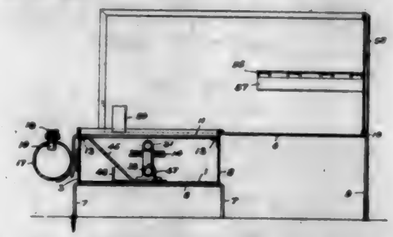
angle to the front arch bars, a series of vertically curved arch bars disposed intermediate said front and rear series, and tile suspended on the several arch bars, said tile cooperating to form the top wall of the furnace in a contour arching upwardly from front to rear thereof.

1,540,070. FURNACE-ARCH CONSTRUCTION. LOUIS H. HOSBEIN, Chicago, Ill., assignor to M. H. Detrick Company, Chicago, Ill., a Corporation of Illinois. Filed July 12, 1923. Serial No. 650,991. 12 Claims. (Cl. 110—99.)

1. In furnace arch construction, the combination of tile supporting members, tile suspended thereon to form a flat arch portion, hangers supported adjacent a wall of the furnace, wedge-shaped tile suspended thereon to form a depending convex arch portion adjacent the fuel inlet, curved supporting members, and tile supported thereon in association to form a concave arch portion having its inner surface merging with and forming a continuation of the inner surfaces of the convex and flat arch portions.



1,540,071. STEAMING ATTACHMENT FOR PRESSING MACHINES. HANS C. HOTING, Neuss, Germany, assignor to Troy Laundry Machinery Co., Ltd., Chicago, Ill., a Corporation of New York. Original application filed Nov. 4, 1918, Serial No. 261,118. Renewed Oct. 31, 1921, Serial No. 511,843. Patent No. 1,416,829, dated May 23, 1922. Divided and this application filed Jan. 14, 1922. Serial No. 529,111. 6 Claims. (Cl. 68—9.)

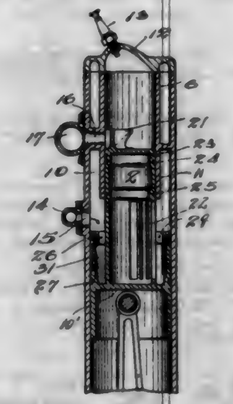


1. In a pressing machine, a pressing member having a groove in its surface forming a steam receiving channel, and a plate fitted in said groove and providing an outer wall for said channel; said plate having outwardly extending transverse grooves developing with the side walls of the groove escape ports for steam delivered to said channel.

1,540,072. SELF-ALIGNING BEARING. IRVING C. HOWES, North Andover, Mass., assignor to Davis & Furber Machine Company, North Andover, Mass., a Corporation of Massachusetts. Filed Aug. 21, 1924. Serial No. 733,259. 4 Claims. (Cl. 308—72.)

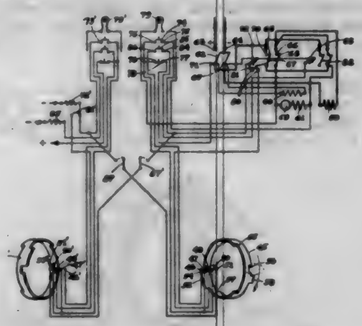
1. A self-aligning shaft bearing comprising a frame and a cylindrical seat, a longitudinally split sleeve fitting the bearing seat and having a concave, spherical, zonal socket section in its interior surface, and a bearing sleeve having its bore fitting the shaft and having a convex, spherical, zonal ball section on its exterior surface fitting the socket section, whereby when the bearing sleeve and the split sleeve are fitted together, they may be slipped endwise into the cylindrical bearing seat.

1,504,073. PORTABLE STOVE. RENE T. HUGO and FRED G. KLINERT, Duluth, Minn., assignors to Hugo Manufacturing Company, West Duluth, Minn., a Corporation of Minnesota. Filed June 11, 1923. Serial No. 644,537. 11 Claims. (Cl. 126—38.)



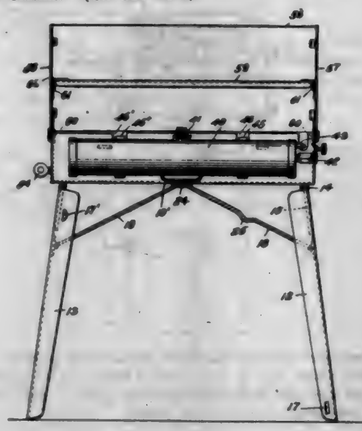
1. A portable stove comprising a casing having a bottom, side and end walls and a lid; a burner, vapor generator and fuel tank rigidly inter-connected to form a unitary structure movable as a unit from a position in which it lies wholly within the casing to a position in which the burner and vapor generator lie wholly within and below the plane of the upper edges of said casing walls and the fuel tank lies outside of the casing, the casing being provided with means for securely holding said unitary structure in its said alternate positions.

1,540,074. KNIFE HANDLE. WILLIAM H. HURLEY, New Haven, Conn., assignor of one-half to James M. Keane, New Haven, Conn. Filed June 28, 1922, Serial No. 571,564. Renewed Mar. 31, 1925. 3 Claims. (Cl. 30—9.)



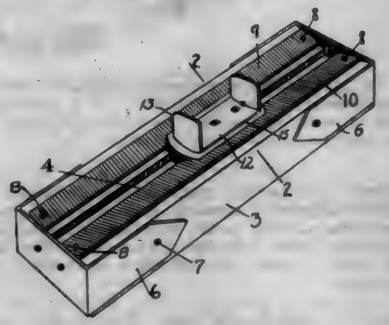
1. A knife of the character described, comprising a blade having a shouldered tang, a metal tube into one end of which the tang is forcibly seated against said shoulders, a non-metallic tube located within the metallic tube, molten metal injected into both tubes, and said tubes and contents subjected to pressure suitable to form a closed handle having a neck bolster and rim.

1,540,075. INTERNAL-COMBUSTION ENGINE. THOMAS A. HUTSELL, Spokane, Wash., assignor to Hutsell Motor Company, Spokane, Wash. Filed Aug. 29, 1923. Serial No. 659,990. 6 Claims. (Cl. 123—59.)



1. The combination in an internal combustion engine with an axially alined pump and working cylinder having intake and exhaust ports, of complementary hollow pump and working pistons therein forming an annular pump chamber, said pump piston having elongated ports communicating with the pump chamber and means carried by the pump piston for admitting a preliminary auxiliary charge of fuel gas to the pump chamber.

1,540,076. CONTROL OF REVERSING APPARATUS FOR HEATING FURNACES. GEORGE H. ISLEY, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed June 25, 1921. Serial No. 480,431. 13 Claims. (Cl. 277—6.)

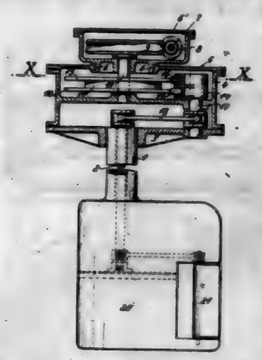


1. The combination with cooperating duplicate reversing devices for a regenerative furnace, of electrical controlling mechanism therefor, operable selectively to procure the reversing movement of said devices in timed relation or to procure the independent movement of either of them.

1,540,077. PORTABLE CAMP STOVE. FRED G. KLINERT, Duluth, Minn., assignor to Hugo Manufacturing Company, West Duluth, Minn., a Corporation of Minnesota. Filed Nov. 25, 1924. Serial No. 752,189. 12 Claims. (Cl. 126—38.)

1. A portable stove comprising a casing having a bottom and side walls, supporting legs pivotally attached to the casing, said legs being angular in cross-section and adapted to embrace the edges of the casing formed by the juncture of the bottom and side walls with the edges lying within the angles of the legs when swung to non-supporting position adjacent the casing, a plurality of said legs being adapted to lie upon each other in superposed nested relation, adjacent legs of the said superposed legs being equipped with interlocking portions for holding the legs in their folded condition.

1,540,078. SHARPENER. WILLIAM R. LONG, St. Louis, Mo. Filed May 28, 1924. Serial No. 715,423. 4 Claims. (Cl. 76—82.)

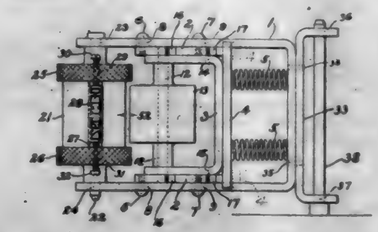


1. A block having a longitudinal channel formed therein and inclined surfaces extending from the longitudinal sides of the block to the channel, metal strips secured to the inclined surfaces of said blocks, said strips corrugated with the corrugations parallel to the ends of the block.

1,540,079. STEERING ARRANGEMENT. EMIL LUCHSINGER, Berlin, Germany, assignor to N. V. Instituut voor Aero- en Hydrodynamiek, Amsterdam, Netherlands, a Dutch Company. Filed Aug. 6, 1923. Serial No. 656,105. 25 Claims. (Cl. 114—167.)

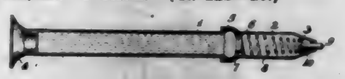
1. In a steering arrangement in combination, a main plane, at least one auxiliary plane adapted to adjust

the latter with the aid of the current, and an intermediary gearing comprising at least two parts, namely a cam race and a sliding contrivance in contact therewith, and adapted to produce the relative movement



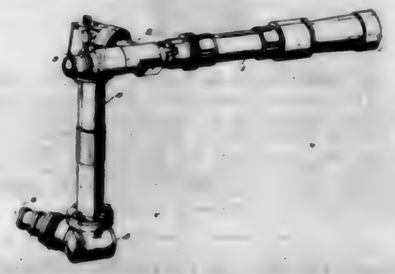
to be executed by the auxiliary plane with reference to the main plane, one of said parts adapted to be adjusted from the steering device and another part to participate in the movement of the main plane.

1,540,080. LINE BAR FOR CROSSBAR LINE SWITCHES. ARTHUR C. MAGRATH, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 16, 1920. Serial No. 417,428. 6 Claims. (Cl. 179—27.5.)



1. In combination, a plurality of parallel metallic strips, supporting elements therefor and a plurality of blocks of insulating material into which said strips and said supporting elements are embedded.

1,540,081. APPARATUS FOR DATING ARTICLES OF MANUFACTURE. JACOB U. MANISCHEWITS, Cincinnati, Ohio, assignor to The B. Manischewitz Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 10, 1922. Serial No. 559,836. 4 Claims. (Cl. 101—85.)

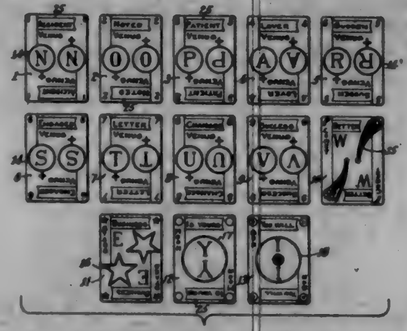


4. In a device of the class described the combination of a pivotally mounted frame comprising a pair of spaced arms and a base connecting said arms at one end, a printing roller removably mounted on the free ends of the arms, a U-shaped ink roller frame removably mounted for reciprocation longitudinally of the arms whereby the ink roller frame may be moved toward and away from the printing roll, a bar slidably mounted between the arms and adapted to abut the ink roller frame, and means retaining the bar in abutment with the ink roller frame for yieldingly positioning said ink roller frame adjacent the printing roll.

1,540,082. PERFUME DISPENSER. JOSEPH M. MERRILL, Montclair, N. J. Filed Aug. 7, 1923. Serial No. 656,219. 1 Claim. (Cl. 221—16.)

A perfume dispenser, comprising a body portion having a bead and a contracted neck, a tapered end portion engaged over and around said bead, a spring engaging said body portion and surrounding said contracted neck and adapted to normally close a valve located in the mouth of the tapered end, and a pin on said valve for opening the valve when the pin is pressed against the surface to be perfumed, substantially as set forth.

1,540,083. CHECKING-EYEPIECE ATTACHMENT FOR GUN-SIGHT TELESCOPES. HENRY A. ORR, U. S. Navy. Filed Jan. 17, 1920. Serial No. 352,210. 1 Claim. (Cl. 88—1.)

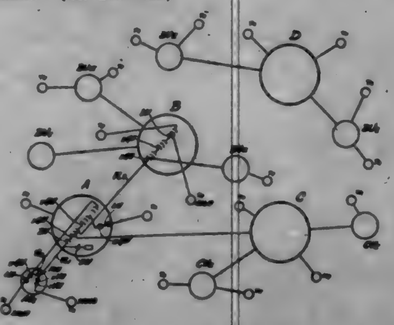


In combination with a main telescope gun sight, a checking eyepiece therefor comprising a portion extending to one side of said gun sight telescope, a second portion extending at right angles downwardly therefrom and a third portion including an eyepiece positioned at right angles to said second portion and extending laterally with respect to the line of sight whereby said checking eyepiece is operable from a point below and at right angles to the main telescope.

1,540,084. HOSE CLAMP. CHARLES A. PARKER, Haugan, Mont., assignor of one-half to William H. Logan, St. Regis, Mont. Filed June 9, 1924. Serial No. 718,777. 4 Claims. (Cl. 24—19.)

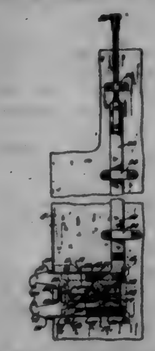
1. The combination with a clamp ring having a bearing head, of a clamp plate within the ring and a threaded stud on said plate, a nut in said head for the threaded stud, said nut comprising a threaded bushing having an annular flange within the head, and a head on the bushing at the outer side of the bearing head.

1,540,085. CARD GAME. MARTHA J. PARTRIDGE, Manchester, N. H. Filed Jan. 17, 1925. Serial No. 3,052. 9 Claims. (Cl. 273—152.)



1. A card game comprising a plurality of separate suits of cards, each suit embodying therein a plurality of cards of increasing values, and having a symbol of a solar body thereon, each suit also embodying therein a plurality of cards having symbols of other solar bodies thereon, said last-named symbols being common to each suit.

1,540,086. TRAILER-BRAKE MECHANISM. GEORGE F. PRASE, San Francisco, Calif. Filed Apr. 5, 1921. Serial No. 458,864. 8 Claims. (Cl. 188—3.)



1. The combination with the truck and the trailer, of a draw bar connecting the same, a shaft journalled on the truck, a shaft journalled on the trailer, a bell crank pivotally mounted on the trailer adjacent said shaft, a bell crank pivotally mounted on the truck adjacent its shaft, a crank arm on each shaft, a link connecting each crank arm with the adjacent bell crank, a telescoping shaft, a knuckle joint connecting each end of said shaft with the first name shafts, and means on the truck for imparting a rocking movement to the bell crank on the truck.

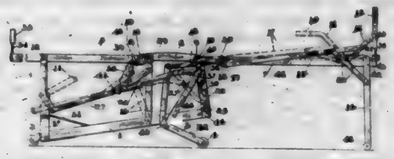
1,540,087. TELEPHONE SYSTEM. WALTER PINELL, Berlin-Siemensstadt, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Filed Apr. 5, 1922. Serial No. 549,957. 9 Claims. (Cl. 179—18.)

1. In a telephone system, a first exchange, a second exchange, automatic switches in both exchanges, a trunk line extending from the first exchange to the second exchange, means in the first exchange for extending a connection from a calling line in the first exchange to the second exchange by way of said trunk line, a sender in the second exchange, means controlled by said sender for further extending said connection by way of switches in the second exchange, means effective when enough switches in the second exchange have been set to determine that the calling line is to be reached by way of the first exchange for releasing the operated switches in the second exchange, means for subsequently extending a connection from the first exchange end of said trunk line to the called line by way of switches in the first exchange, and means effective only after the switches have been set for releasing said trunk line.

1,540,088. TRUNK LOCK. MARTIN RASMUSSEN, Racine, Wis., assignor to Hartmann Trunk Company, Racine, Wis., a Corporation of Wisconsin. Filed July 7, 1923. Serial No. 650,188. 6 Claims. (Cl. 292—25.)

1. In a trunk lock, a keeper member; a lock comprising a reciprocating member; a keeper engaging member pivotally carried by said reciprocating member; means for reciprocating said member; and means operable by the movement of a section of the trunk, for actuating said reciprocating means.

1,540,089. ICE-CREAM DIPPER. OSCAR H. SCHMELTER, Erie, Pa. Filed Oct. 17, 1923. Serial No. 669,015. 9 Claims. (Cl. 107—48.)

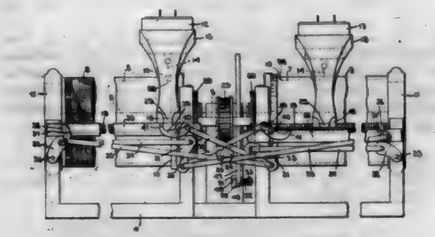


2. In an ice cream dipper, the combination of two dipper sections; rocking shafts on which the sections are mounted; means for rocking the shafts; and a hinged plate at the outer end of the dipper sections, said plate being pivotally connected with the sections with pivots in line with the shafts.

1,540,090. BRUSH. HENRY SHAPIRO, Philadelphia, Pa. Filed Sept. 6, 1923. Serial No. 661,126. 10 Claims. (Cl. 15—187.)

1. A brush including a bristle head; a hollow handle rotatably connected thereto; a delivery tube movable in the head and adapted to communicate with the interior of the handle when moved to open position and cut off communication therewith when moved to closed position; and means within said handle and actuated by rotation of said handle for feeding material through the delivery tube.

1,540,091. FOLDING BED. FREDERICK L. H. SIMS, Southampton, Ontario, Canada. Filed July 24, 1922. Serial No. 577,262. 23 Claims. (Cl. 5—31.)

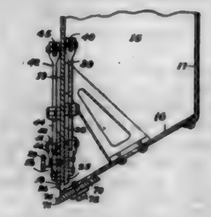


1. In a folding bed, the combination of a truck adapted adjacent one end to rest on the floor; a pair of levers pivoted on the truck and extending towards the other end of the truck to form feet and rockable to tilt the truck on the end resting on the floor; a mattress frame formed in sections hinged together and pivotally supported on said truck adjacent the end supported by the movable feet; and means connected with the mattress frame for rocking said foot levers to tilt the truck, the pivots of the mattress frame on the truck being positioned so that they are substantially in the same vertical plane as the points of contact of the movable feet with the floor, when the truck is in its lowered position, whereby they shaft to a position between said plane and the vertical plane in which lie the points of contact of the other end of the truck with the floor, when the truck is in uptilted position.

4. In a folding bed the combination of a truck adapted adjacent one end to rest on the floor; a pair of bent levers pivoted on the truck, their lower ends forming feet adjacent the other end of the truck; said levers when actuated being adapted to tilt the truck on the end resting on the floor; a folding sectional mattress frame pivoted on the truck adjacent the said other end; and links pivotally connected with said frame and the upper ends of the bent levers.

22. In a foldable mattress frame formed in sections pivotally connected together; shoulders formed on one section adjacent each pivot; and a set screw threaded through the other part adjacent each pivot adapted to engage the shoulder to limit the unfolding movement of the adjacent section.

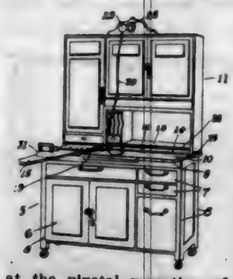
1,540,092. TALKING MACHINE. WILLIAM E. SMITH, Lynn, Mass. Filed Jan. 20, 1920. Serial No. 352,755. 4 Claims. (Cl. 274—18.)



2. In a device of the class described, the combination with two holders for holding cylindrical records, of an independent sound box support for each holder, a feed screw for each sound box support, a sound box carried by each support, means actuated by each support when the sound box thereon approaches the end of a record to establish operative connection between the other sound box support and its feed screw, and means actuated by said other sound box support as it begins its feeding movement to disconnect the first-named sound box support from its feed screw.

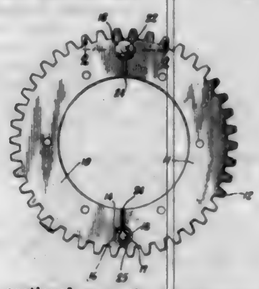
1,540,093. ELECTROMAGNETIC VIBRATOR, TELEPHONE, OR THE LIKE. WILHELM SPÄTH, Kiel, Germany, assignor to Signal Gesellschaft mit beschränkter Haftung, Kiel, Germany, a Firm. Filed Sept. 9, 1922. Serial No. 587,183. 2 Claims. (Cl. 179—119.)

1. In an electromagnetic vibrator, a field magnet composed of iron laminae forming a yoke and limbs converging towards each other, and an alternating current coil on the field magnet, said field magnet forming as a whole a common path for the permanent magnetic lines of force and for the magnetic lines of force produced by the alternating current in the said coil, a vibratory diaphragm, an iron armature connected to said diaphragm and facing the pole pieces of the field magnet and having substantially the size of the pole area, the thickness of the said armature being suitably chosen so that the flux remains somewhat below saturation.



1,540,094. APPARATUS FOR MAKING PYROXYLIN SHEETS. THOMAS H. STACKHOUSE, Intervilla, Pa., assignor to Flexo Film and Chemical Co., Reading, Pa., a Corporation of Delaware. Filed Feb. 20, 1923. Serial No. 620,200. 5 Claims. (Cl. 15—15.)

1. In a machine for making continuous sheets of pyroxylin compound comprising an endless film carrier and a feed hopper having a regulated feed outlet; a film-delivering strip secured to the hopper bottom and underlying said outlet in forwardly inclined position and with its free carrier-contacting edge ahead of the hopper outlet.



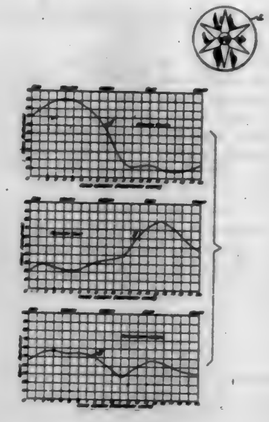
1,540,095. COMBINATION KITCHEN CABINET AND IRONING BOARD. ANDREW JOHNSON STEWART, Lebanon, Ind., assignor to Campbell-Smith-Ritchie Co., Lebanon, Ind., a Corporation of Indiana. Filed June 21, 1922. Serial No. 569,915. 1 Claim. (Cl. 68—10.)

In combination, a base having a horizontal top, a cabinet structure supported over the rear portion of said top, an ironing board pivoted in the cabinet structure and swingable horizontally into position longitudinally of the base and within the area of the cabinet structure and out across the top of the base forwardly of the cabinet structure, said ironing-board being pivoted above the base top and lying thereover with a space between it and the base top when in position out over the same forwardly of the cabinet, and a block detachably secured to one edge of said board and forming a grip for swinging same out into position for use over said top forwardly of the cabinet, said block being removable from the board and adapted to be interposed between the board and top to bridge the space between the board and top and support the board thereon when in position out thereover, said block when in position in the space between the cabinet top and the board relieving the bind-

ing imposed at the pivotal mounting of the board by pressure upon the board when in extended position out over the top forwardly of the cabinet.

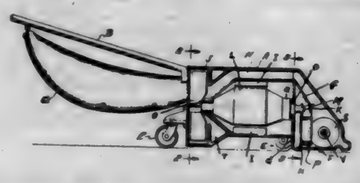
1,540,096. SECTIONAL-GEAR FASTENER. FRANK WILLIAM WEST, New Rochelle, N. Y., assignor, by mesne assignments, to Stewart-Warner Speedometer Corporation. Filed July 6, 1923. Serial No. 649,880. 15 Claims. (Cl. 74—28.)

15. In a sectional gear, the combination of a pair of gear sections, a connector bridged across the jointure between the sections, said connector provided with means for drawing the sections into a prefixed exact relative position.



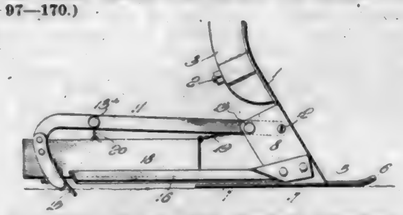
1,540,097. ELECTRIC SWITCH. FRANK BALINT, Bridgeport, Conn. Filed Mar. 17, 1924. Serial No. 699,740. 3 Claims. (Cl. 200—4.)

1. A switch of the character described, comprising a casing, a series of spaced contacts in said casing, a pivoted switch lever normally in engagement with one of said contacts and adapted to be moved into engagement with the others, locking means adapted to be actuated to prevent swinging movement of said lever, and means adapted to move said lever out of engagement with said contact, normally engaged thereby, in said locked position of the lever.



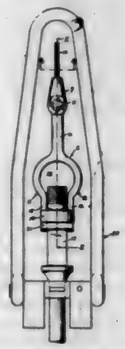
1,540,098. PROCESS OF PRODUCING COLOR SUBSTANCES. FRED K. BREISENBERGER, Cleveland, Ohio. Filed June 30, 1921. Serial No. 481,489. Renewed Oct. 4, 1924. 8 Claims. (Cl. 134—39.)

7. The process of making color substances for use in the arts which comprises determining the brightness of each color to be produced at several points in its spectrum; dividing said colors into two groups one of which comprises the colors having lower brightness and chroma values than the colors of the other group; determining according to the laws of color synthesis the primary colors of comparatively high brightness and chroma values that would be required to produce when mixed in certain sub-groups in uniform proportions said colors having low brightness and chroma values; determining mathematically the brightness values at corresponding points in the spectrum requisite for said



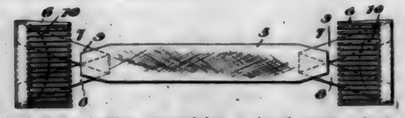
primary colors to produce the aforesaid colors of lower brightness and chroma values; determining the compositions of the primary color substances by comparison of their brightness values determined as aforesaid with the corresponding brightness values of the common known pigments capable of mixing without deleterious chemical reaction; preparing color substances having the compositions thus determined; and thereafter mixing together said primary color substances in the manner specified as the color substances of the lower brightness and chroma values are required for use.

1,540,099. VACUUM CLEANER. STEPHEN J. BOYER, Detroit, Mich. Filed Apr. 9, 1921. Serial No. 459,859. 1 Claim. (Cl. 15—8.)



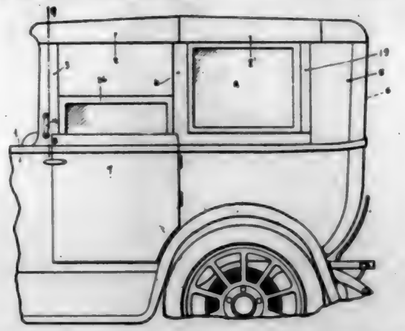
A vacuum cleaner, having in combination with a plurality apertured casing, a partition member constituting, with the adjacent top portion of the casing, an air passage at either end of which the apertures in the casing are located, a brush member rotatably journaled in said air passage adjacent the inlet aperture, a motor member protected by said partition member from access of the air passing through said passage, a fan member carried on the projecting end of the shaft of said motor adjacent the outlet aperture in the casing, a series of friction driving members operatively connecting said motor member and said brush, and externally accessible means whereby said last named members may be temporarily rendered inactive.

1,540,100. COMBINED WEEDER AND CULTIVATOR. MARSHAL S. CARTER, Wichita Falls, Tex. Filed Apr. 10, 1924. Serial No. 705,590. 3 Claims. (Cl. 97—170.)



1. A device of the class described comprising an arched plate adapted to be secured to a cultivator beam, a pair of horizontal runners to which the legs of said arched plate are secured at their lower ends, supplemental cultivator beams extending rearwardly from said plate and adapted to carry cultivator shovels, and rearwardly diverging weed cutting blades extending rearwardly from the legs of said arched plate.

1,540,101. PUMP-ROD SUSPENSION DEVICE. WALTER DWIRE CHAPPUIS, Santa Ana, Calif. Filed Aug. 27, 1924. Serial No. 734,442. 2 Claims. (Cl. 294—91.)



1. A rod suspension device comprising a cast body member consisting of a shank portion the lower end of said shank having a pair of segmental arms extending downwardly therefrom and forming a substantially circular opening, the ends of said arms extending below the segmental portions disposed in parallel relation and spaced apart, the distance between the parallel portions being less than the distance between the segmental portions, whereby to permit the passage therethrough of circular flanges, the extreme ends of the arms extending outwardly from the parallel end portions and substantially at right angles thereto to form a rod supporting seat, and a cross bar connecting the ends of the right angled portions.

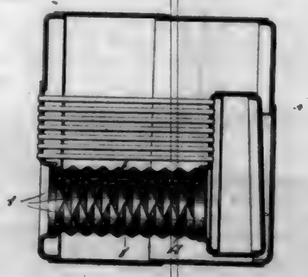
1,540,102. HAIR HOLDER. SAUL COHEN, New York, N. Y. Filed Apr. 1, 1925. Serial No. 19,877. 5 Claims. (Cl. 132—53.)

1. A hair holder comprising a band upon which the hair is secured, elastic bands of V-shaped configuration having their apexes secured to the extremities of said band and means for attaching said holder to the head of the wearer, said means being secured to the tips of the diverging branches of said bands.

1,540,103. AUTOMOBILE TOP. RINO COLOMBINO, Turin, Italy. Filed Aug. 7, 1922. Serial No. 580,178. 4 Claims. (Cl. 296—45.)

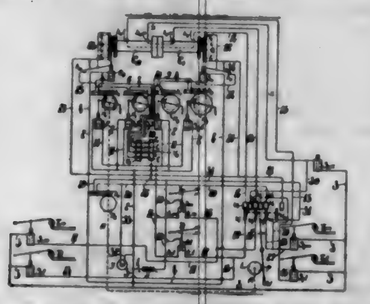
1. A car body, comprising a rear top portion, a front top portion adapted to be folded back over the rear portion, front uprights pivotally connected at their upper ends to said front portion and foldable against the under face of the latter, means for detachably connecting the front uprights to the car body, intermediate uprights for supporting the front and rear top portions at their connection and adapted to be folded inward from the sides of the car body, a back wall and rear uprights pivotedly connected in parallel relation to the car body at their lower ends and to the rear top portion at their upper ends, side walls pivotally connected to said back wall and adapted to be folded against the latter, and windows slidable horizontally in said side walls towards and from the intermediate uprights.

1,540,104. AIRPLANE. JOHN F. COOK, Jr., Detroit, Mich. Filed Dec. 18, 1922. Serial No. 607,538. 18 Claims. (Cl. 244—29.)



1. An aerofoil having an initial section designed for the purpose of giving a high lift/drift ratio and provided with nose and trailing portions capable of being simultaneously projected or retracted for the purpose of varying the angle of entry and trail simultaneously, connecting rods pivoted at one of their ends to said nose and trailing portions and connected at their other ends to bell crank levers, links connected to said levers adapted to move said levers simultaneously, and controlling means connected with said links adapted to cause simultaneous projection or retraction of said nose and trailing portions upon opposite sides of said aerofoil.

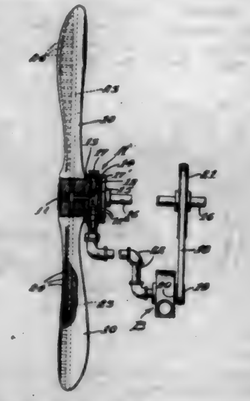
1,540,105. AIRPLANE. JOHN F. COOK, Jr., Detroit, Mich. Filed Dec. 18, 1922. Serial No. 607,539. 26 Claims. (Cl. 144—12.)



1. An aerofoil having a member channeled in cross section, a pair of metal covering plates having their adjacent edges interlocked with the walls of the channel within the interior of said channel, and a locking strip in said channel to hold said edge portions of said plates in interlocking engagement with the channel walls.

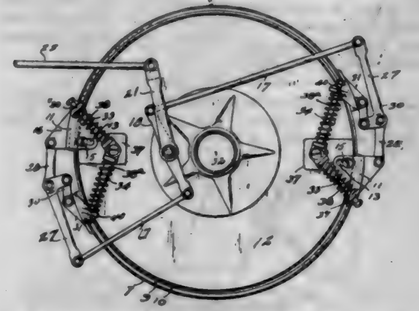
1,540,106. FURNACE FOR BOILERS. ALFRED COTTON, St. Louis, Mo., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed May 21, 1920. Serial No. 383,198. 2 Claims. (Cl. 122—58.)

1. A furnace for boilers consisting of a tubular member provided with a plurality of parallel sections, each of which is composed of a circumferential row of substantially diamond-shaped buckles or pressed portions disposed with their major axes extending circumferentially of said member and their minor axes extending longitudinally of said member.



1,540,107. APPARATUS FOR THE PRODUCTION OF CIPHER DOCUMENTS ESPECIALLY FOR TELEGRAPHIC DISPATCH. ARVID GERHARD DAMM, Ronninge, Sweden. Filed Mar. 1, 1922. Serial No. 540,234. 6 Claims. (Cl. 35—13.)

1. In an apparatus of the kind set forth for the production of cipher documents especially adapted for telegraphic dispatch, means for dividing the cipher into groups each containing a predetermined number of signs, a cipher typewriter, a sender keyboard, means for connecting the cipher typewriter to the sender key board in such a manner that the depression of a key of the sender key board will effect the depression of a key of the cipher typewriter having the same sign as the said key of the sender key board, and means for preventing the cipher typewriter from being connected to the sender key board in the said manner until a group of cipher signs has been completed, substantially as and for the purpose set forth.



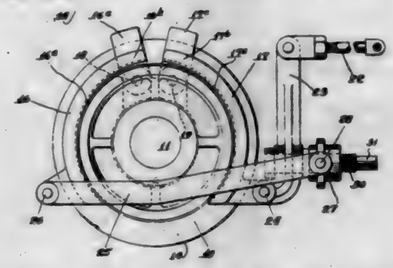
1,540,108. AEROPLANE PROPELLER. IRWIN CHARLES DUGEN, Chaska, Minn. Filed May 20, 1924. Serial No. 714,557. 4 Claims. (Cl. 170—172.)

4. In a device of the class described, a hollow hub comprising a reduced stud and an enlarged drum-like portion, the latter having radial openings therein and spaced annular flanges at either side of said openings, said flanges being beveled at their inner sides, propeller blades mounted radially on said stud, each blade having a conduit extending longitudinally thereof and also passageways opening at the advancing edge of the blade and leading to said conduit, the conduit communicating with the hollow stud, an annulus divided diametrically for the taking up of wear and fitted over the drum-like portion of said hub and between said

flanges, said annulus having an internal annular channel therein communicating with the radial openings in said hub, and a suction pump communicating with said channel.

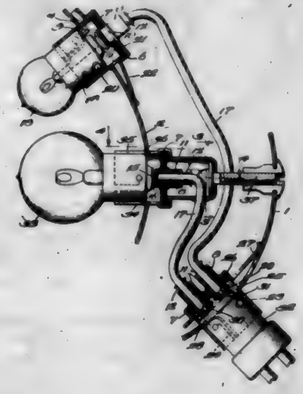
1,540,109. AUTOMOBILE BRAKE MECHANISM. THOMAS M. DEVINE, Cleveland Heights, Ohio. Filed Aug. 20, 1921. Serial No. 493,778. 15 Claims. (Cl. 188—77.)

1. In an automobile, a brake mechanism having in combination a brake drum, a pair of brake shoes having brake lining mounted thereon, a support rigid with the rear axle housing upon which said brake shoes are pivotally and slidably mounted and resilient means for moving each end of each brake shoe away from the drum.



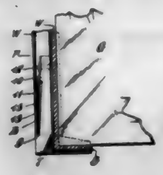
1,540,110. METHOD OF FINISHING FLOORING. ELMER C. DITTMAR, Williamsport, Pa., assignor to The Crooks-Dittmar Company, Williamsport, Pa., a Corporation of Pennsylvania. Filed Sept. 14, 1921. Serial No. 500,656. 9 Claims. (Cl. 91—68.)

3. The method of finishing a strip of lumber consisting in continuously moving a strip of lumber and while in motion applying filler thereto, rubbing the strip



lengthwise, then wiping it crosswise and then rubbing it lengthwise for forcing the filler into the pores of the wood and for removing the surplus therefrom.

1,540,111. BRAKE. EDWARD J. DOBERSTEIN, Blue Island, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 2, 1922. Serial No. 598,680. 4 Claims. (Cl. 188—56.)



1. In a brake, the combination of a frame, a rotatable brake drum, a collar mounted concentric with and adjacent said brake drum, means associated with said frame restraining said collar from rotation respective to said brake drum, a pair of brake members each having a pivotal connection with said collar at their adjacent ends, and adapted to have frictional engagement with opposite sides of said brake drum, and controlling means for said brake members, including a lever arm pivotally connected to the free end of one of said brake members, a link pivotally connecting the free end of the other of said brake members with said lever arm, and means on said frame for actuating said lever arm, including a brake rod pivoted thereto, said lever arm being supported by the pivotal connections aforesaid independent of the frame.

1,540,112. CIRCUIT-CONTINUING DEVICE. HARRY A. DOUGLAS, Bronson, Mich. Filed Jan. 27, 1921. Serial No. 440,481. 2 Claims. (Cl. 173—339.)

1. The combination with a contact carrier having an external shoulder; of a support in bayonet projection and channel connection with the contact carrier; and a bowed spring plate having an opening through which the contact carrier is passed, the opening being of a size to enable the portion of the plate margining it to engage said shoulder, said bayonet projection and channel connection between the contact carrier and support serving to draw said shoulder against said spring plate and to press the spring plate against said support.

1,540,113. WINDSHIELD-GLASS-RETAINING CLIP. THOMAS F. EUSTACE, Cleveland, Ohio. Filed Jan. 18, 1924. Serial No. 687,127. 5 Claims. (Cl. 296—84.)

1. A windshield glass retaining clip comprising a substantially L-shaped member, one portion of said member being adapted for engagement with an edge of the glass, the other arm being engageable with the windshield frame and spring means for retaining said other arm and windshield frame inter-engaged.

1,540,114. INVISIBLE SUSPENDERS. JOHN J. FINK, Lodi, Calif. Filed Aug. 19, 1924. Serial No. 732,902. 3 Claims. (Cl. 241—23.)

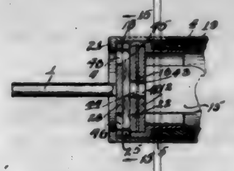
1. A suspenders including a pair of straps crossing each other intermediate their ends, hooks depending from the ends of the straps, flexible endless loops disposed in a vertical plane and slidably supported at spaced points on their upper runs by the adjacent hooks of opposite straps, a connection secured to and extending between the upper and lower runs of each loop between the hooks, whereby to prevent approach of the straps together and hold the upper and lower runs of the loop between the members in definitely spaced relation, and button engaging members depending from said lower runs only on both sides of the connection.

1,540,115. PENCIL CLIP. HOWARD L. FISCHER, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Nov. 22, 1920. Serial No. 425,819. 5 Claims. (Cl. 24—11.)

1. A clip in combination with a pencil casing, a spring engaging arm formed on said clip, an opening formed in said clip, an embossed portion in said casing adapted to fit said opening, a holding tongue adapted to engage

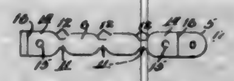
said casing and a locking shoulder adapted to lock said tongue and clip to said casing when said embossed portion enters said opening to hold said clip against longitudinal or transverse movement.

1,540,116. AUTOMATIC CHAIN-APPLYING APPARATUS. CHARLES E. FOSTER, Independence, Mo. Filed Oct. 24, 1921. Serial No. 509,832. 5 Claims. (Cl. 152—14.)



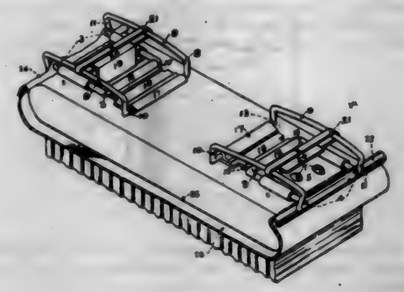
1. The combination with a motor car having a chambered running board forward of a rear wheel, said wheel being provided with loops at its opposite sides, of a pair of spaced channel bars within the running board, a tire chain stretched within said chamber and slidingly engaged at its ends with said bars, and provided at each end with a pair of snap-hooks, and means for adjusting said bars rearwardly to dispose their rear ends at opposite sides of the felly of the said wheel, with the rear snap-hoops in the path of rotation of the loops of said wheel.

1,540,117. MANUFACTURE OF BISMUTH TARTRATES. GUSTAV GIEMSA, Hamburg, Germany, assignor to C. F. Boehringer & Soehne G. m. b. H., Mannheim-Waldhof, Germany. Filed Sept. 9, 1924. Serial No. 736,791. 8 Claims. (Cl. 260—11.)



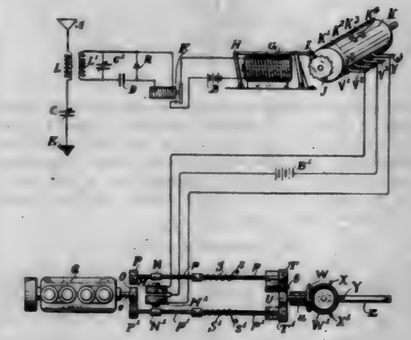
1. The process of preparing a sodium salt of bismuth-tartaric acid, which consists in reacting on di-sodium-tartrate with bismuth-hydroxid.

1,540,118. CARTRIDGE FUSE, KNIFE-BLADE TYPE FOR REMOVABLE-FUSE ELEMENTS. JOHN B. GLOWACKI, Chicago, Ill. Filed Feb. 1, 1922. Serial No 533,193. 5 Claims. (Cl. 200—132.)



1. In a fuse cartridge a casing having notches in the end thereof, a plurality of contact blades, a plurality of superimposed disks rigidly secured to each of said contact blades and having openings therein to afford circuitous outlets for gases, lugs integrally formed on one of said disks for each contact blade, adapted to engage in the casing notches to positively hold the contact blades in the same plane, and means for securing the contact blades and said disks in position.

1,540,119. RENEWABLE FUSE ELEMENT. JOHN B. GLOWACKI, Chicago, Ill. Filed Mar. 9, 1922. Serial No. 542,253. 3 Claims. (Cl. 200—135.)

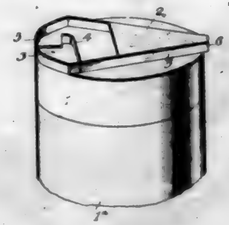


1. A strip of fusible conducting material having end portions each at an angle to the plane of the main body of the strip, and weakened portions separating said end portions from the main body of the strip.

1,540,120. SHEET HOLDER. FRANKLIN T. HAMMERLE, Detroit, Mich. Filed Mar. 4, 1924. Serial No. 696,879. 5 Claims. (Cl. 15—231.)

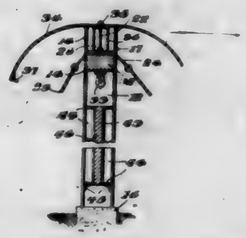
5. In a sheet holder, a block, a buckle comprising a pin fixed to said block and extending longitudinally thereof and having a point adjacent said end, a clamping frame, a link pivoted at its opposite ends to said pin and the inner ends of said frame, said clamping frame having its outer end adapted to engage said pin when said buckle is in a closed position.

1,540,121. SYSTEM OF TELEDYNAMIC CONTROL. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Mar. 21, 1913, Serial No. 755,841. Renewed July 24, 1923. 4 Claims. (Cl. 172—8.)



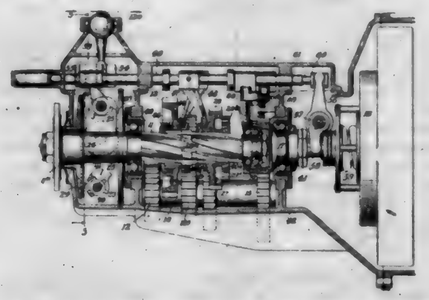
1. The combination with a driving element arranged to rotate about a fixed axis of a flexible shaft normally out of operative engagement with said driving element, a fixed bearing by which said shaft is supported to rotate about a fixed axis extending longitudinally of said shaft, means to flex said shaft to move said shaft into operative engagement with said driving element to be rotated thereby, and yielding means secured to said shaft and automatically operative to reverse the rotation of said shaft and return said shaft to an initial position of rotation after it has been rotated by and released from said driving element.

1,540,122. PREDETERMINED BULK DISCHARGING COVER. HOWARD W. HARDER, Independence, Mo. Filed June 28, 1923. Serial No. 648,297. 5 Claims. (Cl. 221—65.)



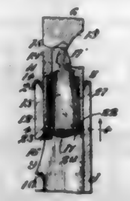
1. In a predetermined bulk discharging cover, a cap adapted to be secured to a container, an opening from said container through said cap near one side of the

cap, a discharge member mounted on said cap and open at one end, and a flange extending partially around the perimeter of said cap opening to direct the discharge



of contents of the container directly into said discharge member transversely of the longitudinal axis of said member.

1,540,123. ADVERTISING DISPLAY AND NIGHT-LANDING SIGNAL FOR AIRCRAFT. HAROLD E. HARTNEY, Washington, D. C. Filed Nov. 2, 1923. Serial No. 672,848. 13 Claims. (Cl. 240—1.)



1. In a night landing signal for aircraft landing fields, a source of light, a substantially vertically disposed panel having one side thereof formed to provide a light reflecting surface for indirectly projecting light onto a field from said source of light, the opposite side of said panel formed to provide an advertising display medium illuminated from said source of light.

1,540,124. VARIABLE-SPEED TRANSMISSION MECHANISM. FRANK A. HAYES, New York, N. Y. Filed Mar. 14, 1921. Serial No. 452,305. 39 Claims. (Cl. 74—97.)

1. In a transmission mechanism, the combination with a pair of gears shiftable into mesh by relative axial movement, of means acting automatically to cause such relative movement and dependent for operation upon a predetermined pitch-line velocity ratio of the gears.

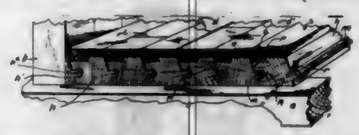
1,540,125. HYPODERMIC SYRINGE. GEORGE N. HEIN, San Francisco, Calif. Filed May 16, 1924. Serial No. 713,754. 7 Claims. (Cl. 128—218.)

1. A hypodermic syringe including a tubular syringe barrel open at one end for the reception of a piston, a piston reciprocably mounted therein and provided with a chamber at one end opening at its inner end laterally through the side wall of the piston, an elastic packing member overlying the periphery at the end of the piston with a portion received within the chamber, and means at the inner end of the packing for engaging the wall of the chamber through a lateral movement to establish a releasable holding contact therewith.

1,540,126. PISTON CONSTRUCTION. GEORGE N. HEIN, San Francisco, Calif. Filed July 1, 1924. Serial No. 723,531. 8 Claims. (Cl. 128—219.)

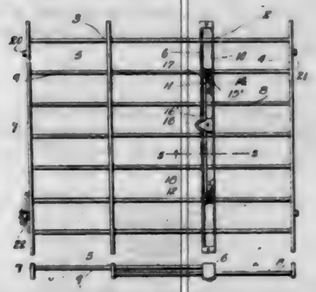
1. A piston-construction especially adapted for syringes, comprising a piston, the lower portion of which is reduced, and said reduced portion circumferentially grooved leaving continuous circumferential shoulders on said reduced portion at the head and foot of said groove, and a yielding packing washer fitted to said reduced portion.

1,540,127. EXTENSION TABLE. ALFRED T. HEYMANN, Hamburg, Germany. Filed Aug. 26, 1921. Serial No. 495,536. 5 Claims. (Cl. 45—9.)



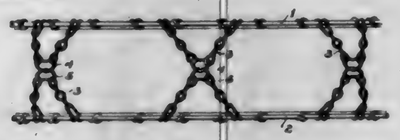
1. An extension table of substantially curved peripheral configuration comprising in combination, a pair of end leaves, pairs of slides underneath said leaves and a foldable middle leaf and a foldable insertion leaf, one on top of the other hingedly attached between and rockable about an axis extending in parallel to said slides, the unfolded insertion leaf being of greater length and width than the unfolded middle leaf.

1,540,128. COMPOSITE UNIT FOR FLOORING AND THE LIKE AND METHOD FOR MAKING SAME. ROSS HOUSTON, Tacoma, Wash. Filed Dec. 28, 1922. Serial No. 609,444. 8 Claims. (Cl. 20—8.)



1. A flooring or surface consisting of a plurality of composite uniform units, each composed of a base-piece and a top-piece, the base-piece being provided with a sunken portion at one side on its top face, the top piece being provided on its bottom face with a protuberance

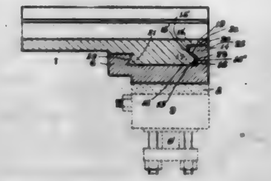
adapted to be seated in said sunken portion, the side of the latter over-hanging the abutting side of said protuberance, whereby the sunken portion of the base-piece



of one unit will lie below the top of the base piece of the adjacent unit, and the side face of the base piece of one unit will provide a locking abutment for the top piece of the adjacent unit.

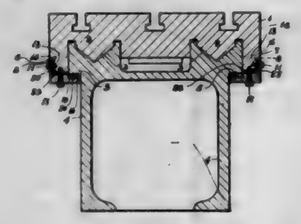
1,540,129. WINDOW GUARD. THOMAS W. HOUSTON, Kansas City, Mo. Filed Dec. 20, 1923. Serial No. 681,855. 5 Claims. (Cl. 20—71.)

1. In combination, two frames, each having end bars and longitudinal rods, the longitudinal rods of one frame passing through an end bar of a complementary frame, locking mechanism carried by one of the end bars through which the rods of the complementary frame projects, said locking mechanism comprising a locking plate having an opening through which one of the rods extends, the edge of the opening impinging on the rod, means for holding the plate in impinging position and means for releasing the plate from engagement with the rod.



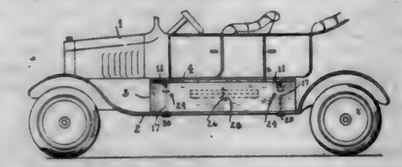
1,540,130. NONSKID CHAIN. JETER F. HOWERTON, Grand Rapids, Mich. Filed Apr. 9, 1921, Serial No. 459,923. Renewed Feb. 18, 1925. 2 Claims. (Cl. 152—14.)

1. A non-skid tire chain comprising side chains, a plurality of cross members, each member comprising interlinked symmetrically arranged heart-shaped links at the center and short chains connected with the outer lobes of each heart-shaped link and connected with an adjacent side chain.



1,540,131. GUIDEWAY. CHARLES GEORGE JOHANNESMEYER, Glendale, and ALFRED R. MCCANN, Hamilton, Ohio, assignors to The Liberty Machine Tool Company, Hamilton, Ohio, a Corporation of Ohio. Filed July 1, 1924. Serial No. 723,510. 9 Claims. (Cl. 308—3.)

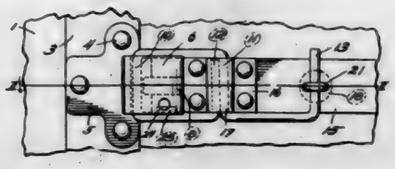
1. In a guide way, a slidable member, a stationary member relative to said slidable member, a longitudinal projection formed on said stationary member and having one side flared and substantially V-shaped and having a flat top and having the other side formed as by two flat surfaces in parallel relation with each other and at right angles to said top, and an angular surface between and connecting the inner ends of said flat surfaces, said slidable member having its inner part formed similar to said longitudinal projection and interlocking therewith, and a space respectively between said flat surfaces of said stationary member and the inner side of said slidable member.



5. In a guide way, a male member having a longitudinal projection, a female member, said male member having a channeled side in fitted and interlocking relation with said longitudinal projection and having one side enclosed by surfaces comprising two flat surfaces in parallel relation with each other and an angular surface between said flat surfaces and a space respectively between each of said flat surfaces and said male member.

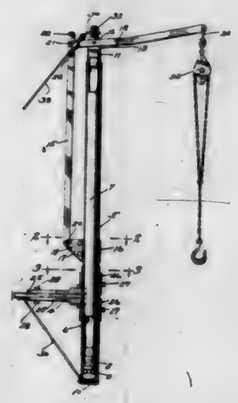
1,540,132. TABLE CLAMP. CHARLES GEORGE JOHANNESMEYER, Glendale, and ALFRED R. MCCANN, Hamilton, Ohio, assignors to The Liberty Machine Tool Company, Hamilton, Ohio, a Corporation of Ohio. Filed July 1, 1924. Serial No. 723,511. 9 Claims. (Cl. 308—3.)

1. In a metal planer table clamp, a bed having a horizontal longitudinal shoulder thereon, a table having a wedge shaped groove longitudinally thereof, a longitudinal plate fixed to the bottom outer edge of said table and in engagement with said shoulder, a wedge in said groove and having its lower edge in engagement with the upper side of said plate and means for adjustably securing said wedge in engagement with said table.



1,540,133. COMBINATION RECEPTACLE AND TABLE FOR VEHICLES. GEORGE W. KIRKPATRICK and JAMES A. CALDWELL, Rochester, N. Y. Filed Feb. 27, 1924. Serial No. 695,553. 5 Claims. (Cl. 190—12.)

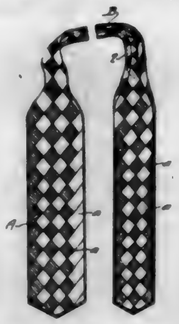
1. A combined receptacle and table for vehicles comprising a receptacle having a hinged cover and openings in the front wall, a leaf hinged to the front wall of the receptacle near the upper edge thereof to form with the



top wall of the receptacle a table top, and a support for the leaf extending through the front wall of the receptacle and supported by the rear wall thereof.

1,540,134. DOOR-SASH LATCH. WILLIAM KIRN, Solomon, Kans. Filed Apr. 9, 1923. Serial No. 630,860. 4 Claims. (Cl. 292—227.)

1. A lock structure comprising a keeper, a latch of loop form adapted for engagement with said keeper; the latch being in the form of a continuous bar having two portions of its length adjacent and parallel, and a bearing member encircling said overlapped ends, said parallel portions being adapted to rotate on their own axes.

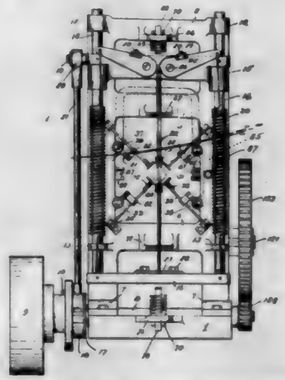


1,540,135. TRUCK HOIST. JOSEPH KLINKHAMMER, Hopkins, Minn., assignor of one-half to Gustave A. Bethke, Hopkins, Minn. Filed Aug. 4, 1924. Serial No. 730,061. 4 Claims. (Cl. 212—65.)

1. A hoist attachment comprising an attaching bracket, a supplemental casing carried by the bracket and extending both above and below the same, a main casing turnably mounted in the supplemental casing, a mast in the main casing, said main casing and mast being supported on a bearing in the supplemental casing, an arm carried by the mast, and a block and tackle carried by the arm.

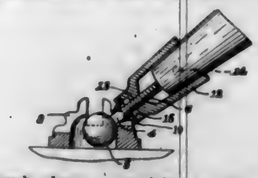
1,540,136. METHOD OF MAKING A BRAIDED TIE. CATHERINE S. LAAGE, St. Louis, Mo. Filed Oct. 15, 1923. Serial No. 668,659. 4 Claims. (Cl. 2—144.)

1. A method of constructing a tie or cravat, characterized by stretching lengthwise the intermediate portion of a braided member constructed in the form of a flat strip, turning over the longitudinal edges of the intermediate portion of said strip so as to form a narrow



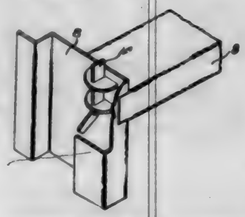
neck band, pressing down said folded edges, and thereafter securing the superimposed parts of the neck band together with stitches.

1,540,137. REMOVABLE JACKET FOR SPARK-PLUG ELECTRODES. WILLIAM F. LAUTENSCHLAGER, Cincinnati, Ohio. Filed Aug. 8, 1921. Serial No. 490,668. 2 Claims. (Cl. 123—169.)



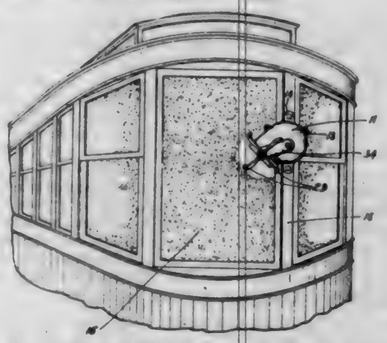
1. In a spark plug, a pair of electrodes having free ends and disposed at an angle to each other, a coiled spring member frictionally held on the free end of each electrode adapted to form a spark gap and said coiled spring members having an inside diameter slightly less than the outside diameter of said electrodes, substantially as described.

1,540,138. FRUIT-PITTING MACHINE. ERNEST A. MEACHAM, Oakland, Calif., assignor, by mesne assignments, to California Packing Corporation, San Francisco, Calif., a Corporation of New York. Filed May 8, 1920, Serial No. 379,745. Renewed Mar. 7, 1923. 28 Claims. (Cl. 146—28.)



1. A fruit pitting machine comprising parallel flexible cutting knives, means for reciprocating said knives, means for spreading said knives apart to enable the fruit pit to pass between them, and means for moving the fruit past said knives.

1,540,139. BRUSH CLAMP. GEORGE C. MORRISON, Calumet, Mich. Filed June 28, 1923. Serial No. 648,224. 3 Claims. (Cl. 306—6.)



1. A brush clamp, comprising a hollow base formed with ways, stepped notches in the walls of said ways, a bolt having a ball on one end engaging said hollow base and a screw on the other, a ferrule adapted to receive the threaded portion of the bolt, a washer having an opening to receive the bolt and a depending rib to engage the notches in the sides of the ways and lock the ferrule to the base piece, and teeth extending into the ways to hold the bolt against rotation during the angular adjustment of the ferrule.

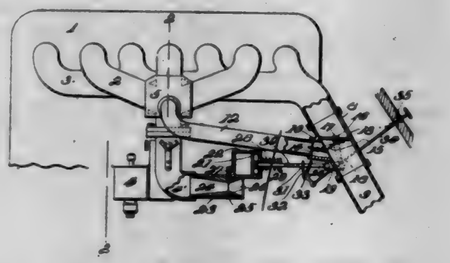
1,540,140. JOINT FOR CABINETS AND THE LIKE. ENOCH OHNSTRAND, Mohawk, N. Y., assignor to Library Bureau, Cambridge, Mass., a Corporation of New Jersey. Filed July 29, 1922. Serial No. 578,414. 8 Claims. (Cl. 45—2.)

1. A joint comprising angular members joined together with one pair of sides meeting at an angle and another pair of sides in parallelism, the sides of said first pair being interlocked together, and the sides of the other pair having a coplaner tongue and recess interfitting together.

1,540,141. DEFLECTING MEANS. CARL W. OLSON, Minneapolis, Minn. Filed Feb. 19, 1923. Serial No. 620,098. 6 Claims. (Cl. 20—40.5.)

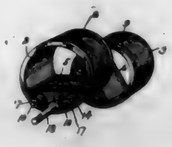
1. In a device of the class described, the combination of a blower, a housing therefor, a conduit adapted to direct a current of air from the blower housing adjacent a window to deflect the elements therefrom, a rotatable arm mounted on the housing to travel in a path adjacent said window to deflect the element therefrom and means simultaneously to actuate the blower and arm.

1,540,142. APPARATUS FOR MANIPULATING GLOBES. JOHN ORR PIERPOINT, Pana, Ill., assignor of one-half to John J. Pierpoint, Pana, Ill. Filed Mar. 22, 1924. Serial No. 701,133. 23 Claims. (Cl. 294—21.)



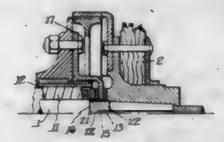
1. In apparatus of the class described, a main driving shaft, a driven shaft adapted to have rotation imparted thereto from said driving shaft, means for rotating the driving shaft, gripper fingers mounted to rotate with said driven shaft, power transmission devices for imparting rotation from driving shaft to driven shaft, said devices providing a pivotal connection whereby the driven shaft may be moved to angular relation with the driving shaft, and including freely movable parts and bolt and nut connections forming a pivot for said parts and adapted to be actuated to permit angular movement to provide adjustment or to secure such adjustment.

1,540,143. APPARATUS FOR MANIPULATING GLOBES. JOHN O. PIERPOINT, Pana, Ill., assignor of one-half to John J. Pierpoint, Pana, Ill. Filed May 17, 1924. Serial No. 714,041. 30 Claims. (Cl. 294—21.)



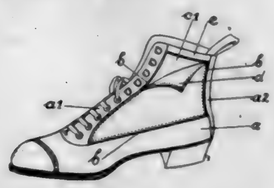
1. In apparatus of the class described, opposing globe gripping elements, a hollow driving shaft, a hollow driven shaft telescoped into the driving shaft, means to impart rotation to the shafts, and means passing through said shafts and connected with said gripping elements for manipulating the gripping elements for the purposes specified.

1,540,144. CHARGE-HEATING CONTROL FOR INTERNAL-COMBUSTION ENGINES. ALBERT G. REDMOND, Indianapolis, Ind., assignor to Marvel Carbureter Company, Flint, Mich., a Corporation of Indiana. Filed Apr. 22, 1920. Serial No. 375,772. 9 Claims. (Cl. 123—122.)



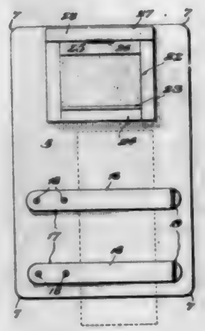
1. An internal combustion engine having an exhaust pipe, intake manifold and charge forming device connected thereto, a heating chamber arranged to heat the charge in its passage to the engine having an inlet and outlet pipe connected to the exhaust pipe, a valve disposed in the exhaust pipe between the inlet and outlet of the connection with said heater, a valve in the outlet pipe of said heater having a connection with said valve and means for actuating the first mentioned valve controlled by the changing vacuum existing in the air inlet of said charge forming device.

1,540,145. VARIOCOUPLER. HARRY REIFEL, New York, N. Y., assignor to Pathe Phonograph and Radio Corporation, a Corporation of New York. Filed May 1, 1923. Serial No. 635,846. 8 Claims. (Cl. 171—119.)



8. A variocoupler comprising in combination a pair of windings, a pair of coil supports for said windings, a bearing member in each support, means for rigidly mounting one of said supports, a rotatable shaft passing through each of said bearing members interiorly of said windings, said shaft having a smaller cross sectional area throughout one portion of its length than another portion, said first mentioned portion fitting within said other support, and resilient means between said bearing members whereby said supports may be axially displaced for varying the coupling between said windings.

1,540,146. REAR AXLE. LOUIS SIMA, Chicago, Ill. Filed Feb. 11, 1924. Serial No. 691,933. 2 Claims. (Cl. 180—88.)



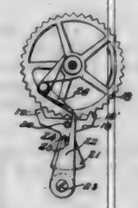
1. A rear axle for automobiles having, in combination, a rear axle housing, a shaft section in said housing, an anti-friction bearing in said housing for the outer end portion of said shaft section, the outer end portion of said shaft section being reduced in diameter to provide a cylindrical surface and an annular shoulder, a stop collar rigidly mounted on said cylindrical surface against said shoulder, a wheel mounted on the outer end of said shaft section, a disk through which the shaft section extends, said disk lying between said stop collar and said wheel, a flange on said disk, a part rigid with the rear axle housing, and a bolt securing said flange to said part.

1,540,147. BOOT AND SHOE. DOUGLAS VON ARNHEM, Berlin, Germany. Filed July 8, 1922. Serial No. 573,744. 4 Claims. (Cl. 36—45.)

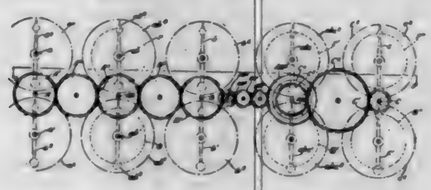
1. Boots or shoes having tops formed partly of superposed layers, the inner layers of which form integral permanent parts of the boot or shoe and the outer layers being removably connected by stitching to the tops thereof.

1,540,148. IDENTIFYING APPARATUS. PAUL. N. WAGGENER, Memphis, Tenn. Filed Nov. 23, 1923. Serial No. 676,550. 7 Claims. (Cl. 41—4.)

1. In a portable finger print device, the combination with a substantially flat base, and a container for marking material attached thereto and substantially in the same plane therewith, of means also attached to the base adapted to hold the article to be marked by finger print impression.



1,540,149. MECHANISM FOR PREVENTING BACKLASH IN PRECISION INSTRUMENTS, ETC. GEORGE WALKER, Newton Center, Mass. Filed Jan. 25, 1923. Serial No. 614,835. 12 Claims. (Cl. 235—104.)

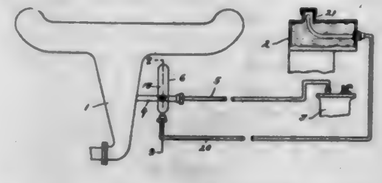


1. In a device having a member adapted to be advanced over a predetermined path and afterwards reset, means for advancing said member, mechanism for continuously holding said member against reverse movement in any position of its advance including its final position before being reset, and means to release said mechanism to allow said member to be reset.

1,540,150. ESCAPE MECHANISM FOR SHIPS' INSTRUMENTS AND OTHER PRECISION INSTRUMENTS. GEORGE WALKER, Newton Center, Mass. Filed Jan. 25, 1923. Serial No. 614,836. 7 Claims. (Cl. 58—1.)

1. A device of the character described comprising an escape wheel adapted to be rotated in one direction, a spring for returning the wheel to initial position, an escape lever for regulating the movement of the wheel, and mechanism for stopping the wheel in initial position upon the return movement, said mechanism including mutually engaging parts associated with the wheel and lever respectively.

1,540,151. APPARATUS FOR AVERAGING VELOCITIES OF ROTATING ELEMENTS. GEORGE WALKER, Newton, Mass. Filed Jan. 25, 1923. Serial No. 614,840. 7 Claims. (Cl. 235—61.)

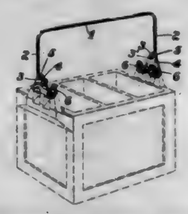


1. Apparatus for differentiating the angular velocity of a number of rotary members greater than two, comprising gearing inter-connecting two of the rotary members, said gearing including a differential rotatable at a speed proportional to the average speed of the two members, gearing interconnecting said differential with other of said rotary members, the last aforesaid gearing including a second differential rotatable at a speed proportional to the average speed of all the rotary members, and means for indicating the angular velocity of each of the rotary members and of each of the differentials.

1,540,152. COMPOSITION FOR MAKING FLEXIBLE, TRANSPARENT, WATERPROOF WINDOWS AND THE PRODUCT THEREOF. KENNETH L. WEBER, Augusta, Ga., assignor of one-third to Charles Weber, Cincinnati, Ohio. Filed Aug. 5, 1921. Serial No. 490,184. 2 Claims. (Cl. 106—39.)

1. The herein described flexible, transparent, waterproof window for automobile curtains and the like, made from a sheet consisting by weight of about fifteen grains of refined granulated or so called sparkling gelatine, five minims of glycerine, one hundred and twenty minims of distilled water and one minim of formaldehyde and having a transparent coating of water proof varnish.

1,540,153. AUTOMATIC AIR CONTROL FOR INTERNAL-COMBUSTION ENGINES. ROBERT G. WIARD, Ypsilanti, Mich., assignor of one-third to James A. Bent and one-third to Oliver A. Hankinson, both of Ypsilanti, Mich. Filed June 19, 1922. Serial No. 569,360. 3 Claims. (Cl. 123—124.)

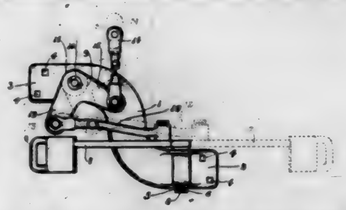


1. The combination with the intake passage for an internal combustion engine, of an auxiliary air control device having a restricted passage in communication with said intake passage, a valve adapted to move in the direction of the air flowing through said restricted passage to close the same, and a thermostat controlled by the heat of the engine for automatically opening said valve, the proportions of the restricted passage, valve, and thermostat being such that the suction within said intake passage when approximately at the maximum closes said valve.

1,540,154. METHOD OF EXTRACTING VANADIUM. ALBERT WITTIG, Berlin, Germany. Filed May 7, 1924. Serial No. 711,743. 1 Claim. (Cl. 23—19.)

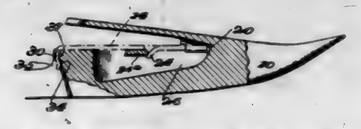
The method of extracting vanadium from vanadium ores by means of a mixture of sulphuric acid and sulphurous acid, consisting in adding to the sulphuric acid at least five parts by weight of SO_2 to a hundred parts of the ore to be treated and treating the ore with the acid mixture thus prepared, in the usual manner, to obtain a solution of vanadium.

1,540,155. DETACHABLE METAL HANDLE FOR BATTERY BOXES. HERBERT H. WYDOM and JOSEPH E. PERRAULT, Watertown, Mass., assignors to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Oct. 25, 1924. Serial No. 745,835. 1 Claim. (Cl. 16—119.)



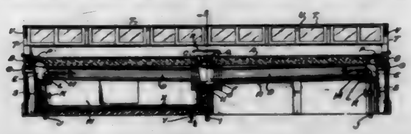
A detachable handle for battery boxes comprising a wire bail having a straight handle portion of substantially the length of the box and vertically depending portions having inwardly curved lower ends, and a pair of sheet metal carrying clips of substantially triangular form suspended from said vertically depending portions, each of said clips having an eye adjacent its apex through which the corresponding curved end of the bail passes, said end being upset to retain the clip thereon, the lower portions of the clips being bent inward to form handle engaging hooks having inclined upper ends.

1,540,156. SWITCH STAND. GEORGE ASHTON, Cincinnati, Ohio, assignor to The Central Frog and Switch Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 4, 1922. Serial No. 579,719. 2 Claims. (Cl. 246—411.)



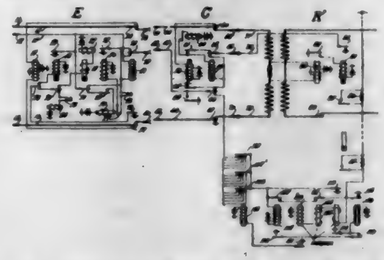
1. A switch stand comprising a base having a horizontal bearing at one end and a vertical stud at the other end thereof, a switch throwing lever mounted in said horizontal bearing, and having a weight thereon, adapted when in downwardly closed position to be entirely removed vertically from said base, a bell crank mounted on said stud and above said base and having the outer end of one arm entirely removed vertically

from said base and having its other arm extending in parallel relation and above said base, a pitman having one end pivotally connected to said switch throwing lever



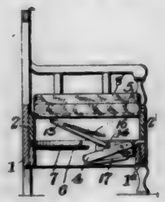
adjacent said horizontal bearing and having its other end pivotally connected to one arm of said bell crank, and a switch throwing connecting rod pivotally connected to the other arm of said bell crank.

1,540,157. GUARD AND LEDGER PLATE. JOHN PETER BAGAN, Vancouver, British Columbia, Canada. Filed Dec. 3, 1923. Serial No. 678,267. 6 Claims. (Cl. 56—311.)



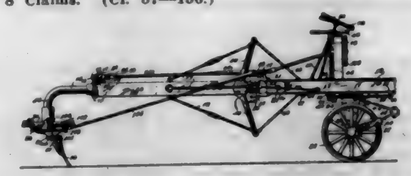
1. A guard comprising a body having a cavity and having a bridge member spanning the cavity, and a ledger plate having a U-shaped incision defining a partly severed portion extended downwardly to define a spring finger adapted to be received in said cavity and securely engaged with said bridge member whereby to hold the ledger plate securely in position, said guard having a pair of shoulders and a socket between said shoulders and said ledger plate having a lip received in said socket and having a pair of shoulders flatly engaging said first named shoulders whereby to cooperate with said spring finger to hold the ledger plate securely in position.

1,540,158. REFRIGERATED DISPLAY COUNTER. JOHN F. BARGHAUSEN, Takoma Park, D. C. Filed Jan. 20, 1925. Serial No. 3,658. 14 Claims. (Cl. 62—37.)



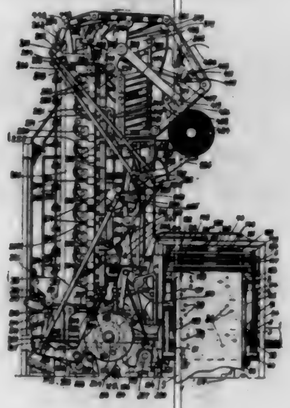
13. A refrigerated display counter having a chilling chamber in the top thereof, end openings directed downwardly from and a central opening directed upwardly into the chilling chamber, an air receiving chamber beneath each end opening and a larger air deflecting chamber beneath the central opening, also a controllable air induction opening leading into each air receiving chamber and controllable air exhausting openings at high positions in the chilling chamber; a louvered frame in each end opening having the slats thereof directed downwardly-outwardly, and a louvered frame in the central opening having the slats thereof directed upwardly-outwardly at each side thereof, a low support baffle positioned over the central opening and having open ends directed toward the end openings, a pair of restricted ducts circular in cross section and positioned longitudinally of the counter beneath the chilling chamber with their entrant ends one in each air receiving chamber and their discharge ends one in each side of the air deflecting chamber in opposed relation each on a slight incline toward the said deflecting chamber, nozzles positioned one in each duct entrant end and adapted to eject finely divided opposed conical sprays of chilled brine into the ducts, and a brine drain leading from the deflecting chamber.

1,540,159. MAKE-BUSY ARRANGEMENT FOR SECONDARY TRUNKING SWITCHES. JOHN I. BELLAMY, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 25, 1922. Serial No. 584,218. 12 Claims. (Cl. 179—18.)



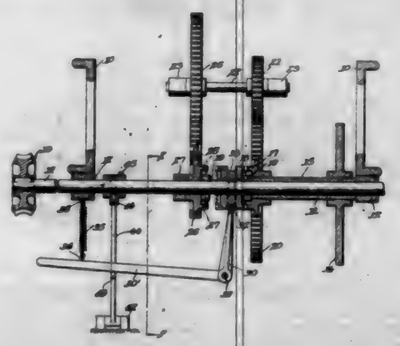
1. In a telephone trunking system, a plurality of incoming trunks, each trunk terminating in a switching mechanism, a lesser plurality of outgoing trunks accessible in common to all said mechanisms, each of said incoming trunks having a test conductor, said conductors being disconnected from each other, and means effective whenever there are only a predetermined number of outgoing trunks idle for connecting together the test conductors of all the idle incoming trunks.

1,540,160. FOLDING COUCH. DANIEL H. CALDEMEYER, Evansville, Ind. Filed Aug. 25, 1923. Serial No. 659,338. 2 Claims. (Cl. 5—22.)



1. In a folding couch, the combination of sections adapted to stack, one on top of the other, or to be arranged side by side, foldable legs carried by the movable section, operative connections between the sections, adapting one section to be folded on the other section, and elongated, inclined plates carried by the stationary section adapted to exert a camming, folding action on said legs, and to sustain the legs when the movable section is stacked on the stationary section.

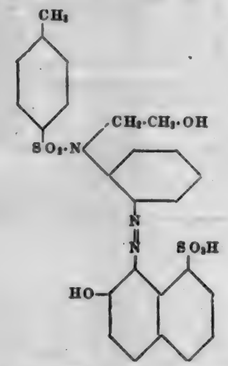
1,540,161. GRADER ATTACHMENT FOR TRACTORS. LILBERN B. CALLISON and ELDER J. ERLANDSON, Chariton, Iowa. Filed Nov. 3, 1921. Serial No. 512,675. 8 Claims. (Cl. 37—156.)



1. A supporting frame, means for steering and advancing said supporting frame, a boom extending beyond the rear end of said supporting frame having its forward end universally pivoted to the rear end of said supporting frame, means carried by said supporting frame for imparting universal movement to the free end of said boom, a grader blade attached to the free end of said boom capable of universal adjustment, and means carried by said supporting frame for accomplishing the said universal adjustment of said grader blade.

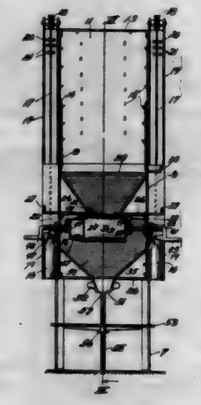
1,540,162. AUDITING MACHINE. FRED M. CARROLL, Binghamton, N. Y., assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Ohio (Incorporated in 1906). Filed Sept. 30, 1912, Serial No. 723,205. Renewed July 28, 1924. 271 Claims. (Cl. 235—61.)

1. In a machine of the class described, the combination with a plurality of accumulators, of a set of differentially movable actuators common thereto, a frame carrying said accumulators, and record controlled means for moving said frame to bring any one of said accumulators into cooperative relation with the actuators.



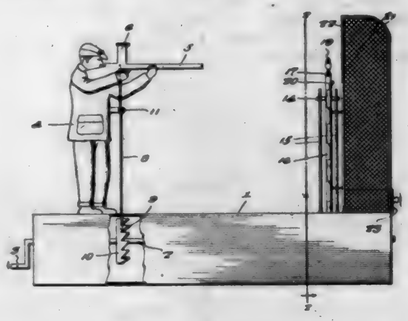
1,540,163. SPINNING MACHINE. JOHN G. CHAPMAN, Talladega, Ala. Filed Aug. 11, 1923. Serial No. 656,950. 11 Claims. (Cl. 242—43.7.)

1. In a spinning machine, a ring rail traverse cam, variable speed means for driving said cam, and means for automatically varying the speed of rotation of said cam to effect the building of a bunch.



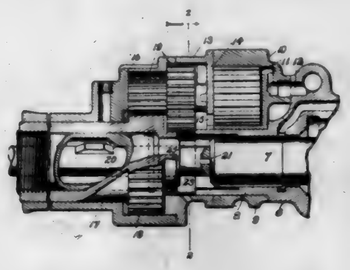
1,540,164. AMINOARYLALKYLTOLUOLSULFAMID AZODYES. HEINRICH CLINGESTEIN, Cologne-on-the-Rhine, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Jan. 3, 1924. Serial No. 684,258. 2 Claims. (Cl. 260—44.)

2. The herein described new azodye having most probably the formula:—



obtainable by combining the diazocompound of 2-aminophenyl-hydroxyethyl-para-toluolsulfamide with 2-naphthol-8-sulfonic acid, which dye is after being dried and pulverized in the shape of its sodium salt a red powder soluble in water with a yellow and in concentrated sulfuric acid with a reddish-yellow coloration; being split up upon treatment with stannous chlorid and hydrochloric acid into 1-amino-2-naphthol-8-sulfonic acid and 2-aminophenyl-hydroxethyl-para-toluolsulfamide; dyeing wool orange shades fast to milling, substantially as described.

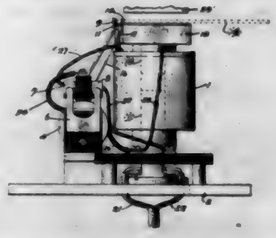
1,540,165. BAG HOLDING AND MEASURING APPARATUS. JULIUS CYTRON, Tulsa, Okla. Filed Dec. 11, 1922. Serial No. 606,176. 2 Claims. (Cl. 221—107.)



1. Measuring apparatus comprising a hopper having a discharge opening, a measuring device in receiving relation to said opening and comprising an approximately cylindrical vessel and a follower member telescoping within said vessel, means for independently adjusting said vessel and follower member for relatively moving the same to vary the measuring capacity of said vessel, said means being operable to rotate said measuring device into either receiving or discharging position.

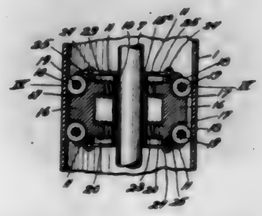
1,540,166. SHOOTING GALLERY. FRANK D'ONOFRIO, Wilmington, Del. Filed Aug. 27, 1923. Serial No. 659,586. 2 Claims. (Cl. 273—101.)

1. A device of the class described comprising a hollow base, a figure representing a man with a gun, supported on the base adjacent one end thereof, a projector in the gun, a vertically arranged lever pivoted to a part on the figure with its upper end engaging the projector, a shaft passing through the hollow base and having a crank on its outer end, a cam on the shaft for rocking the lever, a movable target, means for supporting the same adjacent the other end of the base and means for moving said target from the shaft.



1,540,167. SCREEN FOR ROCK DRILLS. KENNETH O. DUNCAN, San Francisco, Calif., assignor to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed Apr. 14, 1920. Serial No. 373,832. 5 Claims. (Cl. 121—6.)

1. The combination, in drilling apparatus, of a drilling motor, a chuck head on the front end thereof having an internal port and sockets formed directly in the walls on opposite sides of the same, a chuck in the chuck head, and a screen extending across the port and having terminal portions engaged in the sockets.

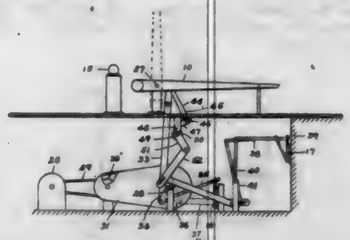


1,540,168. ELECTRICALLY-OPERATED STAMPING DEVICE. CHARLES S. DUTTON, San Francisco, and GEORGE H. DERRICK, Oakland, Calif. Filed Aug. 20, 1923. Serial No. 658,415. 4 Claims. (Cl. 101—257.)

1. In a device of the character described, a movable platform adapted to slidably support an object to be acted upon, a normally opened spring-controlled switch correlated to the platform and adapted to be disposed in the path of movement of said object to be acted upon, and a normally de-energized electro-magnet in circuit with such switch, said platform serving to permit the object to be acted upon to close the switch and energize

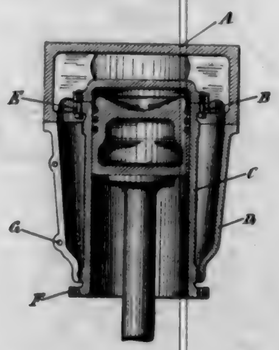
the magnet and then cause the platform to move said object away from the switch and permit the latter to open and again deenergize said magnet.

1,540,169. ROPE-KNIFE GUIDE. WILLIAM WALLACE DYMOND, Carbondale, Kans. Filed Apr. 5, 1923. Serial No. 629,986. 3 Claims. (Cl. 308—7.)



1. The combination with a well casing, of a rope-suspended tool within the casing, and a guide carried by the tool and comprising a body portion, spring-advanced carriers mounted in the body at diametrically opposite sides thereof, and a pair of rollers spaced vertically apart and journaled on and projecting beyond the carriers and engaging the casing.

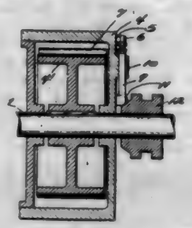
1,540,170. ELECTRICALLY-PROPELLED TOY AUTOMOBILE. RALPH J. FRICK, Burlington, Iowa. Filed Jan. 24, 1923. Serial No. 614,631. 4 Claims. (Cl. 180—65.)



1. In an electrically controlled toy automobile, the combination of an electric propelling motor, a normally applied brake for arresting movement of the vehicle, an electric device for releasing said brake, an electric battery mounted upon the vehicle, conductors connecting said motor and said device in series and in circuit with said battery, and a spring-opened switch arranged in said circuit, said switch being positioned so as to be manually closed by the driver of the vehicle.

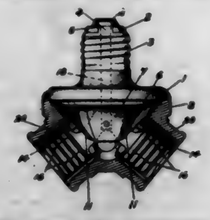
1,540,171. AUTOMATIC GATE TENDER. FREDERICK GEORGES and PIUS P. GEORGES, New Britain, Conn. Filed Feb. 27, 1923. Serial No. 621,642. 4 Claims. (Cl. 246—129.)

2. In an electrically-operated and train-controlled gate tender, a gate for being alternately lowered and raised by a swinging movement, a motor, a main shaft rotatively operated by said motor, a crank-arm on said main shaft operatively connected to said gate, a control switch for each movement of said gate, means for operating said switches from said main shaft, and contact rails, arranged in pairs, for individually closing the circuits for said switches, one pair of rails being on one side of the gate and another pair of rails being on the other side of the gate.



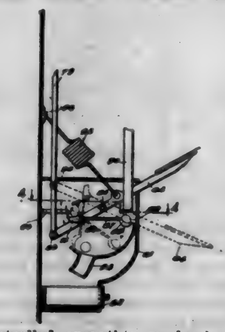
1,540,172. INTERNAL-COMBUSTION SINGLE-ACTING ENGINE CYLINDER. ISAAC CORNTHWAITE GREEN, Glasgow, Scotland, assignor of one-half to Frederick Ernest Rebbeck, Queen's Island, Belfast, Great Britain. Filed Dec. 14, 1923. Serial No. 680,764. 7 Claims. (Cl. 74—108.)

1. An improvement in motor cylinders for single acting combustion engines of that kind in which one end of the cylinder liner is connected with the cylinder cover so as to allow the liner to freely expand downwards, comprising, a cylinder cover, and a cylinder liner, each end of the liner being provided with means for fastening the liner to the cover.



1,540,173. FRICTION CLUTCH. EDWARD LYTTON, London, England. Filed Oct. 31, 1922. Serial No. 598,167. 1 Claim. (Cl. 192—80.)

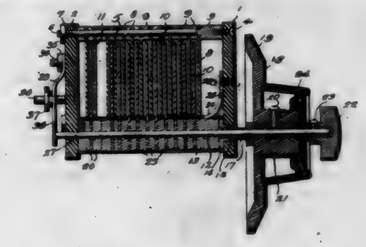
In a friction clutch of the kind herein referred to, a driving shaft having a driving member keyed thereto, a driven drum member having a slotted end, a clutch band extending round the driving member and having one of its ends secured to the driven drum, a two arm lever pivoted on one end of the drum, a pin having one of its ends fixed to one arm of the lever, said pin projecting laterally from the lever and through the slotted end of the driven drum and having its other end connected to the second end of the clutch band, and means for rocking the lever on its pivot and moving said pin along the slot for causing the clutch band to



grip the driving member, said means comprising a collar slidably mounted on the driving shaft and having a coned extension, a guide on said drum end, and a bar traversing the guide, said bar having its ends engaging, respectively, said coned extension and the second arm of the lever.

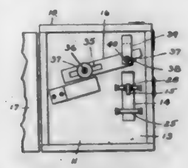
1,540,174. CLUSTER PLUG. CHARLES STANLEY MALLETT, Toronto, Ontario, Canada. Filed Nov. 26, 1921. Serial No. 517,971. 3 Claims. (Cl. 173—335.)

3. In cluster plugs, the combination with a cover having lamp base receiving orifices, of segmental conducting contact pieces of resilient material sprung into slots in the orifices and constituting resilient contacts with the bases of the lamps inserted into such orifices, said contact pieces ribbed transversely, such ribs pitched at the same pitch as the threads of the lamp bases, and resilient raised portions on said contact pieces constituted by double slotting the same longitudinally and embossing the portions lying between said slots.



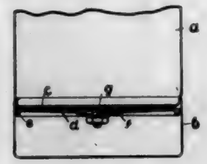
1,540,175. COIN-CONTROLLED OPERATING MECHANISM. ALEXANDER S. MANDEL, New York, N. Y. Original application filed Aug. 21, 1923, Serial No. 658,592. Divided and this application filed May 29, 1924. Serial No. 716,758. 2 Claims. (Cl. 194—58.)

1. A coin controlled operating mechanism comprising a lever fulcrumed intermediate its ends to swing about a horizontal axis, said lever being adapted for connection



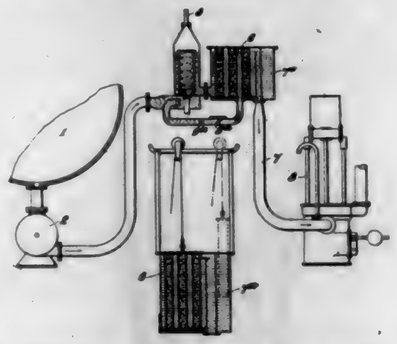
at one end with an operating rod, a tilt bar pivotally attached intermediate its ends to said lever at a point intermediate the fulcrum and said one end of the lever, said tilt bar having a coin receiving head at one end thereof, the opposite end portions of said tilt bar being balanced in weight, means for limiting the swinging movement of said tilt bar in respect to said lever, and a stop extending in the path of said tilt bar when the lever is in normal position and the tilt bar is in balanced position, said stop terminating short of the path of said tilt bar when the latter has been swung from balanced position by the weight of the coin on said coin receiving head.

1,540,176. CONDENSER. FRANK P. MARSH, New Haven, Conn. Filed June 23, 1922. Serial No. 570,396. 3 Claims. (Cl. 250—41.)



1. A condenser comprising a pair of end members formed of insulating material, posts connecting said end members, a plurality of stationary plates mounted on said posts, a shaft extending between said end members, collars mounted on said shaft, a sleeve mounted on said shaft and extending through one of said end members, movable plates arranged between said collars to turn therewith, a knob mounted on said sleeve, a shaft extending through said movable plates and said collars and adapted to rotate independently thereof, an independent movable plate secured to said shaft near one of said end members, and arranged between a pair of said stationary plates, and a collar secured to said shaft and arranged between said independent movable plate and the adjacent end member, said last named collar being secured to said shaft and contacting with said end member, said shaft having one end journaled in said sleeve and provided with a knob and its opposite end extending through and journaled in the opposite end member.

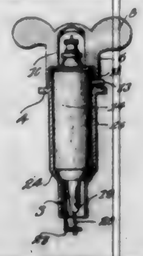
1,540,177. AUTO ALARM. JOSEPH MASSICOTTE, Waterbury, Conn. Filed June 22, 1923. Serial No. 647,153. 3 Claims. (Cl. 200—52.)



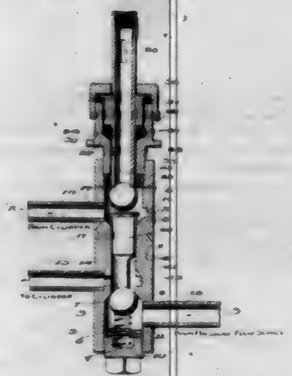
1. In a disturbance actuated circuit closer, a moving circuit closing member and a tripping device for actuating the same, said tripping device comprising a tripping member in the form of a bar-like device that is operatively supported by a pair of pins, said pins being in spaced relation, said bar-like device having a slot for one of said pins for permitting of longitudinal movement, the other of said pins being positioned at a higher elevation than said one pin, and said bar-like device having at the free end a bearing contact edge for resting upon said other pin.

1,540,178. ELECTRICAL COOKING APPARATUS. BRUNO MODELING, Berlin, Germany, assignor to the Firm of Auerlicht Gesellschaft m. b. H., Kommanditgesellschaft, Berlin, Germany. Filed Aug. 29, 1921. Serial No. 496,523. 3 Claims. (Cl. 219—44.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In an electrical heating apparatus having a heating body and a surface to be heated to which the heating body is applied, a pressure plate previously being slightly conical and bearing only on the edge before being tightened up and means for forcing said pressure plate against said heating body so as to assume a plane shape bearing on the whole lower surface of said heating body.



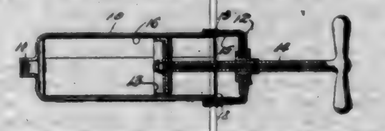
1,540,179. APPARATUS FOR THE DEAERATION OF BOILER-FEED WATER. DONALD BARNS MORISON, Hartlepool, England. Filed Sept. 21, 1921. Serial No. 502,188. 6 Claims. (Cl. 210—14.)



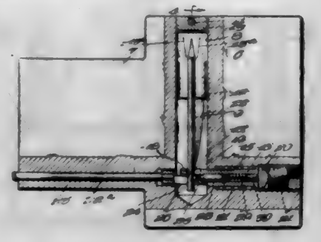
1. Apparatus for degassing boiler feed water, comprising a vessel into which the water to be treated flows, means for heating the water in said vessel, whereby the bulk of the contained gases are liberated, means for recirculating partially treated water back again to the inlet to said vessel, an outlet for the escape of the liberated gases from said vessel, a second vessel having an inlet to which the partially degassed water flows, an outlet from said second vessel, and means for supporting oxidizable material within said vessel between the inlet thereto and the outlet therefrom, whereby the partially degassed water is finally deoxidized during its passage through said second vessel.

1,540,180. THREADLESS SPARK PLUG AND ADAPTER THEREFOR. HARRY MUNROE, New York, N. Y. Filed July 25, 1923. Serial No. 653,733. 2 Claims. (Cl. 123—169.)

1. In a device of the character described, an adapter having a circumferential flange, spaced screw threaded projections extending above said flange, a threadless spark plug arranged within said adapter and having one end projecting therefrom, a coupling or cap member adapted to enclose said projecting end of the spark plug, downwardly extending, spaced, screw-threaded projections carried by said cap member and adapted to engage the projections on said adapter, a gasket surrounding said spark plug, and shoulders carried by said cap member adapted to automatically engage said gasket when the cap member is secured in position to effect a gastight connection.

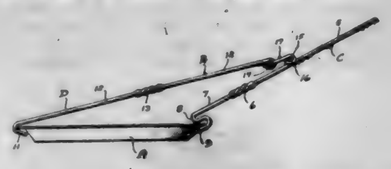


1,540,181. VALVE FOR CYLINDERS. HILMER OLSON, Hoquiam, Wash. Filed Nov. 6, 1924. Serial No. 748,242. 6 Claims. (Cl. 277—20.)



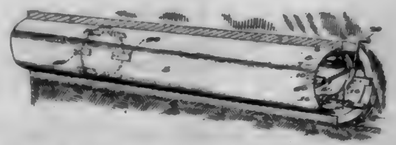
1. A valve comprising a tubular casing having a pair of valve compartments at the opposite ends thereof and a passage extending between and connecting said valve compartments, said valve compartments having seats for valves at their adjacent ends, each valve compartment having an inlet and one of said valve compartments having an outlet, said tubular casing also having an outlet communicating with said passage intermediate of said valve seats, two valves respectively disposed in said compartments for engagement with said seats, motion transmitting means between said valves for holding one of said valves away from its seat when the other of said valves is in engagement with its seat, and means for controlling flow of fluid through the outlet of said one valve compartment.

1,540,182. GREASE CONTAINER. LOUIS T. OUTHIER and EDWARD P. MALONE, Eureka, Calif. Filed Sept. 14, 1922. Serial No. 588,170. 1 Claim. (Cl. 206—56.)



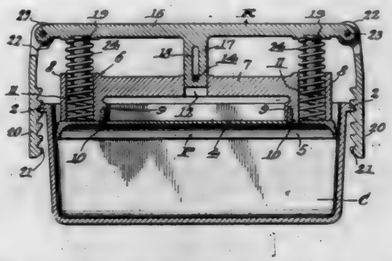
A grease cartridge including a cylinder formed from a single length of material with the adjacent edges free and unattached, one end of the cylinder being offset outwardly to form a shoulder having a flange extending beyond the shoulder.

1,540,183. DEPTH GAUGE. GUSTAV C. PEARSON, Denver, Colo., assignor to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed Aug. 29, 1921. Serial No. 496,361. 6 Claims. (Cl. 33—172.)



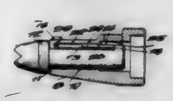
3. In a gauge of the character set forth, the combination with a body casing, of an indicator therein, a fulcrum member engaged with the indicator, an operating device also engaged with the indicator, and a spring device forming the indicator and operating device, said spring device being carried by the fulcrum member and bearing against the operating device.

1,540,184. PAN-HANDLING TOOL. DENTON REINMILLER, Racine, Wis. Filed Jan. 31, 1925. Serial No. 5,965. 2 Claims. (Cl. 294—28.)



1. A pan handling tool comprising, a handle portion formed of a single piece of wire bent substantially upon itself intermediate its ends for forming a handhold, and having its oposite end formed into S-shaped rim engaging hooks; a spanner arm formed of a single piece of wire bent substantially upon itself intermediate its ends, having a hook formed at one end thereof, and spaced apart eyes formed at its opposite end; a hinge disposed transversely of the handle portion at a point substantially midway thereof; and a bail pivotally mounted on said hinge pin and having a cross arm for receiving the eyes of said spanner arm.

1,540,185. MOLD. CLAUDE G. RICHARDS, Bolckow, Mo. Filed July 21, 1924. Serial No. 727,346. 9 Claims. (Cl. 25—128.)

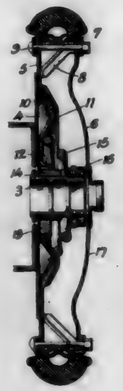


1. A collapsible mold comprising a longitudinally split body, strengthening and reinforcing members secured to the meeting edge portions of said body and having inwardly extending strain resisting flanges contacting with each other and having openings adapted for alinement, and locking levers connected to one of said flanges at points spaced along the same and having locking pins to extend through said openings to connect said flanges, there being means to simultaneously operate said levers.

1,540,186. MEAT COMPRESSOR. ALEXANDER RIEPEL and LOUIS C. LIEDTKE, Chicago, Ill. Filed Feb. 24, 1925. Serial No. 11,231. 1 Claim. (Cl. 100—57.)

In a device of the class described, a container, a pressure member comprising a foot plate located in the container and a bridge carried by the foot plate, a retainer having a finger slidable in the bridge, means for limiting the sliding movement of the finger in the bridge, compression spring means interposed between the retainer and the pressure member, and latches carried by the retainer and engaging the container.

1,540,187. DRILL SHARPENER. PETER H. SCHEIB and HJALMER C. GUSTAFSON, Denver, Colo., assignors to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed Apr. 30, 1923. Serial No. 635,705. 3 Claims. (Cl. 76—5.)

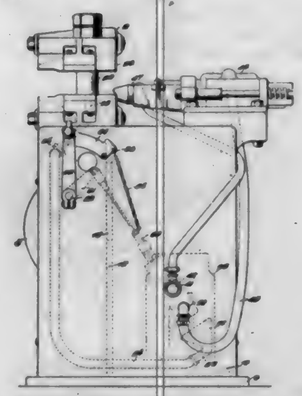


1. In apparatus of the character set forth, the combination with a fluid operated dollying hammer, of a dolly holder comprising a body having a dolly-receiving seat, a dolly that movably and detachably engages in the seat, a retainer for the dolly detachably mounted on the body, and dolly return means acting in opposition to the hammer and carried by the detachable retainer.

1,540,188. RAILROAD RAIL. PETER G. SEIGLE and GEORGE E. DEAN, Scranton, Pa. Filed Oct. 24, 1923. Serial No. 670,469. 3 Claims. (Cl. 238—145.)

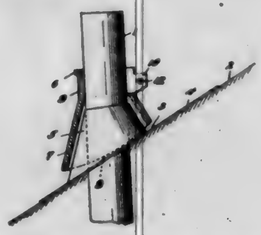
1. A railroad rail including companion alined base sections, companion alined head sections supported by the base sections in mating relation and having the joints therebetwen staggered with respect to the joints between the base sections, the head and base sections being provided one with web plates as well as with a reduced channel between the base portions of said plates and the other with a web accommodated between said plates in spaced relation thereto fitting in said channel, and expansion beads carried by said web to bear between said plates.

1,540,189. COMBINED TRANSMISSION AND BEARING. BENJAMIN F. SEYMOUR, Washington, D. C. Filed Nov. 26, 1923. Serial No. 677,125. 12 Claims. (Cl. 152—44.)



1. In a combined resilient transmission and bearing for vehicle wheels, the combination of a hub portion, a wheel rim mounted to have limited relative movement thereon, and cone elements eccentrically arranged cooperable therewith.

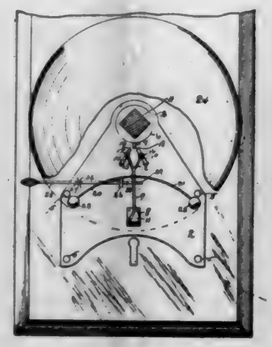
1,540,190. ANTISKID CHAIN. RAYMOND SHUB, Lemoyne, Pa. Filed Nov. 4, 1924. Serial No. 747,857. 4 Claims. (Cl. 152—14.)



1. A unit anti-skid chain comprising a main body and a pair of branches extending from one end of the body, said main body being long enough to surround a wheel felly and tire, and said branches being of such length as to jointly encircle a wheel spoke, one of said branches having at its end a key-hole shaped link comprising a relatively large bore and a contracted portion or slot, and the other branch having at its end an elongated flat link through which the said keyhole link can pass, and the other end of the chain body comprising links capable of passing through the large portion or bore of the keyhole link, and constructed to engage and interlock with the slotted portion thereof.

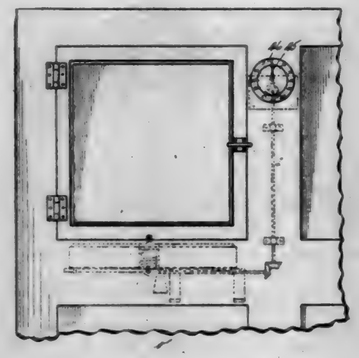
1,540,191. DRILL-STEEL-SHARPENING APPARATUS. ARTHUR H. SHAMB and OMAR E. CLARK, Denver, Colo., assignors to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed Apr. 24, 1923. Serial No. 634,295. 14 Claims. (Cl. 76—5.)

1. In a drill sharpening apparatus, the combination with a hollow base having a bottom and a top that constitutes a platform and providing a chamber therebeneath having an open side, of a fixed die on the platform, a movable die cooperating with the fixed die, a carrier for the movable die extending downwardly into the chamber, a cylinder member mounted upon the bottom and located in the chamber, said cylinder member being accessible and removable through the open side, a piston in the chamber, and means in the chamber connecting the piston and carrier to operate the latter by the former.



1,540,192. ROOF COLLAR. ADOLPHUS R. SMITH, Norfolk, Va. Filed May 22, 1923. Serial No. 640,807. 1 Claim. (Cl. 285—21.)

A roof collar made of a single piece of lead cast into shape to provide a skirt and a band, the band being provided with a lug which is slit to provide two ears, the collar being applied in position by first pulling apart the band to open up the slit and a bolt passing through apertures in the ears for drawing the ears together to contract the band to hold the collar in position.

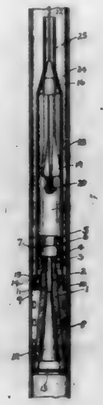


1,540,193. ALARM. THOMAS SWANN SMITH, Edmond, Okla. Filed Jan. 12, 1925. Serial No. 1,924. 2 Claims. (Cl. 116—96.)

1. In combination with a lock and the knob bolt thereof, a ring, a lug thereon, the former being on the bolt and both the ring and lug turning therewith, a flexible elongated shank, a plate upon which the flexible elongated shank is disposed, and which surrounds the knob bolt, forks radiating from the upper end of said shank, triggers on said forks to co-operate with the lug when the knob bolt is turned, lateral levers connected

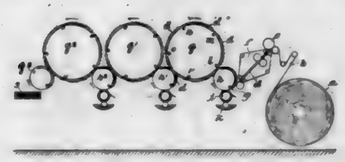
to the spring actuated shank and operated thereby to freely ring a bell, a bell, and means so cooperating with the shank that the bell will not ring at will.

1,540,194. ICE-WEIGHING DEVICE. WALTER E. SWINSCOE and GEORGE L. COLLINS, Waco, Tex. Filed Apr. 17, 1922. Serial No. 553,999. 5 Claims. (Cl. 265—65.)



1. In an ice weighing device for installation within a refrigerator, a pair of fulcrumed rocking members, an ice supporting tray mounted upon said members for rocking the same when loaded, a pair of balance beams in engagement and attached to said rocking members to be swung thereby, a counter-balance connected with one of the beams an arm extending from the counter-balanced beam, a crank shaft connected with said arm, and an indicator connected with and operated by the crank shaft.

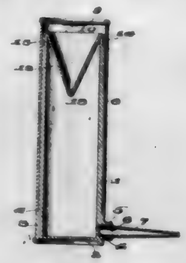
1,540,195. WELL-PACKER PLUG. HOMER C. THRIFT, Houston, Tex. Filed Apr. 6, 1923. Serial No. 630,189. Renewed Jan. 5, 1925. 11 Claims. (Cl. 166—13.)



6. In a device of the character described, a central tubular mandrel, packing means on the outer surface

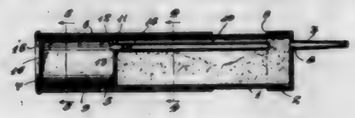
thereof, means comprising a tapered ring connected to said mandrel to protect said packing while said plug

is being introduced into the well, and additional means to disconnect said protecting means and expand said packing.



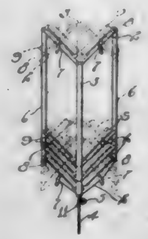
1,540,196. PRESS FOR PRODUCING MULTICOLORED PRINTS FROM COPPER CYLINDERS. FRIEDRICH O. v. TRAITTEUR, Frankenthal, Germany. Filed Mar. 12, 1925. Serial No. 15,154. 1 Claim. (Cl. 101—152.)

In a multi-color printing press, the combination of a pair of successive impression cylinders, a device for feeding sheets of paper to the first impression cylinder, a transfer cylinder for feeding the sheets from said impression cylinder to the other one and disposed between the two, a gripping device carried by each impression cylinder, and a plurality of gripping devices carried by the transfer cylinder; the successive gripping devices carried by the transfer cylinder being spaced apart a distance slightly greater than half the circumference of the impression cylinder, so that during each revolution of the transfer cylinder certain only of its gripping devices will be in position to remove sheets from the first impression cylinder to the exclusion of the remaining gripping devices, the gripping devices excluded during each revolution removing sheets from the said first impression cylinder during the next revolution of the transfer cylinder.



1,540,197. INSECTICIDE CONTAINER AND DISTRIBUTOR. ALBERT P. TREADWELL, Atlanta, Ga., assignor of one-half to Josiah Flournoy, Columbus, Ga. Filed Sept. 24, 1924. Serial No. 739,721. 1 Claim. (Cl. 43—147.)

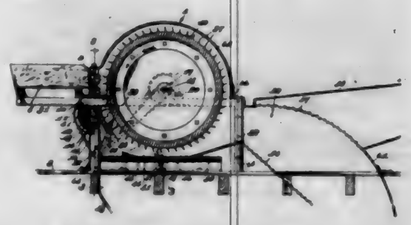
In an insecticide container and distributor, a container section comprising a tubular body closed at its forward end and provided with an outlet adjacent to its forward end, said tubular body being reduced externally adjacent to its rearward end, a funnel-shaped closure member adapted at its wider end to fit within the rearward end portion of said body and having at its wider end a flange adapted to fit on the externally reduced



rearward end portion of the body, and an air displacing section having a tubular body fitting slidably on the body of the container section and having an end member at its rearward end.

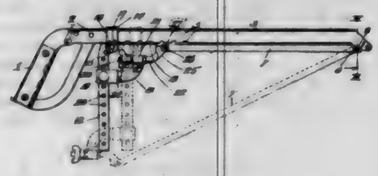
1,540,198. INSECTICIDE CONTAINER AND DISTRIBUTOR. ALBERT P. TREADWELL, Atlanta, Ga., assignor of one-half to Josiah Flournoy, Columbus, Ga. Filed Sept. 24, 1924. Serial No. 739,722. 1 Claim. (Cl. 43—147.)

An insecticide container and distributor comprising a container section having the forward end portion thereof provided with an outlet, a blow tube extending through the rearward end portion of the container section longitudinally thereof, an air displacing section having a tubular body slidably fitting on said container section and having a closure for the rearward end thereof, and a forwardly opening check valve in the rearward end portion of said tube.



1,540,199. EGG-TURNING DEVICE FOR INCUBATORS. HENRY H. TREFFER, Davenport, Iowa. Original application filed July 3, 1922, Serial No. 572,503. Divided and this application filed Jan. 27, 1923. Serial No. 615,349. 1 Claim. (Cl. 119—44.)

In a device of the type described, a vertically extending bar, a plurality of horizontally extending frames having their inner ends pivotally secured to said bar, and being disposed on each side of said bar, egg trays



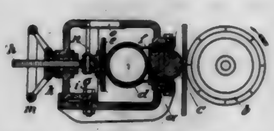
removably carried by said frames, the outer ends of said frames being operatively connected together, and links secured to certain of said frames and being adapted to support the frames.

1,540,200. MOSS-CLEANING APPARATUS. WESLEY DEUSETTE TYLER, Pinquemine, La. Filed June 12, 1924. Serial No. 719,686. 16 Claims. (Cl. 19—65.)

1. Apparatus of the character described comprising a plurality of cleaning machines for separating the refuse from moss, means associated with each machine against which the moss is discharged, means including exhaust fans for then withdrawing dust from the moss, means upon which the refuse falls from each machine and slides by gravity to a common point, and means operating beneath said point for conveying the refuse to a place of discharge.

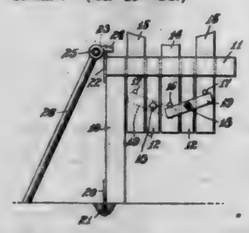
1,540,201. HACK SAW. ALBERT G. VOLTZ, Tulsa, Okla. Original application filed Mar. 20, 1922, Serial No. 545,153. Divided and this application filed Mar. 19, 1923. Serial No. 625,964. 4 Claims. (Cl. 195—34.)

1. A hack saw comprising a back having a handle at one end and a transverse pin at the other end, an arm depending from the back intermediate the handle and said pin, an angle bracket mounted on said depending arm and adjustable toward and from the back, a saw blade pivoted at its front end on said pin, and a holder pivoted to the rear end of the saw blades and longitudinally adjustable relative to the back, on the angle bracket, to tension the blade and to accommodate adjustments of said angle bracket toward and from the back.



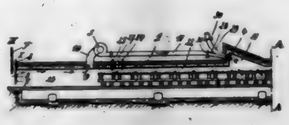
1,540,202. TOILET ARTICLE. MARIUS ZERILLI, Glendale, N. Y., assignor to Lew Joseph, New York, N. Y. Filed Mar. 1, 1924. Serial No. 696,128. 3 Claims. (Cl. 45—98.)

1. A toilet article having a back plate formed with a body section and a handle section, a front plate having an open body section and a handle section, an intermediate open frame extending around and between the outer margins of said back plate and front plate with its outer wall in line with the edges of said plates, a sheet of weighting material and a sheet of filling material within the body and handle portions of said intermediate frame of smaller area than that of said back plate, a toilet accessory within said open intermediate frame with its outer margin beneath the inner margin of the opening of said front plate and a sheet of filling material



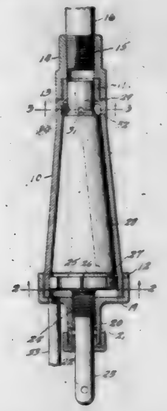
within the handle portion of said open intermediate frame in line with said toilet accessory and of substantially equal thickness therewith.

1,540,203. SKIN REST. BRUNO PAUL BOHACEK, Frankfort-on-the-Main, Germany, assignor to The Corporation of Maschinenfabrik Moenus A.-G., Frankfort-on-the-Main, Germany. Filed Aug. 24, 1921. Serial No. 495,091. 13 Claims. (Cl. 149—12.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L. 1313.)



2. In a machine as specified in claim one a series of individually controllable means to apply different pressures to different points of the pneumatic tube and to flatten the same to a different degree against different points of the rear face of the said ledge.

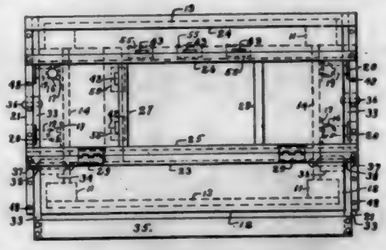
1,540,204. CAPPING HORSE. WILLIAM R. CANNON, and ELMER DAVIS, Okmulgee, Okla., assignors to Baker Brothers Glass Company, Okmulgee, Okla., a Corporation of Indiana. Filed Feb. 13, 1925. Serial No. 8,950. 7 Claims. (Cl. 49—14.)



1. A capping horse unit comprising a support, a group of vertically movable fingers forming a transverse hammock, and inter-connections between said fingers whereby movement of one of said fingers in one direction will cause movement of other of said fingers in the opposite direction.

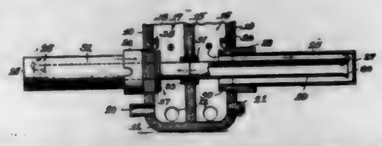
1,540,205. FURNACE FOR THE DIRECT REDUCTION OF METALLIC ORES. ARTHUR JULES FRANCOIS JOSEPH COUSIN, Jemeppe-sur-Meuse, Belgium, assignor to Société Anonyme John Cockerill, Seraing, Belgium, a Company of Belgium. Filed Mar. 14, 1923. Serial No. 624,946. 3 Claims. (Cl. 263—28.)

1. In a furnace of the kind described, a tunnel, a movable hearth, means whereby the said hearth is run continuously through the tunnel, a door closing the entrance of the tunnel above the movable hearth, a damper extending transversally above the movable hearth, a preparation zone comprised between the said door and damper, a pair of dampers extending transversally above the movable hearth, combustion zones comprised between the first damper and the said pair of dampers, each of the said combustion zones comprising inclined burners, whereby the flames of the said burners are projected directly towards the surface of the movable hearth, a damper closing the tunnel above the movable hearth, a cooling zone comprised between the pair of dampers and te closing damper, and a blower drawing air from the said cooling zone and forcing said air to the burners.



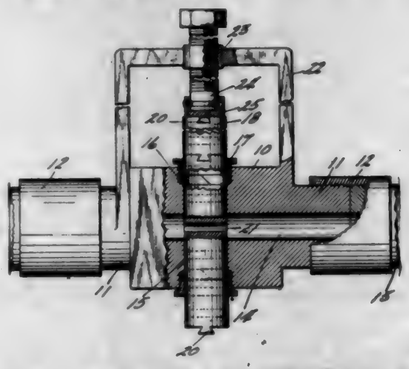
1,540,206. BLEEDER FOR LIQUID-STORAGE TANKS. CHARLES S. CRICKMER, Dallas, Tex., assignor to Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed Feb. 23, 1924. Serial No. 694,806. 12 Claims. (Cl. 210—51.)

1. In a tank bleeder, a housing having an inclined inner wall, and a member having an inclined outer wall contiguous to the inner wall of the housing to form a seal channel therebetween.



1,540,207. STENCIL-OPERATING MACHINE. CHARLES ECKMAN, Roselle Park, N. J. Filed Sept. 15, 1924. Serial No. 737,783. 9 Claims. (Cl. 101—126.)

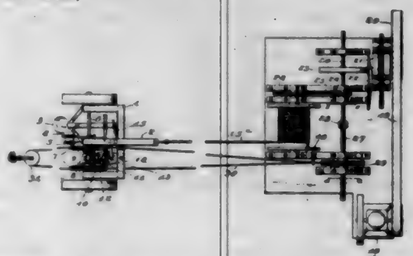
1. In a stencil operating machine a table for feeding thereon sheets of material, a stencil frame, a pair of movable supports therefor, situated at the opposite sides of said table and rigidly connected to each other, a means for raising and lowering said supports with said frame thereon, guide rods secured to each of said supports, to move therewith, and a means for keeping the



motion of said rods vertical secured to said table, thereby keeping said frame in all positions thereof parallel to said table.

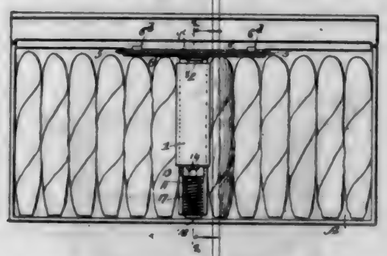
1,540,208. HEAT-EXCHANGE UNIT. JOHN EDWARD ENCANBRACK, Chicago, Ill., assignor of one-third to George F. Paul and one-third to Ralph N. Hartwick, both of Chicago, Ill. Filed Aug. 4, 1923. Serial No. 655,664. 8 Claims. (Cl. 257—254.)

3. A heat exchange unit comprising a hollow casing, a central partition dividing the interior thereof into side-by-side headers, said partition and the adjacent opposite walls of said casing provided with aligning apertures, a plurality of tubes mounted in the apertures of said partition and carried thereby and extending from opposite sides of said partition through the respective apertures in said casing, and a plurality of cylinders having open ends secured to the respective apertures and surrounding said tubes upon the exterior of said casing whereby fluid from one header is conveyed to the other header through the partition by the medium of said tubes in conjunction with said cylinders.



1,540,209. CHOKE VALVE. CHARLES E. FRASIER, Dallas, Tex. Filed May 10, 1923. Serial No. 637,967. 7 Claims. (Cl. 251—55.)

1. In a choke valve for oil pumping lines, a valve casing having a longitudinal passage and a vertical bore intersecting the passage, a plug element slidable through

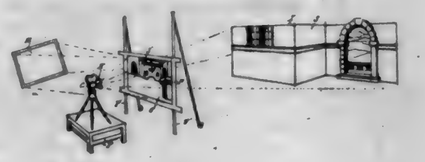


the bore and comprising replaceable plug members adapted to be ejected from the bore, said plug members each having transverse ports, and means for pushing the plug element through the bore.

1,540,210. PLANTING MACHINE. JOHN W. FURMAN, Point Township, Northumberland County, Pa. Filed May 25, 1922. Serial No. 563,567. 2 Claims. (Cl. 104—169.)

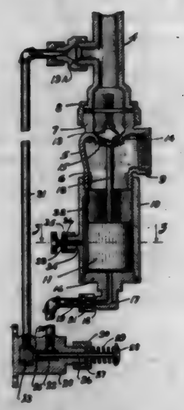
1. A traction apparatus comprising a truck, a stationary motor, a drum, a cable connecting the drum with the truck, speed changing gearing between the motor and drum, a device for adjusting said gearing to vary the speed of the drum including a sheave, a cable extending from the truck to said sheave and back to the truck, sheaves on the truck for winding and paying off the latter cable, and gearing on the truck for connecting either of the latter sheaves in driving relation with the truck wheel.

1,540,211. HUMIDOR. HENRY J. GAISMAN, New York, N. Y. Filed July 11, 1922. Serial No. 574,326. 12 Claims. (Cl. 131—30.)



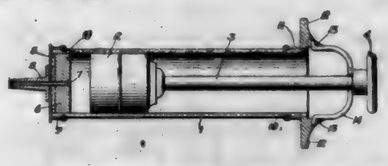
1. A humidor comprising a container, an absorbent material, means to support the absorbent material along a box wall, and means to maintain the container in operative relation to the absorbent material between the box walls.

1,540,212. FOLDING COT AND THE LIKE. JOSEPH GANNON, Walton, N. Y. Filed Jan. 24, 1922. Serial No. 531,846. 2 Claims. (Cl. 5—115.)



1. In a folding cot bed, a plurality of pairs of transversely extending legs, a pair of braces pivotally connecting each set of adjacent pairs of legs at the ends thereof, each pair of braces having a slot intermediate the ends thereof, a U-shaped collar slidably engaging the outer face and adjacent edges of each of said braces and a bolt extending through said slots and said collars for securing the collars to the braces.

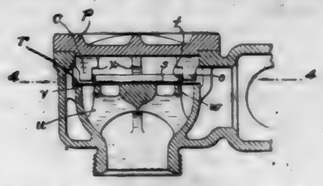
1,540,213. METHOD OF MAKING MOTION PICTURES. OSCAR R. HAMMERAS, Los Angeles, Calif. Filed Mar. 8, 1923. Serial No. 622,528. 7 Claims. (Cl. 88—16.)



1. The method of making moving pictures which consists in placing a transparent sheet of material in the foreground of a "set" of fixed scenery, marking on the transparent element the outlines of the fixed scenery, painting on the transparent element scenery which is complementary to the fixed scenery, and photographing the painted scenery on and the fixed scenery through the unpainted portion of the transparent element in a single exposure.

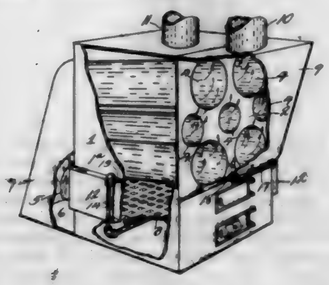
1,540,214. FLUSH VALVE. HAVARD F. HUDSON, Wichita, Kans. Filed July 28, 1923. Serial No. 654,346. 3 Claims. (Cl. 137—68.)

1. A flushometer comprising a body member formed in the shape of a T, said member having two axially aligned openings, and a third opening communicating with the first-mentioned openings, a conical valve seat in one of said aligned openings, a valve member co-operatively related to the valve seat, the opening having the valve seat being adapted to have the water supply pipe connected thereto, a cylinder connected to the body member, a piston in said cylinder, means for operatively connecting the piston and the valve member, a cylinder head secured to said cylinder, a pipe connecting the space between the end of the piston with the supply side of the valve, a normally closed valve in said pipe, said cylinder wall having a groove on its inner surface and a screw operatively associated with said groove for the purpose of adjusting the effective area thereof.



1,540,215. **SYRINGE.** ROBERT E. KLETT, Ridgewood Park, N. J., assignor to Klett Manufacturing Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 12, 1920. Serial No. 365,177. 10 Claims. (Cl. 128—234.)

1. In a syringe having a non-metallic barrel, a groove adjacent the end thereof, a band fitting in said groove, a ferrule fitting over said band, and means securing the ferrule and the band.

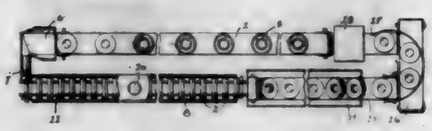


9. A syringe comprising a non-metallic barrel, and end fused therein, a plug having a ground fit, and a nozzle passing through the plug and the end.

1,540,216. **CHECK-VALVE MECHANISM.** STRICKLAND L. KNIGHT, Philadelphia, Pa., assignor to William Sellers & Company, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 10, 1922. Serial No. 551,091. 5 Claims. (Cl. 277—44.)

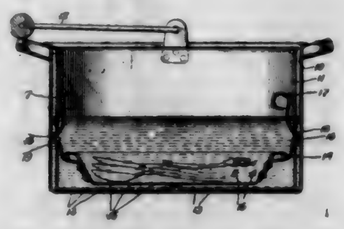
1. A valve mechanism interposed between a source of pressure fluid supply and a pressure fluid reservoir comprising a valve-body, a septum dividing the body into inlet and outlet chambers and provided with an annular opening circumscribed by concentric raised seats, and a light resilient annular valve, said valve adapted to flex under superimposed pressure to conform to said seats and bear on the surfaces thereof.

1,540,217. **FURNACE.** CHRISTIAN A. LAUSEN, Council Bluffs, Iowa. Filed June 17, 1924. Serial No. 720,606. 4 Claims. (Cl. 126—113.)



1. The combination with a hot air furnace, said furnace comprising a casing, a fire box having a grate therein, and flues above said fire box, of means for supplying aqueous vapors and steam to the fire box, said means comprising water jackets carried by the casing and heated by the fire box and means for conveying the aqueous vapors and steam from the water jackets and discharging the same beneath the grate.

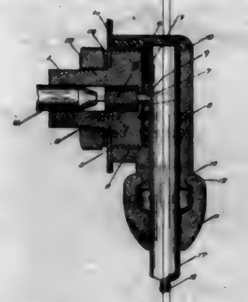
1,540,218. **PROCESS OF REFINING MINERAL OILS.** WILLIAM T. MALONEY, Olean, N. Y. Filed Mar. 18, 1924. Serial No. 700,167. 10 Claims. (Cl. 196—41.)



1. The process of making transformer oil which consists in exposing mineral oil to the action of an oxygen containing gas to oxidise the sludging components, and adding an alkaline reagent to precipitate the oxidised substances.

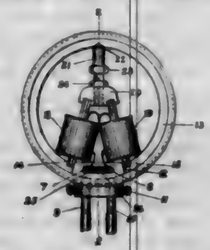
1,540,219. **VULCANIZING APPARATUS.** CARMON A. MYERS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 17, 1921. Serial No. 437,791. 4 Claims. (Cl. 18—4.)

1. A vulcanizing apparatus for use with molds embodying annular mating sections comprising, an elongate heating chamber having an entrance end, co-operating conveyor elements operable to transport the molds in a substantially horizontal plane toward the entrance end of the chamber said conveyors embodying means for separating and assembling the respective sections of certain molds as they are being transported, a conveyor adapted to traverse the chamber, and a chute adapted to feed the assembled molds from said first conveyors to said second conveyors and to turn them into an upstanding position during such feeding operation.



1,540,220. **SILVER-CLEANING APPARATUS.** ANDREW W. NELSON, Terre Haute, Ind., assignor to Columbian Enameling & Stamping Co., Terre Haute, Ind., a Corporation of Indiana. Filed Jan. 22, 1925. Serial No. 3,918. 2 Claims. (Cl. 207—7.)

1. In a metal cleaning apparatus, the combination of an outer vessel having a nonmetallic surface, an inner vessel of smaller diameter fitting therein and having a perforated bottom and a circumferential groove in the side thereof and a perforated aluminum plate fitting into said groove by spring members attached to said plate.

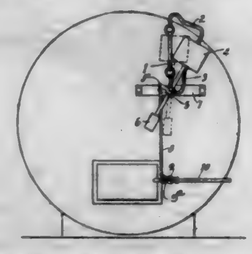


1,540,221. **BINDING POST FOR ELECTRIC CABLES.** EDWARD B. NOWOSIELSKI, Newark, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Sept. 24, 1920. Serial No. 412,441. 2 Claims. (Cl. 173—340.)

1. A quick detachable binding post comprising a female member provided with a cable receiving bore, another bore at an angle to the same, a partition separating said bores, said partition being formed integral with the female member, an end being provided with a centrally located aperture, a male member of insulating material fitting snugly into the last mentioned bore, a tapered conducting pin embedded within said male member and passing through the aperture in the partition,

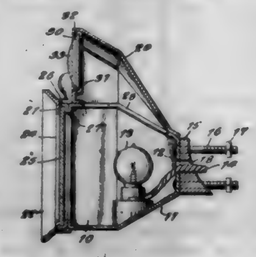
said male member having an extension to receive and support a conductor in end to end contact with said tapered pin as and for the purpose described.

1,540,222. **RECEIVER.** EDWARD B. NOWOSIELSKI, Bloomfield, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Apr. 12, 1922. Serial No. 551,878. 13 Claims. (Cl. 179—114.)



1. In a device of the class described, a casing consisting of, a body and an ear piece with a diaphragm associated therewith, a magnet having pole pieces abutting against its extremities, said pole pieces extending toward the central portion of the casing into operative relationship with the diaphragm and having windings thereon and means pressing against said pole pieces at points near the central portion of the casing for holding them securely against the magnet ends.

1,540,223. **DOCTOR FOR CALENDER ROLLS.** OTTO QUANTZ, Philadelphia, Pa., assignor to Dill and Collins Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 26, 1922. Serial No. 584,394. 11 Claims. (Cl. 92—74.)

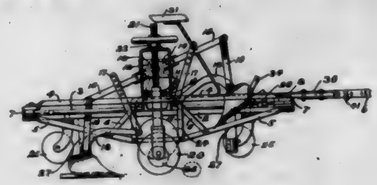


10. In a doctor for calender rolls, the combination of a pad which is adapted to contact with the surface of a calendar roll to clean the same, a plate upon the top side of which the said pad is secured, the inner edge of which plate is in parallel relation to the surface of the adjacent calender roll, an angle iron supported upon the upper side of the rear edge portion of said plate, the inner flange of said angle iron being vertical to the said plate, a clamping plate for clamping the said pad to the said pad supporting plate, means arranged at intervals for pivotally connecting the said clamping plate to the said angle iron, springs arranged at intervals for pressing the inner edge portion of the said clamping plate yieldingly against the said pad, arms situated in spaced relation to each other and pivotally supported upon stationary pivots at their lower ends, and means for pivotally connecting the upper ends of said arms to the opposite end portions of the said pad supporting plate.

1,540,224. **AUTOMATIC FUEL CUT-OFF FOR STEAM BOILERS.** THOMAS H. ROLAND, San Diego, Calif. Filed Sept. 22, 1921. Serial No. 502,522. 2 Claims. (Cl. 122—504.)

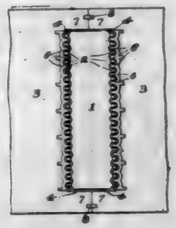
1. An automatic fuel cutoff for steam boilers, including a boiler, a supporting member, a supporting lever pivotally mounted thereon adapted to assume a nearly vertical position, a water receptacle mounted on the one end thereof, a weight mounted on the other end thereof said weight normally overbalancing said water receptacle, flexible water conductors communicating with said receptacle and with the water gage of said boiler, a fuel feed controlling valve, means connecting said fuel controlling valve with said lever comprising an arm extending from said lever and a connecting rod connecting the extended end of the arm with said lever and said valve.

1,540,225. **AUTOMOBILE LICENSE LAMP.** RICHARD MICHAEL RYAN, St. Louis, Mo. Filed Feb. 24, 1922. Serial No. 538,930. 3 Claims. (Cl. 40—132.)



1. An automobile license lamp including a lamp casing having a front opening, a closure for the said opening including a transparent license plate and a door hinged to the casing adjacent the side of the opening, the said door presenting vertical guides open at the top to receive the said plate therein, and a resilient strip projecting horizontally from the casing adjacent the upper edge of the opening to engage over and press upon the upper edge of the said license plate when the said door is closed, said strip having a depending shoulder engageable with the inner face of the said plate for pressing outwardly against the same.

1,540,226. PROCESS OF BEATING STUFF FOR THE MANUFACTURING OF PAPER IN CONICAL STUFF BEATERS, AS JORDAN ENGINES, MARSHALL ENGINES, ETC. ANDERS EMIL RYBERG, Drammen, and PEDER CHRISTIAN SCHAANNING, Christiania, Norway. Filed Nov. 4, 1922. Serial No. 598,987. 1 Claim. (Cl. 92—27.)



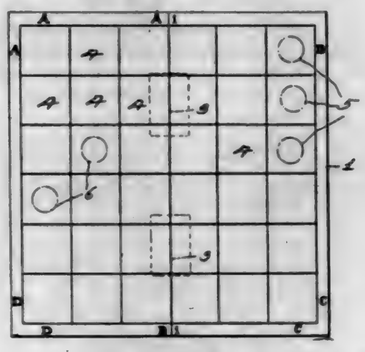
In the process for beating paper-stuff the introduction of compressed air into the paper-stuff before of during its admission into the conical beater.

1,540,227. SCALE BALANCE, AUTOMATIC LIFT, TWO-WAY RIDING PLOW. LEE W. SANDERS, Burley, Idaho. Filed Mar. 14, 1923. Serial No. 624,965. 4 Claims. (Cl. 97—27.)

1. In a plow of the class described the combination of a pivot tongue; a vertical king bolt on which the end of said tongue is pivoted; a bevel gear secured on the end of the tongue and carried on said king bolt; a segment gear with teeth meshing with the teeth of said bevel gear; a horizontal shaft on which said segment gear is journalled; a lift shaft in which said horizontal shaft is carried and to which said segment gear is secured; a balance arm secured on said lift shaft; and plows operatively connected with said balance arm.

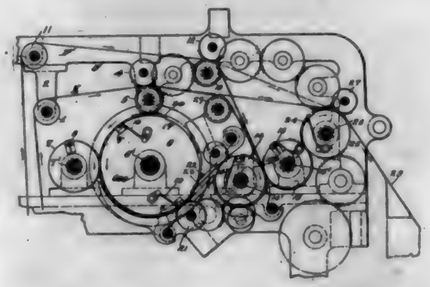
1,540,228. BOOK COVER. JOHN SCHADE, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a Voluntary Trust Association of Copartnership, having as trustees F. B. Towne, E. S. Towne, J. M. Towne, and F. W. Wilson. Filed Oct. 29, 1924. Serial No. 746,585. 5 Claims. (Cl. 281—4.)

3. A book cover comprising a metal back having along its edges hinge elements, and flexible side covers that are longer than said back and are cut away at their inner portions to form recesses, the inner edges of said recesses being of substantially the same length as that of said back and having hinge elements secured thereto, which are connected with the hinge elements of said back, said covers having portions that extend across the back of the book immediately beyond both ends thereof.



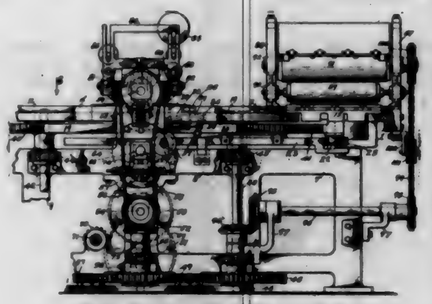
1,540,229. SOUND REPRODUCER. HANS SCHARF, Berlin, Germany. Filed Oct. 27, 1923. Serial No. 671,148. 3 Claims. (Cl. 181—31.)

1. A sound reproducer comprising a vibratory diaphragm, a sheet of resilient material engaging and extending over one face of the diaphragm and beyond the periphery thereof, and a support encircling the dia-



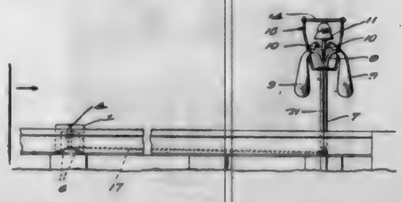
phragm and of greater size than the diaphragm, said sheet adjacent its periphery being secured to said support.

1,540,230. GAME. THEODORE H. SCHROR and GEORGE L. SCHROR, Albion, N. Y. Filed Sept. 12, 1922. Serial No. 587,697. 1 Claim. (Cl. 273—130.)



A game comprising a game board, a plurality of spaces carried by the game board, said spaces being six in alignment at right angles and adapted to receive ten discs, said discs being adapted to be aligned by opposing players, with the object of securing a straight line of six discs entirely across the board at a right angle to the direction of play of opponent without being blocked by the opposing player, said players playing at right angles to each other.

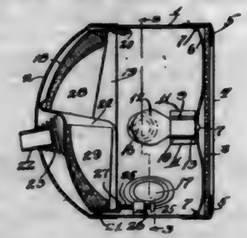
1,540,231. ASSOCIATING MECHANISM. EDWARD P. SHELDON, New York, N. Y., assignor to R. Hoe and Co., New York, N. Y., a Corporation of New York. Filed Nov. 28, 1922. Serial No. 603,808. 16 Claims. (Cl. 270—44.)



1. The combination with means for associating a cut sheet and a web, means for cutting a sheet from the web after association, and means located beyond the associating and cutting mechanism for positively seizing and advancing the associated web and sheet so that the tail of the sheet is prevented from slipping back into the cutting line when the sheet is severed from the web.

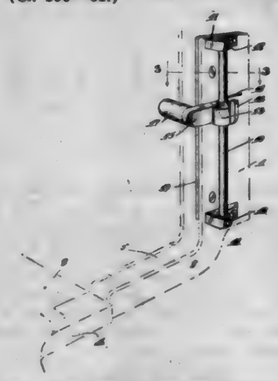
1,540,232. PLATE-PRINTING MACHINE. EDWARD P. SHELDON, Brooklyn, N. Y., assignor to R. Hoe and Co., New York, N. Y., a Corporation of New York. Filed Jan. 15, 1923. Serial No. 612,592. 14 Claims. (Cl. 101—160.)

1. In a plate printing machine, the combination of inking mechanism, wiping mechanism, and an impression mechanism, a frame having curved ends and straight portions between the ends, a plurality of plate carriers, and means for positively driving the carriers independently of each other about the frames and successively under the inking, wiping, and impression mechanisms.



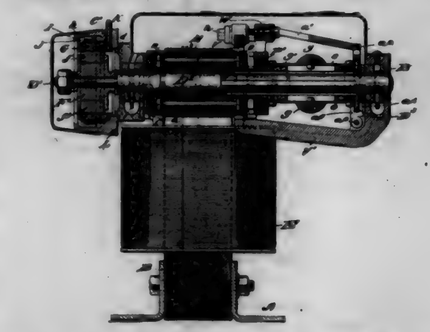
1,540,233. RAILROAD-CROSSING SIGNAL. JAMES DUNN SWANCY, Sr., Augusta, Ga. Filed Dec. 27, 1924. Serial No. 758,867. 2 Claims. (Cl. 246—294.)

1. A railroad crossing signalling device comprising a standard, a head at the upper end of said standard, semaphore arms pivotally mounted upon said head, links connected to the inner ends of said arms, a vertically disposed pull rod connected with the inner ends of said links, a frame also supported on the upper end of said standard, a shaft journaled for rotation in said frame, a mechanically operated bell carried by said shaft, a crank arm on the shaft, said pull rod being connected with said crank arm, and a train controlled cable for operating said arms and bell.



1,540,234. HEADLIGHT. CHARLES H. ALLEN and GLENN S. SOSSMAN, Chicago, Ill., assignors, by mesne assignments, to The Allenlite Company, a Corporation of Illinois. Filed June 16, 1922, Serial No. 568,774. Renewed Nov. 15, 1924. 3 Claims. (Cl. 240—41.)

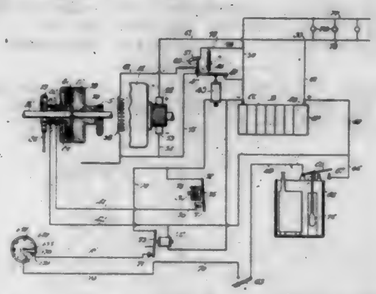
1. A headlight comprising a casing, two reflectors adjustably mounted in the casing, said reflectors being positioned on opposite sides of a horizontal longitudinal plane taken through the casing, one of said reflectors being offset rearwardly relative to the other reflector, a



support extending transversely of the casing in front of said reflector members and below the axis of the casing, and a light source mounted on said support.

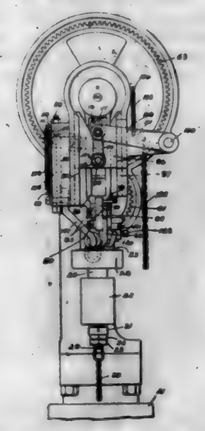
1,540,235. SLUG GUIDE. HARRY C. ALLEN, Charlotte, N. C. Filed Feb. 4, 1924. Serial No. 690,547. 5 Claims. (Cl. 199—61.)

1. In a slug guide for type-setting machines, an arm, a pivot for mounting said arm, a spring mounting for holding said arm in adjusted vertical position to locate it with reference to a slug, to pass thereby, and to permit said arm to yield to release said slugs should they become clogged in the type-setting machine.



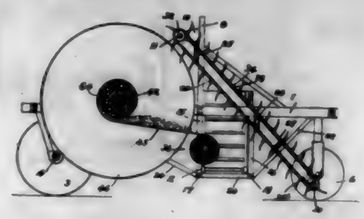
1,540,236. COMBINED STATIONARY TRANSFORMER AND CONVERTER. HARRY M. ABERNETHY and HARRY D. ABERNETHY, Cleveland, Ohio. Filed Sept. 16, 1919. Serial No. 324,287. 5 Claims. (Cl. 171—123.)

1. An apparatus of the character described comprising a stationary transformer having stationary primary and secondary coils with an iron core, in com-



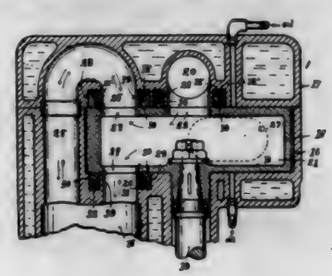
bination with a revolvable shaft, an armature formed of a series of soft iron laminations mounted on said shaft, a commutator mounted on said shaft, swinging brushes adapted to contact with said commutator, automatically operated means mounted on said shaft and adapted to disconnect the brushes from the commutator, and means for revolving said shaft and armature at a fixed, predetermined and unchangeable speed while the armature windings are free of electrical energy.

1,540,237. ELECTRIC-POWER-PLANT SYSTEM. VINCENT G. APPLE, Dayton, Ohio. Original application filed Sept. 15, 1919, Serial No. 324,021. Divided and this application filed Apr. 28, 1920. Serial No. 377,401. 2 Claims. (Cl. 290—2.)



1. In a system of the character described providing a dynamo electric machine; a water cooled engine to drive the machine; a battery to energize the dynamo to start the engine; an automatic switch to connect the battery and dynamo, in combination with a pump driven by the engine to constantly pump water thru the jacket of the engine when the engine is running; a tank to receive the water from the jacket; means to heat the water in the tank and a temperature responsive means to control said heating means.

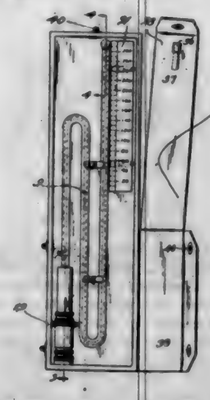
1,540,238. MACHINE FOR TUCKING AND TRIMMING FABRIC-COVERED INNERSOLES. HARRIS A. BALLARD, Boston, Mass., assignor to General Shoe Machinery Company, Boston, Mass., a Corporation of Maine. Filed Mar. 8, 1921. Serial No. 450,673. 19 Claims. (Cl. 12—20.)



9. In an innersole machine, a pair of coacting inner and outer tucking fingers, the outer finger having its operative end shaped to engage the feather and also the wall of the rib of the innersole to crowd the rib inwardly, and the inner finger having its operative end shaped to engage the inner wall of the rib at the base thereof, means by which the operative end of the inner finger is movable transversely across and in contact with the face of the innersole transversely of the said rib, and mechanism for moving said fingers toward and from the face of the work.

1,540,239. GRAIN LOADER. CHARLES HENRY BARKER, Tregarva, Saskatchewan, Canada. Filed July 30, 1920, Serial No. 400,054. Renewed Feb. 27, 1925. 9 Claims. (Cl. 56—345.)

1. In a grain loader, a pick-up device for picking up the grain from the ground and discharging the same, and a web receiving the grain discharged from the pick-up device for winding it between successive turns of the web and means for winding and unwinding said web.



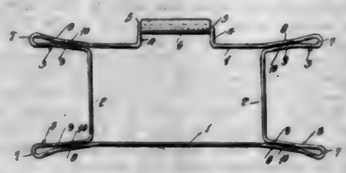
1,540,240. LEAKPROOF JOINT. WILLIAM M. BAUMHECKEL, Milwaukee, Wis. Filed Sept. 22, 1921. Serial No. 502,416. 4 Claims. (Cl. 123—190.)

1. A mechanical compression joint comprising two relatively movable members each provided with a port, an annular recess encircling but walled off from one of said ports, a continuous ring seated in the entrance to said annular recess and movable into and out of said recess to have sliding engagement with the opposite port carrying member, said continuous ring having an inclined face located within said annular recess, and a split ring having a face to engage the bottom of said annular recess, and an inclined face to engage the inclined face of said continuous ring, and serving to resiliently thrust said continuous ring into resilient contact with the opposite port carrying member.

1,540,241. SPHYGMOMANOMETER. GEORGE F. BEACHLER, Cleveland, Ohio. Filed Apr. 8, 1922. Serial No. 550,844. 10 Claims. (Cl. 73—44.)

1. In a sphygmomanometer, the combination with a pneumatic bag and a U-shaped mercury tube, of a detachable means connecting the bag and one end of said tube, a valve incorporated in the connecting means adapted to automatically close when the pneumatic bag is detached from the tube, a casing, means for securing the mercury tube in said casing, said casing having a

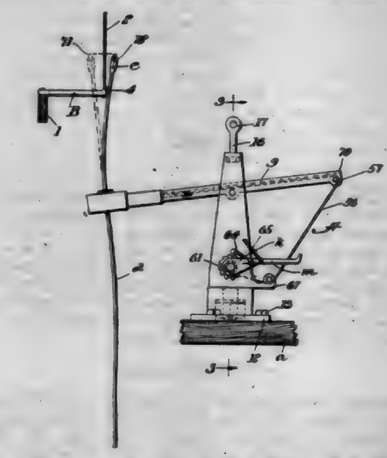
cover and means for making an air-tight seal at the other end of the mercury tube whenever the cover of said casing is closed.



1,540,242. HOLDER FOR COUNTER CHECK BOOKS AND THE LIKE. THOMAS V. BELL, Montreal, Quebec, Canada. Filed Apr. 23, 1921. Serial No. 463,942. 3 Claims. (Cl. 45—61.)

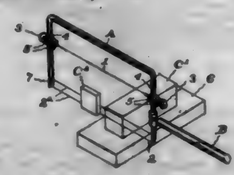
1. A book holder comprising a back formed of a pair of plates and a pin hingedly connecting the inner edges of the plates, covers attached to the outer edges of the plates and an intermediate book support hinged to said pin.

1,540,243. SHOCK ABSORBER. LAWRENCE E. BROUGHER, McFarland, Calif. Filed July 21, 1924. Serial No. 727,211. 3 Claims. (Cl. 267—17.)



1. In a vehicle having a side frame member and a spring carried by the axle and pivoted at one end to said member, the combination of a lever to an intermediate portion of which the other end of the spring is pivoted, a link pivoted to the side frame and to said lever, movable engaging means between the free end of said lever and the side frame, and a cable comprising a tension spring connected to the free end of said link, passing about a pulley carried by the axle and attached at its other end to the side frame.

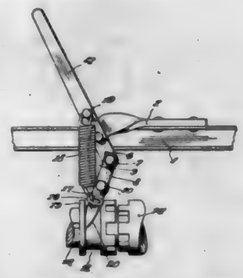
1,540,244. CLOTHESLINE REEL. GUST A. BERGLUND, Joliet, Ill. Filed May 24, 1924. Serial No. 715,625. 2 Claims. (Cl. 242—96.)



1. A clothes line reel comprising side members one of which is offset to provide a handle carrying element, a handle secured to said element, end members, guards extending beyond the end members, and the offset portion being bent to provide clothes line retaining eyes.

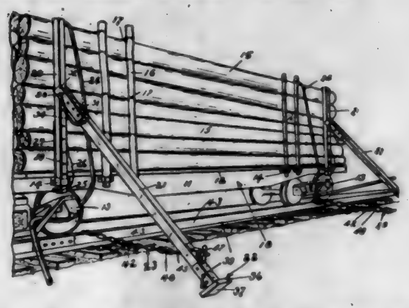
1,540,245. WELL APPARATUS. JOHN BERGSTEN, Torrance, Calif., assignor, by mesne assignments, to Standard Machine Company, a Corporation. Filed Feb. 28, 1923. Serial No. 620,709. 11 Claims. (Cl. 212—29.)

1. The combination, with a well derrick, of a sucker rod lifter mounted therein, said sucker rod lifter comprising a pivoted arm having a jaw portion and means adapted to simultaneously close said jaw portion and move said arm about its pivot point, whereby any sucker rods engaged by said jaw portion may be lifted.



1,540,246. CUTTING DEVICE FOR BUTTER AND LIKE PRODUCTS. STEVE BLASSIS, Ashtabula Harbor, Ohio. Filed Dec. 10, 1923. Serial No. 679,551. 4 Claims. (Cl. 31—27.)

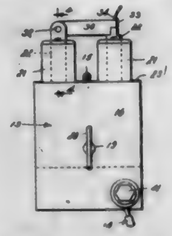
1. A cutter for butter and like products including a frame having spaced resilient arms, and a pair of independent cutting wires connecting the resilient arms, one of the wires being held taut and serving to flex the arms inwardly a sufficient amount to maintain looseness in the other wire.



3. A cutter for butter and the like, including a resilient U-shaped frame having intersecting notches in the arms thereof, said notches being disposed in an angular relation to each other and having open ends admitting of a wire being readily inserted in the notches or removed therefrom, and a cutting wire having looped end portions which have a quickly detachable interlocking engagement with the intersecting notches, being adapted to be readily inserted in the notches or removed therefrom through the open ends of the notches, the resilience of the frame serving to keep the wire taut and at the same time holding the looped end portions thereof in engagement with the notches.

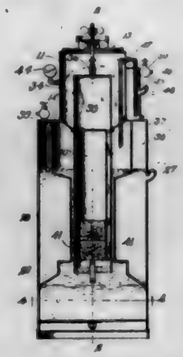
1,540,247. CLUTCH-SHIFTING DEVICE. CHARLES L. BOWMAN, Bowdil, Ohio. Filed Nov. 8, 1922. Serial No. 599,696. 4 Claims. (Cl. 74—14.)

1. The combination with a slidable clutch member, of a rocking arm engaging said member, a transverse elongated eye upon one side of said arm below the pivot of the same, a lever mounted above the rocking arm, a pin and slot connection between the lower end of the lever and the upper end of the rocking arm, and a contractile spring having its lower end engaged in the said transverse elongated eye and its upper end engaged with the lever above the fulcrum of the same.



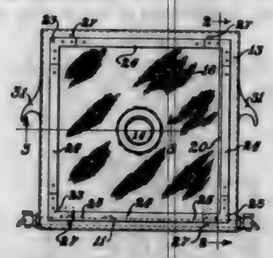
1,540,248. METHOD AND APPARATUS FOR UNLOADING POLES OR THE LIKE FROM CARS. FRED A. BROWN, Los Angeles, Calif. Filed Apr. 23, 1923. Serial No. 634,166. 16 Claims. (Cl. 214—44.)

1. The hereindescribed method of unloading poles from a car on which they are held by stakes including, bracing the poles at one side of the car, tying the poles on the car, releasing the stakes, and then releasing the tying.



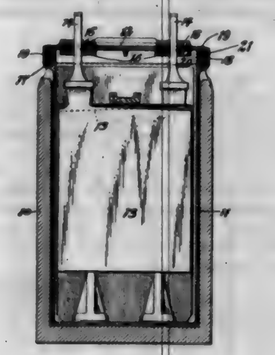
5. Apparatus for use in unloading poles from a car including, a post adapted to be arranged to extend upwardly at one side of the car to hold the poles at that side of the car, and a brace secured to the post and extending therefrom to the ground.

1,540,249. WIRE-GROUNDING DEVICE. FRED A. BROWN, Los Angeles, Calif. Filed Apr. 23, 1923. Serial No. 634,168. 15 Claims. (Cl. 173—273.)



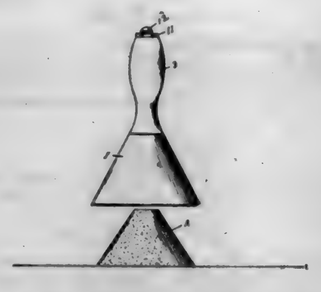
13. A device for grounding a wire being worked on a cross arm including, a body having two spaced jaws adapted to receive the cross arm, and a connecting part extending between the upper ends of the jaws and adapted to be engaged by the wire, a screw carried by one of the jaws for clamping the body on the cross arm, a pair of spaced pivot pins extending upwardly from the connecting part, rollers carried on the pins to guide the wire in engagement with the connecting part, a gate pivotally connected with the upper end of one of the pins, spring catch means for releasably connecting the gate with the other pin, a wire having one end connected with the body, and a grounding stake connected with the other end of the wire.

1,540,250. ACETYLENE-GAS GENERATOR. JAMES H. BROWN, Butte, Mont. Filed Oct. 16, 1924. Serial No. 744,032. 8 Claims. (Cl. 48—22.)



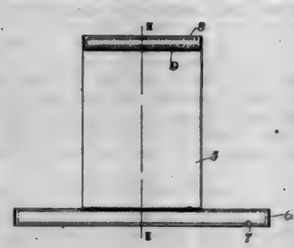
1. An acetylene gas generator including a casing forming in the lower portion thereof a water chamber, an inner casing cylinder within the said casing forming with the latter a pressure chamber above the surface of the fluid therein and having a lower flared end connected to the casing and spaced above the base thereof, the flared portion being recessed to permit the fluid to pass into as well as around the said inner cylinder, said inner cylinder forming with its upper portion and the upper portion of the casing a gas storage chamber having an outlet, a gas collecting cylinder opening downwardly within the casing and into the fluid thereof, said cylinder being within and in spaced relation to the said inner casing cylinder and having a valved outlet at its upper end opening into the gas storage chamber, and a carbide holder fixed within the lower portion of the said collecting cylinder and removable with the latter through the top of the casing and toward and away from which the surface of the fluid within the collecting cylinder is shiftable under control of the opposing pressures within the collecting cylinder and the said pressure chamber.

1,540,251. CLOTH HOLDER FOR FILTER PRESSES. WILLIAM BUCKLEY and JOHN S. CARPENTER, Chicago, Ill.; said Carpenter assignor to said Buckley. Filed Feb. 28, 1923. Serial No. 621,722. 3 Claim. (Cl. 210—195.)



1. In a filter press unit, a base plate, a frame connected with said base plate by oblique shoulders, said frame being of greater thickness than said plate, a supporting screen parallel to said plate and contacting said shoulders, a fabric covering said screen and extending beyond said shoulders onto the side surfaces of said frame, a fastening frame secured to said first-named frame at said shoulders and extending along said shoulders and contacting with said fabric to hold the same in close contact with said shoulders and said supporting screen.

1,540,252. STORAGE BATTERY. RUFUS N. CHAMBERLAIN, Chicago, Ill., assignor to Gould Storage Battery Company, Depew, N. Y., a Corporation of New York. Filed Aug. 27, 1921. Serial No. 496,000. 2 Claims. (Cl. 215—30.)

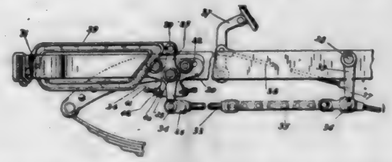


1. A storage battery comprising a tank adapted to contain an electrolyte and provided on its upper edge with a channel one side of which is provided with a plurality of ribs extending continuously around the entire respective side of said channel, a cover adapted to be placed over said tank and having a depending flange adapted to project downwardly into said channel but spaced apart from the sides thereof and provided on one of its sides with ribs extending continuously around the respective side of the cover flange, and a filling of sealing cement arranged in said channel and engaging with the respective ribs of the channel and flange, thereby forming an interlock for the closure and a lengthened path for possible seepage of the electrolyte from the interior to the exterior of the tank.

1,540,253. GOLF-BALL TEE MOLD. JOHN M. COLLINGWOOD, Wichita, Kans. Filed July 9, 1923. Serial No. 650,417. 1 Claim. (Cl. 273—33.)

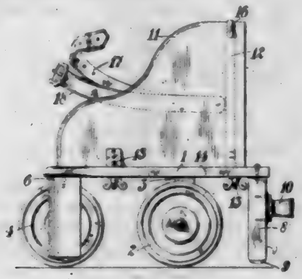
A golf tee mold comprising a cup member having a socket leading in from one end thereof, said socket being provided at its outer portion with a cone shaped surface and at its inner portion with a cylindrical surface the edge of which merges with the cone shaped surface at an angle, a shaft passing through the cup member and having an end portion which enters the socket within a cylindrical surface thereof, a cylindrical plunger mounted upon the shaft and adapted to fit snugly in the cylindrical surface of the socket, said plunger being provided with a convexed face, a collar mounted upon the shaft and housed within the member and a spring interposed between the said collar and a fixed portion of the cup member and being under tension with a tendency to normally hold the plunger within the cylindrical surface of the socket.

1,540,254. HAIR CURLER. ELIZABETH COOK, Salt Lake City, Utah. Filed Oct. 15, 1924. Serial No. 743,678. 1 Claim. (Cl. 132—43.)



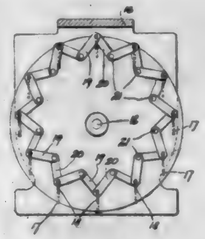
A hair curler composed of a flexible apron of substantially rectangular form, a flexible non-resilient rolling member secured along one end of said apron and normally extending in the plane thereof beyond the edge of the apron and a stiffening member secured along the other end of said apron and parallelly adjacent which stiffening member the aforesaid extending end of the rolling member is bendable to lie when the curler is rolled up to cooperate therewith to prevent unrolling of the curler.

1,540,255. AUTOMOBILE BRAKE-CONTROLLING APPARATUS. NICOLA CONSI, Brooklyn, N. Y. Filed May 9, 1923. Serial No. 637,906. 2 Claims. (Cl. 180—83.)



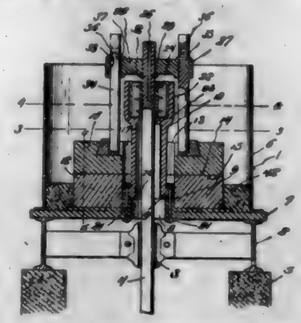
1. In a motor car, the combination, with a frame, of a bumper attached thereto having a rearwardly movable resilient front member, a forwardly operable brake controlling lever, a bracket attached to said frame at a point intermediate between said bumper and brake con-

trolling lever, a cross lever pivoted at an intermediate point on said bracket, an attaching lug mounted on said front member, a link connecting said lug to one of the



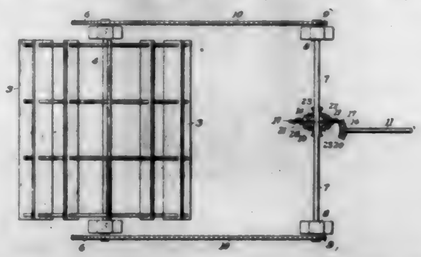
arms of said cross lever, and a flexible member connecting the other arm of said cross lever to said brake controlling lever.

1,540,256. BABY CARRIAGE. WALTER PERCY CRESSWELL, London, England. Filed May 26, 1923. Serial No. 641,547. 2 Claims. (Cl. 155—22.)



1. In a baby carriage, the combination with a platform and a pair of wheels situated beneath the central portion of the platform but towards the rear thereof, of an axle situated transversely beneath the front end of the platform, a single wheel rotatable about and slidable axially along said axle, which wheels are arranged to support the platform at such a height from the ground that the carriage can be propelled by the feet of a child thrust against the ground when seated on the platform, and a plurality of stops depending from said platform, two of which stops are in the form of short legs at the extreme front end and a third is in the form of a buffer-beam at the extreme rear end of the platform, substantially as described.

1,540,257. MARINE PADDLE WHEEL. REINHOLD DOEHLERT, Jr., New York, N. Y. Filed Apr. 7, 1924. Serial No. 704,551. 1 Claim. (Cl. 170—149.)

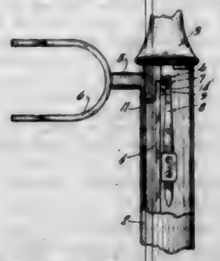


A device of the class described comprising a shaft having annular spaced apart plates therein, said plates having aligned openings therein, paddle blades, crank arms projecting from said blades journalling in the openings of said plates, links attached to said crank arms, the opposing ends of said links being pivotally secured together, studs on the joined ends of said links a rigid U-shaped frame, the arms of said frame being in a plane parallel to the annular plates, said frames having an upwardly off-set circular channel therein, said studs being adapted to ride in said channel and cause arcuate rotation of the paddle blades by means of the links.

1,540,258. STONE-GRINDING MILL. HENRI DOUBIF, Huntington, W. Va. Filed Apr. 1, 1924. Serial No. 703,495. 22 Claims. (Cl. 83—7.)

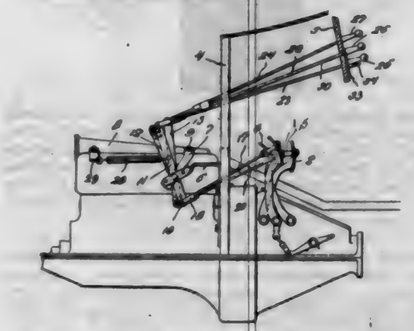
1. In combination in a colloidal batch grinding mill, a cotainer having a bottom formed with an opening in the central portion, a tubular column mounted in the bottom around the opening, an annular stationary grinding stone removably seated on the bottom of the container in concentric relation to the column, cooperating means on the grinding stone and the bottom of the container for preventing rotation thereof on the bottom, an annular rotatable grinding stone mounted around the column on the stationary stone for grinding cooperation therewith, and driving means extending thru the tubular column for driving the rotatable grinding stone.

1,540,259. DRIVING GEAR FOR BOATS. FRANK R. DRAVO, Sewickley, Pa., assignor to The Dravo Contracting Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 21, 1925. Serial No. 17,222. 11 Claims. (Cl. 115—49.)



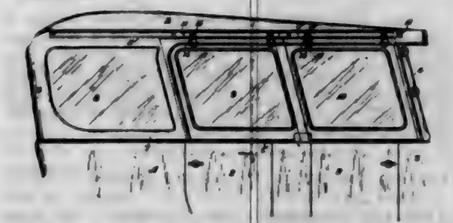
1. In a boat, a paddle wheel shaft, a power unit, and driving connections between the ends of said shaft and said power unit including differential gearing, substantially as described.

1,540,260. SWITCH HOOK FOR SUBSTATION TELEPHONE INSTRUMENTS. JOHN ERICKSON, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 28, 1921. Serial No. 471,690. 9 Claims. (Cl. 179—164.)



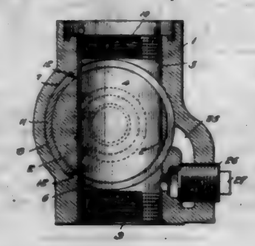
1. In a telephone set, a receiver, a switch hook for supporting said receiver, means for pivotally supporting said hook to permit the same to move through an arc of

approximately ninety degrees when the receiver is removed, a movable contact spring, and means on the switchhook for operating said spring and in such a



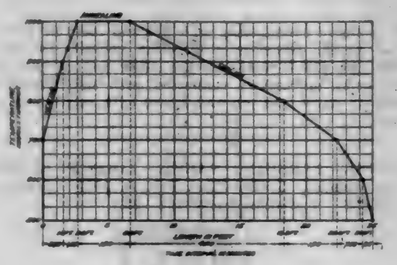
manner that the ratio between any specified movement of the hook and the resulting movement of the said spring increases as the hook moves from its initial position.

1,540,261. HAND ACTUATING MEANS FOR THE FOOT PEDALS OF MOTOR VEHICLES. MIKE B. FARMER, Pratt, Kans. Filed Dec. 13, 1924. Serial No. 755,780. 9 Claims. (Cl. 74—89.)



1. In combination with a motor vehicle including the usual foot pedals, and the dash board, of pivotally supporting levers disposed forwardly of the dash board, rods connecting the lower ends of said levers with the respective foot pedals, operating rods connected at their forward ends to the upper ends of said levers and extending through said dash board, and handles on the opposite ends of said operating rods whereby the foot pedals are actuated independently by the hand.

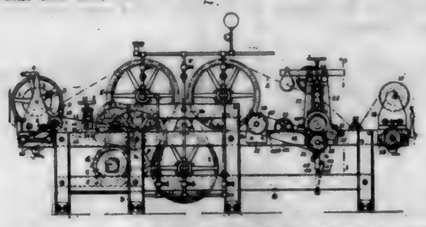
1,540,262. AUTO TOP. FRANK D. GOULD, Oakland, Calif., assignor to F. D. Gould Company, San Francisco, Calif., a Corporation of California. Filed Oct. 12, 1921. Serial No. 507,234. 7 Claims. (Cl. 296—47.)



1. In an auto top of the character described, an upper horizontal trackway, a bar slidably mounted in said trackway, a pair of links pivotally attached to the bar at their upper ends, a window pivotally attached to the lower ends of said links, and a lower guide and support for the window, said links permitting the window to rise slightly when sufficient pressure is applied directly to the window to slide the same horizontally along the trackway.

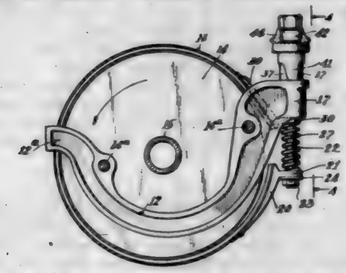
1,540,263. CASING HEAD. ALFRED G. HEGGEN, Tulsa, Okla. Filed June 4, 1924. Serial No. 717,825. 17 Claims. (Cl. 166—15.)

5. A casing head involving a body having a vertical passage therethrough and a side outlet communicating with said passage, and a rotatable valve mounted on said body and adapted to occupy a plurality of positions with respect to said passage, said valve when in one position being adapted to control the flow of fluid through said side outlet and when in another position being adapted to permit the free flow of fluid through said side outlet, and the axis of rotation of said valve being spaced from and disposed at an angle to the axis of said vertical passage.



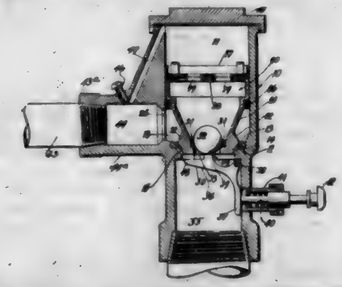
1,540,264. PROCESS OF ANNEALING GLASS. KENNETH M. HENRY, San Francisco, Calif., assignor to Illinois-Pacific Glass Company, San Francisco, Calif., a Corporation of California. Filed Oct. 11, 1922. Serial No. 593,902. 3 Claims. (Cl. 49—89.)

1. The method of annealing glass which consists in first heating to a temperature less than the maximum annealing temperature, maintaining this temperature for a length of time sufficient to partially remove internal stress and strain, cooling rapidly to the lowest annealing temperature of the glass being treated, and thereafter cooling more rapidly, to atmospheric temperature, whereby the internal stress and strain existing at the end of the heating stage will be substantially neutralized during the cooling stage.



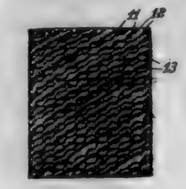
2. The method of annealing glassware which consists in quickly heating the glass to a temperature of approximately 1000° F., maintaining this temperature for approximately 15 minutes and thereafter cooling the glass at the rate of 6° per minute.

1,540,265. MACHINE FOR SIZING WARPS. CHARLES B. JOHNSON, Paterson, N. J. Filed Mar. 7, 1924. Serial No. 697,453. 5 Claims. (Cl. 91—55.)



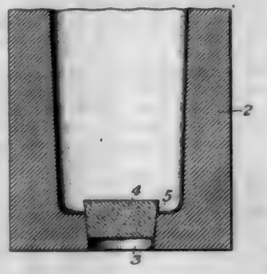
1. Apparatus of the class described including, with a supporting structure and means to apply the liquid size to the sheet to be treated, rotating means to advance the sheet at constant speed and simultaneously dry the size thereon, a rotary beam onto which to wind the advanced sheet, and slip-friction rotation-transmitting means operatively connecting the beam with said rotary means.

1,540,266. AUTOMOBILE BRAKE. HAROLD W. LANGBEIN, Los Angeles, Calif. Filed Dec. 27, 1922. Serial No. 609,178. 5 Claims. (Cl. 188—77.)



1. A brake that embodies a drum and a surrounding band with two ends, a rigid frame, a pin movable longitudinally with reference to the frame in one direction, one end of the brake band being connected with said pin, a sleeve surrounding said pin and movable with relation to the frame in a direction opposite to that in which the pin is movable, the other end of the brake band being operatively connected with said sleeve, and means to move said pin and sleeve with relation to each other.

1,540,267. FLUSHING VALVE. JAMES F. LANGSTON, Los Angeles, Calif. Filed Feb. 3, 1923. Serial No. 616,838. 4 Claims. (Cl. 137—93.)



1. A flushing valve comprising a body containing a cylinder with an outlet valve passage and seat at one end, an inlet leading with a restriction into the cylinder near that end, and a restricted passage connecting the inlet, at a point outside its restriction, to the other end of the cylinder; a hollow piston in the cylinder with a hollow downward reduced extension, a valve on the lower end of the extension adapted to seat on said valve seat, said extension having at its lower end a relief passage communicating with the piston and extension interiors and opening to the cylinder, a valve seat formed in said passage, a valve ball loose within the interior of the extension and adapted to seat on the relief valve seat; and a manually operable lifting arm under and piston extension and having a part adapted to enter the relief passage to directly engage and lift the relief valve off its seat and having another part adapted to engage and lift the extension and piston after lifting the relief valve.

1,540,268. PAPER WASHCLOTH. WILLIAM A. LORENZ, Hartford, Conn., assignor, by mesne assignments, to The Otaka Paper Company, Hartford, Conn., a Corporation of Delaware. Filed July 8, 1920. Serial No. 394,728. 2 Claims. (Cl. 87—23.)

1. A napkin to be used as a wash-cloth for applying soap and scrubbing the surface to be cleaned, consisting of a sheet of tough paper not readily disintegrable in water and having rifles formed in it for softening the same said paper being originally too tough and heavy for such use and having a dried coating of soap.

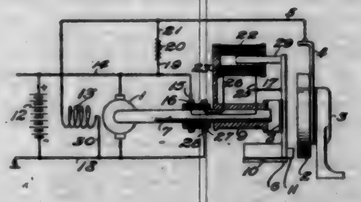
1,540,269. INGOT MOLD. THOMAS MCNALLY, Massillon, Ohio, assignor to The Central Steel Company, Massillon, Ohio, a Corporation of Ohio. Filed Dec. 10, 1924. Serial No. 754,939. 3 Claims. (Cl. 22—139.)

3. The combination with an ingot mold having a tapered opening in the bottom thereof, of a refractory plug having tapered side walls bodily insertible into said opening, said plug being dimensioned to project into the mold cavity and terminate short of the plane of the bottom thereof when in position within said opening, substantially as described.

1,540,270. METHOD OF MAKING BOILER TUBING. GEORGE MAY, San Francisco, Calif., assignor of one-half to Emily Schmidt, San Francisco, Calif. Filed Feb. 12, 1924. Serial No. 692,890. 3 Claims. (Cl. 29—157.4.)

1. The method of constructing tubing in coil form which consists in first bending a strip of metal into

channel form, placing a form retaining bendable strip in the channel of the form, placing a bendable strip on one side of said form then bending the form and



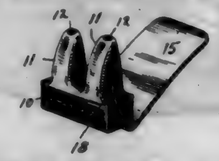
strips to form a coil or series of coils, then removing said bendable strips, then sealing the open side of the channel.

1,540,271. TRICYCLE. CHRIST MAYER, Salamanca, N. Y. Filed Sept. 4, 1924. Serial No. 735,750. 1 Claim. (Cl. 208—45.)

In a tricycle having two front wheels and one rear wheel, the combination of the frame including two diverging front bars and a front frame, a shoe-like passenger body in front of the driver's seat, two substantially C-shaped flat band springs secured with their extended lower ends to said front frame to support the front part of said body, connections for said springs, two substantially C-shaped band springs supporting the rear part of said body and having their lower ends wound about the diverging bars, and means for steering the vehicle.

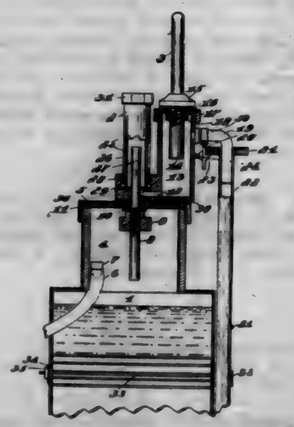
1,540,272. CENTRIFUGAL SPEED REGULATOR. FRANK W. MERRILL, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 19, 1922. Serial No. 530,301. 13 Claims. (Cl. 171—229.)

4. An electric motor, a circuit therefor, a centrifugal speed regulating device therefor and a compensating device associated with said centrifugal device comprising an electromagnet mounted on and revolving with the shaft of said motor and energized from said circuit adapted to cooperate with said centrifugal device to regulate said motor when voltage changes occur in said circuit.



1,540,273. MAIL-SACK TAG HOLDER. WALTER R. MILLER, Mansfield, Ohio. Filed Mar. 14, 1924. Serial No. 699,282. 4 Claims. (Cl. 40—10.)

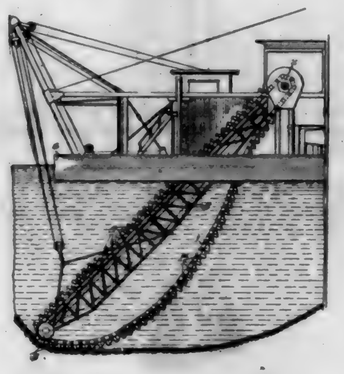
1. In a container of the class described having a wall provided with a slit, a pocket attached to said wall on the inside thereof over said slit, said pocket being adapted to receive a tag, and means for securing the



tag at the bottom of the pocket in such a manner that the greater portion of the tag is exposed exteriorly to the container.

1,540,274. NASAL INHALER. WILLIAM J. MOORE, Washington, D. C. Filed Mar. 28, 1924. Serial No. 702,570. 3 Claims. (Cl. 128—198.)

1. A nasal inhaler having a nose engaging member provided in its bottom portion with a chamber in communication with the external air and from which a passage leads to an outlet and having means for holding the inhaler in position for use comprising a plate of dimensions to extend between the lips and teeth and above the tongue, and a medicament holder attached to the plate and within said chamber.



1,540,275. OVERFLOW AND HEAT INDICATOR FOR AUTOMOBILES. WILLIAM H. MUZZY, Evanston, Ill. Filed Mar. 24, 1923. Serial No. 627,507. 4 Claims. (Cl. 116—114.)

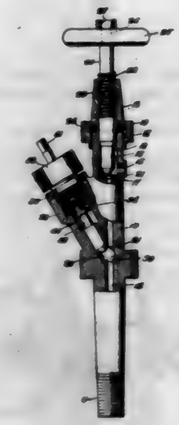
3. In an automobile the combination with an engine and its water cooling system including a radiator, of a closure cap for the filling opening of the radiator, a

glass chamber mounted on the cap, a pipe projecting from the interior of the radiator into the glass chamber and acting as an overflow for the radiator, a motor meter mounted in connection with and under the influence of the overflow, and a detachable overflow pipe connected to the glass chamber.

1,540,276. CHAIN BUCKET DREDGE. WESLEY G. NICHOLS, Chicago Heights, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Aug. 30, 1922. Serial No. 585,192. 16 Claims. (Cl. 198—140.)

1. A bucket for bucket chain dredges, constructed with a pintle hub and a concaved bearing surface forward of and merging into the surface of said pintle hub.

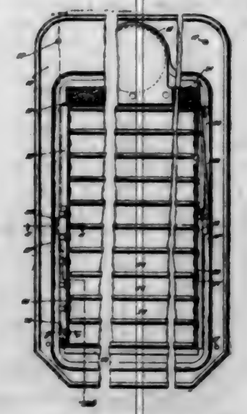
1,540,277. METHOD OF HOLDING EXPANDED-METAL OR SIMILAR BRAKE-SHOE INSERTS. CLIFTON D. PETTIS, New York, N. Y. Filed Apr. 11, 1924. Serial No. 705,779. 11 Claims. (Cl. 22—206.)



1. The method of preparing a multi-part metal insert for placing within a casting mold, which consists in tying together the parts of the insert and forming on the tying means one or more members projecting from the insert a distance equal to the proper spacing of the insert from the corresponding surface of the cast metal body.

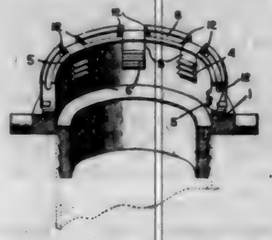
1,540,278. BRAKE SHOE. CLIFTON D. PETTIS, New York, N. Y. Original application filed Dec. 6, 1923, Serial No. 678,793. Divided and this application filed June 7, 1924. Serial No. 718,445. 4 Claims. (Cl. 188—254.)

3. In a brake shoe, a reinforcing shell comprising a back, side and end walls, the lower portion of said sides and end walls being bent inwardly to provide an offset therein.



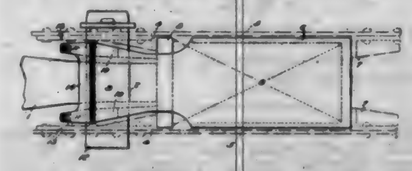
1,540,279. GAUGE COCK. CHARLES PRY, Portsmouth, Ohio. Filed May 7, 1924. Serial No. 711,050. 1 Claim. (Cl. 277—33.)

A gauge cock comprising a valve casing having a main bore extending longitudinally therethrough, said main bore having a relatively large outer end and a relatively small inner end, said bore further having an intermediate portion between its inner and outer ends of greater diameter than the outer end, said bore further having a valve seat at the inner end of said intermediate portion, a bonnet having a threaded bore and being screwed on the outer end of the valve casing, a valve having a threaded stem screwed in said bonnet and provided with a portion adjacent the threads fitting the outer end of said bore, and a portion of less diameter moving in the intermediate portion of said bore and provided with frusto conical end to seat on said valve seat, said casing further having an auxiliary bore arranged at an acute angle with the first bore and intersecting the rear portion of said first bore intermediate its ends, said second bore having relatively large internally threaded outer end, a relatively small inner end and an intermediate portion having a diameter intermediate the diameters of the inner and outer ends, the inner end of the second bore being of greater diameter than the inner end of the first bore, a conical valve seat being formed at the intersection of the first and second bores, a threaded bonnet screwed into the outer end of the second bore, a threaded valve stem extending through said bonnet, a valve carried by the inner end of the last metnioned valve stem and having a cylindrical body fitting closely in the inner end of the second bore and provided with a frusto conical extremity adapted to seat on the second valve seat, and a flange on the second valve stem spaced from the body on said stem, said flange engaging against the second bonnet upon the valve being fully opened.



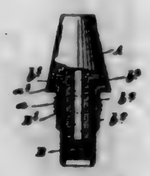
1,540,280. SHUTTER APPARATUS FOR RADIATORS. JAMES F. RALEIGH, Chicago, Ill., assignor to Pines Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 22, 1923. Serial No. 682,218. 11 Claims. (Cl. 189—62.)

1. The combination in an automobile radiator shutter comprising a fenestrated shell, of supporting means carried by said shell, a plurality of shutters mounted in said supporting means, an individual hollow pivot boss for each of said shutters carried by said supporting means, each of said pivot bosses being completely closed



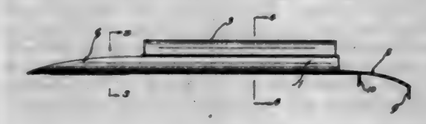
with the exception of an open end facing its shutter, and a hollow pivot boss on the end of each shutter entering the open end of said first boss.

1,540,281. COUPLING. WILLIAM S. REED, Leominster, Mass. Filed Dec. 10, 1924. Serial No. 754,955. 5 Claims. (Cl. 285—150.)



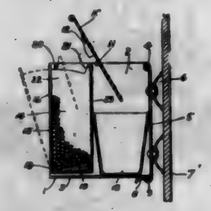
5. A coupling member comprising a circular body provided with slot in its walls and also provided with an annular groove in its ends, a pivoted jaw occupying each groove, each jaw having near its outer end a trunnion integral therewith which is loosely received in the groove and having teeth on its inner face adapted to engage the exterior screw threads of a complemental coupling member, the trunnions being located at a greater radial distance from the center of the coupling than the teeth and a thrust ring screwed to the body and closing the open side of the groove and against which the jaws abut.

1,540,282. DRAFT GEAR FOR RAILWAY CARS. WILLIAM J. REGAN, Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 9, 1923. Serial No. 637,806. 5 Claims. (Cl. 213—65.)



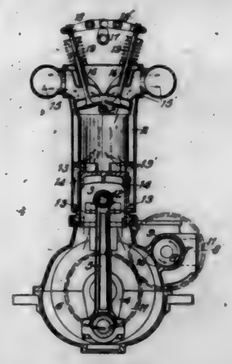
1. A draft gear involving a casing adapted to receive and cooperate with friction elements housed thereby, spaced arms integrally united to said casing and extending forwardly therefrom, said arms being adapted to receive between them the butt of a car coupler and also a follower adapted to be moved rearwardly by said coupler, and spaced walls integrally uniting said arms in advance of said casing, said walls being provided with oppositely disposed slots which are open at their rear ends and are adapted to receive a coupler connecting key.

1,540,283. FUSE BODY FOR PROJECTILE FUSES. LÉON EMILE RÉMONDY, Rueil, France. Filed Sept. 26, 1924. Serial No. 740,120. 3 Claims. (Cl. 102—39.)



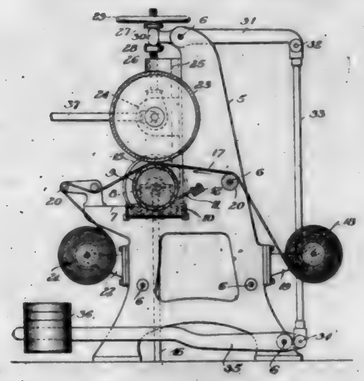
1. A shell fuse body comprising an enlarged head portion of comparatively weak cast metal and having a reduced tubular rear extension and a tubular member of stronger metal embedded in said reduced rear extension and projecting rearward therefrom.

1,540,284. KITCHEN UTENSIL. CHARLES G. REVENY, San Francisco, Calif. Filed Nov. 13, 1924. Serial No. 749,595. 4 Claims. (Cl. 146—208.)



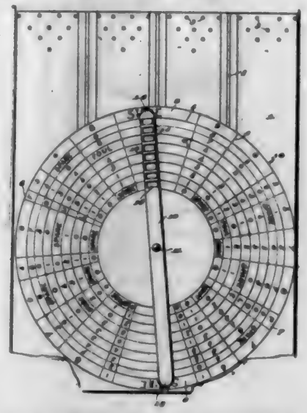
1. A kitchen implement comprising an elongated metallic body of channel shape in cross section intermediate of its ends, a handle engaged in the channel shaped portion of the body and implements provided on the portions of the metallic body which extend from opposite ends of the handle.

1,540,285. COMBINATION MATCH SAFE AND ASH TRAY. HENRY GEORGE EDMUND REYNOLDS, Summerland, British Columbia, Canada. Filed May 12, 1924. Serial No. 712,853. 4 Claims. (Cl. 206—30.)



1. A device of the class described comprising a main container, a match safe pivotally mounted in the main container and an ash receptacle carried within the main container and withdrawable therefrom, a pivotally mounted cover for both the match safe and ash receptacle adapted to swing outward from the container when the cover is tilted, and means for returning the match safe into the container after use.

1,540,286. INTERNAL-COMBUSTION ENGINE. EDMUND W. ROBERTS, Cincinnati, Ohio. Filed Oct. 23, 1920. Serial No. 418,888. 1 Claim. (Cl. 123—73.)



A two cycle internal combustion engine comprising a cylinder, a piston, an enclosed crank pit serving as a precompression chamber, an exhaust valve located at the head end of said cylinder, a piston controlled port leading from said crank-pit to the interior of said cylinder, and a valve for the admission of a fresh charge to the crank pit, said exhaust valve piston controlled port and admission valve being timed in the following order, the exhaust valve to open, the piston controlled port to open, the admission valve to open, the exhaust valve to close, the piston controlled port to close, the admission valve to close, whereby the crank pit is surcharged from its exterior and the cylinder is subsequently surcharged from the crank-pit due to the inertia of the charging fluid in entering and leaving said crank-pit and cylinder.

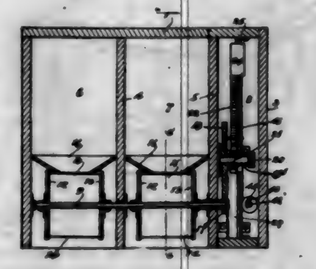
1,540,287. APPARATUS FOR AND METHOD OF PRINTING MATERIALS. WILLIAM F. ROEHLEN, Rochester, N. Y. Filed Jan. 17, 1923. Serial No. 613,147. 6 Claims. (Cl. 101—157.)

1. In apparatus of the character described, the combination of a printing roller, devices for applying a printing medium thereto, means for cooling said roller, a platen for the opposite side of a material to be printed, and heating means for said platen.

1,540,288. BOWLING GAME. EDWARD CHARLES SCHALLIS, Jersey City, N. J. Filed May 20, 1924. Serial No. 714,617. 3 Claims. (Cl. 273.)

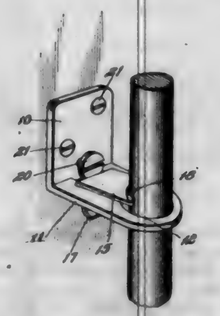
1. A game comprising a board presenting a flat surface and ruled longitudinally to represent bowling alleys and having annular concentric lines located about a center and radial lines intercepting the concentric lines forming a plurality of annular rows of spaces and radially arranged spaces, an indicator hand pivotally mounted at the center of the concentric circle and having a pointer adapted to be revolved over the spaces, and indicia in the spaces designating certain points to be acquired for the count in the game and determined by the arrow when the same comes to rest, said indicator hand being provided with a plurality of numerals so spaced along the hand that each numeral will be located within a space between a pair of concentric lines, said numerals representing the count of a previous spin, and determining the annular space from which the succeeding count is to be taken after the indicator hand has come to rest.

1,540,289. EQUALIZER. JOSEPH A. SCHANNO, Brooklyn, N. Y. Filed Nov. 22, 1921. Serial No. 516,964. 3 Claims. (Cl. 280—104.)



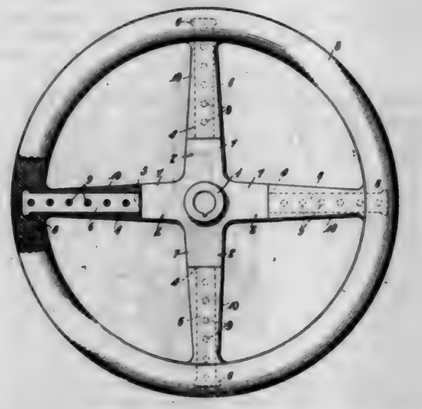
1. An equalizing organization comprising a chassis frame, springs offset therefrom and connected thereto, pivoted members on the chassis frame connecting said springs thereto, and means connecting said pivoted members together and movably connected to the chassis frame; the springs and the pivoted members being arranged in forward and rear pairs, and the means connecting the pivoted members and movably connected to the chassis frame including spaced cross rods, connections between the same and the pivoted members, and swinging hanger members on the chassis frame and connected to said cross rods.

1,540,290. FEED BOX. LEO SELINGER and JACOB SELINGER, Lajord, Saskatchewan, Canada. Filed May 1, 1923. Serial No. 635,991. 2 Claims. (Cl. 119—56.)



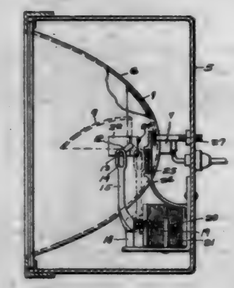
2. In combination, a compartment for the reception of feed, said compartment having a discharge opening in the bottom thereof, a shaft crossing the lower part of the compartment, a feeder rotating with the shaft and

presenting a plurality of radially disposed pockets, said pockets being adapted to successively register with the outlet opening in the rotation of the feeder with the shaft, a stub shaft adjoining the former shaft, a gear wheel mounted on the stub shaft, a pinion meshing with the gear wheel and mounted on the former shaft, a pinion rotatably mounted on the stub shaft, engaging clutch members carried by the gear wheel and latter pinion, a spring normally maintaining the clutch members engaged, a slidably mounted rack bar engaging with the latter pinion, a cross shaft, a winding drum rotatably mounted on the cross shaft, a spring associated



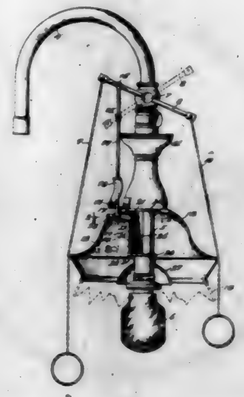
with the drum, a pulling line connected to the drum and to one end of the rack and adapted when pulled in one direction to shift the rack and wind the spring, and means for governing the speed of travel of the rack bar under the influence of the wound spring, said latter means embodying an oil containing cylinder, a plunger operated in the cylinder, a plunger rod extending from the plunger and connected to the rack bar and suitable controlling valves associated with the plunger and adapted to permit of the slow regulated escape of the oil through the plunger in the movement thereof in one direction and the quick escape of the oil past the plunger in the movement of the same in the other direction.

1,540,291. BROOM HOLDER. WENDELL P. SESSIONS, Forest Dale, Vt. Filed Apr. 10, 1924. Serial No. 705,578. 6 Claims. (Cl. 248—49.)



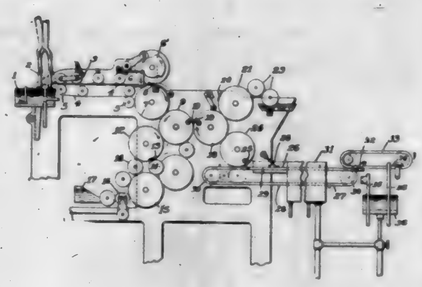
1. A broom holder of the character described comprising a plate angular in form to provide a base and an outstanding portion, the outstanding portion having an opening to receive the handle of the broom and back of said opening being formed with a transverse slot, a clamping member disposed above the plate and approximately parallel thereto and having a depressed shank at its rear end formed with a lip, the shank being adapted to extend through said slot and lip to engage on the forward wall of the slot, and means for adjustably limiting the rearward movement of the clamping member.

1,540,292. STEERING WHEEL. HARRY E. SHELLER, Portland, Ind. Filed Jan. 15, 1923. Serial No. 612,714. 1 Claim. (Cl. 74—33.)



A steering wheel having a metallic hub, and metallic spokes radiating therefrom each of said spokes being abruptly reduced in cross-sectional area at a point intermediate its ends, the reduced portions of said spokes being perforated and terminating in unconnected ends, a rim of plastic material fitted to said unconnected spoke ends to form a wheel, the plastic material of said rim extending inwardly around the reduced portions of said spoke, the layers of plastic material surrounding the reduced portions of said spokes, gradually increasing in thickness so as to merge with the wheel rim, the outer surface of the plastic material forming with the outer surface of the enlarged portions of said spokes a continuous smooth surfaced spoke from the rim to the hub of the wheel, the plastic material being anchored to the metallic spokes by engaging in the apertures therein.

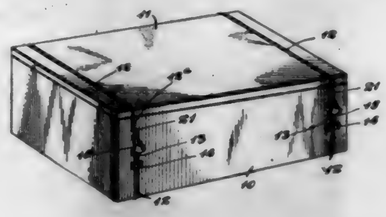
1,540,293. ELECTRICAL HEADLIGHT DIMMER. KATIE L. SMILEY, Belle Fourche, S. Dak. Filed Nov. 24, 1924. Serial No. 751,936. 3 Claims. (Cl. 240—45.)



1. In a device of the character described, in combination with a lamp casing, a reflector therein, a shield shaped to conform to the reflector, and lying snugly against the rear portion thereof, transverse trunnions for the shield, a crank carried by one of said trunnions, a movable lever engaged with said crank, a magnet for moving said lever, a cushioning element for limiting the throw of the shield and means for adjusting the position of said cushioning element.

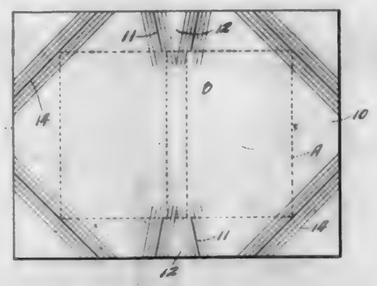
1,540,294. GAS LIGHTER. PASQUALE STELLA, Chicago, Ill., assignor of one-half to Charles Amico, Chicago, Ill. Filed Nov. 3, 1923. Serial No. 672,543. 3 Claims. (Cl. 67—20.1.)

1. A gas lighter comprising a reciprocating rod, a gas valve, means for reciprocating said rod in conjunction with the operation of the gas valve, an ignition element carried by the rod disposed perpendicular thereto, an abrasive element secured adjacent the gas discharge, and resilient means engaging the reciprocating rod to force the ignition element into frictional engagement with the abrasive member.



1,540,295. ART OF MAKING ONE-PIECE WINDOW ENVELOPES. WILLARD E. SWIFT, Worcester, Mass., assignor to United States Envelope Company, Springfield, Mass., a Corporation of Maine. Filed July 1, 1921. Serial No. 481,858. 4 Claims. (Cl. 91—70.)

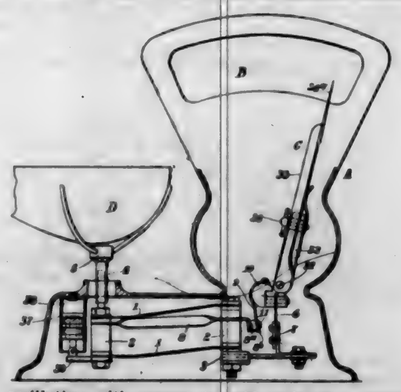
1. The improvement in the art of making one-piece envelopes which consists in printing window margins on the outer surface of successive blanks, applying a liquid transparentizing material to the inner surfaces of said blanks, within the space defined by said printed margins, moving said treated blanks successively, with their inner surfaces uppermost, through a heated chamber to dry the same, and procuring their formation into a stack, by continuance of said movement beyond said chamber.



2. The combination with means for applying a liquid transparentizing substance to successively fed envelope blanks, of a traveling conveyor on which said treated blanks are successively deposited flatwise with their treated faces uppermost, a drying chamber through which said traveling conveyor passes, and means operable to remove successive blanks from said conveyor, and by further movement thereof to assemble them into a stack or pile.

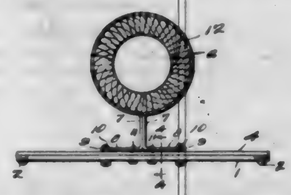
1,540,296. CLOSURE FASTENER. MERVIN WILMER TOZER, Cortez, Colo. Filed Sept. 22, 1924. Serial No. 739,126. 5 Claims. (Cl. 217—66.)

1. A fastener for securing a cover to a shipping case or the like and comprising a binding element encircling the cover and case and secured to the case, the upper portion of the binding element being designed to be slipped off the cover when the binding element is released, and a locking lever including a shank having oppositely directed lugs at one end, the lugs being pivotally connected to the ends of the binding element, and a keeper formed on the shank opposite the lugs and adapted to engage with the binding element to hold the same in tight engagement with the cover and case.



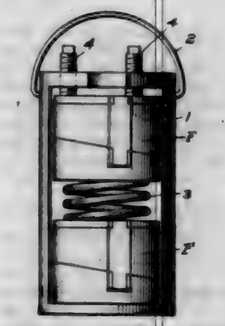
1,540,297. BOOK COVER. ALBERT T. WALRAVEN, Dallas, Tex. Filed Feb. 24, 1925. Serial No. 11,078. 5 Claims. (Cl. 281—34.)

1. A book cover comprising a rectangular sheet folded diagonally across its corners to form a tab, the ends of the sheet being folded on a line passing through the tab to form end flaps, and the sides of the sheet being folded on lines passing through the tabs to form side flaps, the end and side flaps being folded down upon the tab and secured thereto.



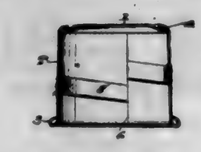
1,540,298. SPRING BALANCE OR OTHER SELF-INDICATING SCALE. JOHN BROWN WHITE, Glasgow, Scotland, assignor to Maatschappij van Berkel's Patent, Rotterdam, Netherlands. Filed Aug. 9, 1922. Serial No. 580,786. 16 Claims. (Cl. 265—87.)

1. A self-indicating weighing machine having weighing and indicating mechanism comprising a resilient weighing beam built up of parallel leaf springs secured at one end with their extreme points of flexure in vertical alignment, load supporting means connecting the other ends of said springs, a fixed scale, an indicator mounted



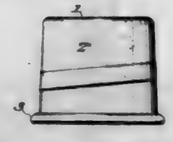
for oscillation with respect to said scale on a member free to flex laterally, and a flexible connection between said load supporting means and said indicator.

1,540,299. GAME. HARRY L. ALLSPAW, West Lafayette, Ind. Filed Apr. 9, 1923. Serial No. 630,895. 1 Claim. (Cl. 273—1.)



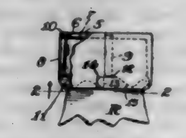
In a game apparatus, a backboard, a basket supporting device including a hoop, arms radiating from the hoop, legs depending from the arms and diverging from each other, the extremity of the legs terminating in eyes, bolts passing through the eyes and the backboard, and U-bolts passing through the backboard and engaging the legs adjacent the arms.

1,540,300. CARRIER FOR DENTAL FLASKS. BERNARD ALTMAN, Pittsburgh, ARCHIE M. FULTON, New Castle, and HAROLD C. BREEDEN, Pittsburgh, Pa. Filed July 30, 1923. Serial No. 654,555. 1 Claim. (Cl. 18—33.)



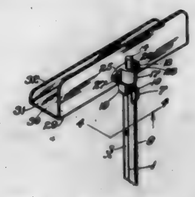
A flask carrier consisting of an integral substantially cylindrical hollow casing, its side walls cut away for the insertion and removal of flasks and provided with three set screws adjustable in one head and extending through the head on lines parallel with its axis, the said screws being spaced at equal distances from the axis of the carrier, and a helical spring whose helical radius equals the distance last noted at which the screws stand remote from the axis of the flask and applicable in assembly with a flask to coaxial position within the carrier.

1,540,301. CLOSURE FOR RECEPTACLES. GUSTAV F. ANDERSON, Brooklyn, N. Y., assignor to Paragon Can & Cap Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 2, 1921. Serial No. 512,261. 4 Claims. (Cl. 220—39.)



1. A sheet material receptacle closure having the material of its body portion folded together to form a reinforced interior spiral thread.

1,540,302. ART OF MANUFACTURING CLOSURES FOR RECEPTACLES. GUSTAV F. ANDERSON, Brooklyn, N. Y., assignor to Paragon Can & Cap Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 2, 1921. Serial No. 512,262. 6 Claims. (Cl. 113—116.)



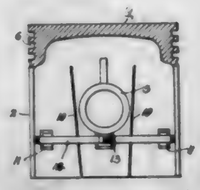
1. The art of manufacturing a built-up receptacle closure, comprising providing a blank, folding said blank upon itself to form a rib extending across one face thereof, and so bending said blank to form the body portion of the closure that the rib forms an interior folded screw-thread for the closure.

1,540,303. RECEPTACLE CLOSURE. GUSTAV F. ANDERSON, Brooklyn, N. Y., assignor to Paragon Can & Cap Company, Inc., Paterson, N. J., a Corporation of New York. Filed May 28, 1923. Serial No. 641,839. 4 Claims. (Cl. 215—46.)

1. In a receptacle closure, a body to constitute the flange of the closure formed of a sheet rolled to tubular form connected at the longitudinal edges by a seam with part of the opposite edge portions adjacent an end of the body unseamed and said unseamed portions of the sheet adapted to overlap and arranged as a tearing strip by scoring the body circumferentially on a zig-zag line and an overlapped part of the unseamed portion serving as a finger tab for tearing the strip from the body, and a disk secured in one end of the body.

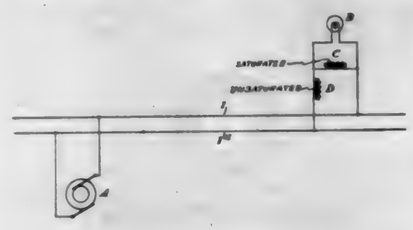
1,540,304. FLASH LIGHT. WILLIAM C. ANDERSON, Kansas City, Mo. Filed Apr. 14, 1924. Serial No. 706,579. 1 Claim. (Cl. 675—628.)

In a flash light, a lighter having a sparking device, a flash pan having an aperture in registration with said sparking device, an adapter mounted on said flash pan and adapted for removable application to said lighter and lugs on the adapter enclosing a groove for directing sparks from the lighter thru the flash pan aperture.



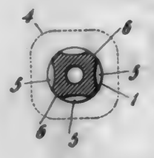
1,540,305. VENTILATION APPARATUS. WILLIAM A. BAKER and FREDERICK A. RAMLER, Toledo, Ohio; said Baker assignor to said Ramler. Filed Sept. 9, 1919. Serial No. 322,671. 2 Claims. (Cl. 98—27.)

2. In a structure providing a room having a foul air passage near the lower portion of the room, a foul air vent control device for said passage comprising a sheet metal screen, a sheet metal frame folded to embrace said screen, said frame having an integral flange extension providing a throat extending rearwardly from said screen, said flange having openings therethrough providing bearings disposed one above the other, parallel rods in said bearings, balanced louvers swingably mounted on said rods and disposed for fully closing said throat, each louver being concave on the side thereof toward the room and having its lower free end contacting with the upper portion of the louver therebelow and folded to form a channel, and sound deadening packing fixed in said channel.



1,540,306. PISTON. EDWIN O. BARSTOW and NORMAN A. BEST, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Aug. 10, 1921. Serial No. 491,135. 4 Claims. (Cl. 74—108.)

1. A piston comprising a head and a longitudinally slit skirt portion, and means controlling the inherent tendency of the latter to expand radially under an increase in temperature, said means comprising an annular member having a different coefficient of expansion inserted within said skirt portion so as to retain same

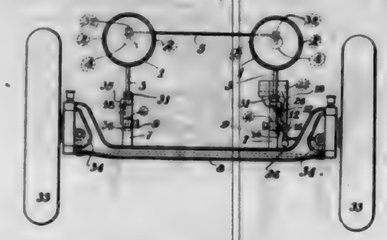


in a condition of inwardly directed tension at all working temperatures, said member contacting with said skirt portion at circumferentially spaced points only.

1,540,307. VOLTAGE-REGULATING APPARATUS. CHARLES R. BEALL, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 26, 1923. Serial No. 641,683. 2 Claims. (Cl. 171—242.)

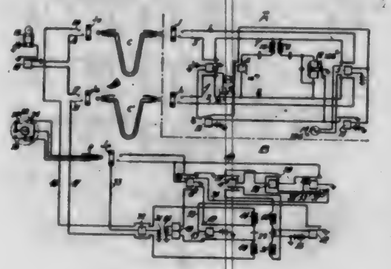
1. In combination, a current consuming device, a circuit for said device comprising a source of electrical energy and means having the characteristic of increasing in impedance in response to increase in the electromotive force of said source, and a reactor connected in parallel with said device and having an iron core the flux density of which is normally such that the iron is practically saturated.

1,540,308. QUILL. JOHN G. BENTLEY, Glen Rock, N. J. Filed Dec. 7, 1923. Serial No. 679,166. 1 Claim. (Cl. 242—120.)



A quill of polygonal form in cross section along its winding portion, the sides being concave.

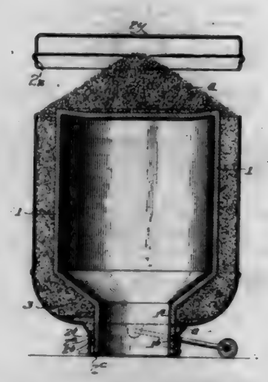
1,540,309. DIRIGIBLE HEADLIGHT. JULIUS A. BERNINGHAUS, St. Louis, Mo. Filed Jan. 21, 1922. Serial No. 530,763. 1 Claim. (Cl. 240—62.)



The combination with the side frame members and the steering shaft rock arm of an automobile; of a bracket having a channel shaped body portion having its web

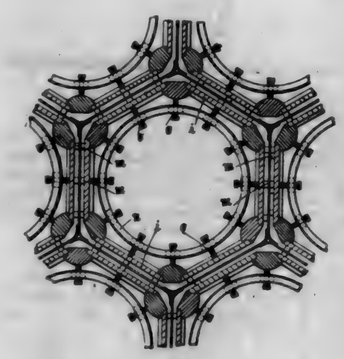
vertical and its flanges horizontal and embracing the forward portion of one of the side frame members, said flanges being provided with vertically alined bearings and the frame member having openings in its flanges aligned with said bearings, said bracket further having a pair of arms extending respectively forwardly and rearwardly from the lower end of the body and provided at

their extremities with depending and laterally extending horizontally alined bearing portions, a lamp supporting shaft journalled in the body bearings and extending through said openings, a segmental gear on the lower end of said shaft, a rod extending through the horizontal bearing and provided with a rack portion meshing with the gear, and a connection between said rod and arm.



1,540,310. TESTING SYSTEM. LANGFORD J. BOWNE, Howard Beach, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 10, 1923. Serial No. 624,105. 2 Claims. (Cl. 179—175.)

2. In a testing system, in combination, a relay to be tested, a circuit having a transformer therein, a source of direct current, an impulse sender adapted to make and break a circuit a number of times when operated and released, a plurality of relays controlled by said impulse sender and adapted to connect said current source to a winding of said transformer, means for connecting said transformer to the winding of the relay to be tested and means for indicating the response of said relay.

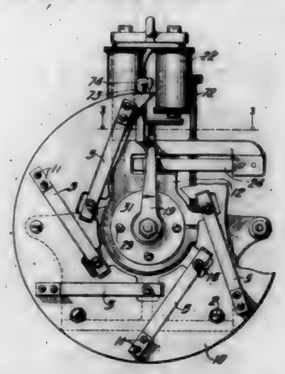


1,540,311. HEAT-INSULATED CONTAINER. PEARL H. BRAINARD, Macomb, Ill., assignor to Macomb Manufacturing Company, Macomb, Ill., a Corporation of Illinois. Filed Oct. 18, 1923. Serial No. 668,291. 5 Claims. (Cl. 215—12.)

1. A heat insulated container comprising an inner shell, an outer shell spaced from said inner shell, and a packing of subdivided heat insulating material in the space between said shells; the bottom of the inner shell having means constructed to resist outward flowing of the subdivided material; and the subdivided material

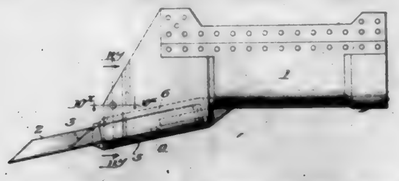
introduced between said bottom and the bottom of the outer shell being under substantial pressure in a direction perpendicular to the bottom of the inner shell.

1,540,312. METHOD OF ERECTING REENFORCED CONCRETE STRUCTURES. EVERARD RICHARD CALTHROP, London, England. Filed May 9, 1923. Serial No. 637,866. 4 Claims. (Cl. 25—154.)



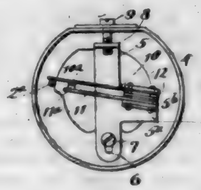
1. A method of erecting cellular structures of reenforced concrete which consists in first erecting a skeleton of metallic reenforcement composed of sheets the vertical edges of which are angled to overlap, applying shuttering to both sides of said reenforcing sheets, applying means to retain the shuttering in position during the casting of the concrete and simultaneously equalizing the pressure throughout all the cells for the time being in course of construction and casting concrete between the shuttering to embed the reenforcement.

1,540,313. PRINTING TELEGRAPHY. MERLE P. CHAPLIN, White Plains, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 13, 1920. Serial No. 423,811. 9 Claims. (Cl. 178—53.)



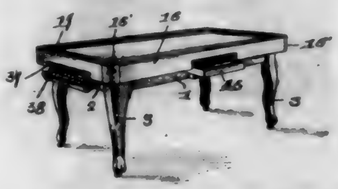
1. A distributor for printing telegraphs comprising a plurality of spring contact members, actuating means

normally tending to rotate, means for releasing said actuating means to operate said spring contact members



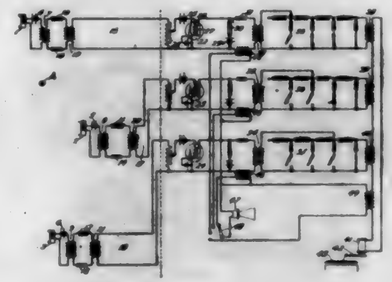
in succession, and means for permitting of a variation between the time of release of said actuating means and its operation of the first spring contact members.

1,540,314. POCKETED BOTTOM FOR EXCAVATING DIPPERS. JOHN O'FALLON CLARK, Chicago Heights, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed June 19, 1924. Serial No. 720,895. 16 Claims. (Cl. 37—141.)



1. A toothed excavating implement having upon its digging portion tooth-receiving pockets constructed of outer and inner walls, and partition walls spacing said outer and inner walls apart and uniting them into a trussed structure.

1,540,315. PRESSURE-RESPONSIVE MAKE-AND-BREAK DEVICE. WARREN F. CLARK, Warren, Pa., assignor to Automatic Electric Heater Company, Warren, Pa., a Corporation of Delaware. Filed Apr. 2, 1921. Serial No. 458,063. 5 Claims. (Cl. 200—81.)

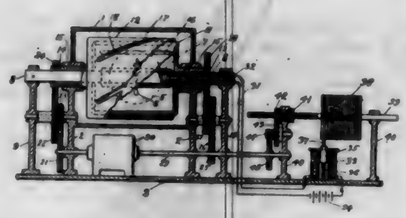


1. In a device of the character described, a casing, a Bourdon tube within said casing, an operating member secured to said Bourdon tube, a bracket having a flange extending at right angles thereto, a pair of contact carrying members which are mounted upon said flange and means for insulating the said contact carrying members from each other and from the flange, one of said contact carrying members being positioned to be engaged by the operating member carried by the Bourdon tube and a member mounted upon the casing and having threaded engagement with the bracket for moving said bracket to adjust the same with respect to the operating member carried by the Bourdon tube.

1,540,316. COMBINATION DINING AND BILLIARD TABLE. JOSEPH N. O. CLEMENT, Three Rivers, Quebec, Canada. Filed Mar. 10, 1924. Serial No. 698,314. 9 Claims. (Cl. 273—5.)

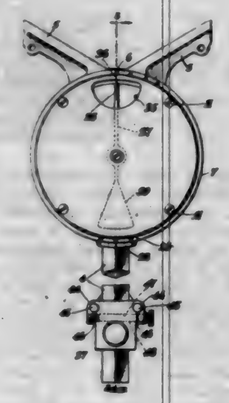
1. A combined dining and billiard table comprising a table frame, legs for supporting said frame, a top mounted on said frame, cross bars slidably mounted in said frame, a cushion frame supported on said cross bars, and means for actuating said bars.

1,540,317. METHOD OF AND APPARATUS FOR RECORDING SOUND. EDWARD B. CRAFT, Hackensack, and EDWIN H. COLPITTS, East Orange, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 28, 1919. Serial No. 341,156. 13 Claims. (Cl. 179—100.1.)



1. A method of recording sound which consists in intercepting sound waves at a plurality of separated points, converting said sound waves into electrical energy at said points, conducting said energy to a common point at different rates of speed to compensate for the difference in time of arrival of the sound waves at the intercepting points, combining the electrical energy from the different points, and recording the effect of the combined energy.

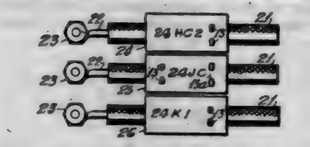
1,540,318. PICTURE-TRANSMITTING APPARATUS. LEONID A. DUNAJEFF, New York, N. Y. Filed Oct. 24, 1921. Serial No. 510,095. 4 Claims. (Cl. 178—11.)



1. In a picture transmitting apparatus, the combination with a housing, a shaft in said housing, a hollow cylindrical drum mounted on said shaft inside of said housing, a plurality of slots in said drum, a second drum mounted on said shaft concentrically with said first drum, a plurality of longitudinal slots in said

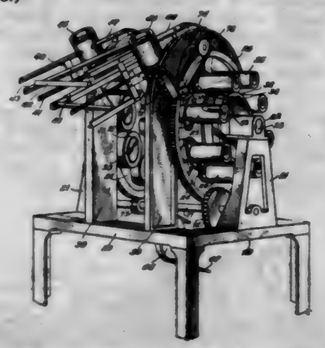
second drum at an angle with slots in said first drum, a photo-electric element inside of said drums, a lens adapted to concentrate a light from an object on said photoelectric element through a point of intersection of said slots, means to rotate said drums with different

velocities, an electric circuit comprising said photo-electric element, and means to reproduce the image of said object at a distance by recording the current variations of said circuit caused by the variations of the intensity of lighting of said photoelectric element.



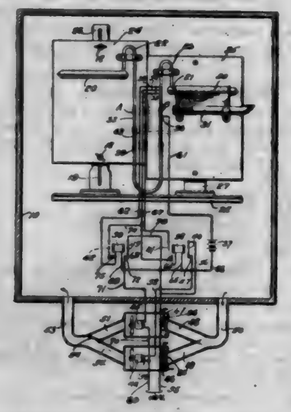
1,540,319. QUARTERING DEVICE FOR LOCOMOTIVE WHEELS. HENRY EISELE, Decatur, Ill. Filed May 28, 1924. Serial No. 716,355. 14 Claims. (Cl. 33—181.)

1. A device of the class described comprising a body provided at one end with a wrist pin receiving yoke, an axle engaging member carried by the body at the other end thereof, an indicating device comprising a member stationary relative to said body, a relatively rotary member mounted on the relatively stationary member for rotary adjustment and provided with graduations associated with the stationary member, and indicating means mounted on the adjustable member and cooperating therewith.



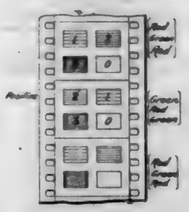
1,540,320. WIRE TAG. EDWARD A. EVERETT, New York, N. Y., and FRED B. WHEELAND, Cleveland, Ohio. Filed Oct. 31, 1923. Serial No. 671,848. 3 Claims. (Cl. 40—23.)

1. In a wire tag for insulated wires of the class described, the combination of a sheet fibre designation part of greater width than the diameter of the wire to which it is attached and a metallic clip, said clip formed from sheet stock and having prongs engaging said fibre



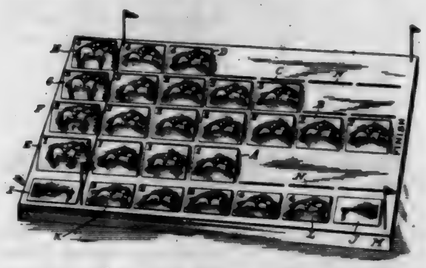
securing said clip in alignment with the longitudinal centre of said part and the sides of said clip formed to clasp on said wire.

1,540,321. ROTARY SHRINKER. JOHN L. FERGUSON, Joliet, Ill., assignor to The Quaker Oats Company, Chicago, Ill., a Corporation of New Jersey. Filed Jan. 17, 1921. Serial No. 437,729. 72 Claims. (Cl. 93—55.)



1. A rotary drum and a plurality of capped-package shrinking devices associated therewith.

1,540,322. HUMIDITY-CONTROL APPARATUS. ROLFE A. FOLSOM, Leonia, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 13, 1920. Serial No. 430,425. 10 Claims. (Cl. 236—44.)



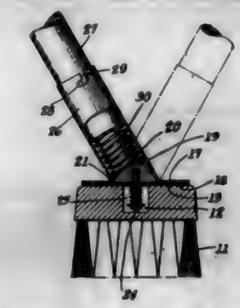
1. In combination; an air filled enclosure; means for adding moisture to the air in said enclosure; means for extracting moisture from the air in said enclosure; and a humidostat for controlling each of said means, said humidostat being actuated by the increase in vapor pressure of a volatile liquid.

1,540,323. MOTION PICTURE. WILLIAM FRANCIS FOX, New York, N. Y., assignor to Glengyle Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 4, 1921. Serial No. 458,379. 30 Claims. (Cl. 88—16.4.)

2. In cinematography the process consisting in limiting the light rays acting upon each image area of the film successively to the same plurality of colors a different one of which predominates with respect to successive image areas, said colors respectively corresponding in value to different definitely limited portions of the visible spectrum.

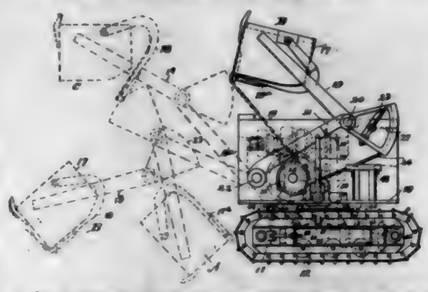
1,540,324. GAME. GARTH C. FULLER, Douglaston, N. Y., assignor of one-third to Elmer D. Fuller, Douglaston, N. Y., and one-third to Nathaniel H. Fuller, New York, N. Y. Filed Oct. 8, 1921. Serial No. 506,304. 8 Claims. (Cl. 273—152.)

1. Playing cards comprising a plurality of series or suits, each of an equal number of cards all of which cards contain a picture of a common racer, said series of cards each having a common legend thereon, the legend of one series differing from that of another series.



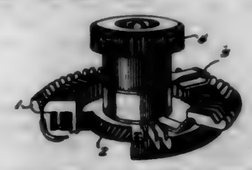
1,540,325. PERFORATED SHEET. JUDSON M. FULLER, Oak Park, Ill., assignor to The Harrington and King Perforating Co., Chicago, Ill., a Corporation of Illinois. Filed May 5, 1919. Serial No. 294,842. 4 Claims. (Cl. 210—149.)

4. A sheet having rectangular apertures arranged in staggered rows with rectangular lugs bent to extend from each of two opposite sides of each aperture of each alternate row, whereby the material between the apertures of intervening rows is arched up between adjacent lugs of the rows adjacent, and thus the surface of the sheet is corrugated.



1,540,326. REVERSIBLE-ANGLE HANDLED BRUSH. ANTON GLOWA, Hoboken, N. J. Filed Feb. 27, 1924. Serial No. 695,447. 1 Claim. (Cl. 306—3.)

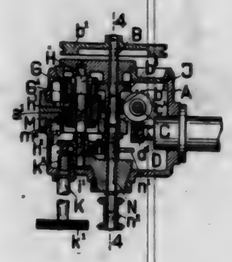
The combination with a brush having a backing containing a central circular recess, a plate fixed on said backing, a bracket rotatable on the plate, spring means in the mentioned recess to retain said bracket on said plate, an angularly faced lug on said bracket, a tube fixed on the bracket to surround said lug and extend



angularly therefrom, a handle fitted to said tube, and a spring in said tube between said lug and the inner end of said handle.

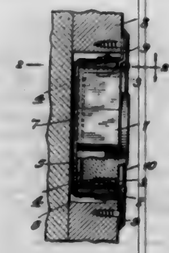
1,540,327. LOADING MACHINE. ROBERT P. GREENLEAF, Shaker Heights, Ohio, assignor to Frank Billings, Cleveland, Ohio. Filed Jan. 23, 1924. Serial No. 687,897. 12 Claims. (Cl. 214—132.)

1. In a loading machine, a traveling base, a revoluble superstructure mounted thereon, digging mechanism carried by the super-structure comprising a digging member, an arm attached thereto, a second arm connected to the first named arm and supported for swinging movement on a part of the superstructure, a power operated device for swinging the second mentioned swinging arm, a second power operated device, and means connecting it to the first named arm, the connecting means being displaced from and having a substantially parallel relation with the second mentioned arm, whereby said elements have substantially the function of two opposite members of a parallelogram of forces during a portion of the cycle of movement of the digging mechanism.



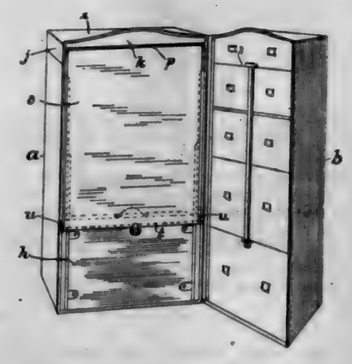
1,540,328. CONTACT TERMINAL. ARTHUR HADDOCK, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 20, 1921. Serial No. 501,984. 8 Claims. (Cl. 200—166.)

8. In combination, an insulating mounting plate having rows of closely spaced perforations therein, a plurality of flat punched metal contacts, each having lugs



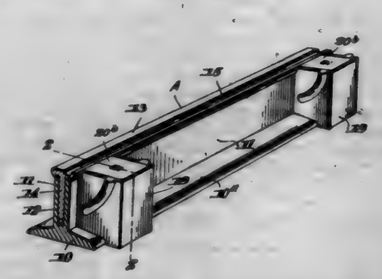
projecting from one edge and registering radially with said perforations, the edges of said contacts from which the lugs project bearing upon said mounting plate, said contacts being secured to said mounting plate solely by one of said lugs whose end projects through said mounting plate and is upset.

1,540,329. CINEMATOGRAPHIC APPARATUS. JOSEF HAPPACHER, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed June 28, 1921. Serial No. 481,081. 4 Claims. (Cl. 88—17.)



1. In a cinematographic apparatus, a film drive including an intermittent driving member, a shutter, said film drive and shutter operating synchronously, the intermittent driving member of said film drive including a single-toothed wheel, a shaft therefor, an intermediate gear wheel interposed between the shaft of the single-toothed wheel and the main driving shaft of the film drive, a displaceable member for coupling said intermediate gear wheel to the shaft of the single-toothed wheel, a movement of said displaceable member causing a mutual rotation between said last mentioned shaft and said intermediate gear wheel, means for adjusting the single-toothed wheel and means whereby an adjustment of said single-toothed wheel causes a displacement of said displaceable member.

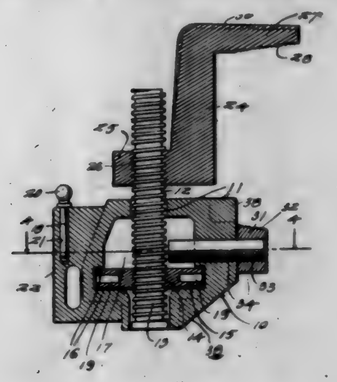
1,540,330. ELECTRICAL RECEPTACLE. PAUL HARTMANN, Brooklyn, N. Y., assignor, by direct and mesne assignments, of one-half to Charles L. Eidlitz, New York, N. Y., and one-half to Metropolitan Electric Mfg. Co., a Corporation of New Jersey. Filed Sept. 30, 1922. Serial No. 591,488. 2 Claims. (Cl. 247—20.)



1. For an electrical receptacle or the like, a body member recessed in at least one of its ends to provide a transverse shoulder at the rear end of the recess, and a substantially U-shape strap embracing the body member along the latter's rear face and two end walls and having it at least one of its arms an inwardly and rearwardly extending spring tongue adapted to be received in the said recess and snap over the said shoulder of the body member as the parts are assembled, whereby the parts are positively locked against separation and may be unlocked by a tool inserted behind the tongue from the front end of the recess.

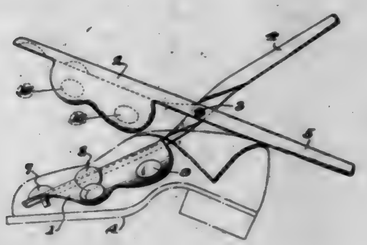
1,540,331. WARDROBE TRUNK. EUGENE W. HAWLEY, Philadelphia, Pa. Filed Dec. 12, 1923. Serial No. 680,080. 3 Claims. (Cl. 190—13.)

1. In a wardrobe trunk, the combination with one compartment thereof, of garment-supporting devices therein, a lid pivoted thereto and adapted to be moved to open and close the top of the compartment, a spring roller carried by said lid, a curtain adapted to be rolled on the roller and unrolled therefrom, a guide secured to the lid in front of the roller, and means for securing the end of the curtain when unrolled, the curtain extending from its roller forwardly over said guide and thence downward, said guide being so positioned that when the lid is closed, the unrolled curtain will extend downward from the guide in a substantially vertical plane.



1,540,332. COMPOUND RAIL. FRANK HENRICH and JOHN ESKESTRAND, Bengough, Saskatchewan, Canada. Filed May 17, 1924. Serial No. 713,969. 7 Claims. (Cl. 238—146.)

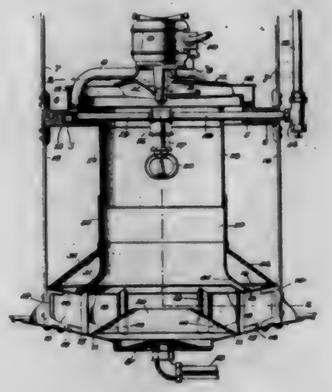
7. In a device of the character described, the combination with a pair of rails having openings therethrough and adapted to fit one within the other, of a slidably supported wedge member adapted to engage with



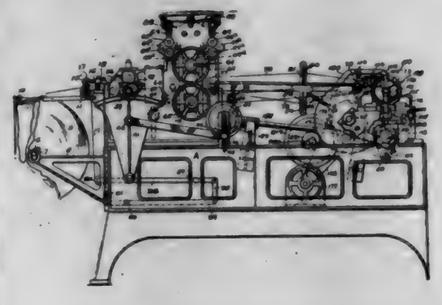
said rails, means for withdrawing the wedge, means for retaining the wedge in retaining position, and means carried by the wedge withdrawing means for gripping and lifting a rail or the like.

1,540,333. CLAMP OR VISE. EDWARD R. HENRY, Vanceboro, Me. Filed Apr. 17, 1922, Serial No. 553,675. Renewed Sept. 18, 1924. 3 Claims. (Cl. 188—43.)

1. A clamp having a stock, a jaw thereon, a rotatable nut carried by said stock, a screw rod engageable by said nut, said screw rod securing the nut against displacement from the stock, and a jaw screw threaded on said rod to coact with the first mentioned jaw.



1,540,334. SHOE FORM. SAMUEL HICKEL, Charleston, W. Va. Filed Sept. 15, 1924. Serial No. 737,771. 3 Claims. (Cl. 12—129.2.)



1. A shoe form comprising two members pivotally connected with each other and each having a handle portion, one of said members having a convex outer contour and being provided on opposite sides and on its upper side with detachable form pieces, while the other member has a concave inner side formed with depressions adapted to receive said form pieces.

1,540,335. HUMIDIFIER. WILLIAM B. HODGE, Charlotte, N. C., assignor to Parks-Cramer Company, Fitchburg, Mass., a Corporation of Massachusetts. Filed June 4, 1923. Serial No. 643,476. 8 Claims. (Cl. 183—121.)

1. The method of humidifying air which consists in surcharging a confined current of air with finely divided moisture; discharging said surcharged air into the room whose air is to be humidified; and subjecting the discharging air at the point of discharge to a transversely directed, free flowing air current.

1,540,336. PAPER-SHELL MACHINE. DANIEL D. HUYETT, Wilmington, Del., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed June 13, 1924. Serial No. 719,840. 41 Claims. (Cl. 93—81.)

1. A paper shell machine comprising, in combination, a cutting mechanism arranged to make a bias cut, a feeding mechanism in fixed relation to the cutting mechanism, a mandrel, means for imparting intermittent and variable movement to the feeding mechanism whereby sheets of paper of varying lengths and with bias cut ends, will be cut off and means for conveying said cut sheets, bias portions foremost to the mandrel whereby to form shells of varying diameters according to the length of paper cut off without shifting the position of the cutting mechanism with respect to the feeding mechanism.

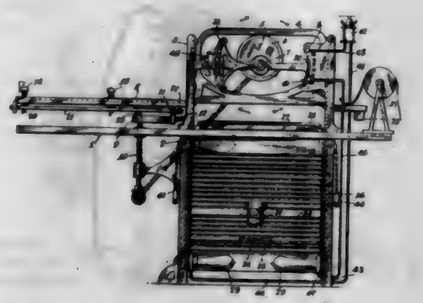
1,540,337. FOLDING CHAIR. ROBERT J. INNIS, Ionia, Mich., assignor to E. H. Stafford Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 25, 1922. Serial No. 590,380. 6 Claims. (Cl. 155—142.)

1. In a folding chair, in combination, rigid front and rear leg frames and a back, the said three parts having

a common pivotal connection at their upper ends, a seat pivotally supported upon the front leg frame and having a sliding connection with the rear leg frame and hinged

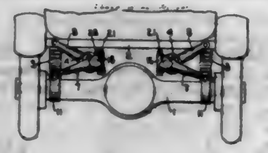
connection with the back whereby the initial folding of the seat will cause said leg frames to be drawn toward each other.

1,540,338. SEWING-MACHINE SHUTTLE. HENRY G. JOHNSON, East Hampton, Conn., assignor to Summit Thread Company, East Hampton, Conn., a Corporation of Maine. Filed June 21, 1922. Serial No. 569,889. 1 Claim. (Cl. 112—232.)



A sewing machine shuttle comprising a body portion having formed therein a circular bobbin chamber open at one end, a sleeve, adapted to have a bobbin core slipped thereover, arranged within said chamber and provided at its inner end with an annular flange of substantially the same diameter as the chamber, a post extending through said sleeve and having a socket extending inward from its outer end and provided within the bobbin chamber with an annular shoulder against which the outer end of the sleeve abuts, and a screw, having its head within the socket in the post, extending through the inner end of the post and securing it against the closed end of the bobbin chamber.

1,540,339. FASTENER. GEORGE C. JONES, Grand Concourse, N. Y. Filed Oct. 14, 1922. Serial No. 594,475. 7 Claims. (Cl. 189—35.)

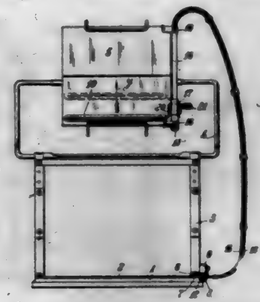


1. In combination: sheet like material; a nail impenetrable member upon which the said material rests; a washer; a nail like member for forming an orifice in said material and lying in said orifice with the head thereof bearing against the washer and the washer bearing against the face of said material remote from the first mentioned member, the said nail-like member having its end remote from the head formed into a hook and a member hooked about the said hook and engaging the first mentioned member.

1,540,340. PHOTO-ENLARGING MACHINE. CHARLES KRESSE, New York, N. Y. Filed May 3, 1922. Serial No. 558,107. 2 Claims. (Cl. 88—24.)

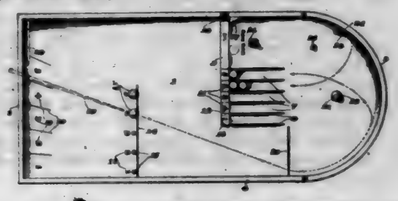
2. In a photographic enlarging device in combination with a printing frame, a reciprocating press for holding the paper during the exposure in said frame, a support for a lens and a support for a negative, said lens being stationarily secured in its support, vertically spaced means arranged for selectively positioning said lens and its support and said negative with its support on various fixed and corresponding numbered positions, one of said positions for said lens and one of said positions for said negative to provide means to enlarge said negative and to throw the focus of the picture with said lens on the paper in said frame and a series of said corresponding positions for said lens and said negative to enlarge from each set of said corresponding positions a different size picture from said negative and to throw with said lens the focus of said pictures in the same position, a lamp to expose the picture, an open switch on the lamp circuit and means to close said circuit when said press is moved to hold the paper in said frame.

1,540,341. SHOCK ABSORBER. JAMES B. KIRBY, Cleveland, Ohio. Filed Apr. 16, 1921. Serial No. 461,763. 4 Claims. (Cl. 188—89.)



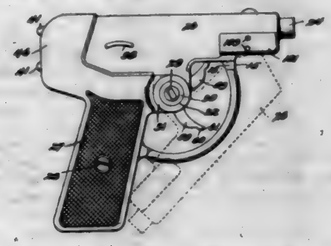
1. A shock absorber for vehicles comprising, in combination, a liquid containing casing, a liquid displacing member movable in said casing and fitting substantially the casing walls, means for securing said casing and member respectively to relatively movable parts of a vehicle, means permitting a controlled flow of liquid from one side of said member to the other, and means operative upon increase of hydrostatic pressure in either direction for obstructing the freedom of such flow.

1,540,342. LINE INDICATOR FOR TYPEWRITING MACHINES. VICTOR KOBLER-STAUDER, Zurich, Switzerland. Filed July 14, 1924. Serial No. 725,950½. 3 Claims. (Cl. 120—33.)



1. A line-indicator for typewriting machines provided with copy-holders, comprising in combination guide means adapted to be fixed close to the typewriting machine in a substantially horizontal position and approximately in the same elevation as that in which the hands of the operator are, an endless pulling member,

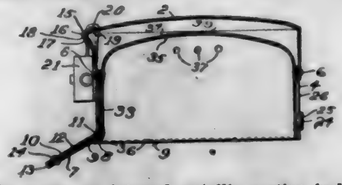
further guide means adapted to be fixed in an upright direction on the copy-holder, a slide adapted to be guided in said first mentioned guide means and con-



nected to the endless member, and a second slide carrying a line indicator and adapted to be guided in the second mentioned guide means and connected to the endless pulling member.

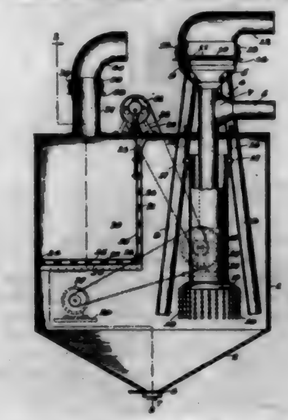
1,540,343. GAME. ERNEST KOHLER, Alameda, Calif. Filed Sept. 26, 1923. Serial No. 664,962. 2 Claims. (Cl. 213—123.)

1. A game board provided with a flat surface, a plurality of adjoining pockets on said board, a plurality of starting positions at the opposite end of said board, balls adapted to seat in said positions, means for projecting said balls along the upper surface of said board, and a removable closure for one end of said pockets.



1,540,344. REPEATING CAP PISTOL. KOBY KOHN, New York, N. Y., assignor to Oscar Schwarzkopf, New York, N. Y. Filed Nov. 14, 1924. Serial No. 749,903. 36 Claims. (Cl. 42—57.)

1. In a repeating cap piston, in combination, a casing, an anvil therein, a hammer structure reciprocably mounted therein having a striking face for cooperation with said anvil, a tape roll support integral with said hammer structure and means between said support and striking face to secure the tape with a cap positioned on said face.



31. A spring for use in repeating cap pistols including a central portion adapted to be rigidly supported, two fulcrum points and ends adapted to press on a cap tape.

1,540,345. MINER'S CAP. FRANK KOWASIK, Hiawatha, Utah. Filed Oct. 29, 1923. Serial No. 671,567. 2 Claims. (Cl. 2—3.)

1. In a cap, an integral metallic portion including a top having a depending skirt perpendicular throughout except at the front portion, the upper part of said skirt at the front being curved forwardly and the top being extended forwardly to conform therewith thereby producing a forwardly extending lip, said lip having a vertical notch centrally thereof and extending through the top and skirt, the top having a hook receiving opening immediately behind said notch.

1,540,346. DUST COLLECTOR. CHARLES A. KUNS, Dubuque, Iowa, assignor to Charles A. Kuns Company, Dubuque, Iowa, a Corporation of Iowa. Filed Oct. 2, 1924. Serial No. 741,234. 7 Claims. (Cl. 183—84.)

1. A dust separator and collector comprising a housing, a vertical conveyor tube extending therein, an air-inlet tube communicating with said conveyor tube substantially above the inner end thereof at an angle thereto, and a screened ventilator at the outer end of said conveyor tube.

1,540,347. RADIATOR COVER. CHARLES W. LEWIS, Nashville, Tenn. Filed Jan. 6, 1923. Serial No. 611,149. 1 Claim. (Cl. 257—136.)

A radiator cover comprising end and side walls of sheet material, the lower portions of said end and side walls having recesses therein forming ways for ingress of air, the forward side portions of said end walls having lips formed thereon substantially right angular in cross-

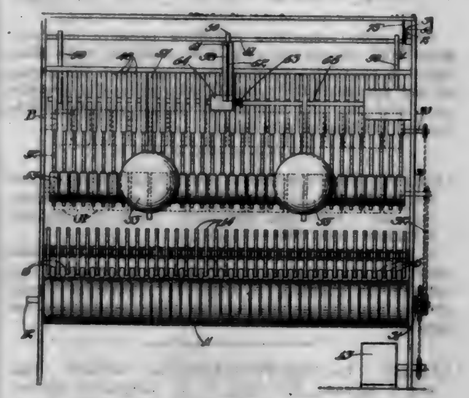
section, the opposite sides and adjacent portions of the forwardly disposed side wall having right angularly disposed lips thereon abutting and flushly engaging portions of said right angularly formed lips on the end walls, the rearward side portions of said end walls having inturned right angularly disposed portions thereon overlapping the adjacent portions of the opposite ends of the rearwardly disposed side wall, parts of said end and front walls being extended for corresponding distances above their respective upper marginal portions, and a top covering having downwardly disposed flanges formed upon certain of its marginal portions engaged over the upper portions of said end and side walls and resting upon said extensions, the flanges on said top covering being disposed laterally of and overlying the opening formed in said side and end walls between said extensions.

1,540,348. VANITY CASE. ERNEST W. LOESSER, Newark, N. J. Filed Sept. 17, 1923. Serial No. 663,158. 2 Claims. (Cl. 132—83.)

1. In a vanity case a compact of powder including a bottom plate and a flange, the compact having an opening therein, and a box insertible in the flange and projecting into the opening and carried when in place by the compact.

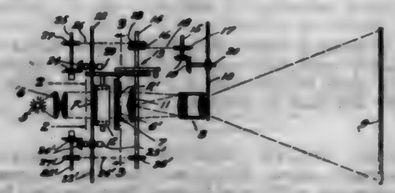
1,540,349. VANITY CASE. ERNEST W. LOESSER, Newark, N. J. Filed Apr. 30, 1924. Serial No. 709,992. 4 Claims. (Cl. 132—83.)

1. A vanity case comprising a tray-like box with a hinged lid, and a tray-like supplemental box hinged at the back of its top edge to the lid at a point within the lid and adapted to be suspended horizontally thereon when the lid is open, the lid closing both boxes when it is swung shut.



1,540,350. GOLF-PRACTICE APPARATUS. DONALD D. LONGENECKER, Topeka, Kans. Filed July 8, 1923. Serial No. 649,315. 4 Claims. (Cl. 273—35.)

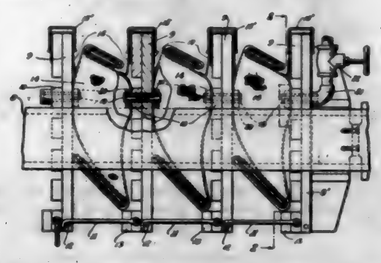
4. In a golf-practice apparatus, an objective consisting of a receptacle comprising a cup-shaped body made of a foldable material, a ring engaging with the edge portion of said cup-shaped body for holding the body open at one end, said ring being adjustable to vary the diameter thereof, and a plurality of legs, each pivotally



attached at its upper end to said ring and being free at its other end, said legs being spaced apart along the circumference of the ring.

1,540,351. LEATHER-MEASURING MACHINE. ROBERT J. MCFALL, Amherst, Mass. Filed Dec. 17, 1920. Serial No. 431,331. 35 Claims. (Cl. 33—123.)

1. In a leather measuring machine, a contact carrier and a contact member mounted to permit joint movement by the action of the leather on the contact carrier, the contact member adapted to have a movement independent of the carrier when engaged by the leather and registering mechanism which is controlled by the independent movement of one of said movable parts with relation to the other.

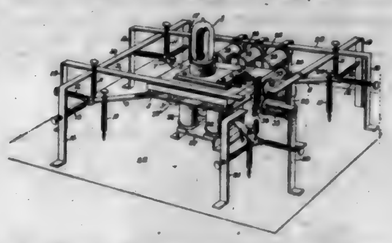


1,540,352. MOTION-PICTURE MACHINE. ALBERT C. MACBETH, Seattle, Wash., assignor of one-half to Charles T. Orange, Seattle, Wash. Filed Feb. 6, 1923. Serial No. 617,215. 2 Claims. (Cl. 88—16.4.)

1. In apparatus for making color projections of motion pictures from a progressively driven film provided with two series of pictures respectively taken through different colored filters, and a source of light, of color filters, and rotary disks provided with apertures disposed

to revolubly traverse the projecting light beam passing through the respective color filters and the series of film pictures, said apertures being arranged on the respective disks to simultaneously exhibit upon a screen pluralities of fractional portions of both of said series of film pictures in spaced relations with each other.

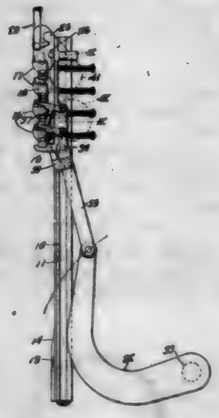
1,540,353. PRESS. KATHERYNE P. MALON, Chicago, Ill., assignor of one-half to John B. Berrigan, Chicago, Ill. Filed Jan. 6, 1923. Serial No. 610,950. 10 Claims. (Cl. 100—50.)



1. A press comprising adjoining pressure members; filter bags inserted between said members, there being open communication between said bags; each bag having an end automatically openable upon release of pressure upon said bag and means for forcing material to be pressed into one of said bags.

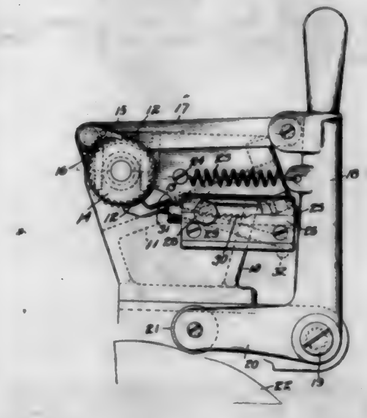
1,540,354. ELECTROLYTE FOR ELECTROPLATING METAL WITH TIN. FRANK C. MATHERS, Bloomington, Ind. Filed Mar. 29, 1923. Serial No. 628,433. 8 Claims. (Cl. 204—17.)

1. An electrolyte for electroplating with tin composed essentially of a solution of tin sulphate and cresylic acid sufficient in quantity to cause an electrolyte deposit of tin from the solution to be finely crystalline and smooth.



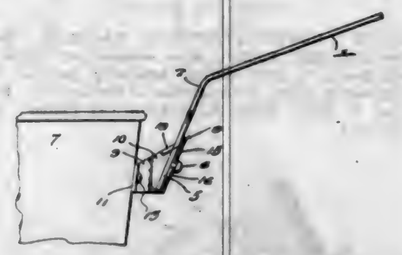
1,540,355. VACUUM-TUBE-TESTING DEVICE. ROBERT C. MATHES, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 20, 1919. Serial No. 332,005. 9 Claims. (Cl. 250—27.)

1. A vibration device comprising a plate, means for resiliently supporting said plate, and electro-magnetic means acting on said plate in a plurality of planes to subject said plate to vibration.



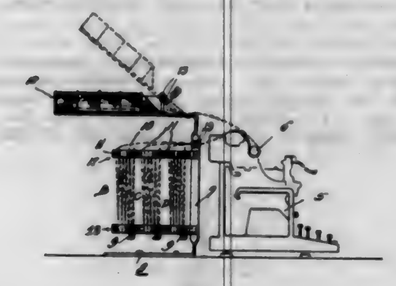
1,540,356. ROLLER CARRIAGE. GEORGE FRANKLIN MATTESON, Rocky Hill, Conn., assignor, by mesne assignments, to Thomson-National Press Company, Inc., Long Island City, N. Y., a Corporation of Delaware. Filed May 11, 1923. Serial No. 638,349. 11 Claims. (Cl. 101—362.)

1. A printing press comprising a reciprocating carriage, form rollers thereon movable toward and from form-engaging position, one or more pivoted latches on the carriage adapted to hold certain of said form rollers out of form-engaging position, and means movable with



the carriage adapted to move said latches about their pivots near opposite ends of the travel of the travel of the carriage substantially as set forth.

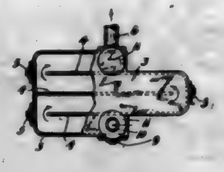
1,540,357. INK FOUNTAIN. GEORGE FRANKLYN MATTESON, Rocky Hill, Conn., assignor, by mesne assignments, to Thomson-National Press Company, Inc., Long Island City, N. Y., a Corporation of Delaware. Filed Dec. 20, 1922. Serial No. 608,101. 9 Claims. (Cl. 101—364.)



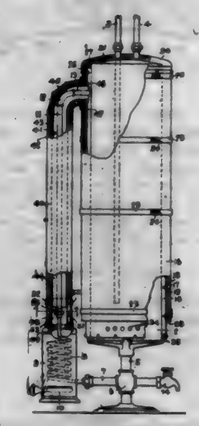
1. In an ink fountain, an ink cylinder, a ratchet connected thereto, a pawl for actuating the ratchet, means for moving the pawl positively in one direction resilient means for returning it, a slidably mounted bolt for limiting the action of said resilient means, a bracket in which the bolt is slidable, said bracket having a series of teeth arranged parallel to the line of movement of the bolt, and means movable with the bolt for engaging the respective teeth to vary the action of the ratchet, substantially as set forth.

1,540,358. DETACHABLE HANDLE FOR UTENSILS. WILLIAM C. MAURER, New London, Conn. Filed July 7, 1924. Serial No. 724,647. 2 Claims. (Cl. 16—114.)

1. In combination with a receptacle, a detachable handle therefor comprising an elongated strip of metal bent downwardly adjacent one end, said downwardly extending portion having notches provided in the sides thereof, adjacent the lower end of the same for forming a head member, a socket on said receptacle for receiving said head member, means for locking the head member in said socket, said means comprising a headed stud carried by the head member and adapted to be received in a substantially oval shaped opening provided in the socket member, and lips formed on said socket member for engagement with the upper edge of the head member.



1,540,359. PAPER-SUPPLY HOLDER FOR TYPEWRITERS. ARTHUR A. MILLER, Selinsgrove, Pa. Filed Sept. 3, 1924. Serial No. 735,635. 3 Claims. (Cl. 270—58.)

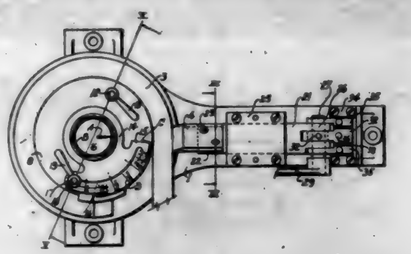


1. In a paper supply holder for typewriters, a frame disposed rearwardly of the typewriter and being adapted to receive a multiplicity of folded sheet tablets, a typewriter platen, said sheets being adapted to be fed to the typewriter platen, a pivoted basket upon the upper end of the frame, and means for feeding the paper into the basket.

1,540,360. WATER HEATER. PHILIP J. MOONEY, Minneapolis, Minn. Filed May 18, 1922. Serial No. 562,008. 2 Claims. (Cl. 122—20.)

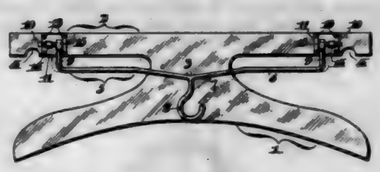
1. A hot water heater adapted to be placed inside of a furnace comprising a hollow member of narrow width, relatively to its height, curved to fit the furnace wall and having flat top and bottom surfaces, bosses on the top and bottom sides thereof adjacent the ends of said sides having threaded apertures therethrough, bosses on the convex side of said member adjacent its top and bottom, whereby inlet and outlet pipes may be disposed either at said convex or at the top and bottom sides of said member adjacent its top and bottom, respectively, a plurality of partitions in said member having free ends and extending substantially horizontally and having a zig zag passage between the bosses at the top and bottom of said member, said member having threaded cleanout openings adjacent the free ends of said partitions, normally closing said threaded opening, and plugs closing the unused threaded openings in said threaded bosses.

1,540,361. WATER HEATER. ROBERT E. NEWELL, Irwin, Pa., assignor to Newell Manufacturing Company, Irwin, Pa. Filed June 15, 1922. Serial No. 568,658. 8 Claims. (Cl. 122—14.)



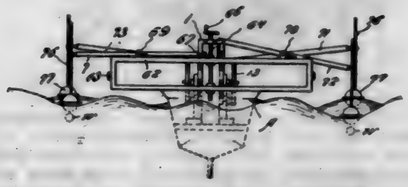
8. The method of heating water which comprises passing the water through a combustion heater and thence to a storage tank, conducting the exhaust products of combustion from said heater to the upper portion of said tank through one path, and causing said products of combustion to flow downwardly in contact with the outer surface of said tank through another path remote from the first-named path.

1,540,362. MACHINE FOR MEASURING AND CUTTING PACKING. CHARLES A. NORVELL, Memphis, Tenn. Filed May 2, 1924. Serial No. 710,689. 8 Claims. (Cl. 164—57.)



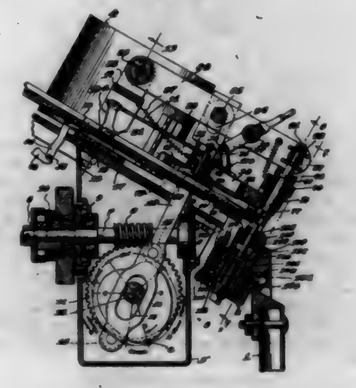
1. In a packing cutter, an anvil, an index plate, cooperative markings on said anvil and plate for indicating relative positions of said plate and anvil for vary-

ing shaft sizes, a compensating quadrant, a packing stop carried by said quadrant, cooperating markings on said quadrant and index plate for indicating relative



positions of said quadrant and plate for varying packing sizes, a cutting knife and means for forcing said knife forward against said anvil.

1,540,363. GARMENT HANGER. WILLIAM REID, Philadelphia, Pa. Filed Mar. 11, 1924. Serial No. 698,395. 10 Claims. (Cl. 211—13.)



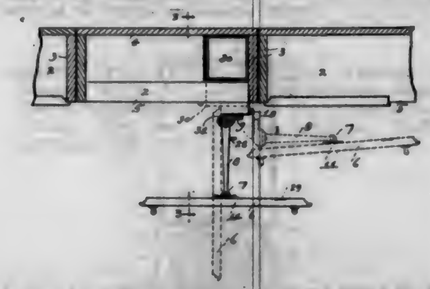
4. A garment hanger formed with a substantially arcuate coat-hanging portion and a cross bar above said portion engageable at opposite ends to support the hanger, and a yieldingly trunnioned bail whereby said hanger may be converted for central single point suspension, said bail being foldable to a position within the perimetrical confines of the hanger so as to be entirely out of the way when not in use.

1,540,364. WAVE MOTOR. BENJAMIN ROLDAN G, Caracas, Venezuela. Filed July 30, 1924. Serial No. 729,111. 2 Claims. (Cl. 253—11.)

1. In a wave motor, a frame comprising an upper rectangular portion, a lower rectangular portion, legs connected to the portions at their corners, bars extending between the legs parallel to and below the longitudinal sides of the lower rectangular portion, a third bar disposed between the ends of the lower portion, a plate attached to the lower surface of said third bar and having notched ends extending beyond the sides thereof, a U-shaped bracket supported on the upper surface of said third bar and having offset outwardly disposed notched ends, bearing rollers supported on the sides of the upper portion and on the first mentioned bars, rack bars having ribs slidably received in the notches and having their opposite surfaces in engagement with the rollers, means for taking power from the rack bars, and wave operated means for reciprocating the rack bars.

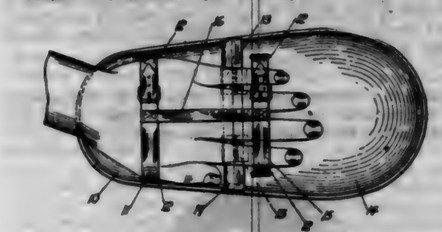
1,540,365. BUTTON-ATTACHING MACHINE. FREDERICK N. ROSS, Pontiac, Mich., assignor, by mesne assignments, to The Button Attaching Machine Co., Waterbury, Conn., a Corporation of Connecticut. Filed Aug. 4, 1923. Serial No. 655,589. 47 Claims. (Cl. 218—6.)

1. In a button attaching machine, the combination of means for attaching a button to a fabric, and means for automatically feeding buttons of several sizes to the attaching means including a manually controlled selector actuated by the feeding means for determining the size button to be fed to said attaching means.



1,540,366. OVERALL HARDWARE. FREDERICK N. ROSS, Pontiac, Mich., assignor, by mesne assignments, to The Button-Attaching Machine Co., Waterbury, Conn., a Corporation of Connecticut. Filed Nov. 5, 1923. Serial No. 672,750. 3 Claims. (Cl. 24—245.)

1. In overall art metal hardware, a loop member comprising a stamped corrugated bar stock with prongs stamped out of one of the bars and projecting at an angle which forms an approximate continuation of the arc of the corrugation for the purpose of strengthening the prongs.



1,540,367. DISPLAY CABINET. ROBERT A. SARGENT, Montpelier, Ohio, assignor to The W. C. Heller and Company, Montpelier, Ohio, a Corporation of New Jersey. Filed June 16, 1923. Serial No. 645,806. 8 Claims. (Cl. 211—7.)

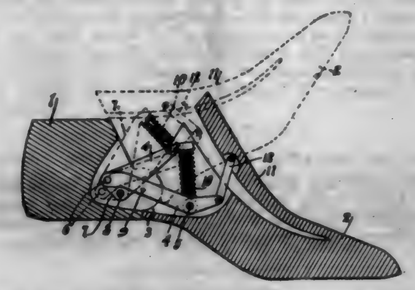
1. A cabinet having a door opening; a closure member for the door opening, swingably carried by the cabinet, and having an opening therethrough; a display member removably carried by the closure member and comprising a support portion detachably carried by the

closure member and a display portion hingedly mounted on the support portion and adapted to be swung through the closure member's opening.

1,540,368. SWIMMING DEVICE. ABRAHAM B. SAMUELS, Akron, Ohio. Filed May 28, 1924. Serial No. 716,392. 3 Claims. (Cl. 9—21.)

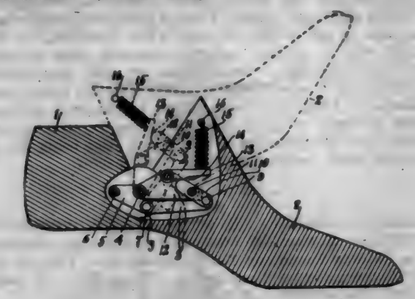
1. Swimming attachments for the hands, comprising a pair of plates hinged together and formed with inner concave surfaces cooperating to form a general inner concavity, one of said plates having a rigid strip secured on its outer surface, said strip overlying the hinged joint, and means on the outer surfaces of each plate to secure the same to the hand.

1,540,369. CARTON. ARTHUR W. SCOTCHER, Newark, N. J. Filed Feb. 20, 1925. Serial No. 10,544. 12 Claims. (Cl. 229—29.)



2. A collapsible, cellular carton formed from a single substantially rectangular blank having four continuous edges, said carton comprising opposed pairs of members or portions including bottom, outer side and hinged cover portions, transverse-partition platforms and longitudinal, vertical partition members arranged to provide a plurality of rows of cells for the reception of articles.

1,540,370. LAST. CLINTON M. SEARL, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Original application filed Apr. 21, 1924, Serial No. 707,796. Divided and this application filed Nov. 24, 1924. Serial No. 751,760. 2 Claims. (Cl. 12—186.)

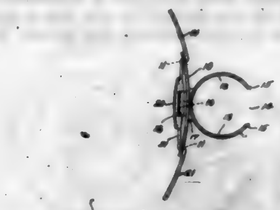


1. In a last of the divided type and comprising a toe part and a heel part, a collapsible instep for the toe part, a link pivotally attached to the toe part intermediate the ends of said link, the rear end of said link

extending into the heel part, an instep link attached to the forward end of the first-mentioned link and to said instep section, a second link pivoted to the heel part of the last and pivotally attached to said first-mentioned link at a point remote from the point of attachment of the second link to the heel part of the last, and a spring interposed between the last-mentioned link and the first-

mentioned link for actuating said links in a direction to shorten the distance between the points of attachment of said links to the last parts to maintain the last parts in extended position and in collapsed position under tension, said instep link maintaining the instep in extended position when the last is extended and drawing the instep into collapsed position when the last is collapsed.

1,540,371. LAST. CLINTON M. SEARL, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Original application filed Apr. 21, 1924, Serial No. 707,796. Divided and this application filed Nov. 24, 1924. Serial No. 751,762. 2 Claims. (Cl. 12—186.)

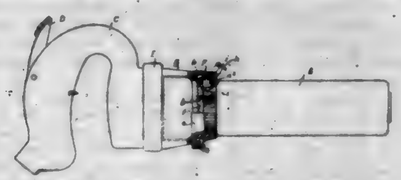


1. In a last of the divided type, the combination of a heel part and a toe part, a bearing pin for said last parts, a plate mounted on said bearing pin within the heel part of the last and having a portion thereof attached to said heel part, a link pivoted in the toe part of the last, a second link extending from said plate to one end of the first link, a member for connecting the first link to said bearing pin, and means for applying power to the first link adjacent the end thereof remote from the point of attachment of the first link to the second link to thereby maintain the last parts in extended position and collapsed position under tension.

1,540,372. FLASH-LIGHT HOLDER. CLARENCE M. SHAW, Shelton, Conn. Filed Oct. 28, 1922. Serial No. 597,565. 1 Claim. (Cl. 240—59.)

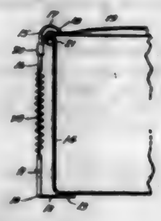
A flashlight holder including a support comprising a plate curved rearwardly longitudinally thereof and having transversely extending openings adjacent its ends, a

second plate extending transversely of the first plate and secured thereto, said second plate being also curved longitudinally thereof and in the same direction as the



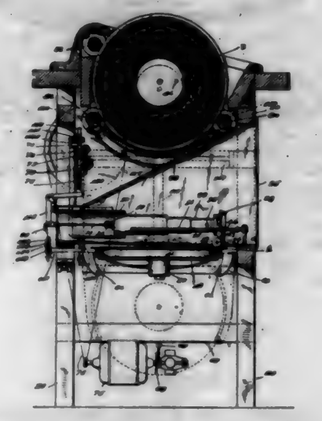
first plate, pads mounted on the back of the second plate, a spring clamp carried at the front of the support adapted to grip the casing of a flashlight, and a flexible supporting strap extending through said openings.

1,540,373. TOOL. RAYMOND S. SQUIRE, Millers Falls, Mass., assignor to Millers Falls Company, Millers Falls, Mass., a Corporation of Massachusetts. Filed Apr. 7, 1923, Serial No. 630,584. Renewed Sept. 22, 1924. 3 Claims. (Cl. 145—47.)



1. A bearing scraper, including a shank U-shaped in cross section, the end portions of the shank being curved in a direction opposite to the direction in which the side walls thereof extend, and said walls being bowed outwardly at said end portions and presenting longitudinal scraping edges, the height of said walls descreasing toward the ends of the shank and said walls converging at the shank ends to provide terminal scraping edges merging into and forming a continuation of said longitudinal scraping edges, one of said terminal scraping edges being rounded to form with the adjacent longitudinal scraping edges a single scraping edge extending in an unbroken curve, and the other terminal scraping edge being flat to provide sharp corners on either side thereof.

1,540,374. LOCKING DEVICE FOR FLUID-PRESSURE TOOLS. EDWARD W. STEVENS, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed July 10, 1923. Serial No. 650,591. 7 Claims. (Cl. 121—36.)

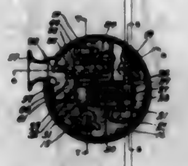


3. In a pneumatic tool, in combination a cylinder and a cylinder head in threaded engagement, a locking ring encircling said cylinder and maintained in face engagement with said head, said ring having a recess adjacent said cylinder, a lug on said cylinder extending within said recess, and a resilient member seated in said recess and adapted to be compressed against said lug for constantly urging said ring and said head in a direction to tighten the latter on said cylinder.

1,540,375. LID HOLDER. AXTON F. STODDECK, Cleveland, Ohio. Filed May 10, 1924. Serial No. 712,266. 1 Claim. (Cl. 53—8.)

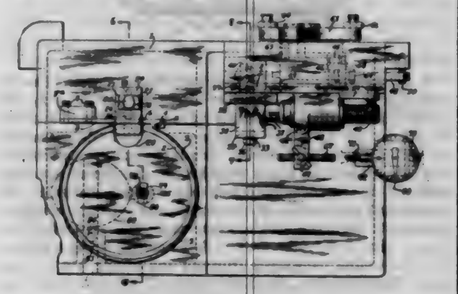
A lid holder for cooking utensils comprising a pair of hook members each formed from a single piece of metal bent upon itself to define a vertically disposed arm and outwardly diverging horizontally disposed arms, the horizontal arms of the lower member being adapted to engage the bottom of a vessel, the ends of the horizontal arms of the upper member being deflected downwardly to engage the lid of the vessel, a member slidably mounted on the vertical arm of said upper member and having a projection adapted to engage between said lid and vessel, and tension means interconnecting the vertical arms of said members.

1,540,376. PHONOGRAPH. HAROLD E. THOMPSON, Indianapolis, Ind. Filed Sept. 28, 1920. Serial No. 413,372. 32 Claims. (Cl. 274—10.)



2. In a phonograph, the combination of a record-supporting table arranged to rotate on a substantially vertical axis, a horn, said table being below said horn, and a tone arm mounted within said horn and provided with a needle-carrying sound box, the bottom of said horn being provided with a slot through which the needle of said sound box may project into co-operative relationship with a record on said table.

26. In a phonograph, the combination of a record-carrying table, sound-reproducing devices arranged to co-operate with a record on said table, a plurality of screws arranged to support a plurality of records in a row, transferring mechanism for removing a played record from said table and placing it in said screws at one end of said row and for removing a record from said screws at the other end of said row and placing it on said table, and means for operating said screws to feed the records

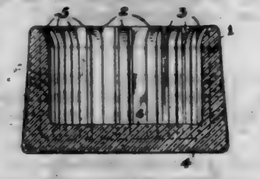


toward the latter end of said row, and means for automatically causing the stopping of the whole device when upon the removal of a record from said screws the next notch of the screws contains no record.

1,540,377. PULL-SWITCH SOCKET. CHESTER E. WARREN, Berwyn, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 25, 1921. Serial No. 464,229. 4 Claims. (Cl. 173—354.)

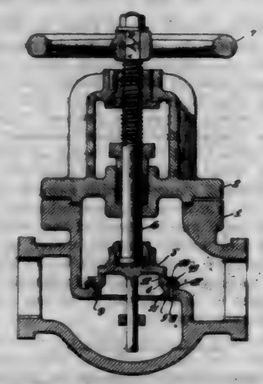
1. A switch mechanism comprising a pivoted switch blade, oscillatable back and forth, a spring bearing on said switch blade, and shiftable back and forth past a dead center to cause oscillation of said switch blade, and means for shifting said spring comprising a link having one end connected with said spring, a crank-shaft having a crank portion connected to the other end of said link, a driven ratchet member for driving said crank-shaft, and a driving ratchet member for driving said driven ratchet member, said driven ratchet member comprising a flange portion for engagement with said driving ratchet member, and a boss portion integral with said flange portion for engagement with the crank-shaft, said driven ratchet member having an opening therein through which the crank-shaft extends, said boss having a notch therein, said crank-shaft having an offset portion forming the crank lying in said notch to prevent relative rotation between said driven ratchet member and crank-shaft.

1,540,378. MICROMETER END-CLEARANCE MACHINE. ROBERT B. WASSON, Cranford, N. J. Filed Aug. 24, 1921. Serial No. 495,076. 34 Claims. (Cl. 33—179.)



9. A machine for measuring the end clearance of piston rings comprising in combination a dimensioning, flexible band adapted to confine the ring in a loop, an anchorage for one end of the band, a clamp for the distal end of the band, a member carrying said clamp, means for adjusting said member, means for bodily moving said adjusting means and an indicator for showing the amount of the bodily movement of the adjusting means, thereby determining the end clearance.

11. A machine for measuring the end clearance of piston rings comprising in combination a dimensioning, flexible band adapted to confine the ring in a loop, means for anchoring one end of the band at one side of the path of the distal portion of the band, a clamp for the distal end of the band, means for bodily moving said clamp and an indicator for showing the amount of the said movement.

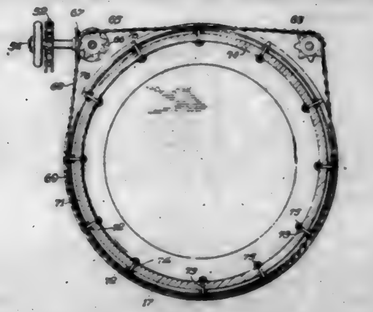


31. A machine for measuring the end clearance of piston rings comprising in combination a dimensioning, flexible band adapted to confine the ring in a loop, means for anchoring one end of the band at one side of the path of the distal portion of the band, a clamp for the distal end of the band, means for bodily moving said clamp, a bracket, means connected with said clamp for actuating the indicator, and an indicator pivoted to said bracket, for showing the amount of movement of said clamp.

1,540,379. SPONGE CUP. FRANK S. WEAVER, Bellevue Borough, Pa.; Sophia C. Weaver and Fidelity Title and Trust Company, administrators of the said Frank S. Weaver, deceased, assignors, by mesne assignments, to Defiance Sales Corporation. Filed Dec. 1, 1922. Serial No. 604,298. 5 Claims. (Cl. 91—54.4.)

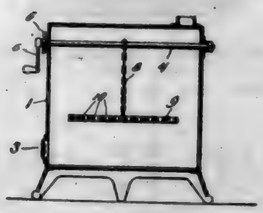
1. A container for a desk sponge of cup like form having its floor provided with ribs to elevate the sponge out of contact with the floor of the container.

1,540,380. VALVE. WYLIE G. WILSON, Jersey City, N. J., assignor to Loose Seat Valve Company, a Corporation of Delaware. Filed Oct. 20, 1922. Serial No. 595,780. 11 Claims. (Cl. 251—167.)



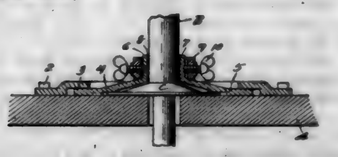
1. In a valve a gasket formed of suitable material to accomplish a seal between opposed surfaces, such gasket having the characteristic of being normally of uniform thickness and compressible and of a width greater than that of the opposed surfaces between which it is mounted, in combination with suitable opposed faces between which said gasket is mounted and means for pressing said faces together.

1,540,381. CONCRETE MIXER. JOHN G. WYNN, Madison, Wis. Filed Sept. 1, 1921. Serial No. 497,581. 9 Claims. (Cl. 82—73.)



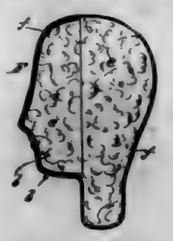
1. In combination, a concrete mixer, a driving chain having operative engagement with said mixer, a hoop

mounted on said mixer and having radially extending shoulders for receiving said chain therebetween and



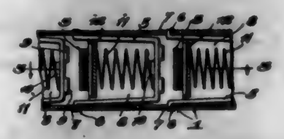
spaced attaching means forming teeth for engagement by the links of the chain, and means for spacing said hoop from said mixer circumferentially.

1,540,382. STRAW-BURNING DEVICE. FRANK O. ARMSTRONG, Altamont, Kans. Filed Apr. 2, 1924. Serial No. 703,789. 1 Claim. (Cl. 110—5.)



A straw burning device of the class described comprising a shaft adapted to be mounted for rotation in the upper portion of a stove, a hand crank connected to one end of said shaft, a ratchet wheel connected to said shaft, a pawl adapted for cooperation with the teeth of said ratchet wheel, a gravity lowered follower-weight adapted to be disposed for vertical movement within the body of the stove, said weight being of discular form and provided with a plurality of apertures and being of a predetermined diameter with respect to the body of the stove in which it is placed whereby to provide space between itself and the wall of the stove body, and a supporting and hoisting chain wound at its upper end upon said shaft and connected at its lower end to the center of said weight, whereby to permit free swinging of the latter so as to permit it to rest upon a burning fire of irregular form.

1,540,383. PUMP BASE. OLLIE P. BEARD, Holden, Mo. Filed July 7, 1924. Serial No. 724,682. 2 Claims. (Cl. 103—218.)

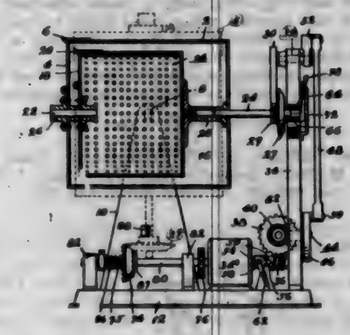


1. A pump base comprising a substantially rectangular shaped frame, a flange formed on the inner edges thereof, a pair of complementary sections slidable in said frame beneath said flange, upstanding semi-circular flanges provided on the inner opposed edges of said sections and adapted to encircle a pump, and means for securing said sections in locked engagement with the pump.

1,540,384. MANUFACTURE OF HEADS FOR DOLLS, MANIKINS, ETC. CHARLES BLOOM, New York, N. Y. Filed Jan. 28, 1924. Serial No. 689,033. 5 Claims. (Cl. 46—40.)

1. As an article of manufacture, a head of the character designated, comprising a physiognomic portion consisting of a basic plaque of relatively coarse woven fabric, a binder, and a surface cloth, the fabric being in superposed layers with the threads in crossed relation the said physiognomic portion being subjected to moist heat and die pressure the surface cloth being extended beyond the buckram layer to form marginal portions, and the marginal portion of the surface cloth being utilized to cover and adapted to enclose the filling material, substantially in the manner and for the purpose set forth.

1,540,385. LINK BRACELET. WILLIAM BOOTH, Attleboro, Mass., assignor to Guyot Bros., Attleboro, Mass. Filed June 27, 1924. Serial No. 722,817. 4 Claims. (Cl. 59—79.)



1. In a link-bracelet, links including boxes having openings in the sides thereof, U-shaped members in the boxes having their free ends turned outwardly and received in the openings of adjacent boxes, plates seated on the members and having fingers struck-out therefrom and engaged with opposite sides of the closed or base ends of the U-members, and coil springs between the plates and the backs of the boxes and engaged at their ends with the bases of the U-members and an end of the boxes, the free ends of the U-members being exposed and projecting outwardly from an end of the box thereof upon disconnection from the box of an adjacent link.

1,540,386. WASHING MACHINE. GEORGE T. BRYAN, Kansas City, Mo. Filed Apr. 2, 1923. Serial No. 629,365. 1 Claim. (Cl. 68—18.)

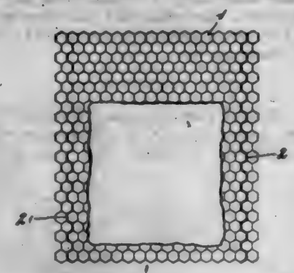
In a machine of the character described, a cylindrical casing, trunnions fixed to said casing, supports in which said trunnions are mounted so that the casing may be rocked to vertical and horizontal positions, a perforated drum mounted in and rockable with the casing, said drum being proportioned to leave a relatively large space between its bottom and the bottom of the casing when in vertical position, a shaft fixed to said drum and extending through one end of the casing, a gear

wheel fixed to said shaft, a segmental gear for imparting an alternate rotary motion to said gear wheel, a standard having a fixed bearing member constituting a stop for the shaft when adjusted to a horizontal position to engage the gear wheel with said segmental gear, a movable bearing member for holding the shaft in engagement with said fixed bearing member, mechanism for driving the segmental gear, and gearing coacting with a portion of said mechanism for driving the shaft in one direction when adjusted to vertical position.

1,540,387. TELEGRAPH RECEIVING APPARATUS. ARTHUR CLAUSING, Berlin-Charlottenburg, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Jan. 25, 1924. Serial No. 688,503. 5 Claims. (Cl. 178—88.)

1. A receiving system for alternating and direct current telegraphy having an impulse current of indefinite frequency, in which system the impedance of the receiving apparatus is made substantially equal to the impedance of the circuit element from which the receiving apparatus receives the current, the value of said impedances being determined by a frequency constituting the succession of impulses of shortest duration in said impulse current of indefinite frequency for the purpose of transmitting the maximum amount of energy.

1,540,388. PORTABLE SAW. JOHN M. CROWE, Covington, Ky., assignor to The Crowe Manufacturing Company, Covington, Ky., a Corporation of Kentucky. Filed Apr. 19, 1923. Serial No. 633,178. 3 Claims. (Cl. 143—6.)



1. A portable motor saw device, comprising a readily portable slideway adapted to be applied to the work and governing the plane of operation of the saw and having means to freely abut the work to maintain the slideway at the desired angle across a face of the work, a carriage slidable on said slideway, a motor on the carriage, and a saw rotated by said motor and mounted to be freely rockable below and back from the plane of the slideway, and handle means on the same rockable mounting by which either the saw may be rocked or the carriage moved on the slideway.

1,540,389. COIN-CONTROLLED VENDING MACHINE. ROBERT FELTON, New York, N. Y., assignor to Jacob E. Hartle, jr., Newark, N. J. Filed Oct. 3, 1923. Serial No. 666,854. 12 Claims. (Cl. 194—2.)

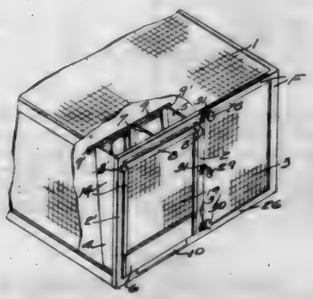
11. In a coin-controlled machine, a casing-member provided with a coin-depositing opening, a delivery-element oscillatorily mounted with relation to said casing member, a coin-operated detent for locking said delivery-element, a coin-supporting means disposed beneath said opening, and a pawl co-operating with said coin-supporting means to permit, primarily, a single delivery operation of the delivery-element, and, secondarily, a greater number of delivery operations of the delivery-element.

1,540,390. RADIATOR AND METHOD OF MAKING SAME. ERNEST FLORY, Lowell, Mass., assignor to United States Cartridge Co., Lowell, Mass., a Corporation of Massachusetts. Filed Nov. 20, 1922. Serial No. 602,253. 10 Claims. (Cl. 113—116.)

1. A radiator comprising an assemblage of tubes having polygonal ends interfitting together, the interfitting ends presenting a zig-zag outline at the side of the assemblage, a side wall having a similar outline fitting against said ends at the side of the assemblage, and means outside said wall having a similar outline interfitting with the wall.

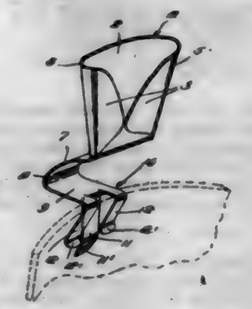
1,540,391. PREPARATION OF MAGNESIUM CARBONATES. SOMA GELLÉRI, deceased, late of Budapest, Hungary, by Felice Gellèri, administratrix, Budapest, Hungary, and Anton Hambloch, Andernach, Germany. Filed July 7, 1921. Serial No. 483,064. 1 Claim. (Cl. 23—67.)

The herein described process for the production of magnesium carbonate from magnesium carbonates and magnesium silicates containing calcium, which consists



in calcining the minerals containing calcium and magnesium carbonates, then finely grinding the same and mixing with alkali metal-carbonates, dissolving in water, saturated with carbon dioxide, and heating to from 60° to 70° centigrade, separating the solution containing the magnesium with the alkali metal as a double carbonic acid salt from the precipitated calcium carbonates and from the other solid residues, and subsequently decomposing by heat into insoluble magnesium carbonate and alkali metal carbonate remaining in solution.

1,540,392. FRUIT THINNER. ALSTINE J. GROW, Hood River, Oreg. Filed July 24, 1923. Serial No. 653,495. 4 Claims. (Cl. 30—11.)



1. In a fruit thinner, a handle bar, a hook provided at the upper end of the handle bar, the upper or curved portion of said hook being of circular form and of circular cross section, a companion bar relatively slidable on the handle bar, and a knife-blade provided at the upper end of the companion bar.

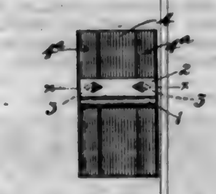
1,540,393. HUTCH FOR SMALL ANIMALS. KARL F. O. HAACK, Jersey City, N. J. Filed Apr. 10, 1924. Serial No. 705,420. 3 Claims. (Cl. 119—20.)

3. In a hutch, a pivoted manger constructed of sheet metal and comprising a bottom trough having the front top edge bent forwardly to form a supporting ledge, a downwardly extending channel piece secured to the bottom of said trough to form a hinge support for the manger, a pair of sides secured to said trough and having inwardly extending flanges at the front edge, a pair of angle strips secured to said sides and having flanges spaced from said inwardly exending flanges on the sides, said pairs of spaced flanges forming guide channels in line with said supporting ledge, a frame removably supported in said channels and on said ledge, a cross strip secured to said angle strips at the top, and a cross strip secured to said sides at the rear top edge, said cross strips projecting beyond said sides to form stops for holding the manger in closed and open positions.

1,540,394. SPOON HOLDER. ORRIE P. HALL and NORA M. HALL, Louisville, Ky. Filed Mar. 1, 1924. Serial No. 696,249. 1 Claim. (Cl. 65—65.)

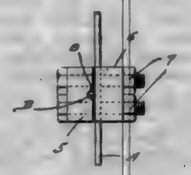
A spoon holder formed of a single piece of T-shaped sheet material, having the head portion formed with the end portion extending inwardly, and terminating in adjacent relation at one side of the central portion and cooperating therewith to form a tapered pocket, adapted to receive the bowl of a spoon, and support the same with the handle in a substantially upright position, and a stem portion on said head extending downwardly therefrom, said stem being formed with cooperating fingers at the lower end to provide a clamp for engaging the upper edge of a container and supporting the pocket on said container, the intermediate portion of the stem being formed to position the pocket inwardly of the edge of the container when the same is supported thereon.

1,540,395. SPEEDOMETER-DRIVING MECHANISM. GUY P. HENRY, Detroit, Mich., assignor to Studebaker Corporation, a Corporation of New Jersey. Filed Apr. 29, 1922. Serial No. 557,278. 10 Claims. (Cl. 74—36.)



2. A speedometer drive mechanism comprising a driving member, a driven member having an external journal and an internal journal, an adjustable bearing for said external journal, an adjustable bearing for said internal journal, and means on said driven member and said internal journal bearing for limiting the axial movement of said driven member.

1,540,396. GILL SCREW. WILLIS HOLDSWORTH, Providence, R. I. Filed July 22, 1924. Serial No. 727,457. 4 Claims. (Cl. 19—129.)

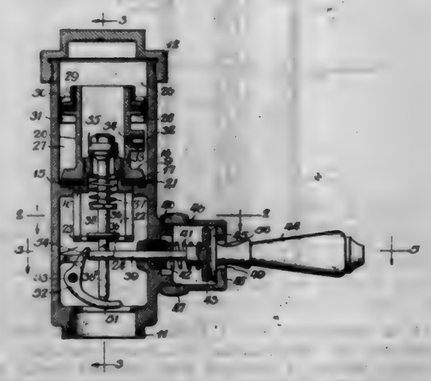


1. An improved gill-screw for gill-drawing frames formed with a cross-slot extending across its ends, and a faller-cam fastened to the end of the screw and provided with a key on its face engaging the slot in the screw to secure the cam rotatively therewith in certain definite relation with respect to the threads thereof.

1,540,397. PIN TUBE. WILLIAM S. HUNKINS, Los Angeles, Calif. Filed Jan. 20, 1925. Serial No. 3,566. 3 Claims. (Cl. 24—76.)

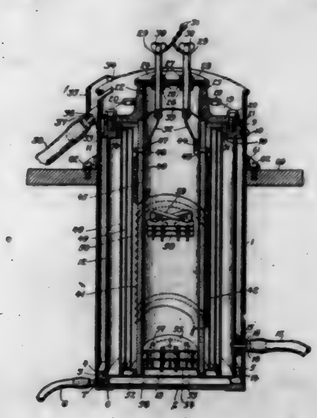
1. A pin tube tab end comprising a short strip of fabric, a sheet metal tube extending across an intermediate part of the same from edge to edge, a flange extending lengthwise of said tube, fastening devices formed integrally with said flange between the ends thereof, said fastening devices penetrating said fabric and being bent into holding engagement therewith.

1,540,398. WIRE CLAMP. NEWTON JACKSON, Newport, R. I. Filed Feb. 21, 1924. Serial No. 694,338. 1 Claim. (Cl. 287—49.)



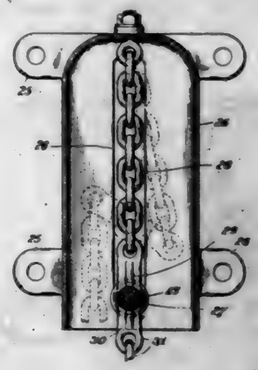
A clamp device for cross wires comprising a pair of plate members, said members being of the same configuration and the same relative dimension, each member having parallel side edges and provided in the vicinity of its ends with circular openings located midway between the parallel side edges, each member being provided at one of its faces with a channel having its side edges disposed at acute angles to the side edges of the member, said channel being located between the openings, and the edges of the channel intersecting the edges of the openings at the inner portions thereof and a pair of traction bolts passing through the openings of the members and disposed one at each side of both of the channels.

1,540,399. PHOTOGRAPHIC PRINTING. ROBERT W. JONES, Wilkes-Barre, Pa. Filed May 3, 1922. Serial No. 558,063. 15 Claims. (Cl. 95—75.)



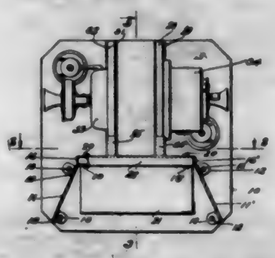
1. The combination in a photographic printing machine, with a light change box having a switch bar adapted to be progressively advanced step by step, to regulate the intensity of the printing light, indicia correlated with the switch bar to distinguish the several steps, a feeler to control the step by step advance of the switch bar; and a negative ribbon film having sections of varying densities, adapted to travel past the feeler, the negative ribbon having spaced mutilations to control the operation of the feeler; indicia applied to the sections of the film of varying densities to distinguish the latter, such indicia adapted to correspond with the indicia which distinguish the several step advances of the switch bar.

1,540,400. FLUSH-VALVE DEVICE. EDWARD L. KELLAN, Chicago, Ill. Filed Apr. 14, 1920. Serial No. 373,722. 18 Claims. (Cl. 137—93.)



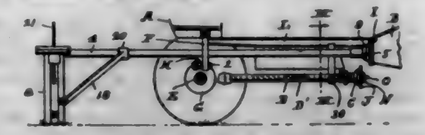
3. A flush valve comprising a casing having a liquid thoroughfare, a main valve to control the same, an auxiliary valve to control the main valve, an actuator for the auxiliary valve, a lifting element pivoted to the casing operatively connected between the auxiliary valve and the actuator, and cam means fixed on the casing to trip the operative connection at the limit of operation of the actuator.

1,540,401. VACUUM OVEN. MERVIN J. KELLY, New York, N. Y., and THOMAS R. GRIFFITH, Dover, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 24, 1920. Serial No. 405,768. 14 Claims. (Cl. 219—36.)



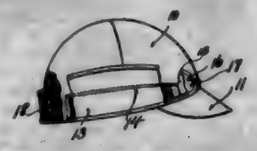
1. An electric oven having an air tight chamber, a heating member within said chamber adapted to receive a charge to be heated, a plurality of highly polished metallic plates surrounding the charge to confine the heat to the vicinity of the charge.

1,540,402. APPARATUS FOR MANIPULATING RAILWAY-CAR BRAKES. AUGUSTUS F. KLASING, Chicago, Ill., assignor to The Klasing Car Brake Company, a Corporation of Colorado. Filed Oct. 8, 1920. Serial No. 415,572. 18 Claims. (Cl. 74—110.)



1. In combination with a railway car and its brakes, apparatus for manipulating the brakes comprising a winding member of relatively small diameter having an arm extending therefrom, a flexible element connected with the brakes and with said arm so that, on rotation of the winding member, the flexible element is given a movement of considerable amplitude through the swinging movement of the arm and is then wound around the portion of the member which is of small diameter, means for rotating said winding member and giving to the same a translatory movement, and means sharing the translatory movement of the winding member for retaining the same in any desired position of rotation.

1,540,403. MUNICIPAL SERVICE POST. OSCAR D. KLEINSTEUBER, Milwaukee, Wis., assignor of forty one-hundredths to Hugo A. Kleinsteuber, Milwaukee, Wis. Filed Nov. 9, 1922. Serial No. 599,868. 1 Claim. (Cl. 177—377.)



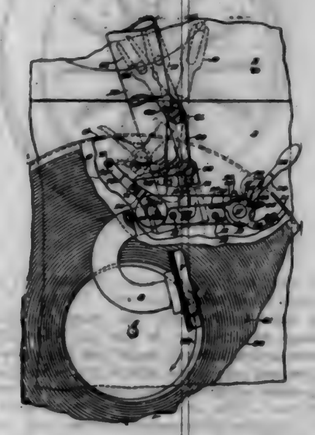
A device for insertion into the compartment of a municipal service post, said device having transverse and longitudinal panel units provided with signalling devices, a base having a transverse trough for receiving said transverse panel unit and having a pair of troughs extending outwardly with reference to said first mentioned trough and adapted to receive the longitudinal panel units with one vertical edge of each abutting a face of said transverse panel, means for releasably locking said transverse panel in place, and a spider bracket having a channel for receiving the upper edge of said transverse panel and having means for holding the upper end of each of said longitudinal panels.

1,540,404. POWER-TRANSMITTING ATTACHMENT FOR MOTOR VEHICLES. ALBERT KOHL, Pleasanton, Kans. Filed Aug. 25, 1924. Serial No. 733,934. 4 Claims. (Cl. 180—63.)

1. In a power transmitting attachment for motor vehicles, a mandrel, a universal joint at the forward terminal of said mandrel for connection with the transmission mechanism of said motor vehicle, and elongated shackles connecting the rear spring to the rear spring hangers of said vehicle to permit the rear axle and propeller shaft assembly of the vehicle to move forwardly or backwardly to a limited degree independently of the rear spring and chassis while said universal joint is being connected or disconnected from the power transmission mechanism of the vehicle.

1,540,405. CAP. GEORGE J. KROMER, Milwaukee, Wis. Filed Apr. 18, 1922. Serial No. 554,969. 1 Claim. (Cl. 2—172.)

In a cap, the combination of a crown, a semi-rigid peak secured thereto, a slide stitched to the said crown adjacent the lower edge thereof, and normally extending upwardly from such lower edge, the stitching joining such slide and such crown extending beyond the ends of said peak and over a material portion of such

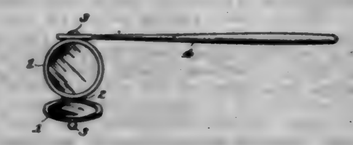


peak adjacent the ends thereof, said slide having an abrupt front end located a material distance forwardly of the ends of said peak, a flap, said slide and said flap being stitched together on a line intermediate the upper and lower edges of said flap and extending to the abrupt front end of said slide, said flap extending forwardly beyond the ends of said slide, and means joining the ends of said flap and positioned over said peak, whereby said slide normally lies flat against said crown without a projecting fold, and whereby the front ends of said slide are drawn directly downwardly and said peak is constricted by said slide when said flap is drawn downwardly and thereby tension said flap, and whereby a secure overlapping joint is secured between the overlying slide and said peak.

1,540,406. FOOD-PRESERVING CAN. EDWARD M. LANG, Jr., 3d, Portland, Me. Filed Aug. 23, 1921. Serial No. 494,667. 2 Claims. (Cl. 220—81.)

1. A food preserving can having an outwardly turned flange at one end and a cover for said can having an upright portion immediately inside of said can body and having a cover sealing flange connected with said upright portion and a relatively rigid metal gasket interposed between said can flange and cover flange, the said can flange, metal gasket and cover flange being rolled or folded together to form an involute sealing joint said gasket gripping the joint and being wide enough to extend down into the interior of the can between said upright portion and the side of the can to prevent by its gripping action the opening of the sealing joint.

1,540,407. STOP MECHANISM FOR TALKING MACHINES. WILLIAM D. LA RUE, Philadelphia, Pa., assignor to Victor Talking Machine Company, a Corporation of New Jersey. Filed Jan. 8, 1923. Serial No. 611,248. 34 Claims. (Cl. 192—122.)



1. The combination with a talking machine having a rotatable record support and sound reproducing means adapted for movement across said support, of stop mechanism for the support comprising a stop member, relatively movable members one cooperative with the stop member and the other cooperative with said sound reproducing means, a rack carried by one of the movable members, and a pawl carried by the other movable member and adapted for cooperation with the rack.

1,540,408. CYCLE-CRANK-HANGER BRACKET. JULIUS M. LOHN, Laporte, Ind., assignor to Great Western Manufacturing Company, Laporte, Ind., a Corporation of Indiana. Filed July 9, 1924. Serial No. 725,030. 3 Claims. (Cl. 208—95.)

1. A cycle crank-hanger bracket comprising, in combination, a barrel having an opening therein the wall of said opening being turned to form a nipple, a reinforcing and frame-tube-receiving sleeve having a reduced inner-end portion and a shoulder abutting against the inner face of the nipple and flush therewith, said sleeve being spread outwardly at its inner-end to bear against the internal surface of the barrel, whereby to clamp together said shoulder and nipple in abutting relation, and a frame-tube the inner end of which contacts with the outer face of the nipple and with the external surface of the barrel thereby forming triple thickness of metal at the joint between said tube and barrel.

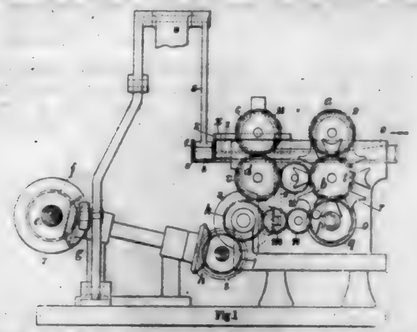
1,540,409. DENTAL MIRROR. RICHARD EARL MCCRAY, Fairmont, W. Va. Filed Jan. 29, 1924. Serial No. 689,327. 2 Claims. (Cl. 32—27.)

1. A device of the character described, comprising a pair of mirrors hingedly connected, headed studs on the free ends of the mirrors and at a point adjacent the hinge thereof, a handle having a longitudinally slotted end with a flared entrance thereto, and having a pair of openings in the slotted portion adapted to receive the headed stud in either of them.

1,540,410. MACHINE FOR SHAPING AND CUTTING TOFFEE, CANDY, OR LIKE SWEETMEAT. HORACE ELTON MARTIN and RICHARD ANSON HARRIS, Peterborough, England. Filed Nov. 26, 1924. Serial No. 752,486. 2 Claims. (Cl. 107—21.)

1. In toffee and like shaping and cutting machines, the combination comprising a plurality of pairs of toffee feeding rolls having their passes in alignment, means for imparting intermittent rotary movement to said rolls, a die coaxial with the said passes, a trough at

right angles to the axis of the die, means whereby the forward portion of the toffee is severed after its projection by the rolls through said die and across said



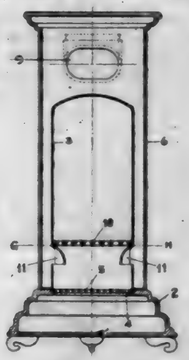


Fig 1

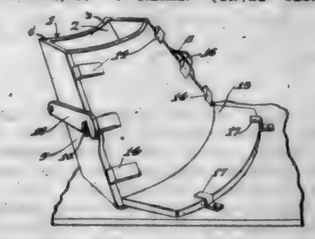
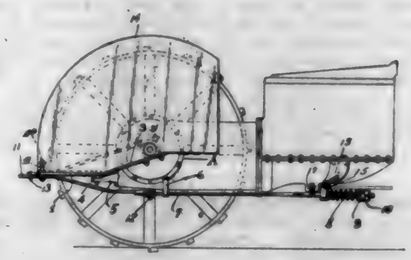


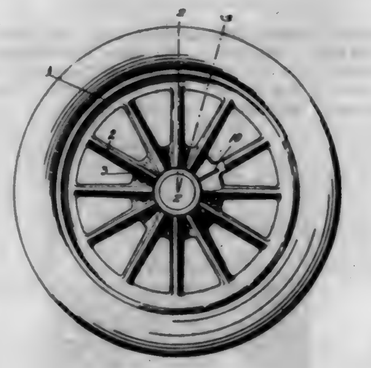
trough, and means for abutting against one end of said severed portion and pushing the same along the trough.

1,540,411. STOVE. TORANOSUKE MATSUMOTO, Osaka, Japan. Filed Feb. 5, 1923, Serial No. 617,000. Renewed Feb. 28, 1925. 1 Claim. (Cl. 126—58.)



A stove having an outer case and an inner case spaced apart to form a smoke passage around the inner case, an upper grate, and a lower grate that receives fuel dropping from the upper grate, the products of combustion through the smoke passage serving to preheat fuel on the upper grate.

1,540,412. CROWN MOLD. JOHN A. MAYBERRY, Bell, Calif., assignor of one-fifth to Thomas A. Mayberry, one-fifth to James T. Mayberry, one-fifth to George O. Heffner, and one-fifth to W. E. Alderson, all of Huntington Park, Calif. Filed June 21, 1923. Serial No. 646,787. 9 Claims. (Cl. 25—121.)

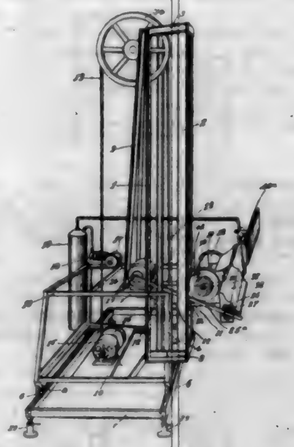


2. In a crown mold, a tapered closure plate having parallel top and bottom edges and provided with a basal flange.

1,540,413. TRACTOR ATTACHMENT. PLEASANT MILNER, Crowley, La. Filed Feb. 27, 1924. Serial No. 695,590. 3 Claims. (Cl. 280—33.9.)

1. In combination with a tractor, a bracket connected with the under part of the crank case and having an eye therein, a yoke member having a stem thereon passing through the eye, a spring on the stem and bearing against a part thereon and against the bracket, a draw bar movably connected with the bight of the yoke member, a platform frame connected with the rear part of the tractor and means for adjustably connecting the draw bar with said platform.

1,540,414. WHEEL FOR AUTOMOBILES OR OTHER VEHICLES. LEON MONTUPET, Paris, France. Filed Aug. 16, 1923. Serial No. 657,800. 3 Claims. (Cl. 301—65.)

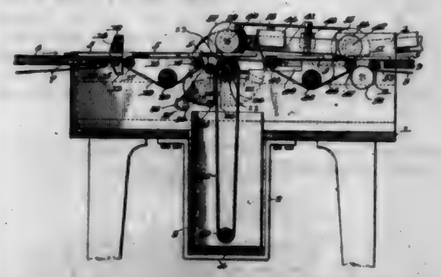


2. In a wheel, a one-piece cast metal hub member, a metal lining ring member in the hub member, one of said members having integral studs and the other member having apertures into which the studs project for locking the lining member in the hub member.

1,540,415. STUCCOING AND PLASTERING MACHINE. ENRICO MORELLI, Cincinnati, Ohio. Filed Feb. 18, 1925. Serial No. 8,901. 7 Claims. (Cl. 72—130.)

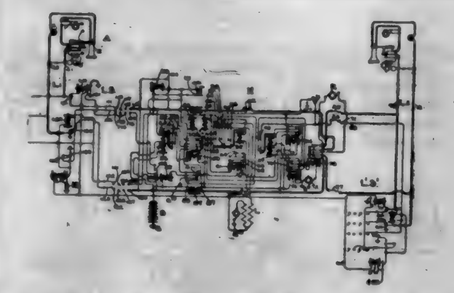
5. A plastering device comprising a supply box with an outlet aperture therein and means causing the discharge

of material within the supply box through the outlet aperture, and a discharging compartment connected with the supply box outlet aperture with combined mechani-



cal and pneumatic means in the discharging compartment for ejecting the material from said compartment onto a wall.

1,540,416. FOUNTAIN PEN. RYOSUKE NAMIKI, Tokyo, Japan. Filed July 23, 1924. Serial No. 727,735. 3 Claims. (Cl. 120—46.)

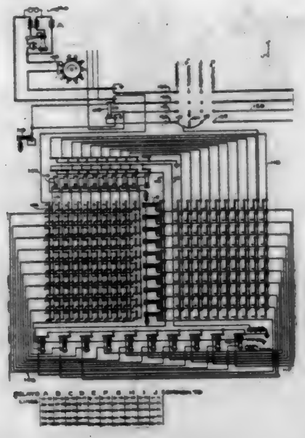


1. In a fountain pen, the combination with a barrel, an inner flexible ink reservoir of flexible material, a resilient means to press and release the flexible reservoir, a pen holder and a pen, of a means, to actuate said resilient means, consisting of a fixed member of one piece of oblong metal plate folded back along the centre line, having two tongues one at each end and holding feet to fix itself in position to said barrel, and a movable metal member of one piece, U shaped in section, having a forked end to bestride and to be pivoted to said fixed member and flattened at the other end to form a picker, said barrel being provided with a longitudinal opening to receive said actuating means and through which said actuating means are operated to actuate said resilient means.

1,540,417. GLAZE MACHINE. JOHN B. OWENS, New York, N. Y. Filed Nov. 4, 1922. Serial No. 599,116. 9 Claims. (Cl. 91—54.)

1. In a machine for glazing tiles, the combination with means for applying the glaze to the tiles, of an endless apron for delivering the tiles to said glazing means, means for cleaning the tiles before they pass to the endless apron, and another endless apron to which the grazing means delivers the tiles after they have been glazed, said last named apron removing the glazed tiles.

1,540,418. AUTOMATIC TELEPHONE TRUNKING SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 19, 1918. Serial No. 250,617. 24 Claims. (Cl. 179—18.)

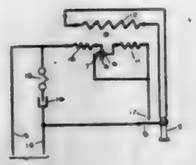


1. In a telephone system, the combination with a line switch, a line relay therefor, a plurality of sets of stationary contacts for the said line switch, each of the said sets of contacts being connected to a trunk line circuit, sets of home point contacts for the said switch, one of the said sets of home point contacts being interposed between adjacent sets of trunk point contacts, line switch wipers, means to cause the said line switch wipers to move from a contacting set of home point contacts, under the control of the said line relay, means to cause the said line switch wipers to move from a busy set of trunk contacts, said first-named and said last-named moving means including a motor magnet for the said switch, and means associated with each of the said trunk circuits responsive to the idle condition thereof, to disable the said motor magnet to stop the said switch wipers upon its set of contacts.

1,540,419. AUTOMATIC TELEPHONE SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 28, 1920. Serial No. 433,877. 6 Claims. (Cl. 179—18.)

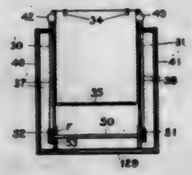
1. In a telephone exchange system, a plurality of telephone lines divided into groups, a selecting switch for

the use of of each telephone line, independent operating means for each switch, a group of relays common to each one of said groups of lines and less in number than the



number of said telephone lines for controlling the operating means of the selecting switch of the calling line, and operating circuits for certain of said relays including said telephone lines.

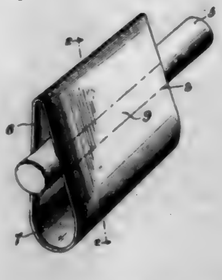
1,540,420. AUTOMATIC TELEPHONE SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed May 28, 1921. Serial No. 473,483. 14 Claims. (Cl. 177—18.)



1. In an automatic telephone system, an incoming circuit, a relay responsive to impulses transmitted over said incoming circuit, said relay being provided with normally open and normally closed contacts, progressively movable switches, magnets for advancing the same, and operating circuits for said magnets completed alternately at said normally open and said normally closed contacts.

1,540,421. TELEPHONE CIRCUITS. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed June 5, 1924. Serial No. 718,141. 9 Claims. (Cl. 179—81.)

9. In a telephone net-work, a pair of line conductors, a normally open bridge including a two-element transmitter connected across said line conductors, a second bridge including a ringer and a condenser connected across said line conductors, a hookswitch for opening said first mentioned bridge, a telephone receiver, and a closed circuit for said receiver conductively separated from but inductively connected to said first bridge.

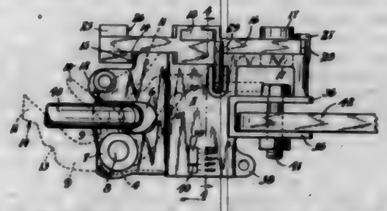


1,540,422. BOX FOR BOBBIN TRUCKS. ARTHUR D. RAMSAY, Lowell, Mass. Filed Jan. 28, 1923. Serial No. 614,458. 2 Claims. (Cl. 280—50.)

2. The combination in a box for empty bobbins, of means to attach it to a truck, with a vertically slidable false bottom, and means for raising and lowering and for holding such false bottom in position, including a drive shaft, lifting pulleys fixed thereto, a ratchet wheel fixed to said shaft, a check pawl in engagement therewith, means to throw such check pawl out of action, a driving pawl in engagement with said ratchet wheel, foot operable means for operating said driving pawl, top pulleys located at the top of the box, and flexible members which pass over such pulleys and connect at one end with such false bottom and at the other end with said lifting pulleys.

1,540,423. GUIDE VANE. PAUL J. RESS, York, Pa., assignor of one-half to Eugene U. Gibbs, York, Pa. Filed Apr. 21, 1924. Serial No. 708,065. 6 Claims. (Cl. 253—122.)

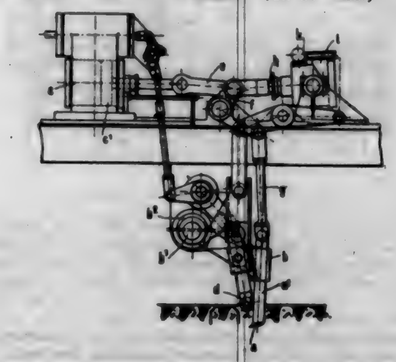
1. A guide vane comprising two plate sections bent to form substantially V-shapes, a stem arranged between the plate sections and welded to the ends thereof.



1,540,424. METHOD OF PRODUCING NITROCELLULOSE EXPLOSIVES. WALTER PHILIP REGESTEIN, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed July 17, 1919. Serial No. 311,512. 9 Claims. (Cl. 52—20.)

1. The method of preparing nitrocellulose propellent powder which consists in colloiding a mixture of nitrocellulose having a portion not soluble in, and a portion soluble in, the solvent used for colloiding, and incorporating a soluble solid body in the colloid, and then simultaneously, and in a single step, removing said solvent and said solid body.

1,540,425. ART OF MAKING ZIRCONIUM COMPOUNDS. LONNIE W. RYAN, Chicago, Ill., assignor to Lindsay Light Company, Chicago, Ill., a Corporation of Illinois. Filed May 28, 1923. Serial No. 641,008. 2 Claims. (Cl. 23—22.)

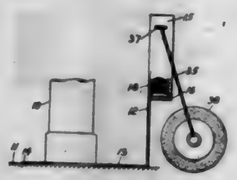


1. The method of preparing granular basic zirconium sulfate which comprises adding sodium chloride to an aqueous zirconium sulfate solution and subsequently adding an alkali thereto.

1,540,426. CONVERTIBLE HITCH DEVICE. MARTIN A. SAGEN, Edmore, N. Dak., assignor of one-third to Hilbert J. Nyhus, Edmore, N. Dak. Filed Apr. 27, 1923. Serial No. 635,000. 8 Claims. (Cl. 280—33.15.)

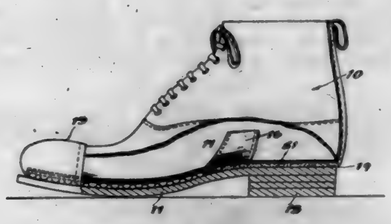
1. A draft device comprising a casing, a latch pivoted at one end thereof, a member mounted to aline and engage with said latch, said member being movable in two directions substantially at right angles to each other into positions out of engagement with said latch, and resilient means resisting movement of said latch in both directions.

1,540,427. PROCESS FOR WEEDING. AUGUSTE SCHEUCHZER, Renens, near Lausanne, Switzerland, assignor to Ferrodesherbeuse Scheuchzer Societe Anonyme, Renens, Switzerland. Filed May 5, 1924. Serial No. 711,301. 2 Claims. (Cl. 37—105.)



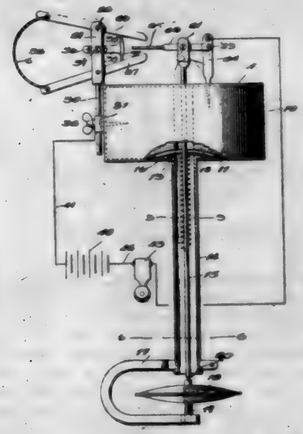
1. In railroad track weeding machines having knives which as may be required are introduced into and withdrawn from the ballast and worked by a servo-motor a process consisting in coupling the piston of a compressed air cylinder arranged coaxially with and facing the cylinder of the servo-motor to the piston of this latter and to the operating member of the knife and in introducing air into the compressed air cylinder on the piston side facing the servo motor so as to counteract the movement of the piston of the servomotor and to have the length of stroke of the knives determined by the initial pressure of the air cushion all as described.

1,540,428. FOUNTAIN BRUSH. WILLIAM SEVERNS, Chicago, Ill. Filed July 15, 1922. Serial No. 575,821. 1 Claim. (Cl. 15—128.)



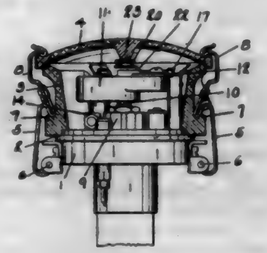
In a fountain brush, a pair of spaced parallel scrubbing elements, a nozzle disposed therebetween having perforations directed only toward said scrubbing elements, a pin extending through said nozzle, a supporting block for the brush having an aperture for receiving said nozzle, said block having alined grooves on opposite sides of said aperture for receiving said pin to hold said nozzle in proper position with its perforations directed toward said scrubbing elements, and a hollow handle secured to said block for receiving the outer portion of said nozzle interiorly thereof.

1,540,429. ATTACHMENT FOR TYPEWRITERS AND THE LIKE. CHARLES V. SHIPLEY, San Leandro, Calif., assignor to J. H. Riding, Oakland, Calif. Filed Jan. 19, 1925. Serial No. 3,315. 1 Claim. (Cl. 242—98.)



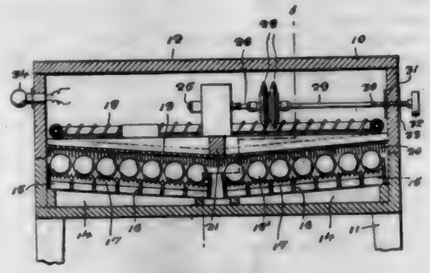
In a device of the class described, a sheet-metal supporting frame comprising an upright portion and a horisontal anchoring foot portion, the upright portion having a relatively large area at the top thereof, a housing carried by the upper end of the upright portion, one side of said housing closed by a fitted cover plate and the opposite end closed by the said area of the upright portion, a spool in said housing, said spool provided with journals, a bearing formed in the upright portion and in said cover plate for the said journals, said spool having an attached cord adapted to carry an eraser on the free end thereof, the cord being wound upon the spool and adapted to unwind therefrom through an opening in the housing, spring means supported in the spool and to the cover plate to restrain the cord in the unwinding therefrom, and further means supported in the spool to check and hold a desired length of the cord unwound from the spool, said latter means consisting of a pivoted pawl having a tooth adapted to engage an indent in the said upright bearing, and the said cover plate provided with an opening for the insertion of means to turn the cover to tighten the said spring restraining means when the spring becomes weak through service.

1,540,430. INSOLE FOR SHOES. WILLIAM BEVERLY SIMS, Portland, Oreg. Filed May 25, 1922. Serial No. 563,508. 3 Claims. (Cl. 36—3.)



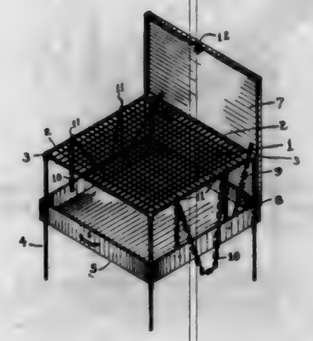
1. A ventilating insole consisting of a strip of leather comprising a heel and forward half portions, adapted to be removably fitted within a shoe and rest upon the sole thereof, said insole having a multiplicity of perforations through the forward half only, a multiplicity of studs projecting from the lower face of said forward half, said studs being so positioned with relation to each other as to define an unstudded perforated area at that portion of the said forward half that will normally lie under the ball of the foot of the wearer whereby to provide a yieldable support for that part of the foot.

1,540,431. INCUBATOR REGULATOR. SIEGMUND SIPERSTEIN, Pensacola, Fla. Filed July 18, 1923. Serial No. 651,392. 1 Claim. (Cl. 200—140.)



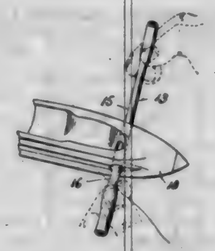
In a thermostatic control for incubators, a supporting member, an inwardly extending sleeve carried by the supporting member, an inwardly extending movable operating rod disposed in the sleeve, means for actuating the rod, an adjustable supporting post carried by the support, a pair of contact arms pivoted to the post at a point equidistant their ends, means normally urging the inner ends of the arms toward one another, an adjustable member regulating the distance between the inner terminals of the arms, a stationary post, a movable contact member pivoted at its inner ends to the post, and means pivoting the movable contact member at a point equidistant its ends to the operating rod, the free end of the movable contact plate being disposed between the inner terminals of the arms.

1,540,432. IGNITION APPARATUS. JOHN H. SPANBURG, Jackson, Mich., assignor of twenty-six one-hundredths to George L. Cotton, Jackson, Mich. Filed Apr. 22, 1922. Serial No. 556,122. 7 Claims. (Cl. 200—21.)



2. In an ignition apparatus, the combination of a body member, a timer mechanism provided with a distributor brush mounted on said body member, an annular distributor member removably mounted on said body member and constituting a housing for said mechanism and having contacts mounted on the inner side thereof to contact with said distributor brush, the parts of said timer mechanism mounted on said body being exposed for adjustment and cleaning when said distributor member is removed, a removable cap for said distributor member, and retaining hooks for said distributor member mounted on said body and provided with auxiliary hooks engaging said cap, said auxiliary hooks being adapted to be released without releasing said distributor member so that the cap may be removed without affecting the operation of the mechanism.

1,540,433. ELECTRIC INCUBATOR. ANTHONY JOHN STAFF, Colorado Springs, Colo. Filed Mar. 28, 1924. Serial No. 702,701. 2 Claims. (Cl. 119—36.)

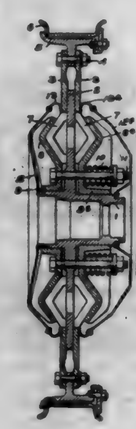


1. An incubator comprising a box like body portion and including a bottom having oppositely inclined sections, egg trays adapted to be supported on said bottom and including spaced parallel resilient elements between which the eggs are supported, an electric circuit, an electric heating element included in said circuit, automatically operable means for regulating the temperature of the incubator, a flexible heat distributing element having a fur side arranged to contact the adjacent surface of said eggs, whereby the heat is uniformly distributed from said heating element to the eggs, said resilient elements of the egg tray supporting the eggs with a slight pressure against said heat distributing element, said element having a configuration similar to that of said bottom.

1,540,434. CAMP STOVE. ARTHUR C. STONE, Rochester, N. Y. Filed Mar. 12, 1924. Serial No. 698,759. 7 Claims. (Cl. 126—9.)

1. The combination with a cooking grate having legs depending therefrom, a receptacle for enclosing said grate having openings in its bottom through which said legs extend, and means for suspending said receptacle from the cooking grate so that the receptacle may act as a fire pan for the grate.

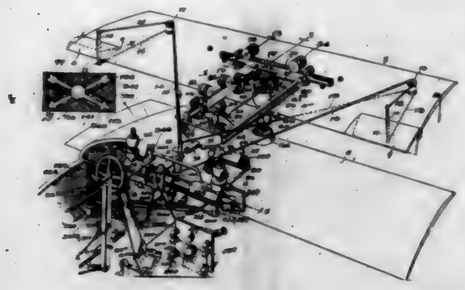
1,540,435. MEANS FOR MOUNTING A BUSHING OR THE LIKE IN AN OPENING. WILLIAM A. TEBO, Anthony, R. I. Filed Apr. 30, 1924. Serial No. 710,098. 6 Claims. (Cl. 29—88.2.)



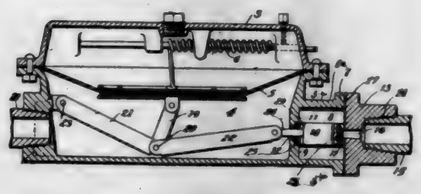
1. The method of securing an article within an opening, which consists, in placing the article within the opening with an elastic material under longitudinal tension, from opposite directions and lying between the article and the walls of the opening and then releasing the tension.

1,540,436. ROTATING ROTARY JAR. CHARLES E. THOMAS, Los Angeles, Calif. Filed Oct. 29, 1924. Serial No. 746,534. 10 Claims. (Cl. 294—86.)

10. In a rotary jar having a mandrel and a sleeve slidable thereon, means for causing the mandrel and the sleeve to be locked against relative rotation, means for causing the sleeve upon upward movement to impart a jar to the mandrel, and means for releasably retaining the mandrel and sleeve in such position as to be locked against relative rotation.



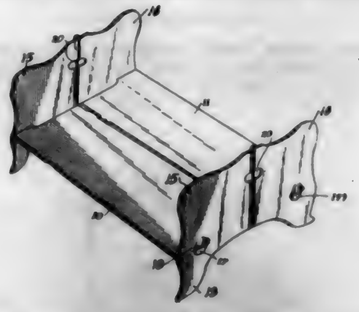
1,540,437. VEHICLE WHEEL. GEORGE P. THOMAS, Glenshaw, Pa. Filed Mar. 23, 1922. Serial No. 545,958. 5 Claims. (Cl. 152—28.)



1. A vehicle wheel, comprising a hub, a felloe, a friction disk clutch having one element connected to the hub and the other to the felloe and forming the sole connection between the hub and felloe, and spring-impelled wedging members urging the clutch elements to concentric position and increasing the friction between them when they are moved to eccentric positions, the elements of said clutch being capable of unlimited relative angular movement resisted by said spring-impelled members.

1,540,438. AIRCRAFT STABILIZER. JAMES HENRY THOMPSON, Hollidays Cove, W. Va. Filed Oct. 26, 1922. Serial No. 597,115. 57 Claims. (Cl. 244—29.)

1. In combination with the stabilizing means of an aircraft, mechanism with connections to said means for the operation thereof, a source of pressure fluid, a source of electrical energy, electro-mechanical means adapted to cause the introduction of said fluid into said mechanism, an automatic control adapted to direct said electrical energy to actuate said electro-mechanical means according to deviations of the aircraft and cause the restoration thereof through corresponding functioning of said pressure-fluid mechanism, and an emergency control in connection with said fluid source adapted for manual operation to actuate said fluid mechanism independently of said electro-mechanical means to compensate for said deviations in the aircraft even while the functions of said automatic control are complete.

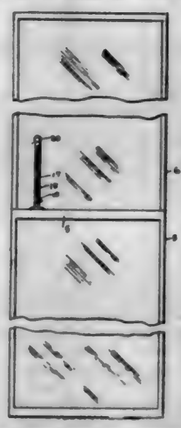


1,540,439. GAS REGULATOR. WALTER I. THRALL, Pasadena, Calif., assignor to Reliance Manufacturing Company, Pasadena, Calif., a Corporation of California. Filed May 12, 1924. Serial No. 712,718. 3 Claims. (Cl. 50—26.)

3. In a gas-regulator, the combination of a casing having a pressure chamber for the gas, said casing having a face on its outer side constituting a fitting seat with a valve-chamber formed in said seat, a valve with means for guiding the same in said chamber, a safety valve seat at the inner end of said valve-chamber and having a port therethrough communicating with the pressure chamber, pressure controlled mechanism within the casing having a stem carrying the valve and passing through said port, and a fitting constituting a distinct part independent of said safety valve seat secured on the said fitting-seat having means for admitting the high pressure gas with an inlet port and seat cooperating with the outer end of the valve to regulate the pressure.

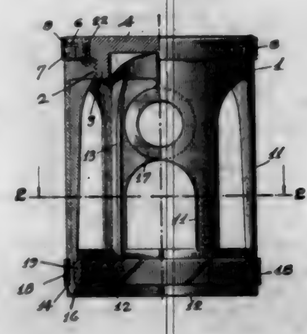
1,540,440. TOY. FREDERICK G. TREBIG, New York, N. Y. Filed Mar. 27, 1923. Serial No. 628,038. 2 Claims. (Cl. 5—40.)

1. In a toy, a frame comprising a rib and angularly disposed pintles, plate-like members each having an edge oscillatably mounted on the rib, pairs of wing members at the ends of the plate-like members, each wing member of a pair having its edge oscillatably mounted on



one of the pintles, and means for effecting an interlocking engagement between each plate-like member and one of the wings at each end.

1,540,441. CLOTHES-LIFTING DEVICE FOR BOILERS. OLOV WALLO, Minneapolis, Minn. Filed Mar. 13, 1924. Serial No. 698,021. 5 Claims. (Cl. 68—30.)



1. A device for handling articles in liquid comprising sections of perforate flexible material connected to form a container with closed sides, a closed loop of rigid material at one end of said container, said sections having end portions adapted to be drawn together to close the end of said container, and means for drawing said portions together at each end of said container.

1,540,442. VENTILATING WINDOW LOCK. LEO T. WARD, Springfield, Mass. Filed Mar. 12, 1923. Serial No. 624,308. 2 Claims. (Cl. 292—277.)

1. A ventilating window lock consisting of a tubular guide having a longitudinal slot and a lateral extension therein at one end of the slot and a base carrying the tubular guide to permit of a rotative movement of the guide in the base, and a companion member having a slidable bolt adapted to be moved into the lateral extension of the slot and to slide in said slot when the tubular guide is turned.

1,540,443. PISTON. MORRIS C. WHITE, San Francisco, Calif. Filed May 22, 1922. Serial No. 562,688. 8 Claims. (Cl. 74—108.)

1. A piston comprising a body portion internally threaded at one end thereof; a head having a threaded extension engaging the threads of the body portion, said head being shouldered adjacent the body to form a groove; a split ring mounted within the groove; and a continuous ring of ductile metal rigidly secured between the head and the body, said ring being provided with an outwardly extending portion shaped to enclose the split ring and to be expanded thereby slightly away from the side of the head to permit internal pressure within the cylinder to enter between the head and the outwardly extending ring portion to expand the same against the wall of a cylinder to prevent leakage past the piston.

1,540,444. MATRIX-FORMING PROCESS. GLENN H. WILLIS, Akron, Ohio, assignor, by direct and mesne assignments, of one-third to Frank Lahey, Akron, Ohio, and one-third to V. V. Messer Manufacturing Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed Oct. 3, 1923. Serial No. 666,397. 4 Claims. (Cl. 18—53.)

4. The process of making reproductions, which consists in making impression matrices by confining a mass of sponge rubber compound within a limited space with an article to be reproduced, in curing and expanding said compound in a softened condition until said space is completely filled and an impression of said article imparted thereto, and in molding reproductions of said article in the matrix thus produced after removing said article.

1,540,445. GELLIKE ABSORBENT AND PROCESS OF MAKING SAME. ROBERT E. WILSON, Cambridge, Mass., assignor to The Baltimore Gas Engineering Corporation, Baltimore, Md., a Corporation of Maryland. Filed Jan. 28, 1920. Serial No. 354,690. 11 Claims. (Cl. 23—300.)

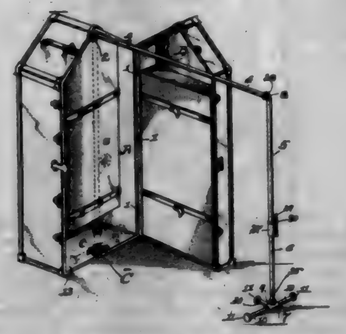
11. In a process of producing gel-like absorbents, preparing dilute solution of ferric salt, allowing same to age one to four days and precipitating with an alkali solution, the strengths of said solutions being from 6 to 10%.

1,540,446. ALUMINUM GELLIKE ABSORBENT AND PROCESS FOR MAKING SAME. ROBERT E. WILSON, Chicago, Ill., assignor to The Baltimore Gas Engineering Corporation, Baltimore, Md. Original application filed Jan. 28, 1920, Serial No. 354,690. Divided and this application filed July 9, 1924. Serial No. 725,037. 8 Claims. (Cl. 23—143.)

2. A partially hydrated gel-like aluminum oxide absorgent.

1,540,447. CUPRIC GELLIKE ABSORBENT AND PROCESS OF MAKING SAME. ROBERT E. WILSON, Chicago, Ill., assignor to The Baltimore Gas Engineering Corporation, Baltimore, Md. Original application filed Jan. 28, 1920, Serial No. 354,690. Divided and this application filed July 9, 1924. Serial No. 725,038. 9 Claims. (Cl. 23—147.)

1. A hard, rough, gel-like material consisting essentially of cupric hydroxide.



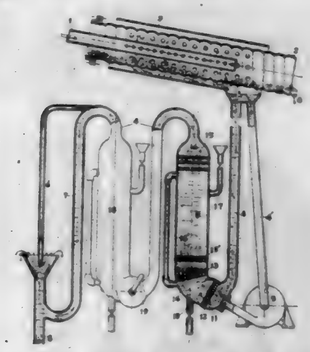
8. In a process of producing a gel-like absorbent, washing by decantation a cupric hydroxide absorbent after precipitation, kneading and then drying same first at about 110° C. in air, and then about 150° C. in a vacuum.

1,540,448. CATALYTIC AND ABSORBENT MATERIAL. ROBERT E. WILSON, Chicago, Ill., assignor to The Baltimore Gas Engineering Corporation, Baltimore, Md., a Corporation of Maryland. Filed Mar. 10, 1922, Serial No. 542,791. Renewed Oct. 1, 1924. 19 Claims. (Cl. 23—234.)

1. Highly porous, highly infrangible, granular material comprising essentially metal, the pores of which are ultra-microscopic.

6. In a process of making a metal in a highly porous form, dehydrating and reducing a gel-like, partially-hydrated oxide of the metal.

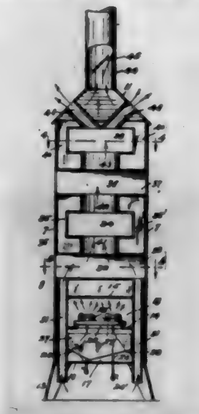
1,540,449. TRUNK FIXTURE. ROBERT L. WILT, Chicago, Ill., assignor to Wilt Trunk Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 11, 1922. Serial No. 606,031. 2 Claims. (Cl. 211—15.)



1. In a receptacle having a clothes hanging compartment, the combination with a suspension device pivotally secured to the top of the compartment of an apertured base for said device provided with three rigid radially-extending supporting arms, a fixture secured to the floor of said compartment and provided with grooves shaped to receive said arms, and means carried by said fixture adapted for movement into the aperture in said base and to detachably secure the latter in position within said fixture.

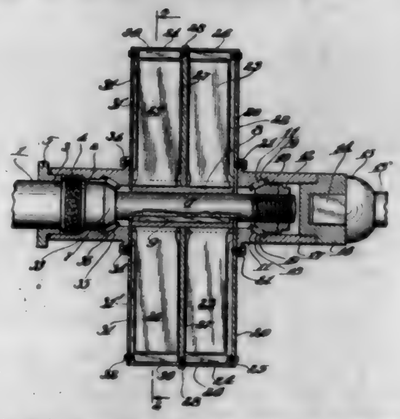
1,540,450. WINDOW STOP. EDWARD L. WOOD, Detroit, Mich. Filed Jan. 12, 1922. Serial No. 528,771. 8 Claims. (Cl. 292—194.)

1. In combination with a frame having an opening and a slidable closure therefor, a socket member carried by the closure, a pintle cooperating therewith and swingable about an axis at right angles to the plane thereof and removable therefrom when the closure is substantially closed, and means for preventing the stop from being removed from the closure when the latter is open to an appreciable extent.



1,540,451. GOLD-DUST EXTRACTOR. KEIZO YANO, Nishiku Osaka, Japan. Filed July 1, 1921, Serial No. 481,893. Renewed Feb. 28, 1925. 5 Claims. (Cl. 83—67.)

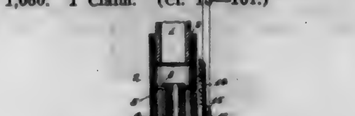
1. A gold-dust extractor comprising a charging drum for metal-bearing gravel, a revolving filter drum within the charging drum, a water injection drum within the filter drum, a series of amalgamation drums each provided with a plurality of nozzles, a shelf having compartments for amalgam, and shelves with apertures for flow of water within said amalgamation drums, all connected in series to form a continuous passage from the charging drum to and through the amalgamation drums, and pipes connected with the last amalgamation drum, with their outlets directed to oppose each other, mercury being supplied into the amalgamation drums.



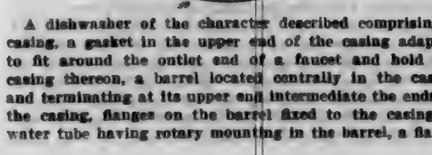
1,540,452. AUXILIARY HEATER. AUGUST ZACHARIAS, Minneapolis, Minn. Filed Nov. 3, 1923. Serial No. 672,525. 8 Claims. (Cl. 126—93.)

1. A heater comprising a casing, transverse air ducts extended through said casing and interconnected by vertical air tubes, a primary combustion chamber in the lower portion of said casing, and an oil burner in said combustion chamber, the sides of said air ducts being spaced from the sides of the casing to afford tortuous

flame passages extended from said combustion chamber upward and between the sides of the casing and air ducts and under and over said transverse air ducts and terminating at its upper extremity in an outlet stack.



1,540,453. FLUID-POWER TRANSMISSION. JOSEPH E. ARAVE, Los Angeles, Calif. Filed Jan. 24, 1924. Serial No. 688,131. 2 Claims. (Cl. 192—58.)



1. A fluid power transmission comprising the combination with a driving and a driven shaft, a resistance housing mounted upon the driven shaft; said housing consisting of a closed cylinder, radial ribs formed on all of the interior surfaces of said closed cylinder, and a partition secured within said cylinder and dividing it into two compartments, two sets of radial blades secured to said driving shaft, each set being adapted to rotate within one of said compartments, and fluid in said compartments.

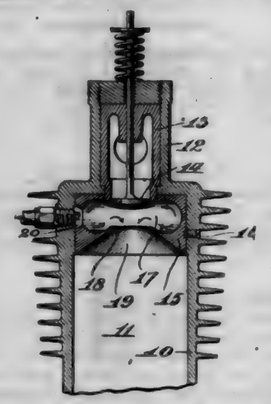
1,540,454. PROCESS OF CLEANING CONVEYING AND SUPPORTING ELEMENTS. JOHN T. AYERS, Lachute, Quebec, Canada. Filed Feb. 2, 1920. Serial No. 355,797. 2 Claims. (Cl. 92—50.)

1. A process of renovating fabrics, which comprises subjecting the fabrics successively to washing and drying actions, the washing action being effected by directing jets of cleaning fluid against one surface of the fabric, and applying suction to the opposite surface, and the drying being effected by drawing out cleaning fluid from the fabric and drawing air through the fabric.

1,540,455. NAME PLATE. WILLIAM E. BECK, Herrick, Ill. Filed Feb. 19, 1925. Serial No. 10,414. 2 Claims. (Cl. 40—17.)

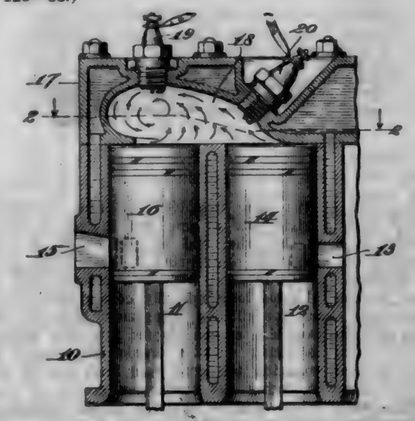
2. As an article of manufacture, a name plate holder comprising a rectangular blank of material slit inwardly from opposite side edges thereof in spaced relation to the ends thereof, the material between the slits being folded upon one side of the body in spaced relation thereto, the body having a longitudinally extending opening, the heads formed outwardly of said slits being provided with transversely extending openings of slightly greater width than the body.

1,540,456. LITHOPONE AND PROCESS OF MAKING SAME. JAMES ELIOT BOOCK, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 27, 1923. Serial No. 665,228. 31 Claims. (Cl. 134—78.)



1. A process of improving the paint grinding properties of a light-resistant lithopone which comprises treating a slurry of the calcined, quenched, and ground lithopone with a substance whose aqueous solution has an acid reaction, until the slurry shows an acid reaction to methyl red indicator, and washing the resulting lithopone until it is substantially free of acid.

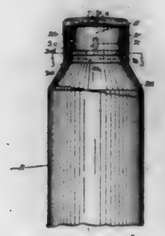
1,540,457. DISHWASHER. ELSA BOYANCE and MARIE PEKARY, New York, N. Y. Filed Jan. 7, 1925. Serial No. 1,060. 1 Claim. (Cl. 15—101.)



A dishwasher of the character described comprising a casing, a gasket in the upper end of the casing adapted to fit around the outlet end of a faucet and hold the casing thereon, a barrel located centrally in the casing and terminating at its upper end intermediate the ends of the casing, flanges on the barrel fixed to the casing, a water tube having rotary mounting in the barrel, a flange at the upper end of said tube resting on the upper flange of the barrel to support the tube in its lowermost position, said tube having an outwardly flared lower end, a mop secured around the lower end of the tube, intermeshing gear wheels on the casing and tube respectively, and a handle on one of said gear wheels, the gears cooperating to prevent upward movement of the tube in the barrel.

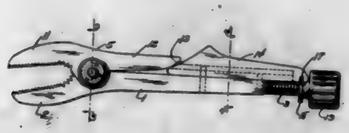
1,540,458. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor of one-half to Homer A. Brunell, Los Angeles, Calif. Filed Aug. 2, 1923. Serial No. 655,268. 5 Claims. (Cl. 123—191.)

1. A member adapted to be positioned in the head portion of an internal combustion engine cylinder, said member being provided with a chamber that is adapted to communicate with the gaseous fuel inlet port in said cylinder, and said chamber being formed so as to cause the admitted gaseous fuel to flow outwardly and downwardly and thence inwardly and upwardly through said chamber before discharging therefrom.



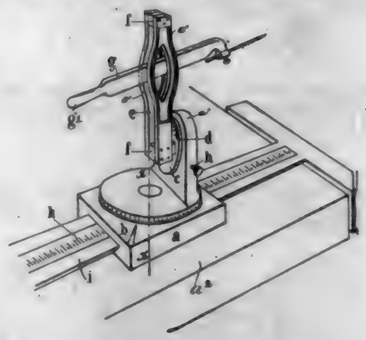
1,540,459. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor of one-half to Homer A. Brunell, Los Angeles, Calif. Filed July 31, 1924. Serial No. 729,800. 4 Claims. (Cl. 123—53.)

2. An internal combustion engine having a pair of combustion cylinder chambers, one of said chambers having a gaseous fuel inlet port and the other chamber hav-



ing an exhaust port, a head closing said cylinders, said head having a combined compression and combustion chamber that serves as a common clearance space for the two combustion cylinder chambers, the opening into said clearance space from the combustion cylinder chamber having the inlet ports being smaller in area than the opening between said clearance space and the combustion cylinder chamber having the exhaust port, ignition means seated in the head and projecting into said common clearance space at a point above the combustion cylinder chamber having the gaseous fuel inlet ports, and an ignition device seated in said head and projecting into the common clearance space at a point above the combustion cylinder chamber having the exhaust port.

1,540,460. COLLAPSIBLE TUBE. MARTIN L. BYRNE, Syracuse, N. Y. Filed July 31, 1924. Serial No. 729,302. 6 Claims. (Cl. 221—60.)



1. A collapsible tube having a normally open neck, said neck having a discharge slot in one side, a cap for closing said neck, said cap comprising concentric cylindrical members which are spaced to receive therebetween the said neck, the said members having discharge slots in the corresponding sides adapted to register with the slot of the neck when the cap is extended, and means for automatically restoring the cap to the closed position for stopping the discharge through said slots.

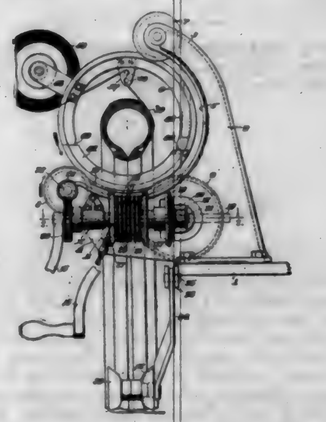
1,540,461. PLIERS. JOSEPH L. CHRISTLIEB, Grants Pass, Oreg. Filed Feb. 6, 1924. Serial No. 691,000. 2 Claims. (Cl. 81—116.)

1. A tool of the class described including a shank formed with a rigid jaw at one end thereof, a stud securely fixed at the other end of said shank, a jaw pivoted to the shank and confronting the first-named jaw, an extension formed integral with said pivoted jaw, a wedge member slidable longitudinally of and along one edge of the shank for slidable engagement between the shank and the extension of the pivoted jaw, said wedge member being provided with a transverse groove, a threaded knob engaging the stud, said knob having an annular collar engaging the transverse groove of the wedge member whereby upon rotation of the knob the wedge member may be moved along the shank towards the jaws for swinging the extension of the pivoted jaw outwardly and thereby forcing the pivoted jaw towards the jaw of the shank.

1,540,462. PROTRACTING SCRIBER. ANTOINE DESTOMBES, Paris, France. Filed Jan. 30, 1920. Serial No. 355,142. 4 Claims. (Cl. 33—169.)

1. In a device of the character described, a socket member, a drum mounted for rotary movement in said socket member, a guide member carried by and projecting radially of said drum having resilient gripping portions, and a scribing point holder adjustably mounted directly in said resilient gripping portions of said guide, said resilient gripping portions exerting pressure on said holder whereby to frictionally retain the latter in adjusted position.

1,540,463. DRAFT MEANS. LORING B. DOE, San Francisco, Calif., assignor to William H. Metson, San Francisco, Calif. Filed Sept. 28, 1922. Serial No. 591,171. 2 Claims. (Cl. 280—33.5.)



1. A draft means for connecting a drawn vehicle to a tractive vehicle comprising sheaves rotatively mounted on adjacent parts of said vehicles and a flexible member secured at each end to one of said vehicles and reeved zig-zag through said sheaves, alternating from a sheave on one vehicle to a sheave on the adjacent vehicle.

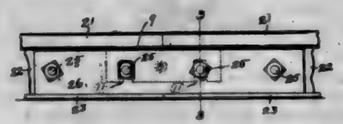
1,540,464. PLIERS. CHARLES S. EDWARDS, Prineville, Oreg. Original application filed Mar. 17, 1923, Serial No. 625,793. Divided and this application filed Feb. 29, 1924. Serial No. 696,054. 4 Claims. (Cl. 294—44.)

1. In a device of the class described, comprising the following elements in combination; a relatively stationary body having a handle portion, a stationary jaw, a vertical guide bore, cut out portions merging with and passing through the guide bore, and slotways forming adjustable fulcrum supports; a movable jaw guided by the guide bore; an actuating lever; a lever fulcrum pin having parallelly flattened sides; and a plurality of co-operative communicating bearing portions for supporting the fulcrum pin in varied adjustments.

1,540,465. WRAPPING MACHINE. FREDERICK F. FELDHAUS and ROBERT H. NOAH, Akron, Ohio, assignors to The Akron Rapatire Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 9, 1923. Serial No. 630,868. 8 Claims. (Cl. 242—6.)

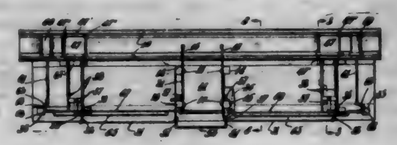
1. In a tire wrapping machine, a standard, a rotary shuttle therein and a roller for supporting and advancing a tire through the shuttle and means to rotate the shuttle and the tire comprising a shaft, the roller being freely movable on the shaft, means to drive the shuttle from the shaft, and means to drive the roller from the shuttle.

1,540,466. CHIMNEY CAP. EARNEST FINCH, Akron, Ohio. Filed Jan. 27, 1923. Serial No. 615,298. 1 Claim. (Cl. 98—4.)



A device of the class described, adapted to be used in connection with a chimney having an upstanding sleeve, the device comprising a hollow body having internal transverse baffles, the lower edges of which are adapted to rest on the chimney to support the device, the lower edges of the baffles being spaced above the lower edge of the body, so that the lower edge of the body will form a depending flange adapted to extend about the chimney, the inner edges of the baffles being adapted to engage the sleeve to space the flange from the periphery of the chimney, a table disposed above the body, standards supporting the table upon the body, and a hollow top having a recess receiving the table, the top being supported on the table and being closed by the table to form an air chamber located in the path of the products proceeding from the body, the chamber serving to heat the table for a time after the products have ceased to flow through the body, the table and the top being thick enough to prevent rapid conduction.

1,540,467. MANUFACTURE OF PURE 1-NITRO-2-METHYL ANTHRAQUINONE. HANS EDUARD FIERZ, Kilchberg, near Zurich, Switzerland, assignor to Society "Chemical Works" formerly Sandoz, Basel, Switzerland. Filed Aug. 9, 1924. Serial No. 731,212. 3 Claims. (Cl. 260—57.)



1. The process for the manufacture of pure 1-nitro-2-methylanthraquinone, consisting in heating for some time the crude nitromethylanthraquinone in an aqueous suspension with salts of sulfurous acid.

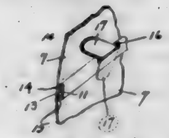
1,540,468. RAIL END AND HEAD SUPPORT. EDWARD M. FITZGERALD, Springfield, Mo. Filed Dec. 1, 1924. Serial No. 753,164. 3 Claims. (Cl. 238—244.)

1. A rail end and head support comprising a single rectangular sheet of metal of uniform thickness and having spaced apart cut away portions extending inwardly from and at right angles to one of its longitudinal edges, a relatively narrow portion of said sheet adjacent the opposite longitudinal edge being bent so as to lie at an angle to the remainder of said sheet, to the end that said sheet will lie snugly against the web and between the underside of the ball of a rail and the upper edge of a fish plate, the cut away portion permitting track bolts to pass therethrough and prevent said sheet from creeping when in use.

1,540,469. CATTLE GUARD FOR RAILROAD TRACKS. ILKO HARMATA, Wilkes-Barre, Pa., assignor of one-fifth to Bronislaw Waszkal, Wilkes-Barre, Pa. Filed July 17, 1924. Serial No. 726,460. 3 Claims. (Cl. 246—293.)

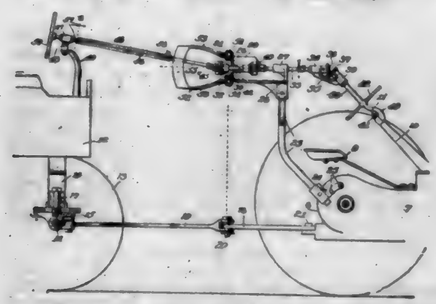
2. In a railroad track, a pair of gates normally extending across the track and spaced along the latter from one another, supporting elements on which said gates are slidably mounted, depressible devices located adjacent the track rails remote from the respective gates, a rock shaft mounted adjacent each gate to which the respective devices are operatively connected, operative connections between the said rock shafts and the respective gates, and connecting means leading between the said rock shafts whereby the latter are caused to be moved in unison upon depression of either of said devices.

1,540,470. MUD HOOK. JOHN F. HAYDEN, Galion, Ohio. Filed Oct. 6, 1924. Serial No. 741,961. 2 Claims. (Cl. 152—14.)



2. The combination with a vehicle wheel, a hub plate carried thereby, a bolt connecting said plate with the

wheel hub, and a tire carried by the wheel, of a mud hook engaging over the tire and provided at its inner end with a shank extending toward the hub, a link pro-

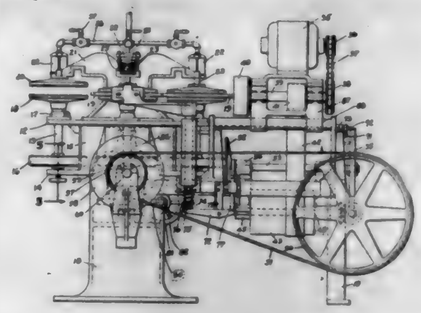


vided at its inner end with an opening accommodating said bolt and anchored to the wheel by said bolt, and means connecting the link with the hook shank.

1,540,471. STOVEPIPE. JOSEPH L. HEMP, St. Louis, Mo. Filed Aug. 25, 1924. Serial No. 733,932. 2 Claims. (Cl. 126—309.)

1. A stove pipe formed of a single sheet of material having one edge inwardly bent forming a U shaped recess, the closed portion of said recess being provided with openings, the opposite edge of said sheet being inwardly offset and adapted to enter the U shaped recess so as to leave the exterior of said pipe free from projections, and inclined tongues of substantially the same width as the opening carried by said offset edge and adapted to pass through said openings whereby said offset edge is tightly held within the U shaped recess and the ends of the pipe are held in alignment.

1,540,472. STEERING MECHANISM FOR TRAILERS. ALVIN G. HEUER and FRED T. HEUER, Bureau Township, Bureau County, Ill. Filed July 18, 1923. Serial No. 652,339. 7 Claims. (Cl. 180—77.)

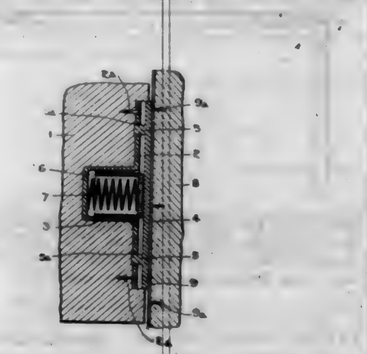


1. The combination with a pulling vehicle having steering wheels, and a trailer, of steering mechanism for steering said pulling vehicle by a person on said trailer comprising rotatable shafts disposed in a longitudinal series, universal joints connecting said shafts together, and a head pivotally supported to swing in a substantially horizontal plane and containing a substantially vertically-disposed slot into which the one of said shafts which extends rearwardly from the rear universal, extends.

1,540,473. MEASURING-INSTRUMENT ATTACHMENT. ALFRED H. HITCHCOCK, Mittineague, Mass. Filed Mar. 9, 1923. Serial No. 623,899. 1 Claim. (Cl. 33—167.)

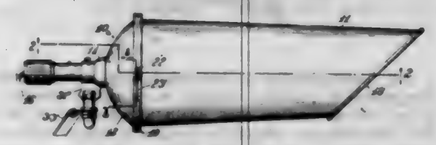
As an improved article of manufacture, a measuring instrument attachment comprising a holder consisting of a semi-cylindrical part, lateral rings extending from the semi-cylindrical part, and an annulus at one end of said semi-cylindrical part, a portion of said annulus extending over the space between the said wings, there being notches in opposite sides of the holder to enable such portion to extend over such space, and to separate the same from said wings, such portion and the opposite edge of said annulus being interiorly flanged to form a socket, and a ball loosely arranged in such socket and projecting beyond the same to contact with the anvil of the measuring instrument and the work.

1,540,474. GRINDING AND SMOOTHING MACHINE FOR GLASSWARE. FORREST L. HITCHCOCK, Indianapolis, Ind., assignor to The Marietta Manufacturing Company, Indianapolis, Ind., a Corporation. Filed July 14, 1922. Serial No. 574,968. 3 Claims. (Cl. 51—132.)



1. A machine for grinding or abrading the circular edge of a piece of work, comprising a supporting table, a plurality of clamping members mounted on said table for clamping said work in position, a grinding element mounted adjacent said members in position to engage the edge of the work for grinding the same, power driven mechanism for rotating said clamping members, and pneumatic means for forcing one of said clamping members against the other under pressure for clamping the work therebetween and permitting the free rotation thereof.

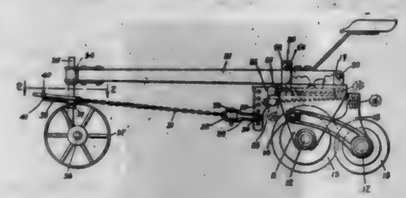
1,540,475. STOP FOR SLIDING WINDOW SASHES AND THE LIKE. GEORGE FARGHER HIGHT and THOMAS WILLIAM BROWN, Auckland, New Zealand. Filed Feb. 24, 1923. Serial No. 621,053. 1 Claim. (Cl. 292—74.)



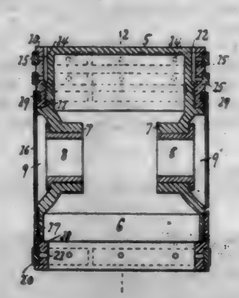
An improvement of the character described, comprising, a sash, a guide frame for the sash, a pressing means, including an apertured socketed plate recessed into and

fixed to an edge of the sash, a slide plate recessed into the said edge of the sash and having pins received in the apertures of the socketed plate, a thimble casing positioned in the socket of the plate with its closed end

against the sliding plate, and an expanding spring bearing against the end of the socket and the end of the thimble casing, and forcing the sliding plate against the guide frame.



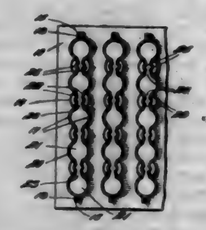
1,540,476. LAMP. PETER M. HOFFMAN, Des Plaines, and CHARLES DOERING and HENRY H. DOERING, Chicago, Ill., assignors to Doering Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 12, 1923. Serial No. 624,381. 6 Claims. (Cl. 240—484.)



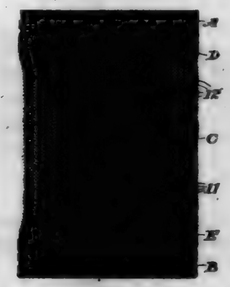
1. In a lamp of the character described, a bulb-holding reflector provided with a rim or flange, a tubular shield of length greater than the diameter of said reflector and tapering toward the front, with the front end beveled rearwardly downward, the rear end of the shield being provided with an enlarged rearwardly bent flange adapted to receive the rim or flange of the reflector, a lens removably mounted in the flange of said shield, and clamping elements adapted to pass through said shield flange and engage rearward of the rim or flange of the reflector to removably clamp the shield to said reflector.

1,540,477. AGRICULTURAL IMPLEMENT. JOHN I. HOKE and LYNN I. HOKE, South Bend, Ind. Original application filed May 28, 1921, Serial No. 473,527. Divided and this application filed Aug. 7, 1922. Serial No. 580,018. 2 Claims. (Cl. 280—82.)

1. The combination of a device of the character described having a tongue, and a forecarriage construction pivotally connected to the free end of tongue for a reduced turning, a draft means connected at one end to the device and at its other end to said forecarriage and projecting beyond the latter, and a connection independent of the forecarriage and tongue pivotal connection and between the forecarriage and the projecting portion of said draft means for permitting pivotal movement of the forecarriage and the projecting portion relative to said draft means.

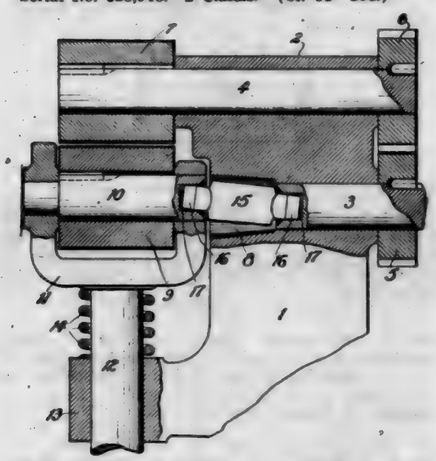


1,540,478. PISTON. THOMAS KEENAN, Brooklyn, N. Y. Filed Sept. 8, 1924. Serial No. 735,561. 6 Claims. (Cl. 74—108.)



1. A piston having a head with a depending skirt, an annular member connected to the skirt, packing rings carried by the member, and means arranged between the member and skirt for admitting air to the back of the packing rings.

1,540,479. RADIATOR CORE. WILLIAM J. KEITH, Cranston, R. I., assignor to Motor Radiator Corporation of America, Boston, Mass., a Corporation of Massachusetts. Filed June 21, 1924. Serial No. 721,411. 3 Claims. (Cl. 257—130.)



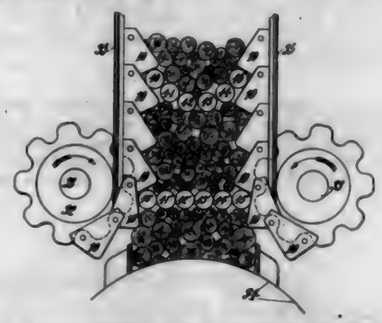
1. In a radiator core of the type set forth, fins provided with openings comprising a plurality of communicating cavities, and water conductors fixed in the openings comprising longitudinal tubular portions filling certain of the cavities, and longitudinal neck portions joining the tubular portions and extending through others of the cavities out of contact with the fins.

1,540,480. ELASTIC WEBBING. WALDEMAR KOPS, New York, N. Y., assignor to Kops Bros., Inc., a Corporation of New York. Filed May 10, 1924. Serial No. 712,225. 6 Claims. (Cl. 139—422.)

1. In an elastic webbing having an elastic and an inelastic section, inelastic warp and weft threads, and elastic strands, all of which are interwoven in the inelastic section while in the elastic section the elastic strands are only interwoven with the threads running angularly thereto.

1,540,481. SHAFT CONNECTION. HARRY W. KRAG, St. Louis, Mo., assignor to American Shoe Machinery & Tool Company, St. Louis, Mo. Filed Mar. 30, 1923. Serial No. 628,946. 2 Claims. (Cl. 64—104.)

2. In a skiving machine, a standard, a bearing mounted thereon for limited movement transversely of its axis, a shaft journaled in said movable bearing, a feed roller fixed to said shaft, a driving shaft journaled in said standard parallel with said feed roller shaft and with one end adjacent thereto, the adjacent ends of said feed roller shaft and said driving shaft being formed with polygonal recesses, and a member disposed between the adjacent ends of said shafts and having end portions of pyramidal form with flat sides fitting in the polygonal recesses therein, whereby said member is adapted to transmit power from said driving shaft to said feed shaft in all positions of movement of the latter.



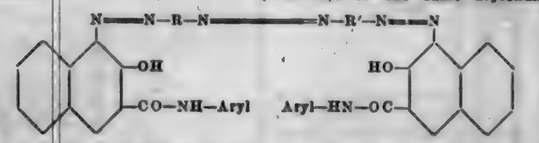
1,540,482. ADJUSTABLE FRAME. HENRY N. LANDAAL, Horicon, Wis. Filed Nov. 12, 1923. Serial No. 674,238. 3 Claims. (Cl. 40—155.)

1. An adjustable frame, comprising corner sections, intermediate members having a sliding engagement with said corner sections, means carried by said intermediate members to assist in forming a binding engagement between said corner members and the intermediate members, and threaded bolts projecting from the mid-

portions of the rear sides of said corner sections adapted to pass through the corners of a poster or the like to attach the same to said frame members, a nut member being further provided for each bolt.

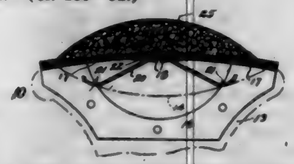
1,540,483. WOOD GRINDER. RICHARD LANG, Wurttemberg, Germany, assignor to American Voith Contact Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 29, 1924. Serial No. 702,712. 10 Claims. (Cl. 83—75.)

1. A wood grinder of the continuous working type, comprising a grinding element, a magazine above the same, and an endless feed chain at opposing sides of the magazine, for positively feeding a charge of wood blocks against the grinding element, said feed chains consisting of wedge like links each having its lower charge-pressing surface of contact inclined against the horizontal under a fixed angle not greater than the known angle of repose between wood and metal, for providing a non-sliding gripping engagement between the said surface of contact and the surface of the wood blocks.



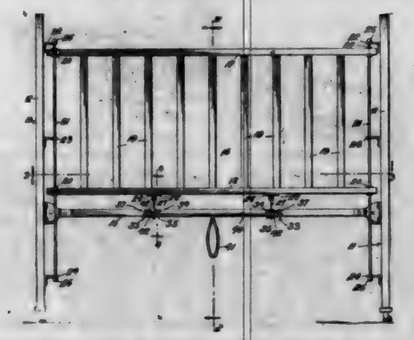
1,540,484. HUMIDOR. LAWRENCE MARTIN LARSEN, Chicago, Ill. Filed Aug. 29, 1923. Serial No. 659,927. 1 Claim. (Cl. 131—80.)

In combination with a tobacco can and cover, a humidor comprising a casing having semicircular ends, and provided with apertures in its top wall, a resilient clip secured transversely on said casing, a corrugated end on said clip adapted to engage with the tobacco can cover, whereby said humidor is held yieldingly in slanting engagement therewith.



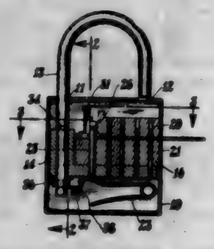
1,540,485. TRISAZO DYE. AUGUST LEOPOLD LASKA and ARTHUR ZITSCHER, Offenbach-on-the-Main, Germany, assignors to Corporation of Chemische Fabrik Griesheim-Elektron, Frankfort-on-the-Main, Germany. Filed Apr. 14, 1923. Serial No. 632,130. 8 Claims. (Cl. 260—72.)

1. As new products the azodyestuffs, insoluble in water, of the general formula:



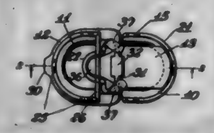
can be used for the production of valuable pigment colors and give, when produced on the fiber, black-violet to black shades of an excellent fastness to washing.

1,540,486. CRUTCH. FRANCIS X. LENGS, Cleveland, Ohio. Filed June 11, 1923. Serial No. 644,635. 9 Claims. (Cl. 135—62.)



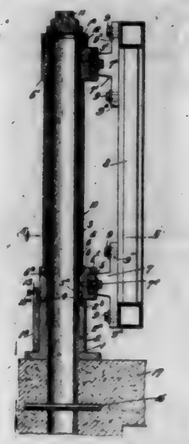
9. In a device of the class described, the combination with the arm piece of a crutch, of a bridge member having portions thereof engaging the sides of the arm piece, and having intermediate portions engaging the top of the arm piece, a pair of inwardly extending arms integral with the bridge member, said arms having the opposed ends thereof spaced from each other, and each having a slot therein, a leaf spring having the ends thereof slidably engaging the arm piece, and having the intermediate portion extending through said slots, and a pad carried by said arms.

1,540,487. CRIB. EDWIN LYDING, Brooklyn, N. Y. assignor to Montauk Metallic Bed Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Jan. 5, 1925. Serial No. 534. 5 Claims. (Cl. 5—100.)



1. In a crib of the character described having end-frames, side-rails and a vertically slidable side mounted on vertical guide rods secured to said end-frames, means for supporting said side in its upper position and trip mechanism for cooperation with said supporting means, said supporting means comprising dog-arms pivotally connected at their upper ends to said side and to swing transversely of the crib and brackets secured to a side rail and adapted to be engage by and interlock with said arms when the side is in its upper position, and said trip mechanism comprising a longitudinal rod carried by said side rail and adapted to have rocking motion, said rod having a depending handle to be turned transversely of the crib for turning said rod, and crank members back of the lower ends of said arms for pressing against and moving said arms, when said handle is turned inwardly, out of the vertical planes of said brackets, for permitting the crib-side to move to its lower position.

1,540,488. PADLOCK. JOSEPH MATALONI, Mason City, Iowa. Filed Oct. 22, 1924. Serial No. 745,072. 5 Claims. (Cl. 70—108.)

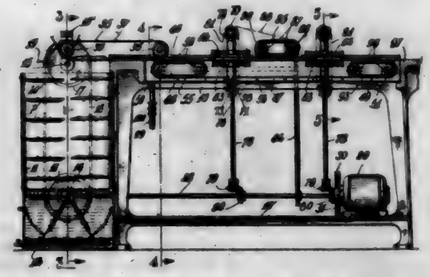


1. A padlock comprising a casing, a block slidable longitudinally in said casing, a shackle mounted in said block for rotary movement, a plunger pin fixed to said block, an apertured ugide member in said casing through which said pin projects, a spring urging said shackle to unlocked position, and a device adapted for release by a key engaging over the end of said pin to hold the shackle in locked position, said device being in the form of a leaf hinged to the said guide member.

1,540,489. CLASP DEVICE. HYMAN MELTZER, Brooklyn, N. Y. Filed May 12, 1923. Serial No. 638,466. 5 Claims. (Cl. 292—246.)

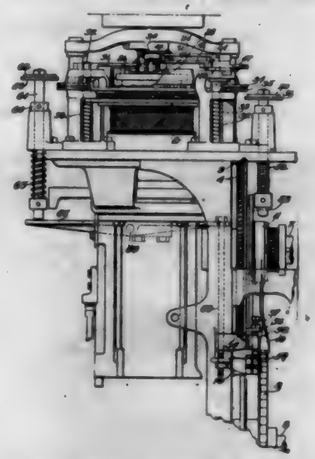
1. In a clasp device of the class described, a main body portion composed of sheet metal, a lock member mounted in recesses at the opposite sides of said body portion and provided with a cross-head extending transversely of and through said body portion and said body portion being provided with projecting fingers adapted to be folded inwardly and around the crosshead of said lock member for retaining said lock member against displacement from said body portion, and other projecting fingers on said body portion for mounting the same in connection with a suitable support.

1,540,490. GATE MOUNTING. HENRY P. MERTEL, West Hoboken, N. J., assignor to Summit Brass & Bronze Works, Inc., a Corporation of New Jersey. Filed Feb. 7, 1924. Serial No. 691,117. 11 Claims. (Cl. 39—87.)



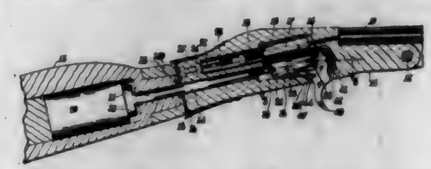
1. A gate-mounting embodying, in combination, an inner anchor member, a base member loosely fitting over said anchor member and a sleeve fitting over said anchor member and within the base member for connecting said anchor member and base member together, and gate-hanger members mounted on said gate-mounting.

1,540,491. METHOD OF DESIZING AND CLEANSING FABRICS. JOSEPH P. MILLIKIN, Hasbrouck Heights, N. J., assignor to Bellman Brook Bleachery Company, Fairview, N. J., a Corporation of New Jersey. Filed Aug. 2, 1924. Serial No. 729,711. 10 Claims. (Cl. 8—12.)



3. The method of cleansing and desizing cotton fabric which comprises subjecting the fabric to the action of a hot hydrochloric acid solution made to Twaddell at from 1 to 2 degrees, next washing with water, and then treating with a dilute caustic.

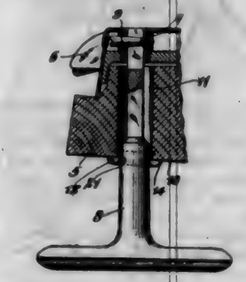
1,540,492. DISHWASHING MACHINE. JOHAN MORTKA, Poughkeepsie, N. Y. Filed Dec. 1, 1922. Serial No. 604,125. 3 Claims. (Cl. 15—56.)



1. In a dishwashing machine, a tank, adapted to contain a cleaning liquid, a carrier adapted to pass the dishes through the liquid in said tank, a traveling brush adapted to act on the dishes after passing through said tank, and a carrier for bringing the dishes into engagement with the said brush, the first carrier being intermittently driven and the second carrier continuously driven.

1,540,493. NEEDLE SELECTING AND OPERATING MECHANISM FOR CIRCULAR-KNITTING MACHINES. GILBERT MURPHY and WALTER A. SIMOND, Franklin, N. H., assignors to Acme Knitting Machine & Needle Company, Franklin, N. H., a Corporation of New Hampshire. Filed Mar. 25, 1922. Serial No. 546,563. 11 Claims. (Cl. 66—22.)

1. In a hosiery knitting machine adapted to knit plain circular, ribbed or reciprocating work and to change automatically from one of said styles of knitting to another, the combination of a set of needles for knitting plain circular work, a set of dial needles cooperating with the first set to knit a ribbed fabric, said dial needles consisting of two groups, and mechanism for operating said dial needles, said mechanism including a divided cam having sections for projecting the needles of said respective groups into yarn taking position, and means for adjusting said sections independently of each other.



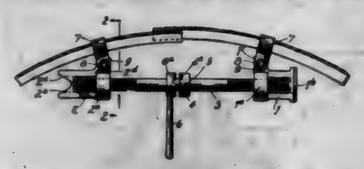
1,540,494. GUN. STANISLAW OLSZOWIEC, New Waterford, Nova Scotia, Canada. Filed Apr. 22, 1924. Serial No. 708,111. 3 Claims. (Cl. 42—84.)

1. In a gun, a barrel, a solenoid, a firing pin constituted by the plunger of the solenoid, a spring urging said plunger rearward and adapted to be tensioned when the plunger is moved by energizing of the solenoid, a battery, contact elements controlling the circuit from said battery to said solenoid, and a trigger element for closing said contacts, and means for adjustably limiting the movement of the plunger by the solenoid.

3. In a gun, a barrel, a solenoid, a firing pin constituted by the plunger of the solenoid, a spring urging said plunger rearward and adapted to be tensioned when the plunger is moved by the solenoid, a battery, contact elements controlling the circuit from the battery to the solenoid, said contact elements comprising a spring contact and a fixed contact adjacent thereto, an arm pivoted at one end in the gun, and a trigger element adapted to engage said arm to move it to cause said spring contacts to be closed, said trigger element having mounted thereon a spring-pressed pin adapted to engage an angular element on the said arm, said pin being adapted to first move said spring contact into engagement with the fixed contact, and upon continued movement of the trigger element to ride off said angular element to free the said arm and allow the said spring contact to move away from the fixed contact.

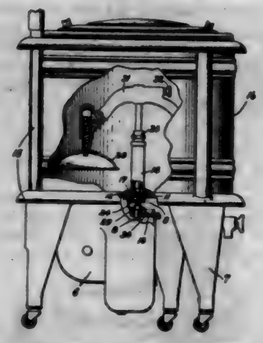
1,540,495. LATCH ESCUTCHEON AND METHOD OF APPLYING THE SAME. LEON OTTINGER, New York, N. Y. Filed June 28, 1923. Serial No. 648,394. 14 Claims. (Cl. 292—357.)

1. In combination with a door structure having a latch handle receiving opening, a latch operating rollback at one end of said opening and an operating handle adapted to be connected to said rollback; a bearing member for the handle shaft permanently fixed in the door structure at the other end of said opening and having a continuously curved or convex surface presenting a single circumferential line of bearing contact for the handle shaft in tangential relation thereto.



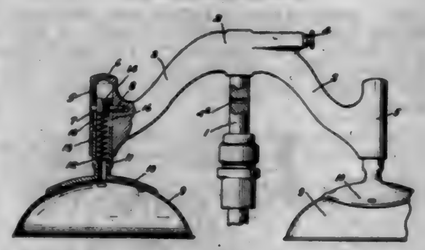
1,540,496. CONNECTING PLUG. LOUIS G. PACENT, Winfield, N. Y. Filed June 9, 1923. Serial No. 644,298. 6 Claims. (Cl. 173—361.)

1. A releasable electrical connector comprising a resilient conductor having a free end portion adapted to engage a wirelike conductor, said resilient conductor being operable in response to being flexed into an offnormal position to grip said wirelike conductor, a member having means for engaging and assisting in the retention of the wirelike conductor in a position wherein it is gripped by said resilient conductor, and a second member movable relatively to said first-mentioned member, said members being operable conjointly to retain the wire-like conductor in a position wherein it continues to be gripped by said resilient conductor.



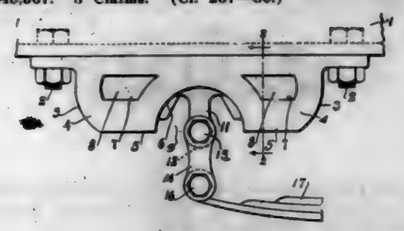
1,540,497. COMBINED VEHICLE RAISING AND RIM-JACK AND HUB-CAP WRENCH. EDWARD A. POHLMAN and JAMES LOVELL, San Diego, Calif. Filed May 3, 1924. Serial No. 710,961. 4 Claims. (Cl. 254—100.)

1. In a device of the class described, a pair of mutually shiftable end members, a screw means connecting said end members with each other and adapted to shift the same relatively to each other, and a pair of oppositely disposed gripping members pivotally mounted on one side of each of said end members, the pivotal axes



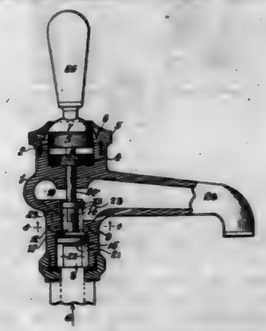
of said gripping members being positioned from the outer ends of said end members a distance greater than the length of said gripping members.

1,540,498. WASHING MACHINE. GEORGE E. RANDLES, Cleveland, Ohio, assignor to The Foote-Burt Company, a Corporation of Ohio. Filed June 25, 1924. Serial No. 722,394. 5 Claims. (Cl. 68—19.)



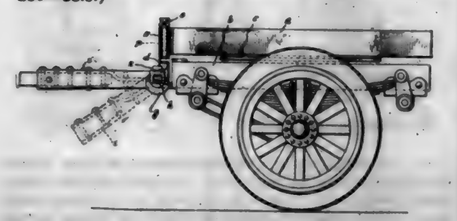
1. In a suction cup washing machine, the combination of a tub, a tubular post therein, a plunger rod which extends up through the post in spaced relation to the wall of the post, and means carried by the plunger rod for transferring water from the rod to the inner surface of the tubular post.

1,540,499. WASHING MACHINE. GEORGE EARL RANDLES, Cleveland, Ohio, assignor to The Foote-Burt Company, a Corporation of Ohio. Original application filed June 25, 1924, Serial No. 722,394. Divided and this application filed Nov. 29, 1924. Serial No. 752,886. 3 Claims. (Cl. 68—19.)



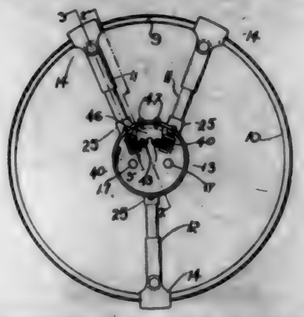
1. In a suction cup washing machine, a yoke having a socket open at its lower end, a suction cup having a tubular stem with a slot in its wall, said stem projecting into the socket, a spring in the stem, means in the upper end of the stem which holds the spring under compression and below the upper end of the slot, and a pin which passes through the socket and said slot above the spring to fasten the stem in the socket.

1,540,500. CUSHIONING DEVICE. RALPH REED, Cincinnati, Ohio. Filed June 15, 1923. Serial No. 645,567. 3 Claims. (Cl. 267—30.)



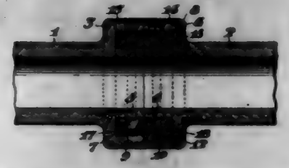
1. In a cushioning device, a frame, a cage having extensions to detachably mount it on said frame, cushioning means detachably mounted in said cage, and supporting means suspended on said cushioning means and passing out of said cage.

1,540,501. SELF-CLOSING BASIN FAUCET. JOHN ROOSMA, Bridgeport, Conn., assignor of one-fourth to Thomas E. Lake, Stratford, Conn.; one-fourth to Henry F. Blakeley, Bridgeport, Conn.; and one-fourth to Isidor Rosenzweig, Milford, Conn. Filed Dec. 31, 1923. Serial No. 683,624. 3 Claims. (Cl. 251—159.)



1. In a faucet of the character described, comprising a body having a valve chamber and valve seat, a sectional valve construction comprising a valve disk for the valve seat, a guide head and a body connecting the valve disk and head, a collar and a buffer located between the valve disk and collar, means for uniting the valve sections, and means for unseating the valve against the water pressure.

1,540,502. REMOVABLE DRAWBAR FOR VEHICLES. CHARLES LAWRENCE SCHNEIDER and HARVEY C. FRUEHAUF, Detroit, Mich., assignors to Fruehauf Trailer Co., Detroit, Mich., a Corporation of Michigan. Filed Mar. 27, 1924. Serial No. 702,217. 3 Claims. (Cl. 280—33.5.)

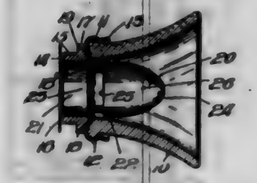


1. A reversible trailer, having in combination a trailer frame, a swiveling truck provided with an open bolt socket having a narrow entrance, a tongue provided with a revolvable lock bolt having a flattened end, said flattened end adapted to pass through the narrow entrance of the open bolt socket in coupling the tongue to the truck, and means for turning said revolvable bolt so as to prevent the same from becoming disengaged from said bolt socket.

1,540,503. TIRE CARRIER AND RIM TOOL. FRANK H. SCHOFIELD, Cleveland, Ohio, assignor to Mary Elisabeth Cook, Cleveland, Ohio. Filed Dec. 13, 1923. Serial No. 680,366. 3 Claims. (Cl. 224—29.)

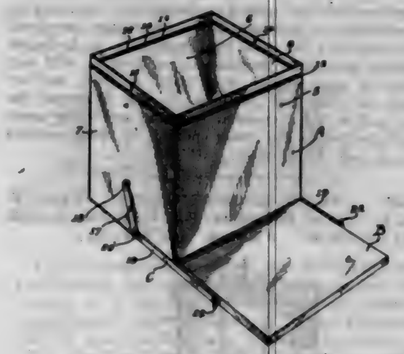
1. In combination, a plurality of spaced arms, a hollow casing connecting said arms, one of said arms being movable radially with reference to another of said arms, gearing within the casing for actuating each arm, said gearing being so arranged that either arm may be moved with relation to the other and independently of the other.

1,540,504. PIPE COUPLING. LLOYD M. SEAMAN, Pleasantville, N. J. Filed Mar. 2, 1921. Serial No. 449,028. 7 Claims. (Cl. 285—144.)



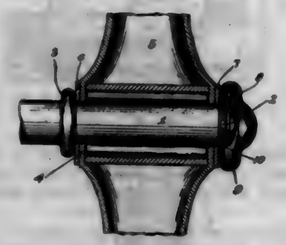
1. A pipe coupling comprising abutted pipe sections each having end nipples embraced by bell-shaped flanges forming an annular pocket, for the reception of sealing material, and a thimble for said nipples, arranged to be embedded in said sealing material.

1,540,505. INSULATOR MOUNTING. EDSON O. SESSIONS, Chicago, Ill., assignor to Albert C. Bell, trustee, Chicago, Ill. Filed June 13, 1919. Serial No. 304,022. 6 Claims. (Cl. 173—321.)



1. In an insulator mounting, the combination of a connecting tube for enclosing the head of an insulator, and an annular member connected with said tube and projecting inwardly from said tube to enter an annular groove adjacent the head of said insulator, said tube being rigid adjacent said annular member, and said annular member being of metal tending to assume a conformation of smaller diameter than the diameter of said groove and comprising an inturned bead formed on one end of said connecting tube.

1,540,506. SOUND TRANSMITTER. FREDERICK A. WATKINS, Chicago, Ill. Filed June 22, 1923. Serial No. 647,006. 16 Claims. (Cl. 179—187.)

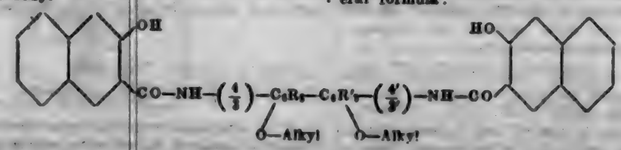


1. A sound transmitter comprising a mouthpiece having a smaller end, and means within said mouthpiece and anchored within its smaller end to confine a body of air in front of the diaphragm of a length greater than the diameter of said body, the anchor comprising a tubular extension to constitute an enclosed sound passage and closely fitting within the smaller end of the mouthpiece, the sound passage internally communicating with said mouthpiece and with the interior of said air confining means.

1,540,507. VERMINPROOF BREAD BOX AND CUTTING BOARD. WILLIAM W. WAYLAND, Cordova, Ala. Filed July 28, 1922. Serial No. 578,265. 6 Claims. (Cl. 45—71.)

8. In a bread box, a body having an upper open end, an internal shoulder formed in the body, a combined cover plate and cutting board adapted to fit in the open end of the body and resting on said shoulder, and linked means for pivotally connecting said cover plate and cutting board with the body for permitting the board to be moved upwardly and downwardly at right angles to the front wall of the body.

1,540,508. AXLE CAP. CLARENCE WATSON WHITE, North Bennington, Vt. Filed Sept. 14, 1923. Serial No. 662,695. 2 Claims. (Cl. 301—112.)



1. In vehicles and the like, a bearing rod having an annular groove in its surface, and an abutment member on said rod, said member having a plurality of tongues extending radially and inwardly of the opening which fits over the rod, said tongues being adapted to snap into the groove and lock the member to the rod when the member is forced upon the rod and flexes the tongues, a number of said tongues having their free ends extending slightly out of the plane of the other tongues whereby after one set of tongues snap into the groove, further movement of the member to cause the other tongues to enter the groove will place both sets of tongues under compression between the walls of the groove.

1,540,509. PROCESS OF MANUFACTURING HEAT-INSULATING BRICK. RICHARD C. WILLIAMS, Baltimore, Md. Original application filed July 2, 1923, Serial No. 649,160. Divided and this application filed Feb. 7, 1925. Serial No. 7,706. 2 Claims. (Cl. 25—157.)

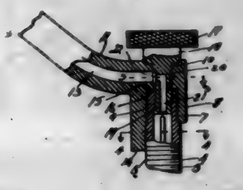
1. That method of manufacturing heat insulating refractory bricks and the like which consists in mixing together diatomaceous earth, a combustible coking binder and water, the quantity of diatomaceous earth being at least equal to the combined quantities of binder and water, molding the mixture, and exposing the molded mixture to a heat sufficient to primarily drive off the volatile matter, next to coke the binder and finally to burn out the binder and effect sintering of the silica.

1,540,510. BIS-(2.3-HYDROXYNAPHTHOYL)-4.4'-DIAMINO-3.3'-DIALKYLOXY-DIARYLS. ARTHUR ZITSCHER, Offenbach-on-the-Main, Germany, assignor to The Corporation of Chemische Fabrik Griesheim-Elektron, Frankfort-on-the-Main, Germany. Filed Nov. 30, 1923. Serial No. 677,879. 2 Claims. (Cl. 260—124.)

1. As new articles the bis-(2.3-hydroxynaphthoyl)-4.4'-diamino-3.3'-dialkyoxy-diaryls, having probably the general formula:

wherein R and R' mean the same or different monovalent substituents, which are when dry almost colorless crystalline powders, soluble in diluted caustic soda solution to a brownish yellow solution and very little soluble in the usual organic solvents.

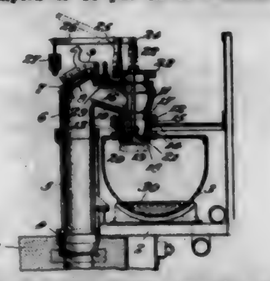
1,540,511. SCREW LIFTING JACK. JOHN M. CANTWELL, Tarrytown, N. Y. Filed June 13, 1924. Serial No. 719,714. 18 Claims. (Cl. 254—102.)



9. The combination of a supporting base, a pair of telescopic lifting screws including an inner and an outer

screw, a vertically extending tubular member carried by said base and having substantially the same length as one of said screws, gear mechanism connected to the lower end of said member for rotating the same, means carried at the upper end of said member and engaging

said outer screw for lifting the same without rotating it, means effective upon predetermined lifting of said outer screw to permit the rotation thereof, and means at the upper end of said outer screw and engageable with the inner screw for lifting the latter upon rotation of the outer screw.

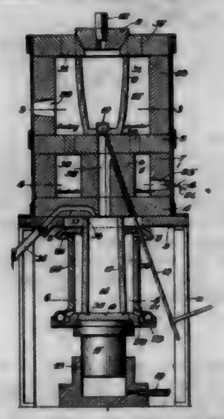


1,540,512. VALVE ATTACHMENT. JOHN E. CARROLL, Philadelphia, Pa., assignor to C. O-2 Products Company, Philadelphia, Pa. Filed Oct. 9, 1922. Serial No. 593,480. 5 Claims. (Cl. 285—107.)

1. The combination with a tire valve having an external flat face and an internal thread, of an attachment for connection to said tire valve, said attachment comprising a body having a recess registering with the outer end of the tire valve, and a lip projecting from the body and engaging the flat face of the tire valve for the purpose specified.

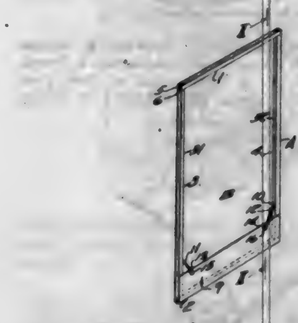
1,540,513. SEALED VALVE. JOHN J. CAVETT, Johnstown, Pa. Filed Sept. 28, 1922. Serial No. 591,193. 6 Claims. (Cl. 251—27.)

6. A valve comprising a conical body portion with an up-turned edge, thus providing a continuous annular space between the edge and body, a valve seat adapted to contact with said valve between the body portion and said up-turned edge, said seat having notches in its contact edge, means for supplying liquid to the valve, whereby it is adapted to be sealed against the passage of gas while permitting liquid to pass, a valve stem secured to said valve, a pivoted lever connected to said stem and a weight adapted to be put on or removed from the



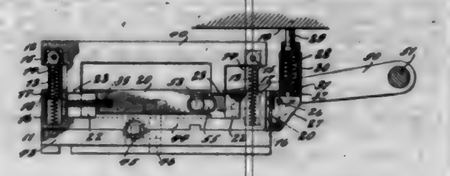
other end of said lever, whereby the valve may be temporarily held closed by said weight or held open by its own weight.

1,540,514. COIL MOUNTING. OMER EUGENE COTE, Pawtucket, R. I., assignor to Electrical Products Manufacturing Company, Providence, R. I., a Corporation of Rhode Island. Filed June 6, 1923. Serial No. 643,670. 2 Claims. (Cl. 175—359.)



1. The combination with an annular wire coil having wire terminals, of a block having electrical terminals therein connected to said wire terminals, a U-shaped tie member extending through the opening in said coil for securing said coil to said block, a cross member engaging the two end portions of said U-shaped tie member, and a clamping screw engaging said cross member, said clamping screw being operable to effect variable tension on said tie member.

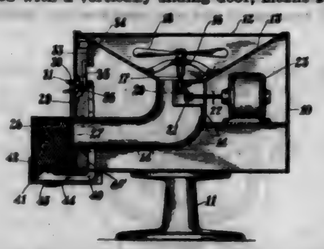
1,540,515. CRUCIBLE-STEEL-MELTING FURNACE. PAUL A. CUBNOT, Harrisburg, Pa. Filed Aug. 8, 1922. Serial No. 580,387. 9 Claims. (Cl. 263—14.)



1. In a furnace of the character described, a stationary crucible having an outlet at its bottom, a plug for sealing said outlet, a heating chamber surrounding said crucible, an ingot mould in vertical alignment with said crucible, a passageway leading directly from said outlet to said ingot mould, and a combustion chamber surrounding said passageway.

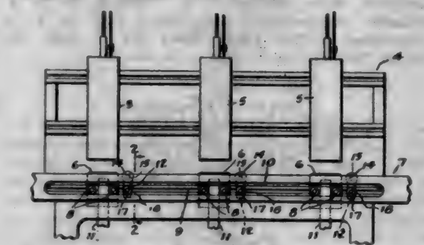
1,540,516. DISPLAY DEVICE. ALBERT E. DAVIS and SIMON DAVIS, Kew Gardens, N. Y. Filed Dec. 20, 1924. Serial No. 756,013. 3 Claims. (Cl. 40—125.)

1. In a display device in combination, a pair of extensor members adapted to be arranged in vertically spaced horizontal positions; a pair of struts; means for disconnectably framing said extensors and struts into substantially rectangular formation; a sheet of flimsy display material permanently secured at one edge to one of said extensor members and adapted to be rolled up thereon for transportation; and means for tensing a fold at the opposite ends of said sheet about the other of said extensor members.



1,540,517. SAFETY OPERATING MECHANISM. HENRY DE SMITH, Rochester, N. Y., assignor to M. D. Knowlton Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 13, 1919. Serial No. 317,238. 6 Claims. (Cl. 192—132.)

1. In a box-ending machine, the combination with the presser-head and the vertically reciprocating box-form carrier, of a box-form mounted on said carrier comprising upper and lower sections, means yieldingly holding the upper section in a normally projected position above the lower one, a slidable connecting member between said sections which is capable of being rendered operative and inoperative to maintain the upper section unyielding relatively to the lower one, means for controlling the action of the connecting member to render it operative just prior to the box-form reaching the end of its working stroke, said means including an operating member carried by the reciprocating box-form and actuated by engagement with a cooperative stationary part, and positively acting automatic means for rendering the connecting member inoperative on the down stroke of the carrier following the work-performing operation.



1,540,518. SUCTION FLYTRAP. FREDERICH DRUGAN, New Haven, Conn. Filed Oct. 29, 1924. Serial No. 746,497. 6 Claims. (Cl. 43—139.)

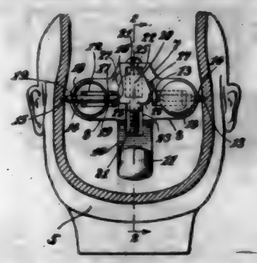
3. A flytrap comprising a screen-topped box, a funnel leading downward from the top of the box, a conduit leading from said funnel to the side of the box, a helical fan in said funnel, and a motor in said box for driving said fan, and a removable receptacle abutting against the side of the box with which said conduit communicates, said receptacle being formed with an aperture in its side provided with a vertically sliding door, means suspending

said door in raised position, a switch controlling said motor, and a lever engaged by said door when in raised position and acting to retain said switch closed.

1,540,519. SADDLE-STITCHER ATTACHMENT. HARRY EHLIG, Pearl River, N. Y., assignor to George R. Swart & Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 8, 1924. Serial No. 691,383. 5 Claims. (Cl. 1—7.)

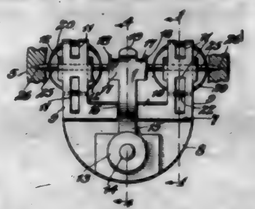
1. In combination, a support or saddle on which signatures are held in open position, mechanism for stitching said signatures so held including means carried by the saddle, and independently rotatable means adjustably carried by the saddle for holding the signatures above said saddle and in register with said means carried by the saddle.

1,540,520. EYE MOUNTING FOR DOLLS. LEO J. GRUBMAN, New York, N. Y., assignor to L. J. Grubman, Incorporated, Long Island City, N. Y., a Corporation of New York. Filed Mar. 26, 1924. Serial No. 701,896. 14 Claims. (Cl. 46—40.)



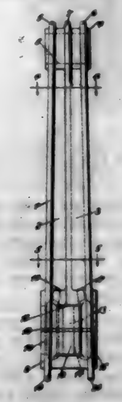
10. In an eye mounting for dolls, eye members comprising hemispherical hollow shells formed with outwardly extending flanges, a support carrying said eye members and provided with portions overlapping upon the flanges thereof to retain the eye members in assembled relation upon the support.

1,540,521. EYE MOUNTING FOR DOLLS. LEO J. GRUBMAN, Belle Harbor, N. Y., assignor to L. J. Grubman, Incorporated, Long Island City, N. Y., a Corporation of New York. Filed Apr. 5, 1924. Serial No. 704,410. 25 Claims. (Cl. 46—40.)



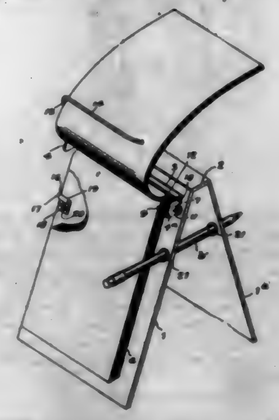
24. In an eye mounting for dolls, eye ball members, spaced pivot members located coincident with the axes

of the respective eye ball members, and movable relative thereto into engagement with opposite sides of a doll head wall to support the eye members for oscillatory



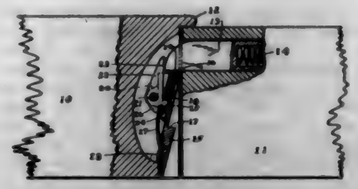
movement, and a part adapted to co-act with the pivot members to unyieldingly resist movement of the same from their applied positions with respect to the doll head wall.

1,540,522. EYE MOUNTING FOR DOLLS. LEO J. GRUBMAN, Belle Harbor, N. Y., assignor to L. J. Grubman, Incorporated, Long Island City, N. Y., a Corporation of New York. Filed Nov. 7, 1924. Serial No. 748,311. 10 Claims. (Cl. 46—40.)



1. In an eye mounting for dolls, eye members, pivot means movably engaged with said members and adapted to be moved relative thereto into engagement with a doll head wall to support said eye members for oscillatory movement, and a spring actuated part adapted to coact with said pivot means and rigidly hold the same in applied position with respect to the doll head wall.

1,540,523. CONNECTING ROD. STEPHEN D. HARTOG, Belleville, Ill. Filed Feb. 26, 1923. Serial No. 621,261. 11 Claims. (Cl. 74—17.)

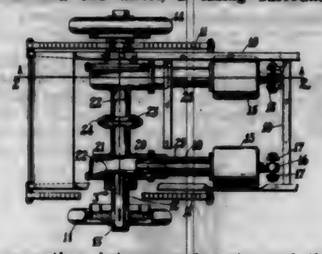


1. As a new article of manufacture, a connecting rod comprising a continuous wall shaped to form parallel channels in opposite faces thereof in which the edges are spaced from the remaining portion, said channels overlapping each other, a wrist pin bearing carried at one end of said rod, and a bearing portion at the opposite end of said rod.

1,540,524. NOTEBOOK HOLDER. EDWARD M. ANDERSON, Jersey City, N. J., assignor to Anderson & Prigge, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 31, 1923. Serial No. 683,639. 9 Claims. (Cl. 120—28.)

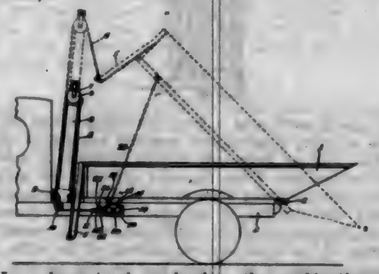
1. In a note-book holder having a board, a plate secured to the face of the board to present side ears facing each other, one of said ears having a perforation and the other ear having a slot, a retainer rod which extends substantially across the board, the rod being passed loosely through said perforation and having a retaining head at one end, and means for catching the other end in said slot, substantially as set forth.

1,540,525. DOOR LATCH. OLAF A. ANDERSON, Hamilton, Ohio. Filed Oct. 21, 1922. Serial No. 595,945. 3 Claims. (Cl. 292—340.)



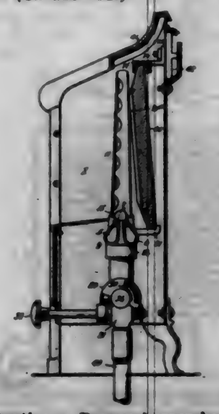
1. In a device of the class described, the combination of a strike plate for door latches, a member carried thereby and slidable transversely of the direction of movement of the latch into engagement with the latter, a member pivoted on said plate and having three arms one of which cooperates with said latch and another of which actuates said slidable member, and a spring having one end secured to said plate and its other end cooperating with the third of said arms of the second-mentioned member.

1,540,526. MOTOR VEHICLE. JOSEPH A. ANGLADA, Jenkintown, Pa. Filed Mar. 16, 1923. Serial No. 544,842. 8 Claims. (Cl. 180—57.)



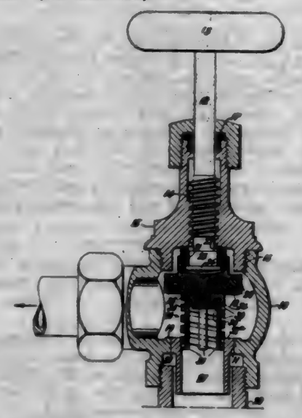
1. In a motor vehicle, a frame, drive wheels connected thereto, a pair of motors independently pivoted

to said frame, operative driving connections between each motor and one wheel, a casing surrounding the



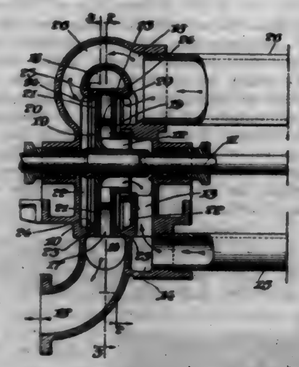
driving connections between each motor and the wheel driven thereby, and a swivel connection between said casings.

1,540,527. DUMP TRUCK. PERCY B. BARKER, Cleveland, Ohio, assignor to The Van Dorn Iron Works Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 24, 1921. Serial No. 509,922. 17 Claims. (Cl. 298—1.)



1. In a dump truck mechanism, the combination of a supporting frame, a load receiving body mounted upon said frame for raising and lowering movement, means for raising and lowering said body, and means controlled by the body of ensuring against improper upward movement of said body, improper movement of said body being adapted to initiate effective operation of said ensuring means.

1,540,528. RADIANT GAS HEATER. GEORGE E. BENNETT, New York, N. Y., assignor to Peerless Manufacturing Company, Louisville, Ky., a Corporation of Delaware. Filed Jan. 21, 1925. Serial No. 3,719. 12 Claims. (Cl. 126—92.)



1. In combination, a Bunsen burner having a group of ports arranged relatively close together with a secondary air space between adjacent ports, and a radiant supported above the group of ports and spaced from the burner to provide a secondary air space between the lower end of the radiant and the burner.

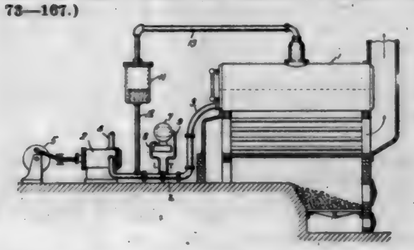
1,540,529. VALVE. HIRAM W. BLAISDELL, New York, N. Y. Filed July 28, 1922. Serial No. 577,502. 12 Claims. (Cl. 251—25.)

3. A steam regulating device, comprising a valve housing, having a seat surrounding the passage therethrough, a lifting stem in the housing, a hollow cylindrival valve connected to the stem, a throat in which said valve is adjustable up and down by means of said stem, said valve being helically slitted to form a porting, and having integral interior ribs or connections to support the whorls, and a packing carried by said stem above said ported valve, and adapted to be forced down by the stem against said seat to prevent leakage of steam.

1,540,530. CENTRIFUGAL PUMP. PAUL G. BOGDANOFF, Bloomfield, N. J., assignor to Bogdanoff-Friedman, Inc., Newark, N. J., a Corporation of New Jersey. Filed Feb. 16, 1924. Serial No. 693,154. 6 Claims. (Cl. 230—14.)

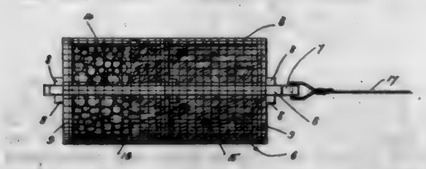
1. A centrifugal pump comprising an impeller chamber, an impeller therein having a central inlet, a stationary discharge chamber encircling the periphery of the impeller, and a vacuum chamber laterally of the impeller chamber and having direct and unobstructed communication through a multiplicity of closely-related ports with the impeller chamber in and throughout the major part of the space between the central inlet and the periphery of the impeller, said vacuum chamber also having a fluid inlet portion.

1,540,531. PROTECTED PIN. DAVID A. BOSWELL, Indianapolis, Ind. Filed Aug. 1, 1924. Serial No. 729,469. 9 Claims. (Cl. 24—158.)



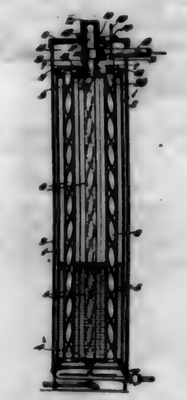
1. A safety pin of the character described including a back portion, a pin portion positioned adjacent thereto, a coiled connection connecting one end of the pin portion to the back portion so that the pin normally tends to position itself adjacent the back portion, and a pin receiving seat construction having a pin receiving surface positioned in spaced relation to said back portion and connected thereto and engageable by said pin in the normal closing movement of said pin, said surface preventing further movement of said pin toward said back portion.

1,540,532. BATTERY SEPARATOR. OLIVER W. BROWN and CLYDE O. HENKE, Bloomington, Ind. Filed Oct. 10, 1923. Serial No. 667,700. 12 Claims. (Cl. 136—29.)



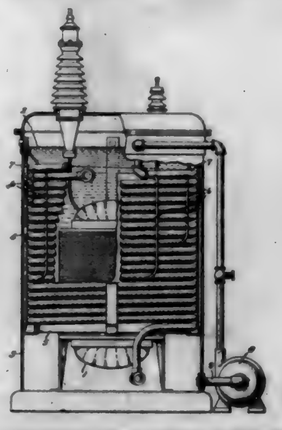
1. A dried treated wood separator for storage-battery or other electrolytic cells, with the wood impregnated with a substance which is substantially insoluble in water but is soluble in the electrolyte of the cell.

1,540,533. FLOW-METER INSTALLATION. CHARLES F. BULLOCK, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 8, 1924. Serial No. 748,781. 1 Claim. (Cl. 73—167.)



In a flow meter installation for measuring the flow of water from a reciprocating pump to a boiler, the combination with the conduit through which the water flows to the boiler, of a flow meter installed in said conduit, means providing an orifice in advance of the flow meter as regards the direction of flow through the conduit for effecting a drop in pressure in the conduit in advance of the flow meter, a surge tank connected to the conduit in advance of said orifice means, and a pipe connecting the upper end of said surge tank to the steam space of the boiler.

1,540,534. SHORE PROTECTOR. FERDINAND WILLIAM BULTMANN, Wakenda, Mo. Filed June 2, 1924. Serial No. 717,334. 2 Claims. (Cl. 61—3.)

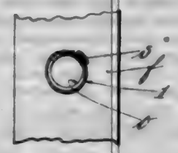


1. A shore protector or fascine, comprising a frame having a central longitudinal bar, outer longitudinal bars spaced apart from the central bar and arranged around it, and crossbars arranged in pairs which are secured crosswise of each other, the bars of each pair being arranged to straddle the central bar and two of the outer bars, and packing material arranged in the frame around the central bar.

1,540,535. HEAT SAVER AND HEAT-INCREASING ACTION FOR BOILER FLUES. LEO J. BURKE, Philadelphia, Pa. Filed Apr. 7, 1923. Serial No. 630,446. 1 Claim. (Cl. 137—112.)

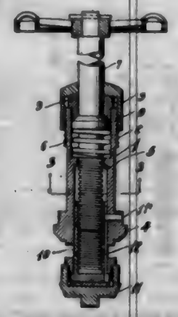
In a heat saver and a heat increasing action for the flue of a boiler, a spiral heat retarder adapted to occupy the flue, and an apertured bar-like member of substantially rectangular form mounted pivotally on said retarder, said bar being adapted to be turned crosswise to support the retarder in the flue and to be placed in the longitudinal direction of the retarder to permit the insertion of the latter and the removal of the same, both through the top of the boiler, said bar-like member having on an end thereof an elbow 20 which when the bar is in the longitudinal direction of the conveyor may rest close to the latter between adjacent convolutions thereof, the removal and insertion of said bar being accomplished by a suitable implement insertable through said aperture.

1,540,536. APPARATUS FOR COOLING TRANSFORMERS. LOCKE H. BURNHAM, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 6, 1923. Serial No. 630,341. 4 Claims. (Cl. 257—191.)



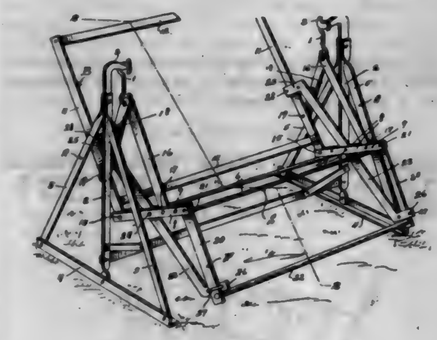
4. The combination with a casing enclosing an oil immersed transformer, of a helical pipe for carrying a current of cooling liquid, said pipe being immersed in the oil and surrounding the transformer, and means having openings directed downwardly and sidewise for forcing a plurality of jets of oil along the surface of said pipe in downwardly and sidewise directions.

1,540,537. METHOD OF MAKING LAMP MOUNTS AND SIMILAR ARTICLES. WILLIAM R. BURROWS, Newark, N. J., assignor to General Electric Company, a Corporation of New York. Filed Nov. 25, 1921. Serial No. 517,737. 15 Claims. (Cl. 140—71.)



1. The method which comprises holding the end of a long wire immovable in contact with one of two accurately spaced and positioned leads, moving said wire and the other lead relatively to bring them into contact at an intermediate point on said wire determined by the position of said other lead, securing the wire to both leads at the points of contact, and cutting the wire adjacent said intermediate point.

1,540,538. REENFORCEMENT FOR BUTTONHOLES. EDITH A. B. BURT, Springfield, Mass. Filed Sept. 18, 1922. Serial No. 588,938. 2 Claims. (Cl. 14—202.)

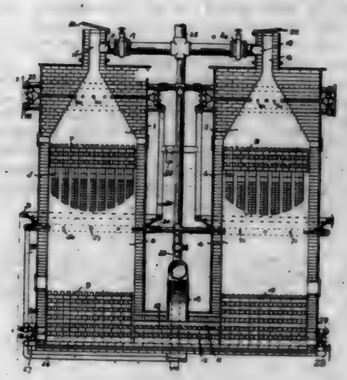


1. A reenforcement for buttonholes comprising, a member formed into the shape of a loop having unjoined end portions, the said end portions being arranged in an overlapping relation and formed to coincide with the contour of the loop, whereby they are adapted for a relative sliding movement to allow an expansion of the loop with the end portions in their overlapping relation.

1,540,539. VALVE. FRANK CAIN, Tyler, Tex., assignor of one-third to Chas. J. Brogan and John H. Brogan and one-third to Loyd H. Cain, all of Tyler, Tex. Filed Feb. 28, 1924. Serial No. 695,796. 1 Claim. (Cl. 251—48.)

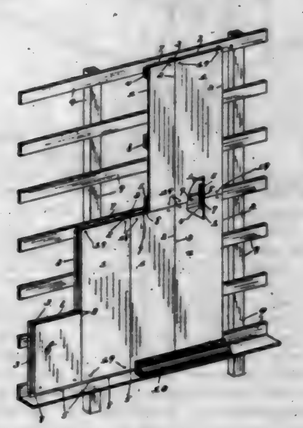
A valve structure comprising a bonnet of elongated tubular form having an inner flange integral therewith intermediate its ends providing an annular shoulder, the lower end of the bonnet being laterally enlarged to provide a beveled seat for engagement with a casing, a valve having a tubular stem slidable within the bonnet and provided with an exterior longitudinal groove, a pin carried by the enlargement and extending into said groove to prevent rotation of the tubular stem, an operating stem guided by said flange and having screw thread connection with the tubular stem, said operating stem having an annular enlargement integral with it, a helical spring surrounding the operating stem and confined between said enlargement and said shoulder, a metal packing snugly fitting within the outer end of the bonnet and engaging said enlargement, a flange on the packing overlapping the outer end of the bonnet, and a nut engaging the last mentioned flange to secure the packing to the bonnet.

1,540,540. SWING. ERNEST CAMM and JOHN W. WRIGHT, Whitehall, Ill., assignors to Camm-Wright-Wemken Company. Filed July 10, 1924. Serial No. 725,225. 1 Claim. (Cl. 155—67.)



A swing comprising, in combination, a seat section, a back section pivotally engaged with the seat section, side bars, a foot rest comprising side bars pivotally engaged with the seat section, and a rod connecting the outer end portions of said side bars; rigid members pivotally engaged with the end portions of the seat section, the extremities of each of said members being provided with oppositely disposed angular extensions, said extensions being provided with outstanding loops, the side bars of the foot rest being slidably disposed through the lower loops, the rod connecting said side bars coacting with the loops of the lower extensions to limit the relative movement of said extensions and side bars in one direction, the side bars of the back section being freely disposed through the upper loops, and a pair of hanger levers associated with each end of the swing, one of said levers being pivotally engaged with the seat section and the other of said levers being pivotally engaged with the back section, the upper loops contacting with the levers engaged with the back section to limit the relative movement in one direction of the side bars of the back section and the upper extensions of the rigid members.

1,540,541. OIL-GAS-MAKING APPARATUS. WILLIAM E. L. CALVIN, San Francisco, Calif., assignor of one-half to Joseph Vellone, San Francisco, Calif. Filed May 31, 1923. Serial No. 642,455. 5 Claims. (Cl. 48—94.)



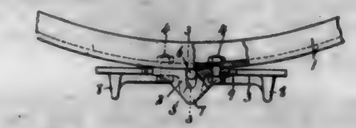
1. In a gas making apparatus, a plurality of vertical vessels each having a grill partition dividing the vessel into upper and lower chambers, the said lower cham-

bers cross-connected by a gas making and fixing passage having a gas outlet, checker brick in said chambers and in said passage, a valve controlled air inlet to and a

valved outlet from the top of each upper chamber and steam and oil spray nozzles in each of the upper and each of the lower chambers.

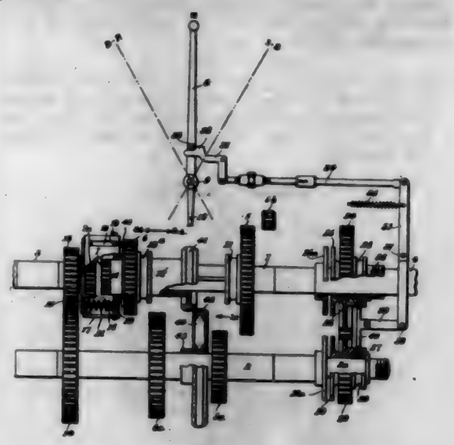
1,540,542. BUILDING FRAME. STEPHEN J. CARHART, Watervliet, N. Y. Filed July 27, 1923. Serial No. 654,276. 1 Claim. (Cl. 20—4.)

A building frame having a body of sheet-metal bent along one side edge to form a flange, and along its other side edge to form a groove engageable with a like flange on a like frame, a rigid reinforcement secured to the back of said sheet-metal body projecting beyond the ends thereof, one of said projections being formed with a flange and the other being provided with a groove engageable with a like flange on a like frame.



1,540,543. GOLD SEPARATOR. HARRY T. COSTA, Grants Pass, Oreg. Filed Sept. 15, 1923. Serial No. 662,928. 2 Claims. (Cl. 83—67.)

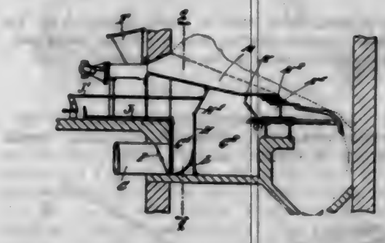
1. A separator of the class described having a pan of inverted frusto-conical shape, a launder associated therewith, a cover for said pan and conforming to the shape thereof, said cover having spaced walls and adapt-



ed to contain water, said cover having an inlet for the water, and a supply tube for the cover spanning said walls and reinforcing the cover.

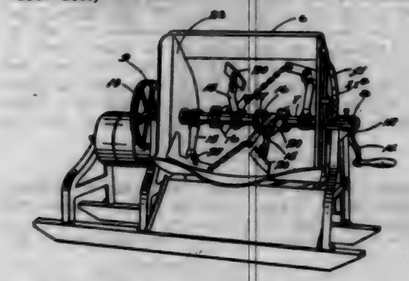
1,540,544. TRACTION DEVICE FOR TRACTOR WHEELS. CLAYTON L. CURTIS, South Otselic, N. Y., assignor of one-half to Sherman Alter, Ithaca, N. Y. Filed Jan. 3, 1923. Serial No. 610,463. 2 Claims. (Cl. 305—13.)

1. A traction device for vehicle wheels comprising a traction plate having a flat inner face and the opposite edges of its central portion recessed and provided with laterally projecting trunnions midway between its ends, brackets arranged in the recesses and provided with radial slots open at their inner ends for receiving said trunnions, and means for clamping the brackets to the periphery of the wheel rim with the open ends of the slots adjacent said periphery to hold the plate in operative position.



1,540,545. SPEED EQUALIZER FOR GEAR-SHIFT MECHANISM. JORGE F. DEL RIO, Mexico, Mexico. Filed Sept. 24, 1924. Serial No. 739,616. 9 Claims. (Cl. 74—58.)

1. In a speed equalizer for gear shift mechanism, the combination with sets of speed changing gears, a main and counter shaft supporting the same, of friction devices associated with the shafts to cause the gears of



each set to rotate at the same speed at the time of meshing engagement, the friction devices for the low speed gears including meshing gears, respectively, freely rotatable on the main and counter shafts, a friction disk on each free gear, and cooperating friction disks fixed to the main and counter shafts.

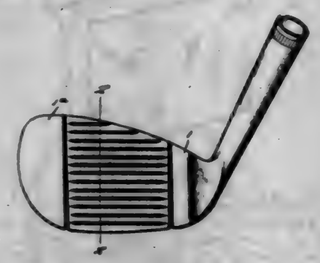
1,540,546. UNDERFEED MECHANICAL STOKER. WILLIAM JOHN HUBERT DITLOCK, Croydon, England, assignor of one-half to Erith's Engineering Company, Limited, Kingsway, England, a British Company. Filed May 5, 1924. Serial No. 711,163. 3 Claims. (Cl. 110—44.)

2. An underfeed stoker comprising an underfeed retort, an air chamber beneath said retort, tuyères located at the sides of said retort, a partition wall extending transversely in the chamber and arranged beneath the forward end of the retort where the fuel bed is thickest for dividing the chamber into two compartments, and a damper hinged at its lower edge to the upper portion of said partition, said damper being movable to inclined positions to direct air from the front compartment directly to the fuel bed above the compartment beyond the partition.

1,540,547. MIXING MACHINE. JOHN C. DOIDGE, London, Ontario, Canada, assignor to London Concrete Machinery Co., Ltd., London, Ontario, Canada. Filed June 2, 1923. Serial No. 643,106. 5 Claims. (Cl. 259—109.)

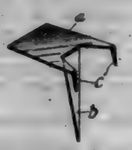
1. A mixing machine consisting of a mixing chamber, a shaft extending through and supporting said mixing chamber on a suitable frame, radially supported mixing means extending from said shaft, chains joining non-adjacent members of said mixing means and means for guiding the material in said mixing chamber towards said chains, said mixing means including radial shanks and arcuate members on said shanks arranged concentrically of said shafts.

1,540,548. PROCESS OF PRODUCING STORAGE BATTERIES. GEORGE F. DOWNER, Cleveland, Ohio. Filed Aug. 25, 1922. Serial No. 584,340. 9 Claims. (Cl. 136—27.)



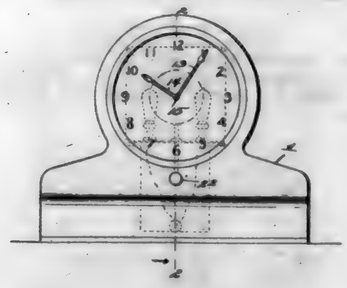
1. The process of producing a storage battery plate which contains the steps of pasting a grid with a paste of lead oxide and water and subsequently immersing the same prior to any material drying and while the surface pores are full of water, in a solution of sulphuric acid having a specific gravity between about 1.050 and about 1.300 until the paste is sufficiently sulphated.

1,540,549. ADJUSTABLE HARROW AND DRAG. WILLIAM A. EARHART, East Radford, Va. Filed Apr. 3, 1922, Serial No. 549,038. Renewed Mar. 3, 1925. 2 Claims. (Cl. 55—103.)



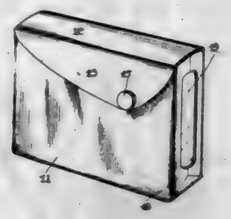
1. A combined harrow and drag comprising side members, cross members hinged to the side members, arms projecting upwardly from the cross members, a bar pivotally connecting the upper ends of said arms, and a diagonal brace member adjustably connected to vertical spaced apart portions of remote arms for rigidly holding the same in adjusted position.

1,540,550. GOLF-CLUB HEAD. JAMES VICTOR THOMAS EAST, Springfield, Mass., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed July 3, 1924. Serial No. 724,003. 1 Claim. (Cl. 273—77.)



A golf club of the pitching type having a relatively thick sole and concave front and back faces.

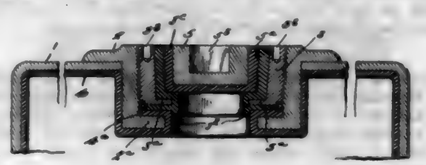
1,540,551. DEVICE FOR REENFORCING MOLDS. JAMES E. EVANS, Chicago, Ill. Filed July 21, 1924. Serial No. 727,209. 4 Claims. (Cl. 22—189.)



1. A device of the class described comprising a prong member with two sides disposed at an angle to each other, and a leaf member formed by the prolongation of said sides, the separation of them longitudinally and the bending of them at substantially an angle of 90 degrees to said prong.

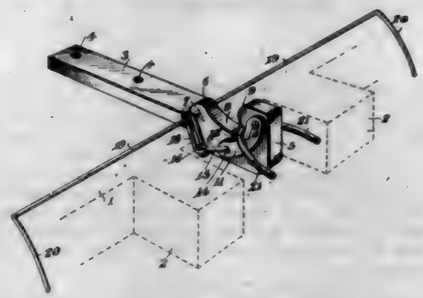
1,540,552. LAMP CLOCK. MAUD C. FOX, Brooklyn, N. Y. Filed Mar. 18, 1924. Serial No. 700,090. 8 Claims. (Cl. 58—50.)

1. A clock including a casing, a slidably supported movement having a forwardly directed winding key, said movement and key being normally housed within said casing, and means for sliding said movement a sufficient distance to present the key adjacent the exterior of said casing.



1,540,553. COMBINED CIGARETTE AND MATCH CASE. ANDREW W. GRAHAM, Buffalo, N. Y. Filed Aug. 11, 1923. Serial No. 656,802. 2 Claims. (Cl. 206—38.)

1. In a structure of the character described, a main receptacle of a rectangular shape, a partition in said receptacle dividing the same into end compartments, said receptacle having an end wall provided with an elongated opening communicating with one of the end compartments and said compartments each having an inlet, closure means for the inlets movable into and out of a closing position and adapted to be releasably secured in a closed position, and auxiliary receptacles formed of rigid material and each open at one end, said auxiliary receptacles being inserted into the end compartments of the main receptacle and filling the same and one having a side wall provided with a match striking surface to be exposed through the opening in the end wall of the main receptacle and a second side wall provided with an elongated opening for registering with the opening in the end wall of the main receptacle according to the position in which the auxiliary receptacle is positioned in the main receptacle.

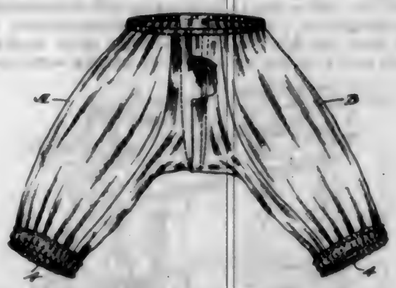


1,540,554. ACID-PROOF CONTAINER. RICHARD T. GRIFFITHS, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 2, 1924. Serial No. 741,170. 4 Claims. (Cl. 220—39.)

1. The combination with a metal container provided with an opening the wall of which is provided with an inwardly extending flange, and a rubber lining for the container which is provided with a portion overlying the upper face of said flange, of a clamping bushing having a surface layer of rubber secured thereto, said

clamping bushing being held in said opening with its surface layer pressed against said overlying lining portion, and a closure member for said bushing.

1,540,555. CAR-UNCOUPLING DEVICE. JOHN WILLIAM JONES, Clifford, Ill. Filed July 7, 1924. Serial No. 724,715. 1 Claim. (Cl. 213—219.)

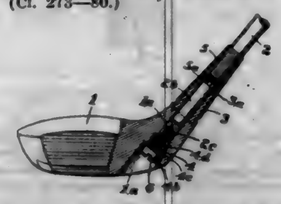


An uncoupling device of the character set forth comprising a drawbar, a head upon one end thereof formed to provide an upturned hook for engagement by a coupling member, a flat arcuate link having one end pivotally secured to the bill of said hook, and lying against and having the swinging end directed downwardly and inwardly, following the curvature of the inner portion of said bill, and means engaging with the free inner end of said link to lift the said inner end across the gullet of the hook to a point above the bill to raise the coupling member to a position where it will slip freely over the head.

1,540,556. CARD HOLDER. WILLIAM K. LAURIE, Albany, N. Y. Filed Apr. 25, 1923. Serial No. 634,468. 1 Claim. (Cl. 40—11.)

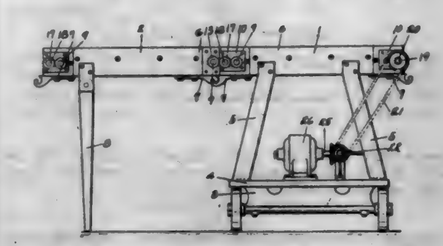
A card-holder formed of an integral piece of wire having a middle M-shaped card-holding member, loops extending from the respective legs of the M-shaped member at right angles to the plane thereof, members extending upwardly from said respective loops on opposite sides of and substantially in the plane of said M-shaped member and terminating in jaw members parallel with and cooperative with the respective loops.

1,540,557. NETHER GARMENT. JOHN J. MCLOUGHLIN, Philadelphia, Pa. Filed Nov. 24, 1924. Serial No. 751,950. 4 Claims. (Cl. 2—224.)



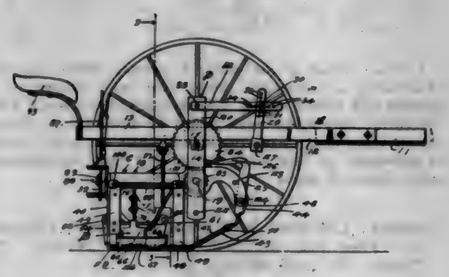
3. A bifurcate garment of the open bloomer type consisting of two corresponding units connected together at the waist only to form a separable crotch, each unit comprising a substantially oval shaped piece forming the side of the body and the major portion of the corresponding leg, and a substantially T-shaped crotch piece two sides of which are cut on curved lines and the respective curved line sides being connected to the opposite sides of the side piece whereby the crotch piece extends from the top at the front to the top at the back and down the leg and constitutes a completing part of the front and back of the body and inside of the leg.

1,540,558. METHOD OF MAKING STEEL RAILS. WILBUR L. MERRILL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 14, 1923. Serial No. 645,448. 8 Claims. (Cl. 22—65.)



1. The process of making elongated objects which consists in centrifugally casting a ring of metal having the general contour desired in the finished object, opening and straightening said ring and finishing to desired form.

1,540,559. GOLF CLUB. JOHN J. MURPHY, Norwich, Conn. Filed Oct. 20, 1924. Serial No. 744,759. 4 Claims. (Cl. 273—80.)

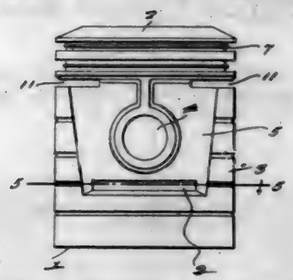


4. A wooden golf club comprising a head having its neck provided with a tubular bore or recess, and a metal ferrule surrounding said neck and provided at its outer end with an annular series of serrations, and a shaft having its body of elliptic shape in cross section and provided with a cylindrical lower end fitting said bore of the neck and with an annular enlargement provided with serrations interlocking with the serrations of the neck ferrule, and means for holding the shaft end in the said bore.

1,540,560. CONVEYER. LEWIS D. NELSON, Union City, Mich. Filed Oct. 11, 1920. Serial No. 416,191. 5 Claims. (Cl. 198—92.)

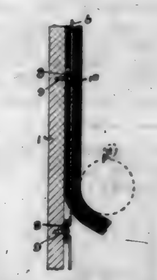
5. In a conveyer, the combination of a main unit and a plurality of supplementary units adapted to be operatively associated at either end of said main unit, a carrier for each unit provided with driving means brought into operative relation when the units are assembled end to end, and means for driving the carrier of the main unit comprising reversing means.

1,540,561. COTTON CHOPPER. EWALD NITZSCHE, Burton, Tex. Filed June 9, 1923. Serial No. 644,400. 18 Claims. (Cl. 97—18.)



1. In a machine of the class described, a chopper frame, chopper means carried thereby, a positioning frame to which said chopper frame is pivoted, and cam means associated with one of said frames to coact with the other of said frames to permit adjustment of the chopper frame and chopper means in substantial parallelism to the ground.

1,540,562. PISTON. CLARENCE F. OBERACKER, Cleveland, Ohio. Filed May 20, 1924. Serial No. 714,607. 2 Claims. (Cl. 74—108.)



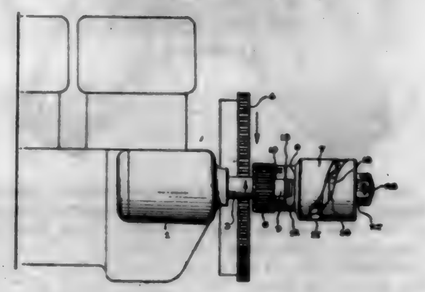
2. A piston comprising a head and skirt portion, said head portion having piston ring grooves provided therein, a reinforcing rib formed on the under face of the head portion, the outer faces of the skirt portion around the wrist pin openings provided therein being cut away to provide diametrically opposed oil pockets, said skirt portion having annular oil grooves extending around the outer face thereof and communicating with said oil

pockets, the lower portions of the oil pockets having slots provided therein to receive oil passing upwardly into said piston, means for directing the oil into said slots, said

means comprising baffle plates formed integrally with the skirt portion and extending inwardly from the upper edges of said slots.

1,540,563. METHOD OF FORMING PROTECTIVE LININGS. EDWIN LETTS OLIVER, Piedmont, Calif. Filed Jan. 30, 1923. Serial No. 615,946. 3 Claims. (Cl. 18—59.)

1. The method of protecting a surface which consists of securing a supporting screen over said surface at a plurality of points and in spaced relation therewith and thereafter overlaying said screen by pressing a plastic rubber composition over the screen until the said screen is embedded in said composition, and then vulvanizing said rubber in place.

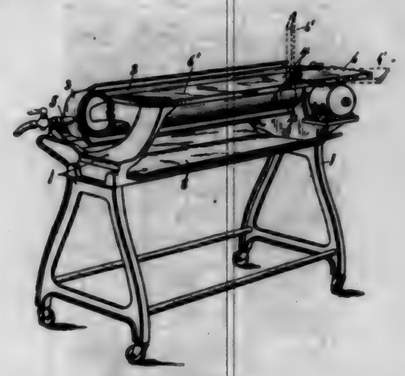


1,540,564. CURLING IRON. JOHN L. OLSON, Chicago, Ill. Filed Nov. 3, 1924. Serial No. 747,595. 11 Claims. (Cl. 132—37.)

1. A curling iron comprising tong members, a free floating pivot between the same, and a normally inactive tension device disposed upon one member to tension the pivot in the separation of the tong members by an interposed object.

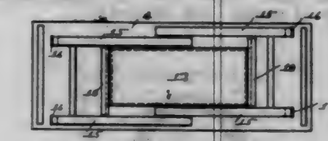
1,540,565. AUTOMATIC STARTER FOR MOTOR-DRIVEN VEHICLES. PETER B. PELTO, Detroit, Mich. Filed July 17, 1924. Serial No. 726,592. 5 Claims. (Cl. 74—7.)

1. A motor starting mechanism having, in combination with a starting motor having a shaft and a drive gear in connection with an automobile motor shaft, a pinion carried by the starting motor shaft for intermeshing engagement with the drive gear, a device for controlling the operation of said pinion and having a sleeve with which the pinion has an interlocking and relatively sliding engagement, yielding means for communicating motion from the sleeve to the pinion, the sleeve having a spiral slot, a driving member on the starting motor shaft



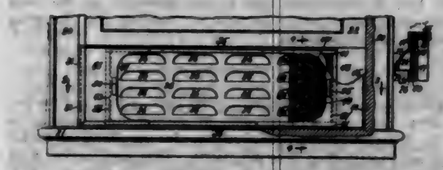
and provided with means engaging said spiral slot, and means on the starting motor shaft and having frictional connections with the drive member to permit a partial yielding movement of the sleeve when the starting motor shaft starts to turn and a complete yielding movement in case of back-fire, thereby preventing stripping of the teeth of the intermeshing gears.

1,540,566. PIPE EXTRACTOR. DONALD C. PETERS, Clarence, Mo. Filed Jan. 26, 1925. Serial No. 4,928. 3 Claims. (Cl. 294—97.)



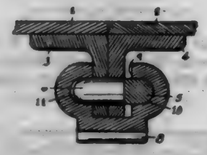
1. An implement of the class described comprising a body having a pointed portion extending from one end and a reduced shank extending from the other end, said body having a transverse opening therethrough and said shank having a cable guideway therein communicating with the body opening, reversely operating grip members pivoted within the opening and withdrawable within the lines of the same, and a pull cable connected to the grip members and extending through the guideway.

1,540,567. FOLDING SHELF FOR IRONING MACHINES. MARY E. PORTER, Syracuse, N. Y. Filed July 24, 1924. Serial No. 727,933. 1 Claim. (Cl. 68—9.)



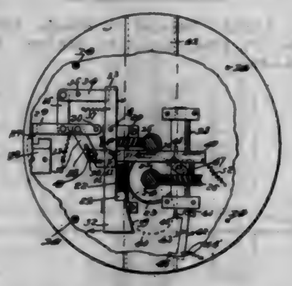
In an ironing machine having a feed roller for the articles to be ironed, a sectional table normally disposed parallel with and adjacent one side of the roller, one of the sections being relatively longer than the other section and hinged thereto to swing about an axis diagonal to the axis of the roller.

1,540,568. AUTOMOBILE TRUNK AND EQUIPMENT THEREFOR. JULES B. REBOUL, Grand Rapids, Mich. Filed Sept. 15, 1923. Serial No. 662,798. 1 Claim. (Cl. 190—12.)



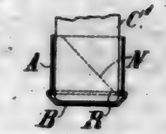
In a structure of the character described: a box having removably mounted adjacent walls, at least one of which is provided on its inner side with a slidable drawer and with folding legs adapted in their operative position to support said wall horizontally when removed from the rest of the structure, the drawer being so positioned between the folded legs as to be held thereby against opening movement.

1,540,569. VENTILATOR. HERMAN REUPERT, New York, N. Y., assignor, by mesne assignments, to Worldsbest Rainshield Ventilator Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 29, 1922. Serial No. 547,642. 1 Claim. (Cl. 98—31.)



A ventilator comprising a plate having guards stamped therefrom and bulging outwardly producing ventilating openings, said plate being provided at its ends with extensions integral therewith bent laterally and inwardly to provide holding flanges, a frame arranged upon the inner side of the plate and carrying a fly screen, said frame having its ends held within the holding flanges, guide flanges formed integral with the top and bottom of the plate, and end pieces having slidable engagement with said guide flanges and being adjustable longitudinally of said plate, said end pieces being spaced from the fly screen by the inwardly bent portions of the holding flanges which serve to keep the end pieces from contacting with the fly screen and thereby protect said fly screen from being scraped when the end pieces are being adjusted.

1,540,570. CLAMP FOR CONCRETE FORMS. LUD ROBERTS, Jackson, Mich., assignor to Jackson Reinforced Concrete Pipe Co., Jackson, Mich. Filed Mar. 23, 1925. Serial No. 17,603. 3 Claims. (Cl. 25—131.)

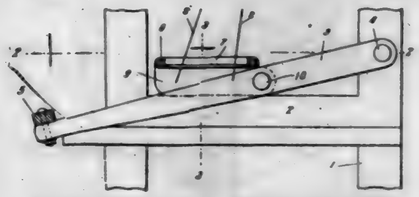


1. The combination with the retaining flanges of a flask or mold, with corresponding perforations, of a wedge member to cooperate therewith, having a dowel pin to engage the said perforations, and a keeper recessed to engage over the said flanges and having tapering longitudinal grooves to accommodate the said wedge and engage the dowel, coacting as specified.

1,540,571. COIN-CONTROLLED ELECTRIC-FAN ATTACHMENT. ORA L. SAMS, Los Angeles, Calif. Filed July 29, 1920. Serial No. 399,681. 5 Claims. (Cl. 194—45.)

1. A coin controlled stop mechanism for motor driven fans having driving and driven shafts connected by speed reducing gearing, a switch lever yieldingly actuated for movement to its closed position, locking means connected with the switch lever for holding the latter in its inoperative position comprising a coin actuable trip for releasing the locking means, and mechanism for moving the switch lever to open position comprising a locking lever for said gearing mounted for rocking and longitudinal movement and connected to the switch lever, means carried by said locking lever and an element carried by said gearing for imparting switch opening movement to said locking lever, and means for disengaging said locking lever from said gearing.

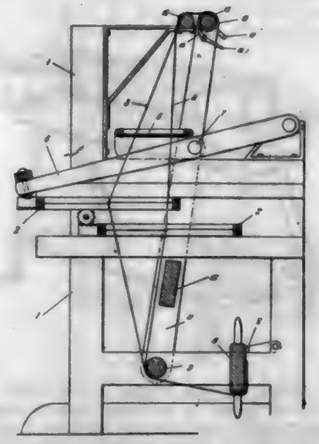
1,540,572. METHOD OF MANUFACTURING SHEET-METAL VESSELS. EDMUND SCHRÖDER, Berlin, Germany. Filed Dec. 6, 1924. Serial No. 754,389. 4 Claims. (Cl. 113—116.)



1. The method of manufacturing vessels of sheet-iron, consisting in manufacturing a vessel body by bending suitably a suitable piece of sheet-iron and closing the joint by welding, manufacturing separately a sheet-metal bottom and welding it to said body, and smoothing the two welding seams in a continuous working phase by drawing, substantially as set forth.

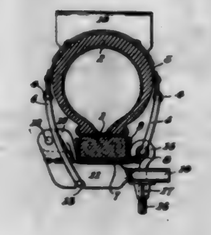
1,540,573. FEED TROUGH. DANIEL E. SPECHER and ELROY C. FAUST, Urbana, Ind. Filed Nov. 2, 1923. Serial No. 672,378. 2 Claims. (Cl. 119—61.)

1. A feed trough comprising a shallow container including a pair of end walls each having integral therewith, centrally thereof, and projecting outwardly from its top edge at resilient latching element offset intermediate its ends, and a cover formed with a pair of inclined depending end portions each provided with a transverse slot for the passage of a latching element and with the outer side edges of the slots engaging under the offset portions of the latching elements for detachably securing the cover to the container.



1,540,574. LOOM. BERNARD T. STEBER, Utica, N. Y. Filed Dec. 16, 1924. Serial No. 756,218. 10 Claims. (Cl. 139—18.)

1. In loom mechanism, the combination, with a loom frame, of a lever pivoted thereto, a reed movable relative to the lever located to be advanced by the lever to a weft-beating position substantially at right angles to the warp, and means for sustaining the reed in advance of the return location of the lever.

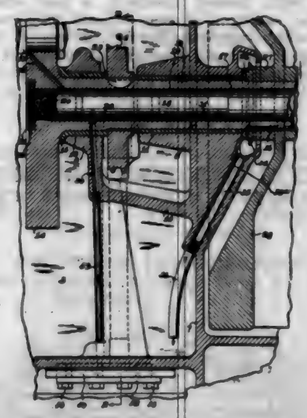


1,540,575. LOOM. BERNARD T. STEBER, Utica, N. Y. Filed Dec. 16, 1924. Serial No. 756,219. 9 Claims. (Cl. 139—18.)

7. In loom mechanism, the combination, with a loom frame, weaving means carried thereby, and a guide for the finished fabric, of a swinging frame having arms adjacent the sides of the loom frame and pivoted at their lower ends to the loom frame to swing freely by gravity, said side arms extending upwardly on an inclined plane to a point adjacent the guide, and a

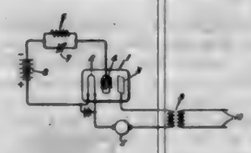
takeup roller carried by the upper portions of said arms adjacent said guide, and adapted to receive and tension finished fabric incident to the gravity movement of the swinging frame.

1,540,576. ANTISKID DEVICE. FRANK STOUBAL, Verdigre, Nebr. Filed Dec. 12, 1924. Serial No. 755,502. 2 Claims. (Cl. 152—14.)



1. In an anti-skid device, an arcuate tire engaging plate, a link carried by each side thereof, a felly engaging plate to which one of the links is pivotally attached at one side, a clamping arm pivotally attached to the other side of the felly plate and constructed for detachable engagement with the other link, a threaded bolt carried by the link adjacent the felly plate mounting, spaced legs at the free end of the arm between which the bolt is positioned and a nut threaded on the bolt into engagement with the legs for holding the clamping arm in closed position.

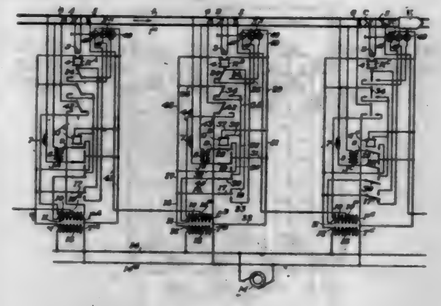
1,540,577. LUBRICATING DEVICE. PAUL THAMM, New York, N. Y., assignor, by mesne assignments, to C. Blair Woodrow. Substitute for application Serial No. 384,949, filed May 28, 1920. This application filed Dec. 27, 1922. Serial No. 609,345. 12 Claims. (Cl. 184—6.)



12. In a lubricating device, inner and outer shafts, keyed to rotate in unison, bearings for the outer shaft,

and oil space between said shafts, inlet and outlet ducts in the outer shaft, an inlet duct on one of the bearings,

an oil reservoir, and deflecting means located in proximity to one end of one of said bearings for deflecting and returning oil to said reservoir.

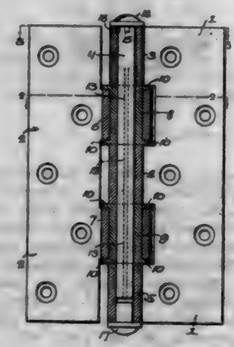


1,540,578. MEANS FOR PRODUCING OSCILLATIONS. HARRY C. THOMPSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 1, 1921. Serial No. 481,979. 4 Claims. (Cl. 250—36.)

1. Means for producing oscillations comprising an electron discharge device having an electron emitting cathode and at least two other electrodes, an oscillatory circuit connecting the cathode and one of the other electrodes, a circuit connecting the cathode and a second electrode and containing a source of potential of such value as to permit of the effective emission of impact electrons from the first electrode in sufficient amount to produce a negative resistance characteristic in the circuit connected thereto over a range of positive potential of the first electrode, and means for maintaining the average potential of the first electrode negative with respect to the cathode.

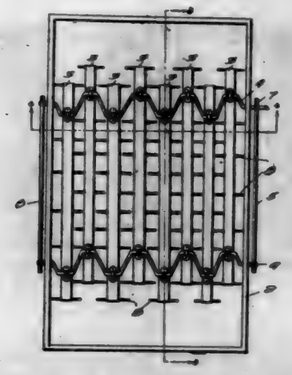
1,540,579. RAILWAY-TRAFFIC CONTROLLING APPARATUS. HERBERT A. WALLACE, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed July 10, 1924. Serial No. 725,169. 6 Claims. (Cl. 246—34.)

1. Railway traffic controlling apparatus comprising a stretch of railway track divided into a plurality of consecutive sections, a track circuit for each section including a track relay, means for supplying each said track circuit with alternating current of one relative polarity or the other according as the track relay for the section next in advance is energized or de-energized, and means for supplying at least one rail of each



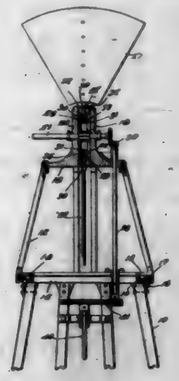
section with loop current of one relative polarity or the other according as the track relay for the section next in advance is energized in the normal or the reverse direction.

1,540,580. METHOD OF VULCANIZING RUBBER. RAYMOND MARK WARNER, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 10, 1924. Serial No. 721,076. 10 Claims. (Cl. 18—53.)



1. The hereindescribed method of producing an article of rubber having one part vulcanized and another part unvulcanized, which consists in mixing two separate stocks, one containing rubber, sulphur and a vulcanization retarder, and the other rubber but no sulphur, juxtaposing said stocks, and subjecting the same to vulcanizing temperature.

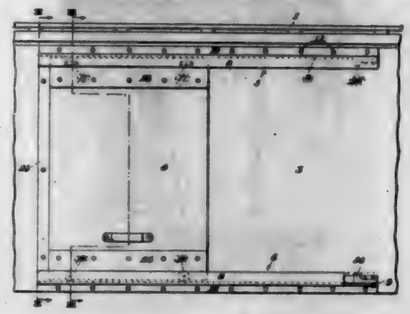
1,540,581. HINGE. ALBAN WARREN WAY, Philadelphia, Pa. Filed Feb. 12, 1923. Serial No. 618,546. 5 Claims. (Cl. 16—131.)



5. The combination in a five knuckle hinge, of two leaves, one leaf having three knuckles and the other leaf having two knuckles located in the spaces between the three knuckles; flanged eccentrics in the knuckles of the two knuckle leaf; a longitudinal key in each of said eccentrics; a pintle having a keyway therein; and means at one end of the pintle for adjustably securing the pintle to the three knuckle leaf.

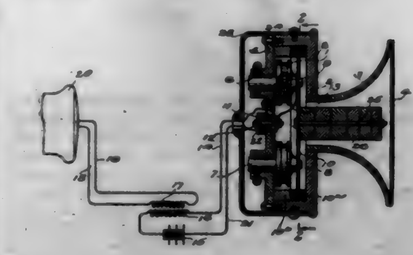
1,540,582. HOG SCALDER. WILLIAM J. WHEELHOCK, Madison, Wis. Filed Sept. 10, 1924. Serial No. 736,921. 7 Claims. (Cl. 17—15.)

1. In combination, a vat, and longitudinal conveyor slats within the vat, and means for reciprocating the slats vertically.



1,540,583. WIND MOTOR. BENJAMIN F. WILLIAMS and WALTER S. SCHLOTHAUER, Douglas, Ariz. Filed Dec. 27, 1924. Serial No. 758,441. 4 Claims. (Cl. 170—29.)

1. A wind motor comprising a horizontally rotatable frame, a vane disposed outwardly therefrom to control the position of the frame, a wind wheel mounted for rotation in the frame, a plurality of radially disposed longitudinally movable axially rotatable arms included in the wheel, sails carried by the arms, means operatively associated with the arms whereby the latter will be axially rotated during rotation of the wheel and means controlled by the speed of rotation of the wheel whereby longitudinal movement of the arms will render the arm rotating means inactive.

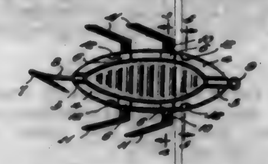


1,540,584. CAR DOOR. SEMKO ZADORONNY, Ashley, Pa. Filed Sept. 21, 1922, Serial No. 589,566. Renewed Oct. 23, 1924. 1 Claim. (Cl. 16—106.)

In combination with a car body having a side wall provided with a door opening therein, a guideway supported upon said side wall and adjacent one edge of the said door opening, said guideway comprising an inner and an outer flange, a cross-web joining said flanges and a projecting portion extending outwardly from said cross-web having perforations therein for receiving bolt fastening means, the said flanges, cross-web, and projecting portion being formed integrally, a door disposed for horizontal sliding movement in said guideway, rollers and a roller supporting bracket carried by said door and adapted for positioning said rollers above said door on substantially a vertical line therewith, the roller supporting bracket carried by the upper edge of said door

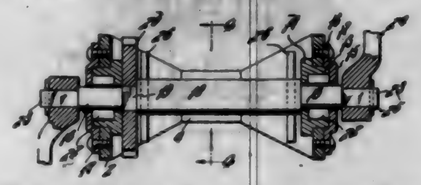
comprising a supporting portion secured to the outer face of the door, a perpendicular web portion carried by the supported portion having spaced laterally opening slots formed therein, laterally projecting spaced walls carried by said web portion positioned above said door, and rollers supported upon vertical axes carried by said spaced walls and projecting laterally through said slots and beyond the free edges of said spaced walls to engage the spaced flanges of the guideway for preventing binding of the door caused by inward or outward thrusts placed thereon.

1,540,585. ELECTRICAL STETHOSCOPE. RAYMOND BARRINGTON ABBOTT, West Lafayette, Ind. Filed Oct. 27, 1922. Serial No. 597,407. 2 Claims. (Cl. 179—139.)



1. In an electrical stethoscopic device, means for providing a dead air chamber, a thing diaphragm forming one end wall of the dead air chamber said diaphragm being mounted for free vibratory motion and adapted to freely transmit vibrations to the dead air chamber, a weighted diaphragm forming the other end wall of the chamber, and means whereby vibrations of the last named diaphragm may be converted into electrical signal currents.

1,540,586. FISH BAIT. LEWIS D. ADAM, Jet, Okla. Filed June 9, 1924. Serial No. 718,947. 3 Claims. (Cl. 43—42.)

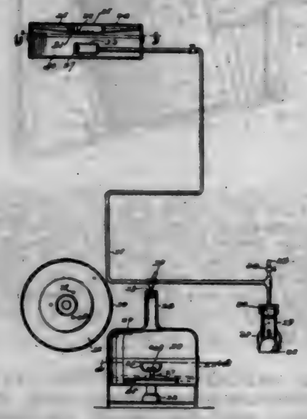


1. A fish bait comprising a hollow elongated body horizontally divided into upper and lower sections which

are secured together, and transverse flexible strips between the two body sections and projecting laterally therefrom, said upper section being of slightly greater

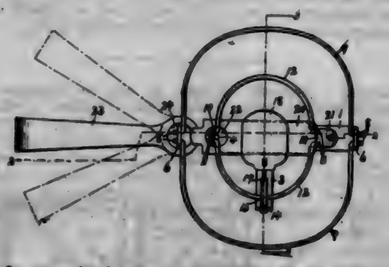
width than the lower section and forcing the projecting portions of said strips downwardly to inclined positions to represent legs.

1,540,587. CAR PULLER. ETNA J. ALBRITTON, Jackson, Miss. Filed May 5, 1924. Serial No. 711,220. 1 Claim. (Cl. 254—161.)



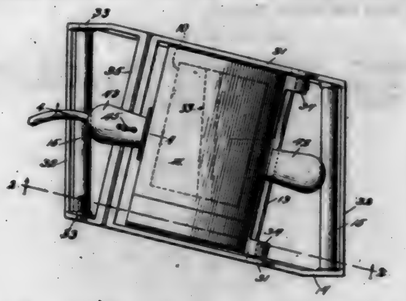
A device for extricating stalled vehicles, comprising a yoke-like frame, means spacing the sides of the frame, said sides, from said means being reduced to the ends of the frame, a hook swiveled in each end of the frame, and a cable attached to each hook, one of which is designed to be secured around a standing object, the other being trained through a sheave block carrying a hook to engage the stalled vehicle, the sides of the frame having round openings therethrough, bearing boxes having barrels received through the openings, caps threaded on the outer end of the barrels and secured to the sides of the frame, anti-frictional rollers in the bearing boxes, a shaft having trunnions which are journaled in the bearing boxes and having squared ends projecting from the trunnions, crank handles removably secured to the ends, a ratchet wheel on the shaft opposite one of the bearings, a pivoted pawl on the frame to engage the ratchet wheel, pins on the shaft adjacent to the ends thereof, and the lower lead of the last mentioned cable being trained around and secured to the shaft.

1,540,588. SECTIONAL ROLL. HORACE G. ALEXANDER, South Londonderry, Vt. Filed Dec. 15, 1923. Serial No. 680,871. 2 Claims. (Cl. 92—49.)



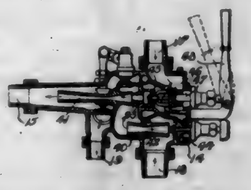
1. A sectional roll comprising a series of circular layers of wood having rounded outer surfaces conforming to the roll and formed of segments having abutting radial side edges, each layer of segments having on one face only a central depressed seat, said seat terminating in an outer, marginal groove extending part way through the segments, a plate mounted between each of the layers and seated in each of said seats, said plates each having a marginal flange extending into its corresponding groove to allow the layers to abut and to prevent outward movement of the segments, clamping plates bearing against the ends of the roll, tie rods traversing the layers outside of the interposed plates and also traversing the clamping plates, and nuts mounted on said rods to hold the layers together.

1,540,589. MEDICAL APPARATUS. BOSTON ALLEN, Baltimore, Md. Filed Aug. 17, 1922. Serial No. 582,420. 2 Claims. (Cl. 128—256.)



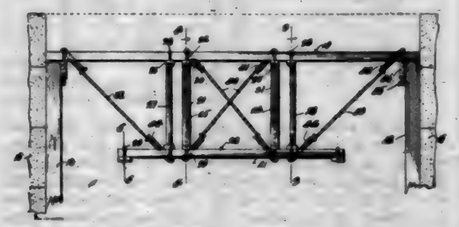
2. An apparatus for applying vapor treatment comprising an applicator, a generator, and a conveyor tube connecting the generator with the applicator, the applicator consisting of a hollow stool into which the conveyor tube extends, the latter being provided with a terminal nozzle having outlet perforations, said stool having an upper wall of concaved contour provided with central outlet perforations arranged above the perforations of said nozzle and having a top wall spaced from said upper wall and provided with a central opening, said central opening and perforations in said upper wall being bounded by an annular wall defining an annular water compartment which may be filled through a perforation in the top wall.

1,540,590. ANIMAL TRAP. JARED E. ALLEN, Oneida, N. Y., assignor to Oneida Community, Ltd., Oneida, N. Y., a Corporation of New York. Filed Jan. 3, 1923. Serial No. 610,465. 4 Claims. (Cl. 43—88.)



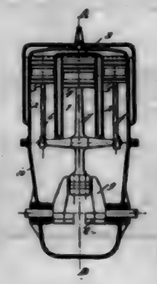
4. In an animal trap, a supporting frame, inner and outer sets of jaws mounted on the frame, a bow spring bearing on the frame within the inner jaws, a leaf spring bearing on the bow spring and engaging the inner set of jaws to close the same, means adapted to be released by an animal for holding the inner jaws in open position, a separate spring hinged to the frame to swing laterally and engaging the outer jaws for closing the same, the second named spring engaging and holding the third named spring in its tensioned position.

1,540,591. SURFACE-ABRADING DEVICE. RAYMOND L. BARKER, Chicago, Ill. Filed Jan. 7, 1924. Serial No. 684,697. 9 Claims. (Cl. 51—170.)



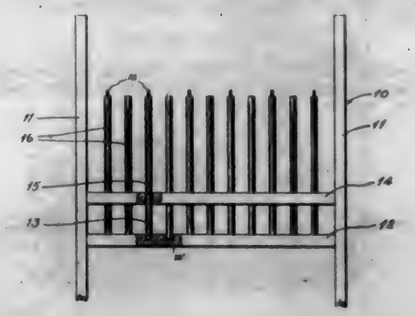
1. In a portable sander unit, the combination of a carriage, a single abrading drum pivotally supported on said carriage, means for driving said drum, the rotation of said drum tending to confine motion of said carriage along a path at right angles to the axis of said drum, and a pair of rollers on said carriage disposed at an angle to said drum for compelling said unit to travel along a divergent path.

1,540,592. EMULSIFYING OR MIXING APPARATUS. ROBERT BERTRAM BEST, Kalamazoo, Mich. Filed Aug. 25, 1924. Serial No. 734,143. 12 Claims. (Cl. 99—2.)



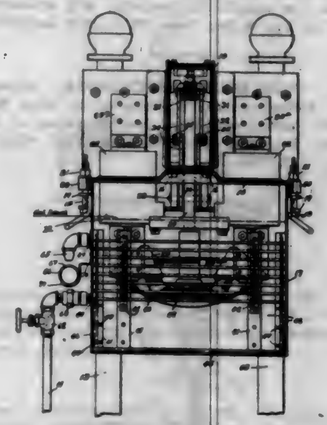
1. An emulsifying apparatus comprising an emulsion tank, a water supply tank, a steam supply, a size tank, means for heating said size tank, an automatically acting inspirator operatively associated with said steam supply and water tank whereby the temperature and pressure of the water delivered is automatically controlled, a delivery connection for said inspirator to said emulsion tank, an ejector disposed in said delivery connection and connected to said size tank, and a rotary mixer disposed between said ejector and emulsion tank.

1,540,593. TRUSS. JAMES S. BIRCH, Chicago, Ill. Filed June 1, 1923. Serial No. 642,842. 3 Claims. (Cl. 25—131.5.)



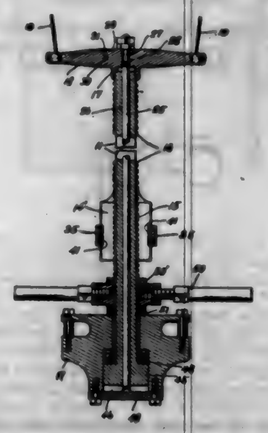
1. A truss for concrete work comprising a spaced pair of bridge beams, a pair of spaced lower weight distributing beams, compression truss disposed between the bridge beams and the weight distributing beams and engaging the inner surfaces thereof, removable U-shaped connecting members detachably holding the compression members in engagement with the bridge beams and with the weight distributing beams, and diagonally extending tension rods connected with said compression members.

1,540,594. INTERNAL FOUR-CYCLE COMBUSTION ENGINE. JAN JACOB BISCHOFF, Madioen, Java, Dutch East Indies. Filed Dec. 8, 1922. Serial No. 605,696. 2 Claims. (Cl. 123—53.)



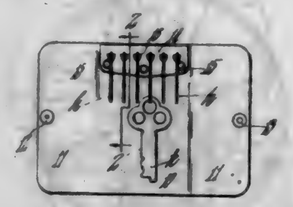
1. An internal four-cycle combustion engine comprising a casing having cylinders arranged therein, said cylinders comprising a central cylinder and two side cylinders; a crank shaft in said casing; a piston in said central cylinder and having a piston rod operatively secured at one end to said crank shaft; a cross arm on said piston rod intermediate the ends thereof; and a piston in each of said side cylinders and having a piston rod secured at one end to said cross arm, said piston in said central cylinder being adapted to produce a power stroke alternately with the power stroke of the pistons of said side cylinders.

1,540,595. LOOM FOR WEAVING MATS. NICKOLAUS BRAUER, New York, N. Y. Filed Mar. 3, 1923. Serial No. 622,700. 1 Claim. (Cl. 139—34.)



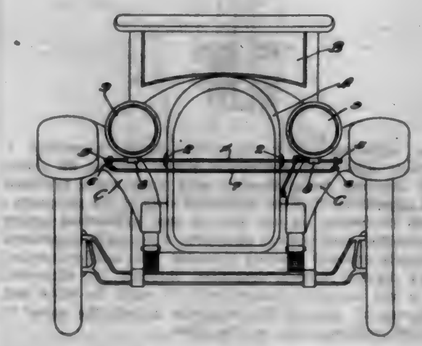
A loom for weaving articles from a length of material including dowel supporting members, one having openings therethrough and the other having sockets aligned with said openings, a plurality of dowels extending through the openings in the first-named member and having adjacent ends seated in the sockets of the second-named member, and material engaging elements carried by said dowels.

1,540,596. ELECTRIC SWITCH. GEORGE A. BURNHAM, Saugus, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Company, a Corporation of Massachusetts. Filed Mar. 31, 1919. Serial No. 286,353. 25 Claims. (Cl. 200—150.)



24. An electric switch having an oil receptacle, relatively-movable switch-members contained in the oil in said oil receptacle, and means disposed within the oil space of said oil receptacle arranged to cool the oil therein.

1,540,597. TEMPER SCREW. JOSEPH BURNS, Okmulgee, Okla. Filed Mar. 4, 1924. Serial No. 696,893. 2 Claims. (Cl. 255—15.)

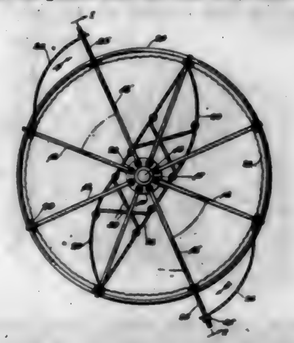


2. In a device of the class described, a screw having a longitudinal bore, a jockey stick extending through the bore, a transverse element on the lower end of the stick, stationary threaded means with reference to which the screw is rotatable, a transverse lifting bar connected with the stick and having a split socket formed therein, means for varying the effective size of the socket to compensate for wear between the end of the stick and the socket receiving it, a swivel block loosely mounted with reference to the lower end of the screw, and means for turning the screw with reference to the stationary threaded means, said swivel block being connected with the transverse element on the lower end of the stick.

1,540,598. CASE FOR KEYS AND THE LIKE. WARNER R. BURTON, Longmeadow, Mass., assignor to Burton, Incorporated, a Corporation of Massachusetts. Filed Oct. 29, 1921. Serial No. 511,436. 1 Claim. (Cl. 150—40.)

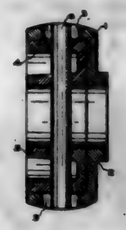
A key holder, comprising, a plate adapted to be secured to a key case and having a plurality of ears struck up forwardly therefrom and disposed at right angles thereto, each of said ears having a circular hole therethrough and having an outer wall of at least one hundred and eighty degrees angular extent which wall is curved concentrically therewith, to form a curved pivotal support for a key holding snap hook, and a snap hook pivotally engaged with each of said supports.

1,540,599. HEADLIGHT FOR MOTOR VEHICLES. JOHN M. CAVITCH, Munising, Mich. Filed Apr. 23, 1923. Serial No. 634,137. 2 Claims. (Cl. 240—61.)



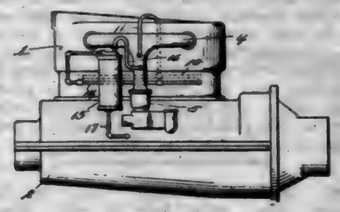
1. An adjusting mechanism for vehicle headlights, comprising a rod extending transversely across the front of the vehicle, having conical shaped recesses in its ends, a brace rod arranged parallel with the first rod and having its ends secured to the fenders of the vehicle, brackets supported by the fenders at each end of the first rod, adjustable bolts carried by the brackets, pointed ends on said bolts for engagement in the recesses of said first rod, a foot pedal and adjustable connection between the foot pedal and the first rod for imparting movement thereto.

1,540,600. DRYING MACHINE. JOHN M. CAVITCH, Munising, Mich. Filed July 6, 1923. Serial No. 649,937. 8 Claims. (Cl. 34—28.)



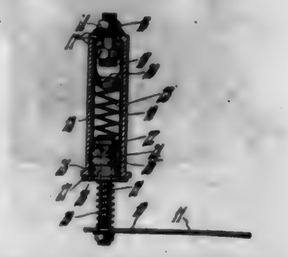
7. A dryer comprising a foraminous article containing basket, means for rotating said basket, air guiding plates carried by the basket at diametrically opposed points and curving inwardly substantially tangentially of the

perimeter of the basket for guiding air into the basket, and air guiding blades within the basket and shaped to receive the air guided into the basket by said blades and



direct it out of the basket in sharp curved paths for increasing the velocity of the outgoing air over the velocity of the incoming air.

1,540,601. COMBINED FAN PULLEY AND CRANKSHAFT ADJUSTER. JOHN E. CREEK and REGINALD W. KENT, Wichita Falls, Tex. Filed Mar. 19, 1923. Serial No. 626,227. 1 Claim. (Cl. 64—17.)



An adjusting device for crank shafts comprising a centrally apertured cylindrical pulley having an internally threaded flange thereon, said flange being provided with oppositely disposed elongated slots in its periphery; a hub projection on one side of said cylindrical pulley surrounding said central aperture; a centrally apertured annularly grooved bushing threaded into said cylindrical pulley having alined apertures through its diameter; and a pin extended diametrically through the slots and apertures of each of the members to lock the same in relative positions, one on the other.

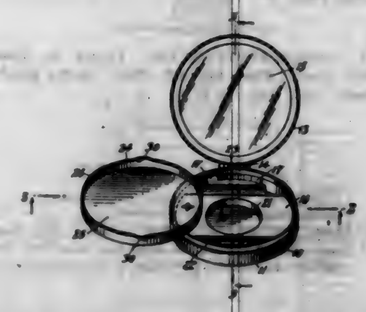
1,540,602. INTERNAL-COMBUSTION ENGINE. CORNELIUS S. CLARK, Norfolk, Va. Filed May 3, 1924. Serial No. 710,882. 5 Claims. (Cl. 123—196.)

1. In an internal combustion engine, a cylinder including a combustion chamber, and a crank case, a piston in said cylinder reciprocable relative thereto and separating that portion of the cylinder wall exposed to the combustion chamber from that part exposed to the crank case, one of said relatively reciprocable members being provided with means constantly overlain by the other for entrapping fuel leaking from the combustion chamber past the piston, and with separate means for intercepting the lubricating oil leaking past said piston from the crank case whereby said leaking substances are segregated, and means for returning said substances to the parts of the engine from which they emanated.

1,540,603. INTERRUPTER MECHANISM. HAROLD H. CLARK, Springfield, Mass., assignor to Wico Electric Company, Springfield, Mass., a Corporation of Massachusetts. Filed Apr. 29, 1921. Serial No. 465,537. 5 Claims. (Cl. 200—80.)

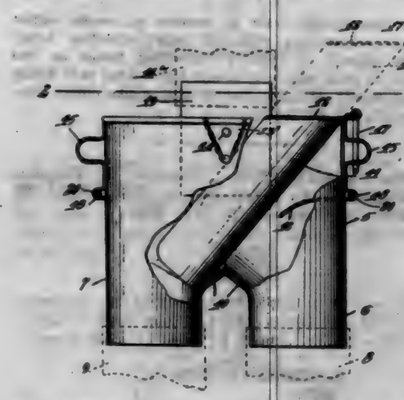
3. An interrupter mechanism, comprising, a hollow guiding sleeve closed at one end, a breaker point within the sleeve and fixed in the closed end thereof, a plunger closely fitting said sleeve and slidable therein, a mating breaker point carried by said plunger, driving means for the plunger extending through the open end of said sleeve, and a closure member loosely mounted on the driving means and closing the open end of the sleeve.

1,540,604. DEVICE FOR USE IN VIEWING MOTION PICTURES. ARTHUR I. CLIMER, Van Wert, Ohio. Filed Aug. 9, 1923. Serial No. 656,525. 2 Claims. (Cl. 88—36.)



2. A device of the class described comprising optical tubes, a handle, and handle receiving keeper sleeves rigid with the tubes and approximately at right angles to each other.

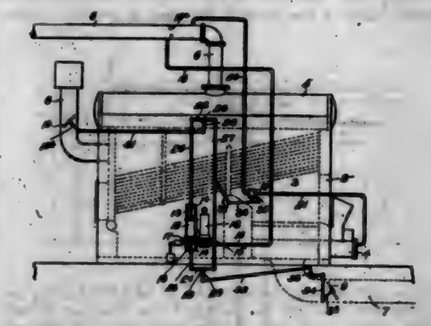
1,540,605. VANITY CASE. JOSEPH J. COHN, Brooklyn, N. Y. Filed Mar. 8, 1923. Serial No. 623,767. 3 Claims. (Cl. 132—83.)



1. A twin compact vanity case comprising a body having a closed lower end and an open upper end, a cover hinged to said body and engageable over the upper open end, a partition disk supported horizontally within said body having a central opening and formed with a depending annular flange from said opening to define a

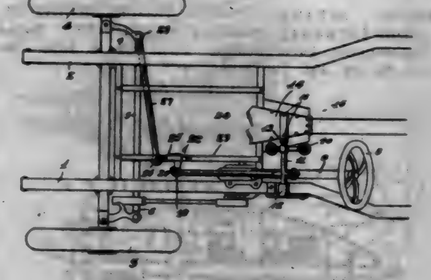
rouge compact compartment, a tray having a closed lower end and an open upper end constituting a face powder compact receptacle, and an eccentric sliding and

pivotal connection between the tray and said partition to permit of the withdrawal of the tray from the upper open end of the body and the lateral swinging thereof to uncover the rouge compact compartment.



1,540,606. RAIN-WATER CUT-OFF. THOMAS F. CRARY, Middleport, Ohio. Filed Feb. 19, 1924. Serial No. 693,339. 1 Claim. (Cl. 137—9.)

In a device of the character described, a pair of pipe sections connected, and having a large upper end providing a body portion, a pipe disposed centrally of the body portion, for delivering fluid to the body portion, keepers secured to the body portion and having inwardly extended portions lying within the body portion, a trough member removably positioned within the body portion and adapted to lie under the pipe extending into the body portion, and said inwardly extended portions of the keepers adapted to be engaged by the trough member to guide the trough member to its active position when the trough member is positioned in the body portion.

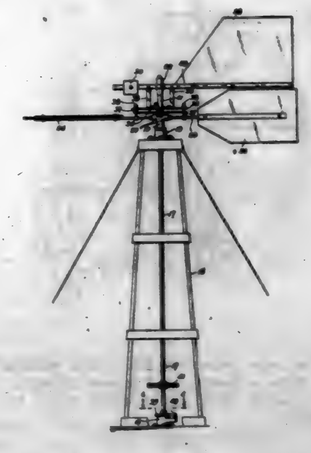


1,540,607. APPARATUS FOR CONTROLLING THE COMBUSTION OF FUEL. WILLIAM L. CURRY, Pittsburgh, Pa.; Albert Curry and Colonial Trust Company, Pittsburgh, administrators of said William L. Curry, deceased. Filed Aug. 30, 1920. Serial No. 407,015. 5 Claims. (Cl. 236—28.)

1. The combination with a steam generator and a furnace, of a steam outlet passage for the generator, a fluid pressure regulator communicating with said passage and responsive to pressure conditions therein, a suspended rocking frame comprising pivoted levers having corresponding ends connected with a movable part of the regulator through vertical rigid links and having

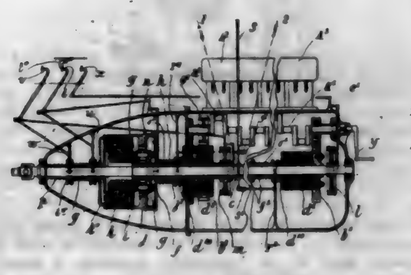
their opposite ends connected by a link parallel with the vertical links, a damper, and means including cranks and links connected with said rocking frame for moving the damper.

1,540,608. STEERING ATTACHMENT. GEORGE K. DAWSON and HORACE RILEY LUCE, San Bernardino, Calif. Filed July 16, 1924. Serial No. 726,364. 1 Claim. (Cl. 74—39.)



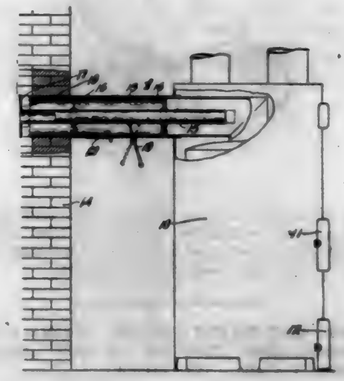
In an automobile having a transmission casing and a cover bolted to said casing, the combination with the steering gear of an automobile including a steering knuckle, of a rock shaft, brackets connected with the frame of the automobile and the cover plate of the transmission for removably supporting said shaft, a pedal rigid with said shaft for rocking the same, an arm rigid with said shaft and projecting downwardly from the same, a bell crank lever pivoted to the frame, a link connecting one arm of the bell crank lever with the arm on the shaft, a rod, and a universal joint connecting the ends of the rod respectively with the steering knuckle of the steering gear and with the other arm of the bell crank lever.

1,540,609. WINDMILL. ALFRED DEBAY, San Diego, Calif. Filed Jan. 19, 1924. Serial No. 687,298. 3 Claims. (Cl. 170—29.)



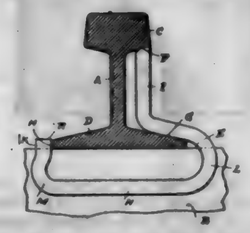
1. A wind mill comprising a shaft, a casting fixed to the shaft, sockets formed in the casting, rods rotatably mounted in the sockets, means for limiting the rotational movement of the rods, blades carried by the rods, arms fixed to the rods, rollers carried by the arms, a sleeve

rotatably mounted on the shaft, an arm fixed to the sleeve, a vane secured to the arm, a counter-weight for the vane, a bracket secured to the arm, a cam secured



to the bracket and positioned to successively engage the first arms during rotation of the blades for effecting a feathering of the latter, and rollers carried by the cam so as to be engaged by the arms.

1,540,610. APPARATUS OPERATED BY MULTICYLINDER INTERNAL-COMBUSTION ENGINES. EMILE DESMOULINS, Paris, France. Filed June 8, 1920. Serial No. 387,401. 2 Claims. (Cl. 74—34.)

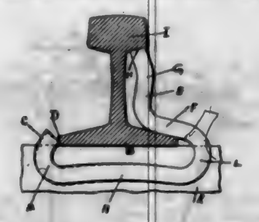


1. In an automobile vehicle, the combination of a driven shaft, two internal combustion engines, one of the engines being of greater power than the other, and both turning in the same direction, a separate crank-shaft operated by each engine, the two crank-shafts each having a pinion keyed thereon, a clutch part for each of said engines mounted to constantly rotate on said driven shaft when its engine is in operation, gear wheels carried by the constantly rotating clutch parts and meshing with said pinions, movable clutch parts associated with said constantly rotating clutch parts, a differential mechanism comprising rotatable concentric spaced annular parts driven respectively through the said clutch connections by said engines, planet pinions in driven connection with said annular parts, said annular parts having radial leverage with respect to the common axis so arranged that both parts will act with equal force on the planet pinions and will compensate for the unequal torques of the mechanism connecting the annular parts to their respective engines, and clutch means on the driven shaft for selectively connecting said driven shaft to various parts of the differential mechanism whereby variations in the speed of said driven shaft are obtained.

1,540,611. COMBUSTION TUBE. FRANK B. DISCO, Norwich, Conn. Filed Dec. 29, 1924. Serial 758,745. 6 Claims. (Cl. 110—58.)

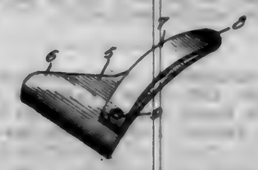
1. In combination with a furnace, a smoke outlet pipe, a concentrically mounted tube extending longitudinally thereof, a radially extending flange on the outer end of said tube, and means for moving said flange into engagement with the end of said smoke outlet pipe, substantially as set forth.

1,540,612. ANTICREEPER. HORATIO G. GILLMOR, Washington, D. C. Filed Mar. 2, 1923. Serial No. 622,378. 12 Claims. (Cl. 238—330.)



1. A rail anchor including a straight body member and terminal arms formed on the body member for securing the rail anchor to the rail, said terminal arms being so disposed with relation to the body that their grip upon the head and base of the rail is tightened by movement together in a plane transverse of the rail.

4. A rail anchor including a transverse body member and terminal arms, the upper portions of which are approximately parallel, formed on the body member and securing the rail anchor to the rail, said terminal arms being so disposed with relation to the body that their grip upon the head and the base of the rail is tightened by movement together in a plane transverse to the rail.

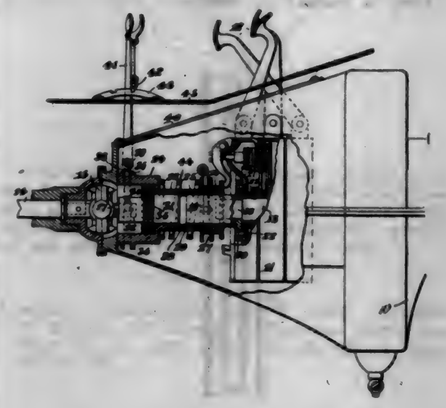


1,540,613. RAIL ANCHOR. HORATIO G. GILLMOR, Washington, D. C. Filed June 25, 1924. Serial No. 722,317. 28 Claims. (Cl. 238—330.)

14. A rail anchor including a transverse body member adapted to engage a tie but not the bottom rail base and end arms formed on the body member for securing the rail anchor to the rail, said end arms being so disposed with relation to the body member that their grip upon the head and base of the rail is tightened by movement together in a plane transverse to the rail.

1. A rail anchor comprising a body adapted to bear against a cross tie and to be out of contact with a rail base and end portions disposed so as to engage and grip the head and base of a rail at one side and to exert downward pressure upon the rail base at the other side of the rail.

1,540,615. EYESHADE. WILLIAM C. GULDE, St. Paul, Minn. Filed Dec. 21, 1923. Serial No. 682,017. Renewed Nov. 1, 1924. 1 Claim. (Cl. 2—13.)

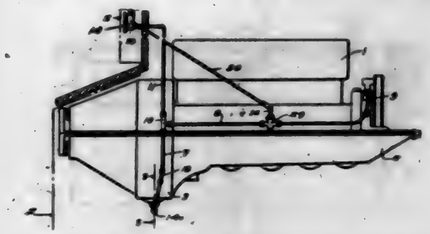


An eye shield including a body portion formed of translucent flexible material, a flexible member of translucent material of a length less than the length of the body portion, secured to the outer surface of the body portion, said body portion adapted to be curved, the second mentioned flexible member being curved to a greater degree than the body portion to hold the body portion in its curved condition, and securing means for securing the body portion to an eye glass frame.

1,540,616. ADJUSTABLE SEAT. CHARLES H. HAGOPIAN, Springfield, Mass. Filed Dec. 7, 1923. Serial No. 679,230. 1 Claim. (Cl. 155—68.)

An adjustable seat comprising, in combination, a support having vertical guideways at the ends thereof, a seat having rigid guides depending therefrom that are slidable in said guideways, whereby the seat may be moved vertically of the support, pawls pivoted at opposite sides of each of said guides, plates carried by the support at either end of said guideways each having a central boss portion that is provided with pawl engaging notches in one side thereof and a flange extending around the boss to form a notch guide at the notched side of the boss and a channel at the rear side thereof, whereby the pawls are guided into the notches during a raising movement of the seat and into the channel and away from the notches during a lowering of the seat.

1,540,617. CLUTCH. WAYNE L. HAINES, Madelia, Minn. Filed Jan. 15, 1924. Serial No. 686,318. 1 Claim. (Cl. 192—67.)



In a clutch mechanism, a shell member having internal teeth and a longitudinal internal guideway, an external longitudinal guide channel and an internal longitudinal guide channel, a holding member having a guide rib engaging in the internal guide channel of the shell, a clutch member having a guide portion engaging in the guideway of the shell and a plurality of teeth adapted to co-act with the teeth of the shell, a shipper collar slidable on the shell and adapted to actuate transmission mechanism, said collar having a guide rib movably engaging the external guide channel of the shell, means for adjusting the shell longitudinally of the clutch member to couple and uncouple the teeth, and means for independently adjusting the shipper collar longitudinally of the shell.

1,540,618. LUBRICATING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. GEORGE E. HAMILTON, Jacksonville, Fla. Filed Feb. 21, 1924. Serial No. 694,339. 3 Claims. (Cl. 184—6.)

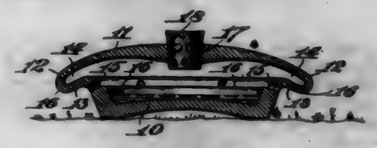
1. An internal-combustion engine having a crank case, a fly-wheel, a housing for the fly-wheel at the rear end

of and communicating with the crank case, an oil intake member communicating with the bottom of the housing, a tube extending upwardly from the intake member to a point above the crank case, a breatner pipe

communicating with front end of the crank case, and a second tube extending from the upper end of the first tube to the breather pipe and having its front end downturned and entering the breather pipe.

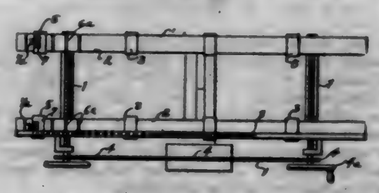
1,540,619. WELL-BORING DRILL. MICHAEL J. HANNAN, Marietta, Ohio. Filed Jan. 7, 1925. Serial No. 1,026. 4 Claims. (Cl. 255—61.)

1. A well boring drill, consisting of a flattened and vertically channeled bit with a contracted shank rising therefrom and provided with means for connection to a drill rod, said shank having a pair of radially attached projecting lugs formed thereon below the upper end of the shank above the bit and at right angles to the flattened sides of the bit, said lugs being free at their outer ends and extending substantially the width of the bit and arranged and adapted to thoroughly stir and mix together the particles of earthy material bored and separated by the bit.



1,540,620. CATTLE STANCHION. HAAKEN P. HANSON, Albert Lea, Minn., assignor to The Olson Manufacturing Co., Albert Lea, Minn., a Corporation of Minnesota. Filed Sept. 4, 1924. Serial No. 735,855. 5 Claims. (Cl. 119—149.)

1. A stanchion comprising a relatively fixed side bar, a swingable side bar, an elongated slide bar passing loocsely through the upper ends of the side bars and projectable beyond the same, means for centering the slide bar so that it projects equally at each side of the stanchion when closed, abutments formed in each



side bar adjacent to the slide bar, and lugs carried by the latter and adapted to engage the abutments to support the swingable side bar when fully opened.

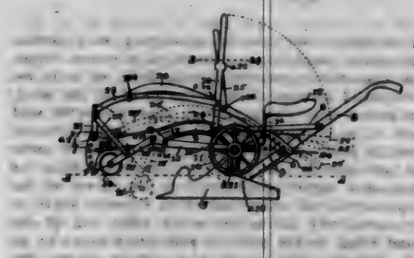
1,540,621. ANT-POISON RECEPTACLE. MOSS HANSON and ELBERT C. HANSON, Los Angeles, Calif. Filed Oct. 16, 1923. Serial No. 668,839. 2 Claims. (Cl. 43—131.)

1. An ant poison receptacle comprising a shallow pan-like base having ant passageways formed in the upper portion of its side wall, a top having a chambered marginal portion that overhangs said ant passageways, and a ledge formed on the inner face of the side wall of the base below said ant passageways.

1,540,622. MEASURING AND SQUARING DEVICE FOR SASH AND DOOR CLAMPING MACHINES. RICHARD M. HARRIS, Dallas, Tex. Filed Oct. 31, 1924. Serial No. 746,954. 2 Claims. (Cl. 144—291.)

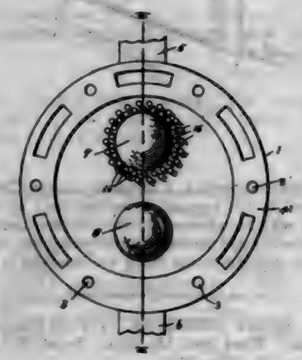
1. In a sash and door-clamping machine, a pair of supporting rails, adjustable side-clamping lugs thereon, means for moving said rail toward and away from each other, and adjustable end-lugs at the ends of the rails with mechanism for applying pressure at the ends of the rails to the sash or door, and a scale rule disposed between the sash or door and said side-clamping and end-lugs.

1,540,623. FLOATING SHOE. KICHINOSUKE HASHIMOTO, Tokyo, Japan. Filed July 1, 1924. Serial No. 723,590. 2 Claims. (Cl. 9—21.)



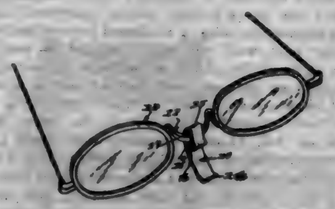
1. A floating shoe comprising an oblong float provided with upper and lower plates secured to the central part thereof on opposite sides, leaving only the surrounding endless part thereof adapted to be inflated.

1,540,624. ANTISKIDDING DEVICE. EMIL H. HAUPT, New York, N. Y. Filed Sept. 8, 1924. Serial No. 736,552. 4 Claims. (Cl. 152—14.)



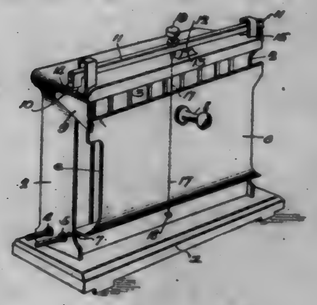
3. The combination with an automobile, supports fixed to the front and rear portions of the automobile, arms pivotally connected to said supports, ground engaging rotary members at the free ends of the arms, elastic means connecting said ground engaging members with the arms, a link connecting the arms and compelling their operation in unison, a lever operatively connected to the link, a latch adapted to hold the arms in either elevated or lowered position, and a foot-operated device controlling the latch.

1,540,625. RIDING ATTACHMENT FOR WALKING PLOWS. DARLEY C. HAYWARD, Custer, Wash. Filed Sept. 11, 1922. Serial No. 587,807. 2 Claims. (Cl. 97—130.)



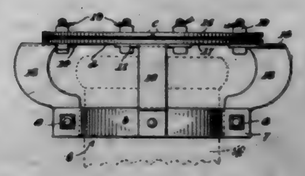
1. The combination of a walking plow, a wheel axle one end of which is fastened to the plow beam thereof projecting landward therefrom, a land wheel mounted for revolution on the outer end of said axle, and a driver's seat supported by said axle, of a gage-wheel arm pivoted to the forward end of the plow beam for vibration beneath the same, a gage wheel mounted for revolution on an axle on the lower end of said gage-wheel arm forward of the plowshare point, a lever link fulcrumed to the forward end of the plow beam vibratable above the same, a link pivoted to said gage-wheel link and to said lever link, a hand-control lever pivoted to said plow beam near said axle to vibrate above said beam, a horizontal link pivoted to said lever link and said control lever, a holding bar having spaced notches underneath in its rear end and pivoted to said horizontal link forward of said notches separate engageable with a catch bar, and a catch bar fastened to the plow adapted to engage said notches.

1,540,626. VAPORIZER. LUCIEN MANLY HIGGINS, Carpinteria, Calif. Filed Sept. 5, 1922. Serial No. 586,263. 3 Claims. (Cl. 123—30.)



1. In combination with an internal combustion engine having a firing chamber with an inlet valve therein, a plurality of pins secured at one end each to the wall of the firing chamber grouped around the valve inlet and projecting into the combustion space.

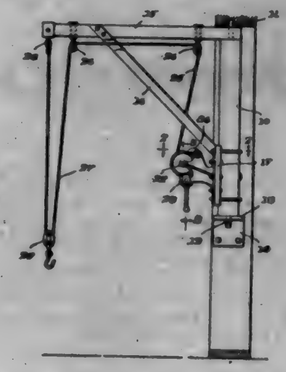
1,540,627. SPECTACLE BRIDGE REST. CHARLES W. HOLMES and SAMUEL C. HASSLER, Liberty, Mo. Filed Aug. 31, 1922. Serial No. 585,468. 1 Claim. (Cl. 88—55.)



A spectacle bridge rest comprising a single leaf of material of substantial elongated form with one end adapted for bearing engagement with the ridge of the nose, the other end of the leaf being bent to form a loop, one wall of the loop being rebent within and conforming to the loop, causing a seat to be formed for the reception of the bridge, the terminal of the rebent portion having a bulge a short distance below the crotch of the seat to retain the bridge engaged in the seat.

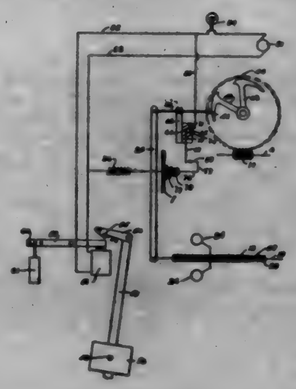
1,540,628. AUTOMATIC TEMPERATURE CONTROL FOR BREAD TOASTERS. FREDERICK E. HURXTHAL, Salem, Ohio, and ALPHEUS O. HURXTHAL, Philadelphia, Pa. Filed Dec. 1, 1924. Serial No. 753,155. 7 Claims. (Cl. 219—19.)

1. In a toasting device, a sensitive element located in such relation to the surface of the material to be toasted that it will be affected by the surface temperature of the material, and mechanism, actuated by the sensitive element, for indicating when the material is toasted.



1,540,629. SPARK ARRESTER. JOB HUBBARD, Cleveland, Ohio. Filed Nov. 18, 1924. Serial No. 750,578. 1 Claim. (Cl. 183—74.)

In a spark arrester, a mounting collar formed of two parts with the parts having mating apertured ears for receiving connecting bolts, a U-shaped bracket fastened to each collar part with one side arranged in parallelism with the plane of the collar, an arcuate bracket clamped at its lower end between each pair of mating apertured ears and having lateral lugs at their upper ends, and a spark arrester structure fastened to the upper ends of the U-shaped and arcuate brackets, said spark arrester structure including a disk-shaped screen, and two-part clamping rings overlying and underlying said screen and bolted thereto and to the said brackets, the parts of said rings being of semi-circular shape and arranged in respect to each other with the mating ends of one ring arranged at right angles to the mating ends of the other ring.



1,540,630. HOISTING DEVICE. CHARLES JENKS and CHRIS E. NELSON, Darlington, Wis. Filed June 2, 1924. Serial No. 717,899. 1 Claim. (Cl. 212—61.)

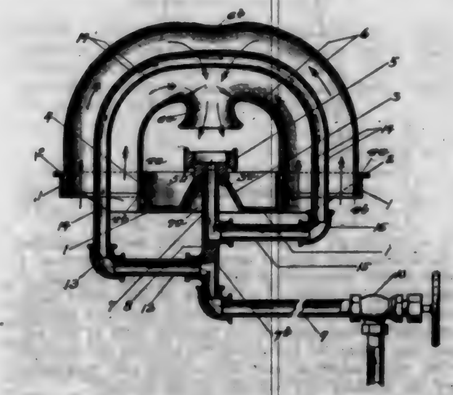
Means for supporting the crane on the door frame of a building, said means comprising a bracket secured to the door frame, a post journalled between the bracket and the upper part of said frame, a plate having a concaved portion at one side to accommodate itself and said post, U-shaped clamps embracing the posts and passed through said plate for holding the latter attached to

the post, and said plate also including an operating mechanism for the crane as and for the purpose specified.

1,540,631. CONTROLLER FOR HOISTING ENGINES. ALFRED E. JOHNSON, Denver, Colo. Filed Dec. 15, 1923. Serial No. 680,876. 10 Claims. (Cl. 192—140.)

1. A controller for use in connection with hoists, said controller comprising a centrifugal governor adapted to be operatively connected to the hoist so as to rotate at a speed corresponding to the speed of the hoist, a lever having one end operatively connected with said governor so as to be moved thereby, a switch contact connected to said lever at a point intermediate its ends, a shaft operatively connected with the governor so as to rotate at a speed proportional to the speed of the governor, a pair of cams connected to said shaft, a plunger operatively connected to the other end of the lever and lying in the path of said cams so as to be engaged thereby, said cams when they engage the plungers moving the lever in a direction that tends to close the switch.

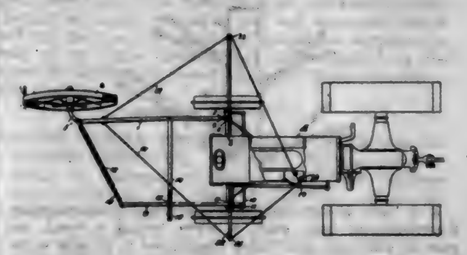
1,540,632. ICE CAN. JOHN F. KELLEY, Tuscaloosa, Ala. Filed Dec. 27, 1924. Serial No. 758,372. 1 Claim. (Cl. 62—137.)



In ice manufacturing apparatus, a can adapted to be placed in a freezing medium, said can having opposite walls thereof provided with outwardly opening hollow

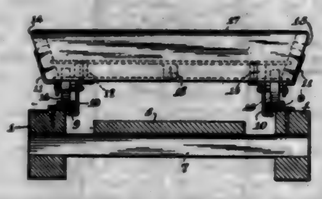
ribs running the full length thereof, each of said hollow ribs extending into the can a distance approximately equal to one-fourth of the distance between the walls having said ribs and being spaced from the adjacent side walls of the can a distance approximately equal to the distance that said ribs extend into the can so that water within and at the center of the can will be frozen at substantially the same rate as at the sides of the can, said ribs being tapered from their lower towards

their upper ends and also being tapered inwardly, said can having a bottom provided with recesses through which the lower ends of said hollow ribs extend whereby said ribs open through the bottom as well as the sides of the can to permit free circulation of the cooling medium therethrough, and downturned flanges on said bottom about the recesses therein, embracing and secured to said ribs to stiffen the latter and to provide a means of producing a water tight joint between the sides and bottom.



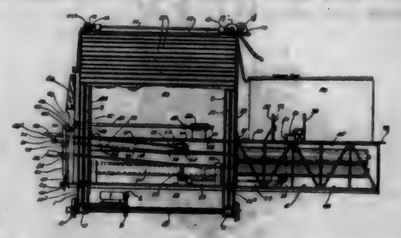
1,540,633. OIL BURNER. OTIS CLARK KINSOLVING, Nashville, Tenn. Filed Feb. 14, 1923. Serial No. 619,056. 1 Claim. (Cl. 158—63.)

In an oil burner, a base, a jet mounted on the base and comprising an elongated hollow body having a single slot in its upper portion from which the oil issues in the form of a spray, means for supplying oil to the jet including a retort of inverted U-shaped form wherein the oil is preheated, said retort overlying the jet and communicating therewith, and means for supplying heated air to the jet and comprising an inverted U-shaped air chamber mounted on the base and enclosing the retort and also overlying the jet, the air chamber being provided on its underside with a flaring outlet directly above the single slot of the jet, said air chamber having its portion above the flaring outlet inwardly deflected to provide surfaces for deflecting the heated air down through the outlet and onto the slot of the jet.



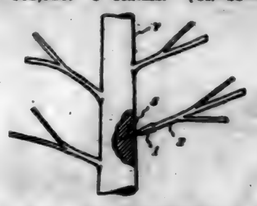
1,540,634. TRACTOR ATTACHMENT. DICK F. KIRCHHOFF, Athol, Kans. Filed Dec. 8, 1924. Serial No. 753,700. 3 Claims. (Cl. 180—82.)

3. In combination with a tractor, a frame connected with the front thereof, and with a part of the steering mechanism, a furrow engaging wheel carried by the frame, a flexible member connected with one of the terminals of the ignition circuit of the tractor and with



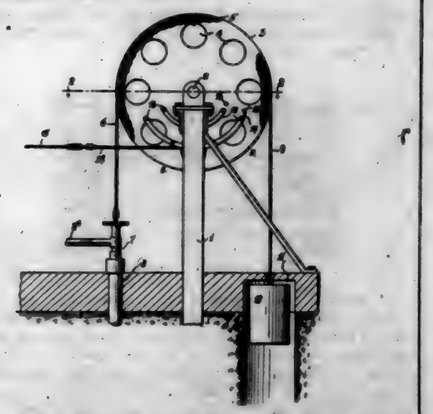
a part of the frame so that the shifting of the frame will detach the terminal and thus break the ignition circuit.

1,540,635. TOBOGGAN. STANLEY E. KOHL, Santa Rosa, Calif. Filed Jan. 19, 1925. Serial No. 3,349. 1 Claim. (Cl. 104—70.)



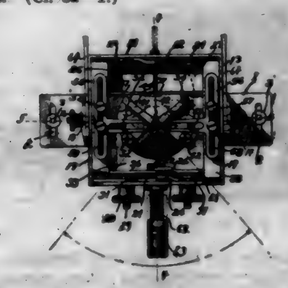
A toboggan comprising a pair of sled like side members spaced with end strips which support longitudinal ribs, which support top and bottom floors running across the toboggan, axles mounted to said brackets which are bolted to sledlike side members and said longitudinal ribs, wheels on said axles and running in a channel steel track to prevent lateral displacement while said brackets extend below and under said channel track to prevent toboggan from jumping same at any point between starting table and water line.

1,540,636. ZINC-RETORT CLEANER. STEVAN KOVAČEVIĆ, Pittsburgh, Pa. Filed July 25, 1923, Serial No. 653,766. Renewed Apr. 18, 1925. 9 Claims. (Cl. 214—28.)



1. In a machine of the character described, a main supporting frame, a supplemental frame, means for adjusting said supplemental frame vertically in the supporting frame, shovels carried by the supplemental frame, means for projecting and retracting said shovels, scrapers carried by said supplemental frame, means for projecting and retracting said scrapers, and means for adjusting the scrapers and the shovels at an inclination.

1,540,637. TREE-BRANCH HOLDER. STEPHEN J. KRATZER, Northampton, Pa. Filed Sept. 15, 1923. Serial No. 662,920. 3 Claims. (Cl. 41—15.)

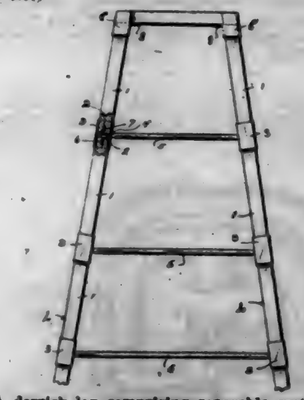


1. A tree branch holder comprising a substantially frustro-conical body shell, a screw having a head, the apex of said body shell being constricted to fit said screw head.

1,540,638. PUMP JACK. CHARLES PYRON LAUGHTER, Luling, Tex. Filed Dec. 5, 1924. Serial No. 754,068. 3 Claims. (Cl. 74—5.)

1. A pump jack for wells comprising a wheel and a support mounted over a well, rocker arms arranged upon the wheel and adapted to receive cables from a source of power, means on the wheel for adjustably connecting the well cable carrying the pump rod; and a weight on one side of the wheel to aid in reciprocating the pump rod in the well.

1,540,639. INCISAL GUIDE. JOHN A. LENTZ, Phoenix, Ariz. Filed May 28, 1923. Serial No. 642,053. 13 Claims. (Cl. 32—1.)



1. An incisal guide for an element of the character described, comprising a plane pivotally supported on a transverse horizontal axis and means for setting the plane in any desired position, said plane being longitudinally divided and hinged and having means associated therewith for setting either section at a desired angle.

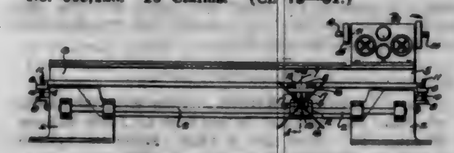
1,540,640. TRAP OR SNARE FOR ANIMALS. EDWIN GEORGE LEWIS, Basingstoke, England. Filed Dec. 9, 1924. Serial No. 754,774. 18 Claims. (Cl. 43—87.)

1. In a trap and in combination, a spring barrel, means for rotatably mounting the barrel on the ground, a guide member attached to the barrel, and a draw string movably carried by the guide member and attached to the spring barrel, the guide member being constructed to hold the spring barrel in the set position.

1,540,641. DERRICK LEG. FRANCES W. LOCKHART, Osage County, Okla.; Minnie Lockhart administratrix of the Estate of said F. W. Lockhart, deceased. Filed June 7, 1924. Serial No. 718,627. 3 Claims. (Cl. 20—0.5.)

1. A derrick leg comprising separable sections adapted to be substantially aligned when in assembled relation, a sleeve snugly surrounding the meeting end portions of said sections, certain of the walls of the sleeve being provided with openings, brace members insertible through said openings and between the meeting ends of the sections, and means for connecting the inserted end portions of the brace members, said means being also engageable with the meeting end portions of the sections.

1,540,642. WRENCH. WILLIAM T. LONG, Puyallup, Wash., assignor to John F. Reed, Seattle, Wash. Filed Aug. 21, 1923. Serial No. 658,581. 1 Claim. (Cl. 81—147.)

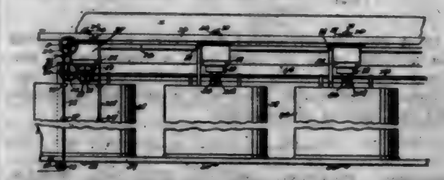


A wrench comprising a straight bar shank having a transverse shoulder on one side edge between its ends and provided with a longitudinal series of transverse teeth on its opposite side edge, a fixed head carried by one end of the shank, a sleeve fitting loosely around the shank between said head and the shoulder and having its closed side normally disposed at an angle to the adjacent longitudinal edge of the shank and spaced a greater distance from said longitudinal edge at its upper end than at its lower end, a movable head secured in the open side of the said sleeve to cooperate with the fixed head, said movable head having a laterally curved thumb piece extending from the sleeve toward the free end of the shank with its free end normally spaced from the teeth on said shank, a series of transverse teeth on the edge of the head presented to the shank and adapted to engage the teeth on said shank, said teeth on the head defining an arc, and a leaf spring secured between its

ends in the closed side of the sleeve and having its ends bearing upon the adjacent edge of the shank, one end of said spring being bent to form a curved terminal for sliding engagement with the shank and the other end thereof being provided with a terminal abutment adapted

to impinge against the transverse shoulders on the shank for limiting the longitudinal movement of the head, said movable head being readily removable from one end of the shank when the spring is depressed so as to clear said shoulder.

1,540,643. BALANCE-TESTING MACHINE. JACOB LUNDGREN, Philadelphia, Pa., assignor to Tinius Olsen Testing Machine Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 7, 1922. Serial No. 605,425. 10 Claims. (Cl. 73—51.)

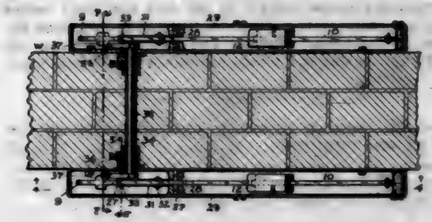


1. In a balance testing machine, the combination with an oscillatory support structure, of means for rotatively mounting a test body upon the structure, means for suspending the structure to afford an axis of oscillation parallel to the axis of rotation of said body and in a perpendicular plane passing through the axis of the test body, and means for suspending the structure to afford an alternative axis of oscillation at right angles to said plane.

1,540,644. CHAIN HOLDER AND APPLIER. LEON C. MAMAUX, Wilkinsburg, Pa. Filed Dec. 31, 1923. Serial No. 683,805. 3 Claims. (Cl. 152—14.)

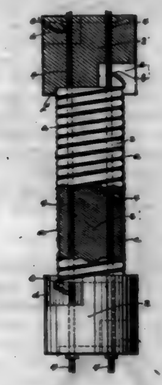
1. In combination with an automobile, a supporting frame slidably mounted on the running board of the automobile for movement toward and away from the rear wheel of the automobile, an anti-skid chain slidably mounted in the frame, co-operating means carried by the chain at one end thereof and the wheel for withdrawing the chain and applying it about the wheel during rotation thereof when the frame is in its rearward position, co-operating means carried by the first mentioned means and the chain at the other end thereof for securing the ends of the chain together, and means carried by the frame for moving the second mentioned means into operative position.

1,540,645. SUGAR REFINER AND SCRAPER OR UNLOADER THEREFOR. MAURICE C. MEIELS, New Orleans, La., assignor of one-half to William Washington, New Orleans, La. Filed Nov. 21, 1921. Serial No. 516,717. 6 Claims. (Cl. 210—63.)



1. In a centrifugal sugar refining machine, a rotatable basket having a discharge opening in its bottom, a vertically movable cover normally closing said opening, a charge tank adapted to discharge into the top of said basket and having a valve controlling the discharge, a receptacle adapted to discharge into the top of the tank, a valve controlling said discharge, manually operable means for permitting or preventing the discharge of material from the tank into the basket, and manually operable means movable in one direction to prevent the discharge of material from the receptacle into the tank and simultaneously lowering the cover into position over the discharge openings of the basket or movable in the other direction to open communication between the tank and said receptacle and simultaneously raise said cover.

1,540,646. TOE SPRING FOR RUBBERS. MILFORD J. NEWHOUSE, Kenwood, N. Y. Filed Apr. 17, 1924. Serial No. 707,149. 3 Claims. (Cl. 36—58.5.)



1. A device for retaining rubbers and the like upon shoes consisting of a bow spring adapted to be inserted in the toe of a rubber and having its ends returned inwardly one beyond the other in overlapping relation for engaging the toe of the shoe when the rubber is placed in operative position thereon, said ends being normally tensioned to spring inwardly away from the bow portion to exert forward pressure upon the bow when the device is placed in operative position.

1,540,647. FIRE-DOOR CONTROL. FREDERICK W. PARSONS, Cleveland, Ohio. Filed June 26, 1922. Serial No. 571,061. 13 Claims. (Cl. 189—45.)

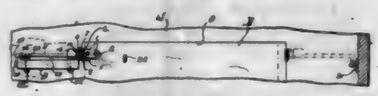
10. A pair of self-closing fire doors, a pivoted lever and movable catch for each door, a fusible cable connected with said levers, and an oscillatory device conpendent for movement upon said levers and engageable with said catches alternatively.

1,540,648. HEATING DEVICE FOR OIL WELLS. ROYAL S. PERSHING, Fort Worth, Tex. Filed Oct. 3, 1922. Serial No. 592,055. 11 Claims. (Cl. 219—38.)

1. An oil well heater comprising a plurality of cores and heads alternately arranged, the opposite ends of the heads being formed with sockets to receive the adjacent ends of the adjoining cores, conductor rods passing continuously through the several cores and heads, and resistance elements supported by the cores, the heads formed with pockets exposing the rods for connecting the elements to the rods.

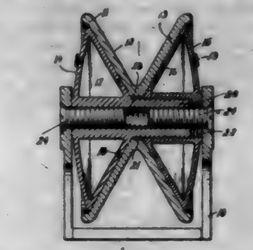
1,540,649. BAIT ATTRACTIVE TO THE COTTON-BOLL WEEVIL. FREDERICK B. POWER, Washington, D. C., and VICTOR K. CHESNUT, Hyattsville, Md. Filed Sept. 24, 1924. Serial No. 739,690. 2 Claims. (Cl. 167—6.)

1. A bait attractive to the cotton boll weevil comprising substances chemically identical with the volatile constituents of the cotton plant.



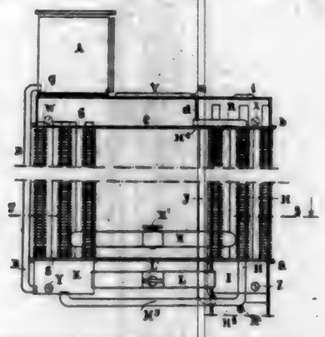
1,540,650. PRESSURE MACHINE FOR FORMING ARTICLES FROM PLASTIC MATERIALS. ROBERT F. J. PRATHER, Dallas, Tex. Filed Nov. 9, 1923. Serial No. 673,652. 4 Claims. (Cl. 25—21.)

1. An anti-friction brick pressing machine including horizontal and vertical rollers in housings disposed on four sides of an elongated tapered channel; means to actuate said rollers in unison; means to permit the



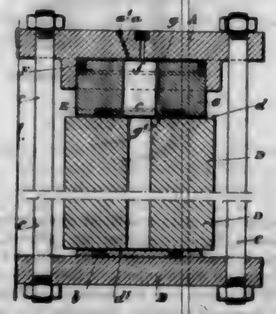
unobstructed passage of said rollers around within the housing, and belt means to aid in the conveying of clay through the rollers.

1,540,651. DOOR HOLDER. SAMUEL J. RAWLINGS, Kearny, N. J. Filed July 22, 1924. Serial No. 727,542. 5 Claims. (Cl. 292—262.)



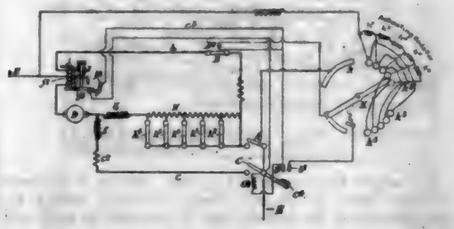
1. In combination with a wall having an opening, a swinging closure member therefor, a hollow member secured to the wall adjacent to the opening and provided with a slot in one of its walls, one end of the slot being open, a rod, means for operatively connecting the rod to the door, an arm carried by the rod and insertable with the member through the slot, an enlargement carried by the arm adapted to extend within the member, said enlargement being of a width greater than the width of the slot, the open end portion of the slot being enlarged to permit said enlargement of the arm to pass therethrough, said arm being in position to be moved through the enlarged portion of the slot only when the door is in completely closed position, said member being provided with means for coaction with the arm to hold the door ajar.

1,540,652. TROLLEY WHEEL. FRED WILLIAM SAXON, Windber, Pa., assignor of one-half to Jacob Nedrow, Windber, Pa. Filed Nov. 3, 1924. Serial No. 747,588. 1 Claim. (Cl. 191—63.)



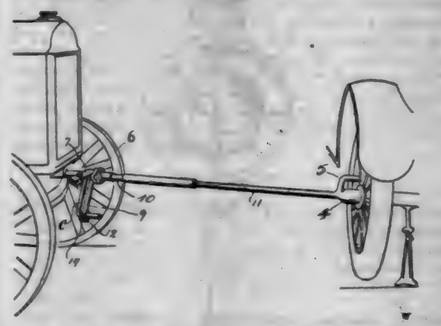
A wheel of the character described embodying a rotatable member having oppositely inclined annular bearing faces, bearing members having opposed bearing faces for engagement with the bearing faces of the rotatable member, an exteriorly threaded stud extending concentrically from one bearing member for adjustable engagement within an interiorly threaded opening provided in the other bearing member, whereby the bearing members may be adjustably connected to provide a substantially V-shaped annular bearing to receive the rotatable member, said stud having an interiorly threaded opening extending axially therethrough, a supporting member and threaded studs extending through the supporting member into the threaded opening for securing the bearing member in position.

1,540,653. RADIATOR. THEOPHILE SAVARY, Paris, France. Filed Jan. 26, 1923. Serial No. 615,180. 8 Claims. (Cl. 237—16.)



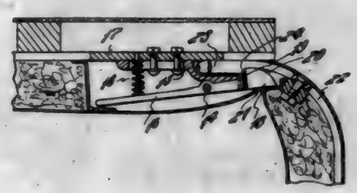
6. A radiator, comprising an upper tank, a pair of spaced lower tanks, means for externally heating one of the lower tanks, horizontal piping connecting the two lower tanks, a system of vertical pipes interposed between the upper and lower tanks and opening into them at opposite ends, and a set of accelerator pipes opening at their upper ends into the upper tank and having horizontally off-set lower portions which extend beneath the heated lower tank in proximity to said heating means so as to be heated thereby and which open at their free ends through the bottom of the other lower tank; substantially as described.

1,540,654. APPARATUS FOR PRODUCING SELF-HOOPING EFFECTS IN METAL TUBES. EUGENE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed June 29, 1923. Serial No. 648,559. 11 Claims. (Cl. 29—1.11.)



5. In an apparatus for subjecting metal tubes to hydraulic pressure, the combination of two plates at opposite ends of the tube, tie-rod connections between said plates, a sleeve intermediate one of said plates and one end of the tube, annular liquid-sealing joints respectively between said sleeve and plate and between said sleeve and tube, the diameter of the joint between the sleeve and plate being substantially greater than the diameter of the joint between the sleeve and tube, a centering obturator carried by the sleeve and entering one end of the tube, and a second centering obturator carried by the other plate and entering the opposite end of the tube.

1,540,655. ELECTRICALLY-OPERATED CRANE, HOIST, AND THE LIKE. WILLIAM HARDING SCOTT and JOHN BENTLEY, Norwich, England, assignors to Laurence Scott Company Limited, Norwich, England. Filed May 4, 1921. Serial No. 466,636. 4 Claims. (Cl. 172—152.)

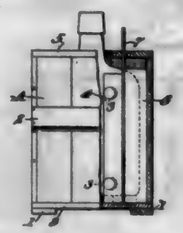


1. In electrically operated hoisting apparatus, of the type described, a series-wound motor, a starting resistance, connections whereby the motor acts as a generator when the armature is driven by the load, an auxiliary resistance and in series therewith an auxiliary field winding for the motor, means operative, when the motor acts as a generator, for leading current from the source of power through the series field winding and the armature in parallel, and thence in series through the auxiliary field winding and the auxiliary resistance, the electrical connection being such that the motor magnets are excited for the lowering direction when the motor is rotated in the lowering direction, the said auxiliary winding serving to increase the torque when current is supplied through the auxiliary resistance and auxiliary winding from the source of electric power.

1,540,656. POWER CRANKING DEVICE FOR FORDSON TRACTORS. ALFRED BRUNO SEPPMANN, Lake Crystal, Minn. Filed Apr. 23, 1923. Serial No. 634,039. 1 Claim. (Cl. 74—106.)

A device of the class described comprising an elongated member, means carried by one end portion of the member for operatively connecting the same to the crank of a motor, the opposite end of the member being provided with a socket member to engage the hub cap of a driven wheel whereby said member and wheel will rotate in unison, and a branch crank integrally connected with said member inwardly of and in close proximity to the socket member, said branch crank being adapted to engage between adjacent spokes of the wheel, said branch crank being substantially L-shaped in form with its foot engaged with the member and its stem of a length to extend outwardly beyond the socket member, said branch crank being entirely to one side of the member and radially with respect thereto, the stem of the branch crank being substantially in parallelism with the member, said socket member being machined out smooth and slightly tapered.

1,540,657. CONVERTIBLE SEAT. WILLIAM THOS. SHAW, Portland, Oreg. Filed May 24, 1924. Serial No. 715,702. 1 Claim. (Cl. 155—7.)



A vehicle body including a seat having a hingedly mounted back, a bracket wholly arranged within the upholstering of the vehicle body at one side of said body and immediately above the seat, said bracket including an offset terminal portion spaced from the side of the body, a horizontally disposed locking lever pivoted on said offset portion, a curved bar having its major portion arranged within the upholstery of said back, and having one extremity projecting from the side thereof and adapted to be received by the space between the side of the body and the offset portion of said bracket when the said back is swung to a vertical position, said extremity being designed to be engaged by the adjacent end of said lever, whereby the latter holds the back in a vertical position, resilient means for holding the lever in its active position, and said bracket being capable of longitudinal adjustment along said side upon which it is mounted, whereby said lever can be adjusted to compensate for lost motion or play of said back.

1,540,658. ADVERTISING DEVICE. IRA HUGH SMITH, Greeneville, Tenn. Filed Aug. 9, 1923. Serial No. 656,623. 3 Claims. (Cl. 40—28.)

1. The combination with the dial, the pointer and pointer shaft of a weighing scale, of a sign carrier mounted concentrically with the dial and displaying announcements about the periphery of the dial, a bracket secured to the pointer shaft in rear of the carrier and having an arm extending forwardly toward the carrier, a circular series of ratchet teeth on the back of the sign carrier concentric with the pointer shaft, and a pawl mounted on the side of the forwardly projecting arm of said bracket and adapted to engage the ratchet teeth upon movement of the shaft in one direction and to ride over the ratchet teeth upon movement of the shaft in the opposite direction.

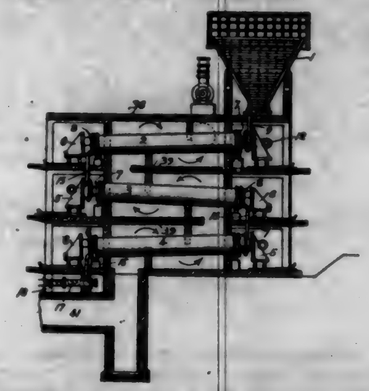
1,540,659. CARBOY BOX. JOHN THOMAS SMITH, Woburn, Mass., assignor to Merrimac Chemical Company, Woburn, Mass., a Corporation of Massachusetts. Filed Feb. 14, 1924. Serial No. 692,910. 9 Claims. (Cl. 217—52.)

1. In a carboy box, the combination of a vertical strip carrying cushioning means in one face thereof to bear upon a carboy and means for moving the strip into the narrowing space between a side of the box and a carboy therein.

1,540,660. ANIMAL EXTERMINATOR. THEODORE T. SNOW, Sioux Falls, S. Dak. Filed Oct. 6, 1923. Serial No. 667,001. Renewed Nov. 13, 1924. 3 Claims. (Cl. 43—124.)

2. A device of the class described comprising a tubular member adapted for communication with a source of liquid poison, a container carried by one end portion of said member and in communication therewith, a cartridge of absorbent material to be engaged within the container, and means insertible through the member for ejecting the cartridge.

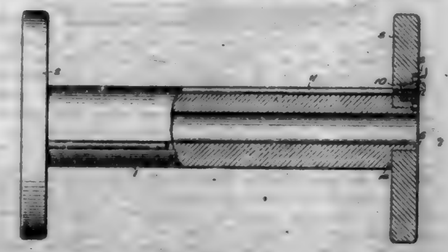
1,540,661. ADVERTISING APPARATUS. ROBERT WALTER ST. CLAIR and JOSEPH R. IRVIN, Clymer, Pa., assignors to National and Local Advertising Company, Incorporated, Indiana, Pa., a Corporation of Pennsylvania. Filed Apr. 16, 1924. Serial No. 706,959. 11 Claims. (Cl. 40—36.)



1. Apparatus of the character described comprising a plurality of display frames, means providing compartments which are occupied by said frames when divided into packs, continuously moving means periodically engaging a frame in each pack to push the frames from

one compartment to another thereby causing a circulation of the frames on a step by step order, means to illuminate the outermost frame, and means to extinguish

the illuminating means on a particular side as soon as the frame starts to move and continuing during the transit of the frame.



1,540,662. RETORT. EDWARD GILES STONE, Devonport, Tasmania, Australia. Filed Sept. 22, 1924. Serial No. 739,167. 6 Claims. (Cl. 202—15.)

1. Retorting apparatus comprising a rotatable element adapted to have heat communicated thereto and inclined in such manner that material fed thereto at one end will pass by gravity to an exit opening at the other end thereof, means within such element for stirring the contents thereof, means whereby volatile constituents derived from the material heated in said element may be discharged from the latter, a truck arranged at the higher end of the element, a vapor take-off for said element carried by said truck, said off-take being movable toward and away from the truck, and resilient means carried by the truck for forcing the off-take away from the truck and against the higher end of the rotatable element to seal said higher end.

1,540,663. SPOOL. HERBERT OTHRO TAFT, Burlington, Vt., assignor to Vermont Spool & Bobbin Co., a Copartnership composed of Charles D. Ordway, Carrie D. Ordway, Arthur A. Tiffany, Herbert O. Taft, William H. Wilson, George A. Ordway, and Harry L. Winter, Burlington, Vt. Filed Oct. 26, 1923. Serial No. 671,014. 1 Claim. (Cl. 242—124.)

A spool, comprising a body having a longitudinally arranged central bore and a tubular projection at one end whereby a shoulder is provided, an end disk having a bore fitting said tubular projection and also fitting flatwise against said shoulder, said tubular projection having an arc-shaped notch, said end disk having a countersunk portion registering with said notch, a nut fitted in said

countersunk portion and projecting into said notch, and a rod screwed into said nut for locking said end disk in place whereby the end disk is locked against independent longitudinal movement and independent rotary movement.

1,540,664. MONOAZO DYESTUFF. KARL THIESS, Lindlingen, near Hoechst-on-Main, Germany, assignor to Farbwerke vorm. Meister Lucius & Bruning, Hoechst-on-Main, Germany, a Corporation of Germany. Filed Oct. 8, 1923. Serial No. 667,409. 1 Claim. (Cl. 260—87.)

As new products the dyestuffs which dye wool greenish-yellow to reddish-yellow fast tints and correspond to the formula:

$$CHO-R-N=N-R^1$$

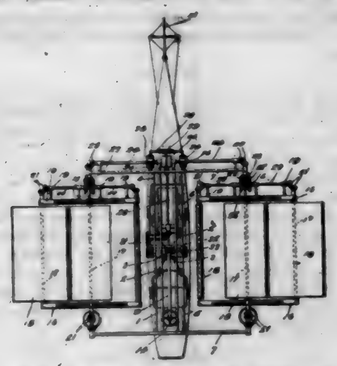
wherein R means a benzene residue, which may be substituted in any way, containing the aldehyde group in m-position, and R^1 means arylpyrazolones their derivatives and substitution products forming greenish-yellow to reddish-yellow powders readily dissolving in hot water, dissolving in concentrated sulfuric acid with a yellowish-green to orange yellow colour and containing the free aldehyde group, consequently showing the reactions characteristic for the said group, such for instance as the formation of bisulfite compounds which are very readily soluble in cold water, and condensation with o-hydroxycarboxylic acids of the benzine and naphthalene series to leucotriarylmethane-dyestuffs.

1,540,665. MONOAZO DYESTUFF. KARL THIESS, Lindlingen, near Hoechst-on-Main, Germany, assignor to Farbwerke vorm. Meister Lucius & Bruning, Hoechst-on-Main, Germany, a Corporation of Germany. Filed Oct. 8, 1923. Serial No. 667,410. 1 Claim. (Cl. 260—94.)

As new articles of manufacture, monoazo dyestuffs obtainable by coupling the diazo compounds of m-aminobenzaldehyde and its substitution products and compounds capable of splitting off m-aminobenzaldehyde with the amino-naphthol-mono- and poly-sulfonic acids in which one hydrogen of the amino group may be replaced by one of the residues, alkyl, aryl and acidyl, said dyestuffs having the general formula

$$CHO-R-N=N-R'-N\begin{matrix}H\\X\end{matrix}$$

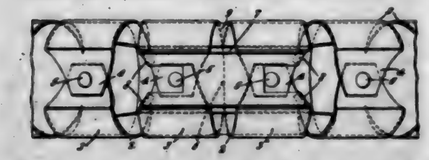
in which R stands for a benzene residue which may be substituted, R' stands for a residue of one of the naphtholmono- and poly-sulfonic acids and X may be one of the residues acidyl, aryl and alkyl, said dyestuffs dyeing wool yellowish-red, bluish red, and violet red to brown fast tints and forming differently colored powders soluble in hot water and in concentrated sulfuric acid with a characteristic coloration and exhibiting the reaction characteristics of the aldehyde group.



1,540,666. MONOAZO DYESTUFF. KARL THIESS, Lindlingen, near Hoechst-on-Main, Germany, assignor to Farbwerke yorm. Meister Lucius & Bruning, Hoechst-on-Main, Germany, a Corporation of Germany. Filed Oct. 8, 1923. Serial No. 667,411. 1 Claim. (Cl. 260—94.)

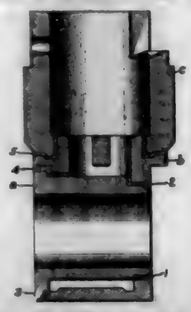
As new articles of manufacture the monoazo dyestuffs obtainable by coupling the diazo compounds of m-aminobenzaldehyde and its substitution products and also compounds splitting off in being diazotized m-aminobenzaldehyde with naphthol-2.6-8- and 1.4.7-disulfonic acids and naphthol-trisulfonic acids possessing the general formula:

$$CHO-R-N=N-R^1$$



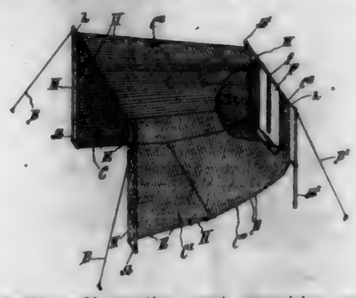
wherein R is a benzene residue substituted in any way and R^1 stands for one of the naphthol-2.6.8 and 1.4.7 disulfonic acid and naphthol trisulfonic acid residues; the said new dyestuffs dyeing wool orange yellow to red fast tints, forming deeply colored powders which are readily soluble in hot water, dissolving in concentrated sulfuric acid with a characteristic coloration and containing the free aldehyde group and showing therefore the reactions characteristic for the said group, for instance the formation of bisulfite compounds readily soluble in cold water and condensation with o-hydroxycarboxylic acids of the benzene and naphthalene series to leuco triarylmethane dyestuffs.

1,540,667. AEROPLANE. JAMES M. THOMPSON and OSCAR J. NEIGENFIND, St. Louis, Mo. Filed July 16, 1924. Serial No. 726,367. 1 Claim. (Cl. 244—25.)



An aircraft of the class described comprising a body, a frame tiltably mounted thereon, a reel device at each side of the device, differential means, a power plant connected with the same, a pair of shafts connecting the differential means with the reel devices, brake means on the shaft, a weight operated member for applying the brakes when the ship tilts, blades carried by the reel devices, means for rotating the blades about their longitudinal centers as the reels rotate and means for tilting the frame.

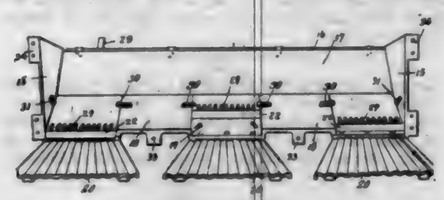
1,540,668. SPRING CORE FOR TIRES. GEORGE HENRY TRUMAN, Valley City, N. Dak. Filed May 16, 1924. Serial No. 713,759. 4 Claims. (Cl. 152—8.)



1. A tire core including an elongated strip of resilient metal having transverse side incisions forming tongues therebetween, said tongues being curved toward each other and having inwardly offset, lapping connected ends constituting seats, and a tread portion mounted on the seats.

1,540,669. FURNACE REFRACTORY. MAGNUS UNGER, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed May 16, 1923. Serial No. 639,397. 5 Claims. (Cl. 204—64.)

1. The method of joining together preformed parts of refractory material which consists in introducing a refractory cement between the parts to be joined and incorporating substantially dry particles of refractory material therein.

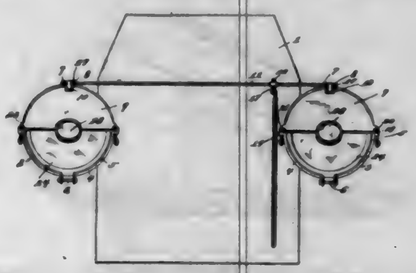


1,540,670. GOLF PRACTICE COURT. GEORGE VIDMER, Washington, D. C. Filed Sept. 12, 1923. Serial No. 662,336. 1 Claim. (Cl. 273—85.)

A flexible golf practice court comprising supports having pins thereon, a netting enclosure composed of side and rear walls and a top, heavy binding strands extending along the edges of the top, said rear wall being secured to the rear ends of the side walls and the side walls adapted to be secured to the ground at their forward edges but sloping upwardly away from the ground at their rear edges, a run-way at the rear portion of the enclosure extending down from said rear wall and being secured to the sloping edges of the side walls, a flexible objective strip supported within the enclosure in forwardly spaced relation to the rear wall, loops extending from the corners of the enclosure for removably engaging said pins whereby to hold the enclosure in a distended position, and further loops at the lower portion of the rear wall for engaging certain of the supports to hold the rear wall at its lower portion away from said objective strip.

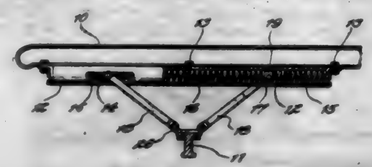
1,540,671. COMBINATION HOPPER AND FUEL-FEEDING AND DISTRIBUTING CONSTRUCTION FOR FURNACES. CLARENCE W. VOGT, Louisville, Ky., assignor to Vogt Brothers Mfg. Co., Louisville, Ky., a Corporation. Filed Jan. 26, 1923. Serial No. 615,112. 2 Claims. (Cl. 110—32.)

1. In a furnace having an opening, the combination of a hopper extending upwardly and outwardly therefrom, a plurality of rams arranged in spaced and parallel relation and slidably supported therein for discharging fuel into said opening, and a plurality of divergingly



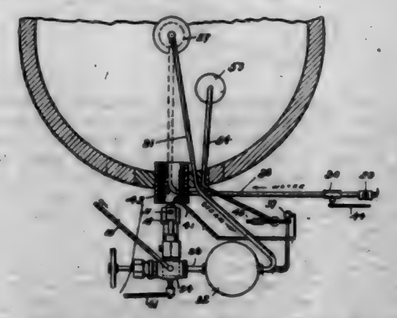
corrugated spreading plates each in line with a ram for receiving fuel therefrom and distributing the same in a body substantially the full width of the opening in width.

1,540,672. OIL BURNER. HERMAN J. ALLEN, Wichita, Kans. Filed Aug. 19, 1924. Serial No. 732,985. 4 Claims. (Cl. 158—28.)



1. In an oil burner a firepot, a blower having an air pipe communicating with said firepot, an inclined oil feed tube in said air pipe having both ends open and provided with a drain opening near its lower end, an oil reservoir having a pipe communicating with said oil feed tube and adapted to establish a gravity feed of the oil, part of the air feed from said blower passing through said oil feed tube and carrying the oil therewith, a drip cup beneath said drain opening and a cut-off safety valve in the oil pipe line operating in connection therewith.

1,540,673. HEADLIGHT DEFLECTOR. RUFUS L. ANDERSON, Orlando, Fla. Filed Mar. 14, 1924. Serial No. 699,275. 6 Claims. (Cl. 240—45.6.)

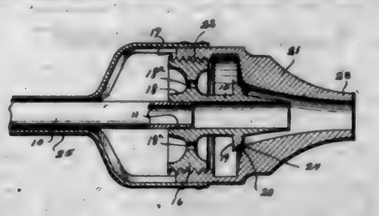


1. A deflector for headlights of the type which include a reflector and a centrally located source of light, comprising a movable curtain normally positioned out of the path of the reflected beam of light emanating from the headlight, and means for tilting said deflector downwardly to a position obstructing the upper part of said reflected light beam, said curtain being constructed to terminate, when in operative position, substantially in a plane embracing the horizontal diameter of said lens, and a light transmitting inset carried by said curtain, said inset being substantially concentric with said lens when the curtain is in operative position, and extending above and below the terminal edge of said curtain.

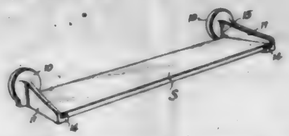
1,540,674. SHOCK ABSORBER. WILLIAM T. ASHTON, New Castle, Pa. Filed May 10, 1924. Serial No. 713,824. 1 Claim. (Cl. 267—20.)

A vehicle shock absorber comprising a casing arranged beneath the frame of the vehicle and having spaced longitudinally disposed slots, spaced end springs arranged in said casing, an intermediate spring arranged therein, sliding plungers positioned between the adjacent ends of the respective springs, a plate mounted upon the adjacent axle of the vehicle, a pair of oscillating arms pivoted on said plate for each of said plungers, a transverse pin passing through each plunger and the adjacent slots of said casing, and with which the adjacent ends of said arms are pivotally connected, whereby said plungers are simultaneously moved toward and away from each other for the purpose specified, and rollers loosely mounted on said pins and operating within said slots of the casing.

1,540,675. OIL-BURNING APPARATUS. FRANK B. AUSTIN, Attleboro, Mass. Filed May 6, 1924. Serial No. 711,498. 9 Claims. (Cl. 158—28.)



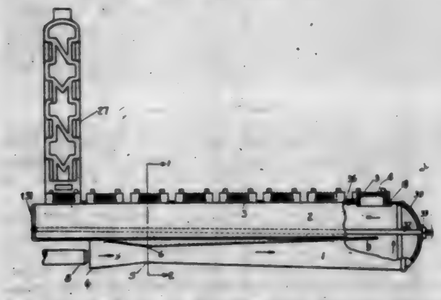
1. In an oil burning apparatus, an oil supply nozzle, a steam generator in the furnace positioned to be heatd by the combustion of the oil, an auxiliary steam generator, an auxiliary heating member therefor, a steam jet nozzle communicating with both of said generators and arranged to direct the steam generated in either of said generators to lift and spray the oil from said oil nozzle into the furnace, means for supplying water initially to both of said generators, and thermally controlled means for initially starting the auxiliary heating member and the supply of water to said generators upon a predetermined low temperature.



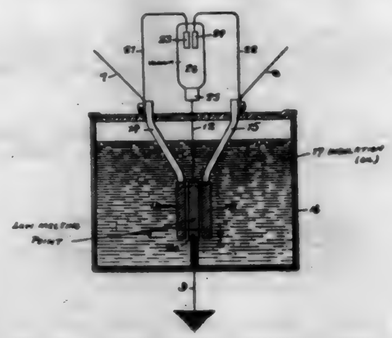
1,540,676. COMBUSTION HEAD OR BURNER FOR BLOWTORCHES. HENRY J. BAGLEY, Sr., Brooklyn, N. Y. Filed June 24, 1924. Serial No. 722,097. 2 Claims. (Cl. 158—27.4.)

1. A blow torch of the character described including a pipe adapted to convey an atomized fuel, a nozzle into which the pipe opens, the nozzle having an outwardly projecting portion which is exteriorly screw-threaded and formed to provide a plurality of air openings, an exterior shell open at its forward end and having interior screw-threads engaged with the screw-threads on said projecting portion whereby the shell may be longitudinally adjusted; the nozzle having a

flange, and the shell being contracted, the adjustment of the shell controlling the space between said flange and the constriction in said shell thereby controlling the amount of air passing from the interior of the shell to the nozzle, and means for shifting the shell relative to the nozzle comprising a member surrounding the fuel pipe and extending longitudinally therealong, and arms extending radially from said member and engaging the rear end of the shell, said member carrying means whereby it may be held to adjusted positions.

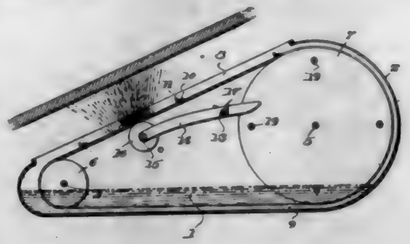


1,540,677. SHELF-SUPPORTING BRACKET. JOHN HENRY BALMER, Maplewood, N. J., assignor to J. H. Balmer Co., Newark, N. J., a Corporation of New Jersey. Filed Nov. 11, 1924. Serial No. 749,258. 1 Claim. (Cl. 248—18.)



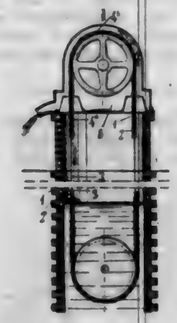
A shelf supporting bracket comprising a base, an arm projecting outwardly from said base, the base gradually merging into the arm where connected to said arm, a flange projecting inwardly from the lower marginal edge of the arm and integrally joined to the base member at the inner end of said arm, the base member being cut away where the inner end of the flange joins the base member to provide a pocket to receive an end of a shelf and a shoulder to prevent accidental upward displacement of the rear corner of said shelf from the bracket, bearing seats raised above the flange at the opposite end of the flange to provide spaced points upon which the end of the shelf is seated, and a stop lug at the outer end of the arm and disposed above the flange.

1,540,678. GAS BURNER. BERRY A. BAXTER, Mansfield, Ohio. Filed July 24, 1924. Serial No. 727,879. 2 Claims. (Cl. 158—104.)



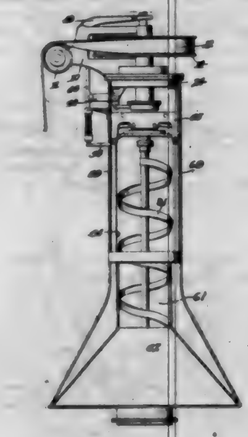
1. A gas burner of the radiant type, comprising a body formed with an elongated opening in the upper portion with transverse spaced portions, burner tips arranged in alinement longitudinally of such opening, each adjacent pair of burner tips having projections on their remote ends to engage beneath certain spaced portions, and flanges on their adjacent ends to bear upon one such spaced portion, and a single means engaging both such flanges to confine the pair of burner tips to the body.

1,540,679. PROTECTIVE INSTALLATION FOR ELECTRIC CIRCUITS. CHARLES E. BENNETT, Decatur, Ga., assignor to Balt Manufacturing Company, Atlanta, Ga., a Corporation of Georgia. Filed May 9, 1922. Serial No. 559,672. 8 Claims. (Cl. 175—30.)



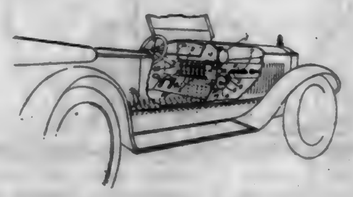
1. In a protective ground connection for an electric circuit, a gap sensitively responsive only to low frequency over-potentials and comprising readily fusible electrode means serving by fusion on discharge across the gap to form a continuous metallic path to ground, a shunt across the gap, and in said shunt a gap sensitively responsive only to high frequency potentials.

1,540,680. FINGERPRINT DETECTOR AND DEVELOPER. ARTHUR E. BERGQUIST, Lindstrom, Minn. Filed Dec. 26, 1923. Serial No. 682,817. 2 Claims. (Cl. 91—44.)



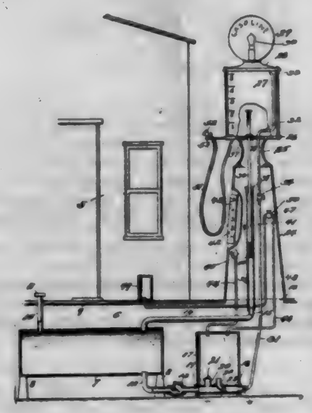
1. A device for developing or making more prominent finger prints, comprising a casing adapted to contain a substance calculated to adhere to the lines of a finger print and render the same more readable, said casing having an opening for the passage therefrom of the said substance, and movable, manually-operable means in the casing for bringing about the movement of said substance from the interior of the casing to the print to be developed or made more prominent, the said casing being tapered toward one end and being provided with shafts and pulleys thereon, one of the pulleys being comparatively large, and the said pulleys being associated with a belt, and means on the belt at intervals in the length thereof to take up chemicals and means for cooperating with the belt to discharge chemicals through the opening in the casing.

1,540,681. APPARATUS FOR RAISING LIQUIDS. EDMOND DETAINT, Paris, France. Filed Aug. 14, 1923. Serial No. 657,406. 5 Claims. (Cl. 103—72.)



4. An apparatus for raising liquids, comprising an endless cable, liquid retaining discs arranged thereon, said discs being of similar diameter but different thickness, and interposed disc members between said discs, said interposed members being of greater thickness and of less diameter than the first mentioned discs.

1,540,682. POSTHOLE AUGER. JOHN R. DREHER, CHRIS S. DREHER, and GUS T. DREHER, Ross, Iowa. Filed July 15, 1921. Serial No. 484,970. 4 Claims. (Cl. 255—22.)

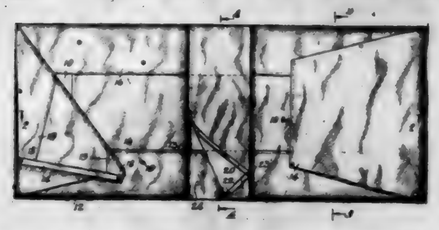


1. In a device of the class described, a threaded shaft for mounting an auger, means for rotating the shaft, a threaded sleeve surrounding the shaft, means for holding said sleeve stationary while the shaft is being rotated, and devices for rotating the sleeve upon the shaft and elevating the shaft when the sleeve holding means are released said devices for rotating the sleeve including a toothed ring and a brake therefor, a second brake for holding the sleeve stationary, a vertically movable spring-controlled rod through which the brakes are actuated, and devices controlling the movement of the rod by vertical movement of the threaded shaft.

1,540,683. AUTOMOBILE LUBRICATING MECHANISM. LEWIS E. DURRIN, San Juan Bautista, Calif. Filed Jan. 17, 1924. Serial No. 686,874. 6 Claims. (Cl. 184—7.)

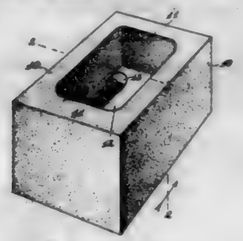
1. In an apparatus for lubricating an automobile, an oil reservoir, a plurality of oil feeds therefrom to various parts of the automobile for lubricating same, a gas pressure tank, a communicating pipe between the tank and reservoir, and means for supplying compressed gas from the engine of the automobile to the tank.

1,540,684. LIQUID-DISPENSING APPARATUS. RODGER EADES, Winchester, Ky. Filed Oct. 23, 1923. Serial No. 670,365. 3 Claims. (Cl. 221—100.)



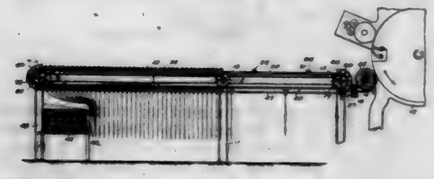
1. In a liquid dispensing apparatus, a storage tank, an auxiliary tank, a discharge pipe leading from the lower portion of said storage tank, a connection between said discharge pipe and the lower portion of said auxiliary tank to permit the flow of liquid from said storage tank to said auxiliary tank, means for preventing backflow of liquid from said auxiliary tank to said storage tank, a conduit extending from the lower portion of said auxiliary tank into said discharge pipe and having its outlet end of reduced area and directed toward the discharge end of the latter, and means for supplying fluid under pressure to the upper portion of said auxiliary tank.

1,540,685. COMBINATION AUTOMOBILE CUSHION AND PILLOW. ERNEST A. EIBAND, New Braunfels, Tex. Filed Mar. 13, 1923. Serial No. 624,863. 7 Claims. (Cl. 5—337.)



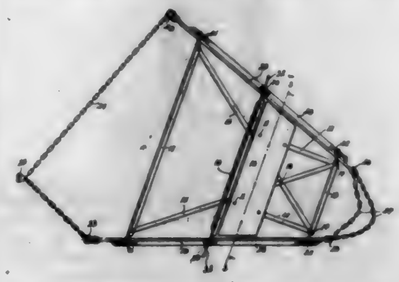
1. A combined cushion and pillow comprising a pair of separate cushions, and covering material over said

cushions and forming a web connecting the same; together with side flaps turned inward and stitched



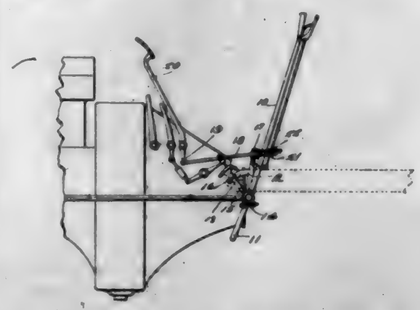
over the cushions, and end flaps folded inward and detachably fastened over the cushions.

1,540,686. **BUILDING TILE.** GUSTAV EY, New York, N. Y. Filed Feb. 14, 1925. Serial No. 9,245. 3 Claims. (Cl. 72—41.)



1. As a new article of manufacture a hollow building tile comprising a rectangular body having an opening therethrough and means for facilitating the handling of the same in which said means comprises a web centrally intersecting the opening through the tile body, said web having a hand receiving opening therethrough at one side of its longitudinal center and intermediate its length.

1,540,687. **DRYING MECHANISM FOR PRINTED SHEETS.** ALBERT V. FRISTEL and JAMES W. ROCKS, Brooklyn, N. Y. Filed Aug. 18, 1923. Serial No. 658,102. 3 Claims. (Cl. 34—12.)

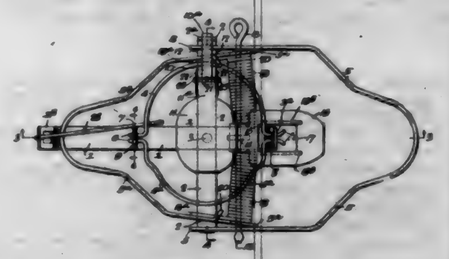


2. The combination with a printing machine, of a drying mechanism for receiving sheets directly from the printing mechanism and moving the same over a given path for permitting a drying action, said drying mechanism including a conveyor, a plurality of gripper bars carried by the conveyor, gripping members arranged on each bar, wheels for supporting the conveyor and for causing the conveyor to move the gripper bars to a point near the discharge of sheets of printed paper from the printing machine, a wheel formed with a plurality of spaced pins arranged adjacent the first mentioned wheels and positioned so that two of the pins will straddle each gripper bar as they move around the first mentioned wheels, said pin-wheels moving at the same peripheral speed as the first mentioned wheels whereby the gripper bars are not permitted to drop under the action of gravity, a cam arranged below the first mentioned wheels, said cam acting to turn the gripper bars to a horizontal position, an actuating arm connected with the gripping members on each gripper bar, and an inclined track engaging said actuating arm for opening the gripping members as the arm passes over the track, said track being so positioned as to cause the opening of the gripping members simultaneously with the insertion of a sheet of paper into the gripping members.

1,540,688. **ROAD DRAG OR SCRAPER.** DAVID FICKES and MERL FICKES, Jeromesville, Ohio. Filed Nov. 17, 1924. Serial No. 750,389. 1 Claim. (Cl. 37—170.)

In a road scraper, a stationary frame including a platform, forwardly extending bars connected therewith, a forward cross bar connected with said forwardly extending bars, diagonally extending cross bars secured in crossed relation and secured to said forward cross bar, a rear cross bar connected with the rear ends of said diagonal bars, scraper blades pivotally mounted on the ends of said forward and rear cross bars, the elongated upstanding members carried by said scraper blades and levers pivotally mounted upon said platform, slidable through said elongated members and pivotally adjustably connected with the latter.

1,540,689. **AUTOMOBILE BRAKE.** JOHN F. FRADET and JULIUS C. ALEXANDERSON, Monango, N. Dak.; said Fradet assignor to said Alexanderson. Filed Aug. 30, 1924. Serial No. 735,176. 2 Claims. (Cl. 74—39.)



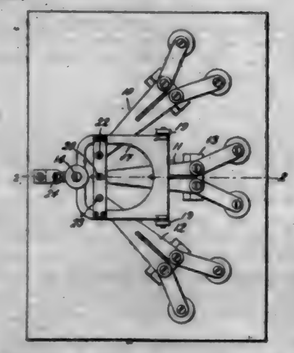
1. In a device of the class described, a lever for releasing a main clutch, a control shaft on which the lever is mounted, an arm rigid with the shaft, a speed lever connected with the arm, a service brake pedal and stem therefor, a rod pivoted to the stem, said rod passing loosely through one end of the arm mounted on said shaft, and means causing the operation of the rod and pedal by the lever upon throwing the latter to clutch releasing position.

1,540,690. **DIE FOR GARMENT CLASPS.** MEYER L. FRIEDMAN and PHILIP L. FRIEDMAN, New York, N. Y. Filed July 19, 1924. Serial No. 721,073. 3 Claims. (Cl. 1—4.)

1. A stapling device comprising a staple support, a guide for receiving a staple, a head, and means associated with the head for first spreading the prongs of the staple to a position where they may be flattened by the head, said means comprising a spring-pressed plunger carried by the head having a rounded end of a greater diameter than the space between the prongs of the staple whereby the prongs will be spread upon passing the auxiliary plunger therebetween.

1,540,691. **ANIMAL TRAP.** WALTER A. GIBBS, Wilmington, Del. Filed Nov. 12, 1920. Serial No. 423,663. 16 Claims. (Cl. 43—88.)

2. In an animal trap, the combination of a pair of cooperating jaws having parallel axes, the animal-gripping portion of one jaw standing above the corresponding portion of the other jaw when in closed position, with automatic means for bringing said jaws together, and normally releasable means for retaining the jaws in open position, together with means for preventing passage of one jaw by the other when brought together by said actuating means.

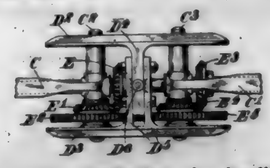


1,540,692. **THERMAL RESPONSIVE MANUALLY-OPERABLE SWITCH.** CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed July 11, 1921. Serial No. 488,729. 4 Claims. (Cl. 200—122.)

1. A thermal responsive manually operable switch comprising a pivotally mounted circuit controlling switch element, means for biasing the same to the open position, an electrically heated thermostatic latch for holding the said switch element in circuit closed position against its bias to the open position, the said latch mounted with one end thereof in position to make abutting and sliding engagement with the said switch element and the said end of the latch freely movable to slide out of engagement with the said switch element to release the same in accordance with the flexing of the latch due to the heating thereof, and manually operable means for mechanically moving the switch element to

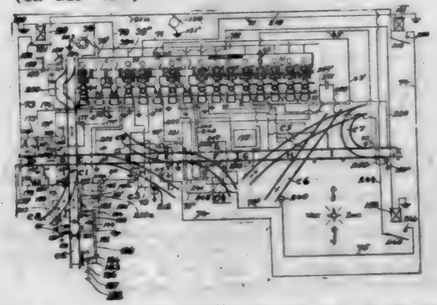
the closed circuit position and for flexing the said latch to release the switch element to return to the open circuit position independently of the heating of said thermostatic latch.

1,540,693. **THERMAL RESPONSIVE DEVICE.** CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Mar. 22, 1923. Serial No. 626,006. 16 Claims. (Cl. 200—118.)



1. A protective device for electric circuits comprising circuit controlling switch mechanism, a plurality of thermal responsive movable elements for controlling the said switch mechanism, each of said elements adapted to be heated in accordance with the current in a separate conductor of the protected circuit and the said elements arranged to operate the said switch mechanism in response to the relative movement of said elements.

1,540,694. **TONGS.** JOSEPHINE POMEROY HERRICK, Cleveland, Ohio. Filed Jan. 7, 1925. Serial No. 1,069. 1 Claim. (Cl. 294—99.)

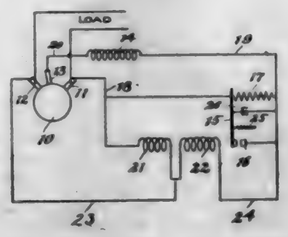


A device of the character described, comprising a pair of connected spring arms, jaws at the ends of the arms, said jaws at their ends having inwardly projecting teeth, each jaw having alternate sharp and dull teeth, some of the sharp teeth projecting slightly beyond the dull teeth, and the dull teeth functioning to limit the projection of the sharp teeth into the article with which the jaws are in engagement.

1,540,695. OAR. JOHN GEORGE HOWARD, London, England. Filed May 5, 1924. Serial No. 711,248. 6 Claims. (Cl. 9—25.)

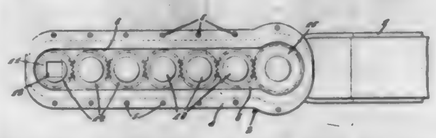
6. In an oar the combination of a handle-portion, a blade-portion, a carrier, cradles in the form of cross-members pivoted upon the carrier with stays extending from the ends thereof to outer bearings, the handle and blade portions being rotatably supported in the cradles so as to turn about their own axes in the cross-members and the outer bearings, arc-shaped gear-segments supported by the cross-members of the cradles and in mesh with one another so that when the handle is swung forward the blade is swung forwardly also, a toothed gear mounted coaxially with the pivot of each cradle to rotate relatively thereto, said gears being operatively connected together, toothed bevel wheels upon each said gear and toothed wheels which mesh with the first said bevel wheels upon the handle and blade, substantially as and for the purpose set forth.

1,540,696. AUTOMATIC REGISTER AND CONTROLLER FOR TRAINS. HEINRICH KARL, Jersey City, N. J. Filed May 15, 1917. Serial No. 168,904. 5 Claims. (Cl. 246—122.)



1. In a register controller for railroads, a plurality of controlling units arranged thereon, electrical means for operating said controlling units, operatively connected to different parts of the railroad, a remotely located device and a circuit therefor, adjacent controlling units being located in said circuit and independently normally rendering the circuit inoperative to actuate said device.

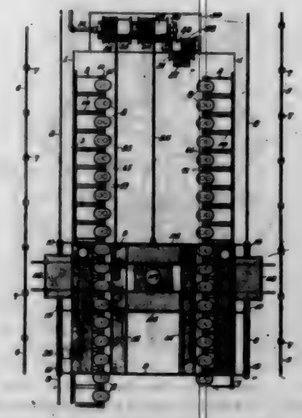
1,540,697. PIPE REAMER. HENRY KRUESHELD, Newark, N. J. Filed Sept. 28, 1924. Serial No. 739,377. 5 Claims. (Cl. 131—18.)



5. A pipe reamer which comprises a plate having slots therein, shoulders at the upper end of this plate on opposite sides thereof adjacent the upper end of one of said slots, a second plate having a slot embracing the unslotted portion of the first-mentioned plate, said plates having offset portions in line with the slots to permit them to be swung flat against each other, said second plate adapted to be swung at an angle to the first plate and moved into engagement with the shoulders whereby it can be maintained substantially in this angular position during use, said second plate adapted to be dropped down into the slots of the other plate prior to being swung flat thereagainst.

1,540,698. VOLTAGE REGULATION FOR GENERATORS. BENNETT M. LEECE, Cleveland, Ohio, assignor to The Leece-Neville Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 10, 1923. Serial No. 679,575. 10 Claims. (Cl. 171—229.)

1. In combination with a variable speed, variable load generator having a field circuit, a regulator for varying the field excitation comprising two relatively movable contacts and two coils, one of the latter being connected to the generator independently of the contacts, and the other being connected to the generator through the contacts when the latter are closed, and said second mentioned coil having another connection with the generator independently of the contacts.



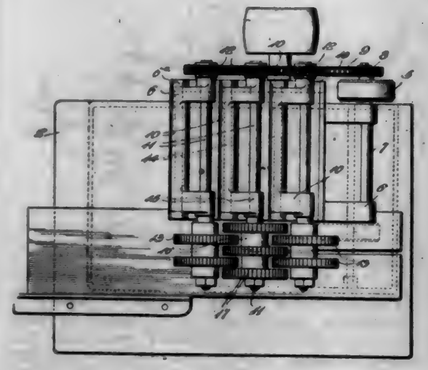
1,540,699. REAMING MACHINE. LEO G. MCMULLEN, Baltimore, Md. Filed July 26, 1922. Serial No. 577,656. 2 Claims. (Cl. 77—55.)

1. In a device of the class described, a frame having a reduced projecting arm embodying a lower member, an upper member and securing elements connecting said members, the members of the arm being supplied with cooperating recesses defining a chamber, said members of the arm being equipped with reduced openings communicating with the chamber, bearings located in the openings and engaging said members of the arm within the chamber, shafts journaled in the bearings, the outermost shaft being provided with tool-holding means, and intermeshing pinions located in the chamber and carried by the shafts.

1,540,700. METHOD OF MAKING CAST-IRON PIPES. CHARLES WILLIAM MCWANE, Lynchburg, Va. Filed Mar. 27, 1923. Serial No. 628,026. 114 Claims. (Cl. 22—16.)

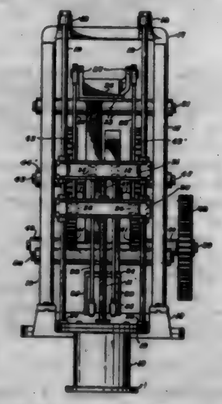
1. In the manufacture of cast iron pipe or the like, that method of making simultaneously a mold and a core which consists in supporting a flask in substantially vertical position, placing a core bar within the flask and securing the same to maintain longitudinal alinement of the core bar, placing and securing a tubular pattern within the flask and around the core bar, and simultaneously filling with green sand the space between the core bar and the tubular pattern and also the space between the tubular pattern and the flask to simultaneously make a core and a mold.

1,540,701. HEEL-TREAD PAD FOR HORSESHOES. JESSE WILLIAM MILLER, Red Wing, Minn. Filed June 11, 1924. Serial No. 719,412. 5 Claims. (Cl. 168—14.)



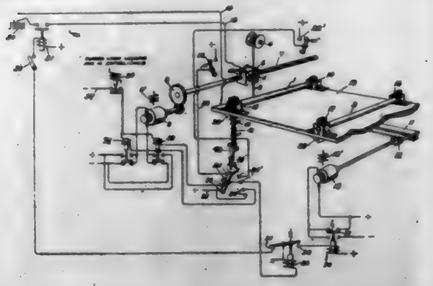
1. The combination with a horseshoe provided with drive calk receiving openings in the rear end thereof, of a heel tread pad therefor comprising a pair of transversely arranged pad body sections, each section having an upstanding element for frictional driving engagement in the calk receiving openings, and an elastic connection between said sections of permitting relative lateral movement therebetween to vary the spacing between said elements.

1,540,702. ARTIFICIAL BAIT. GROVER CLEVELAND MORRISS, Austin, Tex. Filed Dec. 1, 1924. Serial No. 753,346. 1 Claim. (Cl. 43—46.)



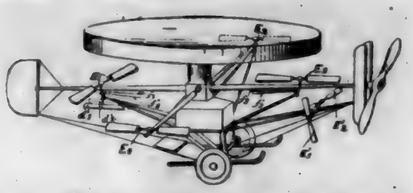
In a device of the character described, an elongated body formed to resemble a fish, a tail portion pivotally mounted at the rear end of said body and capable of movement sideways, fins on the top and bottom of the body for maintaining the same normally in upright position, and securing members passing through the forward and intermediate portions of the body and carrying swivels for connection with a line, a snap hook secured on the under side of the body near the rear portion thereof and a hook detachably engaged with said snap hook.

1,540,703. FEEDING DEVICE. ARTHUR WILSON NELSON, Williamsport, Pa. Filed Mar. 27, 1924. Serial No. 702,420. 2 Claims. (Cl. 143—55.)



1. In a feeding device for a wood-working machine, a plurality of rotary shafts each mounted for vertical movement independently of the others, a plurality of feed rolls having their peripheries interlapped with relation to one another and provided with wood-engaging peripheral surfaces to effect the feeding of a piece of wood supported by the machine, a plurality of sprocket wheels, each of said shafts carrying one of said feed-rolls and one of said sprocket wheels, and a sprocket chain in mesh with each of said sprocket wheels and being operatable to rotate said sprocket wheels in the same direction.

1,540,704. DEEP-WELL POWER PUMP. ANDREW J. NICHOLAS, Philadelphia, Pa., assignor to A. D. Cook, Incorporated, Lawrenceburg, Ind., a Corporation of Indiana. Filed Oct. 28, 1922. Serial No. 596,407. 4 Claims. (Cl. 74—14.)



1. A pump comprising a plurality of E-shaped cross-heads, guide rods common to said cross-heads, links for operating said cross-heads, the repective link of each cross-head passing through another of said cross-heads, and means for operating said links.

1,540,705. ARC-WELDING APPARATUS. PAUL O. NOBLE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 16, 1924. Serial No. 738,093. 9 Claims. (Cl. 219—8.)

1. An automatic arc welding machine for seam welding comprising a welding head having means for maintaining an arc, means for supporting work comprising a plurality of seams to be welded, means for effecting relative movement longitudinally between said welding head and supporting means to traverse the arc along a seam to be welded, means for effecting relative movement laterally between said supporting means and said welding head to position the parts for welding successive seams, and control means for stopping said traversing motion upon the completion of a seam and causing operation of said means to position the parts for welding another of said seams.

1,540,706. CONTROLLING AND STABILIZING DEVICE FOR HELICOPTERS. ETIENNE OEHMICHEN, Valentigney, France. Filed July 26, 1923. Serial No. 653,956. 3 Claims. (Cl. 244—19.)

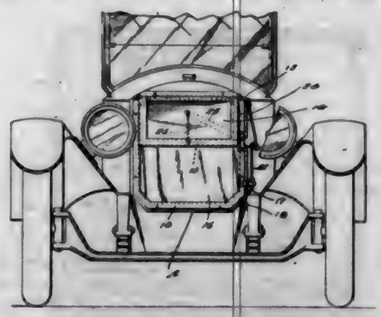
1. In a helicopter apparatus, the combination of a main propeller for sustaining the apparatus in the air, and whereof the axis passes through the center of gravity of the apparatus, a plurality of auxiliary propellers in constant rotation during the operation of the apparatus, and disposed symmetrically in pairs, and in different planes about the axis of the main propeller and comprising flat blades whose incidence can be varied and reversed, the propellers of each pair rotating in contrary directions, a single central lever pivoting in all directions about a center of oscillation, means for varying the incidence of the blades of the said auxiliary propellers, said means being so connected with the said central lever that the movement of the latter in a given direction will vary the incidence of the blades of a given pair of auxiliary propellers.

1,540,707. WINDMILL. GEORGE F. ORMSBEE, Smith Center, Kans., assignor of one-third to Earnest Jones and of one-third to Jess Martin, both of Smith Center, Kans. Filed Apr. 21, 1923. Serial No. 633,697. 4 Claims. (Cl. 74—14.)

1. In a windmill head, a main stem, a vertically disposed casing mounted on said main stem, a windwheel shaft extending into said casing, a pinion mounted on said shaft within said casing, a pitman extending into said casing and embodying a housing within the casing formed with an elliptical gear therein in mesh with said

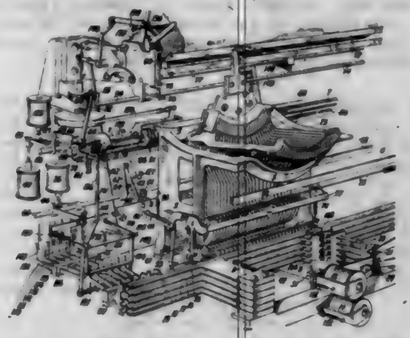
pinion within the casing, the inner edge face of said casing forming a bearing and guiding surface for said pitman during reciprocation thereof by said pinion.

1,540,708. SOUNDING TOY. GEORGE H. PARSONS, New York, N. Y., assignor to Averill Manufacturing Co., New York, N. Y., a Corporation of New York. Filed May 1, 1924. Serial No. 710,466. 1 Claim. (Cl. 84—379.)



In a sounding toy, an air blast tube adapted to be inserted in the mouth of a doll, a member fixed to the end of the tube, an elongated tranversely positioned wire frame having the ends of said wire forming said frame fixed to the said member, and a harmonica appreciably shorter than the frame located within the frame and having a longitudinal groove therein receiving one longitudinal member of the frame, the opposite edge of the harmonica being guided in said member.

1,540,709. RADIATOR COVER. FRED W. PIEHL, JOHN H. PIEHL, and PAUL F. TIMMERMANN, Fairbank, Iowa. Filed July 15, 1922. Serial No. 575,427. 2 Claims. (Cl. 267—132.)

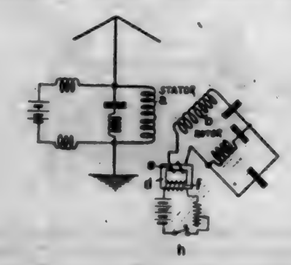


1. A radiator protector comprising a frame mounted on a radiator at the front thereof, a rod journaled transversely of the upper portion of said frame and carrying a plate adapted to cover substantially the upper half of the radiator, a crank arm on said rod, a second plate slidably mounted within the frame below said first named plate, a lever pivoted on the frame and having one end connected with said slidable plate and its other

end connected with said crank arm, a bracket on said frame, an angle lever pivoted on said bracket and connected with the second named end of said lever, and

means operable from the dash for swinging said angle lever to move said first named lever for swinging the first named plate and sliding the second named plate.

1,540,710. PRINTING TELEGRAPHY. HARRY PFANNENSTIEHL, Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 29, 1918. Serial No. 579,446. 6 Claims. (Cl. 23—137.)



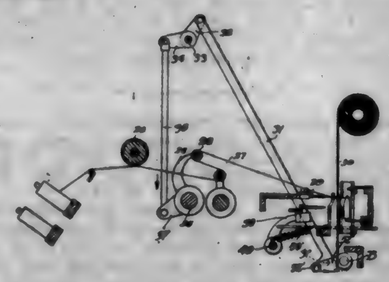
1. In a printing telegraph receiver, a type carriage comprising a plurality of type bars, an electromagnet for moving said type carriage transversely for character printing, and stationary permutation means for selectively controlling the operation of the type bars.

1,540,711. PROCESS FOR THE MANUFACTURE OF SODIUM SULPHIDE. LESTER ALBERT PRATT and JOHN H. CLARKE, Winchester, Mass., assignors to Merrimac Chemical Company, Woburn, Mass., a Corporation of Massachusetts. Filed Aug. 3, 1922. Serial No. 579,446. 6 Claims. (Cl. 23—137.)

1. Process for the manufacture of sodium sulphide which comprises flowing a mixture of molten sodium sulphate with finely divided carbonaceous material in quantity sufficient to reduce the sulphate to sulphide through a supporting and distributing body of inert material at reacting temperature.

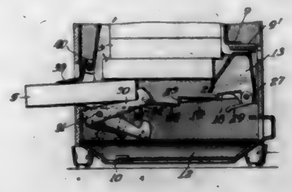
1,540,712. SIGNAL-SENDING APPARATUS IN WAVE TELEGRAPHY. LEO PUNGS, Berlin-Charlottenburg, Germany, assignor to C. Lorenz Aktiengesellschaft, Lorenzweg, Berlin-Tempelhof, Germany. Filed Aug. 23, 1921. Serial No. 494,571. 3 Claims. (Cl. 250—17.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a signal sending apparatus for wave telegraphy, a high frequency machine having a plurality of syntonizing circuits of different frequencies, a coil having an iron core electrically connected with said circuits and means associated with said core whereby the coil may



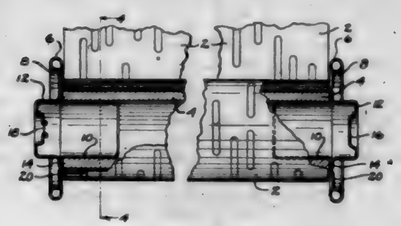
be subjected to superposed magnetic continuous current induction thereby varying the inductivity of the coil and changing the conditions of resonance of the syntonizing circuits.

1,540,713. CHAIN FASTENER. MILTON ALBERT RAMALY, Bowmanstown, Pa. Filed Jan. 24, 1925. Serial No. 4,518. 2 Claims. (Cl. 24—241.)



2. A device of the class described, including a body having spaced connected side walls and a pivoted tongue adapted to be closed down between the side walls, said tongue having an inclined, open ended slot in its inner edge when closed, the lower edge of the slot constituting a shoulder having an inclined lower edge, opposite arcuate seats formed in the free upper edges of the spaced side walls and terminating in opposite shoulders, a coiled spring mounted exteriorly of each of the side walls and joined by a resilient loop traversing the seats in the side walls and normally abutting the shoulders thereof, said loop being forced back away from the last-named shoulders by the inclined lower edge of the tongue and caused to engage over the shoulder of the tongue when the same is forced down.

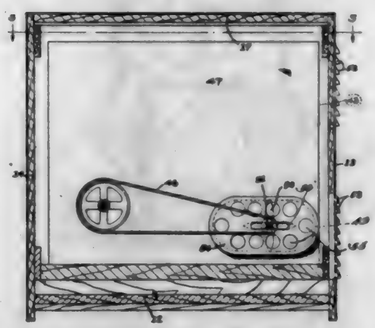
1,540,714. ATTACHMENT FOR EMBROIDERY MACHINES. ANTONIO RAUSSE, Northvale, N. J. Filed Mar. 14, 1922. Serial No. 543,723. 8 Claims. (Cl. 112—96.)



1. An embroidery machine attachment for use with embroidery machines provided with take-up means comprising means operated by the embroidery machine to release the take-up means in its thread tightening position from the embroidery machine when the fabric is being shifted.

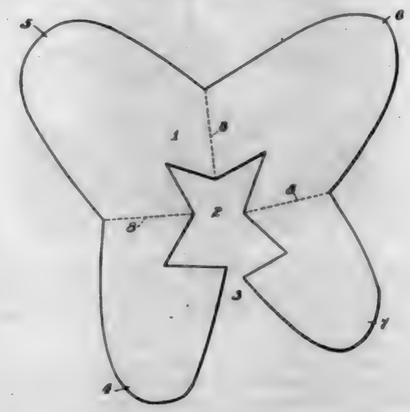
1,540,715. VENDING MACHINE. JOHN RIIKONEN, Chicago, Ill. Filed May 8, 1922. Serial No. 559,246. 7 Claims. (Cl. 194—73.)

1. A device of the character described, comprising, in combination, a series of article receiving receptacles, each having a discharge outlet therefrom, a bottom wall disposed across said receptacles in substantial alinement with the lower edge of said outlets, said wall being provided with a plurality of openings communicating with each receptacle, individual delivery means for each of said receptacles, all of said delivery means movable simultaneously across said receptacles below said bottom wall and normally ineffective to deliver articles through said outlets, and coin-controlled means for selectively elevating said delivery means through certain of said openings to render their movement effective for discharging articles.



1,540,716. MUSIC-ROLL END. WILLIAM M. SAUNDERS, Waterbury, Conn., assignor to The Mattatuck Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 2, 1925. Serial No. 12,620. 3 Claims. (Cl. 242—69.)

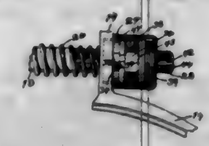
1. In a music roll end a sheet metal flange having a hollow portion protruding therefrom and integral therewith and a cylindrical shell extending in the opposite direction from said hollow portion and constituting a second protruding portion and having a rim secured to said flange member adjacent to the wall of said hollow protruding portion, one of said oppositely extending portions having a spindle engaging portion.



1,540,717. MECHANICAL REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich., assignor, by mesne assignments, to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Jan. 5, 1924. Serial No. 684,657. 10 Claims. (Cl. 62—115.)

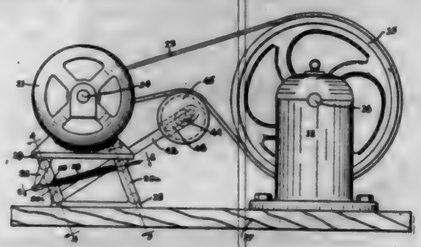
2. In combination, a compressor unit comprising a compressor and a motor for operating said compressor mounted for movement transverse to the axis of said motor to maintain tight the belt connecting said motor and said compressor, a fan carried by said motor, an air cooled condensing coil connected to the outlet of said compressor, an enclosure surrounding said coil and provided with at least one inlet opening and at least one outlet opening and having one of said openings arranged to cooperate with said fan and elongated to register with said fan during the transverse movement of said fan, and a cabinet enclosing said compressor unit and said enclosure and said fan and provided with an inlet opening arranged to cooperate with an inlet opening of said

enclosure and an outlet opening arranged to cooperate with an outlet opening of said enclosure, one of the openings in said casing cooperating with the enclosure opening which cooperates with said fan.



1,540,718. GLOVE. FRANK X. STURM, Alexandria, Ind., assignor to The Glove Corporation, Alexandria, Ind., a Corporation of Indiana. Filed Dec. 5, 1923. Serial No. 678,555. 5 Claims. (Cl. 2—169.)

1. A glove blank for the backs of the fingers of a glove, comprising a substantially star shaped blank, the points of the star forming the finger backs and the center of the blank being slotted at the base of each point to permit the spreading of the material when the blank is folded and secured to the front of the glove.

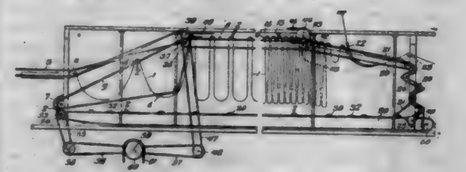


1,540,719. AUTOMATIC TAKE-UP FOR BRAKE BANDS. RAYMOND T. WHIPPLE, San Francisco, Calif., assignor, by direct and mesne assignments, to Charles H. Baer, San Francisco, Calif. Filed Oct. 21, 1922. Serial No. 596,108. 3 Claims. (Cl. 188—196.)

2. In a device of the character described, the combination with a compression brake band having upturned ends, a compression rod adapted to engage said upturned ends, means for imparting partial rotation to said rod, ratchet means secured to one end of said brake band, an intermediate ratchet threadedly engaged by said rod and adapted to have engagement with said ratchet means, a tightening ratchet slidably keyed to

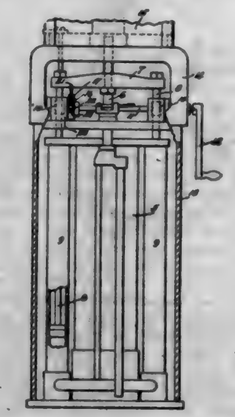
said rod and adapted to contact said intermediate ratchet, and spring means for causing said ratchets to contact one with the other.

1,540,720. POWER TRANSMISSION. CHARLES E. BUCKBEE, Detroit, Mich. Filed Jan. 5, 1924. Serial No. 684,659. 3 Claims. (Cl. 308—11.)



1. In combination, a driven element, a driving element, a belt operatively connecting said elements, an idler pulley engaging said belt, and means supporting one of said elements and said idler pulley in such manner that it continually tends to move, under the influence of its own weight, in a direction to directly tighten said belt and in addition to force said idler pulley against said belt to further tighten said belt, and a spring connected to maintain the tightening force substantially constant over the range of movement of said element.

1,540,721. HANG-UP APPARATUS. CHARLES C. COLBERT and GEORGE E. PRESTON, Elkhart, Ind., assignors to American Coating Mills, Elkhart, Ind., a Corporation of Indiana. Filed Oct. 3, 1923. Serial No. 666,267. 18 Claims. (Cl. 34—20.)

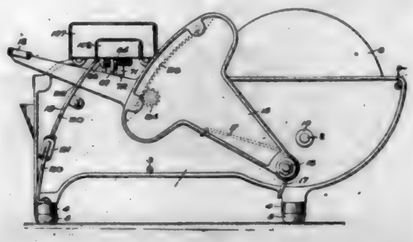


9. An apparatus of the class described comprising, in combination, a plurality of supports travelling in a circuitous course; a magazine containing a reverse supply of said supports interposed in said course; means cooperating with successively presented supports for hanging up material in festoons or folds, which are conveyed by such supports to a place where the material is withdrawn therefrom; means for delivering said supports to said magazine as the material is withdrawn from the supports; and means for said supports withdrawing in proper sequence from said magazine and returning them one after another to position for successive presentation for hanging up the material.

1,540,722. HANG-UP APPARATUS. CHARLES C. COLBERT and GEORGE E. PRESTON, Elkhart, Ind., assignors to American Coating Mills, Elkhart, Ind., a Corporation of Indiana. Filed Oct. 6, 1923. Serial No. 666,900. 8 Claims. (Cl. 34—20.)

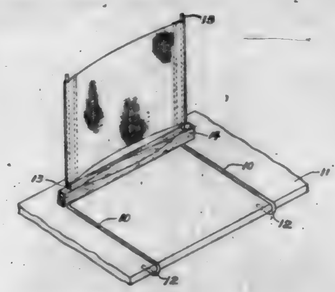
2. An apparatus of the class described comprising, in combination, sticks traveling in a circuitous course; and means for moving said sticks through said circuitous course constructed and arranged for hanging up in-feeding material on supports provided by groups of said sticks.

1,540,723. DISPENSING PUMP. JOHN B. DAVIS, Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, a Corporation of Massachusetts. Original application filed Nov. 7, 1921, Serial No. 513,369. Divided and this application filed June 2, 1923. Serial No. 643,084. 5 Claims. (Cl. 188—74.)



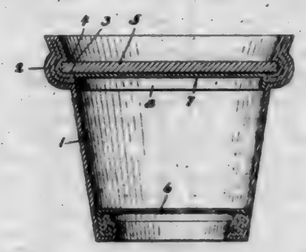
1. The combination with a brake drum having a peripheral groove therein, of a segmental brake shoe having a part normally loosely received in said groove and held from lateral displacement thereby, an actuating cam for forcing said part against the walls of the groove, a pin on which said cam is pivotally mounted, and a fork like portion on said shoe to straddle said pin.

1,540,724. STRIP-SERVING MACHINE. TREVOR RANDALL GAUTIER, Nashua, N. H., assignor to Nashua Gummed & Coated Paper Company, Nashua, N. H., a Corporation of Massachusetts. Filed June 7, 1923. Serial No. 643,907. 30 Claims. (Cl. 91—14.5.)



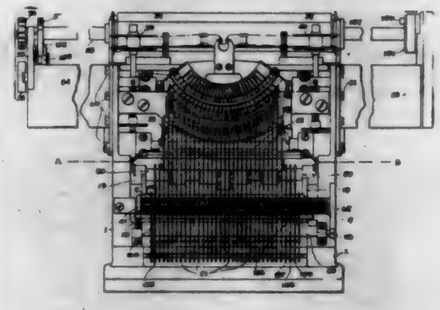
1. In a machine for serving strips of adhesive tape, a frame or housing having opposite side walls providing a space between them for supporting a package of tape in position to be drawn upon by the feeding means, one of said side walls constituting a lateral support for the tape package, a thin disk-like member constituting the opposite lateral support for the tape package, said disk-like member having a spindle extending through an opening in the adjacent side wall, said

spindle having a spring adapted to engage the wall of the opening and to sustain the disk-like member and its spindle in any position of lengthwise adjustment of said



spindle, whereby any width of package or tape receivable between the said side walls may be supported in proper position for feeding.

1,540,725. SEAT BACK. ALBERT B. GLASER, Dayton, Ohio. Filed Mar. 21, 1924. Serial No. 700,834. 3 Claims. (Cl. 155—133.)

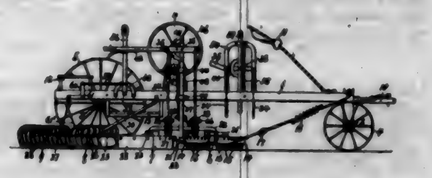


1. A portable seat back comprising two round rods lying across the seat terminating in hooks at one end that embrace the front edge of the seat and at the other end terminating in free standing uprights; a wooden link, having holes adapted to slip over the uprights to hold them in an erect position and at a certain distance apart; a piece of fabric attached to and extending from one upright to the other adapted to serve as a back.

1,540,726. PAPER CONTAINER. ARLINGTON MOORE, Boston, Mass. Filed Oct. 12, 1921, Serial No. 507,370. Renewed Sept. 27, 1924. 2 Claims. (Cl. 229—5.5.)

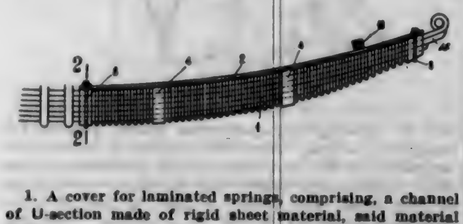
1. In a paper container having a re-inforced neck formed to provide an internal disk-receiving groove having a disk-supporting seat at its inner side and a disk-retaining shoulder at its outer side, a disk closure for said groove, and a sealing disk having an edge flange adapted to fit in the container at the edge of said seat and to be forced inwardly until its outer surface is flush with said seat, to provide a tight internal closure for the container.

1,540,727. PAGE-PRINTING TELEGRAPH MACHINE. DONALD MURRAY, London, England, assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed June 23, 1923. Serial No. 647,330. 6 Claims. (Cl. 178—27.)



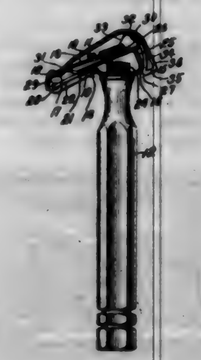
1. A page-printing telegraph machine of the type described, comprising a selecting mechanism actuated by the line impulses, a typewriter printing mechanism including a fixed type bed and a platen carriage reciprocable thereover, the printing operation being controlled by said selecting mechanism, a power driven shaft, an operating spindle having a series of cams, and means actuated by said cams for effecting the required movements of the paper carriage of the printer, a spring-actuated clutch for connecting said shaft and said spindle and a trigger device for said clutch controlled by said selecting mechanism.

1,540,728. PROPELLER. WILLIAM G. G. WEIDINGER, Chicago, Ill. Filed Sept. 6, 1924. Serial No. 736,279. 3 Claims. (Cl. 170—159.)



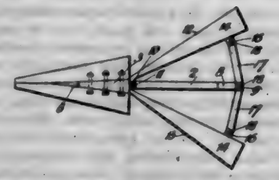
3. In a propeller, a tubular shaft, a hub fast thereupon and rotating therewith, and blades of counterpart formation spaced equidistant one from the other about said hub and extending rearwardly therefrom, said blades curving uniformly outward and then inward and terminating in the plane of said hub, each of said blades being formed with three longitudinally extending cutting edges terminating in a point at the blade end, with a concave portion and with a convex portion embracing one of said cutting edges and producing a streamline effect.

1,540,729. ROAD-SCARIFYING AND STONE-REMOVING VEHICLE. FRITZ E. YORK, Earlville, N. Y. Filed Feb. 11, 1922. Serial No. 535,937. 12 Claims. (Cl. 37—145.)



1. In a road machine of the character described, the combination of a main frame and supporting wheels therefor, of a scarifying unit, a scraping unit and a stone collecting rake unit all arranged in sequence from front to rear beneath said frame, connections between the scarifying unit and frame, connections between the scraper and scarifier, and connections between the frame and stone collecting unit.

1,540,730. SPRING COVER. GUIDO DEBENEDETTI, Turin, Italy. Filed June 24, 1924. Serial No. 722,140. 9 Claims. (Cl. 267—37.)

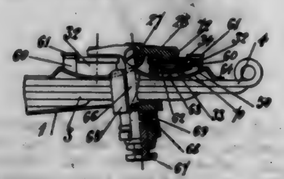


1. A cover for laminated springs, comprising, a channel of U-section made of rigid sheet material, said material having corrugations transverse to the axis of the spring laminations, closing means for the mouth of said channel, and means for fastening said closing means to said channel and the entire cover to the spring enclosed therein.

1,540,731. SAFETY RAZOR. JULIUS BUENO DE MESQUITA, New York, N. Y. Filed Aug. 30, 1924. Serial No. 735,047. 7 Claims. (Cl. 30—12.)

1. A safety-razor comprising a guard plate to receive a blade, a cover hinged at the forward portion of said plate and to close rearwardly over said plate and blade, and means for releasably securing said cover in closed position comprising a rigid part connected with the lower side of said plate and having a rearwardly projecting protuberance and an upwardly and forwardly inclined surface leading from the apex of said protuberance, and a leaf latch spring secured to the rear portion of said cover and having a rearwardly convexed downwardly extending arm to engage and become flexed against said apex when the cover is closed, a rearwardly extending thumb piece at the lower end of said arm and a tongue extending upwardly from the rear end of said thumb-piece to the lower back edge of said cover, said spring being operable to release the cover and aid in throwing the same to open position by the upward pressure of the end of the thumb against said tuhmb-piece, said spring then being flexed rearwardly on passing said apex and reacting against said upwardly inclined surface to drive the cover to open position.

1,540,732. PLOW. SIDNEY JAMES HUNNINGS, Urana, New South Wales, Australia. Filed Oct. 24, 1922. Serial No. 596,593. 1 Claim. (Cl. 97—118.)



A plow, having a body portion, an upstanding breast portion arranged at one end thereof and extending above the body portion, said upstanding breast portion being formed with openings to permit the attachment of a share thereto, a cutting portion arranged in advance of the breast portion, said cutting portion being formed with an opening to receive a share fixing means, an upright extending from the rear of the body portion and substantially equal in height to that of the breast portion, means for pivotally connecting a mold board and a land board to the rear of the breast portion above the body portion, and links carried by the rear edge of the upright to engage and position the rear ends of the mold board and land board.

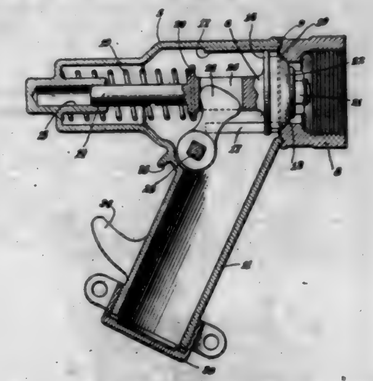
1,540,733. DYESTUFFS OF THE ANTHRAQUINONE SERIES. JAMES BADDILEY and WILLIAM WYNDHAM TATUM, Manchester, England, assignors to British Dyestuffs Corporation Limited, Manchester, England. Filed Oct. 22, 1924. Serial No. 745,233. 3 Claims. (Cl. 260—60.)

1. As new articles of manufacture the new dyestuffs which are condensation products of diaminoanthraquinones and a carboxylic acid of an alkylene oxide.

1,540,734. LAMINATED SUSPENSION SPRING FOR AUTOMOBILES AND OTHER VEHICLES. EUGÈNE HOUDRY, Paris, France, assignor to Manufacture Générale de Ressorts, Paris, France, a Limited Joint Stock Company of France. Filed Mar. 8, 1924. Serial No. 697,689. 9 Claims. (Cl. 267—53.)

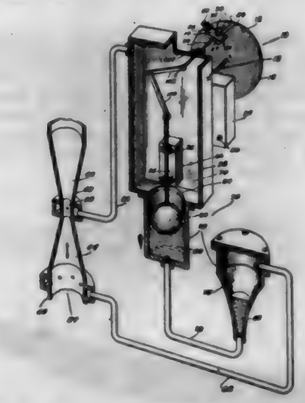
1. In a laminated spring used in the sunspension of automobiles and other vehicles, the combination with a main strip, and a counter strip, of a cap member carried

by said counter strip, a rocking lever pivoted on the said cap member, and a friction member pivoted to each arm of the said rocking lever, and being in frictional contact with a part of the spring opposite said counter strip



---

1,540,735. AUTOMOBILE LICENSE-PLATE-ATTACHING DEVICE. LEONARD D. KROFF, Sterling, Ill. Filed May 7, 1923. Serial No. 637,044. 4 Claims. (Cl. 40—125.)

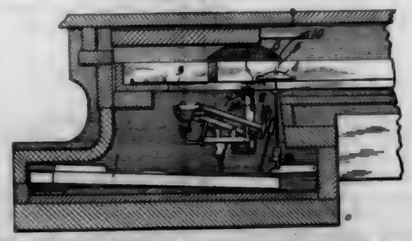


1. In a structure of the class described, comprising a bracket having a slot, and a plate to be supported by said bracket, having a slot to register with the first mentioned slot, the combination therewith of a shank having an integral and laterally flattened head for insertion through said slots, said head being adapted to extend crosswise of the slots, with either end of the head at either side of the slots, duplicate portions adjacent the head and forming flat shoulders facing outward in opposite directions to bear against the edges of said slots, after the inner side of said head is drawn back against the face of the plate, so that with the head in either position thereof the shank is prevented from rotating by engagement of said shoulders with said edges of the slots, a slidable washer on the shank to bear against the bracket, a coil spring bearing against said washer at the back of said bracket, so that said bracket and plate are clamped tightly between said washer and head, and means permanently held on said shank to hold the spring in position thereon.

1,540,736. SELF-CLOSING FAUCET FOR TANK WAGONS. ABRAM W. WHEATON, Jr., Newark, N. J., assignor to A. W. Wheaton Brass Works, Newark, N. J., a Corporation. Filed Dec. 29, 1922. Serial No. 609,566. 2 Claims. (Cl. 137—21.)

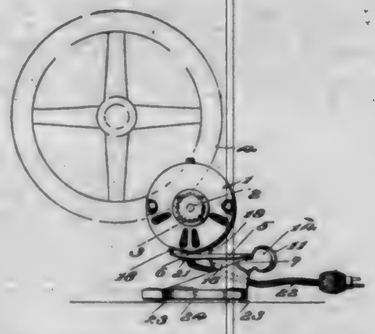
2. In a tank wagon the combination with a tank of a faucet comprising a two-part casing, one part having an outwardly extending valve seat closely adjacent the joint, and the second part having guideways closely adjacent the joint, a longitudinal, movable valve member arranged to seat on the aforesaid valve seat against the pressure of fluid in the tank and having a flange closely adjacent the valve head and bearing against the aforesaid guideways, the valve stem projecting and having bearing in a cylindrical bore forming an extension of the casing, and a spring surrounding said projecting valve stem and operative to seat the valve against the pressure of fluid in the tank substantially as and for the purpose described.

1,540,737. FLOW METER. FREDERICK N. CONNET, Providence, R. I., assignor to Builders Iron Foundry, Providence, R. I., a Corporation of Rhode Island. Filed Aug. 16, 1924. Serial No. 732,589. 5 Claims. (Cl. 235—61.)



5. In an integrating flow meter having pressure differential producing element attached to a conduit, an integrator of the sine type having a friction driven wheel, small rollers substantially forming the periphery of said wheel, and means actuated by said pressure differential producing element to continuously twist said friction driven wheel to an angle whose sine is proportional to the rate of flow in said conduit.

1,540,738. PROCESS OF MANUFACTURING HYDROQUINONE. HERMANN EMDE, Berlin-Lankwitz, Germany, assignor to Chemische Fabrik auf Actien (vorm. E. Schering), Berlin, Germany. Filed Aug. 9, 1921. Serial No. 490,888. 4 Claims. (Cl. 260—154.)



1. The process of making hydroquinone which consists in heating a quinhydrone with iron and water.

1,540,739. COMBINED PIANO AND PRACTICE INSTRUMENT. BENJAMIN H. JEFFERSON and ROBERT H. WAUD, Chicago, Ill., assignors, by mesne assignments, to Lyon & Healy, Inc., Chicago, Ill., a Corporation of Illinois. Filed Dec. 16, 1918. Serial No. 266,859. 2 Claims. (Cl. 84—220.)

2. In a grand piano, the combination with the action, of an axially rotatable rod extending crosswise of the action in proximity to the strings, said rod being provided with a plurality of independent muffling members tangentially mounted and each consisting of one or more strips of felt and a handle at one end of the rod or bar for rotating the same, said rod or bar being mounted so that when rotated said felt strips will be thrown into and out of position between the action hammers and the strings, said felt strips being of such character as to muffle the playing tones so as to make the same almost inaudible.

1,540,740. PORTABLE ELECTRIC SEWING-MACHINE MOTOR. THEOBALD C. WEISS, Racine, Wis., assignor to The Fitzgerald Manufacturing Company, Torrington, Conn., a Corporation of Connecticut. Filed Oct. 2, 1922. Serial No. 591,964. 10 Claims. (Cl. 74—26.)

1. In a portable electric motor, the combination of a base to rest on a table top, a bearing ember on said base having its axis parallel to the axis of the motor shaft, a vertically swinging motor carrying arm rocking at one end on said bearing member, a spring holding said arm on said bearing member and also acting on the arm to press its free end upwardly, and an electric motor mounted on the free end of said arm.

1,540,741. MECHANISM FOR SETTING OR DISPLACING A TOOL OR OTHER DEVICE BY A PREDETERMINED AMOUNT. EDGAR KENNETH HUNTER and JOHANNES ROBERT CARL AUGUST, London, England. Filed Oct. 20, 1924. Serial No. 744,711. 8 Claims. (Cl. 175—337.)

1. A setting mechanism comprising in combination a number of loose elements, guides for said elements, a stop, light springs maintaining said elements displaced from one another and from said stop at predetermined varying distances, means to connect the elements most remote from the stop to a body to be displaced, and means to bring together a number of said elements against the light springs supporting them, whereby the said body is displaced by the distance apart of said elements so brought together.

8. A setting mechanism comprising in combination a rod, a number of discs, loosely slidable on said rod, each comprising an electro-magnet and armature, light springs maintaining the said discs displaced from one another and from said stop, a finger on each disc engaging the neighbouring disc to set a limit to their relative normal displacement by reason of the springs between them, and means to energize any one of said electro-magnets to draw up the discs to one another against the action of said springs.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 335—No. 2. TUESDAY, JUNE 9, 1925. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Mar. 26, 1925.*

The New-Tone Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of McGregor Chemical Co., 840 East Seventy-fifth Street, Chicago, Ill., for registration of a trade-mark and trade-mark registered November 9, 1915, No. 106,988, to The New-Tone Company, 431 North Clark Street, Chicago, Ill., and a notice of such declaration sent by registered mail to The New-Tone Company at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless The New-Tone Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, May 23, 1925.*

Ramco Manufacturing Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Ram Metal Products Co., Inc., 1848 Webster Avenue, New York, N. Y., for registration of a trade-mark and trade-marks registered November 24, 1914, Nos. 101,324, 101,325, and 101,326, to the Ramco Manufacturing Company, 232 State Street, Schenectady, N. Y., and a notice of such declaration sent by registered mail to said Ramco Manufacturing Company at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Ramco Manufacturing Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, May 23, 1925.*

Steinberger & Kalisher, their assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Steinberger Bros. Lobl Co. Inc., 295 Fifth Avenue, New York, N. Y., for registration of trade-marks and trade-mark registered May 14, 1907, No. 62,598, to Steinberger & Kalisher, 2001 Lyon Street, San Francisco, Calif., and a notice of such declaration sent by registered mail to said Steinberger & Kalisher at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Steinberger & Kalisher, their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

ADJUDICATED PATENTS.

(C. C. A. Calif.) The Denivelle patent, No. 1,212,331, for artificial travertin, *Held* invalid. *Denivelle* v. *MacGruer & Simpson*, 4 F. (2d) 329.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,141,717, J. W. Lee and J. L. Hogan, jr., Transmitting intelligence by radiant energy, decided April 6, 1925, claims 1, 2, 3, 4, 5, and 7.

Pat. 1,376,504, W. J. Behn, Universal joint, decided April 6, 1925, claims 1 and 2.

Pat. 1,378,892, C. W. Myers, Tractor, decided April 6, 1925, claims 1 to 4, inclusive.

Pat. 1,396,217, W. M. Jones, jr., Tire making and repairing device, decided April 6, 1925, claim 1.

Condition of Applications Under Examination at Close of Business May 29, 1925.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 44,251; Trade-Mark Division, 3,396. Oldest new case, Dec. 1, 1924; oldest amended, Dec. 2, 1924. The dates given are 1925 except where † indicates 1924.) Divisions, Examiners, and Subjects of Inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	Number of applications awaiting action.
116	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plant Husbandry; Plows; Planting; Scattering Unloaders.	Feb. 26	Mar. 12	610
126	2. HADEN, C. F., Bee Culture; Dairy; Preserving; Presses; Tobacco	Feb. 6	Feb. 14	524
331	3. RICH, WM. J., Electric Heating; Electrochemistry; Heating; Metal Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Mar. 20	Apr. 13	293
234	4. MERRITT, A. D., Conveyers, Chutes, Skids, Guides, and Ways; Conveyers, Fluid Current; Conveyers, Power Driven; Excavating; Handling—Hand and Hoist-Line Implements; Material or Article Handling; Pushing and Pulling Implements; Traversing Hoists.	Feb. 24	Feb. 16	621
108*	5. MACNAB, J. F., Harvesters; Jewelry; Music; Acoustics; Sound Recording and Reproducing; Tying Cords or Strands.	†Dec. 29	Jan. 2	966
318	6. LEWERS, A. M., Bleaching and Dyeing; Chemistry; Chemistry—Carbon Compounds; Explosive, Pyrotechnic, and Match Compositions; Fertilizers; Substance Preparation; Hides, Skins and Leather; Sugar and Starch; Concentrating Evaporators.	Jan. 6	Jan. 5	891
312	7. JARBOE, C. O., Amusement and Exercising Devices; Toys; Optics; Photography	Feb. 2	Feb. 2	966
133	8. HENRY, C. C., Beds; Chairs and Seats; Furniture; Kitchen and Table Articles; Store Furniture	Feb. 5	Feb. 5	1,320
221	9. TRYON, F. M., Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid Current; Pumps.	Jan. 31	Mar. 4	616
116	10. HUNTER, O. F. (Acting), Motor Vehicles; Land Vehicles—Animal Draft Appliances, Bodies and Tops, Dumping.	Jan. 29	Jan. 29	981
148*	11. ARMSTRONG, H. C., Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus; Cutting and Punching Sheets and Bars; Driven, Headed, and Screw-Threaded Fastenings.	Mar. 5	Mar. 14	731
260	12. PIERCE, P. P., Machine Elements	Jan. 20	Jan. 20	736
154*	13. CLIFT, J. W., Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Working; Needle and Pin Making; Turning.	Jan. 13	Feb. 7	1,142
102*	14. BRUMBAUGH, N. J., Compound Tools; Farriery; Metal Bending; Metal Tools and Implements, Making; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire Working.	Mar. 5	Apr. 2	290
329	15. REDROW, W. L., Glass; Paper Making; Plastic Block and Earthenware Apparatus; Plastics	Jan. 30	Feb. 9	925
240*	16. SPENCER, C. J., Batteries; Resistances and Rheostats; Telegraphy; Telephony	Jan. 2	Jan. 8	914
307	17. RAFTER, G. S., Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet-Material Associating or Folding; Sheet or Web Feeding or Delivering; Type Setting.	Feb. 16	Mar. 13	366
229	18. PORTER, M. E., Motors, Expansible-Chamber Type; Power Plants; Speed-Responsive Devices	Jan. 2	Jan. 2	811
236	19. GLASCOCK, E. S., Furnaces; Heating Systems; Liquid and Gaseous Fuel Burners; Stoves and Furnaces.	†Dec. 13	Mar. 25	565
179	20. GROVE, S. D., Miscellaneous Hardware; Closure Fasteners; Locks and Latches; Sales; Undertaking	Jan. 29	Jan. 31	823
212	21. THURBER, W. L., Winding and Reeling; Textiles; Cloth Finishing	†Dec. 31	Mar. 23	458
108	22. COLWELL, J. H., Aeronautics; Amusement Devices, Games; Firearms; Ordnance; Ammunition and Explosive Devices; Ammunition and Explosive-Charge Making; Air Guns, Catapults, and Targets; Boats and Buoys; Ships; Marine Propulsion.	Mar. 2	Mar. 17	881
217	23. GROESBECK, W. D., Coin Handling; Recorders; Registers; Horology; Time-Controlling Mechanism.	Jan. 7	Jan. 20	998
147*	24. DURAS, C. O., Apparel; Apparel Apparatus; Garment Supporters; Sewing Machines	Feb. 2	Feb. 19	511
315	25. LIGHTFOOT, J. H., Agitating; Butchering; Centrifugal-Bowl Separators; Cutlery; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Gas Separation.	Mar. 26	Mar. 27	702
228*	26. HODGES, J. S., Electricity, Generation; Motive Power; Prime-Mover Dynamo Plants	†Dec. 5	†Dec. 3	752
214	27. ANDERSON, L. S., Brush, Broom, and Mop Making; Brushing, Scrubbing, and General Cleaning; Laundry; Washing Apparatus.	Mar. 2	Mar. 9	668
225	28. BENSON, A. R., Internal-Combustion Engines	Apr. 10	Apr. 9	699
160*	29. MORRIS, B. N., Abrading; Boring and Drilling Button Making; Chucks or Rockets; Coopering; Tool-Handle Fastenings; Wheelwright Machines; Wood Sawing; Wood Turning; Woodworking; Woodworking Tools.	†Dec. 15	Jan. 2	1,075
248	30. SULLIVAN, M. R., Automatic Temperature and Humidity Regulation; Illuminating Burners; Illumination; Typewriting Machines; Thermostats and Humidostats.	Feb. 24	Mar. 9	918
314	31. HOLMES, W. N., Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Gas, Heating and Illuminating; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue	Mar. 14	Mar. 16	802
249	32. BARTHOLOMEW, J. A., Gas and Liquid Contact Apparatus; Heat Exchange	Feb. 5	Feb. 3	629
153	33. WYMAN, W. I., Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs; Wooden Buildings.	Mar. 30	Mar. 27	684
304	34. SIMPSON, G. R., Electricity-Transmission to Vehicles; Pneumatic Dispatch; Railways; Railway Rolling Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Store Service; Track Sanders; Vehicle Fenders.	Jan. 26	Jan. 27	606
116*	35. REYNOLDS, E. C., Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet.	Feb. 9	Mar. 12	647
105	36. MORTON, G. L., Automatic Weighers; Geometrical and Measuring Instruments; Force Measuring	Feb. 13	Jan. 22	1,267
224*	37. TAYLOR, E. C., Electricity, Circuit Makers and Breakers	†Dec. 17	†Dec. 15	1,210
145	38. IDE, G. R., Animal Husbandry; Earth Boring; Fishing, Trapping, and Vermin Destroying; Mining, Quarrying, and Ice Harvesting; Stoneworking; Wells.	†Dec. 11	†Dec. 15	938
220	39. COWLES, A. W., Fluid-Pressure Regulators; Multiple Valves; Valves; Water Distribution	Feb. 7	Feb. 13	422
269	40. OBERLIN, J. J., Baggage; Bottles and Jars; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Jan. 5	Jan. 5	1,615
125	41. BROWN, J. L., Land Vehicles, Wheels and Axles; Resilient Tires and Wheels; Wheel Substitutes	Feb. 21	Jan. 31	619
222*	42. CUTTING, H. O., Electrical Conduits and Housings; Electric Signaling	Jan. 3	Jan. 7	1,080
124*	43. HOPKINS, F. M., Baths, Closets, Sinks, and Spittoons; Sewerage; Electricity, Medical and Surgical; Medicines; Surgery; Dentistry; Artificial Body Members; Railway Draft Appliances.	Jan. 7	Jan. 14	904
258	44. SHAFFER, C. H., Bread, Pastry, and Confection Making; Dispensing; Dispensing Beverages; Filling and Closing Portable Receptacles; Refrigeration.	Jan. 26	Jan. 26	757
370	45. GILES, A. H., Pulleys and Shafting; Lubrication; Machine Elements, Bearings and Guides	Jan. 20	Jan. 20	790
233	46. WOLCOTT, C. L., Fluid Sprinkling, Spraying, and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers.	Jan. 3	Jan. 2	670
264	47. BARKER, H., Brakes; Clutches and Power Stop Control; Elevators; Fluid-Pressure Brake and Analogous Systems; Motors; Spring Devices.	Jan. 26	Feb. 2	1,836
213*	48. ROEPKE, O. B., Electricity, Conductors; Electricity, General Applications	†Dec. 1	†Dec. 5	1,721
230	49. EDINBURG, F. P., Check-Controlled Apparatus; Domestic Cooking Vessels; Fuel and Igniting Devices; Pneumatics; Velocipedes; Driers; Liquid Separation or Purification.	Feb. 2	Feb. 7	709
322	50. BLAKE, C. L., Plastic and Liquid Coating Compositions; Coating; Laminated Fabrics	Jan. 2	Jan. 3	1,302
240*	51. BACKUS, C. D., Radiant Energy, Wave Transmission; Electric Lamps	Jan. 3	Jan. 6	2,070
144	52. MORGAN, E. J., Supports; Fire Escapes; Ladders; Scaffolds; Railway Mail Delivery; Joint Packing; Pipe and Rod Joints or Couplings.	Mar. 13	Mar. 26	826
112	53. PECK, M. E., Books; Manifolding; Printed Matter; Stationery; Educational Appliances; Paper Files and Binders; Tents, Canopies, Umbrellas, and Canes; Curtains, Shades, and Screens.	Jan. 20	Jan. 24	1,003

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

PINKERTON v. GIBSON.

No. 1,981. Decided December 1, 1924.

INTERFERENCE—ORIGINALITY.

Where the question was one of originality, and P. contended that he mailed an embodiment of the invention to G., but his letter transmitting the device did not describe it, although he had taken out ten patents so that he must have appreciated the importance of claiming and describing any invention he was conscious of having made; where P. did not preserve the letter when returned personally by G., and several witnesses, one of whom was disinterested, all testified to the effect that the device mailed to G. did not disclose the invention; and where P.'s testimony on cross-examination was equivocal, *Held* that the burden was upon P. as the junior party, and he had not sustained it.

APPEAL from Patent Office. Affirmed.

Mr. Joshua R. H. Potts and *Mr. B. G. Richards* for Pinkerton.

Mr. C. L. Parker for Gibson.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.*:

Appeal from a decision of the Patent Office, in an interference proceeding, awarding priority to the senior party Gibson.

Gibson was the secretary and general manager of the Sta-Rite Hair Pin Co., of Shelbyville, Ill., and Pinkerton was president of the Pinkerton Folding Box Co. of Chicago. A former official of the Sta-Rite Co., in an interview with Pinkerton at the latter's factory, suggested to him the manufacture of cartons instead of display cards, formerly in use. This official and Pinkerton went to the store of Marshall Field & Co. and inspected cartons used by other manufacturers and having plain straps with wooden pins glued between the center of the strap and the side of the box to hold the display hair pin. On September 2, 1920, and subsequent to this interview, Pinkerton sent the Sta-Rite Co. a small carton and wrote the company as follows:

> We have mailed you, under separate cover, a small handmade carton for the celluloid pin to be used instead of the card as suggested by Mr. Bland. Advise us as to how many of these cartons you wish, so we can make provisions to get some of them out for you. We will endeavor to use the stock that we purchased for the cards for this purpose.

It is the contention of Pinkerton that the carton referred to in this letter disclosed the invention in issue, which differs from the prior art in that the strap which overlies the display pin is provided with a struck-down portion or tongue which passes between the prongs of the pin and through an opening in the side of the box, thereby eliminating the wooden dowel. It will be observed that no claim is made in this letter that the carton therein mentioned contained any novel features, nor is there any description of it. Right here it may be mentioned that Pinkerton had taken out ten patents on other kinds of boxes, so that he must have appreciated the importance of describing and claiming any invention he was conscious of having made. Mr. Gibson, who opened the package containing the carton upon its receipt by the Sta-Rite Co., Miss Black, his stenographer, Mr. Girouard, foreman of the celluloid department, a Mr. Creech, a director of the company, and a Mr. Tallman, whose factory was nearby and who was a disinterested witness, all testified to the effect that the carton in question did not disclose the invention; that it did not differ from the cartons already in use. The Assistant Commissioner has very carefully and fairly reviewed this testimony, and we agree with him that it disproves Pinkerton's contention on this point.

Cogency is added to this view from Pinkerton's failure in the letter to describe the carton, from his failure to preserve it when returned personally by Mr. Gibson, and from the equivocal character of his testimony on cross-examination. Mr. Gibson, shortly after his company received this carton, went to Chicago and remained there several days, during which he frequently interviewed Mr. Pinkerton and other concerns dealing in wooden pins or dowels. Gibson contends that it was during this time that he made the invention. On cross-examination, Pinkerton was asked whether he did not suggest to Gibson that he get prices and quotations on wooden pins or dowels, and replied, "No, not that I remember of." He then was asked if Gibson had not reported to him that he had secured prices from one or two persons who owned the stock from which these wooden pins were made and answered, "No, not in my memory." He again was asked whether Gibson did not come back to his, Pinkerton's, office after he had been in Chicago a couple of days, with a box which he informed Pinkerton he had cut out himself the night before, and responded, "I don't remember anything of the kind. We had got through with this box, as to my knowledge." Thereupon he was asked if Gibson did not submit this box for his examination and whether, after carefully examining it and taking it apart and putting it together again, he did not say to Gibson, "You have got it." To this inquiry he replied, "No, I don't remember that."

That Gibson did obtain prices on these dowels is clearly established, because he gave the names and addresses of the firms, and it is apparent from Pinkerton's cross-examination that he not only knew of what Gibson had done but probably suggested it. Of course, if Pinkerton had made the

invention, as he now contends, there was no necessity for this course of conduct on the part of Gibson.

The Assistant Commissioner has so carefully and satisfactorily reviewed the evidence that we do not consider it necessary to dwell further upon it. The burden was upon Pinkerton, as the junior party, and he has not sustained it. We therefore affirm the decision.

Affirmed.

Court of Appeals of the District of Columbia.

IN RE CARRIER.

No. 1,706. Decided April 6, 1925.

Decision of Assistant Commissioner Fenning.

1. PROSECUTION OF APPLICATIONS—REJECTION BY EXAMINERS IN CHIEF ON NEW REFERENCE—RULE 139. An applicant who elects to appeal from a decision of the Examiners in Chief rejecting his claims on a new reference, under rule 139, waives his right to reconsideration before the Primary Examiner.

2. DOUBLE PATENTING—GENUS AND SPECIES—GENERIC CLAIMS PRESENTED IN LATER APPLICATION FOR DIFFERENT SPECIES AFTER GRANT OF PATENT ON EARLIER APPLICATION WITH SPECIFIC CLAIMS. Where two applications filed by the same inventor for different species of the same invention were copending in the Patent Office, and the claims of the earlier application were specific to the species disclosed therein, and generic claims were not presented in the later application until long after the granting of a patent on the earlier application, *Held* that the generic claims should not be allowed in the later application.

3. SAME—UNPATENTABLE DISTINCTION MADE BETWEEN CLAIMS OF DIFFERENT PATENTS TO SAME INVENTOR. An inventor who has obtained a patent for a specific mechanism for moving an indicator to show the humidity of the air or for moving a member for any purpose, can not again obtain a patent claiming the same mechanism for moving a valve for the emission of moisture in the air.

4. INVENTION—AUTOMATIC MACHINERY—USE OF INSTEAD OF HAND OPERATION. It is not patentable merely to do by automatic machinery what has commonly been done by hand.

5. DOUBLE PATENTING—NOT JUSTIFIED BY ENFORCED DELAY FOR INTERFERENCE. Double patenting is not justified on the ground that the inventor could not delay the issuance of his former patent, but had to take it out while his other application was in interference. He should not have claimed the common invention in the application on which the patent was granted if he desired to claim it in the other application.

APPEAL from Patent Office. Affirmed.

Mr. Arthur E. Parsons for Carrier.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN C. J., ROBB, J., and VAN ORSDEL, J.

PER CURIAM:

Appeal from a decision of the Patent Office refusing to allow claims 1 to 8, inclusive, 15, 16, 17, 19, and 20, of appellant's application for a patent relating to a humidity regulator.

After a careful examination of the record and briefs, and giving due consideration to the argument at bar, we are convinced, as were the tribunals of the Patent Office, that the allowance by the Office of seven claims of the application protected all the novel features of appellant's device.

For the reasons stated by the Patent Office, we affirm the decision.

The decision of Assistant Commissioner Fenning, rendered in this case February 5, 1924, is as follows:

This is an appeal from the decision of the Examiners in Chief affirming the final rejection by the Primary Examiner of claims 1 to 8, inclusive, 15, 16, 17, 19, and 20.

The invention relates to an instrument intended for use in textile factories and other places to control the emission of moisture to the air, and thereby maintain the desired humidity of the air in the rooms. The device also controls the temperature of the air; but this is not a feature of the appealed claims. The objects of the invention are stated on page 2 of the specification as follows:

The primary object of the invention is to produce an efficient and practical instrument in which the pressure of the vapor generated by a volatile liquid is made use of for controlling the humidity of the air, and which will work equally well without adjustment in variable temperatures. Other objects of the invention are to provide the instrument with means whereby, if desired, the temperature of the air as well as its humidity can be regulated; also to make the instrument adjustable for obtaining the different desired hygrometric conditions of the air; and also to improve regulating instruments of the character mentioned in the respects hereinafter described and set forth in the claims.

The instrument has two tubes which are subjected respectively to the temperatures indicated by wet and dry bulb thermometers. The tubes are partially filled with a volatile liquid, as sulfur dioxide, the vapor pressure of which varies readily in response to changes of temperature. The vapor pressures generated in the tubes are transmitted by air-tight pipes to diaphragms so arranged as to transmit the pressures to the opposite sides of the left-hand end of a lever and at different relative distances from the fulcrum of the lever, depending upon the desired humidity to be maintained. The diaphragm subjected to the greater pressure from the dry-tube generator is located nearer the fulcrum than is the other diaphragm, and the ratio of these distances is changed by manual adjustment of the fulcrum. The correct ratio for a desired percentage of humidity is established when the fulcrum is brought opposite that percentage, as indicated by a scale on the lever. The end of the lever bears against a valve H which controls the flow of compressed air to means controlling a valve h^1 in the pipe h^2 through which moisture is admitted to the air. This specific means forms no part of the invention. It is shown in Fig. 5 which was incorporated in the drawings by amendment. When the humidity falls below that for which the instrument is set, the differential pressure on the lever increases, causing the left end of the lever to move downwardly and permitting a spring to move the valve H toward closed position. The increase in the differential pressure is due to the increased rate of evaporation in the wick surrounding the wet tube when the air becomes less humid, which results in the lowering of the temperature and gas pressure in the wet tube as compared with the temperature and pressure in the dry tube. As the air becomes more humid the rate of evaporation decreases and the pressure in the wet tube increases, lowering the differential pressure on the lever, with a resulting opening movement of the valve H.

The following are illustrative of the appealed claims:

1. In a humidity regulator, the combination with a humidity supply system, and a valve operable to control the action of said system; of thermo-responsive elements independently influenced by different temperatures, and a device for operating the valve, said device being actuated by the conjoint action of said elements due to changes in temperature, whereby the operation of said device is dependent upon the relation existing between said different temperatures, substantially as set forth.

4. In a humidity regulator, the combination with a humidity supply system, and a valve operable to control the action of said system; of generators independently influenced by the wet and dry bulb temperatures of the air, the generators being partly filled with sulphur dioxide, and a device for operating the valve, said device being actuated by the conjoint action of the generators due to changes in temperature, whereby the operation of said device is dependent upon the relation existing between said wet and dry bulb temperatures, substantially as set forth.

6. In a humidity regulator, the combination with a humidity supply system, and a valve operable to control the action of said system; of thermo-responsive elements independently influenced by different temperatures, a device for operating the valve, said device being actuated by the conjoint action of said elements due to changes in temperature, whereby the operation of said device is dependent upon the relation existing between said different temperatures, and means for varying the ratio of effect of the thermo-responsive elements upon said device, substantially as set forth.

19. A humidity controlling device comprising two thermostatic members, a valve, means mechanically connecting said valve with said thermostatic members, and means for setting the thermostatic members with a predetermined difference in effect of the operation of said members.

The references are: Bradford, No. 222,234, Dec. 2, 1879; Carrier, No. 896,690, Aug. 18, 1908; Carrier, No. 1,165,225, Dec. 21, 1915; Cramer et al., No. 1,331,981, Feb. 24, 1920; Richard (Fr.), No. 156,210, June 23, 1883, and addition thereto dated May 19, 1886.

The patent to Bradford discloses a governor intended for use to regulate either the temperature or humidity of the air in spinning and weaving rooms. The valve B controls the flow of steam to the heating coils when used for the former purpose or to the vapor jets when used for the latter purpose. The valve is moved by the eccentric a each time the magnet C is energized. As shown in Fig. 1 a bar *d f*, the length of which depends upon the temperature in the room, carries at its movable upper end a projection located between the electric contact screws *k* and *t*. Those screws are adjusted to such positions as to maintain the temperature between any desired limits. As the temperature rises to the upper limit the bar expands until its projection contacts with the screw *k*. Then a circuit is established from battery through wire *l m*, insulated post *f*, spring *e*, metallic base plate, magnet C, wire leading to insulated connecting screw *h*, and the wire leading therefrom back to battery. This energizes the magnet, and as the armature *o p* is drawn up the gear mechanism is released, the weight D acting therethrough to rotate the eccentric *a* and move the valve to closed position. As the valve moves contact between the spring *e* and post *f* is broken, and when the wheel *s* has made half of a complete rotation the projection *x* on the armature enters an opening in the wheel, permitting the armature to lower sufficiently so that a projection thereon engages the fly *i* and stops the movement of the gearing, with the valve in its closed position and the spring *e* resting against the post *g*. When the temperature reaches the lower limit, the projection on the bar *d f* contacts with the screw *t* and the magnet is again energized. The circuit is as described above except that the screw *t*, the wire *y v*, and the post *g* are utilized in lieu of the screw *k*, the wire *l m*, and the post *f*. This results in the turning of wheel *s* and eccentric through another half rotation, which opens the valve and breaks the circuit by moving the spring *e* away from the post *g*.

When Bradford's governor is used to regulate humidity instead of temperature, the wet bar $e^3 f^3$, the dry bar $g^3 h^3$, and the lever $c^3 d^3$, Fig. 2, are used in place of the bar *d f* and its projection, Fig. 1. The bars $e^3 f^3$ and $g^3 h^3$ are pivotally connected to the lever $c^3 d^3$ and act in opposite directions thereon. Thus expansion of the bar $e^3 f^3$ swings the upper end of the lever to the left, while expansion of the bar $g^3 h^3$ swings said end to the right, as viewed in Fig. 2.

Claims 1 and 2 read directly on Bradford when the device shown in Fig. 2 of this reference is used. His bars $e^3 f^3$ and $g^3 h^3$ have a differential operation, or an action in opposition to each other, on the lever $c^3 d^3$. This differential operation depends upon the relative temperatures of the bars, which is controlled by the humidity of the air.

Claim 15 is not considered patentable over Bradford, in which the valve B is caused to be moved by the lever $c^3 d^3$.

In his brief before the Examiners in Chief, the appellant relied upon his Patent No. 896,690 to overcome the filing date of the application of Cramer et al., Ser. No. 408,049, which application matured into Patent No. 1,331,981, cited above. The Examiners in Chief held the Cramer et al. patent avoided as a reference against certain of the claims which are readable on Carrier's patent, No. 896,690, but held these claims unpatentable to Carrier in his instant application, because they regarded such claims as statements of an invention indivisible from the invention defined in claims 1 and 7 of the patent.

[1] In his brief here appellant states that the case should be remanded to the Primary Examiner for his consideration of Patent No. 896,690, relied upon by the Examiners in Chief. Having elected to appeal from the decision of the Examiners in Chief, under rule 139, appellant has waived his right to reconsideration before the Primary Examiner.

The Carrier patent, No. 896,690, discloses dry and wet bars A and B, constructed in the form of perforated tubular members and arranged one within

the other. The upper end of the outer member A is rigidly connected to a fixed support, while the upper end of the inner member B bears against a lever L. The lower movable ends of the members A and B are connected to each other, and consequently the action on the lever is a differential action due to unequal expansion or contraction of the members A and B. The lever operates a valve similar in construction and operation to the valve H in the instant application. This valve controls the supply of compressed air in a passage leading to means for supplying moisture to the air. The members A and B are made of different metals, so that they do not have the same coefficient of expansion. The inner member B is mounted on a screw F, which has a different coefficient of expansion from the member B. By adjusting the screw in the member B the effective coefficient of expansion of the inner member is adjusted.

It is thus seen that the patented device is used for the same purpose and is generically the same as that of the application. The latter device is an improved instrument in which the wet and dry vapor-generator tubes are used in place of the wet and dry metal bars of the patented device. Claims 1, 6, 15, 19, and 20 read on the patented instrument.

Appellant urges that his claims should not be restricted in view of his prior patent, No. 896,690, because that patent shows, and claims specifically, one species, while his instant application discloses another species of the same generic invention. Since the two applications were copending in the Office, he maintains that he has a right to the generic claims in either. He points out that claims 1 and 7 of the patent, referred to by the Examiners in Chief, include respectively elements which have different coefficients of expansion and means for changing the ratio of expansion of the elements. Since these features are not present in the instant application and since all the other claims of the patent are limited to that species, appellant bases his right to now claim the invention more generically than he claimed it in the patent, on the fact that the instant application was filed before the former patent issued. If the appellant had consistently claimed the generic invention in the instant application since a time prior to the granting of his former patent, there would be considerable force to his contention. The generic claims were not presented herein, however, until long after said patent was granted.

In the case of the *Union Typewriter Co.* v. *L. C. Smith & Bros.*, 171 F. R. 288, Judge Archbald said that in order to hold valid claims 37 and 38 of the Daugherty patent, No. 481,477, they must be held limited in view of the former Daugherty patent, No. 470,990. There, as here, the two applications were copending in the Office, the claims of the earlier patent were specific to the species disclosed therein, and the generic claims were not presented in the later application until after the granting of the earlier patent. The court held that under these circumstances valid generic claims could be granted only in a reissue of the first patent. That decision was affirmed in the circuit court of appeals, 162 O. G. 271; 1911 C. D. 452; 181 F. R. 966, the appellate court holding claims 37 and 38 void in view of the earlier patent.

[2] Daugherty filed his second application on March 8, 1892, obtained his first patent on March 15, 1892, inserted the generic claims by amendment in the second application on June 23, 1892, and obtained the second patent on August 23, 1892. These events all occurred within a period of six months. Appellant occupies a much more unfavorable position, and this is the only marked distinction in the cases. He received his patent on August 18, 1908, but did not assert his right to claims generic to the two species until April 8, 1921. Prior to that date his claims were commensurate with the above-quoted statement of the primary object of his invention—i. e., the use of vapor generators containing a volatile liquid. To allow him generic claims in the instant application would be equivalent to granting a reissue of the former patent with broadened claims for the full term of 17 years at a time when the patent is about to expire. For about 13 years there was no thought of claiming in this application any invention disclosed in the patent. Not having asserted his right to the generic claims until so long a time after obtaining the patent, they should not be allowed in the instant application merely because it happened to be filed a short time before the patent issued. Moreover, the decisions cited above, to which may be added *Jones* v. *Larter*, 92 O. G. 383; 1900 C. D. 111, preclude the allowance of such claims. Claims 1, 6, 15, 19 and 20 are not patentable in view of Patent No. 896,690.

The patent to Carrier, No. 1,165,225, discloses another instrument in which wet and dry generator tubes are partially filled with sulfur dioxide, the vapor pressures being transmitted by means of pipes, diaphragms, levers, and links to the opposite sides of the lever G^3, Fig. 4. This lever is provided with a segment g^4, having teeth which mesh with teeth on a pinion h. This pinion is rigidly connected to a pointer H, Fig. 1. The pointer cooperates with a scale to indicate the humidity of the air. While Carrier uses his instrument to indicate, or indicate and record, percentages of humidity in the air, many of the claims are not limited to such use. In fact, claims 5 and 8 to 15, inclusive, of the patent read directly upon the instrument claimed in the instant application.

Appellant bases his right to the appealed claims, notwithstanding Patent No. 1,165,225, on the fact that each of said claims includes a humidity-supply system and a valve operable to control the action of such system, features not disclosed or claimed in the patent. He argues, therefore, that there can be no double patenting, even though the claimed instrument is the same as that claimed in the patent. The following claims are copied to illustrate the inventions claimed in the application and patent.

Application.	*Patent.*
4. In a humidity regulator, the combination with a humidity supply system, and a valve operable to control the action of said system; of generators independently influenced by the wet and dry bulb temperatures of the air, the generators being partly filled with sulphur dioxide, and a device for operating the valve, said device being actuated by the conjoint action of the generators due to changes in temperature, whereby the operation of said device is dependent upon the relation existing between said wet and dry bulb temperatures, substantially as set forth.	5. The combination of generator receptacles which contain sulfur dioxid and one of which is influenced by the dry bulb temperature of the air, means whereby the other receptacle is influenced by the wet bulb temperature of the air, a movable device, and operating mechanism therefor which is actuated by the conjoint action of the different vapor pressures produced from the sulfur dioxid in said receptacles, substantially as set forth.

[3] The question presented is whether having obtained a patent for a specific mechanism for moving an indicator to show the humidity of the air, as in claims 1 and 2 of the patent, or a member for any purpose, as in claims 5 and 8 to 15 of the patent, the same mechanism can be again patented for moving a valve to control the emission of moisture to the air. At the time the Carrier patent, No. 1,165,225, was granted it was common in the art to operate a valve for controlling the emission of moisture to the air by the differential pressure created by wet and dry thermoresponsive elements acting in opposition to each other, as disclosed, for instance, in the patents to Bradford and Carrier, No. 896,690, discussed above. It is not seen, therefore, how this feature can constitute a patentable distinction over the invention claimed in Patent No. 1,165,225. Claims which differentiate only in this respect from the claims of Patent No. 1,165,225 are clearly unpatentable to appellant in the instant application, because they state in patentable substance the same invention for which he has received protection in the former grant.

Other than the supply system and valve, claims 1, 2, 3, 4, 5, 15, and 16 contain no feature not claimed in Patent No. 1,165,225. It is not considered that they are patentable, in view of this reference.

[4] Claims 6, 7, 8, and 20 include the limitation—means for varying the ratio of effect of the vapor pressures upon the movable member. In Patent No. 1,165,225 this ratio is varied automatically and so claimed in claims 3 and 4. This feature is also claimed broadly in claim 6 of the patent as "leverage changing mechanism." It is not patentable merely to do by automatic machinery what has commonly been done by hand. *Jones et al.* v. *General Fireproofing Co.*, 280 O. G. 562; 1919 C. D. 241; 245 F. R. 97. Moreover, claims 6, 7, 8, and 20, like claim 6 of the patent, cover both the manual adjustment of the application and the automatic adjustment of the patent. These claims are not considered allowable in view of Patent No. 1,165,225.

Claim 17 states that the lever is rigidly connected to the valve. This connection in the application is similar to that shown in Patent No. 896,690. It is rigid only in the sense that it is not yielding. In Patent No. 1,165,225 the connection between the lever G and the member moved thereby is unyielding. This claim is unpatentable in view of Patent No. 1,165,225.

[5] Appellant contends that the claims of the instant application should not be refused on the ground that there would be double patenting of the subject matter of his former patent, No. 1,165,225, since he could not delay the issuance of the former patent, but had to take out the patent while the instant application was involved in interference. Even so, he should not have claimed the common invention in the application on which the earlier patent was granted if he desired to claim it here. Had he patented the instant application first, with the claims here on appeal, he would have been compelled to restrict his claims in the other application. It is perfectly obvious that many of the claims now in the patent would not have been allowed in that application if the present case had been patented first containing the claims here on appeal.

In view of the fact that the appealed claims are regarded as being without patentable merit, for the reasons stated above, it is unnecessary to consider the remaining art relied upon by the Examiners in Chief.

The decision of the Examiners in Chief is affirmed.

Ser. No. 195,931. (CLASS 24. LAUNDRY APPLIANCES AND MACHINES.) JOSEPHINE S. WATERHOUSE, doing business also as Waterhouse Manufacturing Co. and as J. S. Waterhouse, Los Angeles, Calif. Filed Apr. 21, 1924.

WATMACO

Particular description of goods.—Revolving Drying Racks for Domestic Laundry Use.
Claims use since July, 1922.

Ser. No. 196,177. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NORMAN L. MILES, St. Paul, Minn. Filed Apr. 26, 1924.

The red color shown on the specimens and likewise the words "Miles Candy" and "N. L. Miles Co. St. Paul, Minn." are disclaimed apart from the other features of the mark.
Particular description of goods.—Candy.
Claims use since Apr. 1, 1924.

Ser. No. 196,260. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) SCHALK CHEMICAL CO., Los Angeles, Calif. Filed Apr. 28, 1924.

DOUBLE X

Particular description of goods.—Composition for Use as a Floor Cleaner.
Claims use since Mar. 27, 1924.

Ser. No. 196,797. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ELECTRIC OUTLET COMPANY, INC., New York, N. Y. Filed May 9, 1924.

Improver

Particular description of goods.—Connecters for Electric Wiring.
Claims use since Mar. 27, 1924.

Ser. No. 196,807. (CLASS 38. PRINTS AND PUBLICATIONS.) HARPER & BROTHERS, New York, N. Y. Filed May 9, 1924.

BLACK & WHITE

Trade-mark consists of the words "Black and White."
Particular description of goods.—Printed Books and Books in Series.
Claims use since about 1885.

Ser. No. 199,205. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ATLANTIC SALT CO., Boston, Mass. Filed June 27, 1924.

ATLANTIC

Particular description of goods.—Bathing Salt and Table Salt.
Claims use since Sept. 24, 1923.

Ser. No. 199,326. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) RUNKEL BROTHERS, INC., New York, N. Y. Filed June 28, 1924.

No claim is made to the words "Minute Chocolate" apart from the mark as shown in the drawing.
Particular description of goods.—Chocolate.
Claims use since about June 2, 1924.

Ser. No. 200,221. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MARTHE RÉGNIER, Paris, France. Filed July 18, 1924.

ELLE A PASSÉ PAR ICI

Particular description of goods.—Perfumes.
Claims use since Apr. 4, 1924.

Ser. No. 201,436. (CLASS 17. TOBACCO PRODUCTS.) HAUS NEUERBURG o. H. G., Trier, Germany. Filed Aug. 15, 1924.

Kurtrier

Particular description of goods.—Leaf Tobacco, Smoking Tobacco, Chewing Tobacco, Snuff, Cigars, Stogies, and Cigarettes.
Claims use since Nov. 8, 1921.

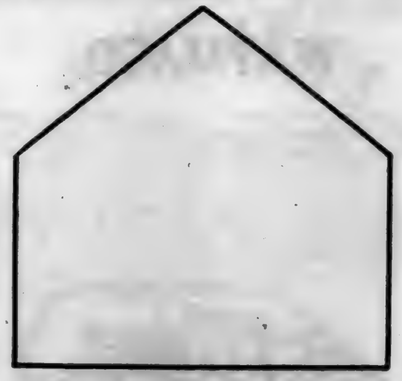
Ser. No. 201,437. (CLASS 17. TOBACCO PRODUCTS.) HAUS NEUERBURG o. H. G., Trier, Germany. Filed Aug. 15, 1924.

„Neuerburg-Löwenbrück"

No claim is made to the word "Neuerburg" apart from the mark shown.
Particular description of goods.—Cigars, Cigarettes, Cigarillos, Raw Tobacco, Tobaccos for Chewing, Smoking, and Snuffing.
Claims use since June 11, 1908.

Ser. No. 201,440. (CLASS 17. TOBACCO PRODUCTS.) HAUS NEUERBURG o. H. G., Trier, Germany. Filed Aug. 15, 1924.

Manengold



Particular description of goods.—Cigars, Stogies, Cigarettes, Raw Tobacco, and Tobaccos for Chewing, Smoking, and Snuffing.
Claims use since June 28, 1918.

Ser. No. 201,441. (CLASS 17. TOBACCO PRODUCTS.) HAUS NEUERBURG o. H. G., Trier, Germany. Filed Aug. 15, 1924.

Güldenring

Particular description of goods.—Cigars, Stogies, Cigarettes, Raw Tobacco, Tobaccos for Chewing, Smoking, and Snuffing.
Claims use since June 28, 1918.

Particular description of goods.—Leaf Tobacco, Smoking Tobacco, Chewing Tobacco, Snuff, Cigars, Stogies, and Cigarettes.
Claims use since Oct. 31, 1908.

Ser. No. 201,448. (CLASS 17. TOBACCO PRODUCTS.) HAUS NEUERBURG o. H. G., Trier, Germany. Filed Aug. 15, 1924.

Ravenklau

Particular description of goods.—Leaf Tobacco, Smoking Tobacco, Chewing Tobacco, Snuff, Cigars, Stogies, and Cigarettes.
Claims use since Nov. 28, 1913.

Ser. No. 201,558. (CLASS 11. INKS AND INKING MATERIALS.) EDWIN A. HESS, doing business as Hess Machine Company, Akron, Pa. Filed Aug. 18, 1924.

HESSCO

Particular description of goods.—Printing Ink.
Claims use since about June 2, 1924.

Ser. No. 202,436. (CLASS 38. PRINTS AND PUBLICATIONS.) EDWARD M. BROOMHALL, Harrisburg, Pa. Filed Sept. 10, 1924.

PONY NAME CARDS

No claim is made to the exclusive use of the words "Name Cards" apart from the mark as shown in the drawing.
Particular description of goods.—Name Cards.
Claims use since July 1, 1922.

Ser. No. 203,136. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) MONTAGUE CITY ROD CO., Montague City, Mass. Filed Sept. 27, 1924.

RADIO

Trade-mark consists of the word "Radio."
Particular description of goods.—Fishing Rods and Reels.
Claims use since Aug. 1, 1922.

Ser. No. 203,409. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSEPH ELLIS ARRAS, Jacksonville, Fla. Filed Oct. 4, 1924.

A

Particular description of goods.—Liver Salts.
Claims use since Jan. 1, 1924.

Ser. No. 204,419. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) PRECISE MANUFACTURING CORPORATION, Rochester, N. Y. Filed Oct. 25, 1924.

Super-Multiformer

Particular description of goods.—Transformer Coils, Single Coils, Blocked Coils, Incased and Unincased Coils, Transformers, Audio-Frequency Transformers, Radio-Frequency Transformers, Air-Cored Transformers, Iron-Cored Transformers, Radio-Frequency Coils, Audio-Frequency Coils.
Claims use since July 26, 1924.

Ser. No. 204,865. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) STANDARD RADIO CORPORATION, Worcester, Mass. Filed Nov. 5, 1924.

Standardyne

Particular description of goods.—Complete Radio Receiving Sets.
Claims use since Apr. 29, 1924.

Ser. No. 205,082. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) NORTHERN MONTANA ALFALFA GROWERS ASSOCIATION, Glasgow, Mont. Filed Nov. 10, 1924.

No claim is made to the words "Northern Montana Alfalfa Growers" and "Alfalfa Seed Brand" apart from the mark shown on the drawing.
Particular description of goods.—Alfalfa Seed.
Claims use since Sept. 1, 1924.

Ser. No. 205,111. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) COPLAN STEEL CORPORATION, INC., Ogdensburg, N. Y. Filed Nov. 11, 1924.

No claim is made to the lining, which indicates the colors red and blue on the drawing.
Particular description of goods.—Castings and Forgings.
Claims use since July 10, 1924.

Ser. No. 205,115. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) FEDERAL TELEGRAPH COMPANY, San Francisco, Calif. Filed Nov. 11, 1924.

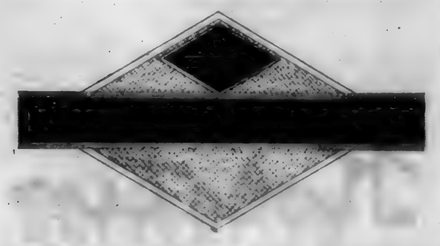
Kolster

Trade-mark comprises a facsimile of a portion of the signature of Frederick A. Kolster, chief research engineer of the Federal Telegraph Co.
Particular description of goods.—Coils Used in Radio Apparatus.
Claims use since Sept. 10, 1924.

Ser. No. 205,200. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) THE COLUMBUS-UNION OIL CLOTH CO., Columbus, Ohio. Filed Nov. 13, 1924.

TRIM-TEX

Particular description of goods.—Leather-Simulating Cloth for Use in Connection with the Upholstering of Motor Vehicles, Vehicle Top Coverings, and Carriage Cloth.
Claims use since Nov. 1, 1924.



Ser. No. 205,230. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ROYAL FEED & MILLING COMPANY, Memphis, Tenn. Filed Nov. 13, 1924.

SPRING MAID

Particular description of goods.—Stock Feed.
Claims use since November, 1923.

Ser. No. 205,243. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) HENRY C. THOMPSON, Hartford, Conn. Filed Nov. 13, 1924.

Trade-mark contains the colors blue and yellow, as shown by the color lines therein.
Particular description of goods.—Soaps, Especially Auto Soap and Hand Soap.
Claims use since Oct. 31, 1924.

Ser. No. 205,432. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE NEW BRITAIN MACHINE CO., New Britain, Conn. Filed Nov. 17, 1924.

NEW BRITAIN

NEW-MATIC

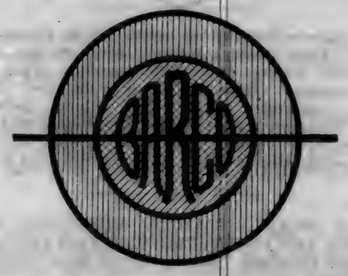
Particular description of goods.—Chucking and Screw Machines.
Claims use since Sept. 19, 1924.

Ser. No. 205,750. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) GILBERT & CO. INC., New York, N. Y. Filed Nov. 24, 1924.

BIRTHFLOWER

Trade-mark consists of the word "Birthflower."
Particular description of goods.—Compact Cases, Vanity Purses, Mesh Bags, Purses, Finger Rings, Bar Pins, Scarf Pins, Lockets, Bracelets, Watch Fobs, Watch Chains, Neck Chains, Key Chains, Earrings, Charms, Brooches, Lavallières, Pendants, Sautoirs, Cuff Links, Cuff Buttons, Vanity Cases, Cigarette Cases, All Made Either of Platinum, Gold, Silver, Either Solid or Plated; Flat Tableware—viz, Spoons, Forks, and Knives—Made of or Plated with Precious Metal; Flatware and Hollow Ware Either Plated with or of Solid Precious Metal.
Claims use since Nov. 9, 1924.

Ser. No. 205,775. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ROBERT PFALLER, doing business as Ludwig Heumann & Co. Chemisch-pharmaceutische Fabrik, Nuremberg, Germany. Filed Nov. 24, 1924.



Rev. Pfarrer Heumann

Trade-mark consists of the portrait of Rev. Ludwig Heumann, deceased.
Particular description of goods.—Tablets, Pills, Lozenges, Powders, Tinctures, Mixtures, Elixirs, Extracts,

Potions, Infusions, Decoctions, Solutions, Jellies, and Teas for Internal and External Use in Treating and Healing Diseases of the Nervous System, the Respiration Organs, the Blood Circulation, the Digestive Organs, the Kidneys and Urinary Organs, the Skin, the Eyes, the Ears, the Throat, and the Teeth, Parasitic Diseases, Inflammations of All Kinds, Gout and Rheumatism, and for Foot and Children's Diseases.

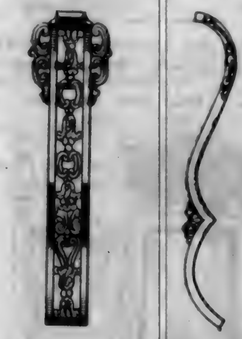
67,500. PLATE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 10, 1925. Serial No. 12,667. Term of patent 7 years.

The ornamental design for a plate for lighting fixtures, as shown.

67,501. SPIDER FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 10, 1925. Serial No. 12,668. Term of patent 7 years.

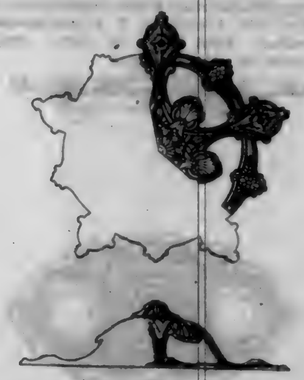
The ornamental design for a spider for lighting fixtures.

67,502. PLATE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 10, 1925. Serial No. 12,669. Term of patent 7 years.



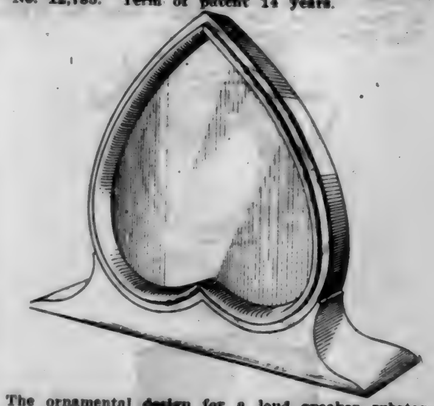
The ornamental design for a spider for lighting fixtures, as shown.

67,503. LOOP FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 10, 1925. Serial No. 12,670. Term of patent 7 years.



The ornamental design for a loop for lighting fixtures, as shown.

67,504. BRACE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 10, 1925. Serial No. 12,672. Term of patent 7 years.

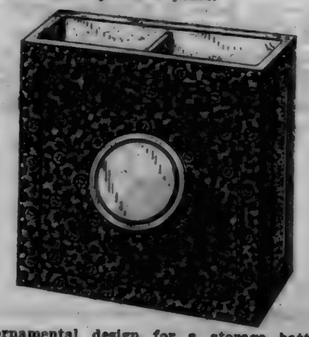


The ornamental design for a brace for lighting fixtures, as shown.

67,505. LIGHTING FIXTURE. STANLEY CZAPEK, Detroit, Mich., assignor to Radiant Specialty Company, a Corporation of Michigan. Filed Mar. 12, 1925. Serial No. 12,700. Term of patent 3½ years.

The ornamental design for a lighting fixture as shown.

67,506. LOUD SPEAKER. LUDWIG M. DIETERICH, New Brunswick, N. J. Filed Mar. 16, 1925. Serial No. 12,783. Term of patent 14 years.

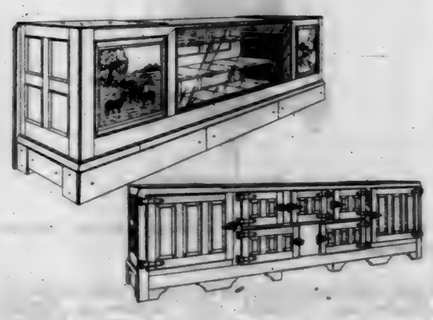


The ornamental design for a loud speaker substantially as shown.

67,507. BRACKET BACK FOR LIGHTING FIXTURES. DANIEL DOBRIN, Detroit, Mich., assignor to Radiant Specialty Company, a Corporation of Michigan. Filed Mar. 12, 1925. Serial No. 12,701. Term of patent 3½ years.

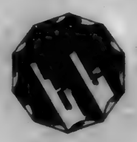
The ornamental design for a bracket back for lighting fixtures as shown.

67,508. STORAGE-BATTERY CONTAINER. CARL J. DUNKWEILER, Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed Apr. 6, 1925. Serial No. 13,033. Term of patent 7 years.



The ornamental design for a storage battery container substantially as shown.

67,509. CAKE OR SOAP OR SIMILAR ARTICLE. ROY S. DURSTINE, Scarsdale, N. Y., assignor to Lever Brothers Company, Cambridge, Mass., a Corporation of Maine. Filed Apr. 2, 1925. Serial No. 12,982. Term of patent 14 years.



The ornamental design for a cake of soap or similar article, as shown.

67,510. BUTCHER'S FREEZER DISPLAY COUNTER. EDWARD FRIEDRICH, San Antonio, Tex. Filed Mar. 30, 1923. Serial No. 5,653. Term of patent 14 years.

The ornamental design for a butcher's freezer display counter, substantially as shown.

67,511. EYEGLASS LENS. WILLIAM B. GEORGIA, Waco, Tex. Filed Jan. 26, 1924. Serial No. 8,441. Term of patent 14 years.

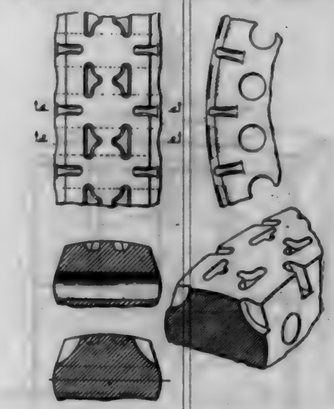
The ornamental design for an eyeglass lens as shown.

67,512. PLATE FOR LIGHTING FIXTURES. RUTH L. GERTH, Minneapolis, Minn., assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Mar. 19, 1925. Serial No. 12,763. Term of patent 14 years.

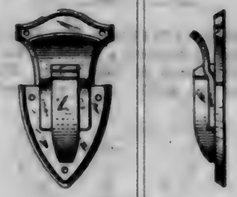
The ornamental design for a plate for lighting fixtures, as shown.

67,513. PLATE FOR LIGHTING FIXTURES. RUTH L. GERTH, Minneapolis, Minn., assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Mar. 19, 1925. Serial No. 12,764. Term of patent 14 years.

The ornamental design for a plate for lighting fixtures, as shown.

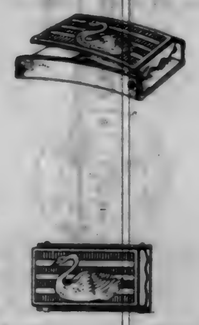


67,514. PLATE FOR LIGHTING FIXTURES. RUTH L. GERTH, Minneapolis, Minn., assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Mar. 19, 1925. Serial No. 12,765. Term of patent 14 years.



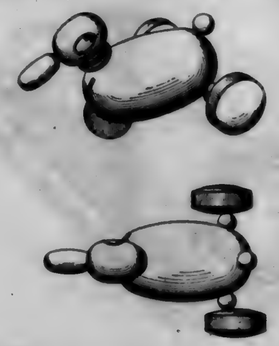
The ornamental design for a plate for lighting fixtures, as shown.

67,515. TIRE. WALLACE R. GILLAM, Tallmadge, Ohio, assignor to Lambert Tire & Rubber Co., Barberton, Ohio, a Corporation of Arizona. Filed Feb. 18, 1925. Serial No. 12,418. Term of patent 14 years.



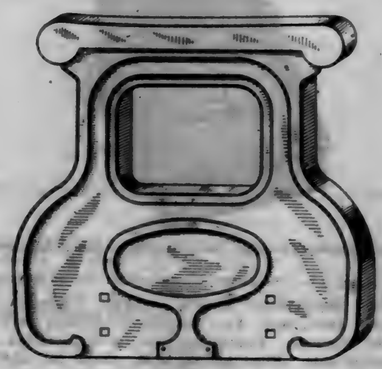
The ornamental design for a tire substantially as shown.

67,516. LOCK. FREDERICK GOERTS, South Orange, N. J., assignor to August Goerts & Co., a Corporation of New Jersey. Filed Mar. 12, 1925. Serial No. 12,694. Term of patent 7 years.



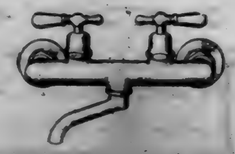
The ornamental design for a lock, as shown.

67,517. BUCKLE. HERMAN GORDON, Louisville, Ky. Filed Mar. 11, 1925. Serial No. 12,682. Term of patent 3½ years.



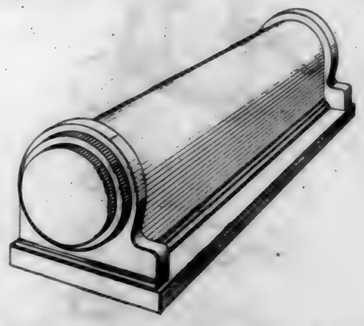
The ornamental design for a buckle, as shown.

67,518. TOY DUCK. RENE DANIEL GROVE, Middletown, Pa. Filed Mar. 30, 1925. Serial No. 12,955. Term of patent 7 years.



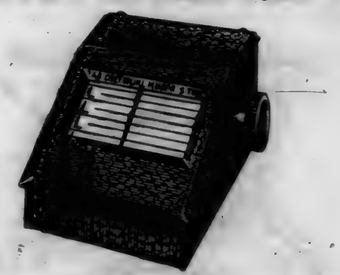
The ornamental design for a toy duck as shown.

67,519. SEAT END. CONRAD T. HANSEN, Detroit, Mich., assignor to The American Motor Body Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Mar. 19, 1924. Serial No. 9,002. Term of patent 14 years.



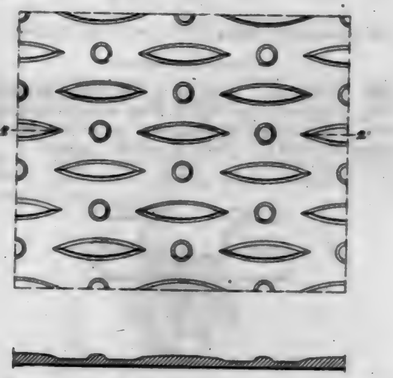
The ornamental design for a seat end, as shown.

67,520. FAUCET. GEORGE A. HARPER, Burlington, Wis., assignor to Burlington Brass Works, Burlington, Wis., a Corporation of Wisconsin. Filed Jan. 26, 1925. Serial No. 12,155. Term of patent 7 years.



The ornamental design for a faucet substantially as shown.

67,521. CASING FOR RADIO RECEIVING APPARATUS. HENRY F. HERMAN, Chappaqua, N. Y. Filed Feb. 7, 1925. Serial No. 12,304. Term of patent 14 years.

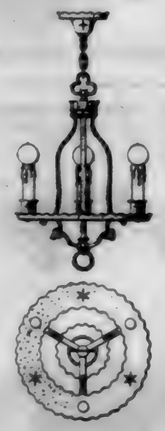


The ornamental design for a casing for radio receiving apparatus as shown.

67,522. TELEPHONE INDEX. GEORGE L. HINMAN, New Haven, Conn., assignor, by mesne assignments, to The Bates Manufacturing Company, Orange, N. J., a Corporation of New Jersey. Filed Feb. 23, 1924. Serial No. 8,701. Term of patent 14 years.

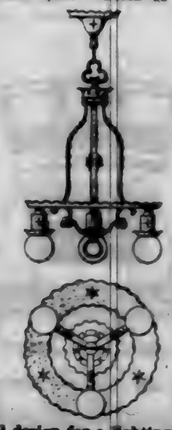
The ornamental design for a telephone index as shown.

67,523. METALLIC FLOOR PLATE. ROBERT H. IRONS, Harrisburg, Pa., assignor to Central Iron & Steel Company, Harrisburg, Pa., a Corporation of Pennsylvania. Filed Apr. 1, 1925. Serial No. 12,979. Term of patent 14 years.



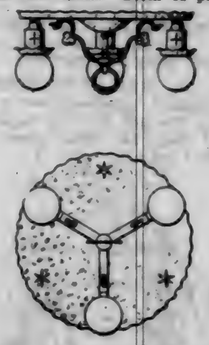
The ornamental design for a metallic floor plate, substantially as shown.

67,524. CABINET FOR TALKING MACHINES. EUGENE T. KIEFFER and WILLIAM B. STEVENSON, Philadelphia, Pa., assignors to Victor Talking Machine Company, a Corporation of New Jersey. Filed Nov. 11, 1922. Serial No. 4,255. Term of patent 14 years.



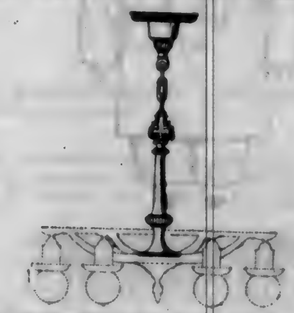
The ornamental design for a cabinet for talking machines, as shown.

67,525. LIGHTING FIXTURE. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed May 16, 1924. Serial No. 9,606. Term of patent 3½ years.



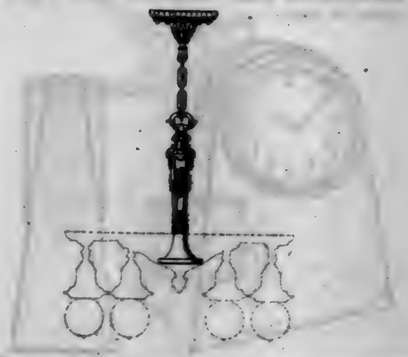
The ornamental design for a lighting fixture, as shown.

67,526. LIGHTING FIXTURE. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed May 16, 1924. Serial No. 9,607. Term of patent 3½ years.



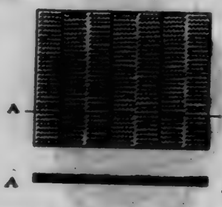
The ornamental design for a lighting fixture, as shown.

67,527. LIGHTING FIXTURE. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed May 16, 1924. Serial No. 9,609. Term of patent 3½ years.



The ornamental design for a lighting fixture, as shown.

67,528. SPINDLE FOR LIGHTING FIXTURE. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., a Corporation of New York. Filed Sept. 2, 1924. Serial No. 10,648. Term of patent 3½ years.

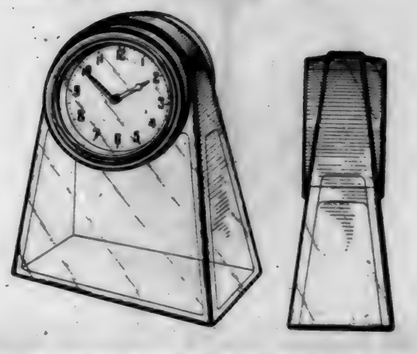


The ornamental design for a spindle for lighting fixtures, as shown.

67,529. SPINDLE FOR LIGHTING FIXTURES. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., a Corporation of New York. Filed Sept. 2, 1924. Serial No. 10,653. Term of patent 3½ years.

The ornamental design for a spindle for lighting fixtures, as shown.

67,530. PILE FABRIC. CLARENCE V. KOSLAY, New York, N. Y., assignor to Sidney Blumenthal & Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 2, 1925. Serial No. 12,242. Term of patent 7 years.



The ornamental design for a pile fabric, as shown.

67,531. SIGNAL LAMP OR SIMILAR ARTICLE. LEON LAPIDUS, Brooklyn, N. Y., assignor to U. S. Auto Lamp Mfg. Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 2, 1925. Serial No. 11,648. Term of patent 3½ years.

The ornamental design for a signal lamp or similar article, as shown.

67,532. CLOCK CASE. WILLIAM H. MAGEE, Moundsville, W. Va., assignor to Fostoria Glass Company, Moundsville, W. Va., a Corporation of West Virginia. Filed Jan. 12, 1925. Serial No. 12,011. Term of patent 14 years.

The ornamental design for a clock case, as shown.

67,533. AUTOMOBILE BUMPER PLATE. WILLIAM F. MARTIN, Baldwinsville, N. Y., assignor to Penn Spring Works Inc., Baldwinsville, N. Y., a Corporation of New York. Filed Mar. 20, 1924. Serial No. 9,007. Term of patent 14 years.

The ornamental design for an automobile bumper plate as shown.

67,534. AUTOMOBILE BUMPER PLATE. WILLIAM F. MARTIN, Baldwinsville, N. Y., assignor to Penn Spring Works Inc., Baldwinsville, N. Y., a Corporation of New York. Filed Mar. 20, 1924. Serial No. 9,008. Term of patent 14 years.

The ornamental design for an automobile bumper plate as shown.

67,535. TIRE TREAD. EDWIN B. MCKAY, Chicago, Ill. Filed Apr. 16, 1925. Serial No. 13,146. Term of patent 3½ years.

The ornamental design for a tire tread, as shown.

67,536. DOLL OR SIMILAR ARTICLE. CRAIG D. MUNSON, Wallingford, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Mar. 24, 1925. Serial No. 12,867. Term of patent 7 years.

The ornamental design for a doll or similar article substantially as shown.

67,537. DOLL OR SIMILAR ARTICLE. CRAIG D. MUNSON, Wallingford, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Mar. 24, 1925. Serial No. 12,868. Term of patent 7 years.

The ornamental design for a doll or similar article substantially as shown.

67,538. DOLL OR SIMILAR ARTICLE. CRAIG D. MUNSON, Wallingford, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Mar. 24, 1925. Serial No. 12,869. Term of patent 7 years.

The ornamental design for a doll or similar article substantially as shown.

67,539. DRESS-TRIMMING BRAID. GUSTAV OBERSTEBRINK, Allenstown, N. H. Filed Dec. 17, 1924. Serial No. 11,728. Term of patent 3½ years.

The ornamental design for dress trimming braid, as shown.

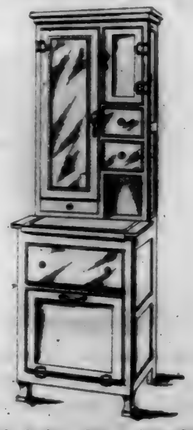
67,540. RADIATOR-CAP ORNAMENT. JOHN R. OISHEI, Buffalo, N. Y. Filed Mar. 3, 1925. Serial No. 12,542. Term of patent 3½ years.

The ornamental design for a radiator cap ornament, as shown.

67,541. SOAP CONTAINER. SUSAN CLARE PEARSON, New York, N. Y. Filed Dec. 19, 1924. Serial No. 11,754. Term of patent 14 years.

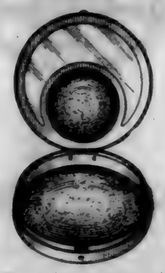
The ornamental design for a soap container, as shown.

67,542. LIGHTING-FIXTURE PART. WILLIAM PENN, New York, N. Y., assignor to Biltmore Lighting Fixture Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 18, 1925. Serial No. 13,162. Term of patent 3½ years.



The ornamental design for a lighting fixture part, as shown.

67,543. CASING FOR A RAILROAD-CROSSING DANGER SIGNAL. ELLERY PERRY, Olean, N. Y., assignor of one-half to Roy E. Vance, Olean, N. Y. Filed Feb. 7, 1925. Serial No. 12,297. Term of patent 7 years.



The ornamental design for a casing for a railroad crossing danger signal, as shown.

67,544. HOUSEHOLD CABINET. ORVAL E. PLATTER, North Vernon, Ind. Filed Aug. 22, 1922. Serial No. 3,513. Term of patent 3½ years.

The ornamental design for a household cabinet as shown.

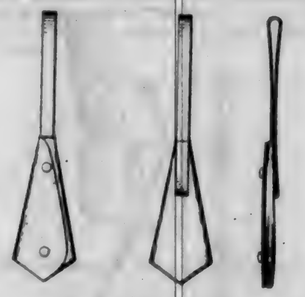
67,545. TOILET CASE. JESSE R. POWELL, Chicago, Ill., assignor to Armour and Company, Chicago, Ill., a Corporation of Illinois. Filed July 20, 1922. Serial No. 3,141. Term of patent 3½ years.

The ornamental design for a toilet case, as shown.

67,546. AMPLIFIER FOR RADIO SETS. HERMAN P. POETER, Washington, D. C. Filed Apr. 7, 1925. Serial No. 13,053. Term of patent 7 years.

The ornamental design for an amplifier for radio sets, as shown.

67,547. LAMP SHADE. FREDERICK ROBITZEK, Stamford, Conn., assignor to S. Robert Schwartz, New York, N. Y. Filed Mar. 24, 1923. Serial No. 5,576. Term of patent 3½ years.

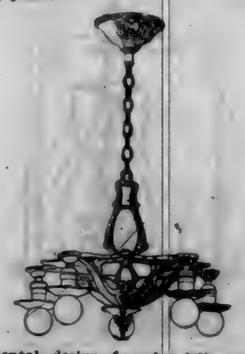


The ornamental design for a lamp shade, as shown.

67,548. PORTABLE LAMP STANDARD. FREDERICK ROBITZEK, Stamford, Conn., assignor to S. Robert SCHWARTZ, New York, N. Y. Filed Mar. 24, 1923. Serial No. 5,577. Term of patent 3½ years.

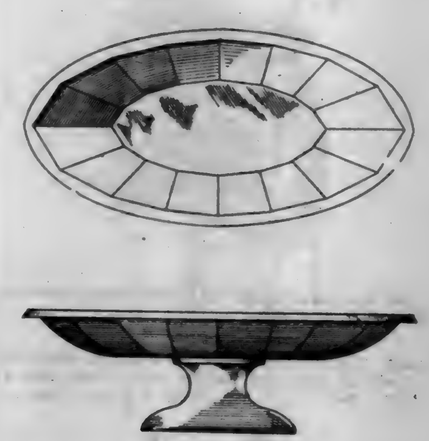
The ornamental design for a portable lamp standard, as shown.

67,549. PURSE. MAMIE E. ROSE, Lynchburg, Va. Filed Apr. 18, 1925. Serial No. 13,153. Term of patent 3½ years.



The ornamental design for a purse, as shown.

67,550. SIGN OR SIMILAR ARTICLE. WILLIAM D. ROSE, Portland, Oreg. Filed June 23, 1923. Serial No. 6,557. Term of patent 3½ years.



The ornamental design for a sign or similar article, as shown.

67,551. CHANDELIER OR ARTICLE OF SIMILAR NATURE. ISIDOR ROSENBLATT, New York, N. Y. Filed Mar. 12, 1925. Serial No. 12,689. Term of patent 3½ years.

The ornamental design for chandelier or article of similar nature, as shown.

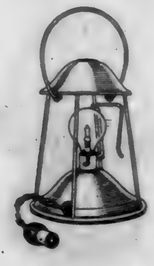
67,552. ICE-CREAM DISH. ALBERT F. SAUNDERS, Syracuse, N. Y., assignor to L. N. Benedict Mfg. Co., East Syracuse, N. Y. Filed Feb. 5, 1925. Serial No. 12,275. Term of patent 3½ years.

The ornamental design for an ice cream dish, substantially as shown.

67,553. PLATE OR SIMILAR ARTICLE. EMIL L. SCHNEFF, Trenton, N. J., assignor to Scammell China Company, Trenton, N. J. Filed Apr. 8, 1924. Serial No. 9,201. Term of patent 14 years.

The ornamental design for a plate or similar article, as shown.

67,554. TOY MUSICAL INSTRUMENT. FREDERICK G. SCHOLL, Woodhaven, N. Y. Filed Mar. 20, 1925. Serial No. 12,779. Term of patent 7 years.

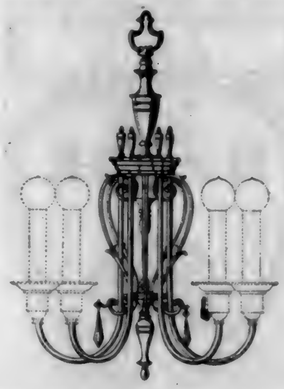


The ornamental design for a toy musical instrument substantially as shown.

67,555. COMBINATION BIRD CAGE AND SUPPORT. CARRIE E. SCHUSTER, Detroit, Mich. Filed Feb. 14, 1925. Serial No. 12,382. Term of patent 7 years.

The ornamental design for a combination bird cage and support, as shown.

67,556. ELECTRIC LANTERN. WILLIAM H. TIFFANY, Portland, Oreg. Filed Nov. 25, 1924. Serial No. 11,483. Term of patent 3½ years.



The ornamental design for an electric lantern, substantially as shown.

67,557. BEVERAGE CONTAINER. JOHN M. TRAVIS, St. Louis, Mo. Filed Dec. 18, 1922. Serial No. 4,626. Term of patent 7 years.

The ornamental design for a beverage container, as shown.

67,558. LIGHTING FIXTURE. ERNEST A. WALKER, Newark, N. J., assignor to William Goldberg and Abe Goldberg, both of Newark, N. J., trading as The G & G Fixture Co., a Copartnership. Filed Mar. 17, 1925 Serial No. 12,744. Term of patent 7 years.

The ornamental design for a lighting fixture, as shown.

67,559. LIGHTING FIXTURE. ERNEST A. WALKER, Newark, N. J., assignor to William Goldberg and Abe Goldberg, trading as The G & G Fixture Co., Newark, N. J., a Copartnership. Filed Mar. 17, 1925. Serial No. 12,745. Term of patent 7 years.

The ornamental design for a lighting fixture, as shown.

67,560. SCROLL ARM FOR LIGHTING FIXTURES. ERNEST A. WALKER, Newark, N. J., assignor to William Goldberg and Abe Goldberg, both of Newark, N. J., trading as The G & G Fixture Co., a Copartnership. Filed Mar. 17, 1925. Serial No. 12,746. Term of patent 7 years.

The ornamental design for a scroll arm for lighting fixtures, as shown.

67,561. GINGHAM TEXTILE FABRIC. JOHN W. WINTERBOTTOM, Nashua, N. H., assignor to Nashua Manufacturing Company, Nashua, N. H., a Corporation of New Hampshire. Filed Apr. 16, 1924. Serial No. 9,291. Term of patent 3½ years.

The ornamental design for a gingham textile fabric as shown.

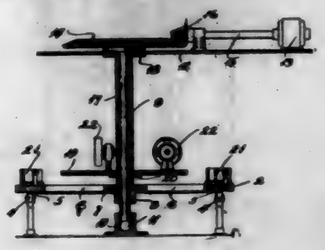
67,562. MIRROR. PAUL WINTERLICH, Dayton, Ohio. Filed Feb. 28, 1925. Serial No. 12,522. Term of patent 3½ years.

The ornamental design for a mirror, as shown.

67,563. CABINET FOR SOUND-PRODUCING DEVICE. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Company, Inc., a Corporation of New York. Filed Mar. 5, 1925. Serial No. 12,618. Term of patent 7 years.

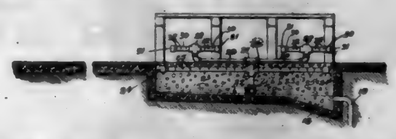
The ornamental design for a cabinet for sound producing devices, substantially as shown.

67,564. SUNDAE HOLDER. ALBERT F. SAUNDERS, Syracuse, N. Y., assignor to T. N. Benedict Mfg. Co., East Syracuse, N. Y. Filed Feb. 5, 1925. Serial No. 12,276. Term of patent 3½ years.



The ornamental design for a sundae holder, substantially as shown.

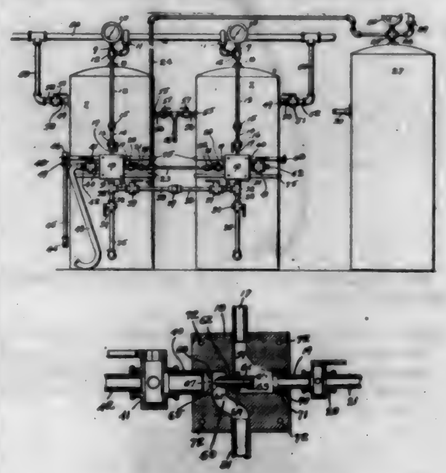
PATENTS



GRANTED JUNE 9, 1925.

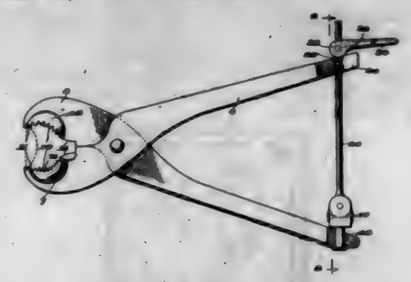
1,540,742. FEEDING TABLE. CHESTER M. ANGELL, Chicago, Ill., assignor to Vesta Battery Corporation, a Corporation of Illinois. Original application filed Feb. 27, 1922, Serial No. 539,430. Divided and this application filed Apr. 14, 1923. Serial No. 632,066. 3 Claims. (Cl. 198—209.)

1. A circular conveyor table, a track upon the underside of said table, antifriction supporting devices contacting with said track, means for rotating said table and a circular stationary platform arranged above the conveyor table concentrically therewith.



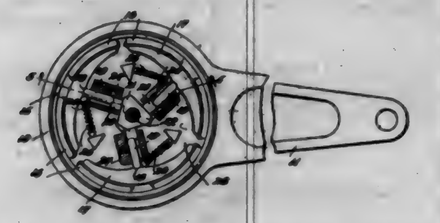
1,540,743. METHOD OF CLEANING AUTOMOBILES. LOUIS J. BADARACCO, St. Louis, Mo., assignor to The Auto Laundry System Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 14, 1923. Serial No. 632,041. 2 Claims. (Cl. 87—5.)

2. The method of cleaning automobiles and the like as a continuous operation which consists of steps taken in the following order first spraying over the greasy parts a film of kerosene, second, dusting the interior of the car with compressed air during which time the grease absorbs the kerosene and becomes softened; third, washing the top of the car and simultaneously therewith subjecting the underside of the car and fenders and the wheels to an upwardly directed spray of water under pressure for softening the road accumulations thereon; fourth, subjecting the parts of the car thus treated to the action of a high velocity spray of water intermingled with a preponderance of air under pressure for removing the road and grease accumulations which have become softened under the action of the previous sprays; fifth, flushing the remainder of the outside of the car with water for floating off lightly lodged foreign matter therefrom, and lastly drying the automobile.



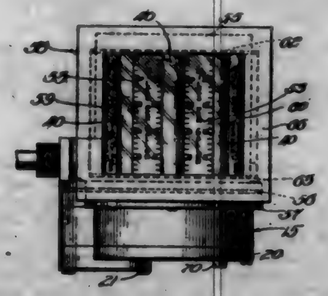
1,540,744. APPARATUS FOR WASHING AUTOMOBILES. LOUIS J. BADARACCO, St. Louis, Mo., assignor to The Auto Laundry System Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 21, 1923. Serial No. 633,788. 10 Claims. (Cl. 299—84.)

1. An automobile washing apparatus comprising a tank, means for introducing a liquid into said tank, means for introducing air under pressure into said tank, a mixer provided with an outlet, a nozzle adjustably located entirely in said mixer coacting with said outlet for cutting off or regulating the amount of liquid passing through said mixer, means for passing air through said nozzle, means for admitting liquid under pressure to said mixer and a delivery means secured to said mixer.



10. An automobile washing apparatus comprising a plurality of liquid tanks, a mixer for each tank and means whereby all the mixers or any one of them may be used with any tank.

1,540,745. PLIERS. ZERO M. BAIN, Coffee Creek, Mont. Filed Jan. 5, 1925. Serial No. 648. 2 Claims. (Cl. 294—41.)

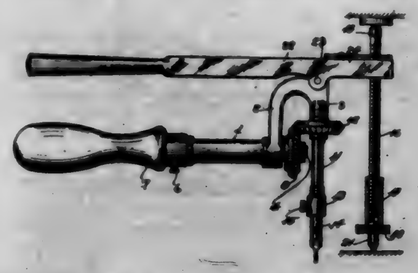


1. A pair of pliers comprising handles having jaws, a shank permanently connected to one of said handles and having a pivot member, a stem connected to said pivot member and being threaded, a nut threaded on said stem and having a reduced terminal portion, one end of one of said handles being provided with a slot receiving the reduced terminal portion of said nut, and a lever pivoted at its forward end to said nut and being of channeled construction to provide a groove for the reception of said stem.

1,540,746. SHOCK ABSORBER. JAMES PIERCE BALDWIN, Los Angeles, Calif. Filed Nov. 11, 1924. Serial No. 749,277. 4 Claims. (Cl. 188—130.)

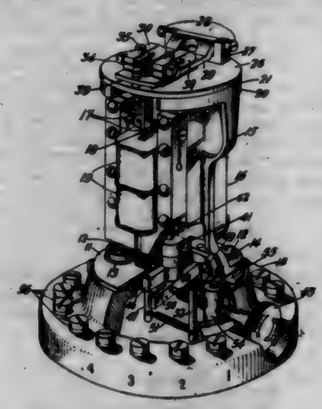
1. In a shock absorber, in combination, relatively movable but non-separable friction and supporting members, and a brake shoe and movable strut interposed between said members, one end of the strut being carried by the support and the other end engaging the brake shoe, the arrangement being such that the strut tends to assume such position as to transmit thrust in a direction normal to the friction member as it moves in one direction, and means for preventing said strut from assuming such position, for the purpose set forth.

1,540,747. METER AND THE LIKE. THOMAS A. BANNING, Jr., Wilmette, Ill. Filed Dec. 29, 1923. Serial No. 683,883. 34 Claims. (Cl. 235—1.)



1. In a device for displacing liquid substantially in proportion to the travel of a motor and a receptacle for liquid so displaced, means for delivering liquid from said displacing means to said receptacle for accumulation in the receptacle during the consumption of a unit of fuel by the motor, and means for indicating the ratio of liquid delivered to the receptacle as compared to fuel required to propel the motor, substantially as described.

1,540,748. PROCESS OF MANUFACTURING ETHYLENE DIHALIDES. WALTER BAUER, Darmstadt, Germany, assignor to Röhm & Haas Aktien-Gesellschaft, Darmstadt, Germany, a Firm. Filed Apr. 26, 1922. Serial No. 556,765. 2 Claims. (Cl. 260—166.)

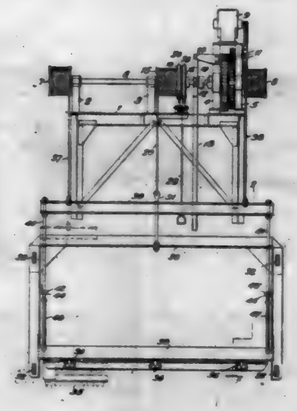


1. The herein-described process of manufacturing ethylene dihalides, which consists in reacting acetylene and hydrogen halide in presence of a gaseous oxydizing substance.

1,540,749. SCREW-DRIVING DEVICE. ARTHUR A. BEACH, Glendale, Calif. Filed Apr. 24, 1924. Serial No. 708,797. 8 Claims. (Cl. 144—32.)

1. A tool including a curved frame having a cylindrical member projecting therefrom, a tool shaft rotatably supported in the curved frame at right angles to the cylindrical member, a tool socket carried by one end of said tool shaft, an operating shaft mounted in the cylindrical member, a handle for operating said shaft, cooperating bevel gears on the operating shaft and tool shaft, to drive the latter in the operation of the former, a supporting means including a threaded shaft terminally formed to permit said shaft to be rigidly held between spaced supports, and a handle member pivotally connected with the curved frame and adjustable longitudinally of the threaded shaft.

1,540,750. ELECTROMAGNETIC DEVICE. WILLIAM O. BECK, Ridgefield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 20, 1921. Serial No. 479,064. 10 Claims. (Cl. 200—95.)



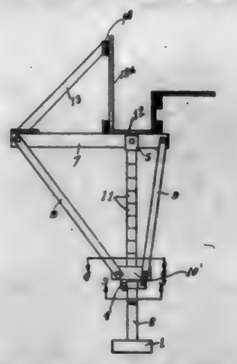
10. An electromagnetic device comprising an operating coil, a support therefor, an armature, a contact member engaged upon the operation of said armature, a supporting plate for said contact member, a flexible intermediate member rigidly connected to said plate and to the support, a shaft rotatably mounted in said support and having a cam at one end adapted to engage a roller rotatably mounted upon said plate, and means for causing the rotation of said shaft to alter the position between the contact member and the armature.

1,540,751. HOISTING APPARATUS. FRANK R. BENSON, Kecoughtan, Va., assignor to Newport News Shipbuilding & Dry Dock Company, Newport News, Va., a Corporation of Virginia. Filed Feb. 9, 1924. Serial No. 691,696. 10 Claims. (Cl. 254—185.)

1. In hoisting apparatus, a rotatable shaft, a brake drum fixed on said shaft, a winding drum loosely mounted

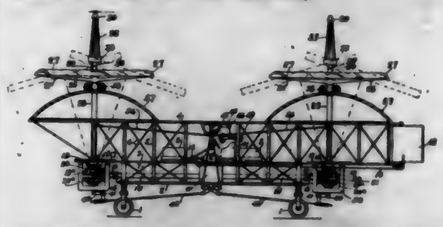
on said shaft, a brake drum fixed to said winding drum, and means for limiting the relative movement between

said brake drums comprising stops on each of said drums adapted to engage with each other.



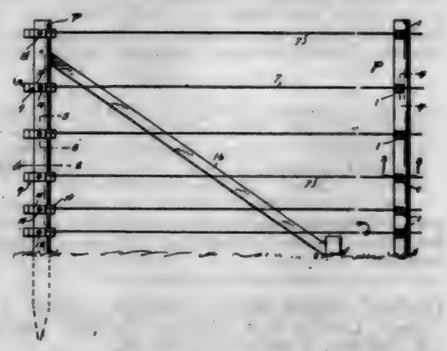
1,540,752. OBJECTIVE LENS SYSTEM. WILLIAM F. BIELICKE, Berlin-Neukolln, Germany. Filed Mar. 8, 1924. Serial No. 697,931. 1 Claim. (Cl. 88—57.)

In an objective lens system for photographic, microscopic, projection, and similar purposes, the combination of four lenses, to wit, a collective and a dispersive lens separated by an air space and situated on a side of the diaphragm facing the incident light and two collective lenses separated by an air space on the rear side of the diaphragm one of these collective lenses having its focal length not longer than twice and the other not greater than the focal length of the combined objective lens and one of these collective lenses at the rear of the diaphragm having its weaker curvature facing the diaphragm.



1,540,753. SHORING DEVICE. JAMES S. BIRCH, Chicago, Ill. Filed Jan. 11, 1924. Serial No. 685,511. 1 Claim. (Cl. 248—2.)

In a shoring device, a base, a hollow tube extending from said base, a clamping collar resting upon said tube, a rod extending through said clamping collar, a bracket attached to the upper end of said rod, a beam supported by said bracket, a plurality of pipe sections



surrounding said rod and extending between said collar and bracket, a block supported upon said collar and braces connecting said beam and block.

1,540,754. FLYING MACHINE. CHARLES C. BLACKMORE, Dayton, Ohio. Filed Dec. 6, 1922. Serial No. 605,159. 3 Claims. (Cl. 244—19.)

1. In a helicopter, a lifting propeller, a shaft supporting said lifting propeller at its upper end, means to support the lower end of said shaft to permit the same to swing in a vertical plane, a carriage supporting said shaft adjacent its upper end, an arcuate guide way supporting said carriage, said guide way being concentric to the point about which said shaft swings, and a parachute carried by the upper end of said shaft and swinging therewith.

1,540,755. FENCEPOST. GLEN H. BRADY, Shinnston, W. Va. Filed Apr. 5, 1924. Serial No. 704,467. 2 Claims. (Cl. 256—40.)

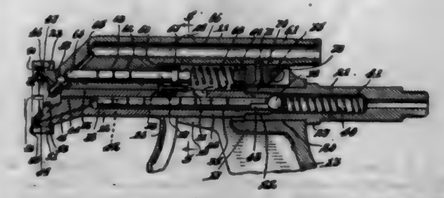
2. As a new article of manufacture, a channel fence post having outstanding bosses carried thereby at points

spaced longitudinally thereof, each of said bosses being provided with means for attaching wire engaging means thereto, a turn collar mounted upon the post, said collar being cruciform to interlock with the bosses when in one position, and wire clamping means associated with the collar.

1,540,756. FASTENER AND TIGHTENER FOR TIRE CHAINS. FREDERICK M. BROWN, Fort Dodge, Iowa. Filed Jan. 25, 1924. Serial No. 688,519. 6 Claims. (Cl. 24—69.)

1. A chain fastener comprising a bar having a transversely arranged pivot pin upon one end, one edge being provided with a notch and its free end provided with a hook, one edge provided with diverging sides terminating in longitudinally extending shoulders, and a restricted portion above said shoulders, substantially as described and for the purposes stated.

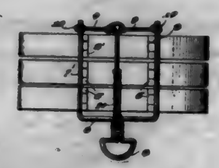
1,540,757. METHOD OF FORMING HELICOIDAL SURFACES. EARLE BUCKINGHAM, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 13, 1922. Serial No. 543,403. 35 Claims. (Cl. 76—101.)



9. The method of forming a hob, which consists in rotating a blank, in forming a thread on the blank having helcoidal surfaces, in cutting flutes on the blank through the thread, and in side relieving the helicoidal surfaces on the sides of the teeth by a constant relief while maintaining the lead unchanged, whereby the effective contour behind each cutting surface is the same at successivee surfaces of intersection similar to the initial cutting face.

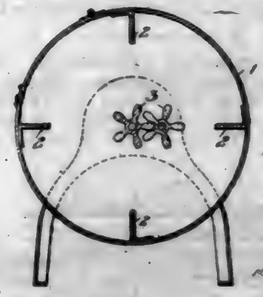
1,540,758. SPRING-CLIP BRACKET FOR BURKE HAND FIRE EXTINGUISHERS. GEORGE W. BURKE, Jr., Dayton, Ohio. Filed Sept. 12, 1922. Serial No. 587,831. 2 Claims. (Cl. 248—20.)

2. A bracket for cylindrical objects comprising, a plurality of substantially parallel loops each loop having an opening therein, parallel guide bars secured in perpendicular relation to the parallel loops adjacent the open ends thereof, the opening in one end loop being of such width as to guide a lug on an object to be retained by the bracket but to prevent its passing therethrough, the loop ends of the other end loop passing toward each other sufficiently to retard rearward movement of an object therein due to its own inertia but allowing rearward movement of such object on a positive pull, means for attaching the bracket to a support.



1,540,759. PNEUMATIC PAINTBRUSH. JAMES H. CAHILL and RALPH H. KINGDON, Chicago, Ill., assignors to Sears, Roebuck and Co., Chicago, Ill., a Corporation of New York. Filed Oct. 7, 1922. Serial No. 592,945. 26 Claims. (Cl. 91—45.)

6. In a pneumatic paint brush the combination of a handle, an air conduit adapted to be rigidly engaged with said handle, a paint conduit adapted to be demountably engaged with said air conduit and said handle, valves for said conduits, operating elements for said valves, and a single trigger for actuating said elements, said operating element for said paint valve having a lost motion detachable operating connection with said trigger.

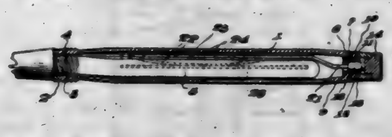


7. In a pneumatic spraying device the combination of a handle having spaced projecting walls thereon, a pair of conduits adapted to be supported thereby in operative relation, one of said conduits conducting liquid substance to be sprayed and the other the air to serve as the transmitting medium therefor, each of said conduits having a control valve, a trigger having a forked portion permanently mounted in said handle between said spaced walls thereof, said conduits being mounted in operative relation in said handle projecting between the legs of said forked trigger, operating stems for said control valves and means engageable by the legs of said trigger for operating said stems.

1,540,760. ASSEMBLING DEVICE. OSCAR C. CARDIN, Valentine, Nebr. Filed June 3, 1924. Serial No. 717,611. 3 Claims. (Cl. 29—87.1.)

1. In an assembling device for use in holding the transmission bands in position on the transmission drums, a holding frame including a body portion having a handle, a pair of arms extending from the body portion and engageable with the lgs of the transmission bands, and readily releasable means cooperable with the outer ends of the arms for maintaining them engaged with the lugs, said readily releasable means comprising a rod fixed to the frame, a shiftable rod mounted on said fixed rod, a spring for drawing said shiftable rod inwardly, and links carried by the shiftable rod and having eyes engageable with the outer ends of the arms.

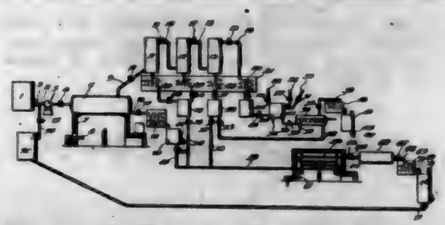
1,540,761. CHURN. OTTO I. CHORMANN, Rochester, N. Y., assignor to The Pfaudler Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 5, 1924. Serial No. 684,519. 5 Claims. (Cl. 259—84.)



2. A closed container adapted for the treatment of fatty materials and liquids comprising a metal body having an interior lining of vitreous enamel provided with a matt surface.

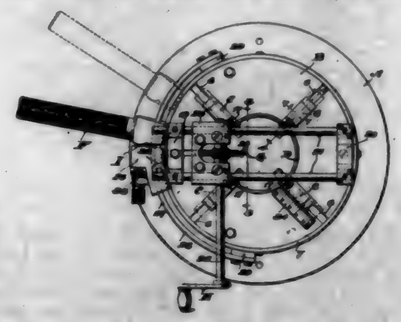
1,540,762. TOBACCO PIPE. GEORGE C. CORDES, Detroit, Mich. Filed Apr. 18, 1922. Serial No. 554,411. 1 Claim. (Cl. 131—12.)

A tobacco pipe having a recessed stem and an insert within the recess of the stem composed of inner and outer tubes of absorbent material, the inner tube being exposed to the smoke and of a material to rapidly absorb the moisture and nicotine thereof, and the outer tube being of greater thickness of material than the inner tube and serving to gradually absorb the collected moisture and nicotine of the inner tube.



1,540,763. FOUNTAIN PEN. SAMUEL V. CORONA, Janesville, Wis. Filed July 15, 1921. Serial No. 484,903. 4 Claims. (Cl. 120—46.)

1. In a self filling fountain pen, a barrel, a sleeve, a ferrule connecting said sleeve and barrel to permit rotary movement of the sleeve, an ink bag, means for compressing said ink bag, a longitudinally movable cam carried by said ferrule, a second cam rotatable with said sleeve and engaging said first named cam for operating said bag compressing means.



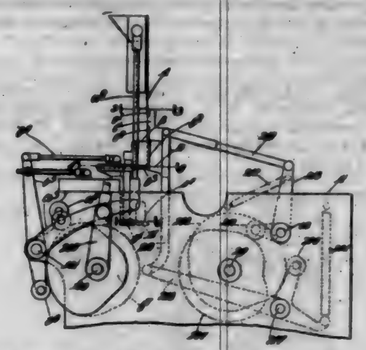
1,540,764. APPARATUS FOR TREATING PETROLEUM OILS. WALTER M. CROSS, Kansas City, Mo., assignor to Gasoline Products Company, New York, N. Y., a Corporation of New York. Filed July 20, 1922. Serial No. 576,197. 3 Claims. (Cl. 196—106.)

1. In an apparatus for treating petroleum oils, the combination with means for fractionally distilling the oil having separate condensate collecting means, of means for refining the lighter fractions of a gasoline-like character, a drawoff line for tarry residual products from the fractional distilling means and means whereby the tarry residual products are combined with the higher boiling point fractions from said distilling means, a pressure distilling means for cracking said higher boiling point fractions and residual products from the fractional dis-

tilling means comprising a heating element, a reaction chamber connected thereto whereby the higher boiling point fractions and residual products may be subjected to the converting reaction of temperatures and pressures regulated to produce conversion of the oil while in substantially liquid phase, means for returning the synthetic products from the cracking means to the initial distilling means for redistillation.

1,540,765. PISTON-RING-FITTING APPARATUS. CHARLES E. DANIELS, Atchison, Kans. Filed Feb. 14, 1924. Serial No. 692,773. 15 Claims. (Cl. 90—59.)

1. In an apparatus for milling the ends of a piston ring, the combination of a support for said ring, of a milling tool adapted to be located between the ends of the ring, and means for progressively compressing the ring up to a predetermined point whereby the ends thereof will be pressed against the milling tool, and means for operating said tool.



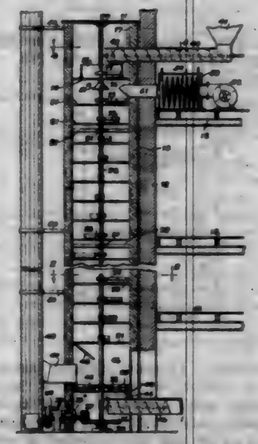
1,540,766. METAL PROCESS. SAMUEL DANIELS and ARTHUR C. ZIMMERMAN, Dayton, Ohio, assignors to Thomas Butmann, trustee, Dayton, Ohio. Filed Feb. 23, 1923. Serial No. 620,833. 35 Claims. (Cl. 147—7.)

1. A process for treatment of metals which comprises, coating the metal with a silicate and heating said coating to permanently affix it.

1,540,767. MACHINE FOR MAKING AND FILLING PACKETS. ALBERT DAY, Wingham Grove, London, England. Filed Apr. 14, 1924. Serial No. 706,437. 5 Claims. (Cl. 93—2.)

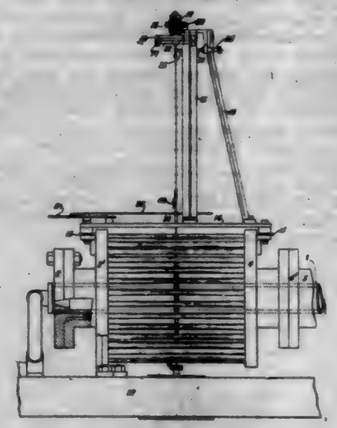
1. In a machine for making and filling packets, a vertically reciprocable former, a folder having consecutive horizontal and vertical movements, said vertical movements of said folder synchronizing with the vertical

movements of said former, a stationary mould located under said former and vertically slotted to give passage



to said folder, said mould having a movable bottom to give passage to a packet, and an ejector platform located below said mould.

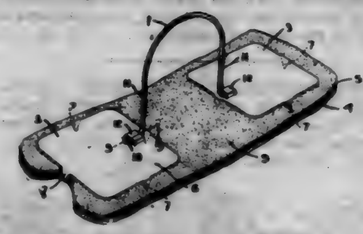
1,540,768. METHOD OF AND MEANS FOR THE MEASUREMENT OF COLORS. ELWOOD EDIE, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Sept. 1, 1921. Serial No. 497,588. 11 Claims. (Cl. 88—14.)



1. Mechanism for gaging color values, comprising a series of rotary members each having permanent opaque sectors of different nonfading colors, the sectors of the one color diminishing in area in the series and the sectors of another color increasing in area, said sectors being capable of reduction in thickness without variation from their original colors.

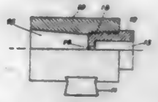
1,540,769. DRIER. CHARLES OSCAR ERICSON, Helmetta, N. J. Filed Mar. 23, 1923. Serial No. 627,129. 17 Claims. (Cl. 34—33.)

1. A drier comprising a vertical hollow body having a series of transverse shelves therein arranged at different elevations and delivering one to the other, means for forcing the material from shelf to shelf, means for forcing a drying medium into the upper part of the drier body, means for exhausting the moist air from the lower part of said body, and means for withdrawing the dried stock from the lower part of the body.



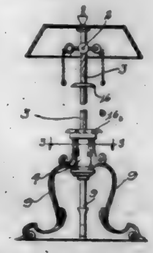
1,540,770. FILAR CONTROL. MICHAEL BIRT FIELD, Glasgow, Scotland, assignor to Kelvin Bottomley & Baird, Limited, Glasgow, Scotland, a Corporation of Great Britain. Filed Oct. 12, 1921. Serial No. 507,332. 9 Claims. (Cl. 171—95.)

4. In a measuring or like instrument, in combination, a pivoted moving system, a bifilar suspension above said system, and means independent of said system exercising in said suspension axial force less than the weight of said system.



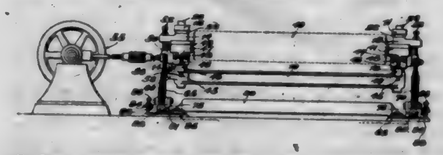
7. A filar control means for measuring instruments and the like, comprising filaments in parallel and a strut connecting said filaments intermediate their ends in such wise as to equalize the tensions in said filaments.

1,540,771. WICKET AND STAKE FOR INDOOR CROQUET. EDWARD S. FOSTER, Boston, Mass. Filed Mar. 15, 1924. Serial No. 699,572. 2 Claims. (Cl. 273—83.)



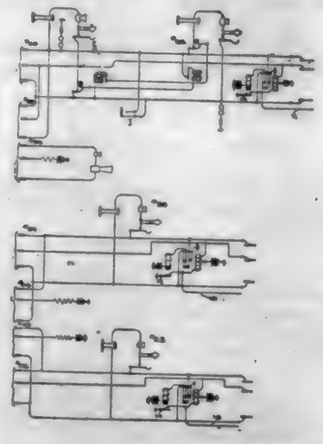
2. A wicket for use in playing indoor croquet on a floor having a covering, comprising an arch formed of heavy wire having the end of each arm of the arch flattened and bent at right angles to said arm, separate thin, flat, metallic sheets to lie on the floor covering and form supports for the arch, each having a struck-up portion between which and the main portion of the sheet said flattened end is clamped and sharp pointed tabs extending downwardly from each sheet to enter the floor covering and prevent lateral movement of the wicket.

1,540,772. FORESIGHT. JAMES WILLIAM GIBBS, Victoria Park, Western Australia, Australia, assignor of one-half to James Lockhart, West Perth, Western Australia, Australia. Filed Mar. 31, 1922. Serial No. 548,496. 1 Claim. (Cl. 33—47.)



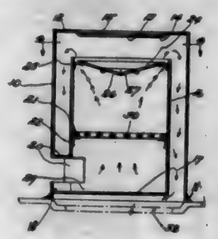
A foresight for firearms comprising a main body, means for attaching said body to a gun barrel, said body having a cylindrical bore extending from one end to the other thereof, which bore is flared outwardly from a point substantially midway between the ends to one end thereof, the other end of said bore being threaded, and a cup-shaped member externally threaded to engage the threads of said bore and having a sighting hole centrally of its bottom substantially as described.

1,540,773. STAND LAMP. JOSEPH GOLDMAN, Chicago, Ill. Filed Nov. 8, 1924. Serial No. 748,729. 2 Claims. (Cl. 240—81.)



1. A device of the type described comprising a substantially upright body member, a supporting member secured to said body member, said supporting member having a plurality of substantially vertical flat surfaces, a plurality of radial members having portions adapted to lie in engagement with the flat surface of said supporting member, a portion of said supporting member being constructed to overhang and partially receive said radial members at one end of the flattened portions, and a disc having an annular groove adjacent to the peripheral edge thereof arranged for movement on said body member, whereby said disc may be moved into engagement with the radial members at the lower parts of the flat portions thereof, these portions being received in the groove in said disc.

1,540,774. PAPER-MAKING MACHINE. RUFUS H. GRANT, Westbrook, Me., assignor to Rice, Barton & Fales, Incorporated, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 2, 1924. Serial No. 690,230. 20 Claims. (Cl. 92—45.)

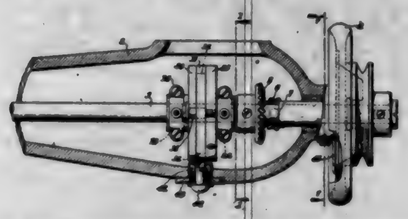


8. In a paper making machine, the combination of a laterally vibratory shake-frame, driving connections joined to said shake-frame for imparting lateral movement thereto; and one or more upright spring bars connected at one end to said shake-frame and at the other end to a suitable support, each bar being composed of a plurality of leaves of varying lengths and being tensioned to constantly tend to move the shake-frame to the limit of its vibration in one direction and thereby imposing tension upon said driving connections throughout movement of the shake-frame in both directions of its vibration.

1,540,775. WATCHMAN'S SERVICE. EDWIN L. GRAUEL, Rochester, N. Y., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 20, 1919. Serial No. 318,655. 4 Claims. (Cl. 179—5.)

1. In a telephone system, lines, means for extending talking circuits therefrom, a watchman's supervisory system consisting of a signal for each line operated when a call is made from that telephone independent of said talking circuit, together with a time recording device adapted to record the number of the telephone calling and the time at which the call is made, together with an attendant's station at which said signals are located, and means whereby said attendant may connect with any calling station over which a signal has been operated regardless of its busy condition over a path also independent of said talking circuit.

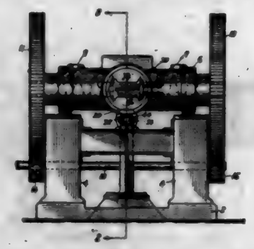
1,540,776. HEATER. GEORG HAFNER, New York, N. Y. Filed Jan. 12, 1924. Serial No. 685,733. 1 Claim. (Cl. 126—58.)



A heater comprising an outer circular casing open at the bottom, a lid closing the upper end of the outer casing, an additional inner casing mounted concentrically in the outer casing, said inner casing being closed at the bottom and open at the top, the inner casing communicating with the outer casing at the top of the heater walls connecting the inner and outer casings at the bottom and bounding an opening communicating with the chamber of the inner casing, a grate mounted in the inner casing above the opening, a conical baffle mounted inverted in the upper end of the inner casing, said baffle having an opening therein, semi-circular doors normally closing said opening and spring actuated hinges supporting said doors, the air circulation being adapted to enter the inner casing through the opening beneath the grate and course upwardly around the baffle and then downwardly between the inner and outer casings and out through the lower open end of the outer casing.

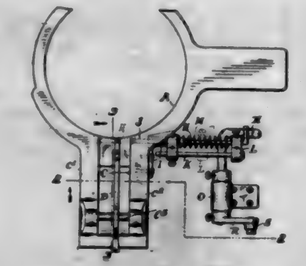
1,540,777. BOOKMARK. ISAAC HELLERMAN, New York, N. Y. Filed July 27, 1922. Serial No. 577,800. 1 Claim. (Cl. 116—119.)

A book marker comprising a one-piece clamp having gripping jaws of unequal length adapted to engage with the cover of a book, a pair of eye members formed integrally with said clamp to extend at right angles to the longer of said jaws, a rod member disposed between and secured by said eye members, and a marker extending along said rod member, said marker being adapted to swing in a plane at right angles to the cover that normally engages with said clamp.



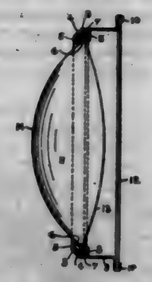
1,540,778. FEEDING MECHANISM FOR SEWING MACHINES. MARTIN HEMLER, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed July 16, 1923. Serial No. 651,801. 6 Claims. (Cl. 112—210.)

1. Feeding mechanism for sewing machines comprising a main-shaft, a main supporting disk fast on said main-shaft, and having a hub constituting a feed-lifting eccentric, a carrier-disk adjustable relative to said main-supporting disk, a feed-advancing eccentric formed integral with said carrier-disk, an adjusting disk intermediate said main and carrier-disks, a feed-dog, and operative connections between said eccentrics and said feed-dog.



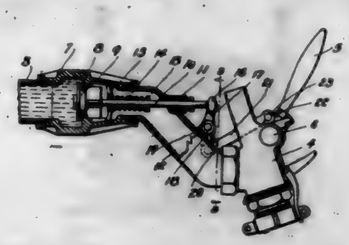
1,540,779. EXTRUDING MACHINE. OSCAR D. HOLLENBECK, Racine, Wis. Filed Sept. 17, 1923. Serial No. 663,026. 3 Claims. (Cl. 18—12.)

1. In a machine for extruding rubber or analogous plastic material, a casing having a passageway leading therefrom, a removable die head threaded into the passageway, and means for removing said head from said passageway, said means including a gear on the head, a pinion meshed therewith and means for rotating the



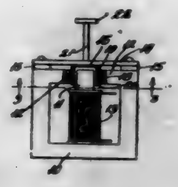
pinion, said pinion being adapted to mesh with said gear throughout the movement of said head out of said passageway.

1,540,780. GAP-CLOSURE ATTACHMENT FOR KNITTING MACHINES. EDWARD JACKSON, Reading, Pa., assignor to The Nolde and Horst Company, Reading, Pa., a Corporation of Pennsylvania. Filed June 5, 1924. Serial No. 717,935. 4 Claims. (Cl. 66—12.)



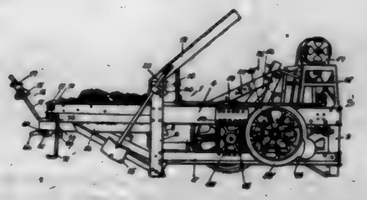
1. In a knitting machine the combination with a plurality of pivotally operated thread-guide members and a latch ring having a thread-guide gap, of a gap closing member comprising a straight bar movable across said gap in a plane substantially tangential to said ring, and means for determinedly moving and retracting said bar.

1,540,781. MOUNT FOR CONDENSER LENSES. CARL W. KEUFFEL, Weehawken Township, Hudson County, N. J., assignor to Keuffel & Esser Co., Hoboken, N. J., a Corporation of New Jersey. Filed Nov. 6, 1922. Serial No. 599,257. 2 Claims. (Cl. 88—24.)



1. In a mount for a condenser lens the combination of a holder member having a heat insulating lining and a retaining plate removably secured to said holder member which is adapted to fit the ordinary condenser holder of projection machines, and brackets removably mounted on said holder member and a transparent guard plate mounted in said brackets.

1,540,782. FAUCET. ANDREW A. KRAMER, Kansas City, Mo. Filed June 9, 1922. Serial No. 567,151. 4 Claims. (Cl. 137—21.)

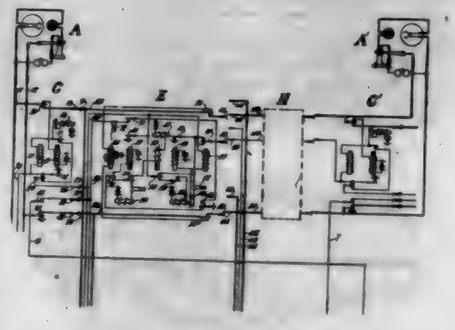


1. In combination with a dispensing conduit and a faucet at the discharge end of the conduit, a valve in the conduit, normally yieldingly held in closed position and having a stem extending to the exterior of the conduit, a handle for the faucet, and means operable by said handle and on said stem to unseat the valve when the faucet is opened.

1,540,783. VIBRATION INSTRUMENT FOR BONE AUDITION. FREDERICK W. KRANZ, Geneva, Ill. Filed Mar. 29, 1923. Serial No.628,683. 2 Claims. (Cl. 179—107.)

1. In an apparatus for translating alternating currents into mechanical vibrations, means for producing a magnetic field, a bar, means for causing vibration of said bar by the combined action of said magnetic field and said alternating currents, the area of said bar in contact with the air being small enough to minimize vibrations of the air caused by said vibrations of the bar, a disk, and a rod connecting said disk to said bar.

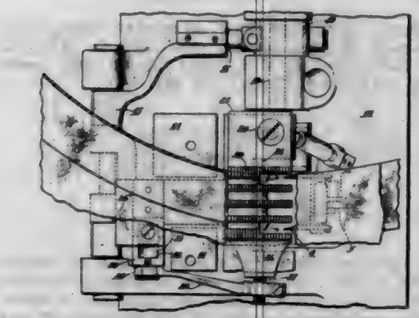
1,540,784. BALER. GEORGE W. LANGFORD, Ann Arbor, Mich., assignor to Economy Baler Company, Ann Arbor, Mich., a Corporation of Michigan. Filed May 17, 1919. Serial No. 297,899. 8 Claims. (Cl. 100—9.)



1. In a baler, the combination with a compression box and a plunger operating in said compression box, of a frame for supporting said parts having an upright, a cover member pivotally carried by said frame, and a cross bar carried by said frame beneath which one end of the cover is held when the cover is in use, and a single locking member for holding the other end of said cover.

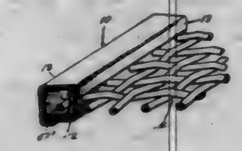
1,540,785. REEL. ALBERT LATHAM, Beverly, Mass., assignor to American Button & Fastener Co., Augusta, Me., a Corporation of Maine. Filed Nov. 6, 1919. Serial No. 336,042. 9 Claims. (Cl. 206—52.)

1. A reel comprising a body constructed and arranged to receive material wound upon it and having means to receive a winding spindle, a head carried by and fixed against movement on the body and an enclosing portion separably mounted upon the head.



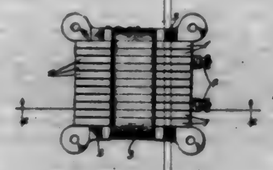
1,540,786. TELEPHONE SYSTEM. CLARENCE B. LOMAX, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 11, 1923. Serial No. 611,916. 13 Claims. (Cl. 179—27.)

1. In a combined telephone and watchman's service system, a plurality of outlying stations, a central station, means operable by the watchman at the outlying station to extend talking connections therefrom to said central station in a definite order, and means responsive to the watchman's call for sounding an alarm at the central station if the watchman calls in from one of said outlying stations out of its regular turn.



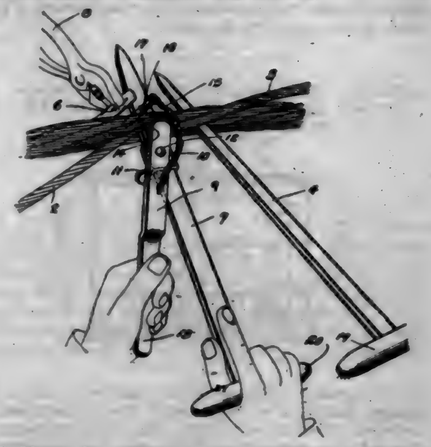
1,540,787. FEEDING MECHANISM FOR SEWING MACHINES. CALVIN H. LUCY, Baltimore, Md., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Mar. 11, 1919. Serial No. 281,951. 15 Claims. (Cl. 112—206.)

1. In a sewing machine, in combination, stitch-forming mechanism including a plurality of spaced needles, and work advancing mechanism including a presser member and cooperating four-motion feed-dog sections adjacent



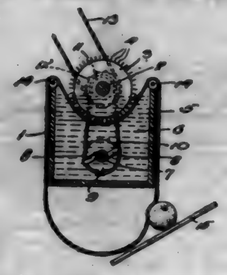
the respective needles and movable at the same angular velocity in concentric horizontal paths to feed the work in a curved path without distortion.

1,540,788. BORDER FRAME FOR OPEN-METAL-WORK PANELS AND THE LIKE. EDWARD MCCLURE, Chicago, Ill. Filed Oct. 24, 1924. Serial No. 745,569. 10 Claims. (Cl. 189—64.)



1. A border frame for metal-work and the like, comprising a flanged frame member, one of the flanges being adapted to receive the metal-work supported by the border frame, and channel like locking bars having flanged portions adapted to embrace two opposite edges of the flanges of the frame member.

1,540,789. TESTING TRANSFORMER. CLAUDE M. MCCORD, Richmond Heights, Mo. Filed Apr. 7, 1924. Serial No. 704,628. 5 Claims. (Cl. 175—356.)



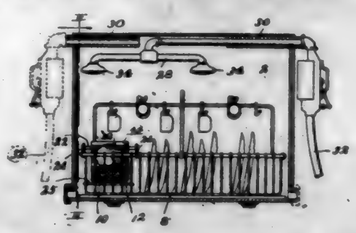
3. An integrally cast testing transformer comprising a body portion, upwardly extending flanges at the sides of the body portion, downwardly extending flanges supporting the body portion, said upwardly extending flanges and body portion having transverse slits therein which extend downwardly entirely through the body portion, and asbestos sheets filling said slits.

1,540,790. SPLICING NEEDLE AND TUCKER. DAVID H. MCCRAY, Tulsa, Okla. Filed July 18, 1924. Serial No. 726,768. 6 Claims. (Cl. 117—6.)

1. Means for splicing a cable comprising a blade, a tucker rod adjustably mounted on the blade and a cable stop on the blade.

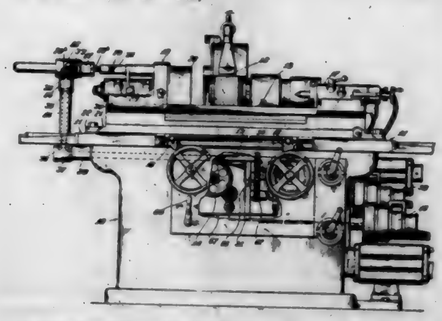
1,540,791. MACHINE FOR APPLYING A LIQUID COATING OR PRESERVATIVE TO THE SKIN OF FRUIT. REX DE ORR MCDILL, Cienfuegos, Cuba. Filed June 10, 1922, Serial No. 567,372. Renewed Feb. 9, 1925. 3 Claims. (Cl. 91—54.)

1. A machine for applying a preservative liquid coating to fruit, consisting of a tank adapted to contain a suitable water repelling liquid coating, an absorbent fabric belt, means for driving the belt, and means for agitating the liquid coating in the tank, aforesaid belt being suitably arranged to contact with and apply the preservative coating to the fruit.



1,540,792. DISPENSING DEVICE. WALTER MCLAREN, Dayton, and URBAN A. KESIDLER, Oakwood, Ohio, assignors to The McLaren Products Co., Dayton, Ohio, a Corporation of Ohio. Filed June 2, 1923. Serial No. 642,927. 2 Claims. (Cl. 248—41.)

2. An article of manufacture comprising a stand having an open top with an inwardly extending ledge around



the opening, a rim surrounding and extending above the ledge and having a notch in one side, a removable tray supported on the ledge and having a laterally extending handle disposed in said notch, said tray having a plurality of cone receiving apertures.

1,540,793. TABLEWARE WASHER. GEORGE A. MALONEY, Kansas City, Mo. Filed Feb. 12, 1923. Serial No. 618,506. 5 Claims. (Cl. 141—9.)

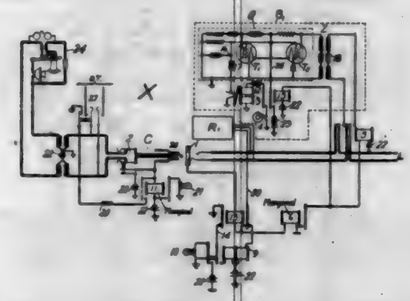
1. In a washer of the character described, a vertically-disposed holder, a horizontal shaft fixed to said holder, U-shaped bearings in which said shaft is rockably mounted, and manually-controlled means for alternately discharging a fluid against opposite sides of the holder and the contents thereof to cleanse said contents and actuate the holder.

1,540,794. GRINDING MACHINE. RAYMOND C. MITCHELL, Springfield, Ohio, assignor, by mesne assignments, to Barber-Colman Company, a Corporation of Illinois. Filed Aug. 16, 1920. Serial No. 403,999. 1 Claim. (Cl. 51—95.)

A grinding machine having, in combination, with a base and a table reciprocable on the base, a shaft mounted to turn on a vertical axis at one end of the table, a plate pivoted on the table and having a head stock at the end adjacent said shaft and swingable transversely with the plate relative to the vertical shaft on the table, said head stock being mounted for longitudinal adjustment on the plate and having a horizontally disposed work driving element, said vertical shaft having its lower end passing through the table and terminating a substantial distance above the table, a horizontal longitudinally extending shaft having a gearing connection with the upper end of said vertical shaft, said gearing connection permitting the horizontal shaft to swing in a horizontal plane on the axis of said vertical shaft and also permitting the longitudinal movement of the horizontal shaft in a direction perpendicular to the axis of the vertical shaft, a flexible coupling between said horizontal shaft and the driving element of the head stock, said coupling being adapted to permit the head stock to be swung bodily relative to the vertical shaft transversely of said table on the pivotal center of said plate, and means operatively connected with the lower end of said vertical shaft for positively driving the same, and maintaining driving engagement therewith during the travel of the vertical shaft with the table.

1,540,795. CABINET FOR ELECTRIC SWITCHES. PAUL E. MONSON, Berkeley, Calif., assignor to Bryson D. Horton, Detroit, Mich. Filed July 15, 1918. Serial No. 245,114. 15 Claims. (Cl. 200—50.)

4. The combination with a switch cabinet, an electric switch therein, and a hinged cover therefor, an operating lever for opening and closing said switch, a lock mechanism for said cover operable by the movement of said lever, interlocking means embodied in said lock for holding said switch and lever in their open position when said cover is open, and means comprising a key-like member for disabling said lock whereby the switch can be closed while the cover is open, said last means having a portion adapted to cooperate with a complementary part of the interlocking means whereby said disablement may be normally effected through the use of said key-like means only.



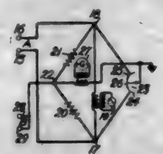
1,540,796. CAR CONSTRUCTION. WILLIAM E. MOREY, Chicago, Ill., assignor to Rodger Ballast Car Company, Chicago, Ill., a Corporation of Maine. Filed Oct. 24, 1923. Serial No. 670,422. 6 Claims. (Cl. 105—243.)

1. A convertible car having members providing a hopper for dumping between the tracks, swinging bottom walls adapted to occupy positions forming hopper walls or horizontal positions to form part of a substantially flat bottom, a second set of swinging bottom walls placed outwardly of the vertical planes containing the axes of rotation of said first mentioned swinging bottom walls, said latter swinging bottom walls being provided with intermediate swinging doors, and telescoping struts connecting the swinging edges of said intermediate swinging doors with said second set of bottom walls.

1,540,797. SIGNALING SYSTEM. PAUL B. MURPHY, Nyack, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 8, 1920. Serial No. 379,705. 16 Claims. (Cl. 179—4.

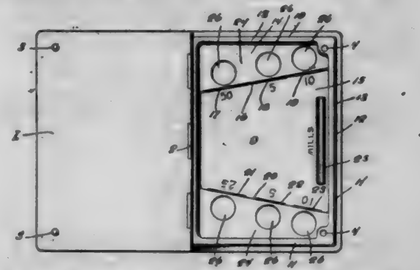
1. In an electric signaling system, means for generating electrical impulses of different audio frequencies, a transmitting medium, a transmitting station, means

thereat for applying the impulses to said transmitting medium separately and alternately in continuous succession, a receiving station, and receiving means thereat



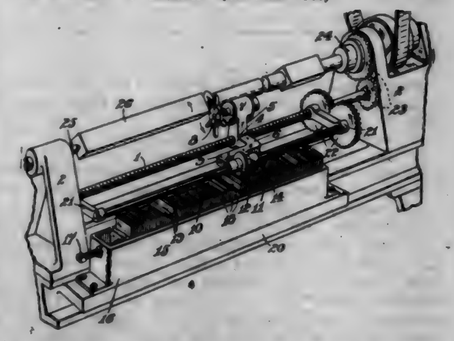
continuously connected to said transmitting medium and responsive only to the combined effect of the several electrical impulses when received singly and alternately over the transmitted medium.

1,540,798. WRENCH. WILLIAM A. NORTON, Marshalltown, Iowa. Filed Nov. 28, 1922. Serial No. 603,733. 3 Claims. (Cl. 81—85.)



1. A wrench comprising a handle member having a fixed jaw member provided with an opening and a fixed pin, a movable jaw member provided with a screw threaded portion, a pin slidably mounted through the opening of said fixed jaw member, said slidable pin being designed to move in a plane parallel with the movement of said movable jaw member and having its outer end provided with an enlarged portion, a screw threaded member on the smaller portion of said slidable pin within the said opening and in operative relative with the screw threaded portion on said movable jaw member, a movable handle member having a yoke portion surrounding the head portion of the fixed jaw member, said yoke having an opening designed to receive said fixed pin from one edge of said fixed jaw member, the said yoke being provided with a cross member opposite from the opening of said yoke, the said cross member being provided with a cam portion to engage the said slidable pin, and a set screw for holding the yoke portion in operative position on said fixed pin.

1,540,799. SYSTEM FOR MEASURING THE CAPACITY OF ELECTRICAL CIRCUITS. DARRELL NUNN, West Kensington, London, England, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 6, 1923. Serial No. 617,283. 5 Claims. (Cl. 179—175.)



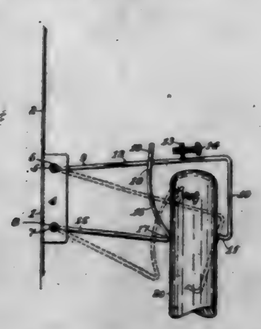
1. An apparatus for measuring the capacity unbalances of a phantomed circuit comprising means for measuring the side-to-earth unbalances independently of the internal characteristics existing between the pairs of the phantomed circuit, said means comprising a bridge arrangement and means for symmetrically connecting one pair of line conductors with respect to the other pair while measuring the side to earth unbalance in said other pair.

1,540,800. NOVELTY CONTAINER. JOHN NUTRY, Ridgewood, N. J. Filed Apr. 18, 1922. Serial No. 555,468. 13 Claims. (Cl. 232—4.)

1. A book-shaped bank comprising a body portion and front and back covers arranged to swing into and out of closed position against the body portion, the body portion having a front wall beneath the front cover, said front wall having a money slot therein thru which coins may be inserted into the body, the back cover constituting a closure for the otherwise open back of the body, the front cover being readily openable, and means whereby the back cover may be locked against opening by unauthorized hands.

1,540,801. AUTOMATIC WOOD TURNER. WALTER O'NEEL, Shelbyville, Ind. Filed Mar. 31, 1924. Serial No. 703,083. 7 Claims. (Cl. 142—37.)

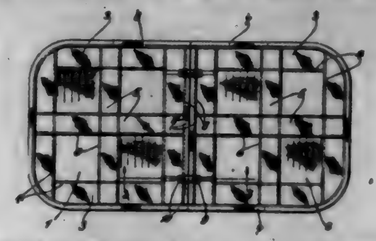
1. In a machine of the character described, the combination with a cutter head, of a support therefor and



means for causing said support to oscillate, including a template having a plurality of track teeth of different elevations and a helical cam arranged to engage said teeth.

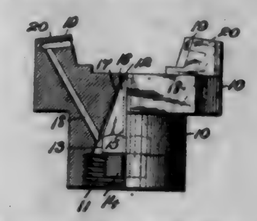
1,540,802. GAME. FRANK L. ORDWAY, Salem, Mass., assignor to Parker Bros., Salem, Mass., a Corporation of Maine. Filed Aug. 19, 1922. Serial No. 582,882. 5 Claims. (Cl. 273—101.)

1. Game apparatus comprising in combination, a vertical spindle, a platform having means for removably supporting the same upon said spindle, means for rotating said spindle thereby to move said platform at a predetermined speed when so supported, a series of figures mounted upon and movable relatively to said platform, and a movable engaging member controllable by the player and with respect to which said figures are moved by the platform, said figures being adapted readily to be moved relatively to said platform when engaged by said member.



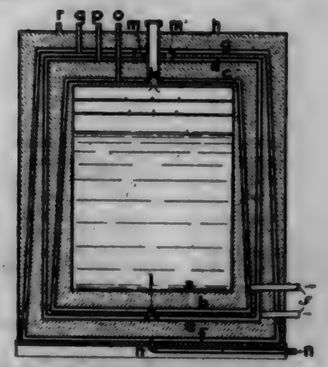
1,540,803. BROOM HOLDER. LEONARD J. POWERS, Waterloo, Iowa. Filed June 26, 1924. Serial No. 722,511. 2 Claims. (Cl. 24—249.)

1. A device of the character described, comprising superposed clamping-members pivoted at their adjacent ends to supporting-means, said members being shaped to have horiosntally opposed and separable end clamping parts and being slidably connected for limited relative movements, and a stop-device mounted adjustably upon one said member opposed to a part of the other member to adjustably limit the spread apart of their clamping parts.



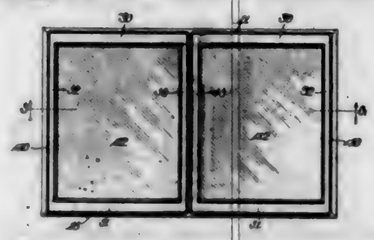
1,540,804. SEAT COVER. JOHN RHEES, St. Louis, Mo., assignor to Evr Klean Seat Pad Co., St. Louis, Mo., a Corporation of Missouri. Filed Mar. 10, 1922. Serial No. 542,590. 10 Claims. (Cl. 155—182.)

1. As an article of manufacture, a seat cover comprising a seating member and a back member, of which the back member is characterized by sufficient stiffness to remain extended vertically and both of which are characterized by sufficient flexibility to permit bending to the curvature of the seat and back of the support to which they may be applied, and a border of flexible material enclosing the outer marginal edges of each of said members, and pivotally uniting the lateral side edges of said members and leaving the intermediate portions of



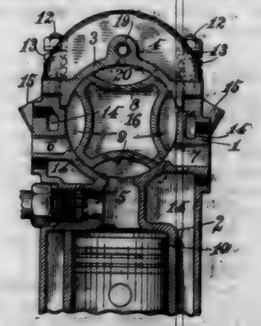
said members disconnected to permit the intermediate portions to spread away from each other in conformity to the contour of the seat and back of the support.

1,540,805. NOZZLE FOR AIR BRUSHES. CARL L. REICHENBACH, Yonkers, N. Y., assignor to Howard W. Bench, Newark, N. J. Filed June 2, 1923. Serial No. 642,952. 2 Claims. (Cl. 91—45.)



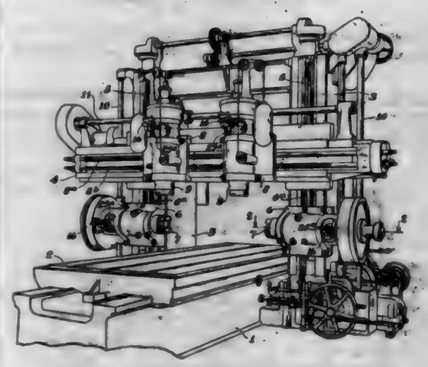
2. A nozzle for air brushes comprising a nozzle casing having a central main opening, side passages having their outlets inclined slightly forwardly relative to the stream from the main bore and tangential to said main bore, and means in said nozzle casing for increasing the velocity of the stream from the main bore.

1,540,806. VESSEL FOR CONVEYING AND STORING LIQUEFIED GASES. WILHELM ROHN, Hanau-on-the-Main, Germany. Filed Jan. 3, 1921. Serial No. 434,822. 4 Claims. (Cl. 220—0.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A vessel for storing (or conveying) liquefied gas consisting of a plurality of hollow shells placed one within the other, the hollow space in each shell being filled with insulating material and gas, the gas being of a kind whose point of condensation is as little below the average temperature existing in the said space as possible under practical conditions, and the quantity of the said insulating material being such that the particular combination of the density of the material and temperature is obtained that produces as nearly as possible the highest possible insulating effect, substantially as described.

1,540,807. DISPLAY COVER FOR RELATIVELY LONG BOXES. JACOB L. RUSSAKOV, Chicago, Ill. Filed July 14, 1924. Serial No. 725,888. 3 Claims. (Cl. 217—56.)



1. A display cover for a relatively long rectangular open-top box of the character described, comprising in combination a substantially flat sheet metal base of relatively long and narrow side and end parts arranged to conform in shape to the top of the box and adapted to rest upon the top edges thereof, said base having depending continuous flanges adapted to telescope readily removably upon the box and to hold the base thereon, said base parts defining an open interior substantially the area of the open top of the box, a strip-like support extending from one side base part to the other side base part substantially midway between the end base parts and across said open interior and dividing said open interior into two substantially equal parts, a pair of doors with a relatively large sight-opening in each thereof hinged upon the respective end parts of the base and adapted normally to overlie said parts of the open interior respectively and to open so as to stand entirely away from said open interior, each of said sight openings being covered with substantially transparent material, there being an upstanding continuous flange-like part surrounding each part of the open interior, the doors telescoping respectively with each upstanding flange-like parts.

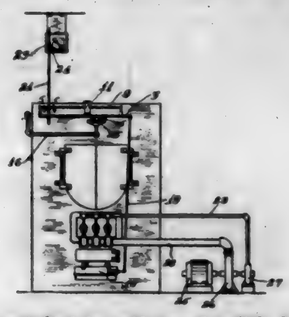
1,540,808. ROTARY VALVE. CHARLES A. SAWTELLE, Detroit, Mich., assignor of one-fourth to G. Edward Huff, Detroit, Mich.; one-fourth to Bert E. Cook and one-fourth to A. E. Lea, both of Ypsilanti, Mich. Filed Oct. 23, 1920. Serial No. 419,041. 7 Claims. (Cl. 123—177.)

1. In an internal combustion engine, a cylinder, a valve casing carried by said cylinder and having a cylindrical chamber, said casing having an inlet port, an outlet port and a port connecting said chamber with said cylinder, a valve rotatably mounted in said chamber and having a peripheral port to successively connect said cylinder port with said inlet port and said outlet port, and means for cooling said cylinder, said valve casing comprising a portion constituting a cap which is independent of said cooling means and the temperature of which is controlled by said valve, said cap being free to expand and contract uniformly with said valve and thereby maintain a uniform clearance between the same and said valve.

1,540,809. SAFETY DEVICE FOR MILLING MACHINES. WILLARD T. SEARS, Montclair, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 22, 1923. Serial No. 614,287. 11 Claims. (Cl. 90—15.)

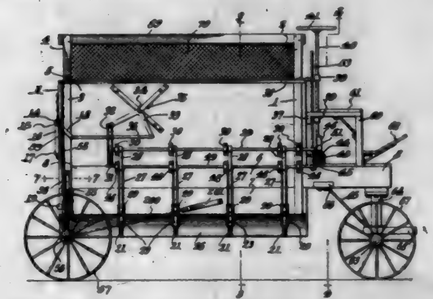
1. In a machine of the class described, the combination of a work support, a plurality of spindles adjacent thereto, power means for rotating the spindles, a motor providing a relative feeding movement between the work support and spindles, means for stopping the rotation of one of the spindles, a switch for controlling the feed motor, and means whereby the switch is automatically opened to stop the feed upon movement of the second named means to stop the rotation of the said one spindle.

1,540,810. DEVICE FOR USE WITH LACES OF BOOTS AND SHOES. WILLIAM SIMON, North Sydney, New South Wales, Australia. Filed Oct. 4, 1924. Serial No. 741,606. 4 Claims. (Cl. 132—1.)



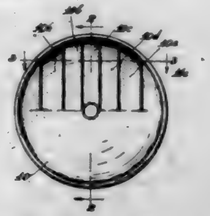
1. A device for use with boot and shoe laces comprising a member formed with a recess capable of engagement with a free part of the lace and with an extension on each side of the recess, the extension on one side of the recess being of greater length than that on the opposite side.

1,540,811. AUTOMATIC REGULATOR FOR FURNACES. CLYDE SLUSSER, Chicago, Ill. Filed Oct. 28, 1922. Serial No. 597,450. 2 Claims. (Cl. 236—0.)



1. In a heating system, a furnace embodying a boiler, mechanism including a motor for feeding fuel thereto, a damper regulator for the furnace responsive to the pressure of the boiler, a switch in the motor circuit controlled by said regulator for stopping and starting said motor, a second switch in the motor circuit, a pair of solenoids for opening and closing said second switch, a

thermostat responsive to the delivered heat for alternately connecting said solenoids with a source of energy,

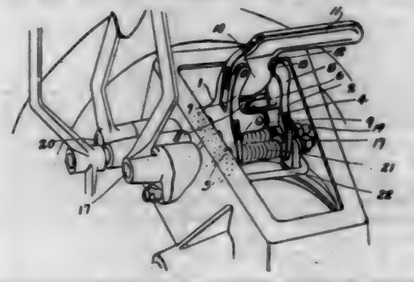


and means controlled by said second switch for alternately making and breaking the circuits to said solenoids.

1,540,812. STACKER WAGON. WALTER H. SMALLEY, Jetmore, Kans. Filed Nov. 28, 1924. Serial No. 752,670. 3 Claims. (Cl. 298—35.)

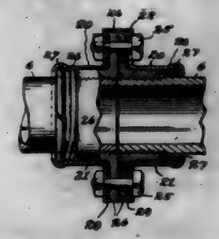
1. In a device of the class described, a wheel-mounted bin having a hinged bottom door provided with an outstanding projection, a first shaft supported for rotation on the bin, an arm on the first shaft, a link connecting the arm with the projection, a second shaft supported for rotation on the bin and having an eccentric against which the arm and the link knuckle to hold the door closed, means for rotating the first shaft to close the door, and means for rotating the second shaft to cause the eccentric to move the arm and the link to such a position that the door will open by gravity.

1,540,813. REFLECTOR. ANDRES SOLOSABAL, Boise, Idaho. Filed Apr. 23, 1923. Serial No. 633,821. 1 Claim. (Cl. 240—41.)



A reflector comprising upper and lower reflecting surfaces each extending over substantially half of the total reflecting surface, said lower half surface being an unmodified paraboloid of revolution and said upper half surface consisting of a plurality of vertically extending zones, each of said zones being of parabolic conformation in vertical section and of flat conformation laterally of the reflector, the front edge of said reflector being at an acute angle to the reflector axis inclining said axis downwardly when said front edge is in a vertical plane.

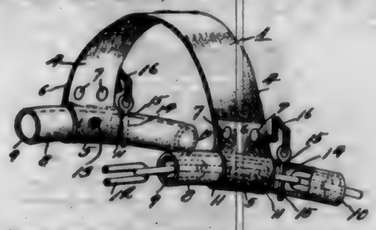
1,540,814. AUTOMATIC WELL AND PIPE-LINE DRIP. GEORGE STEINBERGER, Cherryvale, and PAUL E. STEINBERGER, Sycamore, Kans. Filed Mar. 17, 1924. Serial No. 699,941. 2 Claims. (Cl. 137—103.)



1. An automatic drip for gas wells and the like, including a tank, conduits leading to and from the tank, a valve located in one of said conduits, an extension on said valve, a float attached to said extension, and a coil spring attached to the opposite walls on the interior of the tank and extending beneath said float for supporting the same under certain conditions.

1,540,815. TRANSMISSION-BAND CLAMP. ROBERT B. STEUART, Kansas City, Mo., assignor to Irving E. Johnson, Kansas City, Mo. Filed June 3, 1924. Serial No. 717,473. 3 Claims. (Cl. 29—87.1.)

1. A transmission clamp comprising two pivoted jaw members having rod engaging notches at their lower ends and a cam pivoted to the upper end of one jaw member and contacting with the other jaw member to cause the jaws to rock one with respect to the other, and a notch engaging member on one of the jaw members to engage a notch in the cam when the jaws are moved to clamping position.



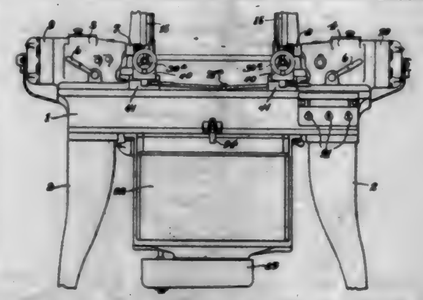
1,540,816. PIPE FITTING. JEREMIAH SULLIVAN, Dudley, Pa. Filed Jan. 28, 1924. Serial No. 689,065. 1 Claim. (Cl. 285—99.)

A repair pipe fitting adapted to be applied to flanged pipe couplings, said fitting comprising a pair of semi-

circular members each of which has a semicircular flange, said members having hub portions with tongue and groove joints at their meeting edges, and packing confined against the hub of the pipe coupling and also between the flange of the fitting member and the flange of said coupling.

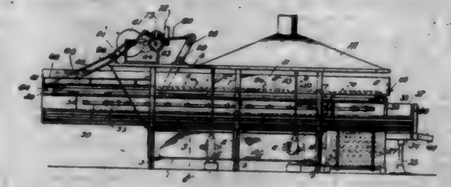
1,540,817. TRACE SUPPORT. WILLIAM Z. SWIFT, Buckner, Va. Filed Nov. 1, 1921. Serial No. 512,024. 1 Claim. (Cl. 54—4.)

A trace supporter comprising a backband, loops carried at the ends of said backband, elongated tubular members secured in said loops, pins secured to the back band by means of pliable members, said pins extending through apertures in the tubular members and forming means for holding traces against movement in the tubular members.



1,540,818. APPLE AND OTHER FRUIT PICKER. HENRY L. TAYLOR, Westfield, Wis. Filed Nov. 28, 1923. Serial No. 677,441. 1 Claim. (Cl. 56—340.)

A fruit picker including a circular ring having a cap integral with a portion thereof and disposed beyond the outer periphery of the ring, said cap having a socket the axis of which is disposed at a right angle to the plane of the ring, a blade fixed within the ring adjacent the cap, annular fasteners loosely receiving the ring, some of said fasteners passing transversely through the blade, a tube connected with the fasteners, and a pole having its end received in the socket of the cap and extending along the tube, and means attached to the tube and surrounding the pole.

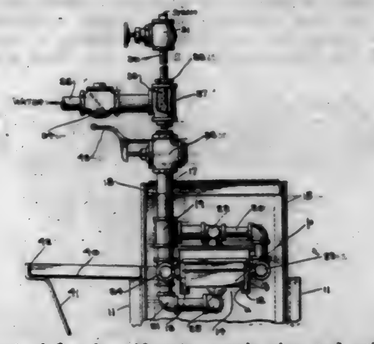


1,540,819. CENTERING MACHINE. JOHN J. THACHER, Wethersfield, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed May 5, 1921. Serial No. 467,056. 36 Claims. (Cl. 77—18.)

1. A machine tool comprising in combination, a base, a tool spindle, a laterally movable carrier on the base having a blank supporting surface and a relatively angular blank gripping surface, the carrier being adapted to support a blank on its supporting surface and carry the same from a loading position laterally of the spindle to a tooling position adjacent the spindle, a normally fixed jaw between which and the said blank gripping

surface the blank is adapted to be centered and held by the carrier for the tooling operation, the said blank supporting and gripping surfaces being adapted to perform their respective functions independently of each other, and means for feeding the spindle toward the blank and operating the carrier.

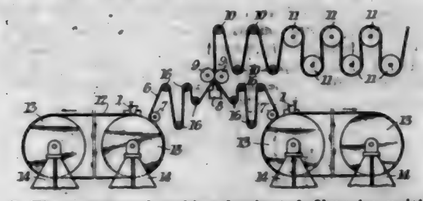
1,540,820. CONVEYING MECHANISM FOR CAN WASHERS. THEODORE L. VALERIUS and OLAF LARSEN, Fort Atkinson, Wis., assignors to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed June 30, 1919. Serial No. 307,821. 13 Claims. (Cl. 198—221.)



1. In apparatus for cleaning cans, conveying mechanism having, an combination, track means to support the mouths of the cans, a guide extending parallel with said track means against which the bodies of the cans lean, said guide being somewhat shorter than said track means, a shelf onto which the cans fall when advanced beyond the end of said guide, said shelf being shorter than a can, and a platform below the level of said shelf to receive the can as it fulcrums on the end of said shelf.

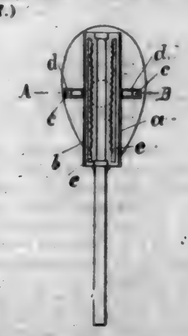
1,540,821. ICE-CREAM BRICK-MOLD RELEASER. THEODORE L. VALERIUS and OLAF LARSEN, Fort Atkinson, Wis., assignors to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 10, 1921. Serial No. 491,309. 4 Claims. (Cl. 107—8.)

1. In apparatus of the class described, the combination of a housing having an entrance and an exit, guide members passing through said housing, jet pipes arranged within said housing around said guide members, and means for controlling the flow of heating medium to said pipes, said pipes forming a jetting field around ice cream molds slidably supported on said guide members for passage through said housing.



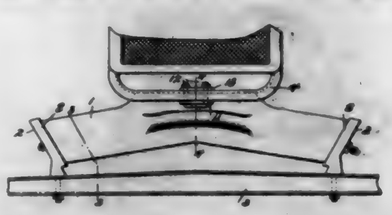
4. In apparatus of the class described, the combination of a plurality of jet pipes arranged to form a jetting field, a water supply pipe connected with said jet pipes, a steam supply pipe extending into said water supply pipe and adapted to discharge steam therein, a

quick acting valve for controlling the flow of heated water to the jet pipes, an automatic valve for preventing



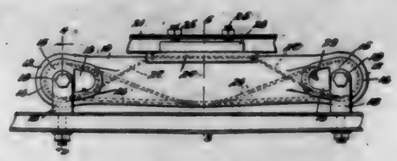
a reversal of flow in said water supply pipe, and guide rails adapted to support ice cream molds for passage through said jetting field.

1,540,822. PROCESS OF MAKING LAMINATED FILMS. HENRY E. VAN DERHOEF, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 27, 1924. Serial No. 722,836. 5 Claims. (Cl. 18—57.)



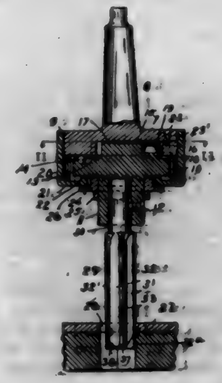
5. The process of making laminated films by uniting sheets of cellulosic-addition-compounds face to face, which comprises spreading solutions of cellulosic-addition-compound, containing a volatile solvent, upon sheet-forming surfaces, partially evaporating said solvent until the sheets thus formed are face-dried and self-sustaining but contain a surplus of said solvent, stripping said sheets from said surfaces, introducing adherence-inducing volatile solvent between faces of said sheets while in said condition, pressing said sheets together and drying out volatile solvent from the laminated film thus formed until said film is cured.

1,540,823. RACKET WITH BALL-CATCHING DEVICE. EDUARD FREIHERR V. MAIRHOFEN, Cassel, Germany. Filed Feb. 16, 1925. Serial No. 9,659. 4 Claims. (Cl. 273—67.)



1. A racket with ball-catching device the front surface of the racket serving to throw the balls and the rear surface for catching the same, comprising in combination with the racket proper two longitudinal plates mounted on the rear surface of the racket at an angle of about 45° the one with regard to the other and movable in lateral direction designed to catch a ball between them.

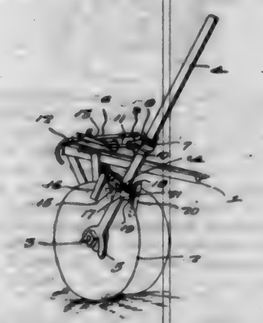
1,540,824. PNEUMATIC SPRING SUSPENSION. JULIUS VON WALDY, New York, N. Y. Filed Mar. 29, 1924. Serial No. 702,076. 23 Claims. (Cl. 267—65.)



1. A spring for vehicles comprising a pneumatic elastic beam.

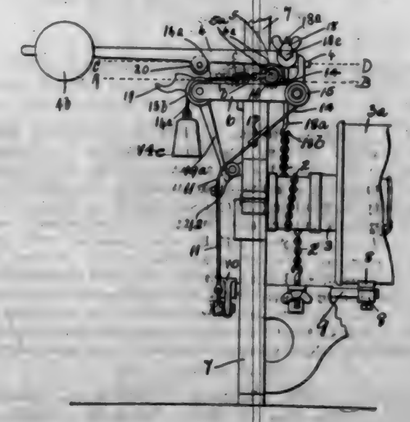
1,540,825. PNEUMATIC SPRING SUSPENSION. JULIUS VON WALDY, New York, N. Y. Filed May 1, 1924. Serial No. 710,445. 16 Claims. (Cl. 267—65.)

1. A vehicle spring comprising a pneumatic beam having rigid securing means adjacent the ends and securing means intermediate its ends for connection to the vehicle frame and to the running gear, means associated with the beam for resisting downward flexure and means for resisting undue upward flexure of the beam.



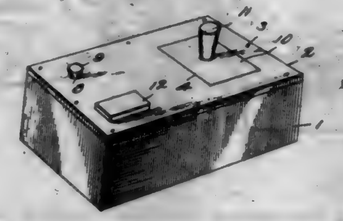
1,540,826. DEVICE FOR DRILLING OR BORING POLYGONAL-SHAPED OPENINGS. HARRY J. WATTS, Turtle Creek, Pa. Filed Jan. 14, 1921. Serial No. 437,153. 11 Claims. (Cl. 77—61.)

1. A device for the purpose set forth comprising a chuck-element provided with a revolvable shank carrying



member and a floatable tool-element carrying member connected therewith, one of said members provided in one face with a plurality of radially disposed recesses and the other carrying on one face a plurality of eccentrically mounted pivoted members each moving lengthwise of and operating against the walls of arecess for imparting a floating action to the tool-carrying member during the revolving of the shank carrying member.

1,540,827. DISK SHARPENER. PAUL M. WILDGRUBE, Sycamore, Kans. Filed June 5, 1924. Serial No. 717,567. 2 Claims. (Cl. 97—221.)

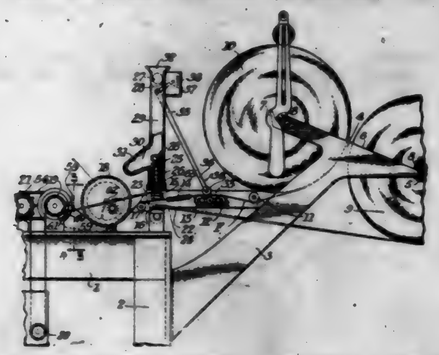


1. Means for sharpening a disk comprising an elongated lever, one end thereof being forked for engagement with the shaft of the disk, an arm supported on said lever, a sharpening member supported on said arm and adapted for engagement with the cutting edge of said disk, a sleeve slidable on the lever, a collar fixed to the sleeve and provided with an eye, a series of links attached to the eye a tone end, and a clamping hook attached at its intermediate portion to the series of links and adapted to engage the frame of the supporting structure of the disk and shaft.

1,540,828. LET-OFF MECHANISM FOR LOOMS. JAMES WILLIAM BOOTH and THOMAS CRAVEN COMLASS, Keighley, England. Filed Jan. 23, 1922. Serial No. 531,078. 6 Claims. (Cl. 139—101.)

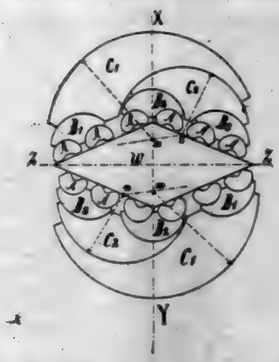
1. In letoff mechanism for looms, a warp beam, a brake device engaging with said warp beam, a weighted lever acting upon said brake device, a movable fulcrum for said weighted lever, means for connecting said movable fulcrum to a detector contacting with the coils of warp on the warp beam, and means for keeping said detector against said warp beam.

1,540,829. LIQUID ADHESIVE HOLDER. JOHN PAUL BURNETT, Whitakers, N. C. Filed Sept. 2, 1924. Serial No. 735,444. 3 Claims. (Cl. 91—54.4.)



1. A device of the class described including a container, a cover on the container and provided with an opening, a box depending through the opening into the container, a sponge element disposed within the box, and a pad resting on the sponge element within the box and filling the opening.

1,540,830. ADVERTISING DEVICE. ALBERT K. DAVIS, Buffalo, N. Y. Filed Apr. 23, 1921. Serial No. 464,032. 8 Claims. (Cl. 40—36.)

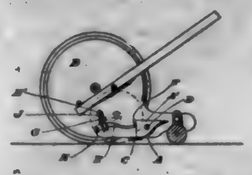


1. In a device of the character described, a pair of upper guideways inclined toward the front of the machine, a pair of lower guideways inclined toward the rear of the machine, a pivoted extension on the rear ends of the upper guideways a series of card frames adapted to be carried upon the lower and upper guideways, a carrier adapted to carry one of the card frames from the lower guideways to the upper guideways, the construction being such that upon the card frame striking the pivoted extensions the same are turned upward to allow the card frame to pass thereby and upon downward movement of the card frame the same is engaged by the said extensions and directed onto the upper guideways.

1,540,831. AUTOMATIC PHOTOGRAPHIC-FILM-SUPPLYING MACHINE. CHARLES DE MOOS, Fort Lee, N. J., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 8, 1923. Serial No. 617,834. 9 Claims. (Cl. 242—58.)

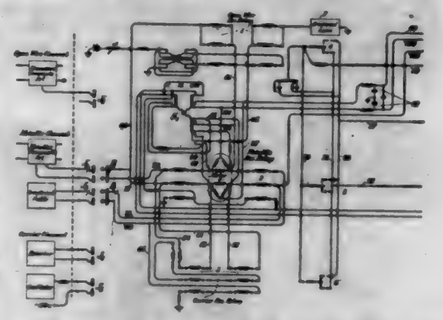
1. A film supplying mechanism comprising, a reel of supply film, means for drawing film from said reel, a reel of reserve film, and means controlled by the supply film for connecting the outer end of said reserve film with the final end of said supply film.

1,540,832. CHUCK JAW. PAUL FÖRSTER, Nuremberg, Germany, assignor to Aktiengesellschaft vorm. Adolf Finze & Co., Nuremberg, Germany. Filed Feb. 13, 1922. Serial No. 536,376. 1 Claim. (Cl. 279—123.)



A chuck jaw comprising in combination different sets of oscillatingly mounted jaws, the first inner set consisting of jaws of equal diameter being adapted to engage and hold the work piece, the jaws of one of the two other inner sets of jaws being of different diameters and seated one within the other, the inner one being of a diameter less than the diameter but greater than the radius, of the outer one in which it is seated and guided.

1,540,833. CLOSURE FOR CONTAINERS. OTTO GOTTSCHALK, Dresden, Germany. Filed Mar. 13, 1924. Serial No. 698,972. 1 Claim. (Cl. 221—19.)

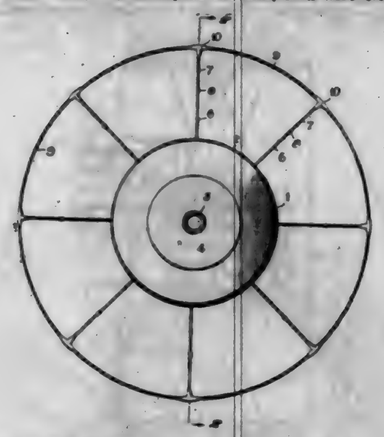


A contrivance for closing sprinkling bottles and similar hollow vessels comprising in combination a cap securely fixed on the bottle neck and having an eccentric orifice in its top plate, a cover rotatably mounted on said cap and having an eccentric orifice, an elastic flap stamped out of said cover and two oppositely situated strips connecting said flap with said cover.

1,540,834. LAWN MOWER. DAVID GEORGE GREGORIE, Pahiatua, New Zealand. Filed Feb. 14, 1920. Serial No. 358,607. 2 Claims. (Cl. 56—294.)

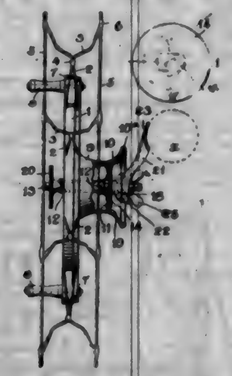
1. In lawn mowers having a rotating cutter, and a stationary cutter, a carrier frame for the stationary cutter, side cheeks on the respective sides of the frame, a knife blade secured along the forward edge of said carrier frame and arranged to extend across between the side cheeks, a flange on each end of the carrier frame directly engaging the inside of the corresponding side cheek, a pivot pin passing through the flange and into the said side cheek, and lever arms, each pivoted forwardly of the carrier and at one end to the side of one cheek of the machine and at its other end engaging with the forward edge of the said carrier frame on its respective side, and a spring acting upon said lever and normally turning it up upon its pivot, substantially as and for the purposes specified.

1,540,835. TELEGRAPH REPEATER. BAXTER P. HAMILTON, River Edge, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 7, 1924. Serial No. 711,684. 3 Claims. (Cl. 178—71.)



1. A telegraph station, a plurality of different types of telegraph channels terminating thereat, a telegraph repeater set adapted to be associated with said channels and comprising a plurality of switching arrangements, a plurality of receiving relays adapted to be connected in said repeater set by said switching arrangements, each of said relays being suitable for operation with and being operated by current impulses coming in over different ones of said telegraph channels, pole changers controlled by said relays, and a receiving leg whereby a connection may be extended from said set, said receiving leg being associated with said pole changers whereby impulses of different polarities may be applied to said receiving leg.

1,540,836. REEL. LEANDER J. HEDDERICH, Mulberry, Ind. Filed June 18, 1924. Serial No. 720,799. 2 Claims. (Cl. 242—77.)



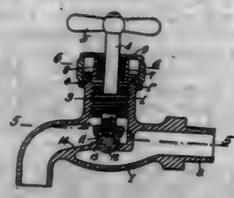
1. A reel comprising a central hub, and a series of spokes secured to and radiating therefrom, each spoke

comprising a pair of wire elements having their inner ends spaced apart, axially of the hub, said wire elements

being secured together at a distance from the hub so as to form a triangle, the outer ends of said wire elements being spread apart to provide a cord receiving channel.

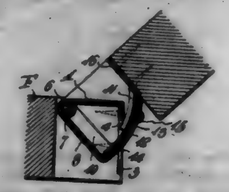
1,540,837. FISHING REEL AND MOUNT. LEANDER J. HEDDERICH, Mulberry, Ind. Filed June 18, 1924. Serial No. 720,800. 10 Claims. (Cl. 242—84.5.)

1. The combination with a fishing reel, of a thumbing drum forming a part thereof, a spindle on which said reel and drum are mounted, for both rotation and slight axial movement, co-operating friction members fixed to said spindle and drum, respectively, the surface of said drum being flaring or bell-shaped at the end, so that pressure of the thumb on such surface tends to shift the drum axially, whereby the said friction members are forced together, and a double breaking effect produced.



1,540,838. DUSTING BRUSH. JAMES R. HENSLEY, Elmer, Okla. Filed June 18, 1924. Serial No. 719,887. 1 Claim. (Cl. 15—188.)

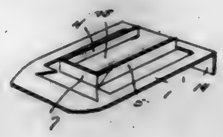
A dusting brush for barbers' use, comprising a brush head having a central opening and a threaded periphery, a powder receptacle having a threaded mouth in which the brush head is screwed, a slotted sleeve in the top of the receptacle, a handle thereabove, means passing through the sleeve for holding the same in the receptacle and for holding the handle on the receptacle, a valve having its stem received in the sleeve, spring means between the sleeve and stem for normally seating the valve, a rod member passing through the receptacle adjacent to the handle having an offset inner end terminating in a yoke provided with inturned fingers that pass



through the slots of the sleeve and enter the sides of the valve stem, and said rod having its outer end offset to form a finger piece.

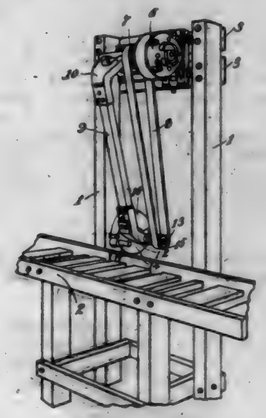
1,540,839. FAUCET AND SIMILAR DEVICE. ROBERT HEYDRICH Y MARTINEZ, Habana, Cuba. Filed May 5, 1924. Serial No. 711,211. 2 Claims. (Cl. 251—46.)

2. A valve device, comprising, a body, an open neck extending from the body, a valve stem in the body and extending through the neck, a gasket receiving the stem and closing the outer end of the neck, a flat packing plate positioned over the gasket and receiving the stem, an upstanding rim on the plate forming a stuffing box receiving the stem, packing means in the stuffing box, and a screw thimble threaded to the outer surface of the neck and enclosing the above said gasket plate and stuffing box, a screw threaded aperture in the lower end of the stem, an internally threaded flanged ring, a screw loosely holding the ring to the end of the stem, and a resilient valve having external threads and screwed into the flange of the ring, whereby to adjustably connect the valve to the valve stem.



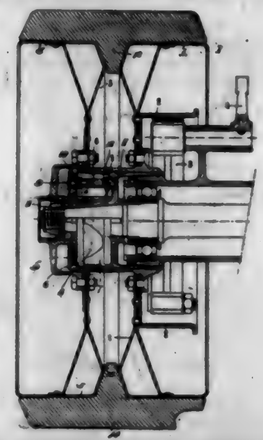
1,540,840. VEHICLE HINGE. RICHARD W. HUBBARD, Ashtabula, Ohio. Filed Nov. 12, 1923. Serial No. 674,270. 8 Claims. (Cl. 16—133.)

1. As an article of manufacture, the combination of a leaf having portions arranged at right angles to each other; one of which portions is provided with a bowed



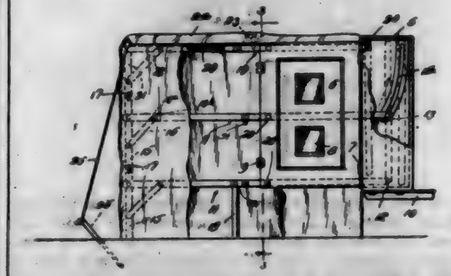
surface and with a substantially oblong aperture in the center thereof; and the other of the angular portions having pintle receiving apertures on the end thereof, an angular plate having one of its portions bowed, ears formed on the angular plate adjacent the arc portion thereof, pintle engaging members arranged on one end of the plate; the arced portion of the angular plate having bent side edges and also having apertures therein, a second leaf having an integral angular portion adapted to enter the bent edges of the bowed surface of the first angular portion and further adapted to be engaged in detachable manner with respect to the bowed portion of the first angular member.

1,540,841. CIGARETTE RECEPTACLE. HENRY W. JOHNSON, Bamberg, S. C. Filed Aug. 4, 1924. Serial No. 729,993. 3 Claims. (Cl. 131—51.)



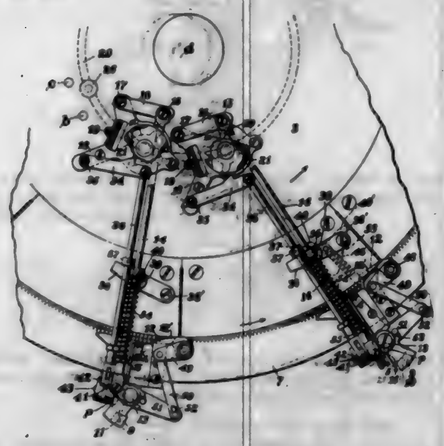
1. An article of manufacture comprising a single blank of material having longitudinally extending slots formed therein, the ends of said slots being disposed inwardly whereby a pair of longitudinally extending lips are formed, said blank having a substantially dove-tailed slot formed therein transversely thereof, a substantially dove-tailed lip formed by said slot, said lips normally lying in the same plane as the blank, said lips being adapted to be bent upwardly to provide a cigarette receptacle.

1,540,842. SWING SAW. HOWARD C. KASTNER, Cincinnati, Ohio, assignor to Elizabeth Townley, Cincinnati, Ohio. Filed Sept. 5, 1922. Serial No. 586,152. 2 Claims. (Cl. 148—46.)



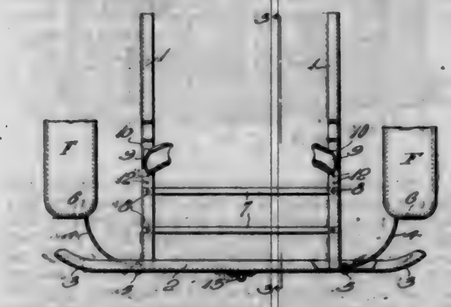
1. In a swing saw, the combination with a swing arm, means for supporting same at its upper end, a cutting element mounted in the lower end, said arm having a head near its upper end projecting away from the vertical plane of the support to throw the lower end carrying the saw away from the operator.

1,540,843. BRAKE MECHANISM FOR TRACK BELTS. ADOLPHE KEGRESSE, Paris, France. Filed Jan. 16, 1923. Serial No. 613,031. 4 Claims. (Cl. 188—2.)



1. The combination, with a supporting wheel or pulley for an endless, flexible track belt, comprising a pair of spaced, companion sections adapted to grip between them a central, longitudinal projection on the inner surface of the belt; of a brake operative on one of said sections to retard its rotation; and a device operative automatically consequent upon the actuation of said brake to effect a relative approaching movement as between said sections and thereby increase the gripping action exerted on the interposed belt projection.

1,540,844. FOLDING TENT AND BED EQUIPMENT FOR VEHICLES. ROOT E. KIMBALL, St. Paul, Minn. Filed Oct. 15, 1923. Serial No. 668,788. 2 Claims. (Cl. 5—119.)

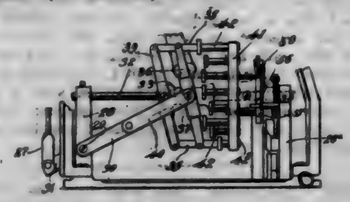


1. A folding bed for vehicles comprising a plurality of pairs of vertically spaced superposed bed supporting rails, said rails being disposed in transversely spaced parallelism and each rail being composed of a pair of links pivotally connected together at their adjacent ends, an open front receptacle to the side walls of which the inner ends of said rails are pivotally connected to permit folding of the structure into the receptacle, legs pivoted to the outer ends of the rails, the legs of the superposed pairs of rails having their ends arranged in abutting relation and detachably connected together, braces carried by the legs and having detachable connection with the rails for maintaining the legs in vertical position, a door pivotally connected to the open side of the aforesaid receptacle, said door being adapted to extend at right angles to the receptacle, and detachable connections between the free vertical edges of the door and the several superposed rails.

1,540,845. KNITTING MACHINE. CHARLES C. KNIBBLE, Norristown, Pa., assignor to Wildman Mfg. Co., Norristown, Pa., a Corporation of Pennsylvania. Filed Feb. 23, 1923. Serial No. 620,818. 18 Claims. (Cl. 66—22.)

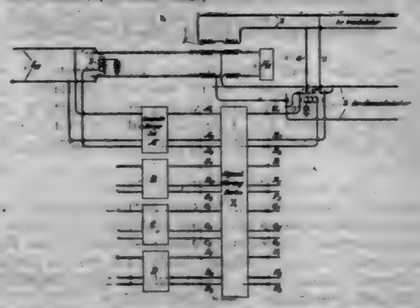
1. In combination in a circular rib knitting machine, having a rotary needle cylinder and dial, a plurality of feeds disposed at separated points about the knitting head, a plurality of controlling means, one for each feed supported by the dial cap and in part extending therethrough, radial connections extending therefrom to the several feeds and means for operating said controlling means in prescribed order for changing the feeds, said means including contact means travelling with the needle dial, substantially as described.

1,540,846. COMBINATION ATTACHMENT FOR AUTOMOBILES. HERMAN E. KRUGER, Minneapolis, Minn., assignor of two-fifths to E. H. Latimer, Minneapolis, Minn. Filed Feb. 12, 1923. Serial No. 618,703. 2 Claims. (Cl. 293—55.)



1. An attachment for automobiles comprising a bumper bar for disposition at the rear end of the automobile, a pair of longitudinal carrying bars for said bumper, a plurality of transverse bars in front of said bumper and secured at their ends to said longitudinal bars, all of said bars cooperating in forming a luggage carrier, the ends of said bumper bar extending beyond said longitudinal bars, and oblique fender braces in the angles between said longitudinal bars and said extended ends of the bumper bar, said fender braces and said extended ends of the bumper bar cooperating in forming extensions for the luggage carrier.

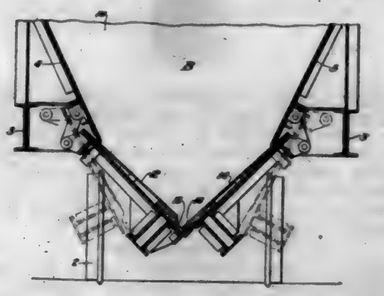
1,540,847. ACCUMULATOR. LAMBERTUS ALPHONS LAMMENS, Arnhem, Netherlands. Filed Dec. 26, 1923. Serial No. 682,818. 3 Claims. (Cl. 136—29.)



1. An accumulator, comprising, a lead container forming part of the negative pole, negative plates fixed to the bottom of the container, positive plates spaced from the bottom and sides of the container, insulating separators resting on the bottom of the container and placed between the positive and negative plates and projecting above the tops of the negative plates, the positive plates being supported by the separators.

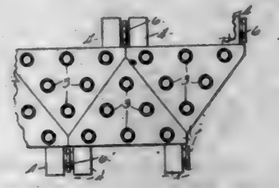
1,540,848. TIME RECORDER. HUGH M. LAWTON, Bellevue, Ky., assignor to The Cincinnati Time Recorder Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 14, 1921. Serial No. 514,887. 12 Claims. (Cl. 234—43.)

2. In a time recorder, the combination with a laterally movable card tray, and an operating handle for effecting time registrations, means for locating the card tray, comprising a shifting member for the tray, means for moving the same by the operating handle, and a clock controlled abutment means adapted to effect a desired position of the shifting member upon being moved by the operating handle, said abutment means comprising a plurality of pairs of abutments against which the shifting member is pressed.



1,540,849. SIGNAL-STORING ARRANGEMENT. OWEN H. LOVELL, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 15, 1924. Serial No. 713,572. 6 Claims. (Cl. 179—15.)

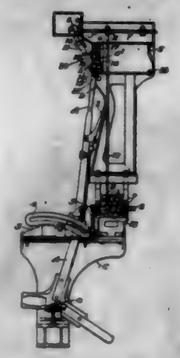
1. A plurality of telephone lines over which voice frequencies are transmitted, means associated with each of said lines for superimposing said voice frequencies



on separate carrier channels for transmission over a common circuit, signaling circuits associated with each of said lines and said last mentioned means, and a signal storing device common to all of said signaling circuits for causing the signals to be transmitted over said carrier channels at separate times.

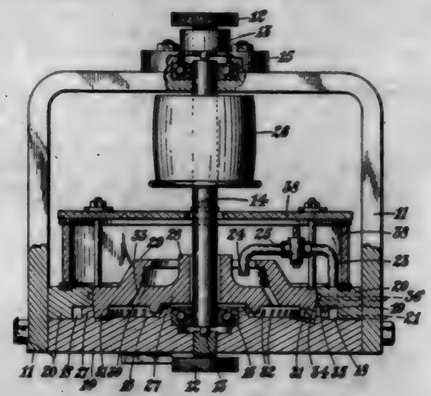
1,540,850. HOPPER-CAR DOOR. CARL M. LUTH, Wilkinsburg, Pa. Filed Oct. 8, 1923. Serial No. 667,258. 3 Claims. (Cl. 105—250.)

1. A hopper car having the hoppers extending longitudinally thereof, and the bottom of said hoppers being closed by inclined hinged doors, one of said doors being provided with a longitudinally extending groove on its inner face adjacent its lower edge, said groove having beveled side walls and a flat bottom face, and the other of said doors being provided with a projecting lip along its lower edge, said lip being provided with a beveled lower edge and being adapted to project into said groove when said doors are in closed position to form a sealed joint.



1,540,851. RADIATOR. DE WITT T. LYON, Chicago, Ill., assignor of one-half to Babet R. H. Lyon, Chicago, Ill. Filed Oct. 24, 1921. Serial No. 509,826. 3 Claims. (Cl. 257—154.)

1. A radiator comprising a plurality of sections, each of said sections having a lower and an upper header, the abutting sides of said headers being fashioned so as to prevent lateral movement of said headers with respect to each other when said headers are assembled, a plurality of pipes disposed between each upper and lower header, said pipes placing said headers in communication with each other, laterally extending compartments carried by said headers, and connecting pipes adapted to secure the adjacent compartments together, whereby the various sections are held together as a unit.



1,540,852. MACHINE FOR CONTROLLING RAILWAY-TRAFFIC-GOVERNING APPARATUS. WILLIAM C. MCWHIRTER, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed July 7, 1923. Serial No. 650,032. 2 Claims. (Cl. 246—136.)

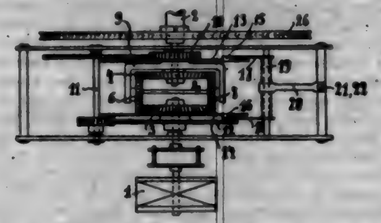
1. In an interlocking machine having electric levers, a super-structure comprising a horizontal frame open at the front and having a horizontal rib dividing the frame into two horizontal compartments located one directly above the other, bus bars in one said compartment associated with the electrical portions of the ma-

chine, cover plates for the other compartment having openings, and indicating lamps supported by said cover plates and located behind said openings.

1,540,853. MACHINE FOR THE TREATMENT OF VACCINE. ROBERT FRANCIS MACFIE, London, England, assignor to Nutriment Limited, London, England, a British Company. Filed June 4, 1923. Serial No. 643,480. 7 Claims. (Cl. 259—107.)

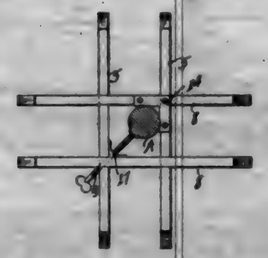
4. In a machine for the treatment of vaccine and bacteria in suspension in a liquid, the combination of a disc-like rotor formed with a peripheral flange, a disc-like stator facing said rotor and spaced away therefrom and provided with a flange fitting closely outside the said flange on the rotor, substantially radial saw-cuts in each of said flanges, means for supplying liquid to the space between the opposed faces of the rotor and the stator, a chamber in said stator whereto the liquid to be treated is delivered through said saw-cuts, and a pipe connection providing a circulation path for the liquid from the said chamber back to said rotor.

1,540,854. TRACTOR HITCH. HAROLD MACK, Finlayson, Minn. Filed Jan. 26, 1924. Serial No. 688,823. 4 Claims. (Cl. 280—33.16.)



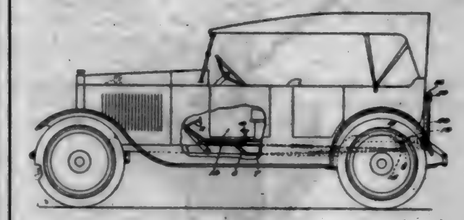
1. A tractor hitch of the class described including a body in the form of an L-shaped bar, the terminal of the longer portion thereof being provided with a pair of

spaced wedge shaped plates tapering inwardly, an arm pivoted to the longer portion of the body so that its terminal abuts the body between the plates, and a



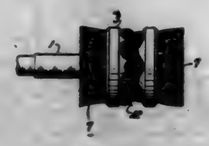
spring impinging between the shorter portion of the body and the arm for holding the end of said arm normally between said plates.

1,540,855. DEVICE FOR DRIVING THE HANDS OF MONUMENTAL CLOCKS. ARMAND MAYER, Levallois-Perret, France. Filed Dec. 16, 1922. Serial No. 607,403. 2 Claims. (Cl. 58—26.)



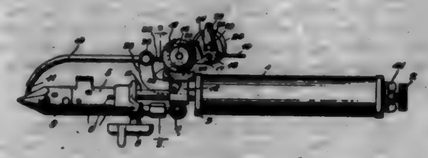
2. A driving mechanism for the hands of turret clocks comprising in combination with the hand mechanism, a motor for driving said mechanism, an auxiliary mechanism, a contact device for automatically adjusting the hand mechanism when the current fails, a differential gear connecting said auxiliary movement and said hand mechanism, two notched disks one for the hour hand and the other for the minute hand connected with the differential gear, rollers bearing against the rims of said notched disks, levers carrying said rollers and designed to act upon the contacts of said contact mechanism in such a manner that the circuit for said motor driving the hands is cut only when the hands of the turret clock and those of the auxiliary movement are in synchronism.

1,540,856. CHRISTMAS-TREE HOLDER. DAVID MUNRO, San Francisco, Calif. Filed Apr. 25, 1924. Serial No. 709,007. 1 Claim. (Cl. 248—38.)



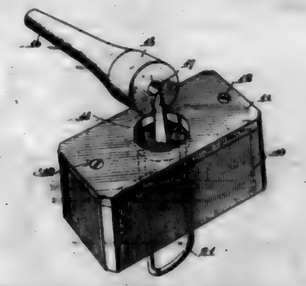
A holder for trees comprising interlocking supporting members, a screw bolt penetrating certain of the members at one of their points of juncture and adapted to engage a portion of the periphery of the tree, an L-shaped reenforcing member carried by the supporting members, and a serrated element carried by said L-shaped member for engaging the tree substantially opposite from the point of contact of the screw bolt.

1,540,857. SIGNALING DEVICE. EUGENE J. PARKER, Cambridge, Mass., assignor to Universal Safety Signal, Inc., Boston, Mass., a Corporation. Filed June 25, 1924. Serial No. 722,354. 5 Claims. (Cl. 116—36.)



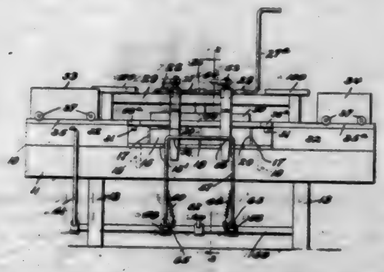
1. A signal device including in combination, a signal arm mounted for partial rotation normally occupying a horizontal position, means to cause 90° rotation of said arm, additional means to cause 180° rotation of said arm, said means being operable independently of each other.

1,540,858. BRUSH. JAMES L. PITCHER, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 14, 1923. Serial No. 657,416. 7 Claims. (Cl. 15—28.)



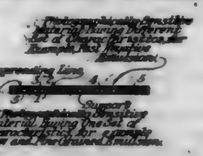
4. In a rotary brush, a cylindrical brush head arranged with a groove around the circumference of said brush head, and having longitudinal openings extending into said groove from each end of said brush head, and brush material in said openings joined together in said groove by binding means.

1,540,859. SOLDERING IRON. ANATOILE PLICQUE, Nashville, Tenn. Filed June 24, 1924. Serial No. 722,171. 3 Claims. (Cl. 113—109.)



1. In combination with a soldering iron and a feeding means for a ribbon of solder, comprising a bracket rigidly connected with the iron, a spool rotatably mounted on the bracket and carrying a ribbon of solder, a guide for directing the ribbon of solder to the heated point of the iron, a pair of arms carried by the bracket, a shaft mounted in the journals, a toothed wheel rigid with said shaft and adapted to engage the ribbon of solder, a tensioning means located below the toothed wheel and maintaining the ribbon of solder in engagement with the toothed wheel, a lever pivotally mounted on the shaft, a ratchet wheel rigid with the shaft, a pawl on the lever and engaging the ratchet wheel for causing rotation of said ratchet wheel when the lever is oscillated.

1,540,860. HAND PUNCH. GEORGE W. FORAKE, Geneseo, Ill., assignor to Charles A. Pobanz, Geneseo, Ill. Filed June 18, 1924. Serial No. 720,795. 4 Claims. (Cl. 164—64.)

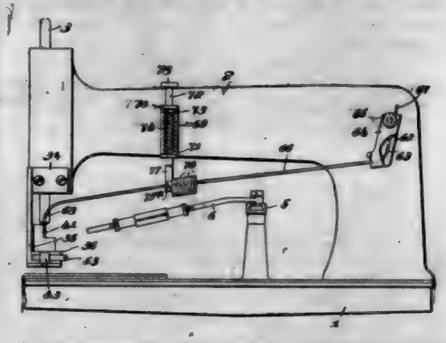


1. A metal hand punch including a die holder, an apertured die on the holder which also forms a rest for the work, a portable hand manipulated punch having an axial bore, and a stud upstanding from the holder axially through the die aperture and adapted to project substantially into the punch bore to act as a guide and centering member for the punch in operation.

1,540,861. CEMENT BRICK AND BLOCK MACHINE. JOHN POSPESHIL, Venus, Nebr. Filed Oct. 4, 1923. Serial No. 666,624. 16 Claims. (Cl. 25—41.)

1. A brick molding machine comprising in combination, a support having a portion provided with a flat horizontal surface, a mold at the end of said surface having the upper edges of its end walls in the same plane as said surface, a movable hopper for supplying said mold with material and parallel runways on said surface and along the upper edges of the side walls of said mold for supporting and guiding said hopper, said mold including a removable bottom pallet, side walls with horizontal lower edges pivoted at their outer sides to a part of said support for turning outwardly, and end walls removable in a vertical plane.

1,540,862. PHOTOGRAPHIC FILM AND PROCESS OF MAKING THE SAME. MILTON B. PUNNETT, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 12, 1923. Serial No. 612,268. 11 Claims. (Cl. 95—9.)

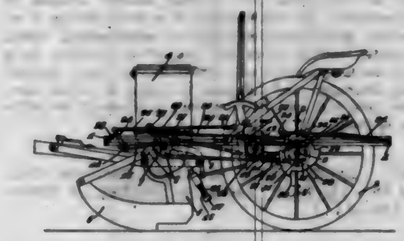


1. A photographic film comprising a support having thereon separate areas of photographically sensitive materials of different recording characteristics the edges of which are defined by anti-spreading lines.

1,540,863. SCALP SYRINGE. ROBERT HANSON RIDGEDON, Richmond, Va. Filed Mar. 22, 1924. Serial No. 701,180. 2 Claims. (Cl. 128—215.)

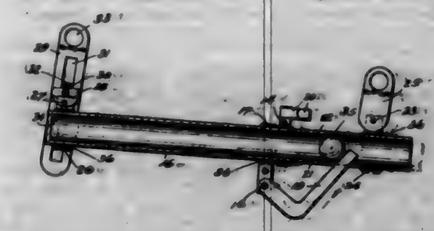
1. A scalp syringe including a rigid container having an upper open end, a cap removably engaged with the upper open end of the container, having a central opening and an inner washer seated against the container around its opening, provided with an enlarged central portion, the cap and the central portion of the washer having alined openings, an applicator having a body portion and a stem extending from one side of the body portion through the openings of the cap and the washer and provided with an axial bore opening at one end into the container, said washer embracing and holding the stem in position and said applicator body having a chamber in communication with the outer end of the stem bore, an annular series of elongated rigid teeth projecting from the opposite side of the applicator body adjacent to its edge, and a series of rigid applicator teeth projecting from the applicator within the first named series of teeth, said applicator teeth being of slightly less length than the first mentioned teeth and having small axial feed channels extending entirely therethrough and communicating at their inner ends with the chamber of the applicator body.

1,540,864. FASTENER ATTACHING MECHANISM. LEFFALLEH G. HARRAG, Boston, Mass., assignor of one-half to Maurice A. Metcalf, Boston, Mass. Filed May 28, 1920, Serial No. 384,875. Renewed Oct. 30, 1924. 34 Claims. (Cl. 112—113.)



1. A reservoir for use in fastener attaching machines comprising in combination a resilient member constructed and arranged to pass through an opening in a fastener whereby to pendantly support the same, and means for holding said member in downwardly inclined position and with its lower end free.

15. In combination in a fastener attaching machine, a fastener reservoir constructed and arranged to deliver fasteners successively and in definite position of orientation, a receiver comprising a chamber for fasteners delivered from said reservoir said chamber being of a cross section similar to the peripheral contour of a fastener, and a transferring device associated with said receiver and arranged to convey successive fasteners therefrom to the point of use.



30. In a button attaching mechanism in combination, a button clamp comprising normally closed jaws, a button transferrer, and treadle actuated means comprising cam elements constructed and arranged successively to open said clamp and actuate the transferrer.

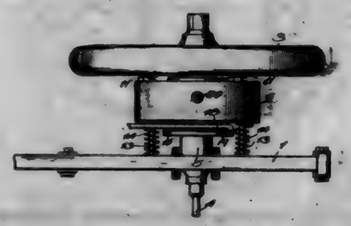
1,540,865. CHECKROW PLANTER. ALVA C. SALMONS, Cosby, Mo. Filed May 9, 1922. Serial No. 559,523. 1 Claim. (Cl. 275—9.)

In a planter, the combination with a rock shaft, an arm extending therefrom, a spring for holding the arm normally in one extreme position, and a tongue pivotally connected to the arm and having an intermediate recess, of a seed dropping mechanism including a shaft, a finger secured to and rotatable with said shaft and normally engaging the tongue, a rod pivotally connected to the finger and having an intermediate shoulder, a spring connected to the rod for holding it normally in one extreme position, a rotatable wheel supported axle, means revoluble therewith for intermittently engaging the shoulder to intermittently shift the rod and finger in one direction against the action of the spring to position the finger in the recess thereby coupling the tongue to the rod during the movement of the rod to normal position when released from the actuating means.

1,540,866. IGNITION-CIRCUIT BREAKER FOR MOTOR VEHICLES. VERNON A. SAMUELSON, Port Angeles, and YORKE YOUNG and CALVIN LICHTENBART, Sequim, Wash.; said Young assignor to said Samuelson and Lichtenbart. Filed May 23, 1923. Serial No. 471,872. 2 Claims. (Cl. 200—52.)

1. A circuit breaker comprising a tube, supporting members pivoted to the tube, the tube being closed at one end and having near the other end slots in the diametrically opposite sides thereof, a switch mounted on said tube and having its movable element normally extending through said slots, a ball within the tube between the closed end thereof and said switch element, said ball adapted to contact with and effect the opening movement of the movable switch element when the closed end of the tube is raised above the other end of the tube.

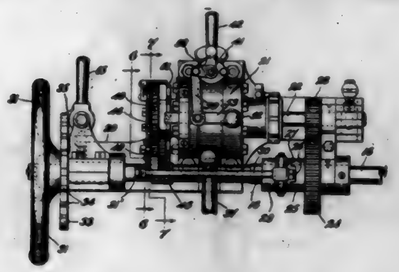
1,540,867. METHOD OF TREATING MOLTEN MAGNESIUM. GUSTAV SCHRIMPFF, Griesheim-on-the-Main, and ADOLF BECK, Schwanheim-on-the-Main, Germany, assignors to Chemische Fabrik Griesheim Elektron, Frankfort-on-the-Main, Germany. Filed Oct. 20, 1923. Serial No. 671,403. 4 Claims. (Cl. 75—14.)



1. The method of protecting molten magnesium and its alloys against burning, comprising placing sulphur onto the surface of the molten metal.

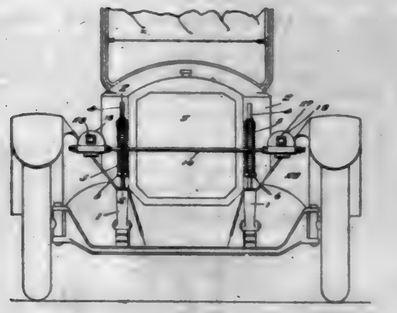
1,540,868. PERCUSSION TOOL. WALTER H. SCULLY, Florence, N. J. Filed Apr. 4, 1922. Serial No. 549,506. 4 Claims. (Cl. 121—32.)

3. In a device of the character described, a tubular handle, a bushing inserted in said handle and having a portion of polygonal formation and constituting a socket, a percussion tool having a shank including a portion of polygonal formation operating in said socket, said handle having a counterbore at its outer end, a sleeve arranged on the shank of the tool and operating in said counterbore and having an annular flange at its inner end, a collar arranged on the outer end of said sleeve, a set screw for securing the collar and the sleeve to the shank of the tool, a coil spring arranged on the sleeve within the counterbore and abutting the annular flange at its inner end and an annular cap having threaded connection with the outer end of the handle and serving as an abutment for the outer end of said spring.



1,540,869. BRAKE MECHANISM. JOHN E. SHAFFER, Chicago, Ill., assignor, by direct and mesne assignments, of one-eighth to George V. Sterling, Chicago, Ill.; three-eighths to James J. Burns and three-eighths to James C. Shrives, both of Cumberland, Md. Filed Mar. 30, 1922. Serial No. 548,038. 5 Claims. (Cl. 188—72.)

1. In a device of the kind described and in combination, a drive shaft, a vehicle brake comprising a slidably non-rotative friction plate, a friction plate drivingly carried by said shaft adjacent said first plate and slidable

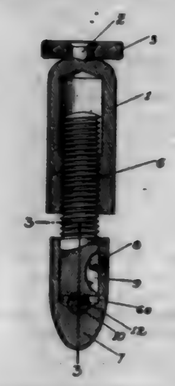


axially thereof, a member slidable to operably move said slidable plates and having a part projecting from the face opposite the sliding plate, a cam engageable with said last mentioned part, means for automatically returning said last mentioned member to its normal position after releasing said cam, and control means for operating said cam member.

1,540,870. POWER REVERSE MECHANISM FOR LOCOMOTIVES. HENRY K. ADAMS, Nashville, Tenn. Filed May 19, 1921. Serial No. 470,999. 10 Claims. (Cl. 121—162.)

9. In a power reverse mechanism for steam locomotives provided with a link valve gear, the combination of a rotary fluid pressure motor; a rotary shaft driven by said motor; connections comprising a worm and sector between said shaft and valve gear for shifting the latter; a clutch to govern said connections; a manually operated rotary valve for controlling the admission of fluid pressure to said motor; a lever linked to said valve and provided with an extension; automatic means comprising a gear train and a cam driven by said shaft adapted to coact with said lever extension to actuate said controlling valve to cut off said fluid pressure when said valve gear has been shifted a predetermined amount; means connected to said gear train for visibly indicating the position of said valve gear; and means for locking said shaft in any desired position, substantially as described.

1,540,871. HEADLIGHT MOUNTING. JOHN S. ADAMS, Pomona, Calif. Filed July 18, 1923. Serial No. 651,366. 7 Claims. (Cl. 240—90.)

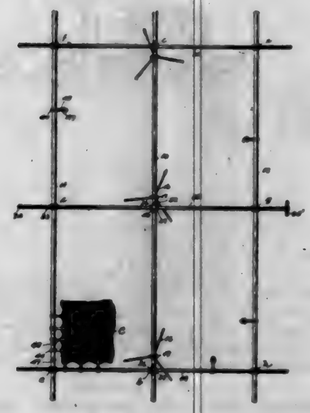


6. A headlight mounting for automobiles including a post fixed thereon, a vertically adjustable sleeve mounted on the post, a bar slidably mounted on the sleeve, headlight supporting means on the bar, and compensating springs on the sleeve above and below the bar and engaging the same.

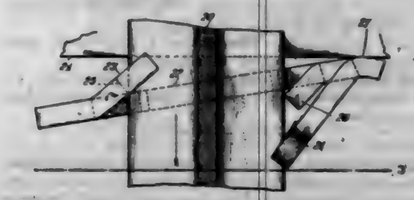
1,540,872. APPARATUS FOR MAKING HOLLOW RUBBER ARTICLES. ALBERT H. BATES, Cleveland Heights, Ohio, assignor to Paramount Rubber Consolidated, Inc., Tuckahoe, N. Y. a Corporation of Delaware. Filed Sept. 20, 1924. Serial No. 738,842. 7 Claims. (Cl. 18—35.)

5. In an apparatus for making hollow articles of plastic material, the combination of a mold having a set of cavities each provided with a surrounding raised edge, vents leading from the respective cavities to a common discharge, a valve carried by the mold controlling the discharge and adapted to stand in either open or closed position, and external means whereby the valve may be opened.

1,540,873. JACK. LOUIS T. BERGH, Fairoaks, Calif. Filed Oct. 17, 1924. Serial No. 744,160. 2 Claims. (Cl. 187—9.)



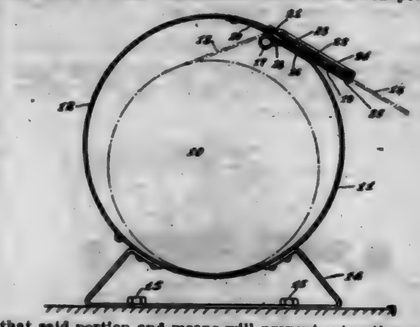
1. A jack comprising a body, a stem screwed therein, a block having a bore into one end of which the outer end of the stem slidably projects, the stem terminating short of the inner end of the bore, and a cam concealed within the bore and on which the stem rests, the cam projecting through and being journaled in the sides of the block whereby to enable the cam to be turned.



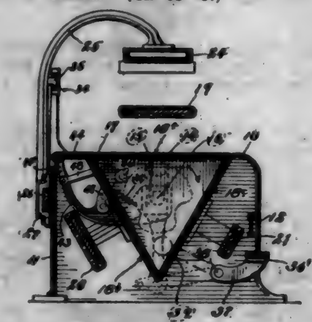
1,540,874. CURTAIN STRETCHER. ARTHUR J. BROSEY, Chicago, Ill. Original application filed Mar. 19, 1920, Serial No. 367,161. Patent No. 1,485,015. Divided and this application filed Jan. 5, 1924. Serial No. 684,520. 4 Claims. (Cl. 45—24.)

1. In a curtain stretcher, the combination of a central longitudinal rod, a central transverse rod, a fitting secured to said central longitudinal rod at the center thereof, said central transverse rod being journaled in said fitting at its center but locked against longitudinal movement, and outer longitudinal rods at each side of said center longitudinal rod, a fitting secured to each outer longitudinal rod at its center, said center transverse rod being threaded, said outer longitudinal rod fittings receiving said threaded center transverse rod, an outer transverse rod at each side of said center transverse rod, fittings adjustable longitudinally on the ends of the center longitudinal rod, said outer transverse rods being journaled at their centers in said fittings to be rotated but to be locked against longitudinal movement, said

outer transverse rods being threaded, and fittings adjustable on the outer ends of said outer longitudinal rods having threaded passageways for receiving the corresponding outer transverse rods, turning of said transverse rods causing movement of said outer longitudinal rods toward or away from said center longitudinal rod.



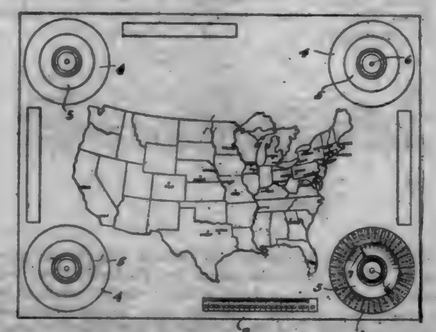
1,540,875. RAIL ANCHOR. WILLIAM H. DE BUSK, Chicago, Ill., assignor to The P. & M. Company, Chicago, Ill., a Corporation of Illinois. Filed June 23, 1924. Serial No. 721,861. 11 Claims. (Cl. 238—330.)



1. A rail anchor comprising a body adapted to extend across beneath a rail, a jaw on each end of the anchor adapted to engage the upper face of the base flange of the rail, shoulders on said anchor in spaced relation at a distance from each other substantially equal to the width of the flange of the rail adapted to engage the side faces of the flange and prevent swinging movement of the body with respect to the rail, one of said jaws being substantially rigid for applying pressure upon the upper face of the flange at one side, and the other jaw being comparatively much more resilient so as to be capable of being displaced readily for snapping into engagement with the upper face of the flange at the opposite side.

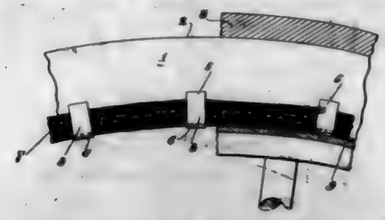
1,540,876. TENSION MECHANISM FOR TICKET RIBBONS. JOSEPH F. DWYER, Seattle, Wash. Filed Mar. 17, 1920. Serial No. 366,619. 2 Claims. (Cl. 211—81.)

1. A ticket merchandising device comprising in combination, a casing housing a roll of tickets and having a display wall along which a strip may be advanced and said wall having a raised friction portion elevating that part of the strip passing thereover, and means holding said strip in such engagement with said raised portion that said portion and means will prevent retractive movement of the strip by manual thrust on the free end of the strip.



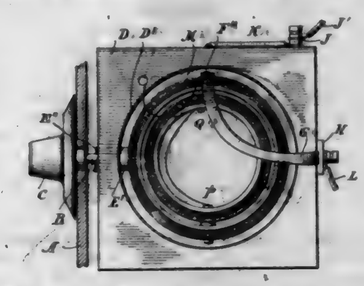
1,540,877. PRESSING MACHINE. ALFRED EILERT, St. Louis, Mo. Filed July 12, 1924. Serial No. 725,546. 10 Claims. (Cl. 68—9.)

1. A pressing machine comprising in combination a longitudinally movable iron, bearings mounted for vertical movement, and a polygonal member having its trunnions journaled in said bearings, there being a plurality of ironing boards supported on said member, the latter being rotatable to position any one of said boards in cooperative relation with said iron, said member being movable in a vertical plane for bringing one of said boards in pressure engagement with said iron.



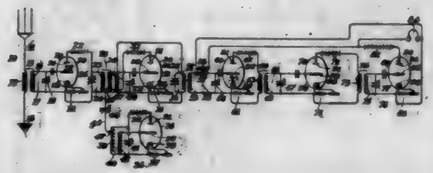
1,540,878. GAME APPARATUS. OSCAR F. ENGEL, Hartford, Conn. Filed Jan. 17, 1925. Serial No. 3,077. 3 Claims. (Cl. 273—134.)

3. A game apparatus comprising a figure representing a map of the United States and bearing on it markings denoting wireless stations, a plurality of discs bearing



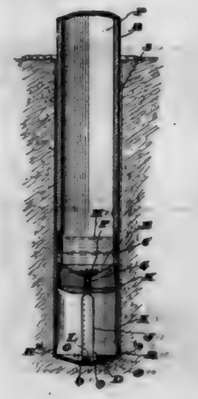
similarly marked designations, and a spinning disc having arranged about it similar marking designations, the figure having holes to receive a peg.

1,540,879. TUBE AND FLAP. EDWARD FETTER, Baltimore, Md. Filed Aug. 18, 1924. Serial No. 732,679. 5 Claims. (Cl. 152—20.)



3. The combination with an inner tube for pneumatic tires of a protective flap secured to the tube and covering its inner peripheral face by a plurality of transverse straps spanning the flap and secured at each end to the walls of the tube.

1,540,880. VARIABLE-INDUCTANCE DEVICE. FREDERICK H. GUBER, Roselle, N. J. Filed May 8, 1923. Serial No. 636,289. 4 Claims. (Cl. 171—119.)

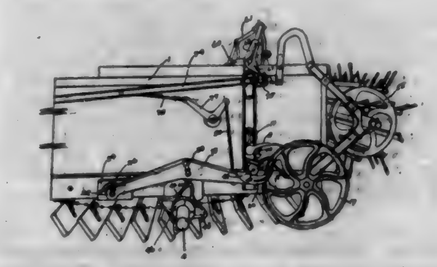


3. A variometer comprising a stator, a rotor coaxially mounted therein, a second rotor mounted to rotate at substantially right angles to the first rotor and flexible means cooperating with the stator and both of said rotors to actuate one of said rotors by the movement of the other.

1,540,881. RECEIVING SYSTEM FOR RADIANT ENERGY. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed July 9, 1918. Serial No. 244,050. 16 Claims. (Cl. 250—8.)

12. A receiving system for radiant energy, comprising an electrical circuit, means for producing electrical beats in said circuit, a detector and a circuit arranged to be controlled by the detector, said second-mentioned circuit including a source of energy and being arranged to react upon said first-mentioned circuit to accentuate the beats therein.

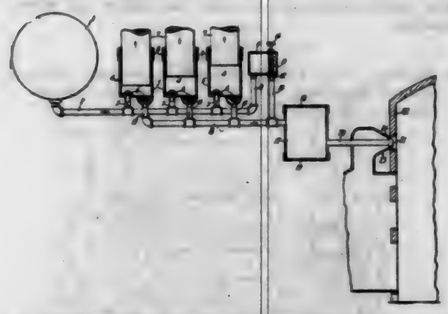
1,540,882. SOLID SHOT BIT. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 11, 1925. Serial No. 22,256. 2 Claims. (Cl. 255—61.)



1. A drill comprising a solid bit, and a hollow cylindrical spindle connected to the bit having a convex grinding face at one end and at its other end a concaved depression for directing shot to the center of the bit, said bit also having an aperture through its center and a plurality of longitudinal grooves in its periphery, and slots arranged perpendicularly in the convex face whereby the central aperture communicates with the longitudinal grooves for the passage of shot and water to the convex grinding face and to the periphery of the bit.

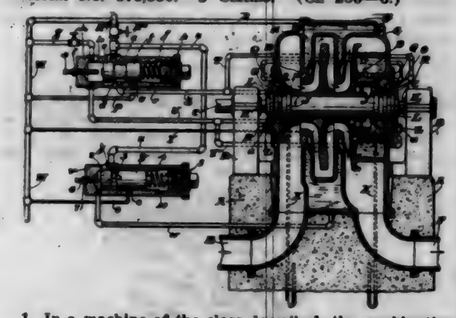
1,540,883. VITAMINE PREPARATION. ISAAC F. HARRIS, Tuckahoe, N. Y. Filed Dec. 26, 1919. Serial No. 347,502. 2 Claims. (Cl. 167—7.)

1. A food compound comprising a "vitamine" body and equal parts of lactose and galactose.



2. A food compound comprising a "vitamine" body derived from living yeast cells and equal parts of lactose and galactose.

1,540,884. FEEDING MECHANISM FOR SPREADERS. CLARENCE C. HERMANN, EDGAR C. LITCHFIELD, and HENRY L. LITCHFIELD, Waterloo, Iowa; said Hermann assignor to said Edgar C. Litchfield and Henry L. Litchfield. Filed Mar. 13, 1922. Serial No. 543,332. 16 Claims. (Cl. 74—54.)

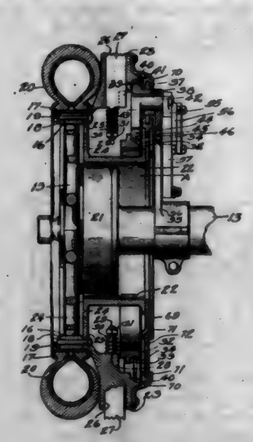


8. In combination, a ratchet wheel, a pivoted lever having at its free end a guide fork engaged with said wheel, and a pawl pivotally mounted on the lever and engaging said wheel.

1,540,885. PROCESS AND APPARATUS FOR OBTAINING RUBBER FROM LATEX. ERNEST HOPKINSON, New York, N. Y. Filed Oct. 17, 1923. Serial No. 669,007. 13 Claims. (Cl. 18—50.)

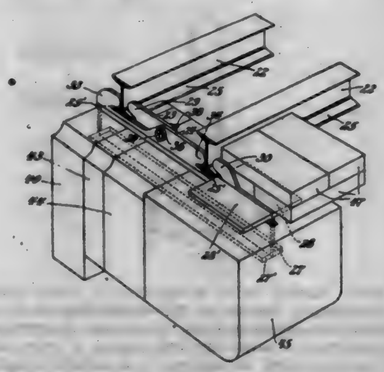
1. That method of obtaining rubber from latex which consists in, maintaining a supply of latex within a container under high pressure, ejecting it from the container in a finely divided condition into a drying chamber, and drying the particles while dispersed.

1,540,886. HYDRAULIC-PRESSURE-CONTROLLING DEVICE. LESLIE R. HUFF, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 6, 1923. Serial No. 678,830. 3 Claims. (Cl. 230—6.)



1. In a machine of the class described, the combination with a main casing, of an auxiliary chamber associated with said main casing adapted to be supplied with liquid under pressure, supply and discharge lines for the liquid in said auxiliary chamber, a valve casing in communication with said supply and discharge lines, a reciprocatory valve rotatable in said casing adapted to automatically shut off the passage of liquid through said supply line when the pressure in the discharge line reaches a predetermined point, and adjusting means for enabling said valve to operate under different pressure in said discharge line.

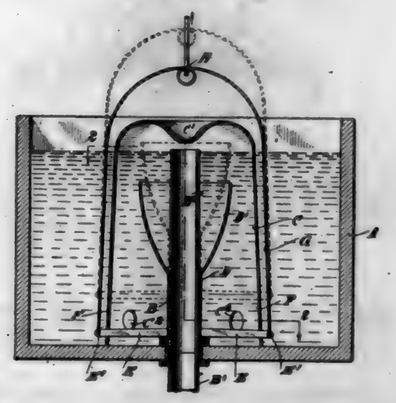
1,540,887. CRAB WRAPPER AND WRAPPING METHOD. BOOKER T. M. HUNLEY, Baltimore, Md. Filed Aug. 17, 1923. Serial No. 657,872. 3 Claims. (Cl. 119—2.)



1. The method of wrapping crabs for shipping which consists in holding the claws and fins in folded position and wrapping a sheet of flexible material about the crab and fastening the same to confine the claws and fins, leaving the head portion, including the respiratory organs, exposed.

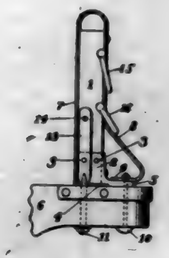
1,540,888. DISAPPEARING ANTISKID LUG. ROBERT N. KOENIGSBERGER, Sioux City, Iowa. Filed Mar. 13, 1924. Serial No. 698,907. 15 Claims. (Cl. 301—49.)

2. In combination with a vehicle having rear wheels, drums fixed to the wheels for rotation therewith, said drums being slightly less in diameter than the diameter of the wheels, traction lugs mounted in the drums for sliding movement radially thereof, a ring within each drum engaging said lugs, a stationary arch within each drum, having its periphery in sliding contact with the interior of the periphery of the drum, a sliding arch mounted in each stationary arch for downward movement relative thereto, said arches being in sliding contact with the peripheries of the rings, and means carried by the stationary arch for extending the sliding arch downwardly for extending the lugs downwardly as they are rotated to position at the lower portion of the drum, said last means being operable from the driver's seat.



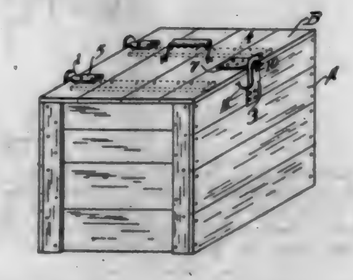
1,540,889. FURNACE ARCH. GEORGE A. KOHOUT, Chicago, Ill. Filed June 26, 1922. Serial No. 571,060. 17 Claims. (Cl. 110—95.)

1. In an arch construction, a pair of spaced supports, a pair of structural members extending between said supports, a hanger comprising a pair of members each



having means engaging each of said structural members, blocks of refractory material each engaging both members of said hanger and means for holding said pair of members from longitudinal movement, whereby said hanger is interlocked both with said structural members and said blocks.

1,540,890. FLUSH TANK. SAMUEL C. LAWSON, Croton-on-Hudson, N. Y. Filed Mar. 31, 1920. Serial No. 370,129. 2 Claims. (Cl. 4—50.)



1. A flushing apparatus comprising a supply tank, a stand-pipe extending into said tank, a stationary air-chamber surrounding the upper portion of said stand-pipe and having water inlets adjacent to its lower end, and provided, on opposite sides, with slots, a sleeve surrounding the outlet pipe and tapering outwardly therefrom to form a cup and means extending through said slots for operating said sleeve and cup for lifting the water within the casing and causing a siphoning flow from the outlet pipe.

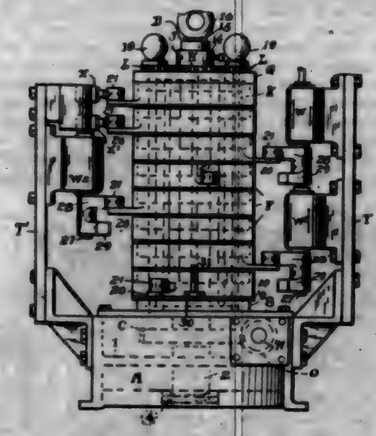
1,540,891. WAGON STAKE. FRANCIS M. LAY, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Mar. 19, 1920. Serial No. 367,153. 1 Claim. (Cl. 296—43.)

A stake adapted to be mounted on a wagon bolster and including a casting on the bolster having a base extending from opposite sides thereof and an outwardly extending foot, a socket in said casting, a wood stake body rigidly secured in said socket, a metallic band secured to the inner side of the stake body and bent over the top thereof and secured on the outward side of the stake body for part of the length thereof and extending downwardly and outwardly therefrom, having its end portion bent inwardly to rest on said foot, a bolt securing said portion and foot to the bolster, and bolts having strap portions projecting upwardly and riveted to the front and rear sides of the stake body and the casting, said bolts passing through the bolster and secured thereto.

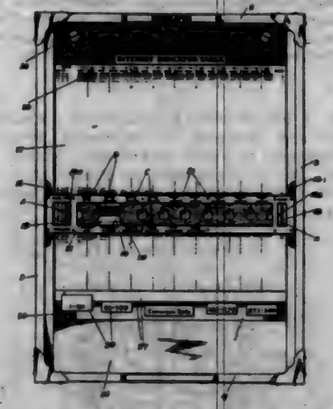
1,540,892. EGG CRATE. JOHN L. LYNCH, Starbuck, Minn. Filed May 12, 1924. Serial No. 712,624. 2 Claims. (Cl. 217—56.)

1. In an egg crate, a cover fastening, comprising perforated lugs connected to the body of an egg crate, a perforated spring connected to the opposite side of the body thereof, lugs to register with and engage the perforated lugs connected to the body of the crate and to removably lock a cover on an egg crate.

1,540,893. OUTLET BOX. JOHN JAMES MERRILL, Ipswich, Mass., assignor, by mesne assignments, to Electric Outlet Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 14, 1921. Serial No. 500,525. 4 Claims. (Cl. 247—21.)



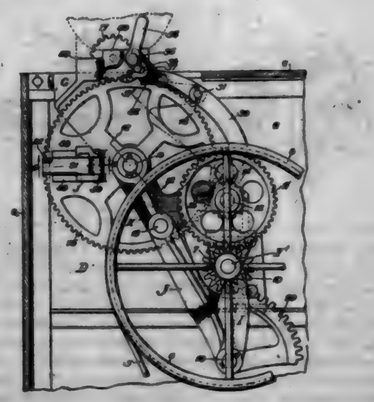
1. In combination, an outlet box and supporting means therefor consisting of a back clamping plate having an outwardly turned rim adjacent to the opening therein, a front clamping plate having an inwardly turned rim adjacent to the opening therein, the said rims being oppositely disposed to form a combined opening of uniform diameter, means for permanently uniting the said clamping plates, the said means being adapted to temporarily hold the back clamping plate in position behind the wall opening while placing the front clamping plate in position in front of the said wall opening, and means for attaching the outlet box to one of the clamping plates.



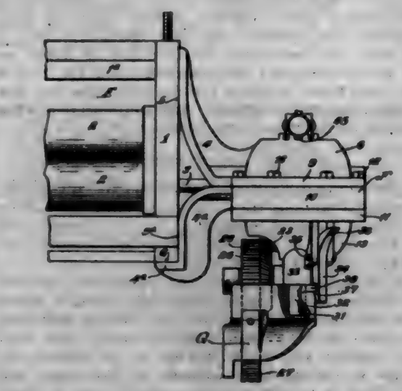
1,540,894. TIMING DEVICE. WILLIAM J. MILLER, Swissvale Borough, Pa. Filed Aug. 15, 1922. Serial No. 581,928. 17 Claims. (Cl. 49—14.)

1. A timing device for associated mechanisms comprising a rotary axial member, a plurality of supports fixed on said member, a plurality of actuating members,

each of said actuating members being rotatably mounted on one of said supports with said rotary member as an axis whereby by turning an actuating member its position relative to its support may be adjusted, and means for individually locking the actuating members in their adjusted positions.

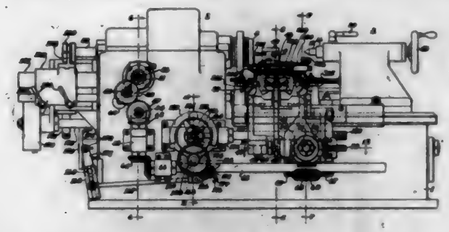


1,540,895. CALCULATOR. HARRY S. MOIR, Chico, Calif., assignor, by direct and mesne assignments, to The Moir Calculator Corporation, San Francisco, Calif., a Corporation of California. Filed May 16, 1923. Serial No. 639,235. 2 Claims. (Cl. 235—1.)



1. In a calculating device, a container for a computation sheet having a compartment to receive and maintain the sheet in a horizontally immovable but vertically removable position, a finding element disposed in a fixed horizontal plane and slidable over the sheet, and guide means for the element mounted on the container, such guide means being disposed beyond the edges of the sheet and having a length relative to that of the sheet to enable the element to be moved clear of said sheet, whereby the sheet may be moved in a vertical direction without interference with the guide means or finding element.

1,540,896. GEARING FOR WASHING MACHINES. GLENN MOIR, Jamestown, N. Y., assignor to Blackstone Manufacturing Company, Jamestown, N. Y., a Corporation of New York. Filed Feb. 7, 1921. Serial No. 443,215. 12 Claims. (Cl. 74—50.)



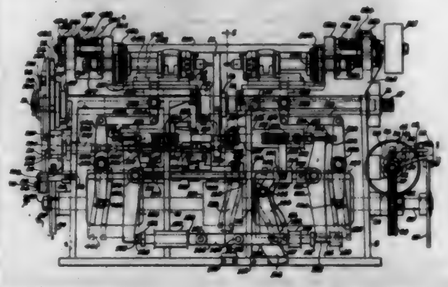
1. A gearing unit comprising rotatable shaft, a driving member rotatably and loosely mounted on said shaft, a driven member adapted for continuous rotative movement in the same direction, a second driven member fixed to said shaft and adapted for rotative movement alternately in opposite directions, gearing means for operating said driven members, and connecting and disconnecting mechanism acting upon said gearing operating means whereby the movement of the rotatable driving unit is transmitted to continuous rotative movement of one of the driven members and is translated to alternate rotative movement of the other driven member, as desired.

1,540,897. SWINGING-WRINGER MECHANISM. GLENN MOIR, Jamestown, N. Y., assignor to Blackstone Manufacturing Company, Jamestown, N. Y., a Corporation of New York. Filed Feb. 7, 1921. Serial No. 443,216. 2 Claims. (Cl. 68—32.)

1. The combination with a wringer mechanism, of a fixed support, a two-part housing, the upper part being movable in a horizontal plane about the lower part, means for removably securing the lower part to said fixed support, said means including depending pins on said lower part, and a hand operated latch member on the lower part adapted to secure the latter to the support.

1,540,898. RELIEVING MACHINE. FRIEDRICH MÜLLER, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 14, 1921. Serial No. 522,304. 77 Claims. (Cl. 82—14.)

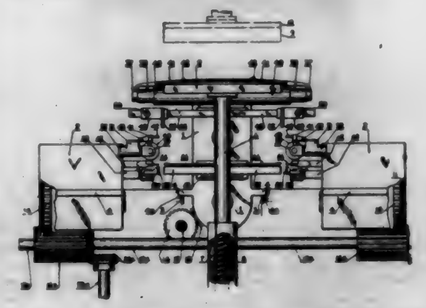
1. In a machine for operating on a cutter blank having helical teeth provided with non-radially arranged cutting faces, the combination comprising means for rotating the blank, a cutting tool adapted to engage the blank, means for effecting feeding movements between the tool and the blank for shaping the latter to cut a predetermined contour, means for effecting relieving movements of the tool along lines extending backwardly and inwardly from the front cutting edge of each tooth in conformity with the helical teeth on the blank while compensating at different blank diameters for the non-radial cutting faces of the teeth, and auxiliary means for changing the direction of the relief lines to side relieve the teeth of the blank.



25. In a machine for operating on a cutter blank having helical teeth provided with non-radially arranged cutting faces, the combination comprising means for rotating the blank, a cutting tool for engaging the blank, a former member having a predetermined contour, means for so guiding the cutting tool by said former member as to shape the blank to cut the predetermined contour, and adjustable guide member, and means for varying the position of the said guide member to change the length of the contour formed on the blank relative to the length of the contour on the former member.

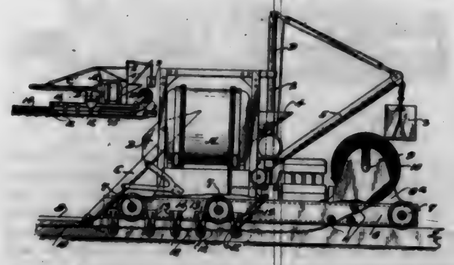
50. In a machine tool, the combination comprising a blank-carrying spindle, a cutting tool movable transversely of the spindle toward or from the blank, means for moving the tool toward the blank, means for retarding the said movement of the tool including a cylinder and a piston therein, a fluid reservoir associated with the cylinder, the said cylinder having a single valve for permitting the free flow of liquid between the cylinder and the reservoir when the tool is moved away from the blank and for restricting the flow of liquid between the cylinder and the reservoir when the tool is moved toward the blank.

1,540,899. COMBINED METAL-CUTTING MACHINE. FRIEDRICH MÜLLER, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 31, 1921. Serial No. 526,121. 93 Claims. (Cl. 20—38.)



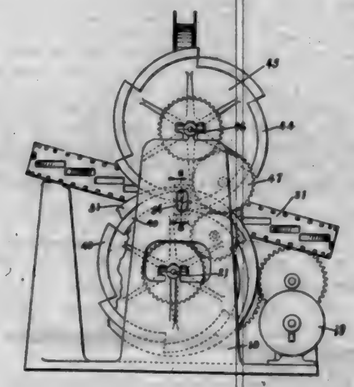
1. In an automatic machine, the combination comprising a member adapted to carry a blank having a tapped hole in the center thereof, means for indexing said member to bring the blank into operative relation to a number of stations, and means located at the various stations for so cutting away portions of the tapped hole in the blank as to form cutting edges and for so chamfering the blank as to relieve the cutting edges adjacent to one side of the blank.

25. In a machine, the combination with a turret adapted to carry a plurality of blanks, each of said blanks having a tapped hole in the center thereof, and means for indexing said turret to bring each blank successively into operative relation to a number of stations, of means for stamping said blanks at one station, means for cutting grooves in the blanks at another station, means at another station for simultaneously drilling holes in each blank adjacent to the tapped hole and from opposite sides thereof while cutting a slot in the side of the blank, means for simultaneously drilling two additional holes in each blank from opposite sides thereof at another station, means for counterboring two of said drilled holes from opposite sides of the blank at another station to extend the drilled holes into the tapped hole in the center of the blank, means for counterboring the remaining two drilled holes in a similar manner to the counterboring at the last station, and means for chamfering the metal between each two drilled holes to relieve each cutting edge adjacent one side of the blank.



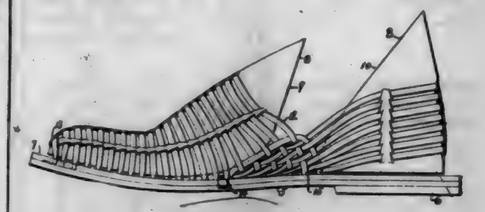
50. In a machine, the combination with a turret adapted to carry a plurality of blanks, each of said blanks having a tapped hole in the center thereof, and means for indexing said turret to bring the blanks successively into operative relation to a counterboring station and to a drilling station, of means located at the drilling station for simultaneously drilling a number of holes through each blank when in operative position and from opposite sides of the turret, said means operating the drilling means in timed relation to the operation of said indexing means, and means located at said counterboring station and operated in timed relation to the indexing means for simultaneously counterboring said drilled holes to extend into the tapped hole.

1,540,900. BOX-COVERING MACHINE. CHARLES H. NITSCH and THEODORE A. FEDERWITZ, Philadelphia, Pa., assignors to Stokes and Smith Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 10, 1923. Serial No. 638,116. 53 Claims. (Cl. 93—54.)



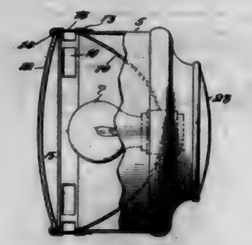
1. In a box-covering machine, the combination with a support, of a unit adjustable to different positions thereon for operation upon boxes of different dimensions, said unit comprising cam structure, a tool controlled thereby, and means for rotating said cam structure always in one direction.

1,540,901. APPARATUS FOR LAYING REENFORCED CONCRETE. JOHN F. ROAD, Cleveland Heights, Ohio, assignor, by mesne assignments, to Koehring Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 26, 1921. Serial No. 455,887. 3 Claims. (Cl. 94—46.)



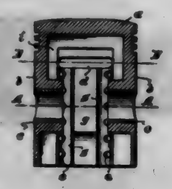
1. In a machine for constructing concrete roads, in combination, a portable support adapted to travel over a road subgrade, a concrete distributing unit mounted upon said support, and adapted to feed concrete aggregates to the subgrade, concrete reenforcing supply means on said portable support, and means carried by said support for supporting said reenforcing in spaced relation from the concrete distributor and in spaced relation to the base of the subgrade, so that materials fed from the concrete distributor pass through the reenforcing to a predetermined depth below the same, and cover said reenforcing to a predetermined depth above the same.

1,540,902. MOVING-PICTURE MACHINE. ELWOOD C. ROGERS, Indianapolis, Ind. Filed May 14, 1920. Serial No. 381,333. 24 Claims. (Cl. 88—16.8.)



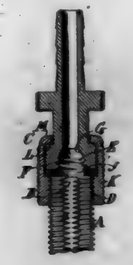
1. In a moving picture machine, the combination of means for moving a film in one direction, and a shutter moving obliquely to the direction of film movement and provided with openings which cross the film with a component of movement in the line of film movement corresponding to the speed of film movement, the sides of said opening being adapted to frame the film on two opposite sides.

1,540,903. SHOE. FRANK SANTOYO, St. Louis, Mo. Filed July 28, 1924. Serial No. 728,550. 2 Claims. (Cl. 36—3.)



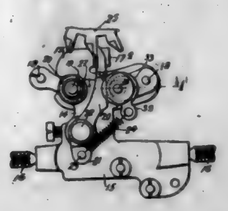
1. A shoe comprising a heel portion of the upper, which heel portion is secured to the insole in advance of the heel portion thereof.

1,540,904. COMBINED SPOT AND PARKING LIGHT. HERMAN SCHLAICH, Long Island City, N. Y. Filed Nov. 8, 1921. Serial No. 513,703. 1 Claim. (Cl. 240—7.)



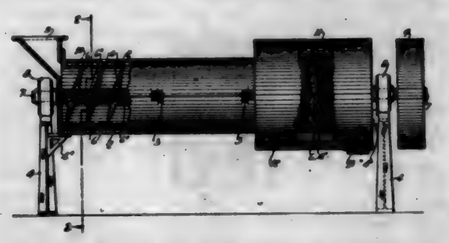
In combination with a motor vehicle, a combined spot and parking light mounted for universal movement on the left side of said vehicle and comprising a casing, a lamp and reflector therein, a translucent portion in said casing through which the spot beam of light is projected, and translucent portions in said casing so located that light will shine through said translucent portions toward the front and rear of the vehicle when the spot beam is directed downwardly.

1,540,905. LIGHT-METAL PISTON, ESPECIALLY FOR USE IN CONNECTION WITH INTERNAL-COMBUSTION ENGINES. PAUL SCHÜTTLER and STEPHAN LÖFFLER, Charlottenburg, near Berlin, Germany. Filed Jan. 26, 1925. Serial No. 4,713. 4 Claims. (Cl. 74—108.)



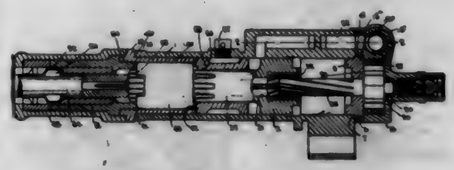
1. A light-metal piston, especially for use in connection with internal combustion-engines and having firstly, rows of holes extending parallelly to the axis of the piston and separating the wall-portions connected with the piston-pin from the other wall-portions, and secondly, transverse slots separating the latter wall-portions from the closed end of the piston, substantially as set forth.

1,540,906. PUMP COUPLING. MAXIMILIAN CHARLES SCHWEINERT, New York, N. Y. Filed Sept. 13, 1915, Serial No. 50,294. Renewed Nov. 13, 1924. 3 Claims. (Cl. 285—122.)



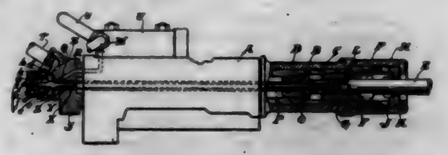
1. A pump coupling having a body portion formed with a threaded bore and a member below said body portion swivelled thereto and formed with a second threaded bore of larger diameter than the first, and a packing washer carried at the end of said body portion and partly overlapped by said member.

1,540,907. TYPEWRITING MACHINE. GEORGE A. SEIB, Ilion, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed May 25, 1923. Serial No. 641,313. 12 Claims. (Cl. 197—88.)



1. In escapement mechanism for typewriting machines, the combination of a dog carrier, a dog movably supported thereon, a stop for said dog contactive with the dog in all of its positions, and a support fixed relatively to said stop, said stop being loosely mounted on said support.

1,540,908. GRINDER AND BEATER. HARRY J. SHELTON, St. Louis, Mo. Filed Dec. 15, 1922. Serial No. 607,117. 10 Claims. (Cl. 83—11.)

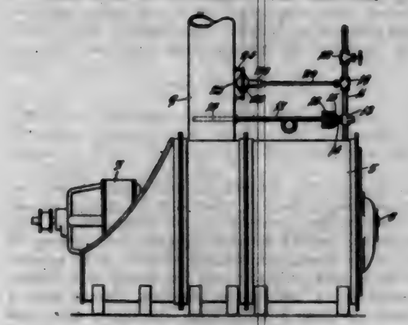


1. A grinder and beater comprising a housing having a tubular grinding chamber with a plurality of revoluble hammers spirally mounted therein, said chamber having an inlet for material to be reduced and an outlet, the pitch of some of said hammers being greater than that of other of said hammers.

1,540,909. PNEUMATIC TOOL. WILLIAM A. SMITH, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 5, 1922. Serial No. 586,291. 12 Claims. (Cl. 121—7.)

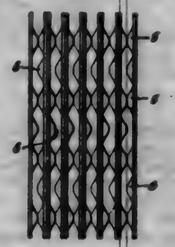
5. In a percussive tool the combination with a cylinder, and a ported valve chest, of a cylinder head having a flange engaging said cylinder, a valve bushing in one end of said valve chest having ports therein registering with the ports in said valve chest, a flanged head on said bushing for engaging said valve chest, the flange on said bushing being cut away to receive and inter-lock with the flange on said cylinder head, and a back head recessed to receive said cylinder head and said valve bushing, and means for clamping said back head to said cylinder.

1,540,910. ROCK DRILL. WILLIAM A. SMITH, Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 13, 1924. Serial No. 737,509. 2 Claims. (Cl. 121—10.)



2. In a rock drill, a hammer cylinder, a front head on said cylinder adapted to receive a hollow drill steel, a back head for the cylinder, a water tube extending from said back head through the cylinder into the front head to supply cleansing water to the drill steel, an air tube about the water tube also extending from the back head substantially to the drill steel, said air tube being flared at its back end and said water tube being provided with a bulb fitting into the flared end of the air tube, and a hollow plug screwing into the back head for holding the bulb in sealing relation to the flared end of the air tube, said back head being provided with air and water passages leading to the air and water tubes respectively.

1,540,911. TOOTHBRUSH. SAMUEL SONNESHEIN, New York, N. Y. Filed Dec. 29, 1924. Serial No. 758,522. 1 Claim. (Cl. 132—84.)

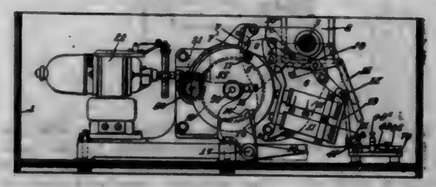


In combination, a brush having a threaded extension, a handle for said brush having a recess in the rear end thereof, the front portion of said handle being internally threaded and being separated from said recess by an intermediate portion of said handle, the rear of said handle having a separable tip detachably connected thereto, and detachable therefrom by a longitudinal movement, said tip having a flat toilet appliance connected thereto and adapted to fit into said recess.

1,540,912. TEMPERATURE REGULATOR FOR BLOWERS. IRA H. SPENCER, West Hartford, Conn., assignor to The Spencer Turbine Company, West Hartford, Conn., a Corporation of Connecticut. Filed May 21, 1919. Serial No. 298,674. 8 Claims. (Cl. 236—18.)

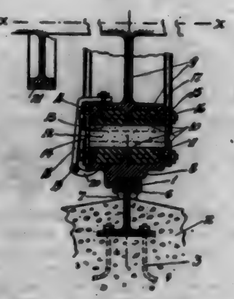
1. A device for effecting flow of air, including means for supplying a temperature changing medium to a volume of air acted upon by said device, a plurality of independently operable valves for regulating a single delivery of said temperature changing medium, and means acting independently each of the other and actuated by reason of different conditions existing in said volume of air to operate said valves.

1,540,913. RADIATOR. SWEN R. SWENSON, New Haven, Conn., assignor, by mesne assignments, to The Motor Radiator & Manufacturing Corporation, Newark, N. J., a Corporation of Delaware. Filed July 14, 1920. Serial No. 396,254. 6 Claims. (Cl. 257—130.)



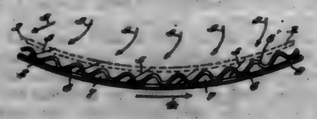
1. A radiator core comprising a plurality of plates arranged in pairs with the side edges of each pair of plates joined together, projections integral with and extending from the faces of each plate serving to space apart adjacent plates and other projections extending from each plate toward the adjacent plate of the contiguous pair of plates, said projections on each plate being offset from any projection on the said adjacent plate of the contiguous pair.

1,540,914. TRUCK. ALEXANDER WALLACE, Shawsheen Village, Mass. Filed Jan. 3, 1925. Serial No. 3,308. 6 Claims. (Cl. 296—28.)



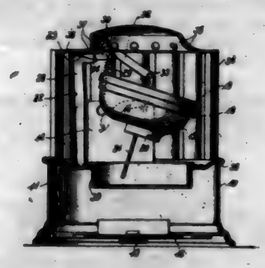
1. In combination with a chassis frame including its longitudinal side members supported on the rear axle, an extension member overlying each of said side members and extending from substantially in advance of the axle to beyond the ends of said side members, a depending strut attached at one end to the frame members adjacent the ends thereof, forward truss members connecting the lower strut ends and the side members, and rear truss member connecting said ends and the extension members adjacent their ends.

1,540,915. AUTOMATIC TRAIN-STOP MECHANISM. LEWIS R. WALLACE, Waltham, Mass. Filed June 2, 1920. Serial No. 385,922. 10 Claims. (Cl. 46—202.)



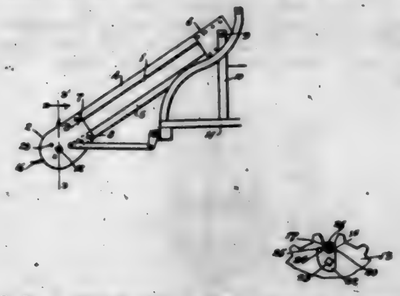
4. In automatic train stop mechanism, in combination with a block signal system, a track obstacle in each block, a gravity operating member therefor, a lock normally maintaining said track obstacle in safety position, and a supplementary lock permitting the track obstacle in the block behind to assume danger position in the event of removal of the gravity member from the track obstacle in the immediately preceding block.

1,540,916. RAILROAD CAR AND TRACK CONSTRUCTION. GAETAN AJELLO, New York, N. Y. Filed Sept. 11, 1923. Serial No. 662,125. 4 Claims. (Cl. 295—11.)



1. In a railroad car and track construction, a wheel consisting of an outer and an inner portion concentrically spaced in relation to each other, embodying in the concentric space between them flanges projecting from each portion toward the other portion, heat insulating means between each set of flanges and cushioning means between the insulating means.

1,540,917. CENTRIFUGAL SEPARATING MACHINE. WILLEM APPEL, Soerabaya, Dutch East Indies. Filed Mar. 14, 1923. Serial No. 15,619. 6 Claims. (Cl. 210—76.)



2. In a centrifugal separating machine, a member comprising a perforated corrugated plate with its corrugations extending parallel to the axis of the machine, all its perforations being in corresponding sloping sides of the corrugations.

1,540,918. SAVINGS BANK. LOUIS V. ARONSON, Newark, N. J. Filed Nov. 20, 1924. Serial No. 751,156. 4 Claims. (Cl. 232—4.)

2. A toy bank comprising, in combination, a base containing a coin chamber, a frame carried by the upper wall of said chamber, a voicing apparatus pivoted in said frame, a chute projecting upwardly from said chamber, a closure for the receiving end of said chute, and means carried by the closure to cause operation of the voicing device upon insertion of a coin.

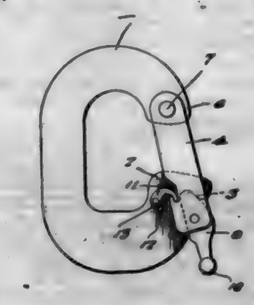
1,540,919. SHEAF LOADER. WILLIAM ALBERT BALDWIN, Winnipeg, Manitoba, Canada. Filed Oct. 8, 1923. Serial No. 667,362. 4 Claims. (Cl. 56—364.)

2. In a sheaf loader, a pick up comprising opposing rotatably mounted and driven chain wheels, said chain wheels having suitably spaced notches formed in the periphery thereof, bearing sleeves mounted in the notches and detachably connected to the wheels and similar prong carrying shafts extending between the chain wheels and having the ends thereof rotatably mounted in the bearing sleeves.

1,540,920. SELF-FILLING PENCIL. HANNIBAL BERRYMAN, Centerville, Mont. Filed June 7, 1924. Serial No. 718,603. 3 Claims. (Cl. 120—18.)

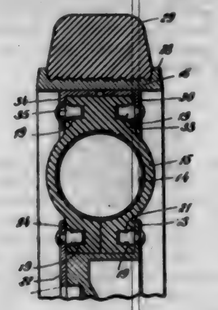
1. A lead pencil comprising a body having a longitudinal opening, a plunger movable longitudinally in the body and having a spiral slot, a shell journaled on the body and having a plurality of internal longitudinal lead compartments adapted to be brought one at a time into registration with the opening to permit a lead to be discharged through the opening and into the body when the plunger is retracted, and a lead feeding means movable in the plunger and having a finger engaged in the slot, the opening, and in one compartment, the body having a recess for the reception of the finger when the lead feeding means and the plunger are retracted, thereby to permit a rotation of the shell.

1,540,921. FASTENING DEVICE FOR LEGGINGS. PAUL BIDAL, Paris, France. Filed July 21, 1924. Serial No. 727,326. 4 Claims. (Cl. 24—208.)



1. A fastener for connecting overlapping pieces of fabric comprising a member adapted to be secured to one piece of fabric and provided at one end with an outwardly-inclined spring tongue in which an opening is formed; and a companion member adapted to be secured to the other piece of fabric and consisting of a bridge-piece embodying a flat central platform formed with a boss which projects inward from its inner face, and T-shaped ends, a securing plate adapted to be positioned against the inner face of the second-named piece of fabric, and a counterplate adapted to be inserted between said platform and the outer face of said second-named piece of fabric and having slots to enable the stem portions of the ends of the platform to be passed therethrough and through the fabric and bent inward against the face of the counterplate; said tongue adapted to be inserted between the platform of the bridge piece and the counter plate to enable the boss on said platform to snap into engagement in the opening in said tongue.

1,540,922. AGGLOMERATED MATERIAL AND PROCESS FOR MAKING THE SAME. ALEXANDRE SACHA BLACHONOVITCH, Paris, France, assignor to Henry Goran Bralower and Morris Bralower, both of New York, N. Y. Filed Sept. 2, 1924. Serial No. 735,480. 5 Claims. (Cl. 106—39.)



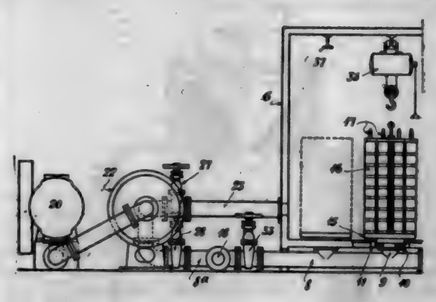
1. A process for agglomerating filler material, comprising, mixing the filler with plaster of Paris, then mixing with the result an aqueous solution of different kinds of gelatines such solution comprising water, bone gelatine, large sinew gelatine, small sinew gelatine, refined gelatine, bronze gelatine, and silver gelatine in approximately the proportions by weight of 1,000, 100, 80, 60, 40, 14, and 6 and then mixing with the result an aqueous solution of different kinds of gelatine hardeners, such solution comprising water, chrome alum, potash alum, bichromate of potash and formaldehyde in approximately the proportions by weight of 1, 76, 152, 57 and 114.

1,540,928. LINK. JEFF M. BLAIR, Humble, Tex. Filed June 18, 1924. Serial No. 719,870. 1 Claim. (Cl. 24—232.)

A hook structure comprising a link having spaced ends and provided at one end with an outstanding lip, and provided at its outer side and under the lip with a recess, link plates pivotally connected with the opposite end portion of the link and adapted to bridge the space between the end portions and overlap the recess, a latch member pivotally mounted between the free ends of the link plates and adapted to engage under the lip and enter the recess, one of the link plates being provided at its edge with a notch and a locking dog pivotally mounted upon the body and engageable in the notch of the link plate.

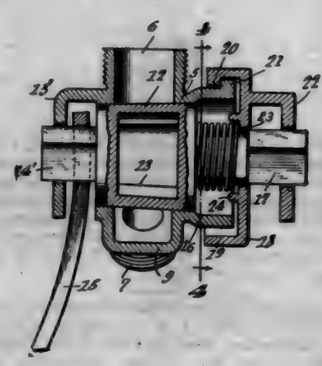
1,540,924. PNEUMATIC CUSHION WHEEL. JOHN BOGDAN, Newark, N. J., and JOSEPH A. ANGLADA, Jenkintown, Pa. Filed Aug. 13, 1923. Serial No. 657,090. 7 Claims. (Cl. 152—33.)

3. A vehicle wheel comprising a body portion, having a rim provided with a flange, a plate, a wheel tire rim, a flexible shoe rigidly clamped to said rims, said rims and shoe being connected by tapered interengaging portions, and clamping bolts extending through the plate, shoe and rim flange and securing the shoe to the first named rim.



1,540,925. IMPLEMENT FOR CUTTING GRASS. MANUEL BOUSO, Habana, Cuba. Filed Mar. 19, 1923. Serial No. 626,184. 2 Claims. (Cl. 97—169.)

1. In an implement of the class described a beam, a standard pivotally connected to the beam for vertical angular adjustment, a substantially semicircular horizontally arranged share provided at the center with a rearwardly extending arm secured to the lower end of the standard and a colter extending upwardly from said arm and adjustably secured to the beam.

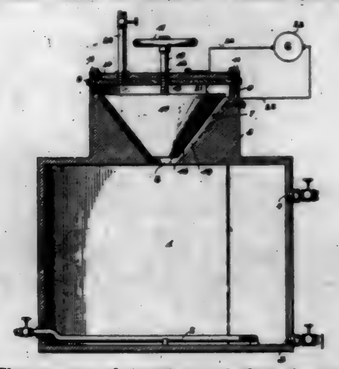


1,540,926. APPARATUS FOR THE DRYING OF WOUND YARNS AFTER LIQUID TREATMENT THEREOF. JOHN BRANDWOOD, THOMAS BRANDWOOD, and JOSEPH BRANDWOOD, Bury, England. Filed May 18, 1923. Serial No. 639,906. 4 Claims. (Cl. 34—26.)

1. A drying apparatus, comprising a drying chamber, an air pipe communicating directly with the air space of the said chamber, a support arranged horizontally in the said chamber and provided with a dish having an air opening, an air pipe connected to said dish, a hollow carrier plate provided with perforated tubes for supporting cheeses of yarn and having a tubular stem which

engages with the said dish, and means for forcing air into one of the air pipes and for exhausting air from the other air pipe.

1,540,927. VALVE. ALFRED W. CHARLES, Butte, Mont. Filed Jan. 7, 1924. Serial No. 684,837. 1 Claim. (Cl. 251—112.)

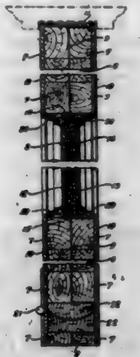


A valve including a body portion, said body portion having an opening extending transversely therethrough, and having a flange formed with lugs extending laterally therefrom, a plug having openings, positioned in the body portion, a cap having lugs, a coiled spring disposed between the cap and plug for normally urging the plug within the body portion to insure a fluid-tight connection between the body portion and plug, and means for rotating the plug.

1,540,928. ACID-RESISTING ALLOY. ALVAH W. CLEMENT, East Cleveland, Ohio, assignor, by mesne assignments, to William H. Smith, East Cleveland, Ohio. Filed Dec. 17, 1917. Serial No. 207,427. 6 Claims. (Cl. 75—1.)

1. An alloy containing principally nickel, chromium and iron, in which the nickel is greater than 50%, the chromium approximately 15%, the balance consisting principally of iron together with an appreciable amount of molybdenum but not greater than approximately 8%.

1,540,929. TREATING OF HYDROCARBON OIL. S PHILIP COMLENTZ, Baytown, and STEWART P. COLEMAN, Corpus Christi, Tex., assignors to Humble Oil and Refining Company, a Corporation of Texas. Filed Dec. 31, 1920. Serial No. 434,393. 7 Claims. (Cl. 196—44.)



1. The process of treating a hydrocarbon oil which consists in subjecting the oil to treatment with acid, separating the acid sludge, producing an emulsion of the oil with a salt solution and subjecting said emulsion to cataphoretic action.

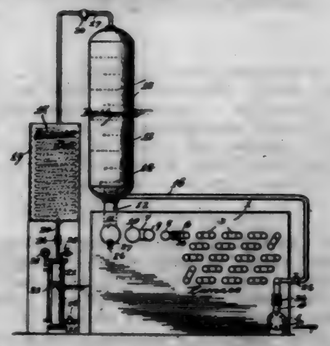
1,540,930. DEVICE FOR SUSPENDING SHEET MATERIAL. SOLOMON F. CUSHMAN, Beverly, Mass. Filed May 28, 1921. Serial No. 473,332. 9 Claims. (Cl. 24—248.)

2. A device of the class described, comprising a base, a pair of toggle levers, one of said levers being pivoted to the base at one locality thereon and the other being adapted, when the toggles are straightened, to co-operate with another locality of the base to grip a piece of material, and a spring-tongue connected with the first-named toggle and shaped to co-operate with the base in locking the knuckle of the toggle from movement.

1,540,931. SOUND-INSULATING PARTITION. WALTER B. DUNCANSON, New York, N. Y., assignor to The J. G. Wilson Corporation, New York, N. Y., a Corporation of Virginia. Filed Apr. 7, 1924. Serial No. 704,626. 9 Claims. (Cl. 20—4.)

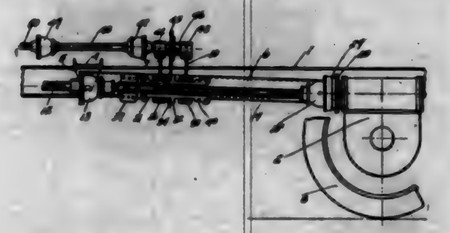
1. A sound insulating structure comprising two layers of non-metallic material and a sound-resisting metal foil interposed between said layers.

1,540,932. SOUND-INSULATING PARTITION. ARTHUR H. DODGE, New York, N. Y., assignor to The J. G. Wilson Corporation, New York, N. Y., a Corporation of Virginia. Filed Apr. 19, 1924. Serial No. 707,553. 7 Claims. Cl. 20—4.)



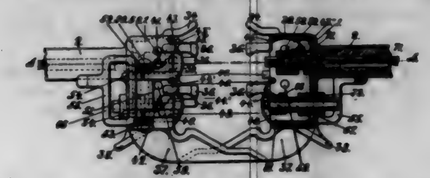
1. A sound insulating door or partition comprising laminæ, and an intermediate lamina consisting of a screen mesh interposed between said laminæ and having the interstices thereof filled with an adhesive by which the adjacent laminæ and the screen are united.

1,540,933. FOLDING PARTITION. JOHN THOS. FAIRHURST, Elizabeth, N. J., assignor to The J. G. Wilson Corporation, New York, N. Y., a Corporation of Virginia. Filed Apr. 26, 1924. Serial No. 709,115. 14 Claims. (Cl. 20—20.)



5. In combination, a slidable and rotatable section of a folding door, means to guide the section and to prevent it from sliding during its rotation, and vertically adjustable means to guide the section during its sliding movement.

1,540,934. APPARATUS FOR CRACKING OIL. GUSTAV EGLOFF and HARRY P. BENNER, Independence, Kans., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Feb. 10, 1921. Serial No. 443,747. 2 Claims. (Cl. 196—107.)



1. In an apparatus for cracking oil, the combination with a furnace, of a plurality of heating tubes for heating the oil to a cracking temperature, expansion means communicating with the heating tubes comprising a plurality of communicating tubes of gradually increasing diameter and means for taking off vapors and separate means for taking off residue from the expansion zone.

1,540,935. POWER TAKE-OFF MECHANISM. WILLIAM J. FOSS, Bay City, Mich., assignor to The Bay City Foundry & Machine Company, Bay City, Mich. Filed Mar. 27, 1922. Serial No. 547,249. 7 Claims. (Cl. 74—7.)

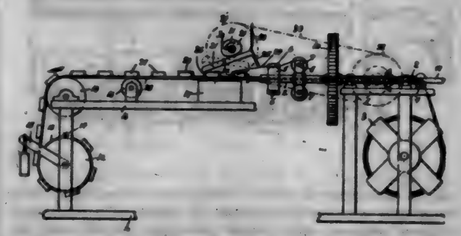
1. The combination with a motor vehicle, a drive shaft, a universal joint, a power take off comprising a declutching mechanism solid on the drive shaft and provided with a toothed clutch, a toothed member journaled thereon and adapted to be connected to the universal joint, shiftable means surrounding said member for selectively engaging one or both of said members, a subframe connected to the vehicle frame, a counter shaft journaled thereon, and means for driving the counter shaft from the drive shaft.

1,540,936. AUTOMATIC GAS AND ELECTRIC COUPLING FOR RAILWAY CARS. THEODORE P. GARABEDIAN, New York, N. Y. Filed Mar. 15, 1923. Serial No. 625,421. 7 Claims. (Cl. 173—332.)

1. In an automatic gas and electric coupling for railway cars, the combination with a housing, pipe nipples in said housing, means to connect said pipe nipples with pipes of the car, connecting terminals on front ends of said nipples, electrical connectors in said housing, cables extending to said connectors from said car, an extension rod on the rear end of said housing, a box adapted to receive said extension rod, a spring in said box, a shoulder on said extension rod adapted to press on said spring, said rod passing through an aperture in the rear end of said box, a nut on the outer end of said rod adapted to limit the movement of said rod with said housing, a yielding means to align said rod in said box, and means to support said box in a parallel coordination with the drawbar of said car.

1,540,937. LADDER. EDWARD F. GIVENS and LYCURGUS LINDSAY, Los Angeles, Calif.; said Givens assignor to W. W. Lineaba. Filed Dec. 28, 1921. Serial No. 525,305. 6 Claims. (Cl. 228—38.)

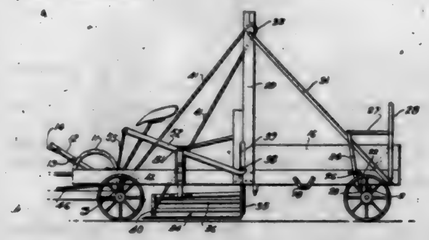
4. In a ladder of the kind described, the combination of a pair of ladder units, interlocking bracket members attached respectively to the ladder units and constructed so as to be disengageable from each other by manipulation of the units, said interlocking brackets operating as a hinge connection for the ladder units when connected and operating to permit an unrestricted opening and closing movement of the angle formed by the ladder units in setting the same up as a step ladder, and a yoke secured to one of the ladder units and having a



pair of laterally projecting arms, said arms operating when the ladder units are set up as a step ladder, to limit the swinging movement of the ladder units on the joint connection, and having a second position operating to hold one of the ladder units on the other when they are superposed upon each other to form an extension ladder.

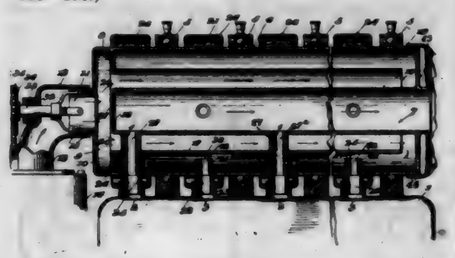
1,540,938. SCRAPING BLADE FOR BEARINGS. RALPH W. GORDON, Rapid City, S. Dak. Filed Sept. 18, 1924. Serial No. 738,442. 1 Claim. (Cl. 45—47.)

A tool of the class described comprising an elongated blade concave-convex in cross section and its longitudinal edges tapering from the longitudinal center of the blade toward each end thereof, said blade being bevelled along the edges of the concave surface so that the corresponding edges of the convex surface terminates in a cutting edge, and a handle carried by each end of the blade.



1,540,939. MACHINE FOR THE MANUFACTURE OF FENCING. HANS CLAUSSON HANSEN, Charlottenlund, near Copenhagen, Denmark. Filed Apr. 1, 1925. Serial No. 19,919. 1 Claim. (Cl. 140—31.)

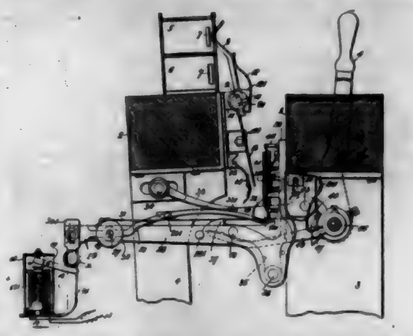
A machine for the manufacture of trellis-like fencing material and wire-bound iron reinforcement for concrete, comprising a machine frame, a plurality of parallel hollow shafts journaled thereon and forming passages for supporting wires, a binding-wire guiding device mounted on each of the said shafts and having means for wrapping the binding-wires around the supporting wires and binding staves to the same, an automatically operated tension device located above the supporting wires and consisting of a spring-actuated lever fulcrumed intermediate of its ends to form two arms, one of the arms being provided at its outer end with means for engaging the staves to control the feed and the other arm having wire engaging means arranged to engage the bind wire and press it firmly against a transverse stave resting on the supporting wire while the binding wire is being wrapped around the supporting wire, a cam located above the lever and arranged to directly engage



one of the arms thereof for moving the lever against the action of the spring, and a single means for operating the cam to disengage the feed controlling means and move the wire engaging means into contact with the binding wire and for rotating the hollow shafts while the binding wire is being pressed against the stave.

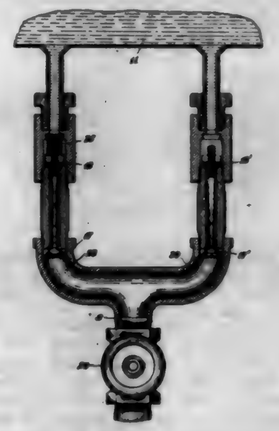
1,540,940. LOADER, MONTA B. HOWARD and THOMAS E. DEWEESE, Marble, Ark. Filed Aug. 10, 1920, Serial No. 402,550. Renewed Nov. 15, 1924. 5 Claims. (Cl. 219—78.)

1. A wheeled frame having a box at the rear thereof, a scoop disposed at the front of the box, lugs thereon, guides carried by the frame and receiving said lugs and designed to permit of a limited vertical movement of the scoop with respect to the frame, pivoted means contacting with said lugs, whereby to raise and sustain the scoop at varying elevations, cable operated means for further elevating the scoop to bring the lugs thereof to the upper extremity of the bearings and for further causing the tilting of the scoop in the direction of the box.



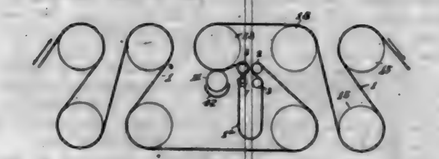
1,540,941. ROTARY VALVE FOR GAS ENGINES. ARTHUR JOSEPH KRAUSE, Cleveland, Ohio. Filed Aug. 19, 1924. Serial No. 732,999. 6 Claims. (Cl. 123—190.)

1. In an internal combustion engine, a rotary valve comprising a cylindrical casing provided with internally arranged exhaust and intake conduits, intake and exhaust ports, and passages connecting the intake ports and exhaust ports respectively with the intake and exhaust conduits, individual water jackets mounted on the cylindrical valve casing and provided with radial passages therethrough isolated from the water jackets, the passages in certain of the water jackets adapted to aline periodically with the intake ports of the valve, the passages in the other jackets adapted to periodically aline with the exhaust ports of the valve.



1,540,942. SMASH-PROTECTOR MOTION. LOUIS N. LA FAYETTE, Plymouth, Mass. Filed July 20, 1921. Serial No. 486,238. 8 Claims. (Cl. 139—348.)

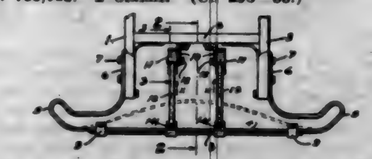
1. A loom comprising a breast beam, a lay and shuttle boxes located at each end thereof, a binder located in each shuttle box to be displaced by the entry of a shuttle into the box, circuit-closers located to be held by said binders in circuit-closing position when said binders are in displaced condition, and a circuit comprising an electromagnet and permanent connections between said electromagnet and said circuit-closers, whereby upon the closing of both of said circuit-closers, the electromagnet will at once be energized, a stop motion



and a locking mechanism, one member of said locking mechanism being attached to said breast beam and the other member being attached to said lay, said members being normally disengaged, and means whereby upon the energization of said electromagnet said stop motion will be operated and said locking members will be positioned to engage and lock the lay on its return movement.

1,540,943. LUBRICATING DEVICE. STEVEN T. LESTER, East Bakersfield, Calif. Filed May 23, 1923. Serial No. 640,839. 1 Claim. (Cl. 184—76.)

In a lubricating device, the combination of a source of lubricant provided with two outlets; each of said outlets having one end of a coupling attached thereto, each of said couplings forming an interior chamber; two nipples respectively secured to the other ends of said couplings; a duct having two branches, one of each of which is secured to the other end of said nipples respectively; and two valve stems respectively passing through said nipples, each of said stems having a valve member secured to opposite ends thereof and arranged so that when one valve is open the other is closed; one only of said chambers having a spring seated therein adapted to exert pressure upon the corresponding movable valve member and tending to actuate same to assume its closed position.

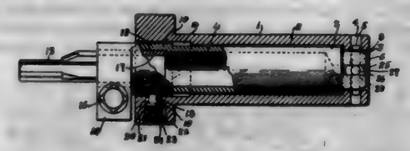


1,540,944. ROOFING MACHINE. OWEN D. MCFARLAND, Chicago, Ill., assignor to The Guyton & Cumfer Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 2, 1921. Serial No. 441,723. 5 Claims. (Cl. 91—16.)

1. In a roofing machine the combination with means comprising an embossing roll for imposing a design upon a roofing sheet continuously fed therethrough, feed rolls having guide flanges thereon arranged out of contact and in off-set relation, whereby the material is accurately fed to the design-making means without the use of pressure.

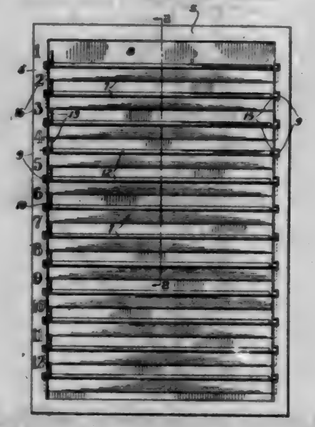
2. In a roofing machine, the combination with a means for imposing a design upon the roofing material, feed rolls adapted to positively feed the material without subjecting it to pressure, and adapted to maintain available at all times an excess of roofing material to prevent strain, or deterioration of the sheet when the design is imposed thereon.

1,540,945. BUMPER FOR AUTOMOBILES. WRIGHT MILLER, Denver, Colo. Filed Sept. 16, 1924. Serial No. 738,015. 2 Claims. (Cl. 293—55.)



1. The combination with a spring bumper of an automobile, of a recoil retarding device located between the bumper and the chassis of the car.

1,540,946. BEATER. ARTURO F. MOELLER, San Pedro, Mexico. Filed May 8, 1924. Serial No. 711,847. 5 Claims. (Cl. 259—113.)

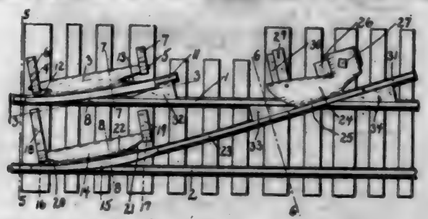


1. In a device of the character described, a dasher including a dasher rod, a foraminous dasher shell connected with the rod, and a removable foraminous bottom plate normally closing the shell and removable without disturbing the connection between the shell and rod.

1,540,947. REAMING TOOL. WILLIAM L. O'BRIEN, Dayton, Ohio. Filed Sept. 15, 1922. Serial No. 588,421. 1 Claim. (Cl. 279—16.)

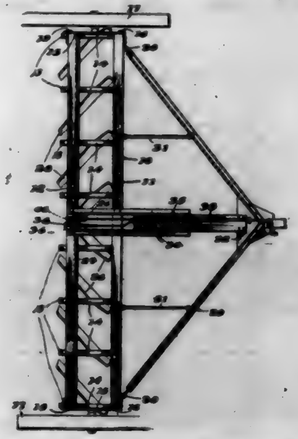
In a floating tool holder, a tubular casing provided at one end with pairs of intersecting apertures, the axes of which intersect the bore of the casing, a tool holder arranged in the casing and having a ball head at one end provided with a kerf dividing the head into two tines; said tines being provided with aligned apertures coaxial with the axes of one pair of the apertures in the casing, a pivot pin rotatably mounted in the other pair of apertures in the casing and having a flat central portion snugly and slidably engaging the side surface of said kerf, and a second pivot pin passing through one pair of apertures in the casing, through the apertures in the tines and through the first mentioned pivot pin, and functioning to lock the tool holder and first mentioned pivot pin in th ecasing.

1,540,948. PRINTER'S GALLEY RACK. ARTHUR A. PANNIER, Salt Lake City, Utah. Filed Dec. 21, 1923. Serial No. 681,990. 3 Claims. (Cl. 276—44.)



1. A cabinet having a compartment provided at its ends with series of opposed grooves extending from front to rear, a series of cooperating galleys, each having the usual side and end flanges and provided with a guiding rib projecting horizontally outward from the bottom of the galley beyond the end flange, and the bottom of the galley being extended horizontally outward at the other end beyond the end of the side flange, said rib and extended end of the bottom forming guiding means, which are received within said grooves to support the galley within the cabinet, whereby each galley serves as its own shelf within the cabinet.

1,540,949. RAILWAY BRIDGE SWITCH. DAVIS A. PICKENS, Jackson, Miss. Filed June 16, 1924. Serial No. 720,246. 5 Claims. (Cl. 246—376.)



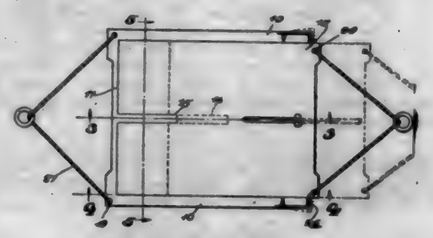
1. In a railway bridge switch, the combination with main line rails and auxiliary rails forming a switch crack of three rail bridging members, each comprising a supporting body and a rail portion having tapered ends secured thereto, trunnions and supports for two of said

rail bridging members arranged to permit these bridging members to be turned back in order to leave the main line rails clear or to be turned over so as to place the rail portion of each on top of a main line rail and an auxiliary switching rail in order to cause a wheel to pass from one rail to the other, and a pivot and sup-

porting means for the third rail bridging member arranged to permit this member to be swung back on its pivot in order to leave the main line rail clear or to be swung forward so as to place its rail portion on top of parts of two auxiliary switching rails and the main line rail in order to cause a wheel to pass from one auxiliary rail to the other.

1,540,950. WEEDER. WILLIAM J. RAUSLER and LAMAR C. PURTT, Loveland, Colo. Filed Feb. 3, 1923. Serial No. 616,728. 2 Claims. (Cl. 97—144.1.)

1. In a device of the type described, supporting wheels, plates bearing stub axles for said supporting wheels, a frame including vertically disposed guide members slidably receiving the sides of said plates, blade holders rigidly connected to said frame member and having aligned apertures formed therein, a shaft directed through the apertures of the blade holders and having its end extending into openings formed in said plates, one side wall of the openings of the plates being formed to provide a rack, pinions carried by the ends of the shaft and engaging the racks of the plates, and means for rotating said shaft and maintaining the same in adjusted position.



1,540,951. PROCESS OF GROWING LACTOBACILLI AND THE PRODUCT. JOHN REICHEL, Philadelphia, and CHRISTOPHER ROOS, Wallingford, Pa., assignors to H. K. Mulford Company, a Corporation of Pennsylvania. Filed June 19, 1924. Serial No. 721,146. 10 Claims. (Cl. 167—7.)

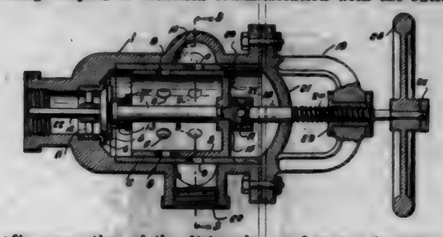
2. A method of obtaining lactobacilli mass containing substantially the same number of lactobacilli contained in milk or *B. bulgaricus* milk, which consists in growing lactobacilli in a culture media prepared by digesting casein with a ferment in proportions suited to the purpose, treating the mixture with an alkali, incubating the same for substantially six hours at 45° C. sterilizing, and cooling substantially to 40° C. and then planting the media with lactobacilli, and allowing them sufficient time to attain their maximum growth prior to harvesting, by settling or centrifugation.

7. A new product comprising lactobacilli in a culture media other than milk, the lactobacilli being approximately one to two cubic centimeters or two grams, the same being in concentration not less than the number of *B. acidophilus* in one quart of lactobacillus milk.

10. A new article of production, comprised of lactobacillus mass in a moist state and gelatin.

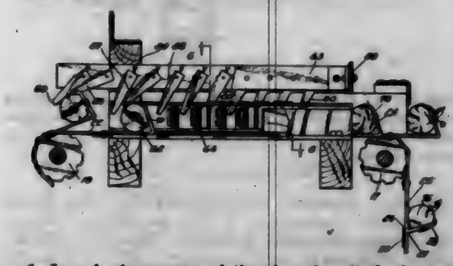
1,540,952. LACE-TRANSFERRING DEVICE. JOHN L. REID, Dublin, Ga. Filed Aug. 30, 1923. Serial No. 660,222. 1 Claim. (Cl. 206—50.)

In a board for bolts of lace, a frame having apertures in its edges at one end, a board slidable therein having apertures near its edges at the end remote from the apertures of the frame, bails adapted to enter the apertures whereby the frame and board are moved relative to each other, and means for holding the frame and board at different positions of adjustment.



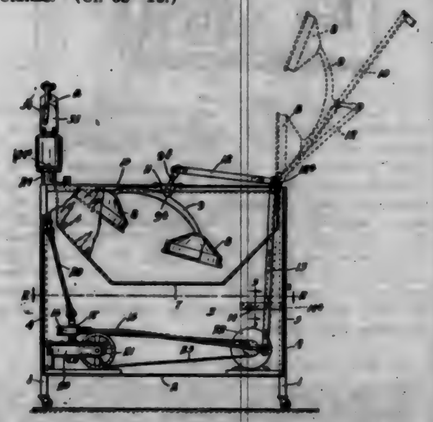
1,540,953. AUTOMATIC TRAIN-PIPE CONNECTER. JOSEPH V. ROBINSON, New York, N. Y. Filed Dec. 6, 1919, Serial No. 343,102. Renewed Nov. 1, 1924. 22 Claims. (Cl. 285—24.)

1. An automatic train pipe coupling head comprising in combination, a base carrying a conduit and having a vertically disposed front face, a pressed sheet metal member mounted on said front face of said base and having an opening in alignment with said conduit and having also guiding means for aligning said conduit with the conduit of a mating head, said member serving as the coupling contour of said base, and means for securing the base and said member together.



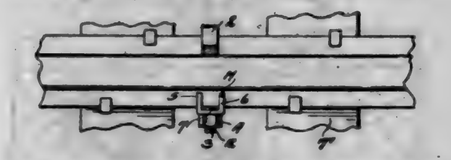
1,540,954. BLOW-OFF VALVE. HUBERT R. ROCKWELL, St. Louis, Mo. Filed May 12, 1923. Serial No. 638,557. 2 Claims. (Cl. 277—35.)

1. A blow off valve having a casing, said casing having an inlet and an outlet, a disk valve for said inlet, a cylindrical valve for the outlet connected to the disk valve, means having swivel connection with said valves to operate them simultaneously, the cylindrical valve being adapted to establish communication with the outlet



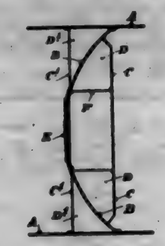
after unseating of the disk valve, and means to prevent turning movement of the cylindrical valve relatively to the casing.

1,540,955. MACHINE FOR REMOVING HUSKS FROM NUTS. MCHENRY ROSS, Monrovia, Calif. Filed Aug. 20, 1923. Serial No. 658,241. 16 Claims. (Cl. 146—49.)



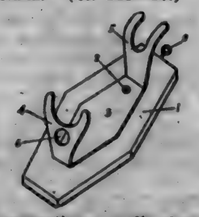
1. In a husk remover of the class described, the combination of: husk removing members disposed along a course; means for carrying nuts through said course in such a manner that said nuts will be engaged by said husk removing members; and means for turning said nuts as they are conducted along said course so that the various portions of said nuts will be engaged by said husk removing members.

1,540,956. WASHING MACHINE. EDWARD RUE, Minneapolis, Minn., assignor to Rue-Nelson Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Oct. 10, 1921. Serial No. 506,686. 8 Claims. (Cl. 68—19.)



1. A washing machine having in combination, a frame, a liquid and clothes receptacle supported therein, a hinged cover for said receptacle oscillatory means in said receptacle for acting on the clothes, means for actuating said oscillatory means including a lever fulcrumed on a horisontal pivot, and also including means for lifting said lever from its fulcrum when the cover is raised to thereby stop the actuation of said oscillatory means.

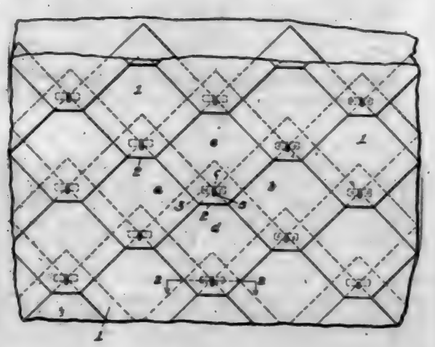
1,540,957. ANTICREEPING DEVICE. ANGELO F. RUGGERO, Gold Creek, Mont. Filed Feb. 14, 1925. Serial No. 9,154. 3 Claims. (Cl. 238—329.)



1. An anti-creeping device for a rail comprising a pair of plates connected by an intermediate plate, said first named plates being provided with notches to receive a flange of a rail, the intermediate plate having an opening positioned below the notches, a shank adapted to underlie the rail and having means to engage the second flange of the rail, said shank extending through the opening in the intermediate plate and a nut engageable with the shank outwardly of the intermediate plate but contacting therewith to hold the first named plates and the shank in proper engagement with the flanges of the rail, and a laterally disposed arm carried by one of the plates for contact with a tie.

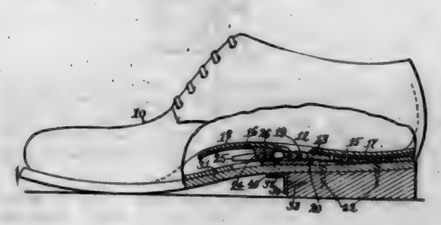
1,540,958. WATER-TIGHT BULKHEAD FOR SUBMARINES AND OTHER SUBMERSIBLE VESSELS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed June 29, 1923. Serial No. 648,557. 15 Claims. (Cl. 114—116.)

1. In a bulkhead structure, the combination of a main bulkhead, a flat auxiliary bulkhead disposed adjacent the main bulkhead and of less strength than the latter, a tubular bulkhead providing a passageway through the structure, and a closure for one end of said passageway.



1,540,959. CURLING-IRON HOLDER. LEO J. SCHUMACHER, Dayton, Ohio. Filed Feb. 4, 1924. Serial No. 690,399. 1 Claim. (Cl. 248—20.)

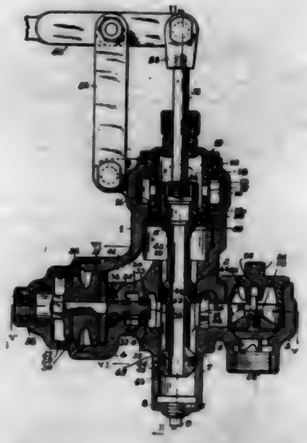
A holder for supporting a curling-iron in a horizontal or a vertical position, comprising a base, a supporting member secured thereto having up-turned ends to hold



said iron in a horizontal position, one of said ends being bifurcated and the other end having an aperture to receive, and prevent from dangling, the front part of the curling-iron when its handle part is supported in a vertical position by the bifurcated end of the supporting member.

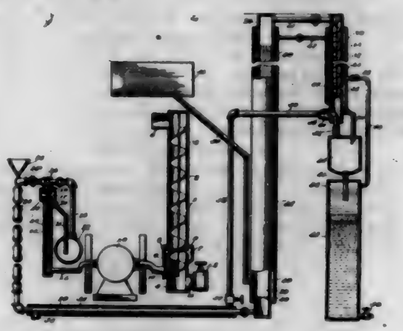
1,540,960. SHINGLE-HOLDING MEANS. ROY SHUMAN, Toledo, Ohio. Filed Aug. 2, 1922. Serial No. 579,177. 1 Claim. (Cl. 108—33.)

In a roof construction having shingles of rectangular construction arranged in such a manner that one shingle overlaps portions of two subjacent shingles, means for holding the shingles together consisting of a flat metallic strip adapted to be inserted between the upper shingle and subjacent shingles, a central upwardly extending bendable stem on the strip projecting thru said upper shingle and adapted to be bent over upon the upper surface thereof, and downwardly extending elements adjacent the opposite ends of the strip for securing the strip to the subjacent shingles, thereby securely retaining three shingles in assembled relation without the necessity of additional securing means.



1,540,961. BOOT OR SHOE. JOHN P. STEVENS, Newburyport, Mass. Filed May 21, 1923. Serial No. 640,374. 5 Claims. (Cl. 36—71.)

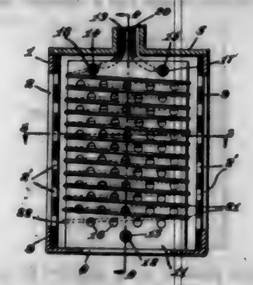
3. An arch-supporting device for use within a shoe comprising a pivoted heel-supporting member, and an arch-supporting member pivoted to said heel-supporting member to rock thereon while engaged with the arch of the foot.



1,540,962. HYDRAULIC VALVE. GEORGE J. STUART, Pittsburgh, Pa. Filed Feb. 10, 1923. Serial No. 618,326. 9 Claims. (Cl. 138—16.)

1. In a hydraulic valve, a casing having therein an exhaust chamber, a common receiving chamber for two fluid pressures, and a third chamber having a port for connection to a hydraulic press or the like; a stem reciprocable in the casing; a valve carried by the stem for opening and closing connection between the last two chambers; a head carried by the stem for balancing the

pressure on the said valve when closed; and a second valve carried by the stem for opening connection between the first and third chambers only after the first valve has been closed.

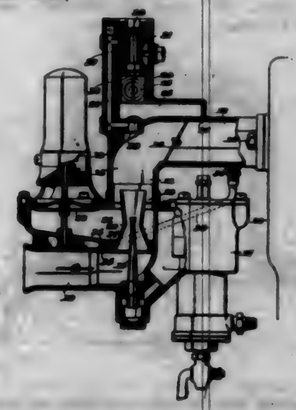


1,540,963. PROCESS FOR SEPARATING GAS FROM LIQUIDS. CHARLES F. W. TABLER, Tampico, Mexico. Filed Mar. 26, 1924. Serial No. 702,117. 7 Claims. (Cl. 183—114.6.)

1. A process for extracting gasoline from gases, which comprises centrifugally separating and eliminating the greater and dry portion from the heavier portions carried by said gases under low pressure, increasing the pressure of the concentrated gases and again centrifugally separating and eliminating discoloring matter from the gases, washing and cooling said gases, further chilling said concentrated gases while centrifugally separating the gasoline and foreign matter from the remaining gases, expanding the separated gasoline for chilling the concentrated gases and gasoline when being washed and during the final stages of the centrifugal separation of the gasoline from said gases.

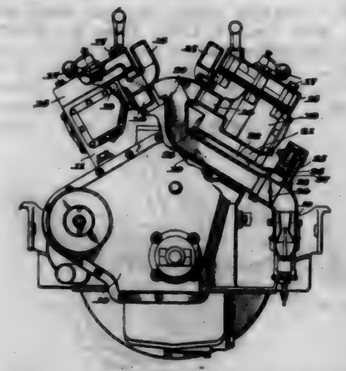
1,540,964. ELECTRIC IMMERSION HEATER. JOSEPH NAPOLEON TRAHAN, Quebec, Quebec, Canada. Filed May 16, 1924. Serial No. 713,805. 3 Claims. (Cl. 219—40.)

1. An immersion heater comprising a casing having slotted walls, a pair of insulation plates disposed in spaced relation within said casing and spaced from the walls thereof, said plates being adapted for the passage of



water therethrough, resistance wire wound around said plates, and means for supplying current to said wire.

1,540,965. ARCH-SUPPORT-SECURING MEANS. CARL H. TRIESCHMANN, Milwaukee, Wis. Filed Sept. 27, 1924. Serial No. 740,273. 5 Claims. (Cl. 36—71.)

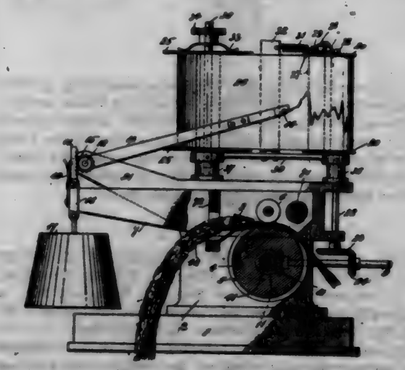


1. An arch support securing means, comprising an arch support member having a recess formed in its lower surface and a tongue entering said recess, and a pointed instrumentality having a head positioned within the recess and its pointed portion extending through the tongue and projecting outwardly therefrom.

1,540,966. HYDROCARBON MOTOR. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed June 30, 1920. Serial No. 392,975. 7 Claims. (Cl. 123—122.)

1. In a hydrocarbon motor, the combination with the intake conduit thereof, a carburetor connected to said conduit, and a suction operated combustion device connected to draw its mixture from said carburetor and discharge into said conduit, of a suction pipe extending from a part of said carburetor where heavy fuel collects during idling of the motor, to said conduit.

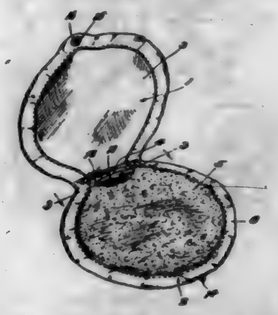
1,540,967. HYDROCARBON MOTOR. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 4, 1920. Serial No. 408,236. 3 Claims. (Cl. 123—122.)



1. In a V-type hydrocarbon motor, the combination with two cylinder blocks having intake passages, of an intake conduit extending through one of said blocks on an incline and connected at its upper end to said intake passages, a carburetor connected to the lower end of said conduit, and a heater jacket on the inclined part of said conduit.

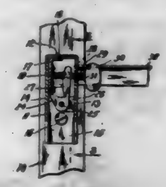
1,540,968. TREATMENT OF VEGETABLE FIBERS AND THE MANUFACTURE OF CELLULOSE BY THE CHLORINATION PROCESS. PERCY WAENTIG and RICHARD ZIEGENBALG, Dresden, Germany; said Richard Ziegenbalg assignor to said Waentig. Filed June 12, 1924. Serial No. 719,581. 6 Claims. (Cl. 92—9.)

2. The process of treating vegetable fibers and producing cellulose therefrom which consists in disintegrating the fibers, adding approximately half their weight of water to the fibers, acidifying them, at ordinary temperature, allowing them to remain in the acidified condition, treating them with chlorine and cooling them during the treatment.



1,540,969. MACHINE FOR INDICATING VARIATIONS IN SLIVER THICKNESS. ERNEST D. WALEN, Watertown, and ARTHUR H. PARSONS, Gloucester, Mass. Filed Sept. 15, 1922. Serial No. 588,508. 4 Claims. (Cl. 33—148.)

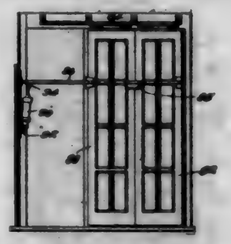
1. In a device of the kind described, a feed roller adapted to support and feed a sliver, a measuring roll located to run on said sliver, means adapted to support said measuring roll whereby said measuring roll may be



vibrated toward and from the axis of said feeding roller by the varying thickness of said sliver, and means for measuring the extent of such vibrations.

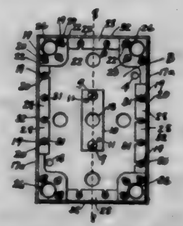
1,540,970. POWDER PUFF. WALTER WARD, Hunter, Kans. Filed June 14, 1921. Serial No. 477,453. 1 Claim. (Cl. 132—78.5.)

In a powder puff, a cover member comprising coacting flaps and a connecting neck portion, said cover member being of a material impervious to powder, a pocket of a material pervious to powder secured to one of said flaps and adapted to be covered by the same and by the other flap and having a mouth presented toward connecting neck portion, there being spaced openings formed in the pocket-carrying flap at said mouth, a flexible securing element extending through said openings for closing the mouth, and interengaging fastening devices carried by the flaps for holding the cover in closed position.



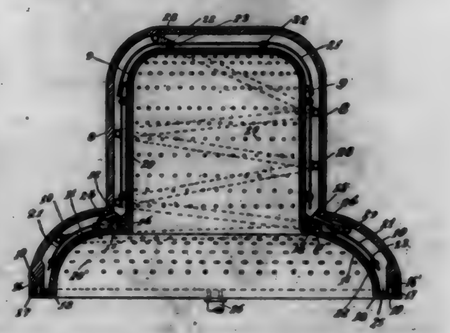
1,540,971. CORNER FASTENING FOR BEDSTEADS. DAVID WASSERMAN, Jersey City, N. J. Filed Oct. 17, 1923. Serial No. 669,038. 3 Claims. (Cl. 5—290.)

1. A corner-fastening for bedsteads comprising a shell, an angle-bar of the bed bottom supporting frame extending into said shell, a bent lever pivotally carried by said shell for clamping said angle-bar against one of the walls of said shell, and means for operating said bent lever, said operating means clamping at the same time said angle-bar against another wall of said shell.



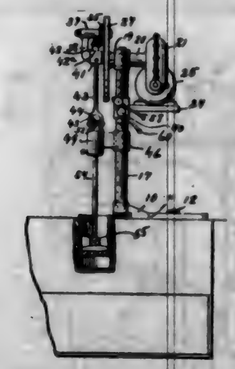
1,540,972. COMBINED ELEVATOR-DOOR CLOSURE AND SWITCH. WILLIAM WALLACE WEEKS, Brooklyn, N. Y., assignor to Elevator Supplies Company, Inc., a Corporation of New Jersey. Filed Oct. 25, 1923. Serial No. 670,719. 14 Claims. (Cl. 187—54.)

9. In an elevator door operating mechanism, adapted to be operatively connected to the toggle levers of an elevator door, a casing, a piston in said casing, a plunger cylinder connected to said casing, a plunger in said plunger cylinder, means for admitting pressure fluid to operate said piston, spring means in said casing for returning said elevator door to its closed position after opening movement thereof, and an electric switch in said casing comprising switch terminals and a movable contact member,



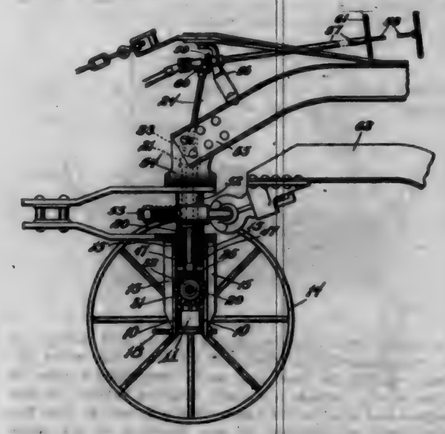
ber, said contact member being adapted to operate with the movements of said elevator door to open and close a circuit through said switch.

1,540,973. FORM BLOCK. LEE R. WETHERILL, Philadelphia, Pa., assignor to Stokes and Smith Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 14, 1924. Serial No. 686,240. 23 Claims. (Cl. 93—59.)



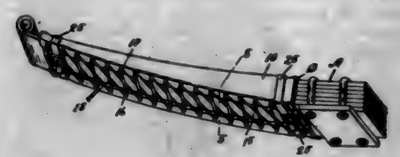
1. Form block structure comprising a block, and a corner shoe carried by said block, said shoe having a body overlying said block, and a cheek having a box-engaging face disposed in a plane substantially parallel with a lateral face of said block.

1,540,974. HAT-STEAMING MACHINE. WILLIAM WILSON, Selma, Ala. Filed Jan. 30, 1924. Serial No. 689,410. 3 Claims. (Cl. 223—31.)

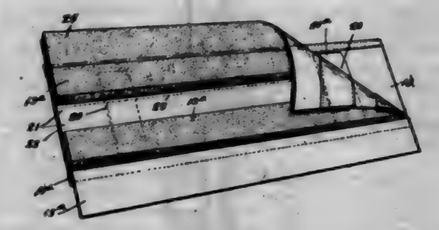


1. A steaming bell for hats comprising an imperforate outer shell and a perforated inner shell, with means to hold the shells in spaced relation and to form a steam tight compartment, a perforated steam pipe for said compartment, with metallic shields of thin material interposed between the perforated coil and the perforations of the inner shell to prevent leakage of condensed water therethrough.

1,540,975. CYLINDER-LAPPING MACHINE. CHRISTIAN WINTHER, CLARENCE W. WINTHER, and LENNA V. WINTHER, Fresno, Calif. Filed Apr. 17, 1922. Serial No. 553,940. 8 Claims. (Cl. 51—26.)



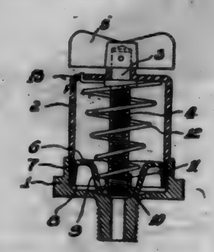
1. A cylinder lapping machine comprising a frame adapted to be detachably mounted upon the upper end of a cylinder block; vertically extending guide members carried by said frame; means mounted on said guide members to slide vertically and adapted to carry a piston; means carried by said frame to impart a vertical reciprocating movement to said slide members, and means operated by said last means to impart a continuous horisontal rotating movement to said piston always in the same direction during its reciprocation; and means to vary the length of said reciprocating movement.



1,540,976. FRONT-WHEEL ASSEMBLY FOR GRADERS. FRANKLIN E. ARNDT, Galion, Ohio, assignor to The Galion Iron Works & Mfg. Co., Galion, Ohio, a Corporation of Ohio. Filed Aug. 16, 1924. Serial No. 732,540. 10 Claims. (Cl. 280—80.)

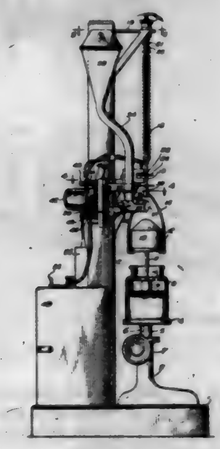
1. In a vehicle of the character described, an axle, wheel knuckles pivotally mounted upon the ends of the axle for tilting movement in a vertical plane, wheels mounted thereon, a sleeve operatively supported upon the axle, a shaft passing downward through said sleeve, a superstructure, said shaft passing through the pivotal center of the superstructure and said sleeve, manually operable means for rotating the shaft, a member mounted upon the axle for movement longitudinally thereof and transverse to the draft line of the vehicle and operatively connected to the knuckles to cause their simultaneous oscillation in the same direction, and means operatively connecting said shaft to said member to shift the member upon an oscillation of the shaft.

1,540,977. CASING FOR VEHICLE SPRINGS. FRANKLIN B. BALLOU, Salem, Mass., assignor to Standard Products Corporation, Salem, Mass., a Corporation of Massachusetts. Filed Jan. 26, 1923. Serial No. 614,969. 24 Claims. (Cl. 267—37.)



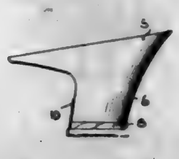
1. A casing for a vehicle spring comprising a flexible sheet of villous material having a fibre pile on one face thereof and adapted to be wrapped about the spring with the pile in contact with the spring.

2. A casing for a vehicle spring comprising a sheet of hair-bearing leather adapted to be disposed with its hairs in contact with the spring.



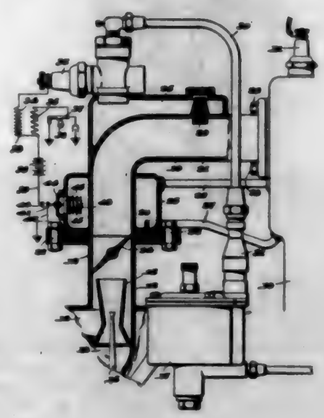
1,540,978. GREASE CUP. OLIVER E. BARTHEL, Detroit, Mich. Filed Feb. 7, 1920. Serial No. 356,944. 2 Claims. (Cl. 184—38.)

1. In grease cup formations, wherein the lubricant is forcibly expelled by the travel of a piston axially of the cup, and wherein the piston movements are provided by rotation of a threaded member, a sheet metal piston having a cross-sectional contour such as to provide an annular depression facing the lubricant within the cup, the outer wall of the depression having an external diameter to fit the cup barrel with the length of such



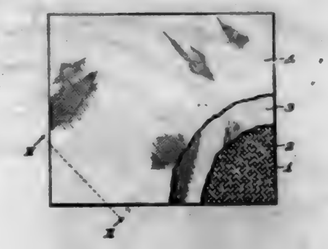
wall sufficient to provide an extended contact with such barrel, the inner wall having a length in the general direction of piston axis greater than the depth of the depression, said inner wall being spaced from the threaded member and having a third wall internal of such depression inner wall, said third wall being internally threaded to fit and travel on the threaded member during rotation of the latter, said walls being of integral formation.

1,540,979. MACHINE FOR TESTING JELLY STRENGTH OF GLUES, GELATINS, AND THE LIKE. OSCAR T. BLOOM, Chicago, Ill., assignor to Swift & Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 11, 1923. Serial No. 631,432. 7 Claims. (Cl. 265—11.)



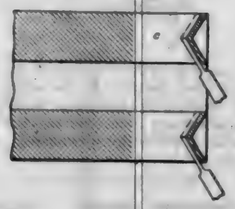
1. In a machine for testing the jelly strength of materials, a material penetrating member reciprocable a predetermined distance through the material being tested and initially contacting with the surface thereof, means for progressively delivering weights to said member to move it through its predetermined distance, and means controlled by the movement of said member for suspending the delivery of weights thereto when it has completed its movement.

1,540,980. BINDING FOR SHOE-HEEL FACINGS. JAKE N. CRASILNECK, San Antonio, Tex. Filed Sept. 4, 1924. Serial No. 735,917. 3 Claims. (Cl. 36—34.)



1. The herein described heel binding comprising a band to embrace a heel and the facing thereof at its lower edge, a bar extending across the band at its lower edge to engage the heel of a shoe, and a cap secured to the heel at the lower edge of the band.

1,540,981. HYDROCARBON MOTOR. HENRY P. DOOLITTLE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 13, 1920. Serial No. 365,450. 3 Claims. (Cl. 123—122.)

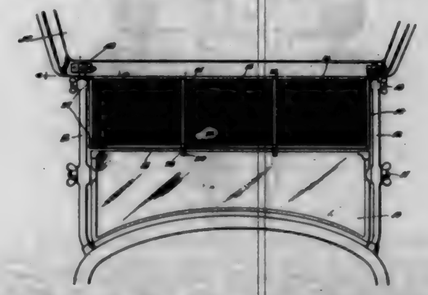


1. In a hydrocarbon motor, the combination with a water jacketed intake conduit, of a combustion heater for the intake gases, and means depending upon the temperature of the jacket water for controlling the operation of the combustion heater.

1,540,982. REPAIR PATCH. WALTER DRABOLD, Detroit, Mich. Filed May 11, 1921. Serial No. 468,476. 1 Claim. (Cl. 152—26.)

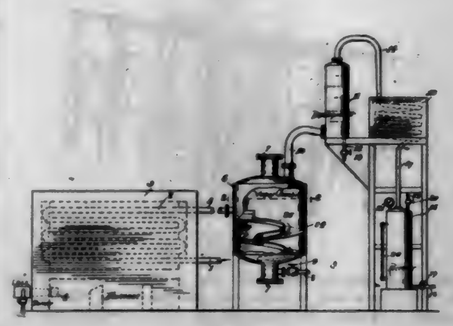
A repair patch adapted to conform to and partake of the stretching characteristics of an inner tube when applied to a deflated tube, said patch comprising a piece of fabric having threads angularly disposed relative to one another and also to the edges of the fabric so that the fabric may be stretched in any direction at its edges other than in the direction of the fabric threads, said piece of fabric being embedded in rubber and heat pressed together to form a unitary stretchable structure of sufficient thickness to entirely prevent the passage of said air at all pressures to which the tube is subjected, a covering of uncured gum of air excluding quality permanently adhering to the exposed surface of said unitary structure, the area of the fabric and of the rubber being co-extensive, and a protecting fabric covering removably adhering to the surface of said gum covering.

1,540,983. PRODUCTION OF FRICTION DISKS, WASHERS, BRAKE LININGS, AND THE LIKE. ALEXANDER MILLER FENTON and THOMAS HENRY CROWTHER, Cleckheaton, England, assignors to "Scandinavia" Belting, Limited, County of London, England. Filed Dec. 9, 1921. Serial No. 521,243. 2 Claims. (Cl. 91—68.)



2. The process of making disks, washers, clutch-coverings and the like, by forming, upon a bobbin furnished with co-axial retaining plates, a wound spool composed of fibrous material, impregnated with a suitable binding agent, enclosing the mass in a cylinder and subjecting it to axial compression, drying and hardening the spool and then cutting it into sections.

1,540,984. FOOT WARMER. HENRY FRATERNALI, Dobbs Ferry, N. Y. Filed Feb. 27, 1922, Serial No. 539,705. Renewed Sept. 30, 1924. 1 Claim. (Cl. 126—204.)



As a new article of manufacture, a foot warmer comprising a terra-cotta body enameled inside and outside, a counter-sunk neck, a rubber stopper adapted to expand against the walls of the neck by virtue of the heat in said body for closing said neck, means for holding said stopper in position, said means comprising a cap for screw threaded engagement with said neck and a pull cord secured to said stopper and extending through said cap.

1,540,985. WINDSHIELD SCREEN. OTHO R. GREGORY, Winter Garden, Fla. Filed Dec. 6, 1923. Serial No. 678,996. 2 Claims. (Cl. 296—95.)

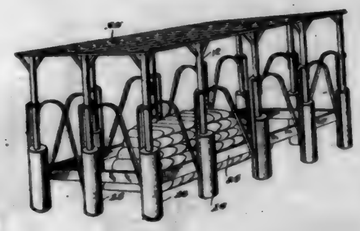
2. The combination with an automobile wind shield having standards in which the top and bottom wind shields are pivoted, of a screen comprising a frame having flat flanges and horizontally and vertically projecting fingers, clamping members including double jaws engaging the standards and bottom wind shield respectively on the one hand and said fingers on the other hand and tightening bolts for the jaws, and a metallic mesh held firmly within the frame between the front inner surfaces of the flanges.

1,540,986. PROCESS AND APPARATUS FOR DISTILLING OILS. HIRAM J. HALLE, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Sept. 17, 1920. Serial No. 410,918. 7 Claims. (Cl. 196—58.)

1. The process of distilling oils consisting in heating oil to a cracking temperature, in directing the same to a vapor chamber, in causing the oil to travel in a spiral path over surfaces in said vapor chamber prior to its discharge, and in discharging vapors from the vapor chamber, in discharging oils after passage over said surfaces from the chamber, and in regulating the quantities of oil discharged from the chamber to regulate the depth of oil maintained therein.

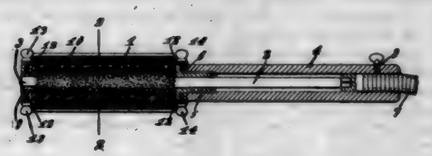
4. In an apparatus for distilling oils, comprising a heating chamber, means for feeding oil thereto, a vapor chamber in communication with the heating chamber, said vapor chamber being provided with a spiral passageway gradually leading from the circumference to the center thereof, means for discharging vapors from the vapor chamber, and means for discharging liquid oil from the center of said chamber.

1,540,987. ABRASIVE. THEODORE R. HEINTZ, San Francisco, Calif., assignor, by direct and mesne assignments, to Heintz Laboratories, Inc., Las Vegas, Nev., a Corporation of Nevada. Filed Feb. 28, 1924. Serial No. 695,663. 5 Claims. (Cl. 29—180.)



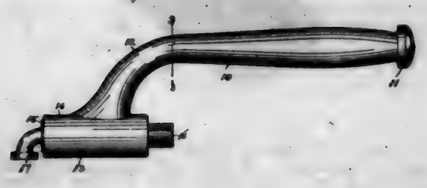
1. A pad of the class described consisting of a ribbon of interwoven metallic threads extending longitudinally of the ribbon, the latter being folded on itself to form a pad.

1,540,988. PROTECTIVE DEVICE FOR USE IN WARFARE. AUGUST WILLIAM HENSEL, Franksville, Wis. Filed Apr. 16, 1923. Serial No. 632,548. 6 Claims. (Cl. 89—36.)



1. In a protective device for use in warfare, a framework carrying a netting adapted to be spread above, and across the objects to be protected, and means for

yieldingly supporting the frame-work including a plurality of rods depending from the frame-work carrying the netting and connected thereto, a cylinder receiving



the lower end of each rod, and a piston head carried by the lower end of each rod and operating within the cylinder against resistance of the fluid confined therein.

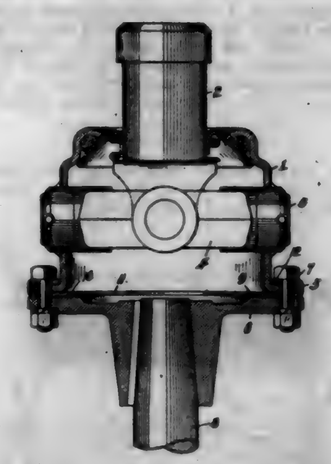
1,540,989. HAIR-CLEANING DEVICE. JOHN T. HIGGINS, Burlington, N. C., assignor of one-half to Robert P. Robinson, Forest City, N. C. Filed Feb. 12, 1924. Serial No. 692,312. 2 Claims. (Cl. 15—23.)

1. A hair cleaning device comprising a hollow handle, a brush having a spindle rotatably mounted within said handle, means for connection with said spindle to rotate said brush, and oppositely disposed independent laterally spaced guard plates for said brush to prevent tangling of the hair therewith and to permit use of the brush between said plates.

1,540,990. TIRE-PRESSURE-GAUGE HOLDER. RANDALL L. HOLBROOK, Denver, Colo. Filed Mar. 3, 1924. Serial No. 696,703. 1 Claim. (Cl. 81—3.)

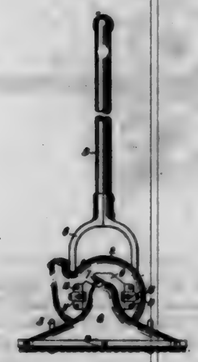
A tire pressure gauge holder, comprising a handle, a neck laterally extending therefrom and a holding head on the outer end of the neck, said holding head being formed with a longitudinal bore substantially parallel with the handle and slightly tapered, said bore being adapted to receive and contain a gauge and open at both ends for the projection of said gauge from either end thereof.

1,540,991. GAUGE. FRANK A. HOLMGREN, Minneapolis, Minn. Filed Sept. 24, 1923. Serial No. 664,591. 2 Claims. (Cl. 33—194.)



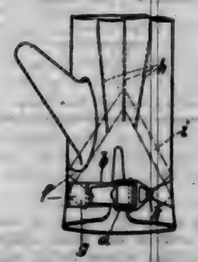
1. A plate having indicating means at its ends corresponding in relative position to the screws of a window hanger, and transversely arranged guiding devices extending perpendicularly from one face of the plate, and laterally arranged projections extending out from said guiding devices.

1,540,992. STEERING WHEEL. CHARLES H. KENRICK, Onaway, Mich. Filed May 6, 1924. Serial No. 711,474. 10 Claims. (Cl. 74—33.)



1. A steering wheel, comprising in combination, a wood rim, a plurality of wood spokes and a one piece metallic hub, said hub having a dovetail connection with each spoke, said dovetail connection, retaining said spokes against movement axially of the wheel and allowing radial movement thereof.

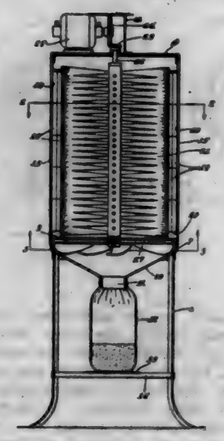
1,540,993. UNIVERSAL-JOINT CASING. ADOLPH C. KLOPPING, Toledo, Ohio. Filed Apr. 7, 1924. Serial No. 704,583. 3 Claims. (Cl. 64—102.)



3. A universal joint having a sheet metal driving housing provided with an out-turned flange at one end, a ring plate of sheet metal disposed flat against the outer side of said out-turned flange with its outer edge extending over the flange in close embracing relation thereto, the inner edge of the ring plate being centered with respect to the housing axis and forming a pilot guide, a shaft plate seating against the outer side of the ring plate and having a pilot rib for fitting into the ring plate opening, and bolts extending through the outer edge of the ring plate and shaft plate to secure the parts in assembled relation.

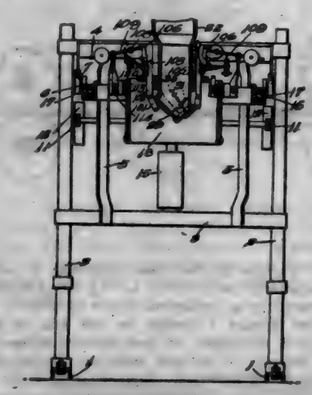
1,540,994. VACUUM CLEANER. STERLING C. LINES, Los Angeles, Calif., assignor to The F. Bissell Company, Toledo, Ohio, a Corporation of Ohio. Original application filed Apr. 17, 1922, Serial No. 553,442. Divided and this application filed Oct. 29, 1923. Serial No. 671,325. 3 Claims. (Cl. 15—16.)

1. In a vacuum cleaner, a frame having a fan casing at one end with the outer side of the casing provided with an inlet opening, a nozzle having a laterally projecting neck flange for seating against the casing in surrounding relation to its opening and for adjustment transversely of the opening, and means engaging the neck flange for releasably securing the nozzle in adjusted relation to the casing.



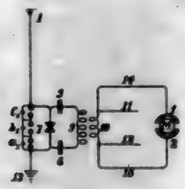
1,540,995. GLOVE. FRITZ MAHN, Oberfrohnau, Germany. Filed Dec. 8, 1923. Serial No. 679,478. 3 Claims. (Cl. 2—162.)

1. In gloves, the combination with a strap-and-buckle closure, of reinforcing bands which overlap the fastened ends of the straps so as to be interconnected therewith, said reinforcing bands being carried helically upwards from the straps towards the finger portions at the back of the glove.



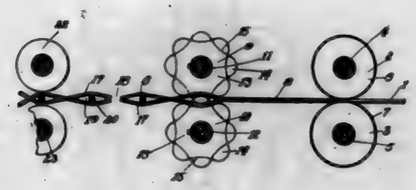
1,540,996. CLEANER FOR BLACKBOARD ERASERS. GEORGE A. MARSHALL, Cleveland, Ohio. Filed July 3, 1922, Serial No. 572,700. Renewed Apr. 22, 1925. 2 Claims. (Cl. 15—7.)

1. An eraser cleaner comprising an upright cylindrical casing provided with a hopper bottom, a collecting bag mounted on the outlet neck from said bottom, a rotary brush in the casing, holders on the inside of the casing,



for the erasers, the brush projecting to contact with said erasers in the holders, and means extending thru the top of the casing to rotate the brush.

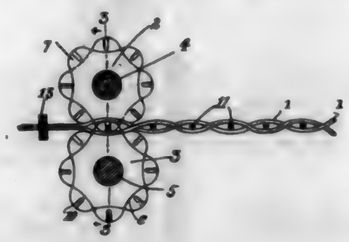
1,540,997. AUTOMATICAL BALANCE. PETER AUGUST NORDLING, Gottenborg, Sweden. Filed Oct. 3, 1923. Serial No. 666,400. 5 Claims. (Cl. 249—66.)



1. In automatical balances, the combination of a pivotal beam, feeding means for supplying the material to be weighed to a package member carried by said beam, shutters adapted to shut off said feeding means automatically and successively when the package member has received the desired quantity by weight of the material, a member connected with the last-closing shutter, a pivotal catch adapted to engage with said member so as to hold the shutter in opened position, a catch-actuating pivotal lever cooperating with said catch, means acting upon said lever and exerting the necessary power for releasing said catch from said member, means operatively connected to said catch-actuating lever and being arranged to bear against the beam of the balance until immediately after that the shutter has been released, and means adapted to support said lever after that the shutter has been released.

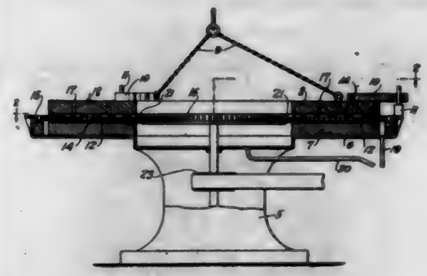
1,540,998. CONVERSION OF ATMOSPHERIC ELECTRIC ENERGY. HERMANN PLAUSON, Hamburg, Germany. Filed Jan. 13, 1921. Serial No. 437,107. 7 Claims. (Cl. 250—1.)

1. An electrical energy generating system, comprising a conducting surface for static charges, means to support same at a distance above the earth, a conductor leading to the earth level, a spark gap associated with said conductor to convert electrostatic charges into electromagnetic high frequency oscillations means to supply said electromagnetic energy to a net work, and a spark gap of greatly increased relative resistance in parallel therewith.



1,540,999. APPARATUS FOR PRODUCING IMITATION BASKET FABRICS. FRANCIS B. RILEY, Newton, Mass., assignor to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 23, 1920. Serial No. 412,336. 3 Claims. (Cl. 139—28.)

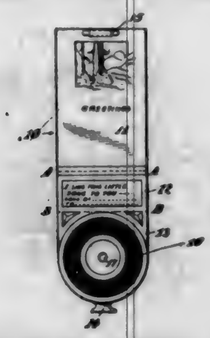
2. In a machine of the class described, a pair of rotatable cylinders, one at least having its cylindrical surface destroyed by a contiguous series of concave grooves, each groove having a center on the axis of the said cylinder, and the plane of each groove being at right angles to the axis of the said cylinder, the two cylinders being adapted to score one surface at least of a sheet of flexible material, in straight, parallel, unbroken lines, and shed forming means comprising a pair of shafts with a plurality of cams mounted on each shaft adapted to break the scored sheet into a number of sheds for the insertion of stakes in spaced relation.



1,541,000. METHOD OF AND LOOM FOR PRODUCING REED, WICKER, AND SIMILAR FABRICS. FRANCIS B. RILEY, Newton, Mass., assignor to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 23, 1920. Serial No. 412,337. 3 Claims. (Cl. 139—28.)

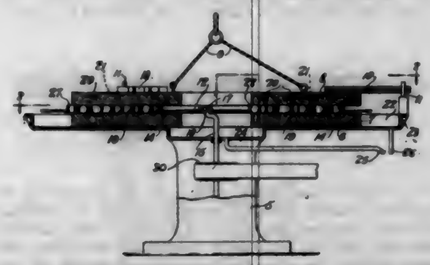
1. In a loom or like machine for weaving a continuous longitudinal web of stake and strand fabric from reed, wicker or the like, a combined shedding and take-up means, consisting of cooperating pairs of rotary disks; each pair frictionally engaging a warp strand to feed it longitudinally, said disks having convex arcuate cam portions with reentrant slots, said convex portions alternating with and tangent to arcuate concave

portions, whereby at each feeding operation, an open shed is formed across the warp strands, and power actuated means for inserting weft stakes into each shed through the matching slots of said cam disks.



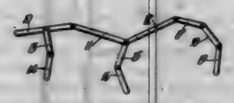
1,541,001. LAPPING MACHINE. RAYMOND R. SEARLES, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed Dec. 4, 1920. Serial No. 428,238. 7 Claims. (Cl. 51—131.)

1. In a lapping machine, a pair of discs, a plurality of work carriers between said discs adapted to hold articles to be lapped, and means for moving said carriers between said discs and relatively thereto to cause each of said carriers to have a planetary motion.



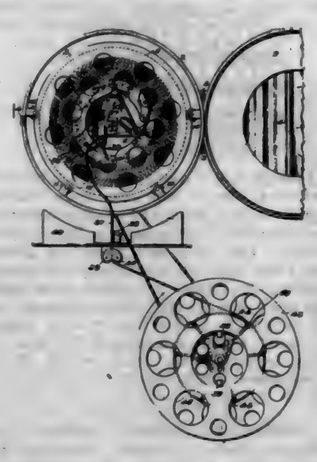
1,541,002. FOLDABLE FORM. LOUIS J. SHRAMEK, New York, N. Y. Filed Feb. 15, 1923. Serial No. 619,328. 3 Claims. (Cl. 274—42.)

3. In a foldable phonographic record carrying device, in combination, a foldable blank, a phonographic record fixedly attached to one face of the blank, a score line upon the blank allowing of the folding of the blank with the record concealed, a score line upon the blank allowing of the folding of the blank with the record exposed, an opening through the record and the blank to allow of the positioning of a phonograph pin therethrough, when the blank is folded with the record exposed, an extended member carried by one end portion of the blank and means carried by the other end portion



of the blank to engage the extended portion to produce a locking means when the blank is folded with the record concealed.

1,541,003. LAPPING MACHINE. JOHN W. SMITH, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed Dec. 4, 1920, Serial No. 428,222. Renewed Nov. 21, 1924. 7 Claims. (Cl. 51—161.)

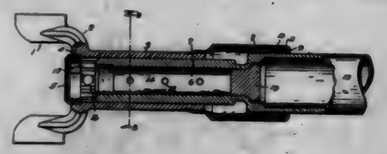


1. In a lapping machine, a pair of discs having spaced lapping surfaces, a work carrier between said discs, and means for effecting a relatively oscillatory movement between said carrier and said discs, said carrier being also rotatable about its own center, and said work carrier having a plurality of apertures for loosely holding articles to be lapped, with means for separating a group of the articles being operated upon, said separating means being thinner than the said articles.

1,541,004. ALPHABETICAL TOY. GRACEBEL TAYLOR, Puente, Calif. Filed Mar. 9, 1923. Serial No. 623,999. 6 Claims. (Cl. 35—1.)

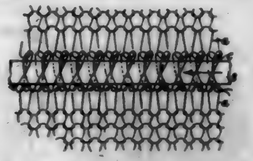
1. A toy of the class described comprising a plurality of long and short bars; the long bars being pivotally joined together end to end, and the short bars being likewise pivotally joined together end to end, the said short bars being pivotally mounted in groups upon the long bars by pivotally joining one end of one of each group thereto; the whole being arranged to be manipulated to form letters of the alphabet and numerals from one to nine.

1,541,005. REEL FOR PICTURE MACHINES. JOSEPH K. E. TREVAS, Hancock, Mich. Filed Feb. 11, 1921. Serial No. 444,182. 2 Claims. (Cl. 88—18.7.)



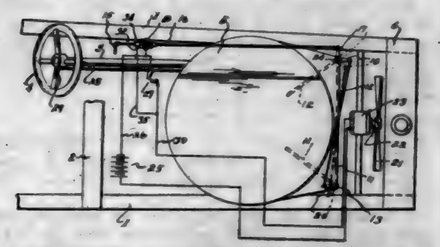
1. In a device of the character described, a magazine for the upper reel, rollers journaled in the magazine, a belt-ring adapted to ride on the rollers, a friction wheel journaled in the casing to operate the belt-ring, and means for communicating motion to said friction wheel.

1,541,006. PROCESS OF MAKING VEGETABLE MILK. GASTON D. THEVENOT, New York, N. Y. Filed June 11, 1923. Serial No. 644,796. 12 Claims. (Cl. 99—11.)



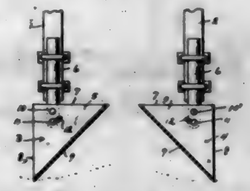
1. A method for the preparation of vegetable milk from soya beans comprising removing from the beans the outside husks, comminuting the beans to attain a fineness whereby the comminuted material may be substantially completely suspended or emulsified in water, and adding water thereto to form a suspension or emulsion.

1,541,007. SLIP-END SPLINE CONNECTION FOR UNIVERSAL JOINTS AND THE LIKE. WILLIAM H. THIEMER, Cleveland, Ohio, assignor to himself, Frederick W. Peters, and J. H. Wills, all of Cleveland, Ohio. Filed July 18, 1921. Serial No. 485,539. 5 Claims. (Cl. 64—89.)



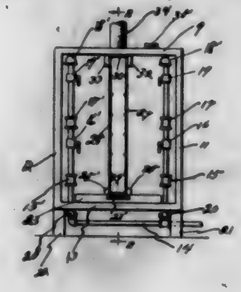
5. A slip-end spline connection comprising a hub closed at one end and provided with grooves extending longitudinally thereof, a shaft having a chamber at one end thereof, said end being slidably mounted in said hub and having ribs cooperating with said grooves, means for supplying lubricant to the space between the exterior of said shaft and the interior of said hub, and a casing secured at one end to the open end of the hub and having at its opposite end an inwardly directed annular flange, an annular collar within said sleeve and spaced from said flange, and packing material interposed between said collar and flange and adapted to engage said shaft.

1,541,008. HOSIERY. LOUIS TLUCKA, Paterson, N. J. Filed Aug. 18, 1924. Serial No. 732,754. 1 Claim. (Cl. 2—240.)



A knitted tubular fabric comprising two knitted tubular portions arranged edge to edge and whose courses substantially parallel each other and an attenuated element arranged between said edges and extending in a circumferential line of the fabric and formed of thread tied in knots at given intervals throughout its length, said element having its thread interlinked with successive loops of and along said edges of said portions and thereby joining the latter, in combination with a constricting attenuated elastic member extending in the same circumferential line as said element and held by the thread thereof at successive points.

1,541,009. STEAM-PROPELLED VEHICLE. OZE C. TRASK, Toronto, Ontario, Canada. Filed Apr. 20, 1923. Serial No. 633,563. 4 Claims. (Cl. 110—62.)

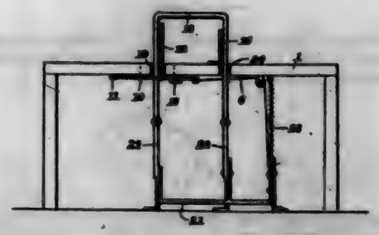


1. In combination, a boiler having a burner thereunder for heating the same, a chamber adapted to receive gases from said burner, a normally closed entrance into said chamber and means for opening said entrance, a fan adjacent said entrance whereby when said entrance is opened and said fan is operated, gases within said chamber that have accumulated from the use of the burner will be forced out.

1,541,010. CULTIVATOR SWEEP. STACHES T. VACEK, Richmond, Tex. Filed Feb. 9, 1924. Serial No. 691,829. 2 Claims. (Cl. 97—198.)

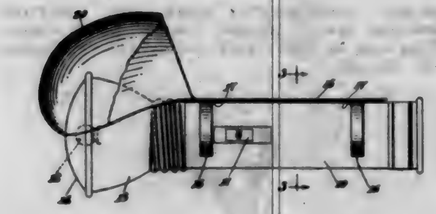
1. A sweep device for cultivators comprising a member including a shank disposed against the depending arm of a cultivator, clamping means engaging the shank and the arm for securing the shank in a rotatably adjusted position, a triangular blade having right angularly extending edges and a diagonal edge, means for pivotally connecting said blade at a point adjacent one of the right angularly extending edges and adjacent to the junction of said edges to the shank, and coacting means carried by the shank and blade for holding the blade in desired adjustment about its pivot.

1,541,011. BROILER. HARRY VALLOR, Detroit, Mich. Filed Aug. 6, 1923. Serial No. 655,929. 3 Claims. (Cl. 126—41.)



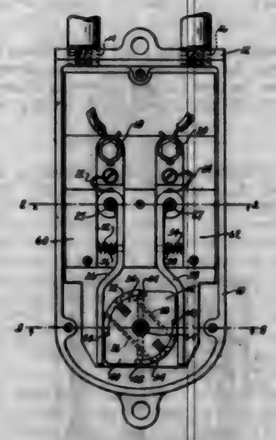
1. A broiler comprising a housing; a food retainer comprising a screen adapted for insertion into said housing; guide members spaced apart and projecting downwardly from the roof of said housing, said guide members being adapted for retaining said food retainer in upright position; a drip pan; and a guide member adapted for mounting in said drip pan, and for engaging the opposite sides said food retainer at its lower edge.

1,541,012. HOLLOW BLAST GRATE BAR. PAULUS J. A. VAN DEINSE, Greenville, Mich. Filed Oct. 31, 1922. Serial No. 598,162. 6 Claims. (Cl. 110—74.)



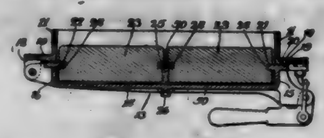
1. A hollow blast grate bar having an opening on its upper side leading from the interior thereof, in combination with a tuyère adapted to be seated in and partially close said opening, said tuyère being made up of two elements having air passages, one element seated on the wall of said opening and the other element seated on the first-mentioned element so that its upper surface is below the surface of the grate bar, both elements being held in position by gravity.

1,541,013. CELERY BUNCHER. BENJAMIN H. VETTER, Lynnhaven, Va. Filed Aug. 2, 1922. Serial No. 579,113. 4 Claims. (Cl. 100—31.)



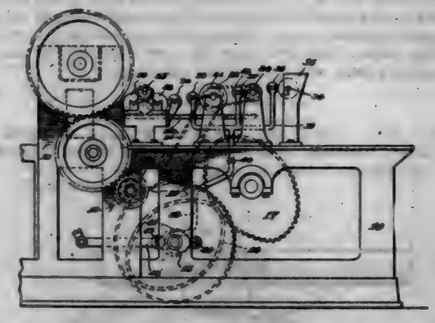
1. A vegetable buncher, a table, standards rising from the same, a sliding frame having guides in the table, standards connected to the sliding frame, means for operating the frame to compress the articles between the standards of the frame and table, and means to retract the frame after operation.

1,541,014. HAND ELECTRIC LAMP. EDUARD WAGNER, Wauwatosa, Wis. Filed Dec. 5, 1923. Serial No. 678,610. 3 Claims. (Cl. 240—8.4.)



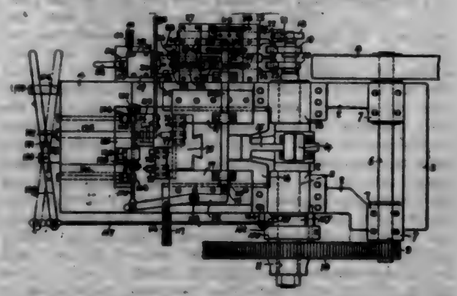
1. The combination with a portable electric lamp having a bulb at its end, of a flat level plate adapted for use as a writing surface, resilient arms on said plate engageable with the body of said lamp, and a reflector adapted to direct a portion of the rays of light from said lamp upon said plate.

1,541,015. ELECTRIC SWITCH. WILLIAM W. WEEKS, Brooklyn, N. Y., assignor to Elevator Supplies Company, Inc., a Corporation of New Jersey. Filed May 25, 1923. Serial No. 641,210. 6 Claims. (Cl. 200—155.)



5. An electrical switch comprising a movable insulating member having diametrically opposite conducting portions thereon in the form of substantially circular segments, the said insulating member having nosed insulating portions between the said segments, conducting bars pivoted at one end and extending to contact with opposing sides of the said movable member so as to yield with movements of the said member, the said conducting portions being so placed on the said movable member as to break contact with the said bars substantially simultaneously, and the said nosed portions being so positioned as to cause the said bars to spread rapidly with a speed depending upon the speed of movement of the said movable member and the distance of the nosed portions from the pivoted ends of the said bar.

1,541,016. FURNACE DOOR. FRED ELIEL WERTHEIM, Chicago, and ARTHUR URL WETHERBEE, Evanston, Ill., assignors to William A. Gilchrist, New York, N. Y. Original application filed Dec. 21, 1922, Serial No. 608,333. Divided and this application filed Dec. 31, 1923. Serial No. 683,644. 6 Claims. (Cl. 110—173.)



1. In a furnace door the combination of a body portion having ribs projected inwardly at each side, a lining composed of lateral sections having their outer edges in engagement with said ribs, and a key for securing the inner edges of said lining sections to said body portion, said key being releasable for permitting the removal of said lining.

1,541,017. PRINTING PRESS. RICHARD HENRY WILDER, Port Huron, Mich., assignor of one-half to William C. Bowen, Port Huron, Mich. Filed Jan. 19, 1922. Serial No. 530,236. 4 Claims. (Cl. 101—187.)

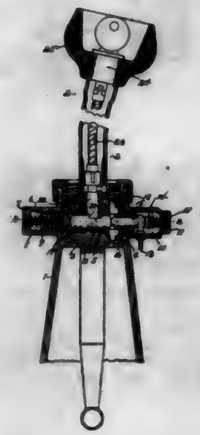
1. In the inking mechanism for a flat bed printing press, in combination with the ink fountain and fountain roller, form rollers, a series of rotatably mounted stationary and movable rollers adapted to pick up and convey the ink from the fountain rollers to the form rollers, and a rock frame carrying and simultaneously moving the movable rollers.

1,541,018. MACHINE FOR MAKING NUTS. ANDREW WOLFRAM, Pittsburgh, Pa. Filed Apr. 18, 1924. Serial No. 707,376. 14 Claims. (Cl. 10—72.)

1. Feeding mechanism for nut making machines comprising a pair of clamping members adapted to grip a stock bar between them, automatic means for reciprocating one of said clamping members toward and from

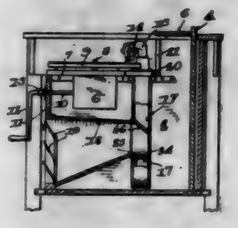
the other, automatic means for swinging said clamping members around a fixed axis to advance said stock bar, and means for permitting said clamping members to move about individual axes to maintain alignment with said stock bar during said swinging movement.

1,541,019. ROAD SKATE. EDWARD YOUNGMAN, Muskegon, Mich. Filed Jan. 4, 1923. Serial No. 610,551. 1 Claim. (Cl. 208—184.)



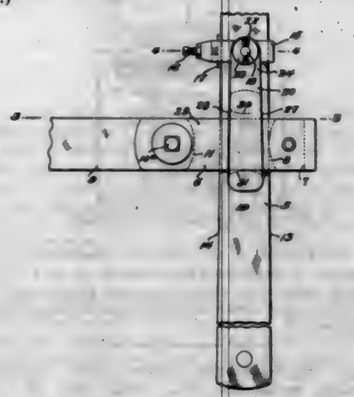
A device of the class described, comprising a long, narrow and relatively thin body of wood, a metal shoe connected to the under side thereof, a flat sheet metal plate formed with an upturned ear at its rear edge and with two oppositely extending ears at its sides located in the same plane with the plate, said plate being attached at the upper side of said body, a second plate of sheet metal attached to the upper side of the body in front of the first plate and formed with two oppositely extending ears at its sides located in the same plane with said second plate, said plates of sheet metal being of thin readily bendable stock whereby the said ears lying in the same planes therewith may be bent upwardly at any desired points, substantially as described.

1,541,020. SIGNALING DEVICE. WILLIAM E. ATTERBURY, Portland, Oreg. Filed Nov. 11, 1922. Serial No. 600,389. 1 Claim. (Cl. 116—39.)



In a signaling device for automobiles, the combination of a horizontal tube extending from one side of the automobile to the other, a wall traversing the tube diametrically at the center, a second wall traversing the tube diametrically on each side of the center wall, said second wall delimiting an air tight compartment on each side of the center wall, and a piston reciprocating within each compartment, with a flat circular housing below the tube, the axis of said housing lying within the plane of the center wall, a flat circular disk rotating air tight in said housing, said disk having a crescent shaped section in the top edge cut away thus leaving an air tight chamber between disk and housing, a suction inlet entering the rim of the housing radially and communicating with the chamber, a suction outlet at the medial center line of the housing at each side of the inlet and normally communicating with the chamber, each suction outlet proceeding toward the tube and terminating in the compartment corresponding to the respective outlet and below the lowest piston inward stroke, a second suction outlet at the medial center line of the housing adjacent to the first named suction outlet and normally held closed by the rim of the disk, said second-named outlet crossing the plane of the center wall and terminating in the compartment on the opposite side above the highest piston outward stroke.

1,541,021. COMBINATION GEAR AND IGNITION SWITCH LOCK. ANDREW BACHLE, Detroit, Mich. Filed June 25, 1923. Serial No. 647,737. 11 Claims. (Cl. 70—127.)

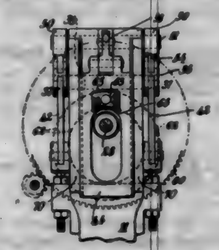


4. The combination with a lever, of means engageable with said lever for locking the same, an electric switch, and a member carried by and extending transversely of said lever for operating both said locking means and switch.

1,541,022. PHONOGRAPH. HENRY BARTEL, Milwaukee, Wis. Filed July 26, 1920. Serial No. 398,954. 3 Claims. (Cl. 274—2.)

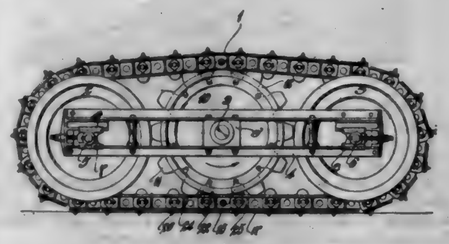
3. A phonograph comprising the combination with a box-like cabinet, a horizontal shelf therein, and means supported from said shelf for rotating a record, of a wholly removable panel at the rear of said shelf and constituting an extension thereof, an amplifying horn portion permanently associated with the cabinet beneath said shelf, and a second amplifying horn portion of substantially a U-shaped contour associated with the removable panel and provided with an opening registering with said first mentioned horn portion, said second horn portion being of such a character that it can be withdrawn with the panel in a sliding movement through the opening left by said panel without disturbing the means for rotating the record.

1,541,023. PICKER CONNECTION FOR LOOMS. EMER A. BARTON, Philadelphia, Pa., assignor of one-half to Hugh W. Juby, Philadelphia, Pa. Filed Dec. 12, 1924. Serial No. 755,492. 7 Claims. (Cl. 139—154.)



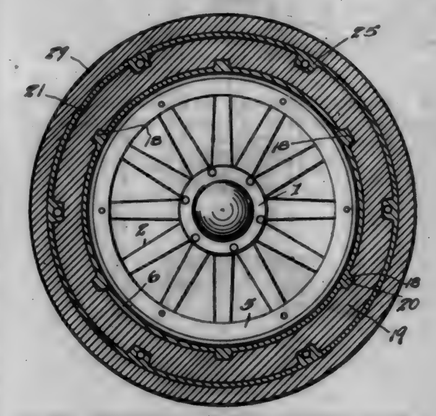
1. The combination with a picker stick of means providing a lateral pivot; a link on said pivot and depending adjacent the side surface of said picker stick, said link having a slot therethrough; and a lug strap embracing said picker stick and having a leg portion extending through said slot.

1,541,024. ATTACHMENT PLUG. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 30, 1919. Serial No. 334,476. 4 Claims. (Cl. 173—359.)



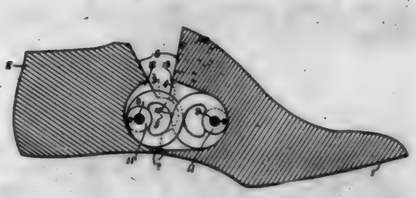
1. An attachment plug comprising an insulating portion having a non-circular recess in the lower side thereof, a shell-contact associated with said insulating portion, a center contact including a screw disposed longitudinally of said insulating portion, and extending therethrough, and a second insulating portion having a metallic member secured thereto for receiving said screw, said member corresponding in shape to said recess and entering the latter and engaging the walls thereof.

1,541,025. DRAWING PRESS. OTTO S. BAYER, Brooklyn, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of West Virginia. Filed June 30, 1922. Serial No. 571,952. 20 Claims. (Cl. 113—38.)



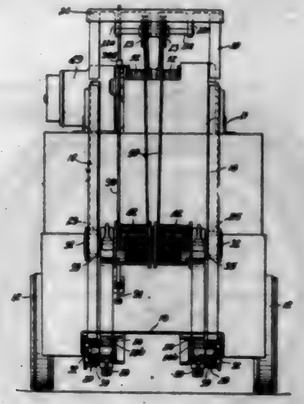
1. A drawing press comprising a blank-holder or die-carrying slide and means for reciprocating the same with a dwell in its movement, said means comprising two rocking parts at the same side of the press, and means comprising a rotary cam on the same side of the press as said rocking parts for simultaneously rocking said rocking parts.

1,541,026. TRACTOR MACHINE. ARTHUR R. BLEWETT, Tacoma, Wash., assignor to The Blewett Tractor Company, Tacoma, Wash. Filed Apr. 27, 1920. Serial No. 376,920. 3 Claims. (Cl. 305—8.)



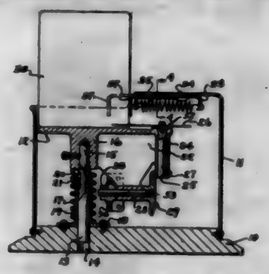
1. The combination with a track having bearing members, of a sprocket wheel adapted to co-act with said members, and a tread rim on said wheel to roll on the track and of the same diameter as the pitch diameter of the sprocket wheel.

1,541,027. TIRE. ROBERT BRUCE BROWN, Spokane, Wash. Filed Feb. 26, 1925. Serial No. 712,028. 1 Claim. (Cl. 152—86.)



The combination with an outer rim having an inner retaining flange and a complementary removable retaining ring, of an inner rim having side flanges for co-action with the retaining flange and retaining ring, spaced transverse lugs on the inner periphery of the outer rim and means for securing said retaining ring to said lugs, a series of spaced transverse lugs on the exterior periphery of the inner rim, an annular cushion having staggered notches in its interior and exterior peripheries for co-action with said two series of lugs, a felloe and felloe ring, and means for securing the inner rim on said felloe ring.

1,541,028. LAST. GEORGE CLAUSING, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Filed Mar. 26, 1924. Serial No. 701,986. 5 Claims. (Cl. 12—136.)



1. In a last, a toe part, a heel part, a joint to permit relative movement of said parties about a center, an S-shaped resilient link connecting said parts, and means for attaching said link to the respective parts.

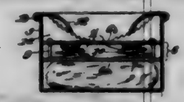
1,541,029. INDUSTRIAL TRUCK. CLYDE E. COCHRAN, Cleveland, Ohio, assignor to The Elwell-Parker Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 25, 1923. Serial No. 614,720. 34 Claims. (Cl. 187—11.)

17. In an industrial truck of the character described, an upright frame structure rigidly mounted on the frame of the truck, load lifting means associated therewith including an elevating platform, rack bars rigidly mounted on the upright frame structure, gear members coacting therewith and movable with the platform, power driven means rigidly mounted on the truck, power transmitting means associated with said last named means and with the load platform to impart rotation to said gear members associated therewith, whereby said gear members coact with the rack members to raise and lower said load lifting platform and means mounted on the load lifting platform for maintaining the rack and gear members in cooperative relation when the platform is moved.

1,541,030. PACKAGE SLITTER. MORRIS COHEN, New York, N. Y. Filed Oct. 3, 1923. Serial No. 666,265. 15 Claims. (Cl. 121—59.)

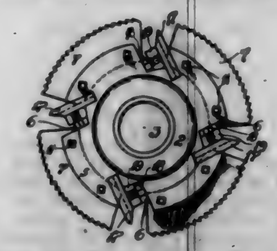
1. In mechanism of the character described, a package support, a rotatable knife carried by said support, and means operatively connecting said support and said knife whereby said knife is rotated on the movement of said support.

1,541,031. WATER-LEVEL REGULATOR. CHARLES J. DAVIDSON, Milwaukee, Wis. Filed Jan. 27, 1923. Serial No. 615,413. 7 Claims. (Cl. 137—101.)



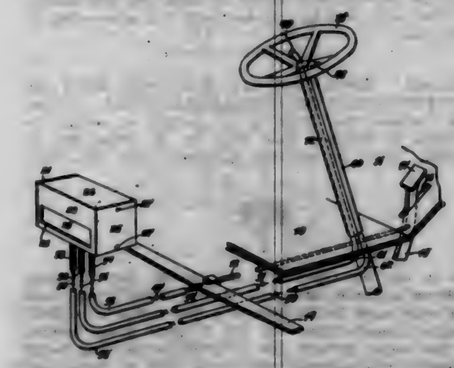
1. An automatic liquid level control mechanism comprising a chamber in which the liquid level may rise and fall; a substantially solid metal control member within said chamber adapted to displace and be buoyed up by said liquid; a substantially solid metal counterbalancing member; differential connections between said members whereby they may move in opposite directions relative to one another in response to the rise and fall of said liquid level; and a valve carried by one of said members for directly controlling the admission of feed liquid, to maintain said level substantially constant.

1,541,032. FISH BAIT OR LURE. EDWARD J. DUMOUCHEL, Kalamazoo, Mich., assignor to Shakespeare Company, Kalamazoo, Mich. Filed July 16, 1924. Serial No. 726,282. 7 Claims. (Cl. 43—47.)



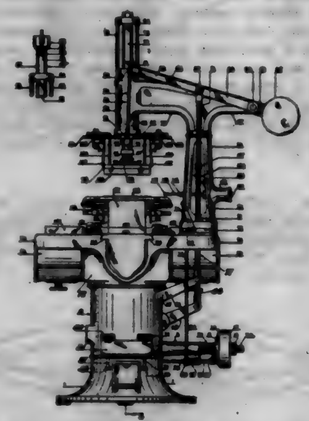
1. A fish bait or lure comprising a longitudinally bowed body of metal finished to provide reflecting surfaces, and a wire net wrapped about said body with parts of the body projecting at the front and rear, the ends of the net being secured by external wrappings.

1,541,033. HAM-BOILING FORM. JOHN EASKES, Cedar Rapids, Iowa. Filed Nov. 10, 1923. Serial No. 674,936. 2 Claims. (Cl. 100—57.)



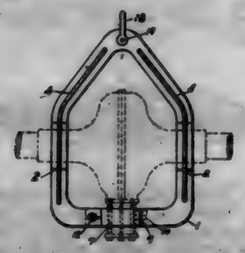
2. A ham-boiling form, comprising a rectangular, open-topped, parallel-sided container, a follower fitting closely but slidably therein, the follower having top and bottom plates with interposed, closely collapsible springs and bosses for positive engagement of the plates when fully collapsed, the upper plate of the follower having outwardly and upwardly inclined serrated ribs, and pawls pivoted thereover to the top of the container.

1,541,034. ROTARY CUTTER. OSCAR G. EDMOND, Spokane, Wash., assignor of one-half to White Pine Sash Company, Spokane, Wash. Filed June 9, 1924. Serial No. 718,786. 6 Claims. (Cl. 144—223.)



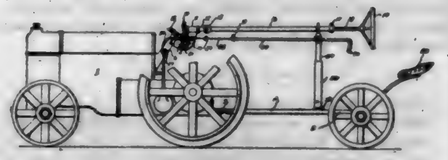
1. The combination with a rotary head having an exterior annular groove and a retaining flange formed thereby, of a saw section and a saw plate in the groove, retaining means on the plate for engaging the section, and retaining means supported in the flange for engaging the plate.

1,541,035. SIGNAL FOR AUTOMOBILES. GUY J. EVANS, Buffalo, N. Y. Filed Aug. 17, 1923. Serial No. 657,917. 2 Claims. (Cl. 116—44.)



1. A signal for automobiles etc., comprising a casing provided with a sight opening, an indicator member arranged in said casing and movable into and out of a position across said opening, a return member movable normally into its operative position, manually operated means for moving said indicator member across said opening, and automatic means for moving said indicator member out of line with said opening when the return member moves to its normal position, comprising a flexible controlling member having its ends fixed while its intermediate part is operatively connected with said return member and indicator member and adapted to have portions thereof deflected into loops upon moving said members relatively to one another.

1,541,036. BOX-COVERING MACHINE. THEODORE A. FREDERWITZ and WALTER T. BAILEY, Philadelphia, Pa., assignors to Stokes and Smith Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 22, 1923. Serial No. 647,012. 46 Claims. (Cl. 93—54.)



1. In a box-covering machine, the combination with a support, of a unit adjustable to different positions thereon, said unit comprising cam structure, a tool controlled thereby, and a gear for driving said cam structure, and a driving shaft for said unit along which said gear is adjustable by adjustment of said unit upon said support.

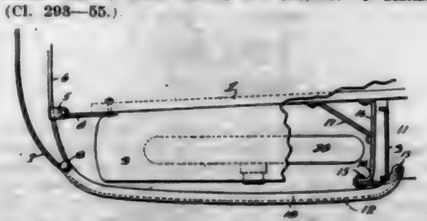
1,541,037. DRIVE-AWAY TOWING FIXTURE. WALTER P. FLEMING, Highland Park, Mich. Filed May 5, 1923. Serial No. 636,912. 2 Claims. (Cl. 280—33.44.)

1. A towing fixture of the character described comprising a cast metal frame for encircling the gear housing in the axle, said frame having one V-shaped end formed thereon, U-sockets formed in opposite sides of the frame for receiving the axle shaft housing therein, said U-socket formed and arranged for hooking over the axle shaft housing and to bring the main frame about the central portion of the axle shaft, a U-bearing formed in one end of the frame to receive the drive bearing housing therein, a hinged clamp attached to the said U-bearing for clamping the casting on the drive gear housing, means for firmly holding the hinge clamp in place against the bearing housing and means for attaching the steering bar of the towing device to the rear end of the fixture.

1,541,038. VEHICLE CONTROL. CLYDE M. FORD, Dearborn, Mich. Filed July 31, 1922. Serial No. 578,615. 1 Claim. (Cl. 180—77.)

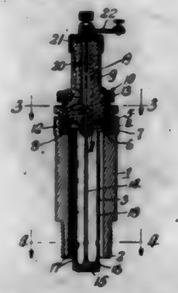
A device of the class described, comprising a somewhat U shaped member adapted to partially encircle the steering post of a motor vehicle, a member engaging the ends of said first member and rigidly securing the same to said post and having arms extended therefrom adapted to support one end of an extension gear shift control and an extension clutch control, and a rearward extension on said U shaped member adapted to rigidly support one end of an extension steering device.

1,541,039. BUMPER. CHRISTIAN GIRL, Kalamazoo, Mich, assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed July 23, 1923. Serial No. 653,145. 9 Claims. (Cl. 293—55.)



8. A bumper having an impact section comprising external upper and lower bars having their intermediate portions vertically spaced and intermediate upper and lower bars having their intermediate portions vertically spaced from each other and from the first mentioned bars, and means for supporting the ends of said impact section for attachment to a vehicle frame.

1,541,040. BUMPER. CHRISTIAN GIRL, Kalamazoo, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed July 23, 1923. Serial No. 653,146. 7 Claims. (Cl. 293—55.)

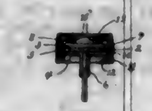


1. A bumper comprising attaching members and an impact section connecting such members, said impact section comprising an upper and a lower bar having their central portions vertically spaced, with the end portions of each bar converging toward the end portions of the other bar, a pair of intermediate bars interposed between the first mentioned bars and each having a central portion extending substantially parallel with the central portion of the first mentioned impact bar adjacent thereto, each of the intermediate bars having portions on each side of the central portion which are bent toward corresponding portions of the opposed intermediate bar, and each intermediate bar having portions extending outwardly from the last mentioned portions and substantially parallel with corresponding portions of the other intermediate bar, and means connecting the ends of the impact bars together and to the corresponding ends of the said members.

1,541,041. FENDER GUARD. CHRISTIAN GIRL, Kalamazoo, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Aug. 9, 1923. Serial No. 656,619. 5 Claims. (Cl. 293—55.)

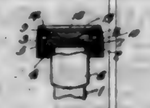
1. The combination, with a fender of a vehicle, of a guard for said fender spaced from the lateral edge of the fender and conforming in curvature thereto, and means for supporting said guard.

1,541,042. SPARK PLUG. EDWARD S. GORMACK, Chicago, Ill. Filed Oct. 6, 1922. Serial No. 592,735. 5 Claims. (Cl. 123—169.)



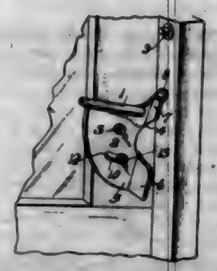
1. A spark plug, comprising a tubular metal body, a metal shell extending into said body through its upper end and having removable connection therewith, said shell being spaced from said body below its connection therewith and having its lower end at the lower end of the body, said shell being provided adjacent its lower end with a double set of apertures, one set above the other, an insulating core carried by said shell at its upper end, and an electrode carried by said core and extending into said shell to said apertures and surrounded by said shell.

1,541,043. RESILIENT CAP FOR THE KEYS OF TYPEWRITERS OR SIMILAR MACHINES. ROBERT S. GRAHAM, New York, N. Y., assignor of one-half to Willis M. Follmer, New York, N. Y. Filed Feb. 6, 1924. Serial No. 690,899. 2 Claims. (Cl. 197—103.)



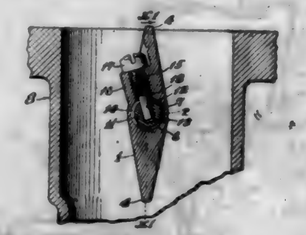
1. A cap for typewriter and similar keys provided with an upwardly extending circumferential ridge, said cap being made in the form of a hollow disk of slightly smaller diameter than the key, a guide flange secured to the bottom of said cap to facilitate the same being stretched over said key, the top of said cap being provided with side and end cushion members, said side members being broader than said end members, and an opening in the top of said cap surrounded by said cushion members, the top of said cap being arranged to rest upon the ridge portion of said key, the central portion of the top of said cap being spaced away from the top of the central portion of said key.

1,541,044. RESILIENT CAP FOR THE KEYS OF TYPEWRITERS OR SIMILAR MACHINES. ROBERT S. GRAHAM, New York, N. Y., assignor of one-half to Willis M. Follmer, New York, N. Y. Filed Mar. 28, 1924. Serial No. 702,517. 1 Claim. (Cl. 197—103.)



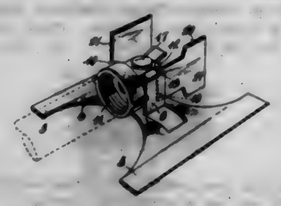
A cap for typewriter and similar keys arranged to be removably secured thereto, the top of said cap being provided with side and end cushion members surrounding an opening, the inner edges of said side and end cushion members adjacent said opening being undercut as and for the purposes set forth.

1,541,045. RESILIENT CAP FOR THE KEYS OF TYPEWRITERS OR SIMILAR MACHINES. ROBERT S. GRAHAM, New York, N. Y., assignor of one-half to Willis M. Follmer, New York, N. Y. Filed May 17, 1924. Serial No. 713,941. 2 Claims. (Cl. 197—103.)



1. A resilient cap for typewriter and similar keys provided with an upwardly extending circumferential ridge, said cap being made in the form of a hollow disk having a top opening, side cushion members adjacent said top opening, and supports secured to said side cushion members, said cushion members and supports being tapered from the edge of said top opening inward toward the ridge of said key as well as being tapered in opposite directions along the side of said opening, said supports being arranged to engage the top of said key when the cap is forced over the top of said key.

1,541,046. COMBINED SASH LIFT AND WINDOW LOCK. GEORGE R. HALL, Dayton Township, Newaygo County, Mich. Filed Apr. 23, 1923. Serial No. 633,967. 2 Claims. (Cl. 292—202.)



1. In a combined sash-lift and window-lock, the combination of a hand-hold of suitable size and shape for convenient and effective use as a sash-lift, a pivotal base, a narrow-faced locking bolt adapted to engage a special stop to lock the window down, a broad-faced locking bolt adapted to engage a series of regular stops to lock the window in position when raised; all shaped and united to form a single operating unit pivotally mounted upon the face of the sash-bar in combination with a limiting stop limiting its motion, whereby it is adapted and made to serve the double purpose of a sash-lift and locking bolt.

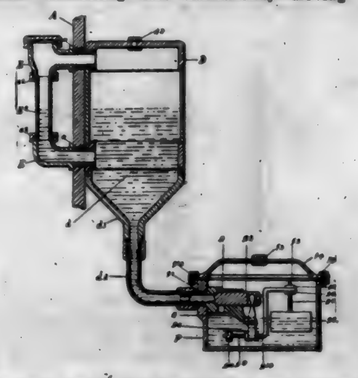
1,541,047. DOUBLE-BEARING THROTTLE. ROBERT H. HART, Los Angeles, Calif., assignor to The Ensign Carburetor Company, Los Angeles, Calif. Filed Apr. 3, 1923. Serial No. 629,736. 5 Claims. (Cl. 251—11.)

1. The combination with a throttle tube, of a bearing tube extending thereacross; a throttle plate journalled on the bearing tube; a throttle shaft inside the bearing tube; and means fixing the throttle plate to the throttle shaft.

1,541,048. LAWN SPRINKLER. EDWARD HAUBISEN, Cleveland Heights, Ohio. Filed Jan. 25, 1924. Serial No. 688,438. 5 Claims. (Cl. 299—74.)

1. A lawn sprinkler comprising a cap member having an inlet and a discharge opening, a substantially cone-shaped spreader head arranged in the discharge opening, a pair of transversely alined pintles formed upon opposed vertical faces of the cap member, and a pair of vertically disposed parallel deflectors mounted upon the pintles.

1,541,049. HARNESS TRACE. EWALD F. HEISER, Denver, Colo. Filed Oct. 14, 1924. Serial No. 743,518. 2 Claims. (Cl. 54—32.)

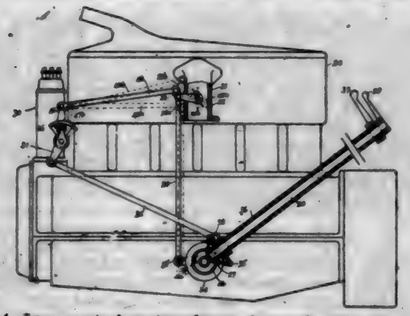


2. A trace whose end portion comprises an inner assembly comprising a metal plate having a cylindrical portion intermediate its ends, the ends of said plate being disposed radially of the cylindrical portion, a strip of leather extended around the cylindrical portion and attached at its ends to said first mentioned strip, and an outer assembly comprising a strip having its end portion terminating adjacent the cylindrical portion, and a second strip having its end portion extended around the inner assembly and overlapping the end of the other strip forming the outer assembly.

1,541,050. AUTOMATIC OIL FEED. LEO J. HINDLE, Lowell, Mass. Filed Jan. 13, 1921. Serial No. 436,915. 1 Claim. (Cl. 184—103.)

The combination of a crank case, a main reservoir, an auxiliary reservoir at a lower level, a pipe leading to

the auxiliary reservoir, a horizontally moving valve closing the opening to said pipe, a float, a lever control mechanism connecting said horizontally moving valve



with the float, one of said levers being bent and provided at one end with a counterweight and at the other end with a vertical screw adjustment for the float.

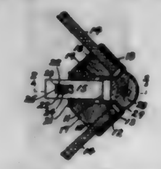
1,541,051. BOBBIN CASE FOR SEWING-MACHINE SHUTTLES. EDGAR D. HUMM, Collingswood, N. J., assignor to Summit Thread Company, East Hampton, Conn., a Corporation of Maine. Filed June 10, 1922. Serial No. 567,276. 4 Claims. (Cl. 112—233.)

1. A bobbin case comprising a base composed of a circular body and an annular wall portion; a central post fixed to the base body; a latch pivoted to the post; and a cap composed of an annular wall portion and a head which is apertured to receive the outer end of the post, and is provided with an annular inwardly projecting boss forming a latch-receiving depression, the said base and cap forming a chamber in which a bobbin is rotatable on the post; combined with a flat-sided discoidal inner head frictionally engaged with the annular wall portion of the cap, in position to bear on and guard the outer end of a ready wound bobbin, said inner head having a central post-receiving aperture and being of such diameter that it overhangs the periphery of the bobbin; and means for pressing the bobbin against the inner head.

1,541,052. ENGINE CONTROL. JOHN H. HUNT, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed Mar. 27, 1919. Serial No. 285,660. 5 Claims. (Cl. 123—99.)

4. In a control system for an internal combustion engine having a throttle valve and an ignition timer, in combination, three individual systems for controlling said timer which are cumulatively operable to advance or retard said timer, including first, an engine speed controlled system, second, a system controlled by the throttle valve piston, and third, a manually controlled system.

1,541,053. BUMPER. HERBERT S. JANDUS, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Aug. 20, 1924. Serial No. 733,135. 7 Claims. (Cl. 293—55.)



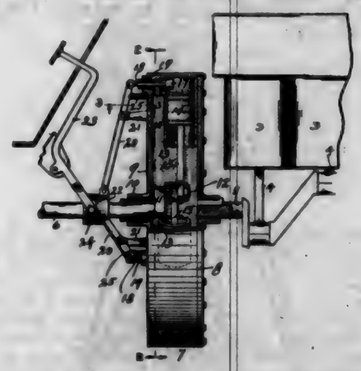
1. A bumper comprising a bar adapted to be fastened to the rear of a vehicle, an upper and a lower bar secured at their ends to, and respectively above and below, the corresponding ends of the first mentioned bar, the said upper and lower bars projecting outwardly and forwardly from such ends, and arms connecting the outer ends of said upper and lower bars to the sides of the vehicle.

1,541,054. ABSORBENT SHIELD FOR GARMENTS. RICHARD KAMM, Chicago, Ill. Filed July 5, 1922. Serial No. 572,772. 6 Claims. (Cl. 2—53.)

3. A shield for the armscye of a garment, the same comprising an absorbent sheet part for insertion in the body of the garment, an outer waterproof flap for insertion in its sleeve, and a waterproof flap inside only of said absorbent part, for insertion in the body of the garment; said absorbent part being secured to said flaps along its upper edge and projecting beyond the lower edge of the inner flap and being also attached to said inner flap below its own upper edge.

1,541,055. MOUNTING FOR STORE WINDOWS. MARTIN KATZ, Brooklyn, N. Y. Filed Sept. 20, 1924. Serial No. 738,908. 6 Claims. (Cl. 20—56.3.)

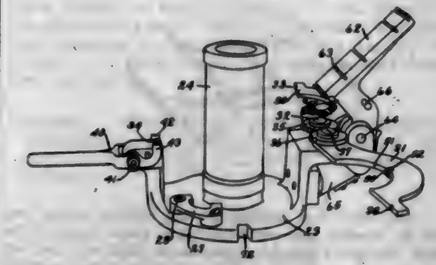
1. In a window setting, a connection comprising a body member having a projecting flange disposed to engage an outer face of the glass, a tongue projecting inwardly from said body member, a clamp member arranged to engage the inner face of the glass and provided with a perforation adapted to receive said tongue, and clamping means operating through said tongue and clamp to urge the glass against the flange of said body member.



1,541,056. SELF-LOCKING SPRING. ABRAHAM KRAKAUER, New York, N. Y. Filed Dec. 12, 1923. Serial No. 680,086. 5 Claims. (Cl. 5—264.)

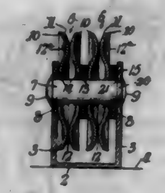
1. In a spring seat, a cross bar having apertures therein, comprising a pair of webs and a flange connecting said webs, a coil spring, and a lowermost coil on said spring having a portion thereof passed through the apertures in said bar and forced in the direction of the axis of said spring away from the position said portion would normally assume if free into axially sprung engagement with one of said webs, whereby that part of said coil above and not passed through said apertures engages said flange under pressure.

5. The method of causing a coil spring to lock itself into place comprising the insertion of the end of said spring through a pair of holes in a cross bar, and then forcing said end in a direction axially of said spring out of the position same end would normally assume if free, and into axially sprung engagement with said cross bar.



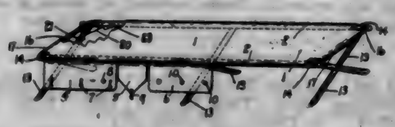
1,541,057. MOTOR-VEHICLE CLUTCH. STACY C. LAMBERT, Clayton, Ind., assignor of one-half to Albe R. Marley, trustee, Clayton, Ind. Filed June 7, 1920. Serial No. 387,130. 2 Claims. (Cl. 192—60.)

1. A crank-shaft, a drum fixed to the crank-shaft and filled with liquid oil, a propeller-shaft entering the drum and having a crank, one or more cylinders fixed within and to the drum, pistons in the cylinders, rods connecting the pistons with the crank on the propeller-shaft a port-communication between each cylinder and the drum-interior having an outwardly tapering valve-seat, a tapering valve for each seat through which port the cylinder is charged and discharged, automatic seating means for each valve comprising a pivoted lever with which the valve is connected, and a spring to appropriately move the lever, said lever and spring being externally of the drum, and manually operated means for moving the lever in opposition to the spring comprising a sleeve sliding on the propeller shaft to which sleeve the valve connected levers are attached and means operated manually for sliding the sleeve.



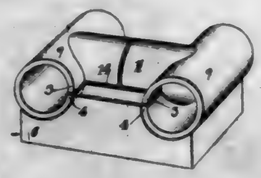
1,541,058. ASSEMBLY FIXTURE. CHARLES L. LEE, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 2, 1923. Serial No. 629,404. 16 Claims. (Cl. 113—99.)

1. Apparatus for the manufacture of finned cylinders comprising, in combination, a support adapted to receive a cylinder, means for locating the cylinder with respect to the support in a predetermined relation, means for



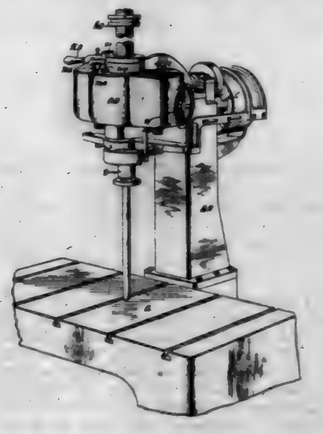
supporting fin material about the cylinder, and means for locating the fin material with respect to the cylinder in a predetermined relation.

1,541,059. SHEAR AND KNIFE SHARPENER. FRED A. LEIGH, Chicago, Ill. Filed Dec. 22, 1923. Serial No. 682,140. 7 Claims. (Cl. 76—87.)



1. In a sharpener of the character described, the combination of a base, a plurality of disc like cutters carried by the base and having their peripheral edges aligned, said cutters each having a portion of its body between its center and one peripheral edge bulged out of the normal plane of the disc to bring one of the peripheral edges of the disc inward of the other so that the outermost peripheral edge may form the cutting edge of the disc.

1,541,060. CONVERTIBLE COT AND PACK BAG. SAMUEL D. MARTIN, Grand Junction, Colo. Filed Nov. 20, 1922. Serial No. 602,249. 3 Claims. (Cl. 224—9.)

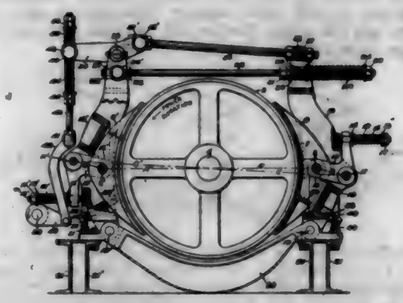


1. In combination, a sheet provided at opposite side edges with spaced flaps arranged to form the ends of a pack when the sheet is folded, side rails connected to said sheet and formed of hinged sections, foldable with the sheet to form said pack, and supporting legs detachably connected to said side rails, for holding the sheet and side rails in elevated position.

1,541,061. MAKING COUPLINGS AND SIMILAR OBJECTS. THOMAS E. MURRAY, Brooklyn, N. Y. Filed May 26, 1922. Serial No. 563,943. 3 Claims. (Cl. 219—10.)

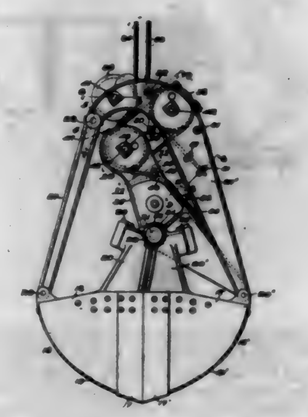
1. The method of making tubular articles which consists in bending opposite edges of a blank to meet the blank at intermediate points so as to form two of such articles connected alongside of each other, welding said edges to the intermediate points of the blank and separating the articles thus formed.

1,541,062. MACHINE TOOL. JOSEPH W. MYERS, Jackson, Mich., assignor to Hinckley-Myers Company, Jackson, Mich., a Corporation. Filed June 27, 1921. Serial No. 480,520. 7 Claims. (Cl. 77—2.)



1. In an apparatus of the kind described having a threaded boring bar provided with a longitudinal key-way, a power receiving gear wheel sleeved upon said bar and engaging in said key-way, a second gear wheel sleeved upon said bar and having interior threads engaging the threads of said bar, means for engaging said gear wheels together so as to secure differential movement, and automatic means adapted to disengage said gear wheel at a definite position of said boring bar.

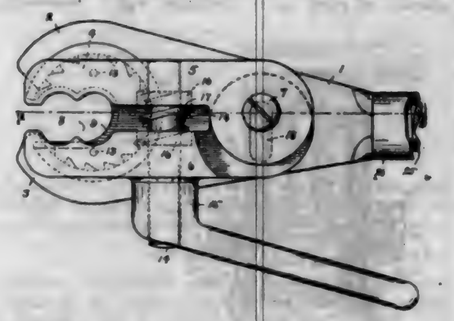
1,541,063. BRAKE MECHANISM. ALMON E. NORRIS, Brookline, Mass. Filed Oct. 26, 1922. Serial No. 597,027. 30 Claims. (Cl. 188—82.)



1. In a brake mechanism, the combination of a brake-drum, a friction brake therefor, means cooperating with said brake normally to permit rotation of said brake-drum in one direction but to resist rotation in the opposite direction, and means for moving the first-mentioned means bodily at will to permit rotation in said opposite direction.

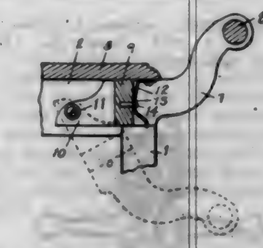
24. In a brake mechanism, the combination of a brake-drum, a friction brake therefor, brake applying means cooperating with said brake normally to permit rotation of said brake-drum in one direction, but to resist rotation in the opposite direction, and auxiliary brake-applying

means adapted to be brought into effect by intervention of the operator to cause said brake to be applied with a greater degree of force than that which is afforded by the first-mentioned brake-applying means.



1,541,064. GRAB. ALMON E. NORRIS, Brookline, Mass. Filed July 11, 1923. Serial No. 650,818. 7 Claims. (Cl. 37—184.)

1. A grab comprising, in combination, a pair of hinged jaws, supporting means therefor, a holding rope attached to said supporting means, a closing arm carried by one of said jaws, a closing rope, and means providing for arrangement of said closing rope for two, three, four and five part purchases.



1,541,065. WRENCH. CHARLES S. OLSON, Duluth, Minn. Filed Oct. 27, 1923. Serial No. 671,268. 1 Claim. (Cl. 140—119.)

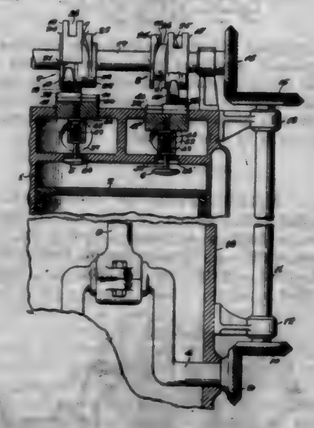
A wrench of the character described having a head, an open sided hub-like saw tooth ratchet mounted within the head the hub portion of said ratchet being stepped to rotatably register with a like stepped portion in the head of the wrench, a removable holding plate on the extreme end of that portion of the hub extending into the head of the wrench, a gripping jaw formed integral with the end of the hub externally of one side of the head of the wrench, and a second jaw adjustably carried in parallel relation to and by the first mentioned jaw, and a spring controlled pawl mounted longitudinally of

and within the head, and operable from that side of the head opposite the gripping jaws for releasing the ratchet.

1,541,066. SERVING TABLE. JOHN H. PAALMAN, Grand Rapids, Mich. Filed Aug. 6, 1923. Serial No. 656,014. 2 Claims. (Cl. 45—17.)

2. In a serving table, the combination of corner uprights, side rails connecting said uprights, a top secured upon said side rails and uprights, a handle comprising a pair of supporting arms having a handpiece at their outer ends and a cross piece adjacent their inner ends, said supporting arms being pivoted on the inner sides of said side rails to swing against the under side of the table top or to be collapsed between the adjacent uprights, a pin on said cross piece, and a spring catch mounted on the under side of the table adapted to automatically engage said pin when the handle is swung to erected position, the outer end of said latch being offset to provide a fingerpiece for releasing the latch.

1,541,067. REED HOLDER FOR ACCORDIONS. JAMES PALMER, Philadelphia, Pa. Filed Sept. 22, 1922. Serial No. 589,807. 3 Claims. (Cl. 84—360.)



2. A reed holder for accordions consisting of a one-piece casting including a face plate and a pocket-forming part, the face plate having rows of apertures and extended ends for attaching the holder, and the pocket-forming part having a central partition between the rows of apertures, and parallel transverse partitions between the apertures and integral with the central partition, the partitions being integral with the face plate and forming the pockets one end of each pocket communicating with an aperture.

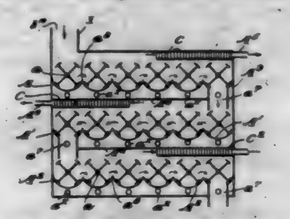
1,541,068. PROCESS FOR THE MANUFACTURE OF ALUMINUM CHLORIDE. HARRY L. PELSER and EUGENE C. HERTHEL, Chicago, Ill. Filed Jan. 15, 1923. Serial No. 612,791. 8 Claims. (Cl. 23—93.)

1. A process for the production of aluminum chloride which consists in heating aluminum in the presence of the chloride of a metal having a less affinity for chlorin than aluminum at high temperatures to a reacting temperature and separating the aluminum chloride formed from the residue.

1,541,069. FOUR-CYCLE INTERNAL-COMBUSTION ENGINE. GALEN H. PETERS, Los Angeles, Calif. Filed Jan. 16, 1923. Serial No. 612,989. 7 Claims. (Cl. 123—93.)

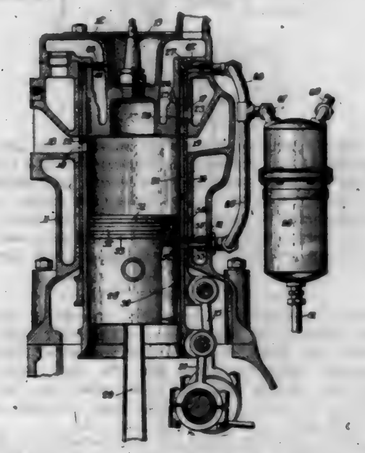
7. Valve operating mechanism substantially set forth comprising a cam, having a cylindrical limb and a wiper; an eccentric strap mounted on said cam and adapted to be carried by said limb to hold the valve closed, and to be reciprocated by said wiper to open the valve; said eccentric strap being slotted to accommodate said limb when the wiper moves the eccentric strap to open the valve.

1,541,070. MOVING PLATFORM. HENRY S. PUTNAM, New York, N. Y., assignor to Continuous Transit Company, New York, N. Y., a Corporation of Delaware. Original application filed May 15, 1922, Serial No. 561,184. Patent No. 1,437,549, dated Dec. 5, 1922. Divided and this application filed Sept. 30, 1922. Serial No. 591,439. 4 Claims. (Cl. 104—25.)



1. An endless moving platform comprising cars each having wheels only at one end, the wheels of the respective cars being fixed thereto as regards angular movements, and each car at its other end having a part overlapping and pivotally supported from the wheeled end of the respective adjacent car, said cars having floors making up a continuous platform and provided with arcuate mating portions permitting relative angular movements between the floors of adjacent cars.

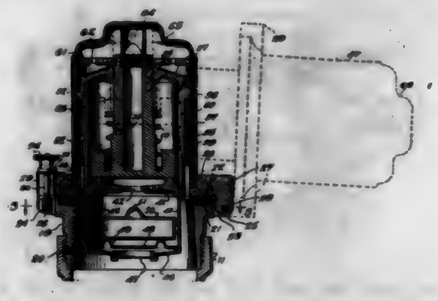
1,541,071. DISTILLATION APPARATUS. PIERO MARIANO SALMONI, London, England, and EDOARDO MICHELE SALMONI, Paris, France. Filed July 16, 1924. Serial No. 726,360. 1 Claim. (Cl. 202—9.)



An apparatus for the distillation of carbonaceous material comprising a casing having inlet and outlet open-

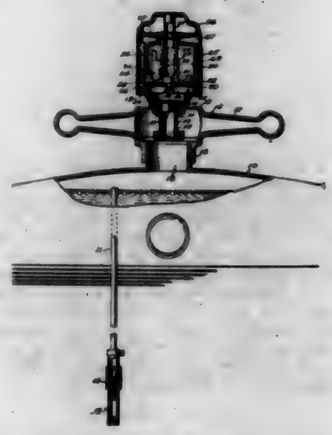
ings, a set of superimposed troughs positioned in said casing, each set having a series of horizontal rows of troughs open at the top and arranged to contact side by side in the same horizontal plane, said troughs being corrugated to allow expansion and contraction thereof

in a longitudinal direction, a rotatable agitator in each of the troughs, discharge means for drawing off separately the volatile constituent yielded up in each of the horizontal series of troughs, means for extracting dust in each of said discharge means, and a separate heating device for each of said troughs.



1,541,072. SLEEVE TYPE OF INTERNAL-COMBUSTION ENGINE. RALPH L. SKINNER, Detroit, Mich., assignor to Skinner Automotive Device Co., Inc., Sacramento, Calif., a Corporation of California. Filed Dec. 8, 1922. Serial No. 605,565. 13 Claims. (Cl. 123—196.)

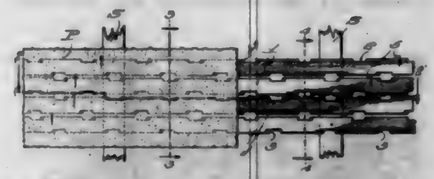
1. In an internal-combustion engine, the combination of a cylinder having a port in its side-wall, an externally channeled piston reciprocatory in said cylinder, means to apply suction to said cylinder-port, a sleeve between said piston and cylinder having a port cooperating with said cylinder-port and with the piston channel means to reciprocate said sleeve, and means to supply lubricant to said cylinder, piston and sleeve.



1,541,073. INDICATOR. ALFRED L. SOHM, Chicago, Ill. Filed Sept. 12, 1924. Serial No. 737,376. 8 Claims. (Cl. 116—108.)

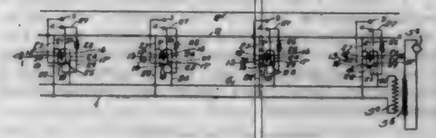
3. A device of the character described comprising a substantially cylindrical supporting member adapted to communicate with the interior of an automobile radiator, a base member arranged over said supporting member and forming a substantial closure therefor, said base member being provided with a central aperture, a pressure chamber arranged above said base member and communicating through the aperture therein with the interior of said supporting member, a movable member arranged in said pressure chamber and adapted to be actuated by fluid pressure therein, said movable member having a portion adapted to serve as an indicator, and a condensing

chamber surrounding said pressure chamber, said base being provided with a second aperture affording communication between said condensing chamber and the interior of said supporting member.



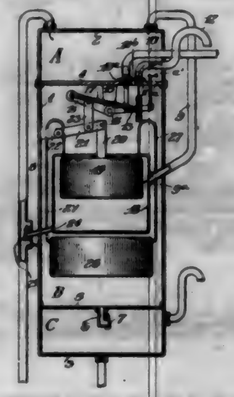
1,541,074. INDICATOR. ALFRED L. SOHM, Chicago, Ill. Filed Oct. 2, 1924. Serial No. 741,291. 4 Claims. (Cl. 116—109.)

2. The combination with a radiator of a motor vehicle, of a member divided by a partition to form upper and lower chambers, said partition being provided with a valve seat normally affording communication between said chambers, a signal adapted to be operated by a predetermined increase in pressure in said upper chamber, said lower chamber communicating with the interior of the radiator, a float valve mounted in said lower chamber and adapted to engage said seat, and an annular plate surrounding said valve and slightly spaced therefrom.



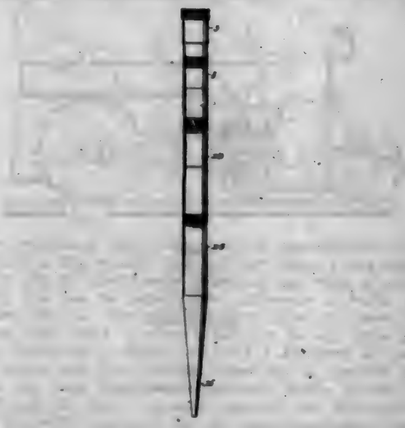
1,541,075. LATH. FRED M. SPAID, Van Wert, Ohio. Filed Jan. 9, 1924. Serial No. 685,224. 2 Claims. (Cl. 72—116.)

1. A lath comprising an elongated flat strip of wood having shallow elongated notches in its opposite edges, the end walls of each notch being substantially parallel with each other but oblique to the length of the lath,



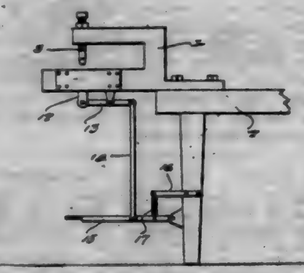
the end walls of the notches at one edge of the lath being disposed in planes at an angle to the end walls of the notches at the other edge of said lath.

1,541,076. ELECTRIC RAILWAY. JOSEPH B. STRAUSS, Chicago, Ill. Filed July 31, 1915, Serial No. 42,961. Renewed Oct. 14, 1920. Serial No. 417,016. 11 Claims. (Cl. 191—14.)



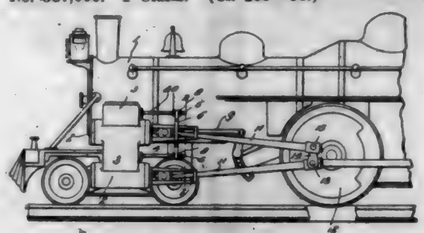
2. An electric railway system comprising a track, a series of separated feed contacts extending along said track, a series of separated exciter contacts also extending along said track, feed wires extending along said track, a series of mercury rectifiers at intervals along said track, one for each feed contact, said rectifiers electrically connected with said feed wires, each rectifier electrically connected with one feed contact and one exciter contact.

1,541,077. FLUID-MEASURING APPARATUS. ADOLPH STUBER, Rochester, N. Y. Filed June 26, 1919. Serial No. 306,976. 16 Claims. (Cl. 103—236.)



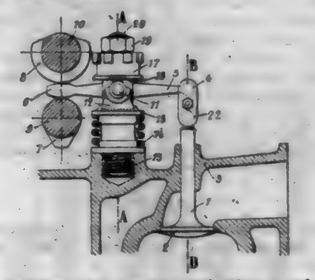
1. The combination with a measuring chamber having a source of fluid supply connected thereto, a receiving chamber in communication therewith and a valve controlling said communication, of a receptacle having communication with the measuring chamber, means for opening and closing the valve controlled by fluid in the receptacle and means for creating a partial vacuum in the receptacle to draw fluid into the measuring chamber and thence into the receptacle.

1,541,078. PUNCH. JONATHAN SUDWEEKS, Ephraim City, Utah. Filed Feb. 27, 1923. Serial No. 621,614. 2 Claims. (Cl. 81—3.)



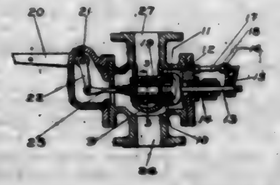
1. A tool of the character described consisting of a head section and a plurality of partially tubular sections, the head section having a conical screw-threaded projecting portion, a shoulder about said threaded portion and a tool which extends from said threaded portion, a member for attachment to the head section having a recess of a size to receive the aforesaid mentioned tool, said recess being internally screw-threaded for engagement with the conical threads of the head section, a cylindrical externally threaded portion of less diameter than the cylindrical portion which engages with the shoulder of the head, said member being tapered from said screw-threaded portion to its end, and other similarly constructed detachable members of different lengths which may be placed in engagement with the section constructed for attachment to the head section.

1,541,079. RIVET HOLDER. JOSEF TISSLER, Bally, Pa. Filed Nov. 24, 1924. Serial No. 751,917. 2 Claims. (Cl. 78—535.)



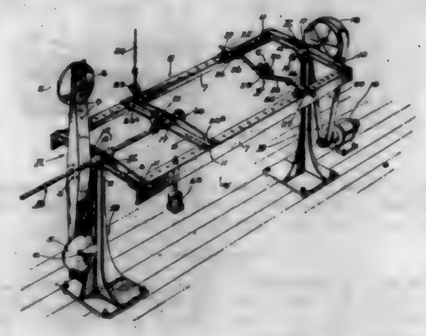
1. A rivet holder comprising a bracket having an abutment member, an anvil member mounted for movement in the bracket and provided with a cone shaped mound portion located below the abutment member, said anvil member being provided at opposite sides of the said mound portion with spaced lugs, rivet holding bars having their inner end portions engaging the mound portion of the anvil and having their intermediate portions disposed between the lugs, pins carried by the bars, the bracket member having diverging slots which receive the pins, and means for moving the anvil member vertically and swinging the rivet holding bars to cause the inner ends thereof to uncover the intermediate portion of the mound of the anvil.

1,541,080. LOCOMOTIVE CONSTRUCTION. LOUIS C. TOLLIVER, Trinity, Tex. Filed Sept. 8, 1922. Serial No. 587,000. 1 Claim. (Cl. 105—84.)



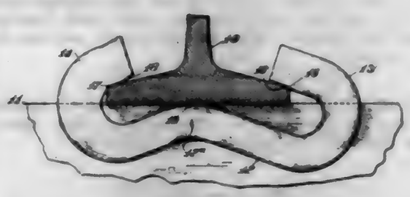
The combination, in an engine having superposed cylinders and a piston rod for each cylinder and a driving wheel, a wrist pin positioned eccentrically of the driving wheel, a connecting rod pivoted at one end upon the wrist pin and pivotally connected at its other end with one of the piston rods, a crank arm fixed upon the wrist pin, a wrist pin carried by the crank arm and disposed at the same distance from the center of the driving wheel as the first mentioned wrist pin and a connecting rod pivotally mounted at one end upon the second mentioned wrist pin and pivotally connected at its other end with the other piston rod.

1,541,081. POSITIVE-VALVE-CONTROL MECHANISM. PIERRE HENRI EDMOND VAREILLE, Levallois-Perret, France. Filed May 26, 1924. Serial No. 716,047. 3 Claims. (Cl. 123—90.)



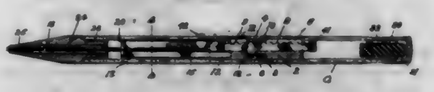
2. In a positive valve control mechanism a rod secured to the engine, a support adapted to slide on said rod and carrying the pivot of the rocker arm, a nut screwed on said rod and a spring urging said support and pivot towards said nut, the latter being so adjusted as to leave a slight play between the pivot and the nut, for the closing position of the valve whereby the valve is yieldingly pressed upon its seat.

1,541,082. VALVE. VINCENT V. VERNSCHOTEN, Erie, Pa., assignor to Northern Equipment Co., Erie, Pa., a Corporation of Pennsylvania. Filed Sept. 15, 1921. Serial No. 500,753. 2 Claims. Cl. 137—101.)



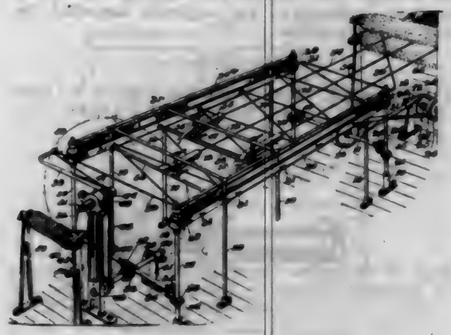
1. A valve casing having a partition therein with two opposing openings in said partition, a cylindrical member having its ends threaded respectively into said openings, a cylindrical plunger slidably mounted into said member, means for reciprocating said plunger, and means for rotating said member.

1,541,083. DYNAMOMETER. CLINTON L. WALKER, Piedmont, Calif. Filed Apr. 14, 1924. Serial No. 706,225. 6 Claims. Cl. 265—24.)



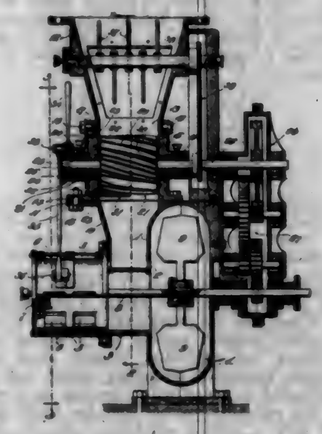
1. A device of the character described, comprising a pivotally supported frame for the reception of a motor, a shaft extending through the pivotal support, means permitting the motor to be connected to said shaft to rotate the same, a resistance member rotatable with the shaft and attached thereto, and means for resisting tilting movement of the frame.

1,541,084. RAIL ANCHOR. HAROLD G. WARE, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 2, 1923. Serial No. 655,240. Renewed Dec. 8, 1924. 36 Claims. (Cl. 238—330.)



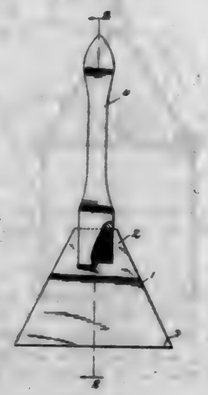
31. A rail anchor comprising a rail base embracing yoke under strain when applied to the rail, formed near its extremities with notches to engage the upper corners of the rail base, and to bear at an intermediate point against the under side of the rail base.

1,541,085. PENCIL. CHARLES E. WEHN, Alameda, Calif., assignor to Listo Pencil Corporation, Alameda, Calif., a Corporation of California. Filed July 31, 1923. Serial No. 654,847. 7 Claims. (Cl. 120—18.)



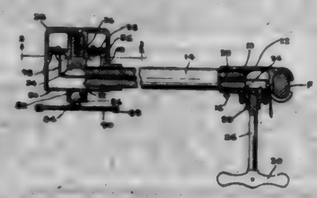
1. In a pencil of the character described, a rod like elongated coupling member having a longitudinally extending groove formed therein, a non-rotatable threaded feed member slidable in the groove, a nut surrounding the coupling member and rotatable thereon and engaging the threads of the feed member to impart longitudinal movement thereto, and a pair of stop members one on each end of the threaded feed member to limit longitudinal movement of the feed member and to prevent disengagement of the threaded feed member and the nut.

1,541,086. LOOM. WILLIAM WILLIS WHEELER, Knoxville, Tenn. Filed Apr. 24, 1924. Serial No. 708,777. 18 Claims. (Cl. 139—11.)



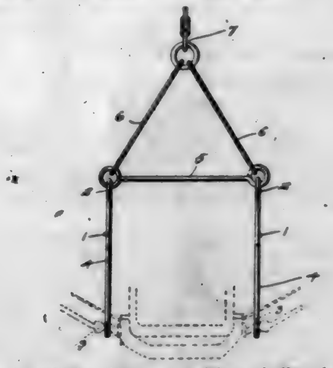
1. A method of weaving which comprises disposing a plurality of sections of a weft thread in the same plane with one section at an angle to the adjacent section, carrying said sections along a definite path and simultaneously disposing warp threads alternately above and below the weft threads, and at a definite point in the travel of the weft thread brushing said sections of the weft thread in parallel relation and in close association with each other and in locked relation with the warp threads.

1,541,087. POWDERED-FUEL AIR MIXER AND FEEDER. WILLIAM H. WHITAKER, Shelbyville, Ill. Filed Feb. 11, 1924. Serial No. 692,065. 6 Claims. (Cl. 110—104.)



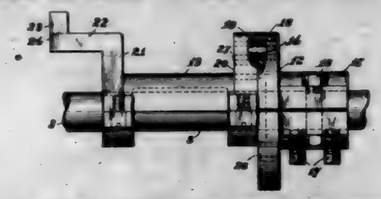
3. Powdered fuel and air mixing and feeding means comprising an air passage, a fuel inlet opening into said air passage, a peripherally-pocketed feed roll whose pockets discharge fuel into said passage through said fuel inlet, a gate movable across a portion of said feed roll to prevent fuel feeding by said portion of the roll, said gate having an operating stub extended outwardly through the wall of said fuel inlet, a controlling valve for the aforesaid air passage, and means connecting said stub and valve for adjustment in unison.

1,541,088. SINK BRUSH. WILLIAM A. WHITEHACK, New York, N. Y. Filed May 20, 1922. Serial No. 562,293. 2 Claims. (Cl. 15—245.)



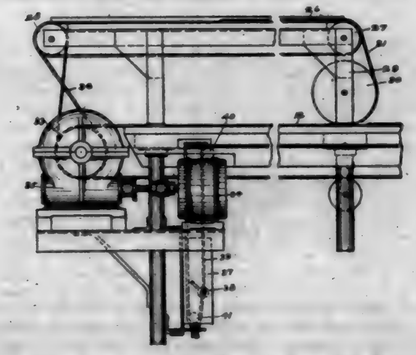
1. A sink brush or the like comprising; a handle, an elastic member secured to said handle and having a free working edge transversely to and beyond said handle, said member being of diminishing thickness from said handle to said edge to increase flexibility of the edge portion and to render said member devoid of a definite bending line to thereby insure the presentation of said edge to a surface against which it is pressed.

1,541,089. SIGNAL FOR MOTOR VEHICLES. EARL T. WINGET, HARVEY E. BRADLEY, and MORLEY C. WALTER, Minneapolis, Minn., assignors to H. E. Bradley Co., Minneapolis, Minn. Filed Dec. 22, 1921. Serial No. 524,100. 1 Claim. (Cl. 116—51.)



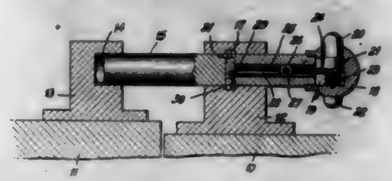
A signal for motor vehicles comprising a support adapted to be secured to a windshield post of the vehicle, an outwardly extending sleeve secured to said support, a cup-shaped member secured to the outer end of said sleeve, a bearing formed in said cup-shaped member, a horizontal shaft rotatably mounted in said bearing, a second cup-shaped member secured to the outer end of said shaft, the periphery of said second cup-shaped member rotatably engaging the periphery of said first cup-shaped member, an indicating arm carried by said second cup-shaped member, a miter gear on the inner end of said shaft, a horizontal shaft rotatably mounted in said sleeve, a miter gear on the outer end of said last-mentioned shaft meshing with said first-mentioned miter gear, a miter gear on the inner end of said last-mentioned shaft, an operating shaft rotatably mounted in said support, a miter gear on the inner end of said operating shaft in mesh with said last-mentioned miter gear, and a handle on the outer end of said operating shaft.

1,541,090. VEHICLE LIFTER. RUDOLPH M. YUNKERS, St. Francisville, La. Filed Mar. 15, 1924. Serial No. 699,511. 2 Claims. (Cl. 294—32.)



1. A vehicle lifter comprising similar bars having engaging hooks at their lower ends and having the lower portion of each offset so as to clear the headlights of a vehicle.

1,541,091. SAFETY DEVICE FOR LAP RACKS. ROBERT ALDRICH, Greenwood, S. C. Filed Sept. 8, 1923. Serial No. 661,726. 10 Claims. (Cl. 19—162.)



1. In friction release mechanism for lap racks, the combination, with a gear adapted to mesh with a rack and a frictional resistance for the gear, of a frangible pin for transmitting motion from the gear to the resistance, and means for carrying said pin at variable distances from the axis of rotation of the gear.

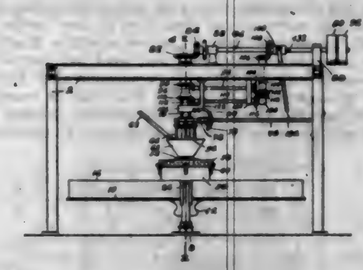
1,541,092. APPARATUS FOR ASSEMBLING TREAD UNITS. CORNELIUS B. AMES, Cudahy, and GEORGE F. WIELE, Milwaukee, Wis., assignors, by mesne assignments, to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Aug. 19, 1921. Serial No. 493,751. 2 Claims. (Cl. 154—9.)

2. In a tread unit assembling device a traveling belt for receiving a tread element, guides for positioning the element thereon, a stationary support positioned above and parallel to said belt for positioning a second tread element and from which the second element may be moved into assembled relation with the first element, a second belt, parallel to said first belt, adapted to position a third tread element and move the latter into assembled position with the previously assembled elements on said first belt.

1,541,093. LOCK. JOHN AMICO, New York, N. Y. Filed Oct. 11, 1923. Serial No. 667,798. 2 Claims. (Cl. 292—150.)

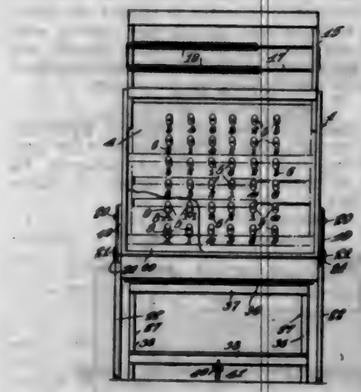
1. A lock bolt comprising a cylindrical bar, a body in which said bar is slidably mounted, said body containing a cylindrical bore and an annular recess midway therein; said bar having an axial bore in one end and a transverse opening intersecting the bore, a chambered knob on said bar covering the bore, a stem slidable transversely in said knob, a disc pivoted to rotate in the bore of said bar, said disc having an arm operable by said stem, a pin movable in the transverse opening in the bar, said pin being engageable in the recess in said body, a connection between said pin and said disc, and resilient means in said knob opposing the movement of said stem.

1,541,094. LENS HOLDER. JOHN A. AMOS, St. Louis, Mo., assignor to Oliver Electric and Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed June 9, 1924. Serial No. 718,764. 1 Claim. (Cl. 240—41.)



The combination with a lens, of a holder therefor comprising a supporting member having a peripheral recess forming a seat for the peripheral portion of the lens, and a curved resilient member for retaining the lens in the recess, the supporting member being provided with integral rearwardly extending spaced lugs, two of said lugs being provided with openings to receive the ends of the retaining member and the third lug being provided with a portion extending over the retaining member intermediate its ends.

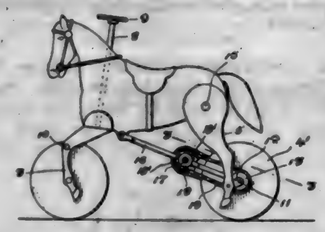
1,541,095. ORE CONCENTRATOR. JAMES B. ARTHUR, deceased, by Mary B. Arthur, executrix, Joplin, Mo. Original application filed Feb. 21, 1920, Serial No. 360,434. Divided and this application filed May 15, 1922. Serial No. 560,883. 1 Claim. (Cl. 83—87.)



In an apparatus of the character described a rotary table having a flat bottom portion and rim fixed thereto, a centrally disposed drum fixed to said table, a conical

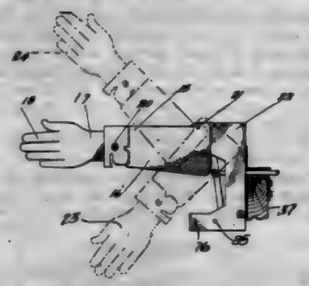
distributor spaced above and overlapping said drum, a guard spaced from and encircling said distributor.

means supporting said guard and secured to the drum, and means for continuously driving the table and the distributor in opposite directions.



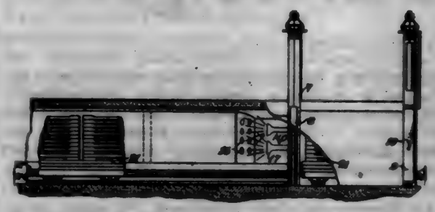
1,541,096. GAME BOARD. CHARLES W. BABCOCK, Addison, N. Y., assignor of one-half to Harry Babcock, Rome, N. Y. Filed July 3, 1923. Serial No. 649,316. 5 Claims. (Cl. 273—104.)

5. In a game device, a box-like body including a table spaced from the rear edge of the body, means on the table for receiving tossed articles, legs, means for connecting the legs to the body, a prop comprising upper and lower members, means for hingedly connecting said members of the prop whereby they may be folded together, means for pivotally connecting the upper member of the prop to the body in such position that the folded prop may be swung within the body and toward the table, and means on one member of the slot for holding the tossed articles when the same are not in use, the space between the table and the rear edge of the body being positioned to house the folded prop and the tossed articles, when the tossed articles are mounted on one member of the prop, as aforesaid.



1,541,097. CHILD'S VEHICLE. EDWARD J. BAISDEN, New York, N. Y., assignor, by mesne assignments, of one-half to George E. Grey and one-half to Gerrit J. Lloyd, both of New York, N. Y. Filed Dec. 2, 1922. Serial No. 604,555. 2 Claims. (Cl. 208—42.)

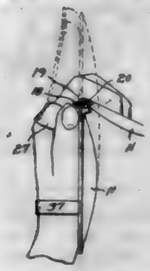
1. A device of the class described comprising a body made in the shape of an animal having four legs, a front wheel pivoted between the front legs, means for pivotally connecting the rear legs with the body, a crank shaft having its cranked ends pivoted to the rear legs, a wheel rotatably mounted on the crank shaft, a



link connecting the crank shaft with an under part of the body and gearing connecting the crank shaft with the wheel.

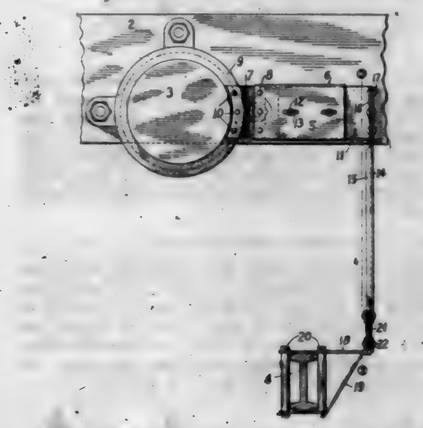
1,541,098. ARM VEHICLE SIGNAL. FREDERICK M. BALDWIN, Los Angeles, Calif. Filed Dec. 11, 1923. Serial No. 679,934. 13 Claims. (Cl. 116—52.)

1. In a traffic signal of the class described, the combination of a supporting member; an arm member including a counterfeit forearm pivotally depending from said supporting member, and a hand pivoted to the lower and outer swinging end of said counterfeit forearm; and means comprising two levers of sheet metal geared together for swinging said arm member outwardly into signalling position.



1,541,099. PROCESS FOR THE MANUFACTURE OF ACTIVATED MATERIAL. OSCAR L. BARNEBEY and MERRITT B. CHENEY, Cleveland, Ohio; Josephine B. Cheney administratrix of said Merritt B. Cheney, deceased; said Josephine B. Cheney, as administratrix, assignor to said Barnebey. Filed Mar. 19, 1919. Serial No. 283,639. 12 Claims. (Cl. 252—5.)

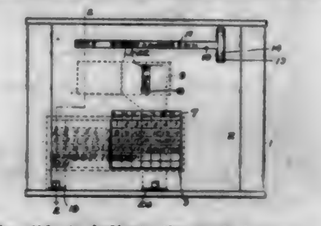
1. In an activating process, heating a thin layer of granular carbonaceous material at carbon activation temperatures in the presence of similarly-heated, oxygenated, activating gases adapted to react endothermically with carbonaceous material, maintaining the temperature substantially uniform during the activation, introducing into the activating chamber cooler oxygenated gases containing practically no free oxygen, cooling the



activated carbonaceous material therewith, and then heating said cooling gases to activating temperature and activating carbonaceous material therewith, the granules of said layer being substantially without intermotion during said process.

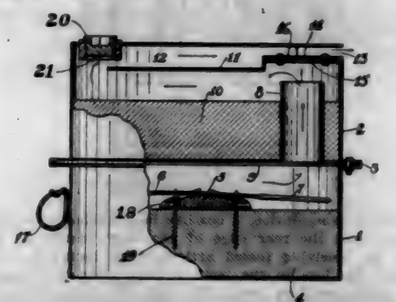
1,541,100. SWIMMING PADDLE. CHARLES S. BARRETT, Venice, Calif. Filed July 24, 1924. Serial No. 727,896. 9 Claims. (Cl. 9—21.)

9. A swimming paddle comprising: a web having a peripheral seam; a frame secured by said seam, said frame comprising a finger portion and a palm portion hinged together; a spring for retaining said frame in flat disposal; cross braces secured to said frame; a palm band laterally adjustable on said cross braces; and a wrist band secured to said web.



1,541,101. SHOCK ABSORBER. CHARLES C. BLACKMORE, Dayton, Ohio. Filed Jan. 16, 1922. Serial No. 529,563. 12 Claims. (Cl. 267—9.)

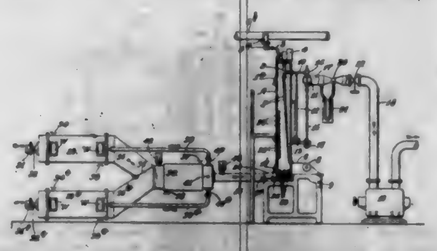
1. The combination with a shock absorber comprising a movable member, of a substantially horizontal arm connected with said movable member and having a portion capable of bending about a vertical axis, a substantially vertical arm connected with said horizontal arm and capable of bending about a horizontal axis, and means for connecting said vertical arm to a structure having movement relatively to said shock absorber.



1,541,102. CALENDAR. HERBERT SCOTT BOWMAN, St. Joe, Ind. Filed Apr. 10, 1925. Serial No. 22,233. 2 Claims. (Cl. 40—109.)

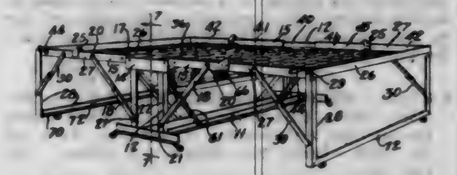
2. A calendar comprising a case having a plurality of openings in one of its sides, a pair of rollers revolubly mounted rearwardly of one of the openings, a chart secured at its opposite ends to the rollers respectively, the chart having thereon a column of numerals designating a plurality of years, and also a plurality of columns of indicia designating the names of the days of a week, one column for each month of a year, the indicia in the horizontal row with any year designating the week day names of the first days of the months of that year, means to rotate the rollers in either direction to cause a selected row of year and week day indicia to be exposed through said opening, a movable slide having thereon the names of the months of a year in consecutive order adapted to be selectively exposed through another of said openings, a pointer responsive to the move-

ment of the slide to indicate the week day name on the chart of the selected month and year, the names of the week days being formed on the said slide in order and above another of said openings, and a movable slide having thereon a table of numerals arranged in columns and horizontal rows and representing the days of the months, the latter slide being rearwardly of the latter opening and adapted to be moved to cause a full month of numerals to be exposed through said opening when the numeral one thereof is positioned in register with the name of the week day above said opening corresponding to the week day indicated by the pointer.



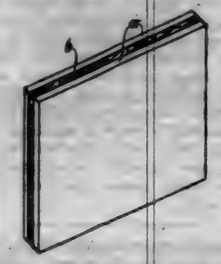
1,541,103. METHOD AND APPARATUS FOR DISPERSING TOXIC AND OTHER IRRITANT SUBSTANCES. DONALD B. BRADNER, Philadelphia, Pa. Filed May 15, 1924. Serial No. 713,590. 10 Claims. (Cl. 102—29.)

5. In a portable apparatus for dispersing an irritant without substantial chemical decomposition thereof, a compartment for holding fuel, another compartment for holding the irritant, means for delivering the combustion gases from the first compartment to the surface of the irritant within the second compartment and an exit passage for gases issuing from the said second compartment.



1,541,104. APPARATUS FOR THE PRODUCTION OF ARTIFICIAL SILK AND THE LIKE. JOHN FREDERICK BRIGGS and WILFRED YORKE, Spondon, near Derby, England, assignors to American Cellulose and Chemical Manufacturing Company, Limited, New York, N. Y., a Corporation of Delaware. Filed May 14, 1923. Serial No. 638,994. 13 Claims. (Cl. 18—8.)

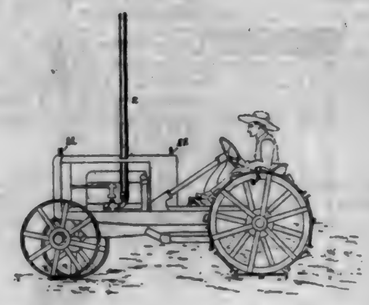
1. In dry spinning apparatus of the cellular type for the manufacture of artificial silk and the like, a dry-spinning metier comprising numerous spinning cells, a collecting conduit for carrying off vapour-laden air from the cells of the metier to the exhaust, an individual outlet connection between each of said cells and said collecting conduit, an indicating device in connection with



each of said outlet connections for individually indicating the volume of vapour-laden air passing therein from the corresponding cell, and a controlling device to each outlet connection for regulating and cutting off the flow from the corresponding cell.

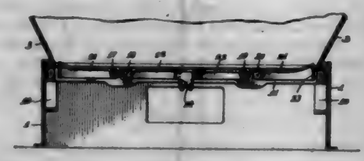
1,541,105. SEAT BED. WILLIAM J. BROOME, Los Angeles, Calif. Filed Aug. 19, 1922. Serial No. 583,005. 7 Claims. (Cl. 5—111.)

1. In a folding bed, the combination of: a carriage providing a central spring section; an intermediate spring section pivoted upon each side of said central spring section, said intermediate sections being foldable against the sides of said carriage; an outer spring section pivoted to each of said intermediate spring sections at the outer extremity thereof, said outer spring sections being adapted to be folded in against said intermediate spring sections; means for supporting said intermediate sections in laterally extended position; and means secured to said outer sections for supporting the outer extremities of said outer sections.



1,541,106. ASBESTOS SLATE MATERIAL AND PROCESS FOR MANUFACTURING IT. FRANZ BRÖSSLER, Vienna, Austria. Filed Sept. 6, 1923. Serial No. 661,320. 2 Claims. (Cl. 20—91.)

1. The manufacture of a composite material, which consists in forming a pile of plates of asbestos cement material, alternating with intermediate plates of ply-

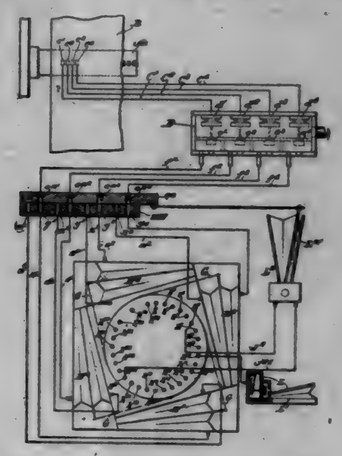


wood with the interposition of a waterproof adhesive in such a manner that the outside plates of the pile consist of asbestos cement material, and then subjecting the pile of plates to hydraulic pressure for causing the plates to unite together to constitute material of the desired thickness.

1,541,107. DUST EXCLUDER FOR INTERNAL-COMBUSTION ENGINES. WILLIAM H. BROWN, Cleveland, Ohio. Filed Dec. 5, 1918. Serial No. 265,380. 7 Claims. (Cl. 180—54.)

6. In an internal combustion engine vehicle, the combination with the engine and its carburetor of an air supply pipe having one end detachably connected to the air intake of the carbureter and its other end extending to a point in the atmosphere above the zone of dust raised by the wheel.

1,541,108. FURNACE GRATE. ALBERT A. BRUDER, Holly, Mich. Filed May 19, 1923. Serial No. 640,077. 9 Claims. (Cl. 126—176.)



1. The combination with a fire box and ash pit, of guideways in the ash pit, a grate frame slidable on said guideways and adapted to be fixed relative to the fire box, and rockable units carried by said grate frame and operatable at the front of said ash pit to shake down a fire in the fire box on said grate units.

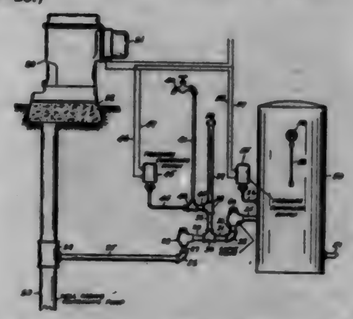
1,541,109. FUNCTION-MULTIPLYING DEVICE FOR AUTOMATIC MECHANISMS. CHARLES S. BURTON, Oak Park, Ill. Filed Nov. 11, 1920. Serial No. 423,318. 8 Claims. (Cl. 84—50.)

1. A device for the purpose indicated comprising a plurality of combining members mounted for movement in parallelism with each other through a definite step distance; means for positioning them all normally at a selected starting or rest position, and means for giving them individually in selected groups a definite step movement from said normal rest position; each member having a series of ports arranged in succession along the path of the step movement; each member having a blank or portless area at a point along said path at which other members have ports positioned for registration, and having a port in said path at step distance from said

portless area; the several members differing as to the points in the path at which said portless areas occur; whereby a movement of different combining members a

step distance from the normal rest position produces through-and-through registration of ports in all the members at different points in the path of movement.

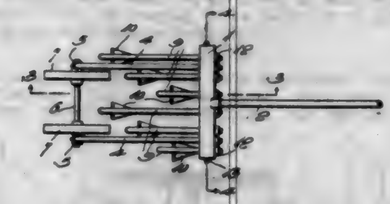
1,541,110. CUE-TIP HOLDER. JOHN H. BUSCHER, Washington, D. C. Filed Aug. 23, 1923. Serial No. 658,860. 1 Claim. (Cl. 273—70.)



A cue tip holder comprising a ferrule having at one end a recess leading in from the side thereof, the inner wall of the recess lying in a plane coincident with the axis of the furrow, the said ferrule being provided at its end with a semi-circular jaw having an inwardly disposed arcuate flange and a pointed lug provided upon the flange and located midway between the ends thereof and disposed with its point toward the center of the ferrule, a clamp section seated in the recess and completely filling the same, a screw passing transversely through the clamp section and entering the body of the ferrule, said clamp section being provided at its end with a semi-circular jaw having an inwardly disposed arcuate flange and a pointed lug provided upon the last mentioned flange at a point midway between the ends thereof and having its pointed end disposed toward the axis of the ferrule, the said pointed lugs being aligned diametrically of the ferrule.

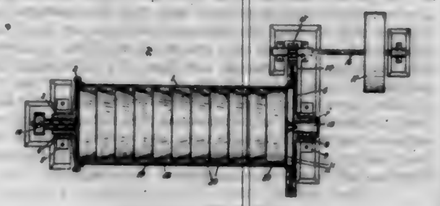
1,541,111. PUMPING APPARATUS. GEORGE A. BUVINGER and CLARENCE WARNER, Dayton, Ohio, assignors to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 19, 1922. Serial No. 626,173. 53 Claims. (Cl. 103—179.)

1. In a pumping apparatus, the combination with a well casing and a pump; of a container for the pump removably carried by the inside wall of the casing, and having a discharge through the well casing below the top of the well casing.



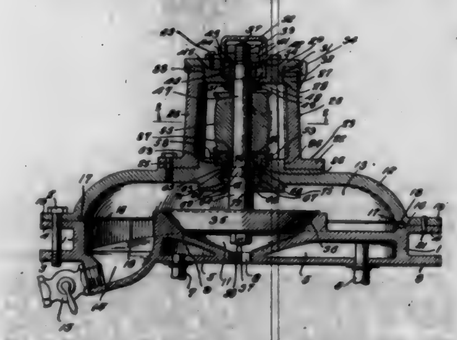
1,541,112. PUMPING APPARATUS. GEORGE A. BUVINGER, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 30, 1923. Serial No. 635,486. 7 Claims. (Cl. 103—25.)

1. In a water system, the combination with a pump; of power means for driving the pump; a storage tank connected with the pump; a fresh water pipe connected to the pump between the tank and pump; means for causing the pump driving mechanism to operate when the pressure in the storage tank falls below a certain amount and to cease operation after a relatively large volume of water has been pumped into the storage tank; and other means for causing the pump driving mechanism to operate substantially as soon as there is demand for water from said fresh water pipe and for causing said mechanism to cease operation substantially as soon as the demand for water ceases regardless of the pressure in the storage tank.



1,541,113. HAND CULTIVATOR. ALMON C. BYRUM, Stockton, Ill. Filed Mar. 22, 1923. Serial No. 626,968. 1 Claim. (Cl. 97—59.)

A hand-operated implement comprising a transverse horizontal bar, a pair of spaced beams extending rigidly rearward from said bar and provided at their rear ends with ground wheels, a plurality of additional beams extending rigidly rearward from said bar on opposite

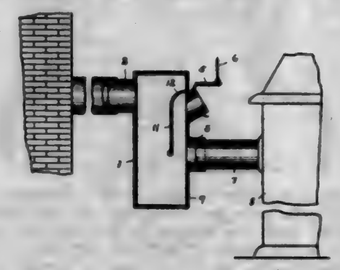


sides of said spaced beams and carrying earth working blades, said blades being arranged in advance of said wheels and a rigid tongue extending forwardly from said bar for pulling the implement.

1,541,114. BALL OR PEBBLE MILL. CHARLES L. CARMAN, Riverside, Calif. Filed Feb. 23, 1924. Serial No. 694,584. 5 Claims. (Cl. 83—9.)

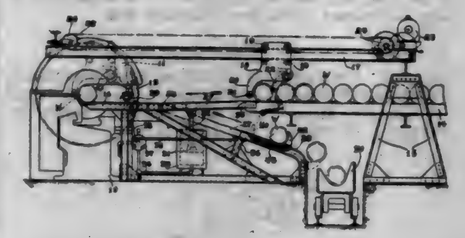
1. A tube mill comprising a tubular body having its inner wall formed with a plurality of abrupt shoulders with intervening frusto-conical portions flaring toward the feed end of the mill, said tubular mill body being provided with means for feeding material to one end thereof, and means for discharging material from the other end thereof.

1,541,115. EXTRACTING MATERIAL. FREDERICK JOHN EDWIN CHINA, Esher, England. Filed May 19, 1923. Serial No. 640,284. 23 Claims. (Cl. 167—4.)



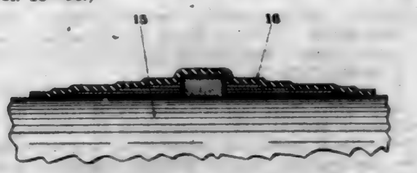
1. A method of obtaining an extract from a solid substance comprising, passing the solid substance together with a suitable solvent of the material to be extracted in a thin film between surfaces relatively movable one past the other at high velocity, whereby the solvent is washed through the fibers of the solid and an extract of material obtained, the velocity of movement of the surfaces past each other and the thickness of the film being such that the solid is not wholly disintegrated.

1,541,116. MANUFACTURE OF MAGNESIA FROM DOLOMITE. CAMILLE CLERC and ARMAND NIHOUL, Paris, France. Filed Dec. 14, 1921. Serial No. 522,366. 2 Claims. (Cl. 23—201.)



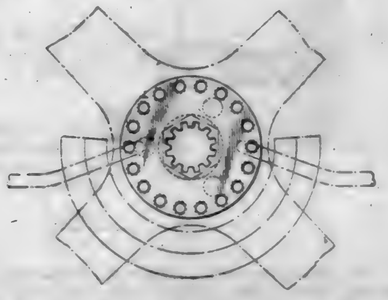
1. The process, which comprises calcining dolomite at a temperature above that necessary for decarbonation and sufficiently high to make hydration of the magnesia difficult without preventing hydration of the lime, swelling the lime-magnesia mixture without completely hydrating the lime or dissolving the same separating the powder thus formed from the non-hydratable portion, and mixing the powder obtained with an excess of magnesium chloride to rapidly precipitate the partially hydrated magnesia in a readily filterable granular form.

1,541,117. SMOKE FILTER. JOSEPH COCHRAN, Duluth, Minn. Filed Oct. 27, 1924. Serial No. 745,948. 3 Claims. (Cl. 126—280.)



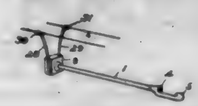
1. The combination with a furnace flue of the character described, of an upright hollow receptacle into which the flue discharges adjacent the lower end thereof, a discharge orifice adjacent the upper end of the receptacle, and controllable means for admitting cold air into the receptacle.

1,541,118. LOADING AND UNLOADING MEANS FOR AXLE LATHES. LYNDON C. COLE, Hamilton, Ohio. Filed June 11, 1924. Serial No. 719,365. 11 Claims. (Cl. 214—1.)



1. Blank transferring means for machine tools comprising in combination, a loading platform, guiding means for transferring the work blanks from said platform to said machine, guiding and supporting means for the finished blanks, and means to move a portion of said guiding means to alignment with said platform or with said supporting means for the finished blanks.

1,541,119. FORMING HOLES IN RUBBER ARTICLES. WILLIAM DE RUSHA, Milwaukee, Wis., assignor, by mesne assignments, to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Oct. 27, 1921. Serial No. 510,940. 4 Claims. (Cl. 18—56.)

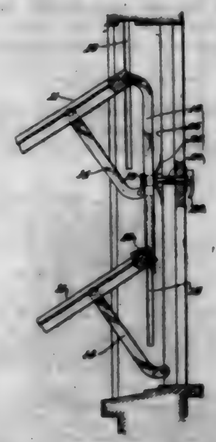


1. The method of forming a hole in a rubber article which comprises cutting a hole at least part way through the reinforcing pad, inserting in said hole a plug which protrudes from the hole, pressing the rubber of the article against said plug in such manner that said rubber tends to move from over said plug, and vulcanizing.

1,541,120. IRREVERSIBLE STEERING DEVICE FOR AUTOMOBILES. JOSEPH G. DES ROBERTS, Portsmouth, N. H. Filed Nov 25, 1924. Serial No. 752,270. 1 Claim. (Cl. 74—33.)

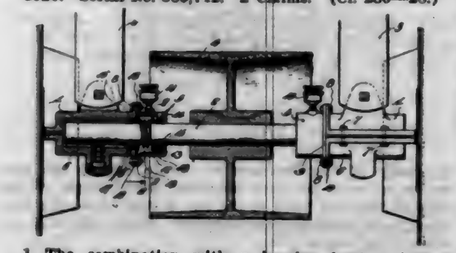
In combination with a steering mechanism of the planetary gear type, having a sun gear and three planet gears, a stabilizing device comprising a disk having a central aperture provided with teeth to engage the teeth of the sun gear, said disk having a plurality of equally spaced countersunk recesses equidistant from the center of the disk; a second disk provided with three apertures adapted to be fitted on the shafts of the three planet gears, said second disk having a plurality of equally spaced rounded projections equidistant from the center of the disk, said rounded projections being adapted to engage the recesses of the first mentioned disk.

1,541,121. INSULATING MEDIUM FOR TRANSMISSION OF INTELLIGIBLE SOUNDS. FRANK C. DOBLE, Winchester, Mass. Filed Aug. 2, 1920. Serial No. 400,741. 20 Claims. (Cl. 179—20.)



1. The combination with an electrical apparatus adapted to effect conversion between electrical and audible effects, of a combined insulating sound conducting medium and barrier including a channel for conveyance of sound waves, constructed and arranged to maintain safe separation between said apparatus and all parts of the person of an operator using it.

1,541,122. MEGAPHONE. CHARLES H. DODGE and ROBERT H. E. SCHLECHT, St. Louis, Mo. Filed Aug. 21, 1922. Serial No. 583,257. 1 Claim. (Cl. 181—27.)



A megaphone comprising a tapered rear section and a tapered forward section, the former being provided with a mouthpiece, a plurality of intermediate tapered sections, the terminal portion of the forward end of the rear section and of each intermediate section being bent inwardly and out of alinement with the exterior surface of said section, the terminal portion of the rear end of the forward section and of each of said intermediate sections being bent outwardly from the intermediate surface of said section, the outward and inward bent portions being parallel to each other, whereby the oppositely bent portions of adjacent sections will fit snugly one within the other and be held in close frictional contact thereby preventing easy collapse of said megaphone without the use of any extraneous fastening means, and means extending across the free end of the forward section for preventing the remaining sections from passing therethrough when the megaphone is collapsed.

1,541,123. SWINGING WINDOWS. JOHN J. DONOVAN, Oakland, Calif. Filed Apr. 26, 1924. Serial No. 709,807. 6 Claims. (Cl. 20—42.)

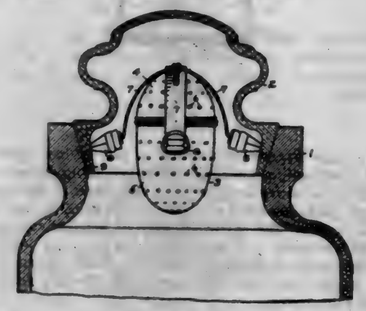
1. In combination with a window frame, a plurality of superposed sashes therein, a pair of guideways in the frame for each sash, trunnions slidable in said guideways, said trunnions being connected to the sides of the sashes and constituting pivots for the same, links between the sashes and the frame, said links being pivotally connected at one end to the sashes and at the other end to the frame, and a connecting bar connecting the trunnions of the sashes whereby to permit said sashes to be simultaneously swung inwardly and upwardly or outwardly and downwardly with the trunnions as pivots, said connecting bar being pivotally connected to one of the trunnions of the upper sash and detachably connected to the trunnion of the lower sash, and operative means for swinging said connecting bar about its pivot to disconnect it from the trunnion of the lower sash to permit the sashes to be operated independently.

1,541,124. STUFFING BOX FOR BEARINGS. ORSON WINFIELD DUNHAM, Treece, Kans. Filed June 17, 1920. Serial No. 389,742. 2 Claims. (Cl. 286—28.)

1. The combination with a bearing having a shaft therein an annular packing receiving pocket and an annular flange on its end, said flange having bolt holes; of a cup-shaped stuffing box, having its outer closed end counter-bored to provide a shaft passage and a packing pocket, an annular flange on the inner end of said box to fit against the flanged end of said bearing, said stuffing box flange having elongated bolt holes to coincide with the bolt holes in said bearing flange, fastening bolts engaged with the bolt holes in said flanges whereby said box is secured in place after proper adjustment on the shaft, packing in said pockets and resilient means positioned about the shaft between the packings and adapted to expand to compress the packings in said pockets.

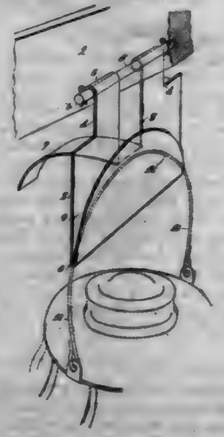
1,541,125. AUTOMOBILE TIRE VALVE. JAMES H. DUNN, Beckley, W. Va. Filed Aug. 30, 1924. Serial No. 735,223. 1 Claim. (Cl. 152—115.)

In a tire valve structure, a body including a longitudinally extending bore extending from end to end of the body, an enlargement formed laterally of the inner end of the body, an angular shaped bore extending from the inner end of the body through the enlargement, a tire valve in the outer end of the first mentioned bore, a tire valve in the outer end of the second mentioned bore, and a perforated nut threaded in the outer end of the second mentioned bore for releasing the valve therein.



1,541,126. GOLF CLUB. WILLIAM DUNN, Redwood City, Calif. Filed Mar. 24, 1923. Serial No. 627,296. 2 Claims. (Cl. 273—77.)

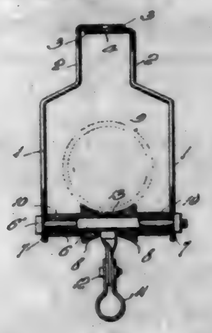
1. In a golf club head comprising a single solid metallic body, a longitudinally convex sole provided with a groove of less width than the sole and extending longitudinally from the toe to the heel of said head and bringing into relief ground-contacting strips adjacent the front and



rear faces, a longitudinally convex rear face formed with a longitudinally extending groove, and a neck integral with said head to receive a club shaft.

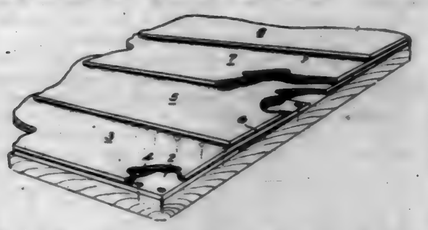
1,541,127. AIR DRIER FOR CANDY JARS. OSCAR B. ELMER, New Orleans, La. Filed May 14, 1923. Serial No. 638,827. 1 Claim. (Cl. 215—48.)

The combination with a hollow cover of a two part perforated container, the perforated parts being threaded together and adapted to receive and fully enclose a powdered absorbing material, a plurality of resilient members secured to the top of one of said parts and flaring downwardly and outwardly therefrom, and an elastic member on the free end of each said resilient member adapted to engage the inner wall of the lower portion of the cover and space the container therefrom.



1,541,128. LAMP HANGER. COMMIE L. ENNIS, Boyking, Va. Filed Nov. 20, 1924. Serial No. 751,090. 4 Claims. (Cl. 240—52.)

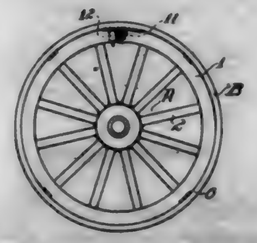
1. In combination with a railroad crossing guard arm and a signal lamp having a swinging ball a hanger pendently secured to the arm to swing freely beneath it, said



hanger including a member for holding the ball of the lamp, and also including a resilient member to engage the guard arm when said guard arm is in an elevated position substantially as shown and described.

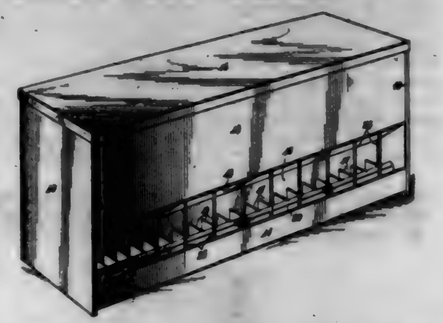
1,541,129. PIPE HANGER. JOHN W. FARLEY, Cleveland, Ohio. Filed Feb. 25, 1924. Serial No. 695,024. 2 Claims. (Cl. 248—31.)

1. A pipe hanger comprising a pair of vertically disposed side bars, a spacing sleeve extending between and abutting the lower ends of said side bars, a bolt passing through said side bars and sleeve and holding the former tightly against the latter, a pair of separate rollers rotatably mounted on said sleeve, a pair of additional spacing sleeves surrounding the first named sleeve between said rollers and said side bars, and another spacer between said rollers.



1,541,130. ROOF AND METHOD OF FORMING THE SAME. DOZIER FINLEY, Berkeley, Calif., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Dec. 19, 1922. Serial No. 607,791. 1 Claim. (Cl. 108—9.)

The method of forming a roof with strips of smooth surfaced prepared roofing, which comprises laying a strip of roofing, laying a second strip of roofing above the first strip and overlapping a predetermined portion of the first strip, securing the second strip to the roof sheathing adjacent its upper edge only, in then laying back the second strip to expose the overlapped surface of the first strip, covering said surface with a layer of a plastic adhesive compound having substantially the same temperature as the atmosphere, then turning the second strip back over that portion of the first strip to cover the said compound, and pressing the second strip into the layer of the compound to permanently unite the strips.



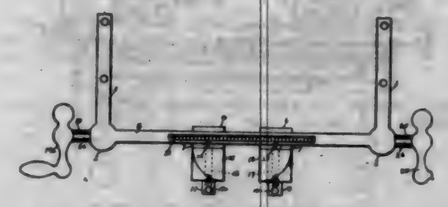
1,541,131. TIRE RIM FOR AUTOMOBILE WHEELS. LOUIS G. FINNICUM, St. Paul, Minn. Filed Nov. 15, 1924. Serial No. 750,106. 2 Claims. (Cl. 301—17.)

1. In a wheel having a demountable rim, a channeled felly, a plurality of notches in a wall of said felly, cam means connected interiorly of the felly adjacent said notches, gear means mounted interiorly of the felly and rotatable from without the felly, locking means associated with the gear means to lock the gear means against rotation, cam means integral with the demountable rim to register with the notches in the felly, and a rack mounted

interiorly of the demountable rim to engage the gear means to move the rim relatively with respect to the felly to draw the faces of the cam means on the rim into engagement with the cam means on the felly to lock the rim on the wheel.

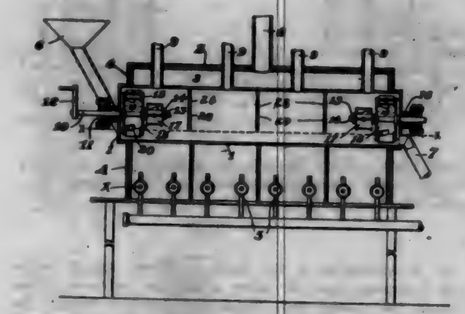
1,541,132. AUTOMATIC FEEDING DEVICE. ERNEST M. FISHER, Atlanta, Ga. Filed Nov. 29, 1924. Serial No. 752,890. 8 Claims. (Cl. 119—52.)

1. A feeder having a feed trough, a structure associated therewith open at the bottom and beneath which the feed is supplied and through which the feed must be obtained, the feeder having a passageway outwardly of said means through which dropped feed may return by gravity to the feed within the trough and below the said means.



1,541,133. HAT-HOLDING DEVICE. ANTONIO FORTI, New York, N. Y. Filed Dec. 5, 1921. Serial No. 520,145. 1 Claim. (Cl. 223—33.)

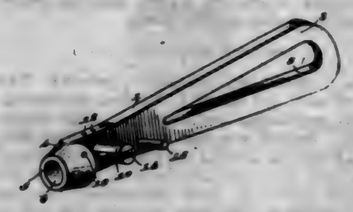
A hat holding device of the character described comprising a cross shaped bearing member, oppositely disposed threaded legs included in said bearing member, oppositely disposed hollow legs arranged at right angles to the threaded legs and being provided with oppositely



disposed longitudinally arranged slots, rods mounted for slidable movement within the hollow legs and projecting therefrom, arcuate shaped finger pieces extending from the opposite sides of the rods and passing through said slots to limit the outward movement of the rods, springs arranged in said hollow legs and tending to force the rods to their outward position, and a series of blocks secured to the rods and also associated with said threaded legs as and for the purpose specified.

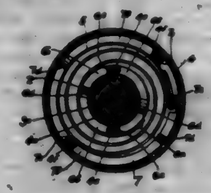
1,541,134. ATTACHMENT FOR MITER BOXES. FRANCIS GILPIN, Colorado Springs, Colo. Filed June 30, 1924. Serial No. 723,242. 9 Claims. (Cl. 143—89.)

1. In a device of the class described, the combination of a frame adapted to be attached to a miter box, said frame having an upper and a lower guide bar forming a guideway therebetween, and connections having a threaded hole at each end of said guideway; two slides, each having a front and a rear plate secured thereto forming flanges thereon, disposed in said guideway; threaded means engaging the threaded holes and the slides, the rear plates having a plurality of holes therein; vise jaws pivotally mounted on the slides and having means for engaging the holes thereof; for the purposes set forth.



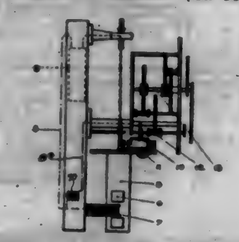
1,541,135. APPARATUS FOR TREATING BITUMINOUS SHALE AND THE LIKE. JOSEPH H. GINET, Denver, Colo. Filed Nov. 1, 1920. Serial No. 421,111. 4 Claims. (Cl. 202—14.)

1. In a retort for treating shale and the like, having a bottom, a plurality of shovels adapted to sweep successive zones of the retort, means carried by each of the shovels adapted to deflect material therefrom into the zone swept by the next adjacent shovel, comprising an adjustable side guide.



1,541,136. TOOL FOR APPLYING WIRE CLAMPS TO HOSE COUPLINGS. FRED W. GUNN, Boston, Mass. Filed Jan. 21, 1924. Serial No. 687,550. 3 Claims. (Cl. 81—9.3.)

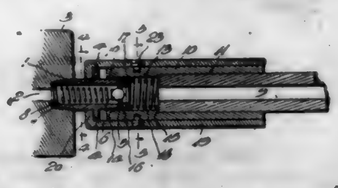
1. A tool of the character described comprising an elongated body having a head at one end thereof, said head having a bore extending longitudinally therethrough, a pair of spaced apart guide members extending transversely through said bore, and a rotatable tightening pin carried by said body, said tightening



pin having a slotted end portion extending at right angles to the direction of length of said bore and being located at the rear of said head.

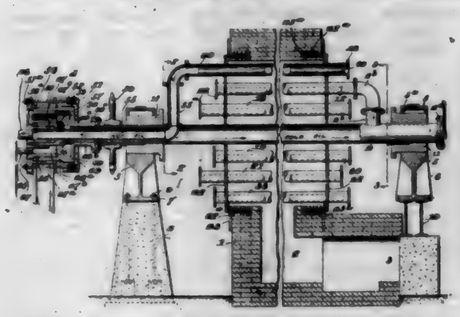
1,541,137. IMPULSE COUPLING FOR MAGNETOS. GEORGE S. HANFORD, Lakewood, Ohio, assignor to The Teagle Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 11, 1920. Serial No. 430,039. 6 Claims. (Cl. 123—149.)

1. In an impulse drive coupling for ignition generators, the combination of a rotary driven member, a rotary driving member coaxial with the driven member, a resilient driving and cushioning means between the driving and driven members comprising a spiral spring, a connector secured to the inner end of the spring and having a rotational lost-motion connection with the driving and driven members and a connector secured to the outer end of said spring and having a rotational lost-motion connection with the driving and driven members, and means for temporarily retarding the rotation of the driven member in relation to the rotation of the driving member.



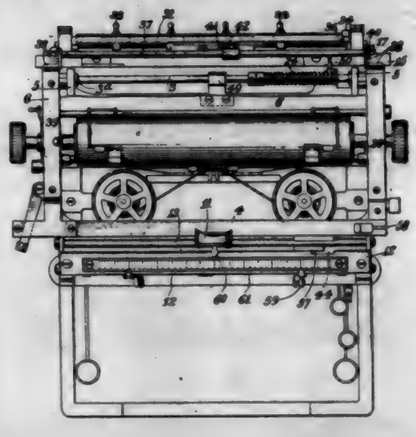
1,541,138. ELECTRIC CLOCK. AUGUST BENGTSSON HJERN, Copenhagen, Denmark. Filed Mar. 15, 1922. Serial No. 543,928. 3 Claims. (Cl. 58—30.)

1. In an electric clock, a torsion pendulum including a flexible member and a body suspended from the lower end thereof, a clockwork mechanism including a toothed wheel, a pivoted member carried by the pendulum body engageable by the teeth of said wheel for intermittently rotating the latter, means for limiting the swinging movement of said pivoted member in one direction, electro-magnetic means for periodically accelerating the



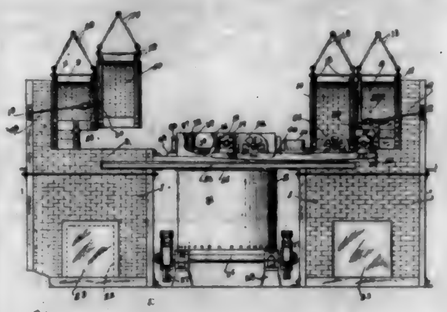
movement of said pendulum, said toothed wheel and pivoted member constituting a contact device for controlling said electro-magnetic means, and said pendulum being arranged to rotate in a given direction before and after contact of said contact device.

1,541,139. COUPLING. JOSEPH BENNETT HAYDEN, JOHN MORRIS, and HARRY C. GEORGE, Greensburg, Pa. Original application filed Sept. 14, 1923, Serial No. 662,674. Divided and this application filed Mar. 27, 1924. Serial No. 702,372. 2 Claims. (Cl. 285—180.)



1. A coupling for connection with a nipple having lateral lugs spaced inwardly from its end; said coupling comprising a tubular casing adapted at its rear end to be secured to a hose and open at its front or outer end for reception of the above-named nipple, said outer end of the casing being adapted to abut the lugs of the nipple to limit its insertion into the casing, a spring-pressed packing within said tubular casing to yieldably press against the nipple and establish a tight connection therewith, a tubular sleeve rotatable and non-slidable on said tubular casing, said sleeve having a front end extended beyond said open end of said tubular casing and of an internal diameter to receive within its interior the lateral lugs on the above-named nipple, said front end of said sleeve having an end wall formed with a transverse slot through which the aforementioned nipple and lugs are insertible, the inner side of said end wall being adapted to engage the lugs when the sleeve is turned on the casing and being spaced outwardly from the outer end of said casing a distance slightly greater than the thickness of the lugs, permitting said end wall of the sleeve to be entirely freed of contact with the lugs when turning said sleeve.

1,541,140. PROCESS OF AND APPARATUS FOR DISTILLING AND CRACKING HYDROCARBON OILS. ALFONCE H. HELLER, Berkeley, Calif. Filed Aug. 21, 1922. Serial No. 583,069. 6 Claims. (Cl. 196—47.)

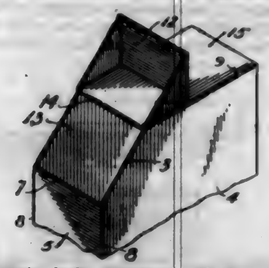


1. The process of producing low boiling hydrocarbon oils from high boiling hydrocarbon oils which comprises passing liquid oil to be treated progressively through a plurality of pipes connected in series and mounted for rotation, and subjecting the oil while in the pipes to a heat treatment sufficient to effect cracking within at least some of the pipes.

1,541,141. TYPEWRITING MACHINE. FREDERIC W. HILLARD, Tottenville, N. Y. Filed Mar. 10, 1922. Serial No. 542,662. 27 Claims. (Cl. 197—60.)

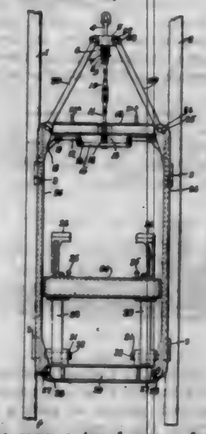
1. In a typewriting machine, in combination, a carriage normally in writing position, said carriage being adapted to be moved to a non-writing position and when so moved to be locked and key operated means to unlock the lock.

1,541,142. GLASS APPARATUS. ROBERT W. HILTON, Smethport, and JOHN L. GRAHAM, Reynoldsville, Pa.; said Graham assignor to said Hilton. Filed Dec. 3, 1920. Serial No. 428,116. 19 Claims. (Cl. 49—53.)



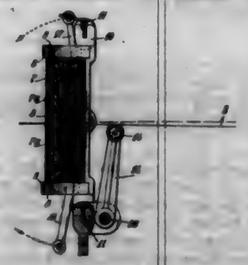
1. In apparatus of the class described, spaced draining furnaces open at their relatively adjacent sides, means for closing each furnace, a drawing furnace located between the draining furnaces, a truck supported for travel between the draining furnaces and with relation to the drawing furnace, the truck including side sills spaced to span the respective draining furnaces when the truck is at one or the other limit of its travel, bearings upon the sills, and pots having trunnions journaled in the bearings, the said bearings being of trough-like form whereby to contain a cooling fluid.

1,541,143. CARTON OR CONTAINER. RICHARD HOILE, Verona, N. J. Filed Aug. 23, 1921. Serial No. 494,472. 10 Claims. (Cl. 229—17.)



1. In a container, means for providing an access opening comprising weakening lines partially enclosing a

portion of at least three surfaces of the container, whereby the enclosed portion can be partially separated

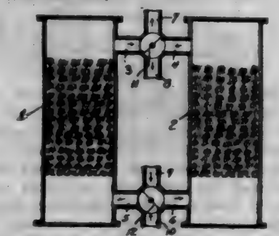


from the main body structure and swung back along an unweakened zone to provide an access opening of less than a whole surface with a hinged closure.

1,541,144. MINE CAGE. WILLIAM G. HOLMES, Danville, Ill. Filed Jan. 21, 1924. Serial No. 687,455. 16 Claims. (Cl. 187—1.)

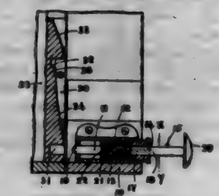
8. In a mine cage, a top frame, a bottom frame, and side frame members connecting said top and bottom frame members, bolts passing through said members at their ends for pivotally connecting them to permit them to move relative to one another about the bolts as pivots and guides carried by the side members.

1,541,145. WARPING MACHINE. EMIL HOTTINGER-SCHLEER, Hombrechtikon, Switzerland. Filed Apr. 9, 1923. Serial No. 630,822. 11 Claims. (Cl. 28—54.)



1. A reed for warping machines, comprising a number of bars arranged at a small distance from and parallel to each other, a frame in which said bars are mounted, and adjustable means adapted to impart segment shapes of different rises of arch to said bars and thereby to the reed.

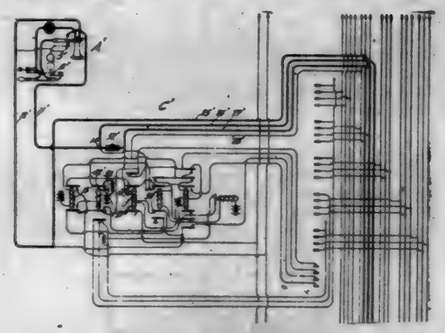
1,541,146. PAPER CONTAINER. ERNEST R. HUNTLEY, Los Angeles, Calif. Filed May 22, 1923. Serial No. 640,697. 1 Claim. (Cl. 229—5.6.)



As an article of manufacture, a paper container formed of a single blank having plaited side walls and having the upper end of its walls bent outwardly and downwardly to form an inner annular ledge then bent upwardly and downwardly upon itself and terminating above the said ledge to form with said ledge a cover locking groove, the width of the locking groove being substantially the same as the thickness of the cover, and a flat cover mounted in said groove, the resiliency of the side wall permitting the insertion of the cover in the locking groove.

1,541,147. PROCESS OF DRYING AIR. KIKUNAE IKEDA and HAJIME ISOBE, Tokyo, and TSUBUJI OKAZAWA, Kitatoshima-Gori, Japan, assignors to Zaidan Hojin Rikagaku Kenkyujo, Komagome, Hongo-Ku, Tokyo, Japan. Filed June 2, 1922. Serial No. 565,431. 1 Claim. (Cl. 183—4.)

A process for extracting aqueous vapours from air containing the same consisting in alternately treating two masses of acidic clay, contacting air carrying vapors with one of the masses of acidic clay and continuing this contacting action until the clay has absorbed substantially all of the vapors from a predetermined quantity of air and in alternately contacting an additional source of heated air with the other mass of acidic clay to remove the previous accumulation of moisture therefrom.

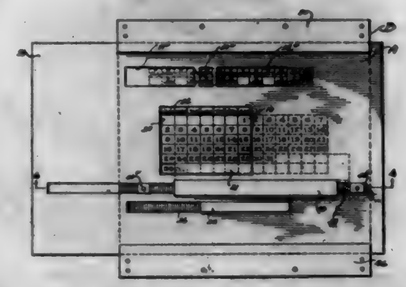


1,541,148. SASH OPERATOR AND FASTENER. RICHARD A. IRVING, Gateshead, England. Filed Mar. 26, 1924. Serial No. 701,066. 2 Claims. (Cl. 292—57.)

1. Sash operating devices for windows comprising the combination of a horizontally disposed barrel adapted to be mounted on the lower sash of the window, a spring-pressed bolt therein, and means for temporarily fixing said bolt in any one of three positions, namely a fully projected position, an intermediate position and a fully retracted position, and a socket member, adapted to be mounted near the top of the upper sash of the window, said member having a socket which can be disposed in

vertical alignment with said bolt, the lower edge of said socket being of such depth that it is cleared by the bolt in its intermediate position but is engaged by the bolt in its fully projected position, and the upper end of said socket being of such depth that it is engaged by the bolt in its intermediate and in its fully projected positions, and a rising track leading from below to said lower edge.

1,541,149. AUTOMATIC TELEPHONE SYSTEM. EMIL JACOBSEN, Evanston, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 19, 1917. Serial No. 155,651. 43 Claims. (Cl. 179—18.)



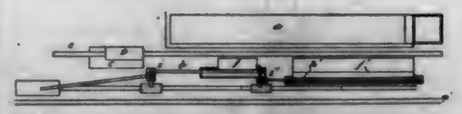
1. In a telephone system, a plurality of lines each terminating in an automatic switch, said switches having movable and fixed terminals, normal conductors for each line multiplied to the fixed terminals of the switches associated with the other lines, a condenser in one line conductor of each line, means for operating any one of said switches to connect its associated line with the normal conductors of another line to establish a talking circuit, and a transposition in the leads extending to the movable terminals of each switch, whereby an established connection will include a condenser in each side of the circuit.

1,541,150. PROCESS OF IMPROVING THE QUALITY OF BUTTER. RUDOLF KAISER, Vienna, Austria. Filed Dec. 17, 1924. Serial No. 756,558. 3 Claims. (Cl. 99—13.)

2. A process of improving the quality of butter by which inferior or rancid butter is decomposed in milk and the cream regenerated thereby is churned again, consisting in passing the butter and milk through a machine for producing a homogeneous mixture of butter and milk, heating the mixture to about 80° Celsius, separating this warm mixture of butter and milk into cream and skimmed milk in a separator rotating with a number of revolutions which is smaller than the ordinary number of revolutions, subsequently intimately mixing both products of separation by means of agitation, cooling the mixture thus obtained in a cream maturing device, adding to the milk and butter product a bacilliculture which is similar to the Tourola-yeast and develops a distinctly agreeable ethereal smell, allowing the mixture to rest for some time, and subsequently churning in known manner.

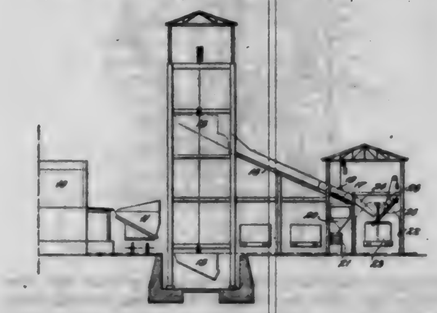
1,541,151. PERPETUAL CALENDAR. ABD-EL-RAHMAN AMER KHALIFAH, Delengat, Egypt. Filed Oct. 29, 1923. Serial No. 671,494. 5 Claims. (Cl. 40—109.)

1. In a perpetual calendar the combination of a frame, a century bearing member fixed in the frame, a year bearing member adjustable in the frame having the years from 1 to 99 indicated therein, a month bearing member adjustable with respect to the year bearing member so that the same may be arranged in the frame in a definite relation to a particular year of the year bearing member, a numeral bearing member having numerals thereon arranged in substantially calendar formation and in fixed relation with said frame, a member adjustable upon said frame having the week days delineated there-



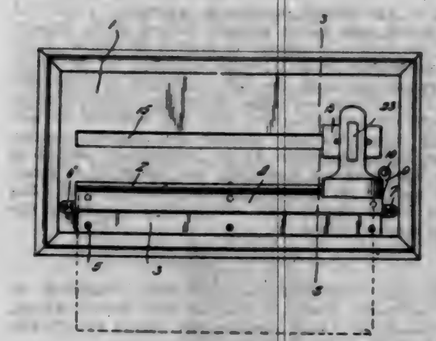
on, and means for arranging said week days according to a particular month of said month bearing member, said last mentioned member when so arranged having the numerals of the numeral bearing member correctly exposing the numerals of the calendar month indicated by said member.

1,541,152. TOBACCO PIPE. VICTOR KOBLER, Zurich, Switzerland. Filed Dec. 11, 1922. Serial No. 606,229. 5 Claims. (Cl. 131—12.)



1. A tobacco pipe having a stem provided with a bore, and a part inserted in said stem and consisting of a rod and discs on said rod, spaced at such a distance from each other that upon the inserted part being immersed in a liquid the latter will adhere to said discs by capillary action and will span the intermediate spaces between adjacent discs.

1,541,153. COKE QUENCHING AND LOADING APPARATUS. HENRICH KOPPERS, Essen-Ruhr, Germany, assignor to The Koppers Development Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 5, 1921, Serial No. 482,613. Renewed Mar. 9, 1925. 5 Claims. (Cl. 214—18.)

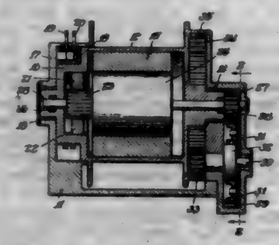


1. A coke quenching and loading device comprising, in combination: a coke oven; a car for receiving coke pushed from the oven, said car having a slanting bottom; a quenching station for quenching the coke in said car; an inclined throw-off ramp adapted to receive the quenched coke from said car; means for conveying the coke from said ramp to a screening apparatus; an auxiliary ramp of relatively greater capacity adapted for use in emergency; means associated with said auxiliary ramp adapted to transfer the coke on said ramp to either railway cars or to the conveying means of said first mentioned ramp.

1,541,154. COKE QUENCHING AND LOADING DEVICE. HEINRICH KOPPERS, Essen-Ruhr, Germany, assignor to The Koppers Development Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 8, 1921. Serial No. 483,145. 10 Claims. (Cl. 214—18.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

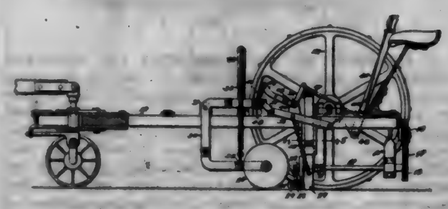
1. The combination of a coke quenching oven, a coke support having an inclined bottom for receiving coke from said oven, a vertically movable coke support having an inclined bottom for receiving coke from said first support according to the sliding angle of said coke, an elevated inclined coke holding and cooling ramp for receiving coke from said vertically movable support, and screening and loading means arranged to receive coke from said ramp.

1,541,155. ENVELOPE OPENER. FRANK N. KROESEN, Indianapolis, Ind. Filed July 24, 1924. Serial No. 728,012. 1 Claim. (Cl. 164—77.)



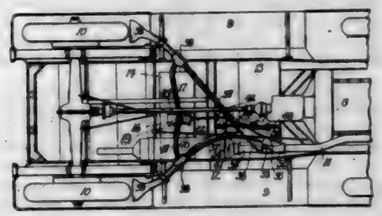
An envelope opener comprising a base having a longitudinal opening therein, a stationary cutter blade on said base, the cutting edge thereof being disposed adjacent said opening, a clamping plate mounted on said base and adapted to hold an envelope in position on the base, a stop for the edge of the envelope to be slit, a carriage slidable on the base, and a rotary cutter carried by the carriage, said rotary cutter disposed in said opening and cooperating with the cutting edge of the stationary cutter blade in slitting the edge of an envelope, means for releasing the clamping plate from engagement with the envelope, said means comprising an extension formed on one end of the clamping plate, means associated with the extension for normally holding the clamping plate under tension, and a finger projecting laterally from the carriage and adapted to engage the extension after the edge of the envelope has been slit and the carriage has traveled the full length of the opening.

1,541,156. BLUE INDANTHRENE DYESTUFF AND PROCESS OF MAKING THE SAME. GEORG KRINGLEIN, Hochst-on-the-Main, PAUL NAWIASKY, Ludwigshafen-on-the-Rhine, MARTIN CORELL, Hochst-on-the-Main, MAX ALBERT KUNZ, Mannheim, and FRITZ SCHÜTZ, Hochst-on-the-Main, Germany, assignors to Badische Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Bavaria, Germany, a Corporation of Germany. Filed July 31, 1922. Serial No. 578,802. 5 Claims. (Cl. 260—31.)



1. The process for the production of a new blue vat dyestuff of the anthracene series, consisting in dissolving the blue vat dyestuff, obtained by subjecting beta-aminoanthraquinone to the caustic potash melt, in concentrated sulfuric acid, adding to this solution sufficient water to cause the precipitation of the dyestuff but insufficient to cause the precipitation of substances which cause the dyestuff to be not fast to chlorin.

1,541,157. MOTOR HOIST. FRED H. LENLEY, Duluth, Minn. Filed Sept. 27, 1923. Serial No. 665,142. 6 Claims. (Cl. 254—187.)



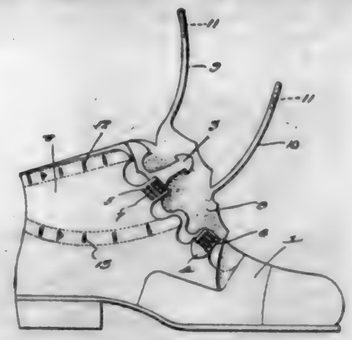
1. In a motor hoist, a hoist frame, an armature and a field, both said members being movable relative to the hoist frame, gearing adapted to connect the armature and field to control their relative movement, and a speed controlled clutch adapted to bring said gearing into operation upon one of said members reaching a predetermined speed.

1,541,158. BEET TOPPER. JOHN W. LITTLE, McCook, Nebr. Filed Feb. 24, 1922. Serial No. 538,982. 4 Claims. (Cl. 56—107.)

1. A beet topper including a supporting frame presenting vertical guides, a cutter mechanism slidable in said vertical guides, a rocker pivoted to the supporting frame in advance of the cutter mechanism, a gauge wheel mounted at the lower end of the rocker, a lever having one end pivoted to the supporting frame and its other end pivotally connected with the upper end of the said rocker, and means connecting the said lever with the lower end of the said cutter mechanism.

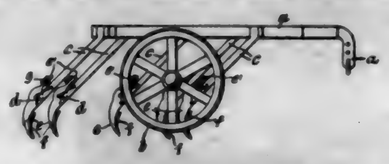
1,541,159. SANDER FOR MOTOR VEHICLES. JAMES MACCALLUM, Jr., St. Louis County, Mo. Filed Feb. 11, 1924. Serial No. 691,879. 1 Claim. (Cl. 291—3.)

In a sander for motor vehicles, a downwardly and rearwardly extending nozzle carried by said vehicle and located in front of and in close proximity to each of the rear wheels thereof, a venturi secured to each of said nozzles, a sand reservoir having an opening in its bottom, an inverted Y secured in said opening, a sliding valve carried by said Y for opening and closing said opening, a conduit secured to the side of each venturi and communicating with said venturi at its point of greatest restriction, the opposite ends of said conduit being secured to the branches of the wire, a conduit secured to the end of each venturi, the opposite ends thereof secured to the exhaust pipe of a motor vehicle, means carried by the exhaust pipe for directing the exhaust into said conduits, a lever having one end connected to the brake rod of said vehicle, a link pivotally secured to the opposite end of said lever and to the sliding valve, a flexible connection between the last mentioned end of the lever and the exhaust directing means, a support to which said lever is pivoted intermediate its ends, and means for moving said support whereby the valve operating and exhaust directing means can be placed in operation simultaneously with the braking mechanism of the vehicle when desired.



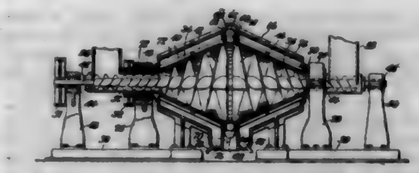
1,541,160. EDGE SPACER FOR CULTIVATED GRASS PLOTS. BERNARD MACDONALD, South Pasadena, Calif. Filed June 30, 1924. Serial No. 723,300. 3 Claims. (Cl. 94—31.)

1. A pavement for use in connection with lawns and comprising a body of plastic material having its upper surface disposed approximately flush with the surface of an adjacent lawn section and spaced therefrom laterally, said body further having a lateral extension disposed in the intervening space between the said surfaces of the lawn and the body and extending upwardly to a position substantially flush with the surface of the ground and below the adjacent surfaces of the lawn and the pavement.



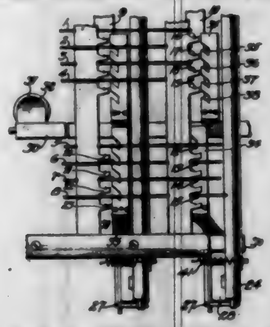
1,541,161. SHOE. PETER MANCUSO, West Hazleton, and PETER NAPOLITANO, Beaver Meadows, Pa. Filed Dec. 9, 1924. Serial No. 754,769. 2 Claims. (Cl. 36—50.)

1. In a shoe, interlocking fastening means for the forward free edges of the upper of said shoe, one side of the upper having slits formed therein, a cover secured to the free edge of the other side of the upper, said cover adapted to extend over the aforementioned fastening means and the opposite free edge of the upper, and means for securing the free edges of the cover to



the upper comprising straps extending from the free edge of the cover and adapted to extend through said slits.

1,541,162. AGRICULTURAL IMPLEMENT. DANIEL MERCER, Kirkby, near Liverpool, England. Filed Oct. 30, 1922. Serial No. 598,080. 2 Claims. (Cl. 97—188.)



1. In agricultural implements, wherein a chank and its shovel form a unit pivotally carried by its supporting standard in a manner to prevent movement of the shovel rearwardly and permit movement of the shovel forwardly and with the unit adjustable to adjustably limit its extreme movement rearwardly, resilient means operatively connecting the unit and standard to normally return the unit to such rear extreme position when moved therefrom to an intermediate portion of the unit range of movement, and operative to retain the unit in its inactive position when the unit has been moved beyond such intermediate portion of the unit range of travel.

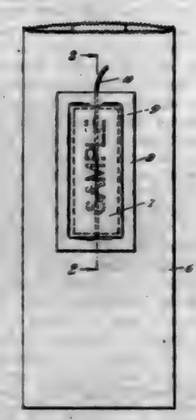
1,541,163. CENTRIFUGAL DRIER. TERRENCE O. WESTHAFER, Pueblo, Colo., and FRED MERLE MILLER, Chicago, Ill. Filed Apr. 7, 1920. Serial No. 371,829. 16 Claims. (Cl. 210—69.)

1. In a centrifugal drier, the combination of a perforated rotary drum, a peripheral discharge intermediate the ends of the drum, means for feeding material into both ends of the drum, means for rotating the drum at a sufficiently high speed to hold said material against the drum by centrifugal force, and means to advance the material from the ends of the drum to said discharge.

1,541,164. AUTOMATIC TELEPHONE SWITCH. VICTOR F. MILLER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 6, 1922. Serial No. 572,909. 18 Claims. (Cl. 179—27.5.)

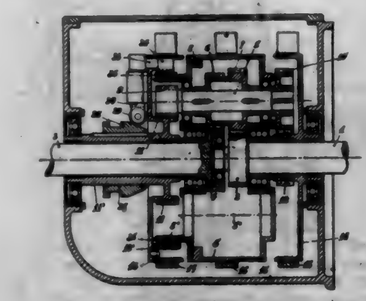
1. In a switching mechanism, sets of active conductors, sets of passive conductors, an arm having rotary and pivotal movements simultaneously for operating said active conductors, the resulting movement of said arm being in a diagonal direction, an operating card mounted on said arm, rotary bars and means including said rotary bars for moving said arm to effect interengagement of said sets of active and passive conductors.

1,541,165. BUILDING MATERIAL AND PROCESS FOR MANUFACTURING SAME. SIMA MINACHE, Constantinople, Turkey. Filed Aug. 17, 1923. Serial No. 657,004. 3 Claims. (Cl. 18—60.)



1. A building element comprising two outer layers each consisting of a mixture of magnesium chloride, water glass and calcined magnesium carbonate, and an intermediate layer consisting of a mixture of pulverized organic waste material, calcined magnesium carbonate and magnesium chloride.

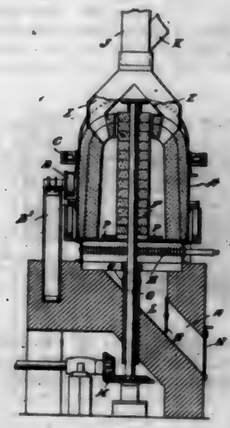
1,541,166. PUMP PLUNGER. OSMIN MOWERS, Dallas, Tex., assignor of one-half to The Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed Dec. 6, 1924. Serial No. 754,434. 11 Claims. (Cl. 103—225.)



1. In a pump plunger, a rubber cup having a valve seat, a valve in the cup engaging the seat, and a foraminous reinforcing cage enclosing the cup.

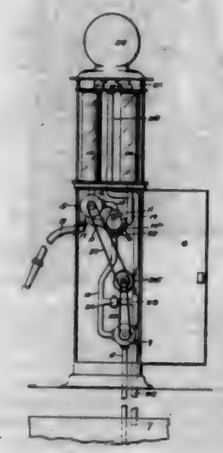
1,541,167. SAMPLE-CARRYING DEVICE. ROBERT JOHN MULVEY, Chicago, Ill. Filed Sept. 14, 1922. Serial No. 588,145. 3 Claims. (Cl. 229—53.)

1. A sample carrier comprising a transparent member provided with means on its edges for fastening it on a container of merchandise and having its intermediate portion raised to enclose a sample, and pliable means extending across said raised portion for opening the same to release said sample.



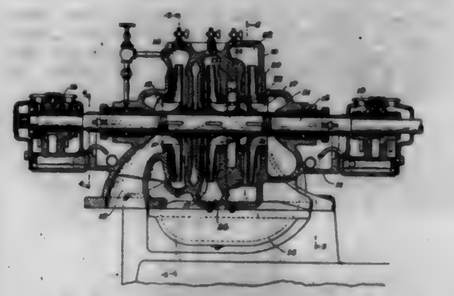
1,541,168. SPEED-CHANGING MECHANISM FOR MOTOR VEHICLES OR OTHER APPARATUS. JOSEPH NAMBOTIN, Lyon, France, assignor to Société Anonyme des Motocyclettes et Automobiles Viratelle, Lyon, France. Filed Mar. 5, 1923. Serial No. 622,885. 1 Claim. (Cl. 74—34.)

Speed change mechanism comprising a casing, a bearing in each of the end walls of said casing, a driving shaft mounted in one of said bearings and extending into said casing, a driven shaft mounted in the other of said bearings and also extending into said casing, a pinion on the end of said driving shaft, a pinion of different diameter than said first mentioned pinion mounted on the end of the driven shaft, said pinions facing one another, two axles arranged diametrically opposite one another on each side of the axis of said shafts and in the same plane therewith, a two cheeked drum freely mounted axially on said shafts and enclosing said pinions, bearings in the cheeks of said drum in which said axles can rotate said axles extending through said cheeks, two planetary wheels of different diameter keyed on each



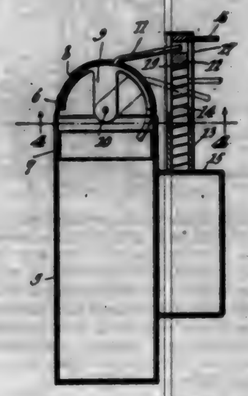
of said axles and within said drum said planetary wheels gearing with said pinions, further planetary wheels keyed on the ends of said axles outside the cheeks of said drum, a pulley mounted loosely on said driving shaft, a toothed wheel integral and co-axial therewith with which two of said further planetary wheels engage, a second pulley loosely mounted on said driven shaft, a toothed wheel integral and co-axial therewith the other two of said further planetary wheels engaging therewith, band brakes round said drum and said pulleys, means for adjusting the effective length of said band brakes, plungers operating to actuate said band brakes, means supporting said plungers, a rotatable shaft of polygonal section mounted in said casing, a cam slidably mounted on said polygonal shaft, means for sliding said cam along said polygonal shaft to actuate one or other of said plungers, a sleeve surrounding said driven shaft, and integral with said first mentioned pulley, a conical sleeve slidable on said first mentioned sleeve, means for sliding said conical sleeve, a sliding member actuated by the sliding movement of said conical sleeve an arm articulated by one end to said sliding member, a spring acting on said arm, a spindle on the other end of said arm said spindle projecting through the cheek of said first mentioned pulley, a toothed sector mounted on said spindle, a hoop integral with one cheek of said drum a band brake surrounding said cheek, one end of said brake being fixed, a block on the free end of said band brake said block having teeth gearing with the teeth of said sector.

1,541,169. CONTINUOUS KILN. SPENCER B. NEWBERRY, Cleveland, Ohio; Andrew W. Newberry, executor of said Spencer B. Newberry, deceased, assignor of one-half to Andrew W. Newberry and one-half to Arthur C. Newberry. Filed May 24, 1922. Serial No. 563,268. 7 Claims. (Cl. 222—3.)



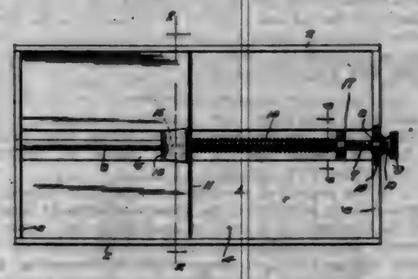
1. A kiln for calcining materials comprising a hollow shell the inner wall of which is substantially straight from the bottom to the top thereof, a substantially cylindrical core arranged in said shell and spaced from the inner wall thereof and extending upwardly and terminating adjacent the top of the shell, the space between said shell and core being unobstructed and forming an annular calcining space, means for supplying materials to be calcined to the upper portion of said space, and means for producing relative motion between said shell and core to cause the materials to travel spirally downwardly through said space during the calcining operation.

1,541,170. DOUBLE-CONTAINER, FORCE-DISCHARGE, DISPENSING APPARATUS. GEORGE BURTON NICHOLSON, Pittsburgh, Pa. Filed Apr. 2, 1924. Serial No. 703,725. 5 Claims. (Cl. 103—2.)



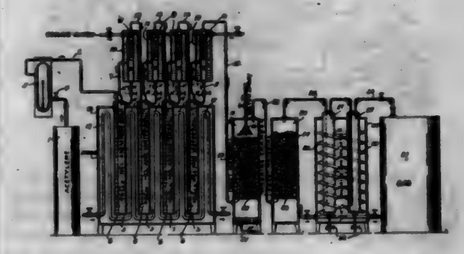
1. Apparatus of the character described comprising a pair of dispensing receptacles, means for filling one while emptying the other and power means for discharging the contents of said receptacles.

1,541,171. CENTRIFUGAL PUMP. WILLIAM H. NOBLE, Easton, Pa., assignor to Pennsylvania Pump and Compressor Company, Easton, Pa., a Corporation of Pennsylvania. Filed Feb. 20, 1924. Serial No. 694,047. 11 Claims. (Cl. 103—112.)



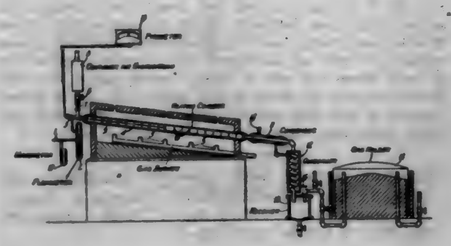
1. A multi-stage centrifugal pump comprising in combination, a pump casing comprising upper and lower halves, more than two impellers rotatably mounted therein, two of said impellers being opposed whereby they are balanced, a suction inlet at one end of the casing, a volute discharge from the first stage impeller, a conduit connecting said volute with the suction of the second stage impeller, re-directing conduits from the discharge of said second stage impeller and leading to the suction of a third stage impeller, a balancing chamber for said second stage impeller, and a volute discharge from said third impeller.

1,541,172. SIRUP CAN. VIRGIL B. NUCKOLS, Elkton, Ky. Filed Oct. 8, 1924. Serial No. 742,492. 1 Claim. (Cl. 65—31.)



In a device of the character described, a body portion, a cover for the body portion having an opening, a pivoted closure mounted within the cover and adapted to normally close the opening, a rod extending from the cover, a handle portion, a tubular member extending upwardly from the handle portion and having a cut out portion, said rod adapted to extend into the cut out portion, a sliding block in the tubular member and having an opening to accommodate the rod, a spring for normally urging the block to the limit of its upward movement, and means for operating the block to move the closure.

1,541,173. FOLLOW BLOCK FOR FILING CABINETS. JAMES B. ORMOND, Flagstaff, Ariz. Filed Sept. 19, 1924. Serial No. 738,615. 2 Claims. (Cl. 129—32.)

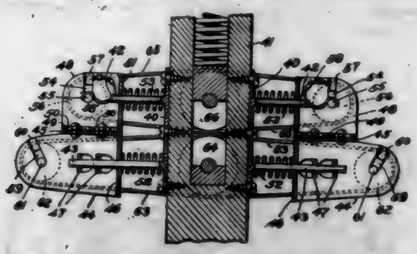


1. A filing receptacle having a recess in its bottom, a partially threaded rod mounted for turning movement in said receptacle and positioned in said recess, a nut threaded on said rod fixed against rotation but free to move along said rod, a follow block slidably mounted on said rod, a coil spring on said rod connected to said follow block at one end and at its other end connected to said nut, and means for turning said rod to relieve the tension of said spring.

1,541,174. PROCESS FOR OBTAINING VINYL CHLORIDE FROM ACETYLENE. IWAN OSTROMISLENSKY, Locust Point, N. J., assignor to the Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Sept. 14, 1922. Serial No. 588,112. 6 Claims. (Cl. 260—162.)

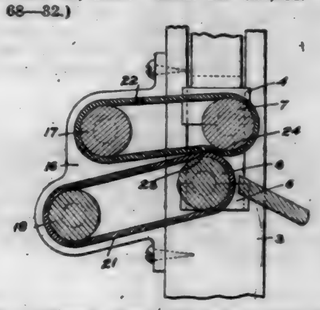
1. A process for making vinyl chloride which comprises passing acetylene through a water solution of hydrochloric acid containing more than 0.1 mol. per litre of a mercury compound, and recovering vinyl chloride produced thereby.

1,541,175. PROCESS FOR PRODUCING STYROL AND ITS HOMOLOGUES FROM AROMATIC HYDROCARBONS. IWAN OSTROMISLENSKY and MORRIS G. SHEPARD, New York, N. Y., assignors to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed May 7, 1924. Serial No. 711,583. 13 Claims. (Cl. 260—168.)



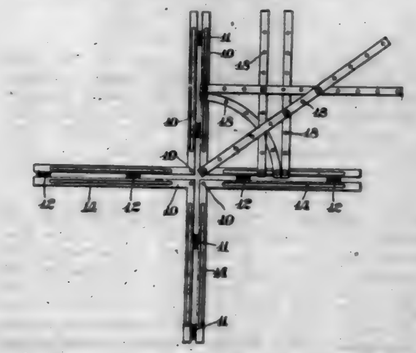
1. A process for making compounds of the type $ArCH:CH_2$ where Ar represents aryl, which comprises heating a hydrocarbon having the general formula ArC_2H_4R where R represents a monovalent substitution to a temperature of approximately 450°–700° C. and partially decomposing the hydrocarbon to form $ArCH:CH_2$.

1,541,176. PROCESS FOR THE MANUFACTURE OF STYROL OR ITS HOMOLOGUES. IWAN OSTROMISLENSKY, New York, N. Y., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Conn. Filed May 7, 1924. Serial No. 711,587. 7 Claims. (Cl. 260—168.)



1. A process for the manufacture of $ArCH:CH_2$ where Ar represents aryl, which comprises decomposing $ArCH:CH.COOH$ in two stages at widely separated temperture ranges lying below and considerably above the boiling point of the $ArCH:CH.COOH$.

1,541,177. COMBINED BUTTON ARRANGER AND SAFETY GUARD FOR WRINGERS. OTHO M. OTTE, Tarentum, Pa. Filed Oct. 13, 1921. Serial No. 507,559. 3 Claims. (Cl. 68—32.)

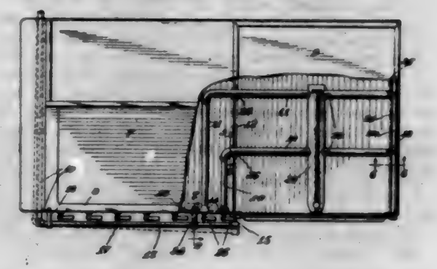


1. The combination with the compression rolls of a wringer, of a pair of endless belts for conveying material to said compression rolls and means for yieldingly supporting the outer reaches of each of said belts.

1,541,178. WRINGER. OTHO M. OTTE, Tarentum, Pa. Filed Jan. 30, 1922. Serial No. 532,758. 2 Claims. (Cl. 68—32.)

1. In a wringer, upper and lower compression rolls having their axes vertically offset, an endless belt driven by said lower roll, a roller around which said belt passes mounted in front of said lower roll, an endless belt driven by said upper roll and a roller around which said belt passes mounted in front of said upper roll and in spaced relation to said first named roller so that said belts converge from said rollers to said compression rolls.

1,541,179. DEVICE FOR USE IN TEACHING GEOMETRY OR TRIGONOMETRY. GEORGE A. PARKINSON, Madison, Wis. Filed Apr. 17, 1924. Serial No. 707,086. 7 Claims. (Cl. 35—2.)

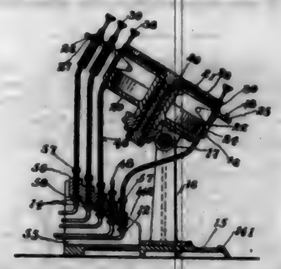


1. An apparatus adapted for use in teaching geometry or trigonometry comprising a frame composed of angle members hinged at their sides to each other to permit coinciding superposition, one of said angle members provided with a slot, a bar and means for adjustably securing said bar in said slot.

1,541,180. DENTAL CASTING MACHINE. JOHN E. PARKINSON, Seattle, Wash. Filed Oct. 22, 1923. Serial No. 670,169. 15 Claims. (Cl. 22—69.)

1. In a casting machine, in combination, a cap adapted to rest on a casting flask and having a passage for compressed air, a movable support for said cap, a valve casing having a passage communicating with said first named passage, a valve in said casing, a member carried by and movable with said support and forming means for pressing said cap against a flask, said member also being movable relative to said support, and means operated by the movement of said member relative to said support for moving said valve.

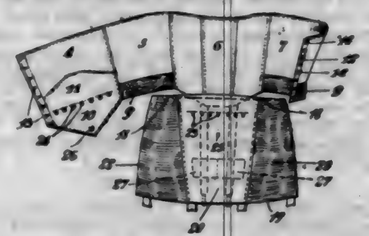
1,541,181. GAS RANGE. GEORGE E. PICKUP, Newark, Ohio, assignor to The Wehrle Company, Newark, Ohio, a Corporation of Ohio. Filed Mar. 26, 1923. Serial No. 627,832. 4 Claims. (Cl. 126—39.)



4. In a gas range, an oven having opposed side walls and a burner, said burner being mounted at one end so as to contact with one of said opposed side walls at the inner side thereof and adapted to engage with the other one of said walls whereby the burner is supported in position in the oven and serves as a stay to prevent the side walls from bulging inwardly.

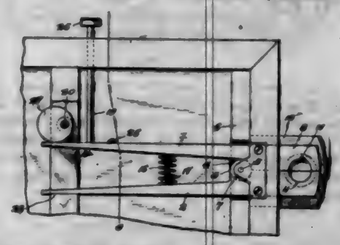
1,541,182. GRADING OF ALKALINE-EARTH CARBONATES. WALTER WILLIAM PLOWMAN, East Sheen, England. Filed Apr. 14, 1922. Serial No. 552,815. 10 Claims. (Cl. 83—84.)

1. In the process of grading as hereinbefore defined of alkaline-earth carbonates, the steps consisting of admixing the carbonate in a state of subdivision with water in presence of an alkaline silicate in quantity sufficient to effect deflocculation of the carbonate, separating the alkaline-earth carbonate suspension so produced from any undeflocculated material, and separating the carbonate from its suspension.



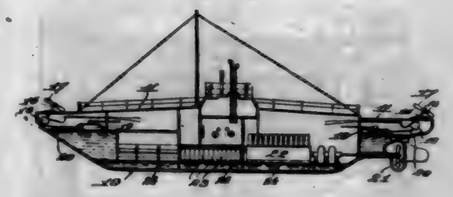
1,541,183. CODING ATTACHMENT FOR TYPEWRITERS. JAMES POWERS, New York, N. Y., assignor to American Code Machine Company, Memphis, Tenn., a Corporation of Tennessee. Filed Apr. 25, 1922, Serial No. 556,413. Renewed Apr. 30, 1925. 28 Claims. (Cl. 35—13.)

1. In combination, a support; a rotary key-carrying disk; keys on said disk in annular series; connections arranged to be engageable by any one of said keys and to engage typewriter keys; code-changing means for



rotating said disk; and spacing means whereby the typewriter is spaced as the disk is rotated.

1,541,184. UNDERGARMENT. LESSAGE RAYMOND, Woodhaven, N. Y., assignor to Camlin Corset Co. Inc., a Corporation of New York. Filed Mar. 5, 1925. Serial No. 13,020. 1 Claim. (Cl. 2—30.)



As a new article of manufacture, an undergarment of the character described comprising a brassière garment the front of which is adapted to be opened and closed to put the garment off and on, fastening means for said front, a step-in corset garment, means for securing the said front of the brassière garment to the corset garment at the front of the latter, hose supporters secured to the corset garment at the lower front edge thereof, other hose supporters, elastic straps for securing the latter to the back of the said brassière garment and a piece of fabric secured to the back of the corset garment and forming loops through which the said elastic straps pass as and for the purpose set forth.

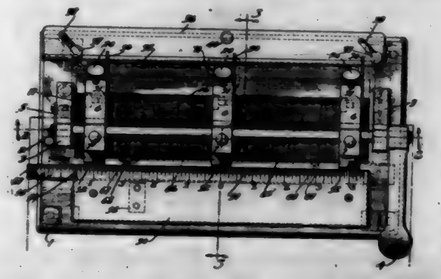
1,541,185. SPRING GRIP LATCH FOR AUTOMOBILES, ETC. FRANK L. RICHARDSON, Jena, La. Filed Aug. 26, 1924. Serial No. 734,307. 3 Claims. (Cl. 292—49.)

2. A grip latch comprising a pair of latch members pivoted intermediate of their ends and provided at their outer portions with heads having co-acting recesses forming a keeper receiving socket, a spring interposed between the latch members at the inner side of the pivot thereof, a stop receiving the inner end of one of the latch members and operating means arranged to engage the other latch member for releasing the latch.

1,541,186. SUBMARINE VESSEL. FREDERICK RIES, Compton, Calif. Filed Dec. 26, 1924. Serial No. 757,968. 3 Claims. (Cl. 114—16.)

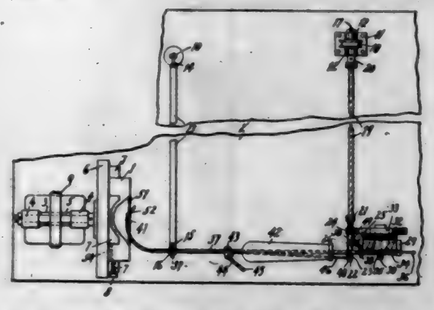
1. The combination with a submarine vessel, of a bearing mounted for rocking movement at the end of the hull of the vessel, an upright shaft journalled in said bearing, the upper end of which shaft extends a substantial distance above the top of the hull, a propeller mounted on the upper end of said shaft and a motor mounted on the lower end of said shaft.

1,541,187. WATER GAUGE FOR RADIATORS. RONALD ROPER, Humboldt, Iowa. Filed Apr. 14, 1924. Serial No. 706,520. 1 Claim. (Cl. 73—82.)



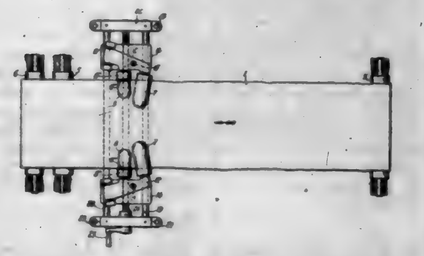
A water gauge for radiators comprising a sleeve, the upper end thereof being threaded and extending through an opening provided in the top of the radiator, clamping nuts threaded on the upper end of said sleeve on opposite sides of the radiator top for securing the sleeve in position thereon, a stem slidable in said sleeve, a float on the lower end of said stem, a cotter pin extending transversely through the upper end of said stem for indicating the position of the float and the amount of water in said radiator, said cotter pin being further adapted for engagement with the upper end of said sleeve for limiting the downward movement of the stem in the sleeve when the water in the radiator is at a predetermined level.

1,541,188. PERFORATOR. ELMER H. SALT, Norwood, Ohio, assignor to The Globe-Wernicke Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 14, 1923. Serial No. 625,161. 1 Claim. (Cl. 164—91.)



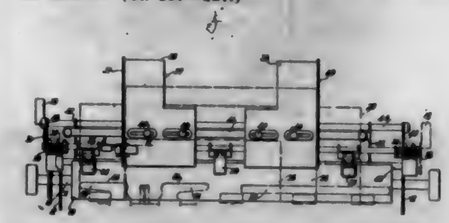
A base, a punch-operating shaft journaled upon said base, punch-carrying units slidable upon said shaft, reciprocable punch-members in said units simultaneously

operable by said shaft, stock-receiving slots traversable by said punches, plates secured to said punch carrying units bridging said slots for limiting the depth of the



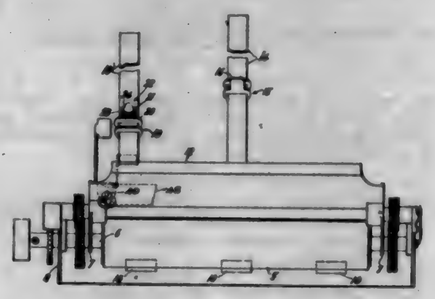
stock insertion within said slots, and an element commonly attached to said plates for unitarily adjusting the same.

1,541,189. METHOD OF AND MACHINE FOR THE INTERNAL WINDING OF WIRE. FRANK W. SICKLES, Springfield, Mass. Filed May 6, 1922, Serial No. 559,044. Renewed Nov. 7, 1924. 39 Claims. (Cl. 242—1.)



1. A method of winding wire into hollow objects, consisting in simultaneously feeding wire into a hollow object, guiding the wire fed therein, and rotating said object by the action thereon of the wire fed into the same.

1,541,190. SHEET-CONTROLLING DEVICE. CLYDE J. SMITH, Detroit, Mich., assignor to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed Aug. 18, 1923. Serial No. 658,191. 10 Claims. (Cl. 26—66.)

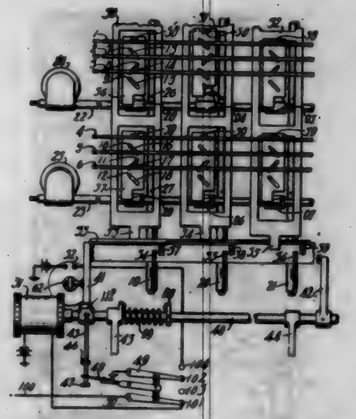


1. A device for guiding sheet material comprising two pairs of rolls for engaging both faces of a sheet at one side thereof, the axes of one pair of said rolls being inclined to the axes of the other pair of rolls, and common means supporting two of the rolls engaging one face of the sheet for insuring their automatic operation in alternation, each of said rolls being adapted to govern the movement of the common supporting means therefor.

1,541,191. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 10, 1921. Serial No. 476,422. 15 Claims. (Cl. 197—127.)

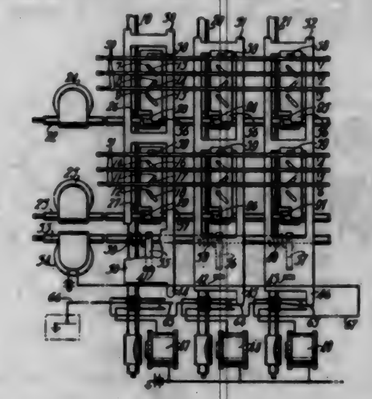
1. In a typewriting machine, a platen, a collating table at the front of the platen upon which work-sheets may be adjusted, a clamp formed to be interposed between work-sheets on the collating table for clamping one of them by a lateral margin, said clamp being movable slightly toward and from the collating table while remaining about parallel therewith, and a single side-edge gage on the collating table extending above and below said clamp, and gaging the sheets placed upon and underneath the clamp.

1,541,192. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 14, 1923. Serial No. 624,889. 12 Claims. (Cl. 197—133.)



1. In a typewriting machine having means to guide superposed work-sheets with similarly perforated side margins underneath and around a platen and a web-severing device, the combination of a pin for re-registering said work-sheets relatively to one another, means at one side of said machine for adjustably supporting said pin, and means to lock said pin.

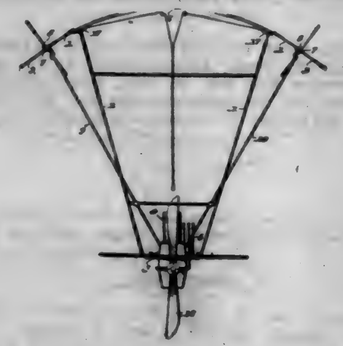
1,541,193. ELECTRICAL SWITCHING APPARATUS. PERCY C. SMITH, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 5, 1922. Serial No. 604,977. 13 Claims. (Cl. 179—27.5.)



1. In combination, incoming circuits, outgoing circuits, separately movable contacts for effecting connection therebetween, a controlling member for each outgoing

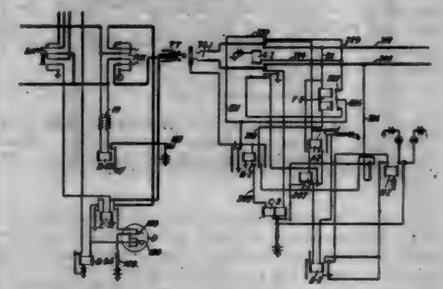
circuit, operating means for moving said contacts, means within said operating means for actuating each controlling member when the corresponding outgoing circuit is

taken for use, and means associated with said members for allotting in definite order the outgoing circuits for use.



1,541,194. ELECTRICAL SWITCHING DEVICE. PERCY C. SMITH, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 8, 1922. Serial No. 605,694. 10 Claims. (Cl. 179—27.5.)

1. In combination, a number of circuits each having separately movable contacts for making connection therewith, magnets individual to said circuits for preparing the contacts for operation, a controlling member for each circuit, operating means for said contacts, means controlled by said operating means for actuating each controlling member when the corresponding circuit is taken for use, and circuits associated with said controlling members for allotting said first mentioned circuits for use.



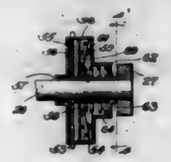
1,541,195. HELICOPTER FLYING MACHINE. ROY W. SMITH, Mechanicville, N. Y. Filed Jan. 10, 1923. Serial No. 611,776. 3 Claims. (Cl. 244—16.)

1. In a helicopter flying machine, the combination with a plane having unobstructed opposite margins, of elevating paddle wheels arranged adjacent and beyond the said unobstructed opposite margins of said plane, and means for revolving said paddle wheels in opposite directions

for the purpose of relieving the air pressure above the plane and blowing air underneath the plane against its under surface.

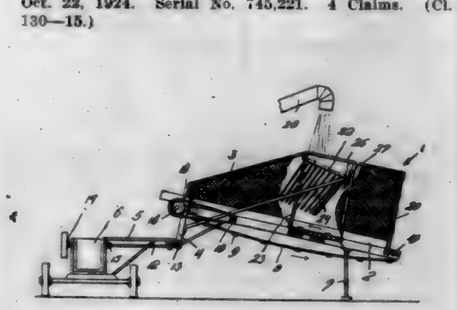
1,541,196. TELEPHONE SYSTEM. ARTHUR B. SPRAGUE, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 15, 1923. Serial No. 619,086. 10 Claims. (Cl. 179—9.)

1. In a telephone system, a subscriber's line, a call charging device associated therewith, an operator's position, a signal thereat, a trunk circuit, means including an automatic switch for extending a connection from said line or said operator's position to said trunk circuit a connecting circuit for answering calls incoming over said trunk circuit, and means in said connecting circuit to discriminate between calls over said trunk circuit, said discriminating means serving to prevent operation of said call charging device when a call from said subscriber's line is answered and serving to control said signal when a call from said operator's position is answered.



1,541,197. COMBINATION BRUSH. GEORGE W. STEIN, Los Angeles, Calif. Filed July 26, 1924. Serial No. 728,483. 3 Claims. (Cl. 15—106.)

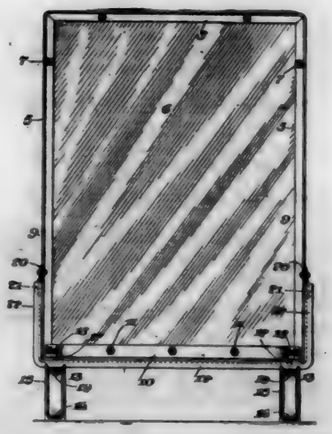
1. The combination with a back member, of a slotted strap transversely arranged on said back member with the ends of said strap secured to said back member, a headed member arranged for sliding movement in the



slot in said strap, with the head of said member disposed between said strap and the back member, and a brush back secured to said sliding headed member.

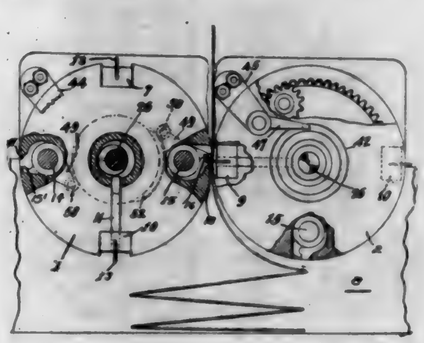
1,541,198. SLIP CLUTCH FOR STONE GATHERERS. LELAND D. TETER, Livingstonville, N. Y. Original application filed Nov. 25, 1922, Serial No. 603,200. Divided and this application filed Nov. 23, 1923. Serial No. 676,597. 2 Claims. (Cl. 64—99.)

1. In a machine for the purpose set forth, the combination of a gatherer shaft, a driving disk fixed to said shaft, a hollow sprocket loose on the gathering shaft housing the said disk and having one side disposed adjacent said disk, means for imparting rotation to the sprocket, a clutch plate slidably fitted within and rotatable with the said sprocket, fingers pivoted upon the rim of the sprocket and connected with said clutch plate, and yieldable means acting on the inner free ends of the fingers for normally holding the clutch plate in engagement with the said driving disk.



1,541,199. FEEDING ATTACHMENT FOR HAY PRESSES. EDWARD THOMSON, Ashley, Ill. Filed Oct. 22, 1924. Serial No. 745,221. 4 Claims. (Cl. 130—15.)

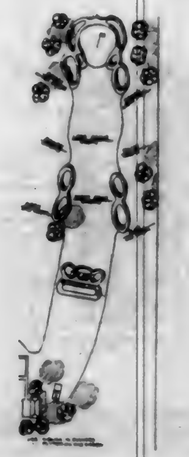
1. An attachment for the feeding platform of a hay press comprising a frame, wire mesh covering the sides, ends and the forward end portion of the top of the frame, an endless conveyor in the bottom of the frame co-operating at its forward end with the platform, guide means in the frame below the inlet formed in the top of the frame, said guide means comprising a U-shaped member supported in the top of the frame below the inlet opening, and rods extending downwardly from the U-shaped member in parallel spaced relation.



1,541,200. SIGN STAND. HERBERT G. THOMSON, New York, N. Y. Filed Apr. 16, 1925. Serial No. 23,441. 5 Claims. (Cl. 40—125.)

1. A sign stand comprising two juxtaposed corresponding frame sections connected to support a sign therebetween, said sections composed of angle bars bent to form top and side members, and cross-bars secured

to and connecting the lower ends of the side members of the respective bars, a base structure, and detachable connections between the cross-bars and said structure.



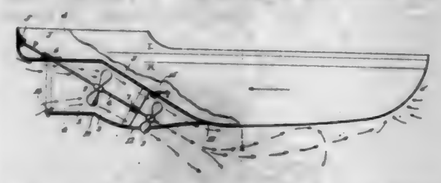
1,541,201. ZIGZAG-PAPER-STRIP-FOLDING MACHINE. EINAR G. WENNERBLAD, NELS OSCAR NELSON, and RAY C. JOHNSON, San Francisco, Calif. Filed Dec. 27, 1922. Serial No. 609,277. 4 Claims. (Cl. 270—73.)

1. A paper strip folding machine, comprising a pair of rollers between which the paper strip is passed, means to alternately crease the paper strip as it passes through said rollers in opposite directions whereby the strip will be delivered from the rolls in a series of zigzag folds and means craried by one of the rollers to cut off the paper strip after a predetermined number of folds have been made.

1,541,202. GAME. CECIL M. WINDIGLER, Washington, D. C. Filed Jan. 31, 1924. Serial No. 689,740. 15 Claims. (Cl. 273—87.)

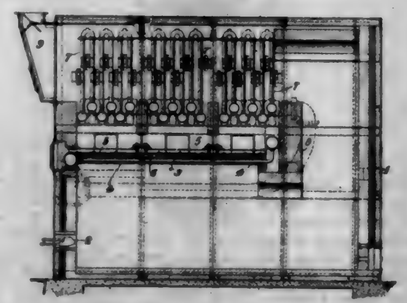
5. In a game such as described, and in combination, a playing board with direction markings indicated thereon, cards having information thereon co-related to the markings on the playing board, dice for throwing to select the information, and vari-colored chips to be used

as counters for keeping a record of the number of strokes taken by the players as the game progresses from hole to hole.



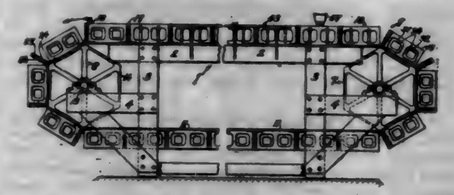
1,541,203. SIGN. GEORGE R. WOOD, Los Angeles, Calif. Filed Mar. 12, 1924. Serial No. 698,665. 4 Claims. (Cl. 40—145.)

1. The improvement in signs set forth comprising a wooden stake having a recess therein; a metal pan adapted to be fitted into and secured in the recess of said stake; a metal point secured to one end of said stake; and a metal cap at the other end of said stake.



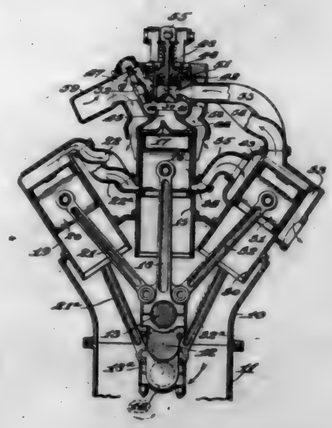
1,541,204. MARINE VESSEL. BENJAMIN FRANKLIN WRIGHT, Elk Hill, Va. Filed Mar. 3, 1924. Serial No. 696,576. 9 Claims. (Cl. 115—16.)

1. In a marine vessel, a hull having a bow front wall inclining downwardly and rearwardly and merging gradually with the bottom of the hull, a casing on the front wall of the hull forming a chamber having the width of the vessel, said chamber being open at its front end and at its lower rear end, and an inclined pro-



pelling means located within said chamber and adapted to drive the water therein downwardly and rearwardly, as and for the purposes set forth.

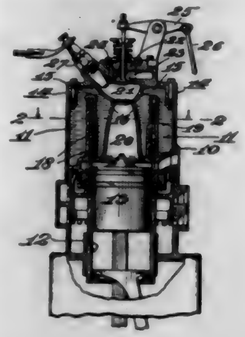
1,541,205. SUPERHEATER. JOHN E. BELL, Brooklyn, N. Y., assignor to Power Specialty Company, New York, N. Y., a Corporation of New York. Filed June 17, 1919. Serial No. 304,775. 2 Claims. (Cl. 122—485.)



1. The combination with the furnace of a separately fired superheater divided into two compartments, of a superheater constituting a part of the partition wall between the two compartments and the surface of which is adapted to withstand and absorb radiant heat in the fire chamber, in an amount to substantially lower the temperature in said chamber, and an ordinary superheater located in the other compartment through which the hot gases pass from the first compartment or fire chamber, and connections between the two superheaters through which the steam passes from one to the other superheater.

1,541,206. HOLLOW-TILE MACHINE. ARTHUR J. BRUCE, Hollywood, Calif., assignor, by direct and meane assignments, to National Gypsum Products Company, a Corporation of California. Filed June 5, 1923. Serial No. 643,532. 7 Claims. (Cl. 25—99.)

1. In a tile machine, molds having bottoms hinged together to form a continuous belt; and pulleys around which the belt is trained, one of said pulleys having a crowned support adapted to bow up the bottoms of said molds as they pass over such pulleys.



1,541,207. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Co., Los Angeles, Calif., a Voluntary Trust. Filed Apr. 2, 1923. Serial No. 629,296. 4 Claims. (Cl. 123—55.)

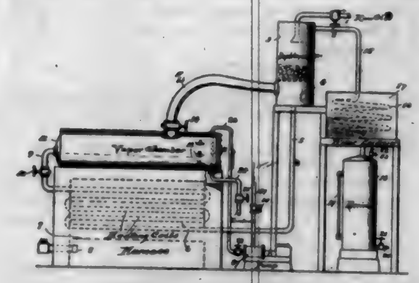
1. An internal combustion engine having six cylinders arranged in two rows of three cylinders each and the individual cylinders of each row being radially disposed, a crank shaft having a fixed direction of rotation, the two first cylinders of each row in the direction of crank rotation being adapted to the function of pumping an inert scavenging and cooling volume, the two second cylinders of each row in the direction of crank rotation being adapted for internal combustion, the two third cylinders of each row in the direction of crank rotation being adapted to the function of gaseous fuel pumping, the first cylinder of each row in the direction of crank rotation functioning to provide the inert volume to the second cylinder of the other row, the third cylinder of each row in the direction of crank rotation functioning to pump the gaseous fuel to the second cylinder of the opposite row, means for supplying an inert volume to the inert volume pumping cylinders, means for supplying gaseous fuel to the gaseous fuel pumping cylinders, cross ducts from the inert volume pumping cylinders to ports that are located in the lower portions of the combustion cylinders, and ports which are uncovered and open only when the pistons in the combustion chambers are at the outer ends of their travel, cross ducts from the gaseous fuel pumping cylinders to the combustion cylinders and ignition means within said combustion cylinders.

1,541,208. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Co., Los Angeles, Calif., a Voluntary Trust. Filed Sept. 13, 1923. Serial No. 662,415. 2 Claims. (Cl. 123—178.)

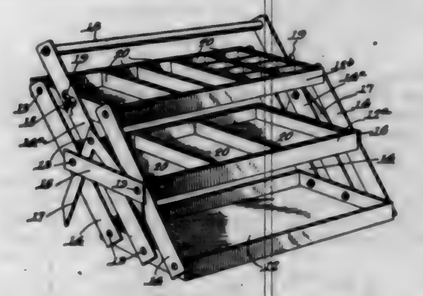
1. In an internal combustion engine, the combination, with a combustion cylinder and a sleeve valve arranged for operation therein, of an inverted cylinder head secured to said cylinder and extending downwardly into the upper portion of said sleeve valve, the lower portion of said cylinder head having a compression clearance chamber, the lower portion of which gradually enlarges to the same diameter as the internal diameter of the sleeve valve, the upper portion of said cylinder head having a charge localization pocket that communicates with the upper portion of the compression clearance chamber by a Venturi passage, a centrally located poppet valve arranged in the upper portion of

said head for admitting gaseous fuel into the charge localization chamber, and ignition means projecting into said charge localization pocket.

1,541,209. ILLUMINATED GEAR-SHIFT LEVER BALL FOR MOTOR VEHICLES. BOYD COTTEN and MALCOLM L. LANDESS, Dallas, Tex., assignors of one-third to Jack Browder, Dallas, Tex. Filed Dec. 30, 1924. Serial No. 758,812. 2 Claims. (Cl. 240—7.)



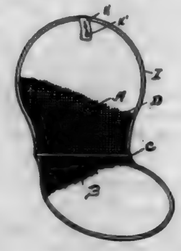
1. An illuminated gear shaft lever ball for motor vehicles, in combination with the lever, comprising a threaded tubular member screwed onto the lever, a hollow ball of translucent material removably secured to the tubular member, an insulating plug seated in the tubular member and carrying a pin under spring tension, the pin connected to a wire leading to an electric battery, an electric light globe in the ball and adapted to be advanced upon the pin and means for locking the globe in electric contact with the battery.



1,541,210. APPARATUS FOR DISTILLING LIQUIDS. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Aug. 12, 1920. Serial No. 403,077. 2 Claims. (Cl. 196—137.)

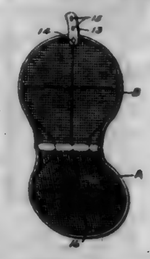
2. In an apparatus for distilling hydrocarbon oils, the combination with a heating means where the oil is heated to a vaporizing temperature, of a vapor chamber in communication therewith, a vapor discharge line

from said chamber, a residual discharge leading therefrom, and an injector nozzle disposed within said chamber and terminating at the entrance of the residual discharge, and means for feeding liquid oil through said nozzle to maintain the discharge from the vapor chamber free of residual carbon.



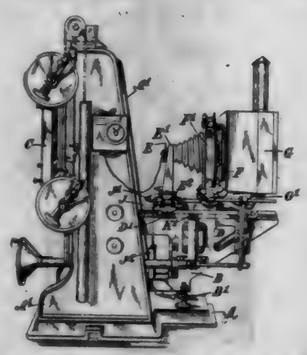
1,541,211. TOOL RECEPTACLE OR CARRIER. LEWIS E. FORD, Salamanca, N. Y. Filed Nov. 22, 1923. Serial No. 676,337. 5 Claims. (Cl. 224—48.)

5. A receptacle, for tools or the like, comprising a plurality of trays, one above the other, a plurality of uprights at each end of the receptacle to which said trays are loosely jointed, the central one of these uprights at each end of the receptacle being extended above the uppermost tray, a cross-bar connecting the upward extensions of said uprights and serving as a handle for lifting and carrying the receptacle, and members attached to the outsides of the ends of said receptacle and adapted to serve as stops to limit the sidewise or inclined adjustment of the receptacle when inclined in either direction.



1,541,212. COOL CUSHION AND SEAT. ERSKINE POLK HARLEY, Oklahoma City, Okla. Filed June 27, 1922. Serial No. 571,132. 3 Claims. (Cl. 155—131.)

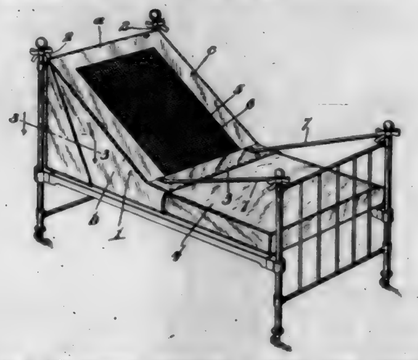
1. An article of manufacture comprising an enclosed member, a convoluted member within the enclosing member to hold the enclosing member distended and means separate and independent of the convoluted mem-



ber circumscribing the convoluted member within the enclosing member to give stability to the structure.

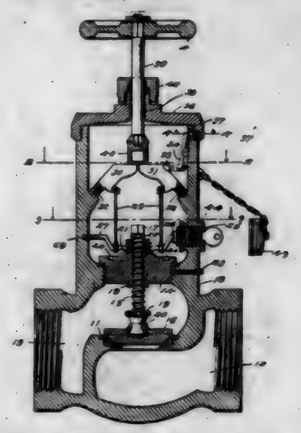
1,541,213. SEAT CUSHION. ERSKINE P. HARLEY, Oklahoma City, Okla. Filed Dec. 11, 1922. Serial No. 606,063. 12 Claims. (Cl. 155—131.)

1. An article of manufacture comprising a convoluted coil spring member having its convolutions positioned in a common plane, an enclosure for said member held distended by said element and transversely disposed means cooperating with oppositely disposed parts of the enclosure for maintaining the enclosure in engagement with the convoluted member.



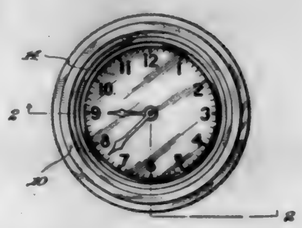
1,541,214. PHOTOGRAPHIC COPYING, ENLARGING, AND REDUCING APPARATUS. ROBERT HARRIS, London, England, assignor of one-half to Pictorial Machinery Limited, London, England, a British Company. Filed Apr. 1, 1924. Serial No. 703,418. 3 Claims. (Cl. 88—24.)

1. In a step-and-repeat machine, the combination of a fixed framework, a unit holder, a lens holder and an image screen mounted thereon, one of which components is fixed and the other two arranged to be movable rela-



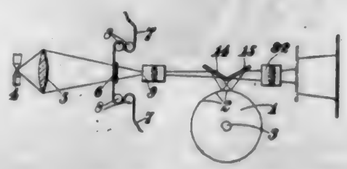
tively thereto, and automatic means whereby the movement of the one movable component so automatically controls the movement of the second movable component as to maintain an image in correct focus on the screen, which means comprises a toothed rack on the framework, a cam rotatably carried by one movable component, a pinion operatively connected with said cam and meshing with said rack, and means for maintaining the second movable component in contact with said cam, the teeth of which pinion and rack are arranged at such an angle to the axis of rotation of the cam that the "normal" pitch is a "standard" pitch.

1,541,215. BED CANOPY. MABEL J. HASTINGS, Loma Portal, Calif. Filed Nov. 13, 1922. Serial No. 600,709. 3 Claims. (Cl. 135—5.1.)



1. A bed canopy comprising a fabric sheet, flexible tie members secured to the sheet intermediate the ends thereof, the end portion of the sheet outwardly of said tie members constituting a back wall, the side portions of the sheet outwardly of said members constituting side walls, the opposite end portion of the sheet being provided with a window, and a reticulated fabric disposed over said window.

1,541,216. LOCK VALVE. VIRGIL J. HENDRICKS, Minneapolis, Kans., assignor to George E. Hendricks, Salina, Kans. Filed May 17, 1924. Serial No. 714,053. 7 Claims. (Cl. 251—20.)



7. A locking valve comprising a casing, a cover for the casing, latch means for said cover, a valve within said casing, a detachable partition member supporting said valve, detachable valve operating means carried by said cover, pivoted stop plates adapted to be interposed between said valve and said detachable valve operating means, means carried by one of said pivoted stop plates to operate the latch means for the cover when said stop plates are shifted to their position between the valve and valve operating means; and a rock shaft having connection with said pivoted stop plates to shift the same to and from their position between the valve and valve operating means.

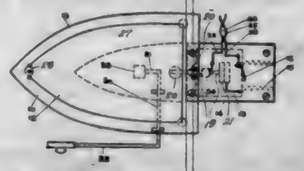
1,541,217. BEZEL. FREDERICK C. HEBBERMANN, Mount Vernon, N. Y., assignor to Phinney-Walker Company, New York, N. Y., a Corporation. Filed Jan. 5, 1925. Serial No. 627. 4 Claims. (Cl. 58—46.)

1. The combination with inner and outer clock casings, of a bezel screwed into the inside of the front end of the inner casing and having an outwardly extending portion forming a lap joint with the outer casing.

1,541,218. CINEMATOGRAPHIC APPARATUS. KINGSLEY HIGGINSON, London, England, assignor to Carey-Gavey Syndicate Limited, London, England, a British Company. Filed May 2, 1922. Serial No. 557,837. 6 Claims. (Cl. 88—16.8.)

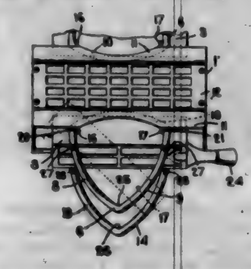
1. In cinematograph apparatus of the character described, the combination of a cinematograph projector wherein the film is moved continuously through the gate, and a rotatable mirror having an external surface of regular polygonal form constituted by a plurality of rectangular mirrors arranged side by side and having each its plane parallel to the axis of rotation of the mirror, which mirror is so disposed as to intercept the beam from the projector along a line other than a radial line of the mirror and reflect the beam towards a screen, the optical refracting system constituting the objective lens of said projector being constructed to have its focal length adjustable within limits less than 10% above and below its normal value and arranged to be moved for focusing purposes toward and away from the gate.

1,541,219. TYPEWRITING MACHINE. JOSEPH B. HOLDEN, Syracuse, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Oct. 9, 1924. Serial No. 742,528. 21 Claims. (Cl. 197—198.)



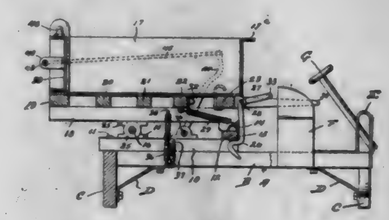
1. In a typewriting or like machine, the combination of a carriage, printing keys, a lock therefor, a key operative to release the carriage from restraint of its feed mechanism, and means controlled by said key for actuating said lock.

1,541,220. ANTISLIP MATERIAL. OTIS HUTCHINS, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed June 28, 1922. Serial No. 571,571. 5 Claims. (Cl. 106—7.5.)



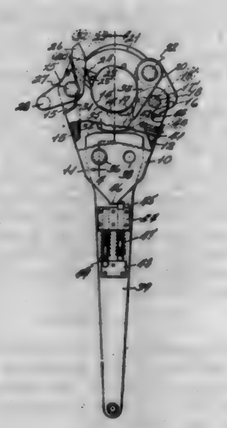
2. An antislip floor or tread surface having cement with fragments embedded therein, said fragments being broken portions of fused alumina masses having a porosity of at least 25 per cent.

1,541,221. COMBINED SUPPORT AND CONTROL DEVICE FOR ELECTRIC IRONS. JOHN F. JOHNSON, Baltimore, Md. Filed July 7, 1924. Serial No. 724,629. 6 Claims. (Cl. 219—25.)



1. In a device of the character described, a base, an iron supporting member pivoted thereon, a switch operatively connected with the member whereby to be opened upon downward movement thereof, and manually movable means for holding said member against downward movement.

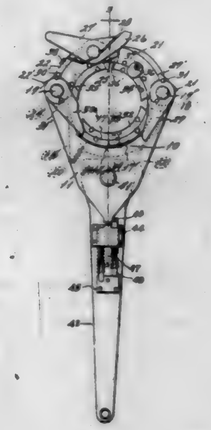
1,541,222. ELECTRIC TOASTER. CHARLES F. JONES, Newton Highlands, Mass. Filed Dec. 1, 1924. Serial No. 753,088. 2 Claims. (Cl. 53—5.)



1. In an electric toaster, the combination with a frame supporting the heating element, of two skeleton guiding members extending laterally from the frame, each guiding member having a triangular shape with each side curved on an arc struck from the opposite apex, a toast holder situated between the guiding members and having two pivot pins extending from its upper edge into the upper guiding member and two pivot pins extending from its lower edge into the lower guiding member, the distance between the pivot pins of each pair being substantially the same as the radius of the arc on which each side of the guiding member is formed, whereby the toast holder may be reversed by swinging it first about the pivot pins adjacent one edge and then about the pivot pins adjacent the other edge.

1,541,223. WAGON OR TRUCK DUMPING BODY. ALLEN A. JUELFS and ALBERT JUELFS, McPherson, Kans. Filed Apr. 7, 1923. Serial No. 630,482. 7 Claims. (Cl. 298—23.)

1. In a dumping vehicle, a stationary frame, a frame pivotally mounted thereon and carrying a body having a pivoted end gate, a hand lever pivoted on one side of the movable frame, a rock shaft journaled at the forward end of the movable frame and terminating in a latch, a keeper on the stationary frame cooperating with said latch to hold the body in normal position, an arm on said rock shaft in the path of travel of said lever, arms pivoted on the stationary frame and connected with the end gate, and means on the movable frame engageable with said arm when tilted whereby to open said end gate.

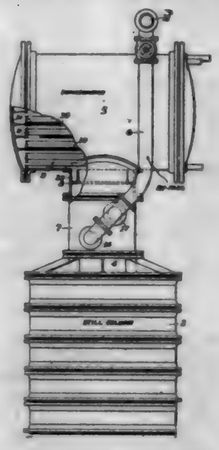


1,541,224. WRENCH. JOSEPH W. KAOUGH, Dallas, Tex., assignor to The Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed Nov. 8, 1923. Serial No. 673,608. 9 Claims. (Cl. 81—66.)

1. In a wrench, a head having a seat, a gripping jaw pivoted to the head and swinging relatively of said seat, a clamping jaw pivoted to the gripping jaw and swung

thereon, fingers carried by the clamping jaw for closing the latter, means carried by the head for fastening the clamping jaw in its closed position, a cam mounted in the head and eccentrically engaging the gripping jaw for displacing the same into clamping engagement with a pipe or the like, and a handle mounted in the head and connected with the cam.

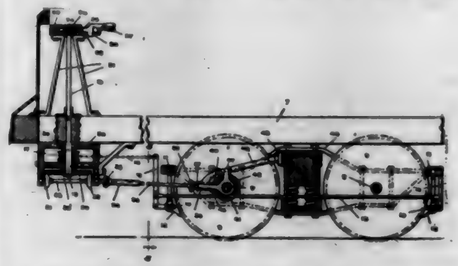
1,541,225. WRENCH. JOSEPH W. KAOUGH, Dallas, Tex., assignor to The Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed Nov. 8, 1923. Serial No. 673,610. 8 Claims. (Cl. 81—66.)



1. In a wrench, a head having a seat, a gripping jaw pivoted in the head, means for displacing the gripping jaw into gripping position, a pair of clamping jaws hinged to the head and co-acting with the gripping jaw, and jaw closing fingers detachably connected with one of the clamping jaws.

1,541,226. COUMARONE-INDENE RESINS AND PROCESS OF MAKING THE SAME. HARRY CLIFFORD KARNS, Philadelphia, Pa., assignor, by mesne assignments, to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 10, 1917. Serial No. 185,453. 26 Claims. (Cl. 260—7.)

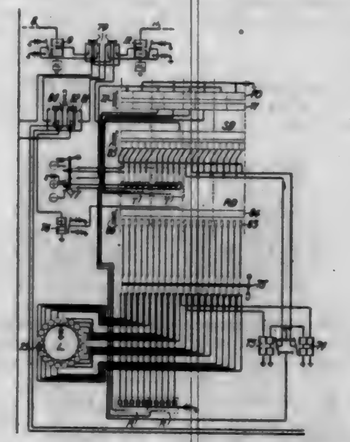
8. A process of producing a resinous material which comprises treating, with 0.1% to 1.0% of its weight of sulfuric acid, a naphtha distillate of coal tar containing oils distilling up to approximately 200° C., to convert unsaturated hydrocarbons into substances readily separable from the oil by distillation, distilling the treated oil and subjecting the distillate to the action of aluminum chloride in an amount of from 0.25% to 1.25% of the weight of the distillate to polymerize resin-forming constituents of said distillate.



1,541,227. DISTILLATION APPARATUS. RAYMOND M. KELLY, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 7, 1920. Serial No. 401,832. 5 Claims. (Cl. 196—100.)

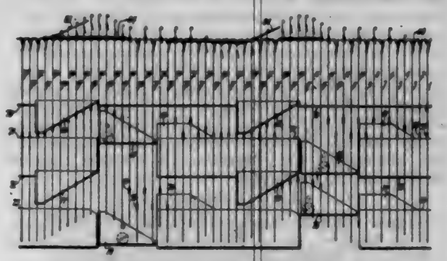
1. A distillation apparatus comprising a still column, a dephlegmator provided with means for circulating a cooling medium therethrough, a dephlegmator bypass, a removable section between the still column and dephlegmator serving to support the dephlegmator on the still column, a partition extending transversely in said section dividing the interior thereof into independent chambers, and pipe connections to the removable section for con-

ducting the vapors from the still column either around the partition into the dephlegmator or into the dephlegmator bypass, substantially as described.



1,541,228. AUTOMATIC BRAKE. CHARLES P. LANCASTER, Three Rivers, Mich., assignor of one-half to Ester T. Griffin, Three Rivers, Mich. Filed Oct. 13, 1923. Serial No. 668,328. 2 Claims. (Cl. 188—145.)

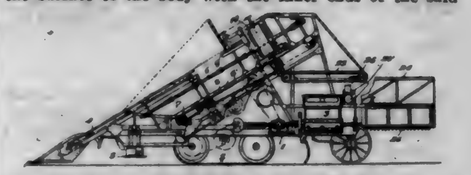
1. The combination in a vehicle, of a wheel, brake means for retarding the motion of said wheel, a frame, a vertical shaft slidable vertically in said frame and prevented from turning, a sleeve rotatable in said frame and on said shaft and movable vertically with said shaft, a friction wheel rotatable about a horizontal axis simultaneously with the rotation of the first named wheel, a friction wheel carried by said sleeve to bear on the aforesaid friction wheel, a drum on said sleeve, a flexible element to be wound on the drum and connected to the brake means for applying it, a stand, a nut mounted for turning movement in the stand and screw-threaded on said shaft, and a handle connected to said nut.



1,541,229. AUTOMATIC TELEGRAPH SYSTEM. GEORGE A. LOCKE, Glen Cove, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 23, 1922. Serial No. 602,724. 4 Claims. (Cl. 178—53.)

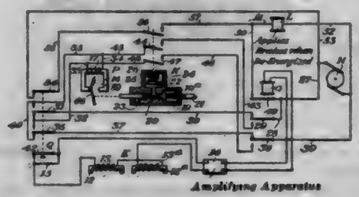
1. In a telegraph system, a plurality of terminal stations, a plurality of repeating stations intermediate said terminal stations, continuously operated distributors at each of said stations, means for transmitting a predetermined signal from one of said stations to one of said repeating stations, means at said repeating station for repeating said signal to the adjoining line section and thence to said other repeating and terminal stations,

mechanism at each of said stations responsive to said predetermined signal for indicating directly the amount of line lag, and means at each of said stations for compensating for said line lag in accordance with the indication given by said mechanism.



1,541,230. KNITTING MACHINE. VINCENT LOMBARDI, Brooklyn, N. Y. Filed Dec. 18, 1922. Serial No. 607,554. 22 Claims. (Cl. 66—21.)

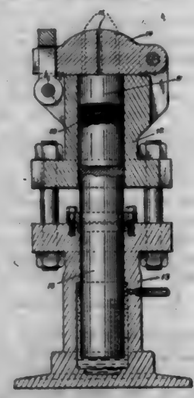
20. In an independent needle machine for combining a plurality of independent yarns into a fabric, in combination, a row of knitting units, each comprising a yarn receiving member and a latch, and means including said yarn receiving members and said latches to manipulate said yarns to produce a fabric wherein each yarn presents a looped portion and an unlooped portion, the unlooped portion of each yarn extending along the back of a section of the fabric wherein the looped portions of certain other of the yarns are interknit and being interlocked between the loops of adjacent rows in certain of the wales thereof.



1,541,231. STRIPPER FOR CANE HARVESTERS AND THE LIKE. GEORGE D. LUCE, Watertown, Wis., assignor to Luce Cane Harvester Corporation, New York, N. Y., a Corporation of Delaware. Original application filed May 12, 1919, Serial No. 296,539. Divided and this application filed July 13, 1920. Serial No. 396,004. 33 Claims. (Cl. 130—31.)

3. In a cane stripper of the character described, a stripping brush comprising a body, wire fingers projecting therefrom formed into spring coils pivoted adjacent to the surface of the body with the inner ends of the said

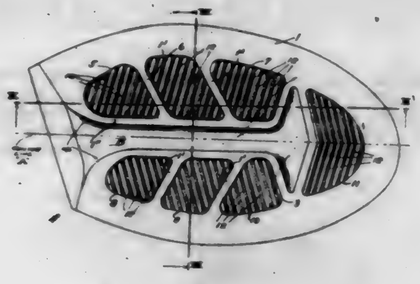
fingers free to move through an angle within the body, and rods carried by the surface of the body and extending through the coils for securing the fingers to the body.



1,541,232. RAILWAY TRAFFIC-CONTROLLING APPARATUS. RONALD A. MCCANN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 14, 1925. Serial No. 15,647. 5 Claims. (Cl. 246—63.)

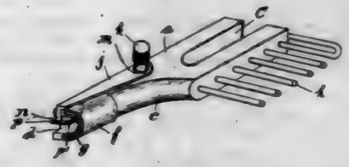
Amplifying Apparatus

1. In combination, a stretch of railway track having positive control territory equipped with primary means for supplying train controlling energy to trains and non-positive control territory not so equipped, auxiliary means located at the entrance to said non-positive control territory for supplying an excess of energy to trains, a first relay on a train for receiving energy from the trackway, a polarized controller controlled by said first train relay, and means on the train including said first relay and said polarized controller and responsive to energy from said auxiliary means but not to energy from said primary means for conditioning the train to proceed through said non-positive control territory without interruption.



1,541,233. PREPARATIONS OF LAMPBLACK FOR USE IN COMPOUNDING RUBBER. WILLIAM W. MCMAHAN, Detroit, Mich., assignor to Morgan & Wright, a Corporation of Michigan. Filed Nov. 3, 1916. Serial No. 129,290. 2 Claims. (Cl. 100—57.)

1. A process for transforming finely divided carbon from a light, fluffy, powder condition to a solid block which comprises, subjecting the carbon as such being



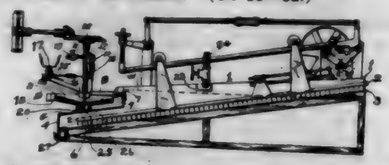
treated upon all sides to a high pressure, while simultaneously venting the mass to permit the pressure to force the air therefrom through the vent until cohesion is produced between the particles and a permanent block formed.

1,541,234. ANTISLIP SHOE SOLE. HARRY ALFRED MCKNIGHT and FRANK ELLIS BURNS, San Francisco, Calif. Filed Feb. 20, 1924. Serial No. 694,046. 3 Claims. (Cl. 36—59.)

1. A sole formed of elastic material and including a longitudinal channel closed at its front end, open at its rear and provided with parallel sides and a connecting web, the latter forming an integral part of the sole.

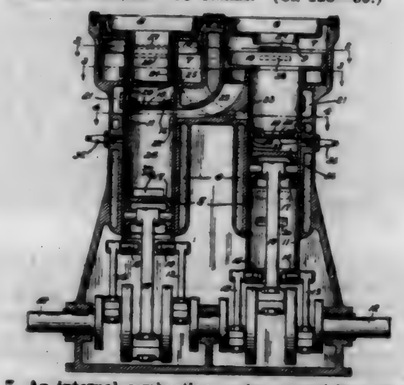
1,541,235. SEWING-MACHINE BINDER GUIDE. CHARLES H. SANBORN, Newburyport, Mass. Filed June 30, 1924. Serial No. 723,173. 5 Claims. (Cl. 112—138.)

5. A sewing machine binder guide comprising an arm having a transversely concave groove therein arranged to extend horizontally transversely of the end thereof in the direction of the sewing machine feed, and having means whereby a strip of galloon will be folded longitudinally as it is drawn therethrough, an edge gage mounted on said arm arranged to depend into said grovce in position to engage and guide the uppermost edge of the galloon as it is drawn through said groove, and a foot piece on the lower end of said edge gage having a face on its under side for engagement with the material to which the galloon is to be attached and having a portion projecting towards the bottom of the groove from the inner side of said edge gage to support the upper edge portion of the galleon while engaged by said edge gage.



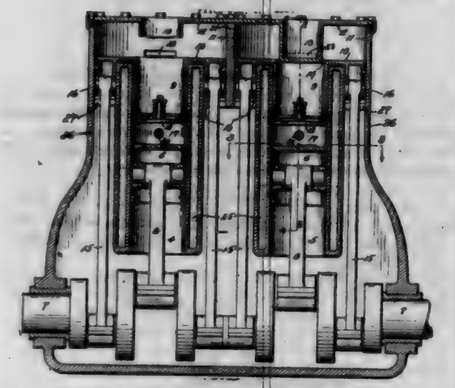
1,541,236. PROTECTOR FOR FANS AND THE LIKE. BRUNO SCHMELZER, Jersey City, N. J. Filed July 23, 1924. Serial No. 727,837. 3 Claims. (Cl. 230—1.)

1. In a device of the class described, a casing comprising a circular wire frame or disc and a plurality of rear supports each dished rearwardly and extending from the casing rim to the spindle of the fan in a single curved line to conform to the arc or contour of the surface of a fan blade but spaced therefrom to provide, by the rearwardly extending supports lying in and parallel with



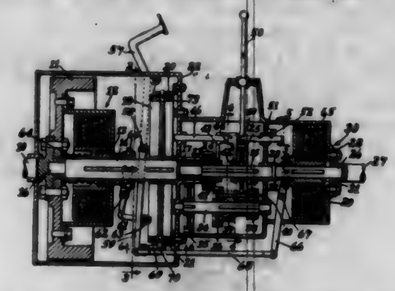
the path of the entering air, a free and unobstructed channel for the air of practically equal width throughout its length before it is deflected by the rotation of the fan.

1,541,237. CLOSED-CIRCUIT CLASSIFIER. ROLLAND S. TROTT, Denver, Colo. Filed Dec. 24, 1923. Serial No. 682,540. 35 Claims. (Cl. 83—82.)



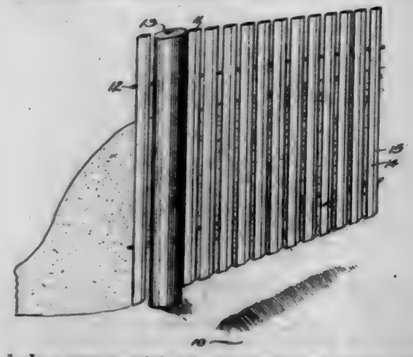
1. A classifier unit, comprising in combination, a thickener and a classifier, each provided with an overflow, the classifier having an outlet above its liquid level, a device for moving settled material to said outlet and an aperture below its liquid level, the thickener having a bottom surface adapted to receive settling material, and being provided with a discharge orifice and with a device for moving settled material toward said orifice, means joining the thickener and the classifier so that said orifice registers with said aperture, means for feeding material to the thickener, means for feeding a liquid to the classifier, and means for conveying the overflow from the classifier to the thickener.

1,541,238. INTERNAL-COMBUSTION ENGINE. JEAN A. H. BARKEIJ, Los Angeles, Calif. Filed Dec. 5, 1923. Serial No. 678,624. 13 Claims. (Cl. 123—59.)



7. An internal combustion engine comprising; an adjacent pair of counterbored cylinders; compression pistons within the counterbores, having tubular trunks within the respective cylinders; power pistons within the trunks; and means for intermittently connecting one side of each compression piston to the inner end of its trunk, and the other side to the inner end of the adjacent trunk; said trunks and the respective power pistons being adapted for reciprocating oppositely.

1,541,239. INTERNAL-COMBUSTION ENGINE. JEAN A. H. BARKEIJ, Los Angeles, Calif. Filed Jan. 15, 1924. Serial No. 686,320. 6 Claims. (Cl. 123—51.)



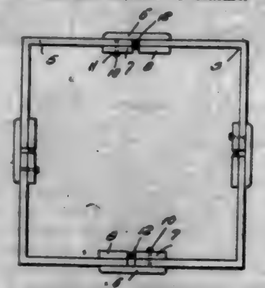
1. An internal combustion engine comprising; an adjacent pair of cylinders with power pistons therein, and directly intercommunicating counterbores; a pair of differential pistons opposed the power pistons adapted for compressing explosive mixture in said counterbores; and means for introducing and firing the thus compressed explosive mixture between said power and compression pistons; said power pistons being adapted for reciprocating in the same direction, and oppositely the compression pistons.

1,541,240. POWER TRANSMISSION. JEAN A. H. BARKEIJ, Long Beach, Calif. Filed May 19, 1924. Serial No. 714,365. 8 Claims. (Cl. 74—107.)

1. In combination with an automobile engine, a power transmission comprising a gear set, a front clutch between the driving shaft and said gear set, a brake between said front clutch and said gear set, a rear clutch between said gear set and the driven shaft, means for operating said front and rear clutches simultaneously to release said gear set from both the driving and driven shafts, said means serving to operate the brake immediately after such release to stop the gear set, and means for shifting the movable gears in said gear set while the fixed gears thereof are held from turning by said brake, said movable gears being caused by the friction in said rear clutch, to turn slowly as they pass through their neutral positions into their new engaging positions.

1,541,241. SNOW FENCE. HECTOR M. BAXTER, Battle Creek, Iowa. Filed July 1, 1924. Serial No. 723,462. 3 Claims. (Cl. 256—1.)

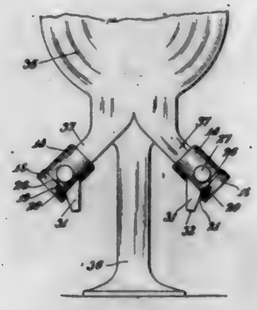
1. In a snow retaining fence, a series of spaced upright slats, each slat being substantially parallelogram-shaped in cross section, the lateral faces of the slats being inclined relative to the front and rear faces, the slats being so spaced that a plane passing through an acute corner of one slat perpendicular to the lateral faces of the slat will intersect the adjacent acute corner of an adjacent slat.



1,541,242. OIL MIXTURE FOR USE IN TREATING PETROLEUM-OIL MATERIAL. HOMER BEHM, Tulsa, Okla., assignor to The American Patent Rights Corporation, Dover, Del., a Corporation of Delaware. Filed Jan. 9, 1923. Serial No. 611,663. 4 Claims. (Cl. 196—1.)

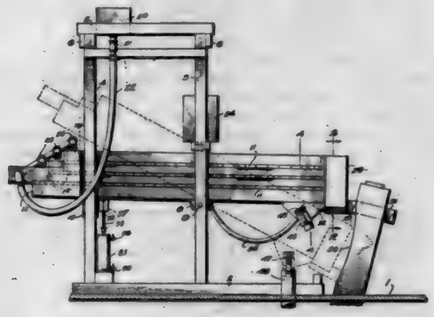
2. A liquid composition for use in treating oils, composed of a mineral oil material, and the reaction products of lime, rosin, formaldehyde and ammonia.

1,541,243. METHOD OF PRODUCING DECOMPOSED OIL MATERIAL. HOMER BEHM, Tulsa, Okla., assignor to The American Patent Rights Corporation, Dover, Del., a Corporation of Delaware. Filed May 9, 1923. Serial No. 637,890. 8 Claims. (Cl. 196—1.)



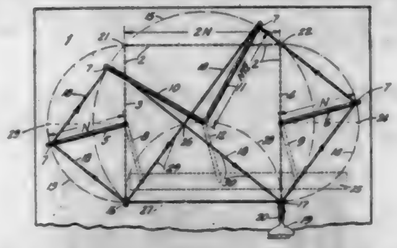
1. A process of making a decomposed oil which comprises reacting upon a solid acid material in a finely divided state, with an alkali material, while both are in a hydrocarbon oil being treated, adding ammonia and an aldehyde material, allowing to stand for at least several hours for the reaction to go on, and blending the product with a terpene oil.

1,541,244. FORM FOR CONCRETE CONSTRUCTION. WILLIAM WHITFIELD BENSON, Chipley, Ga. Filed Apr. 16, 1925. Serial No. 28,731. 3 Claims. (Cl. 25—121.)



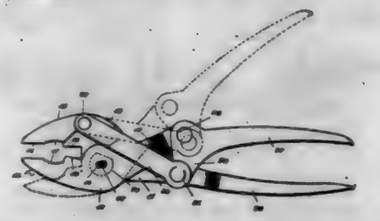
1. A form of the class described including a plurality of segments, the adjacent ends of said segments having spring means therebetween for normally holding them separated and allowing them to contract toward each other, and means for loosely holding the sections together.

1,541,245. SANITARY SUGAR DISPENSER. LEOPOLD BORNFREUND, New York, N. Y. Filed Jan. 14, 1924. Serial No. 685,988. 1 Claim. (Cl. 221—106.)



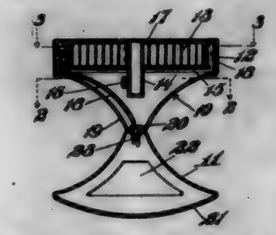
In a sugar dispenser of the class described, a container, angular outturned necks on said container, heads on said necks in communicatin with said container, each of said heads having a curved spout and a closing cap, a hollow sphere having a cut-away part forming a valve seat, a spindle within said head on which said sphere is mounted, a stud in said cap, a U-shaped bracket element mounted on said stud, and constituting a bearing for said spindle, a coiled compression spring wound about said stud for holding said sphere normally with its seat against the neck, and means for rotating said spindle to dispense a predetermined amount of sugar determined by the size of said sphere through said spout.

1,541,246. SLIME CONCENTRATOR. SAMUEL H. BOYLAN, Joplin, Mo. Filed Sept. 23, 1922. Serial No. 590,105. 4 Claims. (Cl. 83—89.)



1. In a device of the character described, a pivotally mounted table, a plurality of decks mounted on said table substantially parallel to each other, said decks being provided with fabric surfaces, said table being provided with an inlet and an outlet for the introduction and discharge of material to be concentrated and being normally inclined downwardly toward said outlet, a pair of discharge members arranged adjacent said outlet end of the table, one of said discharge members being arranged above the other, said upper discharge member forming a substantial continuation of said outlet and normally communicating therewith, and means for tipping said table at intervals to bring the outlet end into communication with said lower discharge member.

1,541,247. MATHEMATICAL MODEL. MAURICE R. BROWN, Amsterdam, N. Y. Filed July 30, 1924. Serial No. 729,195. 12 Claims. (Cl. 35—2.)

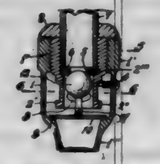


1. A mathematical model comprising flexible means forming the legs of a right triangle and two squares; a side of each square forming a leg of said triangle; and means for varying the sizes of the squares.

1,541,248. PLIERS. ELMER R. CARLSON, Galva, Ill. Filed May 17, 1924. Serial No. 713,988. 5 Claims. (Cl. 294—43.)

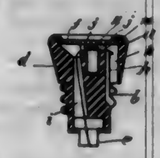
1. Pliers comprising crossing levers having a pivot joint at their point of crossing and cooperable jaws at one end, a handle pivoted to one of said levers, the other lever having a handle cooperable with the first-named handle to be grasped in the hand for moving said handles toward one another, said handles being at those extremities of the levers opposite to the jaws, and a link pivoted to the firstnamed handle and secondnamed lever with said link crossing, between its pivots, the first-named lever.

1,541,249. CUFF LINK. JAMES F. CONNOR, Cleveland, Ohio. Filed Oct. 25, 1924. Serial No. 745,907. 9 Claims. (Cl. 24—102.)



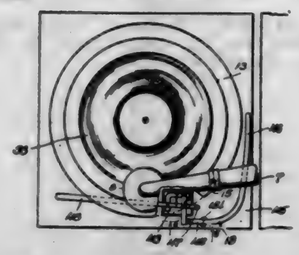
1. A cuff button comprising opposed studs, one of the studs being hollow and having a head at one end disposed in a plane at right angles to the axis of the stud, a spring-retracted drum rotatably mounted in the said hollow head and rotating concentrically to the axis of the stud, and a flexible element wound upon said drum and carried through the hollow stud and connected to the other stud, both of said studs toward their meeting ends being contracted to form relatively narrow abutting necks.

1,541,250. BOTTLE HOLDER. HERBERT CULP, Willoughby, Ohio. Filed May 14, 1924. Serial No. 713,261. 1 Claim. (Cl. 232—41.)



A receptacle for milk bottles comprising a box having an open upper end and adapted to receive a bottle upon the bottom thereof, a hinged cover for said box adapted to rest upon the bottom of a bottle when placed bottom-side-up in the box, whereby said hinged cover will be maintained open, said hinged cover having an inverted recess adapted to receive the neck of a bottle when placed in the box right end up, whereby said cover is permitted to close.

1,541,251. FAUCET AND SIMILAR DEVICE. ALEJANDRO DE BERNARD, Habana, Cuba. Filed May 5, 1924. Serial No. 711,217. 4 Claims. (Cl. 251—8.)

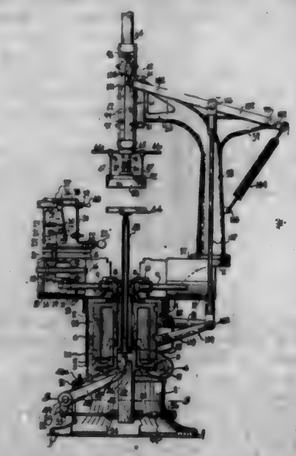


4. A valve device, comprising, a casing, a valve box within and screwed to the casing, the valve box having a projecting, smooth, bored extension limited by flanges, a supply pipe connected to the box, a valve seat at the end of the pipe, a spherical valve loosely positioned in the box, an apertured plate carried by the casing, a pusher arm on the plate in permanent engagement with the valve, screwing of the casing on the box moving the pusher arm to control opening and closing of the valve seat, and a screw in the casing projecting within the same against said smooth extension on the box to limit movement of the casing relative to the box by contact of the screw with said flanges.

1,541,252. ELECTRIC CUT-OUT. RICHARD DEDERER, Sindelfingen, Wurttemberg, Germany, assignor to William Luttgen, New York, N. Y. Filed Aug. 17, 1921. Serial No. 493,174. 8 Claims. (Cl. 200—121.)

1. A fuse plug comprising in combination, a body portion provided with a terminal at one end and a side terminal, said body portion having fuse receiving channels accessible from the outer end of said body portion and terminating at corresponding ones of said terminals, a fuse link extending through said channels and electrically connected to said terminals, indicating means within said body portion and controlled by said link, said indicating means being accessible from the outer end of said body portion, and a closure for the outer end of said body portion.

1,541,253. AUTOMATIC STOP FOR TALKING MACHINES. WILLIAM R. DUNCAN, Chicago, Ill. Filed Mar. 2, 1923. Serial No. 622,317. 11 Claims. (Cl. 192—122.)



1. A stop for phonographs having reproducers provided with floating weights, comprising a brake mechanism having a trip lever, a spring plunger for engagement with said lever, a catch for holding the plunger in raised position, a weight for actuating said catch, a second catch for holding the weight in raised position and means actuated by the floating weight of the reproducer, for tripping the last named catch.

1,541,254. RUNNING-BOARD SADDLE FOR BOX CARS. MATHEW ELONEN, Conneaut, Ohio. Filed Apr. 13, 1925. Serial No. 22,880. 5 Claims. (Cl. 105—457.)

1. In a device of the class described, a plurality of base portions articulated on each other, and upwardly projecting lugs on said base portions adapted to clamp running boards between them when said base portions are in position with their upper surface in a straight line.

1,541,255. BOX-COVERING MACHINE. THEODORE A. FEDERWITZ and WALTER T. BAILEY, Philadelphia, Pa., assignors to Stokes and Smith Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 12, 1924. Serial No. 705,990. 47 Claims. (Cl. 93—54.)

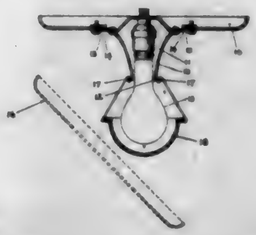
1. In a box-covering machine, a longitudinally movable hollow plunger, a second plunger within and mov-

able longitudinally with respect to said first named plunger, and a form block carried by said second named plunger.

1,541,256. SATCHEL. WALTER L. FRASER, San Diego, Calif. Filed Nov. 29, 1921. Serial No. 518,521. 3 Claims. (Cl. 190—44.)

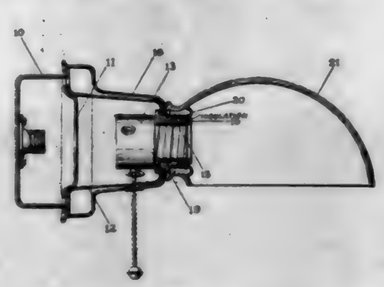
1. A satchel, comprising a flexible body portion, a pair of U-shaped frames hinged together at their free ends and attached in said flexible body portion below the top, a second pair of U-shaped frames hinged concentric with the first named U-shaped frames and attached to the top of said flexible body portion, said first and second U-shaped frames being mutually collapsible into each other to form the conventional sized satchel and extensible to enlarge said satchel and releasable means mounted on said U-shaped frames for separately securing the correspondingly hinged portions of said frames in mutually collapsed condition.

1,541,257. TREATING GREEN VEGETABLE FIBERS. EDGAR W. GRIESLER, Brooklyn, N. Y., assignor to R. H. Comey Brooklyn Company, Brooklyn, N. Y., a Corporation of New Jersey. Filed Mar. 7, 1925. Serial No. 13,858. 10 Claims. (Cl. 8—2.)



2. The process of preparing green vegetable fibers for bleaching or dyeing which comprises treating such fibers with activin.

1,541,258. SANITARY DRINKING JACKET FOR BOTTLES. WALTER GOTTLICH, Dallas, Tex. Filed Jan. 28, 1924. Serial No. 688,931. 2 Claims. (Cl. 215—100.)

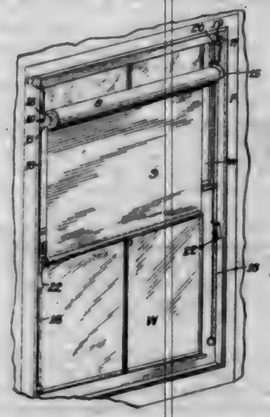


1. A sanitary mouth-guard adapted to be removably placed on a bottle neck, formed of water-proof paper and including a disk-shaped top adapted to rest on the bottle mouth, and a tubular wall adapted to surround the upper portion of the neck of a bottle, said top normally preventing the ready exit of the contents of the bottle and being provided with means to facilitate the tearing away of its central portion to furnish an indication that the guard has been used.

1,541,259. LIGHTING FIXTURE. EDWIN F. GUTH, St. Louis, Mo. Filed Feb. 23, 1923. Serial No. 620,785. 1 Claim. (Cl. 240—78.)

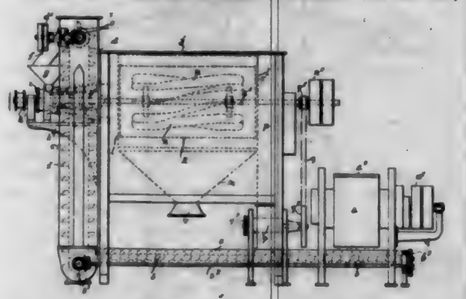
A lighting fixture comprising a reflecting canopy, a socket within the canopy, globe supports secured to the canopy, and a globe supported thereby, said canopy consisting of an outer annular part and a depending central part, said depending part containing a positioning flange fitting into the annular part on one end, and a flange carrying the globe supports on the other end, and being apertured for the reception of the light bulb.

1,541,260. SUPPORT FOR LIGHTING FIXTURES. EDWIN F. GUTH, St. Louis, Mo. Filed May 10, 1923. Serial No. 637,977. 2 Claims. (Cl. 20—85.)



1. A supporting means for a lighting fixture comprising a retaining member secured to the junction box, or wall, and protruding therefrom, said member being provided with an opening with a straight side, a socket with an insulating member to be attached thereto and a straight side on the insulating member to engage the straight side of the opening in the retaining member, a canopy to cover the retaining member, a shade to engage the canopy and a support for the shade to clamp it against the canopy, substanially as shown and described.

1,541,261. ADJUSTABLE SHADE-ROLLER-SUPPORTING MEANS. THOMAS F. HARRIS, New York, N. Y. Filed Sept. 7, 1923. Serial No. 661,373. 1 Claim. (Cl. 156—27.)

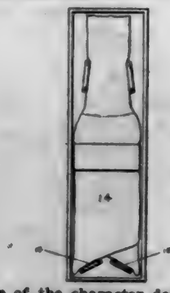


In adjustable shade roller supporting means, the combination of a shade roller having fixed and spring influenced trunnions each of which trunnions is arranged with a transverse reduced portion; plates having perforations of two different cross sectional dimensions for the insertion of the roller trunnions and the engagement of the reduced portion thereof to hold the shade roller and plates against displacement and said plate having an edge formed to tubular shape; flexible means connected at one end to said plates and the opposite ends passing through the tubular portion of the plates; brack-

ets over which the intermediate looped portion of said flexible means movably engage and guides for the

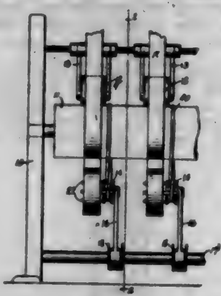
flexible means during the adjusting of the shade roller arranged with means for the engagement of said flexible means to retain the shade roller in adjusted position.

1,541,262. TREATMENT OF COCOA AND SIMILAR FOODSTUFFS. RONALD HEAD, Luton, and WILLIAM EDWARD PRESCOTT, London, England, assignors to Joseph Baker, Sons and Perkins Limited, London, England, a Company of Great Britain. Filed Mar. 17, 1921. Serial No. 453,092. 2 Claims. (Cl. 83—42.)



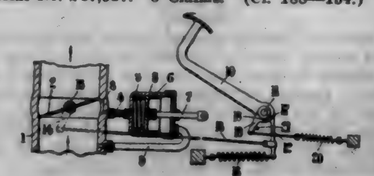
1. An apparatus for treating cocoa and similar food stuffs comprising a breaker in which the material is first reduced, a disintegrating mill embodying means for producing a current of air on the material under treatment, conveying means for transferring the material from the breaker to the disintegrating mill, a sifting device into which the material treated in the mill is delivered by said air current, means for grinding tailings from the sifting device, and means for delivering the said tailings back to the disintegrating mill for further treatment.

1,541,263. FOOD PRODUCT. CHARLES HOFFMAN, Tuckahoe, HARRY DAVETT GRIGSBY, Brooklyn, and NATHAN MINTON CRIDGE, New York, N. Y., assignors to Ward Baking Company, New York, N. Y., a Corporation of New York. Filed Oct. 1, 1921. Serial No. 504,698. 15 Claims. (Cl. 99—11.)



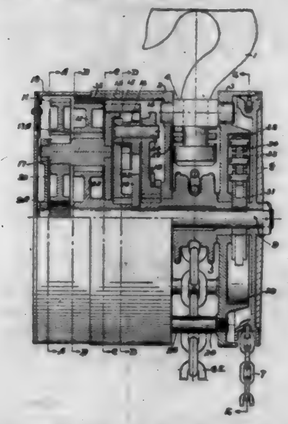
2. The method of producing a food product rich in water-soluble B vitamines from such raw materials as rice polishings, wheat bran, cereal germs, and the like, which comprises cooking the raw material until the starch present is gelatinized, and saccharifying the gelatinized starch by the action of malt diastase thereon; substantially as described.

1,541,264. HOSIERY BOX. GEORGE R. HOLLAND, Brooklyn, N. Y. Filed Oct. 6, 1920. Serial No. 416,068. 3 Claims. (Cl. 206—44.)



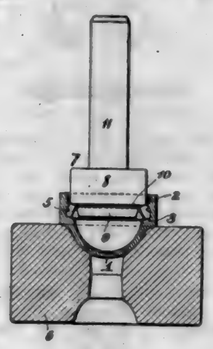
1. In a device of the character described, in combination, a box for enclosing hosiery having cut out and bent up from its bottom member two pairs of flaps, one pair of which is adapted to embrace therebetween an upper portion of hosiery position in the box and the other pair of which are positioned at an angle one with another and adapted to engage and support the lower ends of said hosiery, the said box comprising a paper member upon its bottom covering the openings left by said flaps.

1,541,265. NARROW-WARE LOOM. ELDRIDGE R. HOLMES, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed July 12, 1921. Serial No. 484,196. 10 Claims. (Cl. 139—310.)



10. In a narrow ware loom, in combination, a tube, a driven roll on which said tube is supported, said roll having an axially extending recess with a raised intermediate portion, and a resilient arm secured at one end in said recess and having its middle portion engaged by said raised portion, the free end of said arm having a spur yieldingly engaging said tube to drive the same.

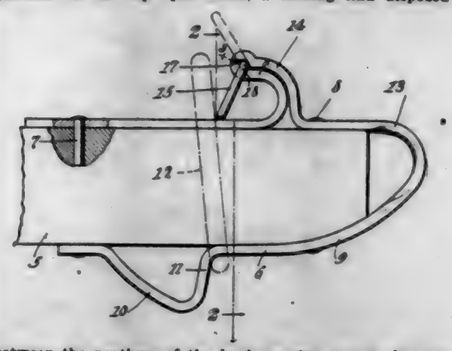
1,541,266. VACUUM-OPERATED BRAKE. WILLIAM O. KENNINGTON, London, England. Filed Nov. 5, 1924. Serial No. 747,917. 6 Claims. (Cl. 188—154.)



1. A vacuum operated brake mechanism for automobiles and like vehicles, comprising, the combination of the usual brake and throttle mechanism, and means operated by the suction of the engines to actuate the brake mechanism when the throttle is moved beyond what is normally the closed position.

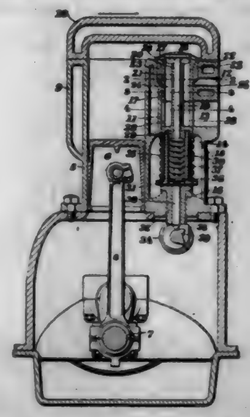
1,541,267. HOISTING BLOCK. JOHN W. KITTREDGE, Akron, Ohio. Filed Dec. 13, 1920. Serial No. 430,406. 19 Claims. (Cl. 254—171.)

1. In a hoisting block, a combination of driving elements so co-acting as to form a planetary gear drive, a second combination of driving elements co-acting in a different manner from the first combination so as to form a different planetary gear drive, and the said driving elements comprising a planetary gear train; said planetary gear train in combination with a frame, a driven wheel, a lifting line, a winding connection between the driven wheel and the lifting line, and means controlled by the load on the lifting line which shift the drive from one planetary gear drive to the other.



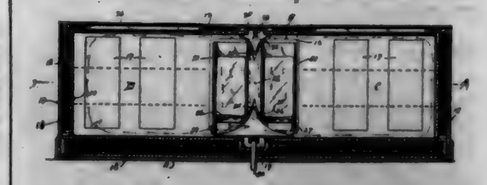
1,541,268. TOOL. FREDERICK K. LANDGRAF, Pittsburgh, Pa., assignor, by mesne assignments, to Flannery Bolt Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Jan. 24, 1921. Serial No. 439,507. 1 Claim. (Cl. 81—15.)

A tool for applying gaskets within hollow members having internal annular shoulders, comprising a body portion adapted to enter into the hollow member, said body having a tapering extension and an annular flattening shoulder at the juncture of said extension with said body portion, said shoulder providing a surface adapted to engage a gasket within the hollow member and press it flatly against the shoulder in the latter.



1,541,269. POLE CAP. WILLIAM J. MCFERRAN, Pierre, S. Dak. Filed Apr. 7, 1924. Serial No. 704,779. 4 Claims. (Cl. 278—51.)

1. A pole cap including a lower offset portion defining a shoulder to be engaged by a ring member of a neck yoke, an offset portion formed along the upper edge of the cap to provide a hook member, and formed by bending portions of the cap upon itself, a locking link disposed



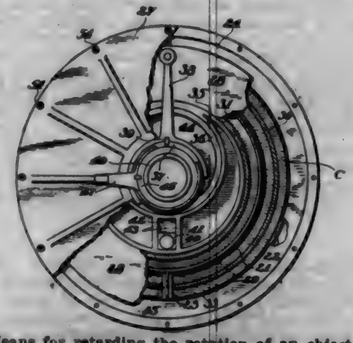
between the portions of the hook member, means for setting up a binding action between the hook member and link member, and said link member adapted to provide an abutment for a neck yoke ring supported on the cap.

1,541,270. INTERNAL-COMBUSTION ENGINE. CHARLES B. MEREDITH, Corning, N. Y., assignor of one-half to George W. Pratt, Corning, N. Y. Filed Apr. 27, 1923. Serial No. 634,979. 4 Claims. (Cl. 123—188.)

1. A valve structure for internal combustion engines comprising a tubular exhaust valve having radially extending fins, and an intake valve mounted in the exhaust valve and being surrounded by the fins.

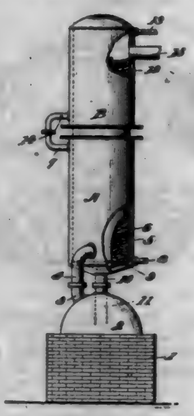
1,541,271. FREEZER CASE OR REFRIGERATOR. LOUIS B. MOORE, St. Louis, Mo. Filed Feb. 2, 1924. Serial No. 690,246. 3 Claims. (Cl. 62—87.)

2. In a refrigerator, a medially disposed ice chamber, a metallic ice container mounted within said chamber and formed to provide two compartments, the compartments being separated by an air space and the air space being bounded by end walls and the upper ends of the



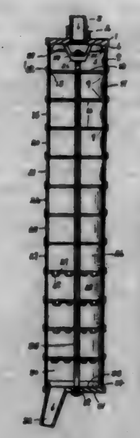
end walls having downwardly extending V-shaped cut-away portions and the lower ends of the walls having V-shaped cut-away portions, a deflector supported above the floor of the chest and V-shaped in cross section and having a length equal to the width of the two ice containers projecting upward into the cut-away portions of the end walls of the air space, a deflector V-shaped in cross section and having its ends disposed in the cut-away portions of the upper ends of the walls of the air passage, the last named deflector being hollow and having an opening at its lower end, the deflector having its end walls extending above the ice container and into proximity to the top of the ice chest, the remainder of the ice chest being divided into compartments for food open at the top and bottom, the deflectors acting to cause a circulation of air downward through the air space, laterally in opposite directions beneath the food compartments, upward through the food compartments, and back to the upper end of the air space, the top of the chest being provided with an opening immediately above the upper deflector, and a removable door normally disposed in said opening, a motor, and a fan operated by the motor and carried by said door and normally disposed between the two upwardly divergent walls of the upper deflector and acting to force air downward between the walls of the upper deflector into the upper end of the air space, and tracks extending transversely across the walls of the refrigerator disposed in proximity to said door, the ice container having walls engaging said tracks and the ice container being independently movable through the door opening.

1,541,272. GRAIN DOOR. JAMES LITTLE NEILSON, Winnipeg, Manitoba, Canada. Filed Sept. 25, 1923. Serial No. 664,727. 4 Claims. (Cl. 20—28.)



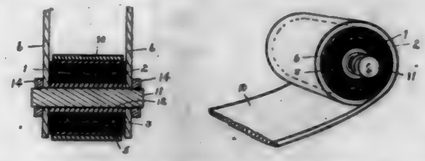
1. The combination with the door posts of a grain car, of a grain door formed from a pair of sections converging inwardly of the car and having their outer ends butted against the posts and their inner ends lapping, a vertical strip secured to the inner end of each section and abutting the adjacent end of the other section and means for releasably locking the lapped ends of the sections together.

1,541,273. FLUID BRAKE. HARVEY C. NUCKOLS, Long Beach, Calif. Filed Sept. 7, 1923. Serial No. 661,443. 15 Claims. (Cl. 188—90.)



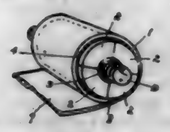
1. Means for retarding the rotation of an object, comprising a chamber for retaining a fluid and adapted to rotate with the object, means for dividing the space in the chamber so that continued rotation thereof will be resisted by the necessity for the fluid to pass from one part of the chamber into another part through a restricted connecting space.

1,541,274. PROCESS OF DISTILLATION. HARRY FRANKLIN PERKINS, Port Arthur, Tex. Filed Jan. 17, 1922. Serial No. 529,862. 5 Claims. (Cl. 196—93.)



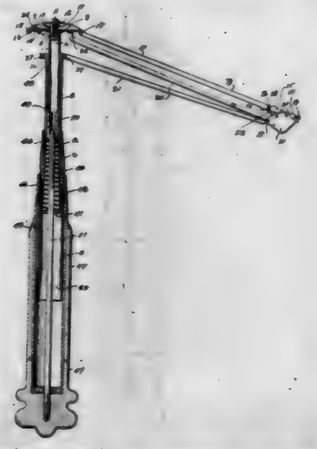
1. In the distillation of fractions or "cuts" of petroleum oils the process which comprises producing vapors of the oils to be distilled, transmitting said vapors in a tortuous pathway through a metallic packing of material freely conducting heat and positively maintained at the temperature near but somewhat above the end point of the cut to be made, then through a similar device maintained at a temperature within 6 degrees Fahrenheit of the end point of the cut to be made and finally condensing residual vapors to afford such cut.

1,541,275. MUFFLER. HERBERT SPENCER POWELL, New Hartford, N. Y. Filed June 6, 1923. Serial No. 643,771. 3 Claims. (Cl. 137—160.)



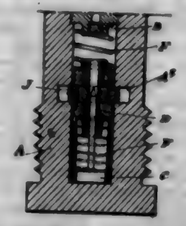
1. In a muffler for explosive engines built of a plurality of sections, a chamber for the expansion of the gases, said chamber being equipped with a plurality of sections having unperforated peripheral flat flanges for cooling the exhaust gases, said flanges forming central apertures for the passage of said gases, said flanges being disposed in alignment with each other, whereby the central apertures will provide a substantially unobstructed passage for said gases, and other sections equipped with a plurality of conical shaped apertures, whereby to break up and segregate exhaust gases.

1,541,276. JOINT FOR THE SPRINGS OF MOTOR VEHICLES. HERBERT SPENCER POWELL, New Hartford, N. Y. Filed July 5, 1923. Serial No. 649,500. 6 Claims. (Cl. 267—54.)



1. In a joint for the springs of motor vehicles, a shell containing a flexible material projecting beyond the edges of said shell, a sleeve passing through said flexible material, and means permitting said shell to be removably mounted to the spring ends and shackles of motor vehicles.

1,541,277. JOINT FOR THE SPRINGS OF MOTOR VEHICLES. HERBERT S. POWELL, New Hartford, N. Y. Filed Dec. 15, 1924. Serial No. 756,009. 7 Claims. (Cl. 267—54.)

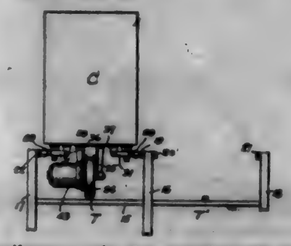


1. In a joint for the springs of motor vehicles, a shell containing removable flexible members adapted to fit together, a sleeve passing through said flexible members, and means permitting said shell to be removably mounted to the spring thereon in shackles of motor vehicles.

1,541,278. UMBRELLA. FRANK J. PUGEL, Pueblo, Colo. Filed Apr. 17, 1924. Serial No. 707,196. 11 Claims. (Cl. 135—22.)

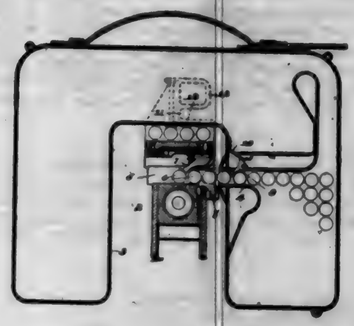
9. In combination with an umbrella having a stick comprising two telescoping sections, ribs pivotally engaged with the outer end portions of the inner section of the stick, each of said ribs comprising two sections, a plate with which the adjacent end portions of the rib sections are pivotally connected, the pivoted end portions of one of the rib sections extending beyond its pivotal connection with the plate, a link pivotally connected with said extension and with the second section of the rib inwardly of the pivotal connection between said second rib section and the plate, a stretcher pivotally connected with the plate and with the outer end portion of the inner section of the stick, a stretcher pivotally connected with the plate and with the outer end portion of the outer section of the stick, the pivotal connections between the sections of the rib and the plate being offset one with respect to the other, the pivotal connection between the plate and the inner section of the rib being disposed inwardly of the pivotal connection between the outer section of the rib and the plate when said sections are extended.

1,541,279. MECHANISM FOR FIRING PERCUSSION OR TIME FUSES. LÉON EMILE REMONDY, Rueil, France. Filed Aug. 15, 1924. Serial No. 732,309. 18 Claims. (Cl. 102—39.)



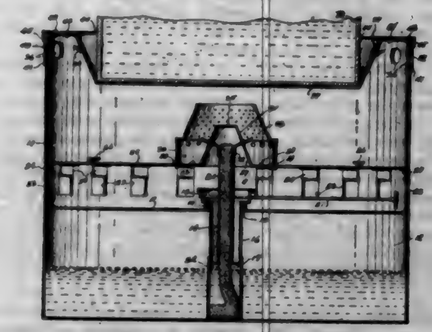
5. A fuse for projectiles comprising a body, primer and striker elements in said body, one of said elements being situated forwardly of the other of said elements, and means for preventing accidental firing of the fuse, said means including a separator body, and a spring for moving said separator body into engagement with the rearwardly situated element to prevent the latter from contacting the forwardly situated element.

1,541,280. SPRING ATTACHMENT CASTER. DANIEL BENSON REPLOGLE, Berkeley, Calif. Filed Aug. 1, 1924. Serial No. 729,418. 3 Claims. (Cl. 16—30.)



3. In a caster of the kind described, spring actuated attachment means in combination with a hub, a main body of rubber encasing said hub and constituting a tire having an integral central web, forming a buffer upon and completely covering an end of the hub, and a spindle secured to the attachment means, journalled within the hub.

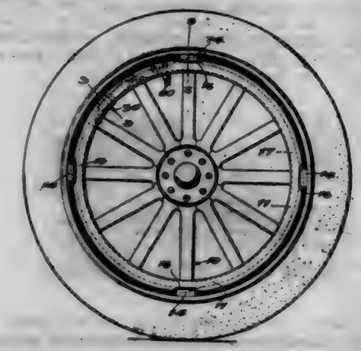
1,541,281. RAILWAY. FLOYD H. RICKER, Los Angeles, Calif. Filed Apr. 22, 1924. Serial No. 708,137. 6 Claims. (Cl. 105—144.)



2. In a railway, a pair of mono-rail tracks, guide rails above and at opposite sides of the mono-rail tracks, with a pair of guide rails for each of the tracks, and a common supporting means for the adjacent guide rails of said pairs.

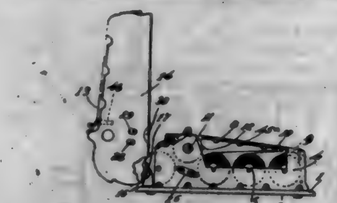
1,541,282. FEED BOX FOR CARTRIDGE BELTS OF MACHINE GUNS. HERBERT O. RUSSELL, Detroit, Mich., and CHARLES LEIGH PAULUS, Dayton, Ohio. Filed Apr. 18, 1922. Serial No. 555,416. 5 Claims. (Cl. 89—33.)

3. A machine gun belt feed box provided with means for securing the box to a gun, the said means permitting the release of the box from the gun by a movement of the box laterally with respect to the gun.



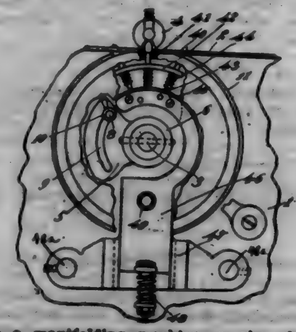
1,541,283. LAMP HEATER. JOHN M. SARGEANT, Elmira, N. Y. Filed Apr. 19, 1924. Serial No. 707,712. 4 Claims. (Cl. 126—258.)

1. In a heater, a cylindrical casing, a heater within the casing at the lower end thereof, a dished receptacle mounted within the casing and having an outstanding flange resting upon the upper surface thereof, said receptacle being provided upon the outer edge of the flange with a depending flange fitting against the outer wall of the casing, said depending flange and the wall of the casing having a plurality of openings formed therein, said receptacle being rotatable to control the alignment of said openings.



1,541,284. WHEEL. FRANK WILLIAM SCHROEDER and JOHN WESLEY WILCOX, Bemidji, Minn. Filed Apr. 22, 1924. Serial No. 708,251. 2 Claims. (Cl. 301—26.)

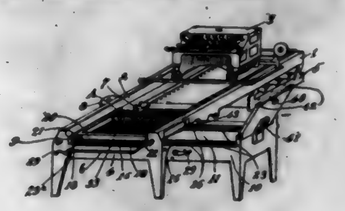
1. In combination, a wheel having a fixed rim, a demountable rim adapted to be mounted on the fixed rim, wedges on said demountable rim, a carrier mounted on the fixed rim and comprising a ring shiftable circumferentially with respect to the fixed rim, wedges on said carrier, means for shifting the carrier to bring the wedges thereof into engagement with the wedges of the demountable rim or to move said wedges out of engagement with each other, and releasable locking means for holding the carrier in position to maintain the wedges engaged, said releasable locking means including a ratchet carried by



said ring and a plurality of independently swingable pawls carried by the fixed rim and cooperable with the ratchet, the teeth of the pawl being staggered.

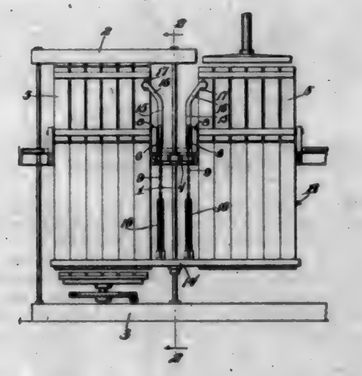
1,541,285. MANIFOLDING MACHINE. JOHN Q. SHERMAN and ALBERT W. METZNER, Dayton, Ohio; said Metzner assignor to said Sherman. Filed Sept. 15, 1921. Serial No. 500,898. 20 Claims. (Cl. 282—15.)

1. In a manifolding machine, the combination with a framework, paper feeding and supporting mechanism therein, and a cabinet adapted to come down over said framework so as to enclose its sides, top and ends, and having open spaces therein to expose a certain portion of the frame for making impressions upon the paper, of a hinge structure for the cabinet, comprising interengaging means on the cabinet and the frame adapted to retain said parts together in an arc of movement limited in scope from closed position of the cabinet to a substantially vertical position therefor.



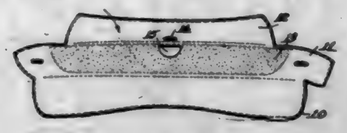
1,541,286. MANIFOLDING MACHINE. JOHN Q. SHERMAN, Dayton, Ohio. Filed Sept. 19, 1921. Serial No. 501,601. 17 Claims. (Cl. 281—1.)

1. In a manifolding machine, a pin wheel feed for paper strips, and means operating in conjunction with the said feeding means for removing the pins and paper



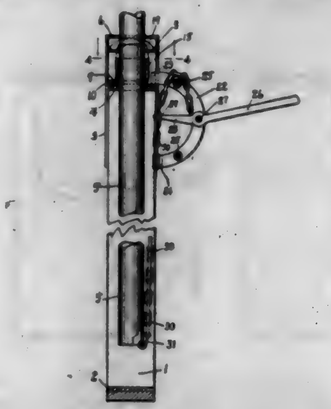
from operative juxtaposition, said means being adjustable for duration of operation during portions of single cycles of operation of the pin wheel feed.

1,541,287. MANIFOLDING DEVICE. JOHN Q. SHERMAN, Dayton, Ohio. Filed May 11, 1922. Serial No. 560,237. 19 Claims. (Cl. 197—126.)



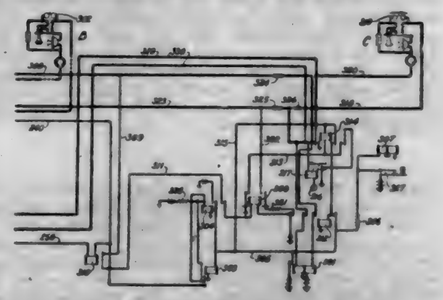
1. A means for printing plural copies, which comprises an assembly of pins having independent movement, means for holding the pins together so as to permit of the depression of selected pins to penetrate the plural copies, and means for applying ink to the pins prior to their penetration of the plural copies.

1,541,288. COTTON PRESS. FERMAN A. SMITH, Coleman, Tex. Filed Nov. 22, 1924. Serial No. 751,675. 3 Claims. (Cl. 100—28.)



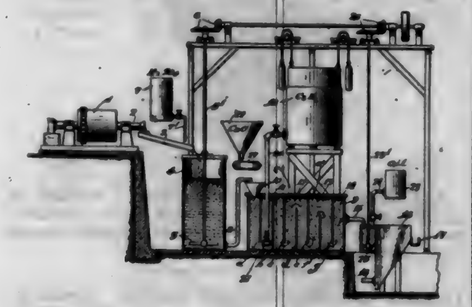
1. In a cotton press, the combination of a press box having a swinging side door, an arm supported by the box for swinging movement and having contact with the door, and a spring engaged with the arm and placed under tension when the door is moved into open position to cause said spring and arm to automatically swing the door in the opposite direction.

1,541,289. COLLAR. STEVE STOMI, Worcester, Mass. Filed July 31, 1924. Serial No. 729,219. 4 Claims. (Cl. 2—138.)



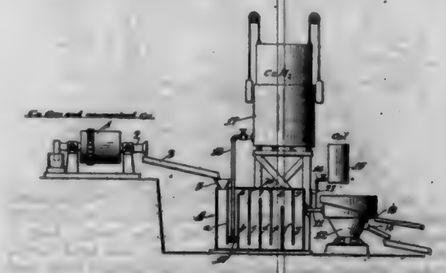
1. A collar having an outer portion, a neck band, and a supplementary flap forming with said neck band a tie passage, one side wall of said passage being of material which is softer and more yielding than the other side wall of said passage.

1,541,290. SHORE. FRANK J. STREIT, Cincinnati, Ohio, assignor of one-half to David B. Kaufmann, Cincinnati, Ohio. Filed May 5, 1923. Serial No. 636,980. 2 Claims. (Cl. 254—148.)



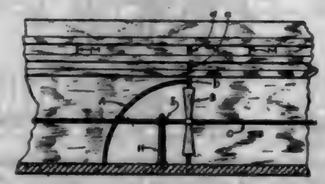
2. A shore including a frame provided with an apertured head, a plate arranged in the frame and provided with an aperture, a pipe slidably arranged in said apertures and provided at one end with a supporting block, a casing arranged in the frame at one side of said plate and surrounding the pipe, a stationary corrugated jaw arranged in the casing and adapted to grip one side of the pipe, a movable corrugated jaw arranged in the casing and gripping the opposite side of the pipe, means extending through the frame and casing and engaging the movable jaw to permit the operator to actuate the latter from the exterior of the frame, a ring loosely mounted on the pipe, means for canting the ring to cause the latter to automatically grip the pipe and prevent the latter from moving downwardly, said ring being accessible from the exterior of the frame to permit the operator to move the ring into a position at right angles to the axis of the pipe, a bracket detachably connected to the frame, a lever pivotally mounted in the bracket, and a chain detachably connected with the lower end of the pipe and engageable with the lever to permit the latter to raise the pipe when force is exerted on the lever.

1,541,291. TELEPHONE-EXCHANGE SYSTEM. DAVID L. TEMPLE, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 28, 1922. Serial No. 603,754. 8 Claims. (Cl. 179—9.)



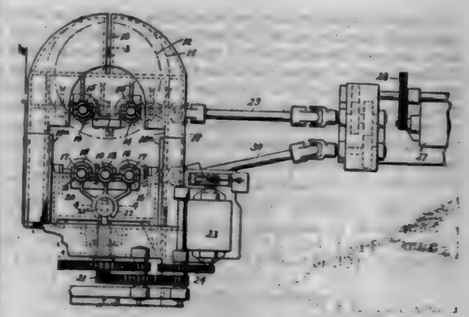
1. In a telephone exchange system, a calling line, a called line, a second called line, call charging mechanism associated with said calling line, switching means for extending a connection from said calling line to either of said called lines, means associated with said switching means for applying ringing current to the line called, means associated with said switching means for operating said call charging mechanism following the successful establishment of a connection between said calling line and one of said called lines, a relay individual to the other of said called lines operative upon the seizure thereof, a second relay operated thereby for opening the circuit of said first relay, and a circuit controlled jointly by said relays for rendering said ringing current applying means inoperative, and for rendering ineffective said call charging operating means.

1,541,292. PROCESS OF TREATING ORES. JOSEPH T. TERRY, Alhambra, Calif., assignor of one-half to James E. Lacy and one-eighth to Richard H. Lacy, both of Los Angeles, Calif. Filed Oct. 29, 1924. Serial No. 746,525. 4 Claims. (Cl. 83—85.)



1. A process of treating metalliferous ores, comprising subjecting the ground ore to the action of a solvent of metals, precipitating dissolved metals in the pulp as insoluble compounds other than sulphides, treating the pulp with acetylene to form metal acetylide at least in part, and separating by the flotation process a concentrate containing metal acetylides.

1,541,293. PROCESS OF TREATING ORES. JOSEPH T. TERRY, Alhambra, Calif., assignor of one-half to James E. Lacy and one-eighth to Richard H. Lacy, both of Los Angeles, Calif. Filed Oct. 29, 1924. Serial No. 746,526. 3 Claims. (Cl. 83—85.)

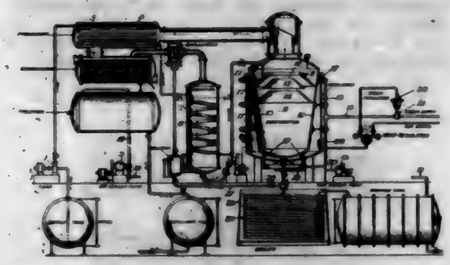


1. A process of extracting copper from ores, comprising treating pulverized ore containing copper in a non-acid solution containing ammoniacal copper with acetylene to form copper acetylide at least in part, and separating the copper from the pulp by the flotation process.

1,541,294. REVERSIBLE CIRCULATION INTERNAL-FAN KILN. ROLF THELEN, Madison, Wis. Original application filed Apr. 19, 1924, Serial No. 708,323. Divided and this application filed Mar. 7, 1925. Serial No. 14,422. 14 Claims. (Cl. 34—46.) (Granted under the act of Mar. 3, 1883; 22 Stat. L. 625.)

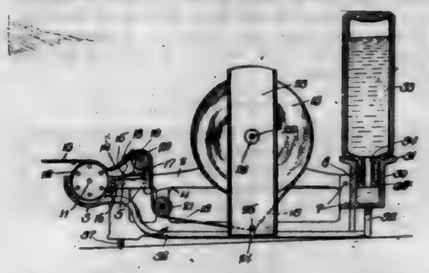
1. In a double track dry kiln arranged for edge stacking: two series of fans; two shafts on which the fans are mounted for rotation; means for rotating said shafts in either direction to cause reversal of the circulation of the air and vapor in said kiln; and an air distributing system comprising said deflecting partitions, two main air distributors, and two sets of diffusers for each main air distributor.

1,541,295. METHOD OF STRAIGHTENING METAL PIECES. IVOR D. THOMAS, Cleveland Heights, and PAUL H. DOUGLAS, East Cleveland, Ohio, assignors to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 29, 1919. Serial No. 347,887. 2 Claims. (Cl. 153—54.)



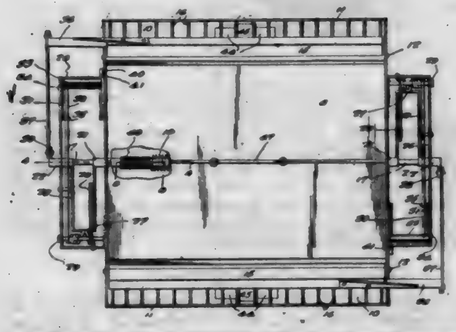
1. The method of straightening which comprises placing a piece to be straightened between two sets of rolls, applying power to one set so as to move it toward the other and straighten the section of the piece between the rolls, rotating the rolls in one direction so as to straighten the portion of the piece at one end of the section which has been straightened, and then in a reverse direction to straighten the portion on the other side of the straightened section.

1,541,296. DEALCOHOLIZING PROCESS. WILLIAM B. UHLEIN, Milwaukee, Wis. Continuation of application Serial No. 215,278, filed Feb. 4, 1918. This application filed Jan. 19, 1923. Serial No. 613,777. 31 Claims. (Cl. 195—1.)



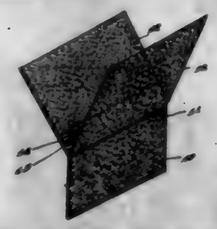
1. The herein described method of dealcoholizing an alcoholic beverage which consists in rapidly and unin-

terruptedly passing the beverage through a high vacuum and momentarily imparting heat thereto at a relatively



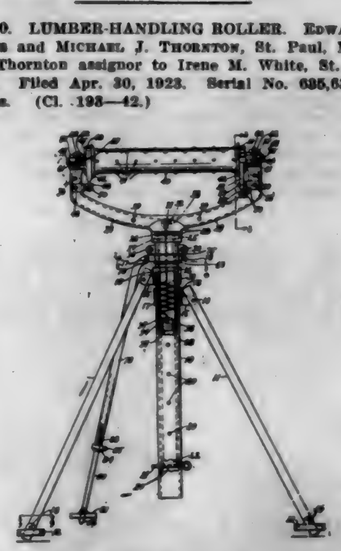
high rate under a relatively low temperature while it is passing through the vacuum so as to volatilise and liberate alcohol practically instantaneously.

1,541,297. TAPE-MOISTENING MACHINE. VANDIVER J. VAN HORN, Chicago, Ill. Filed Feb. 23, 1922. Serial No. 538,458. 1 Claim. (Cl. 91—14.5.)



A tape moistening machine comprising a frame; a moisture-supplying hopper at one end of the frame; a receptacle for an inverted bottle mounted on the other end of the frame; a holder for a roll of gummed tape between the hopper and bottle; a pipe connecting the bottle receptacle and the hopper, extending below the holder; a distributing roller in the hopper; and means for adjusting the elevation of one end of the frame to change the height of the water level in the hopper.

1,541,298. ANIMAL TRAP. WILLIAM H. DE RELLE, Newark, N. J., assignor to Henry J. KLUSMIRE, Holton, Kans. Filed Jan. 14, 1924. Serial No. 686,118. 4 Claims. (Cl. 43—61.)

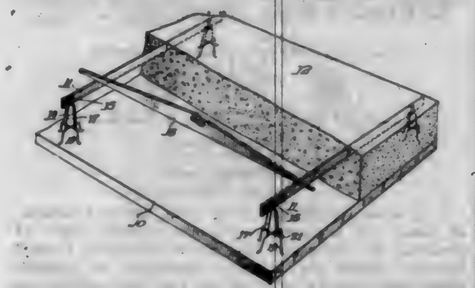


4. In a trap, a compartment, swinging doors normally closing the sides of the same, runways outwardly of the doors, bars mounted above the runways, sweep fingers projecting from the bars, a shaft having a bail fixed on one end and a second bail journalled on the other end, a single impelling spring for rotating the shaft and its attached bail in one direction and for rotating the second bail in an opposite direction, a connection between each bail and one of said bars, separate means for normally holding the bails against rotation, a trigger plate arranged in each runway, a connection between each trigger plate and one of said holding means for releasing the latter when the associated trigger plate is depressed, said compartment embodying a removable pan positioned between the runways, and having inwardly projecting flanges, and further swinging doors disposed inwardly of the first named doors.

1,541,299. DRESSING FOR WOUNDS. ARTHUR LOUIS WALTERS, Indianapolis, Ind., assignor to Eli Lilly and Company, Indianapolis, Ind., a Corporation of Indiana. Filed July 5, 1921. Serial No. 482,305. 5 Claims. (Cl. 206—63.2.)

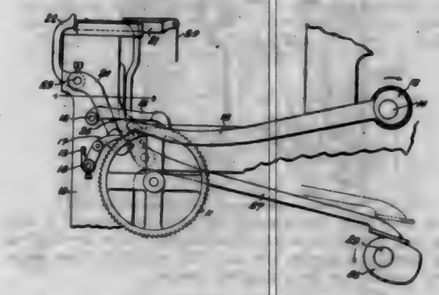
1. A dressing for wounds, comprising a plurality of layers of absorbent material superposed to form a flexible, flat pack, and a frangible medicament container among such layers.

1,541,300. LUMBER-HANDLING ROLLER. EDWARD R. WHITE and MICHAEL J. THORNTON, St. Paul, Minn.; said Thornton assignor to Irene M. White, St. Paul, Minn. Filed Apr. 30, 1923. Serial No. 635,636. 5 Claims. (Cl. 193—42.)



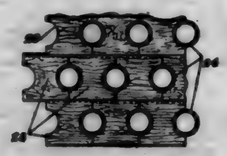
1. In a device of the class described a portable stand comprising a central, vertical, tubular body, a horizontally disposed roller, a head with two arms having each a journal bearing for one end of the roller, said head having a stem slidable and rotatable in the tubular body, and means for holding the stem at various elevations in the body, in which the stem has its upper end provided with a fixed collar rotatable in an annular groove in the head and a spring arranged to maintain a predetermined rotary relation between the head and the stem, and means engaging the lower end of the stem to resist its rotation in the body.

1,541,301. SOLDERING DEVICE AND MATERIAL. JOHN H. WHITE, Cranford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 16, 1924. Serial No. 686,515. 5 Claims. (Cl. 75—1.)



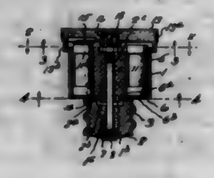
1. An alloy composed of nickel, tantalum, and columbium, the nickel constituting about 95% of the alloy.

1,541,302. CHAIR FOR CONCRETE LEVELING DEVICES. WILLIAM E. WHITE, Chicago, Ill., assignor to Kalman Steel Co., Chicago, Ill., a Corporation of Delaware. Filed July 31, 1922. Serial No. 578,574. 4 Claims. (Cl. 72—122.)



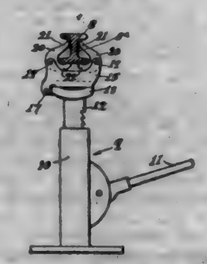
2. A skeleton chair composed of wire and consisting of a base and superstructure, said base being in the form of crossed U-shaped members and said superstructure being in the form of similarly placed U-shaped members, the legs of the superstructure being welded to the horizontal members of the base.

1,541,303. LET-BACK MECHANISM FOR LOOMS. JOSEPH WILKINSON, Fairhaven, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed June 18, 1923. Serial No. 645,968. 3 Claims. (Cl. 139—313.)



1. In a loom, a take-up mechanism comprising a ratchet wheel, a take-up pawl for said ratchet wheel, actuating mechanism therefor, a holding pawl, a let-back pawl, means to disengage said holding pawl from said ratchet wheel while said ratchet wheel is being moved by said take-up pawl, and to thereafter disengage said take-up pawl from said ratchet wheel on the idle return movement of said take-up pawl.

1,541,304. BAFFLE WALL FOR BOILERS. EINAR A. WINHOLT, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Dec. 27, 1921. Serial No. 525,120. 3 Claims. (Cl. 110—98.)

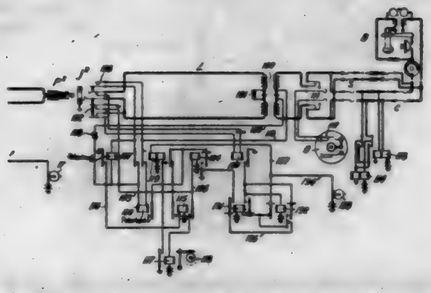


1. In a water tube boiler, the combination with the boiler tubes, of blocks adapted to be inserted between the tubes, the sides of said blocks recessed to receive one-half the circumference of the tube, said recesses shaped to closely fit the tubes throughout the thickness of the blocks, the top and bottom edges of contiguous blocks provided with engaging means adapted to hold the blocks in position.

1,541,305. MULTIPLE-FUSE PLUG. GEORGE T. WOODIN, Newport, N. Y., assignor of one-half to William S. Thorpe, Lakewood, Ohio. Filed July 30, 1921. Serial No. 488,520. 2 Claims. (Cl. 200—125.)

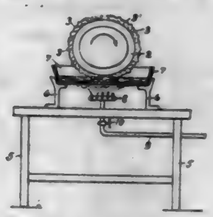
1. In a device of the character described, the combination of a base having a central contact and a shell plug contact, an annular plate in electrical engagement with one of said contacts, a magazine member having chambers the lower ends whereof are crossed by said plate, the said plate being embossed upwardly in each of said chambers, a fuse casing in each chamber adapted to engage the embossed portions of the plate at their lower ends respectively, and an arm in electrical engagement with the other of said contacts and adapted by its rotation to engage the upper ends of the said casings successively.

1,541,306. AUTOMOBILE JACK. ERICK A. YOUNG, Los Angeles, Calif. Filed Mar. 18, 1924. Serial No. 700,032. 9 Claims. (Cl. 254—133.)



1. In a jack, a lifting member having mounted thereon a pivoted jaw, said jaw having a portion engageable beneath the body to be lifted, and a second portion engageable upon the side of the body to be lifted when the first mentioned portion is pressed downwardly.

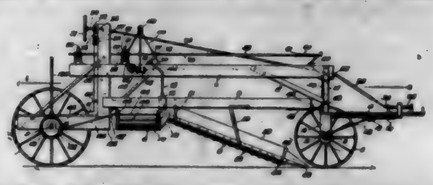
1,541,307. KNIFE CONSTRUCTION. HENRY J. ZINN, Forty Fort, Kingston, Pa. Filed Apr. 30, 1924. Serial No. 709,940. 11 Claims. (Cl. 30—9.)



1. The herein described composite cutting blade comprising a thin wafer-like core of high grade material, and a sheath substantially coextensive in length with said core and constituting a reenforcement and stiffening means therefor, a portion of the side of said sheath being spaced from said core and said side contacting said core only at the edge of said side.

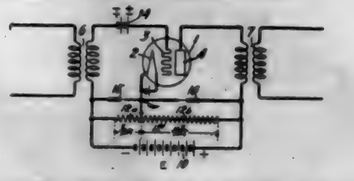
1,541,308. TELEPHONE SYSTEM. WALTER F. ALBERT, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 31, 1923. Serial No. 660,284. 12 Claims. (Cl. 179—9.)

1. In a telephone system, a two way trunk circuit a registering device therefor, and means including a polarized relay for rendering said device operable to register calls in one direction only, over said trunk.



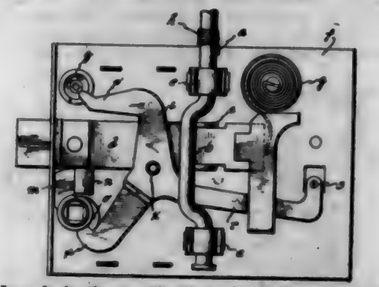
1,541,309. MANUFACTURE OF HATS. JOSÉ ALVARES ALBA, Habana, Cuba. Filed Mar. 31, 1923. Serial No. 629,023. 3 Claims. (Cl. 2—193.)

1. A process for the manufacture of hats of straw having a flange at the edge of the brim prior to ironing, comprising, ironing the hat whereby the flange is flattened out by the action of ironing, and then dampening the flange until it recovers the shape it had prior to the ironing, said dampening being effected by hot acidulated water.



1,541,310. ROAD CLEANER. ANDREW C. ANDERSON, Hazard, Nebr. Filed Dec. 23, 1924. Serial No. 757,728. 15 Claims. (Cl. 37—102.)

1. A road cleaner comprising a wheeled frame, an adjustable frame, means carried by the adjustable frame for cleaning a ditch and for discharging dirt from the ditch to a point beyond the machine, and independent means located at opposite sides of the main frame and connected with the adjustable frame for raising and lowering the same and for tilting the frame laterally to suit the angle or inclination of a road bed and a ditch



at the side thereof, the raising and lowering means at one side of the main frame being connected with the adjustable frame at the front and back thereof for simultaneously raising and lowering the same.

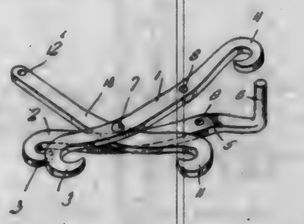
1,541,311. VACUUM-TUBE CIRCUITS. SIDNEY R. ANDERSON, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 7, 1923. Serial No. 617,533. 6 Claims. (Cl. 179—171.)

1. A vacuum tube translating device having a cathode, an anode, and a control electrode, a variable source of potential for energizing said device connected to said cathode, means for applying potentials of opposite phase and having a ratio of one over the amplification factor of said tube to said control electrode and said anode respectively, and means for impressing on said device voltage variations to be repeated.

1,541,312. DOOR LOCK. THOMAS P. ARCHER and ERNEST E. HEINTZ, Detroit, Mich., assignors to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed June 16, 1924. Serial No. 720,224. 7 Claims. (Cl. 292—169.)

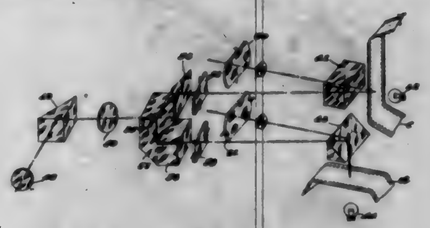
4. In a lock, the combination of a lock casing, a sliding bolt, means for retracting the bolt, means for dogging the retracting means, and a spring actuated lever snap-over control for such dogging means.

1,541,313. TIRE CARRIER FOR AUTOMOBILES. JULIUS G. BALCERWICZ, Grand Rapids, Mich., assignor of one-half to Charles A. Safranski, Grand Rapids, Mich. Filed Oct. 8, 1923. Serial No. 667,119. 4 Claims. (Cl. 224—29.)



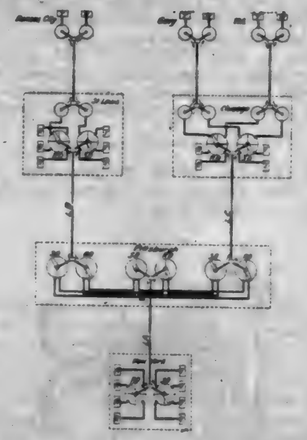
1. A tire-carrying device comprising a pair of rigid members interrelatively-swingably connected intermediate

their ends, each of said members having at one end a laterally-extending hook adapted to supportedly engage a portion of a supported tire and at its other end an



oppositely-extending hook adapted to supportingly engage a substantially-diametrically-opposite portion of a second tire.

1,541,314. TIRE-CHAIN FASTENER. SIMON BENNETT BALDWIN, Galva, Ill. Filed Feb. 18, 1925. Serial No. 10,003. 2 Claims. (Cl. 24—222.)



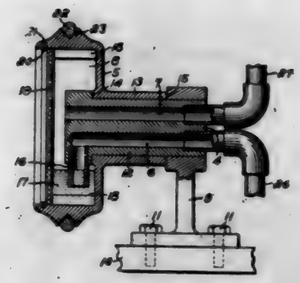
1. A tire chain fastener comprising a pair of spaced bars, one bar being provided at one end with a laterally disposed extension and at its opposite ends with a hook, the other bar being provided at its opposite ends with hooks, one of which is adapted to be connected with said extension, and a retaining lever disposed between and pivotally connected with said bars, said retaining lever being provided with a hook at one end adapted to cooperate with the opposed hooks on said bars.

1,541,315. PRINTING COMPLEMENTAL PICTURES. JOSEPH A. BALL, Wollaston, and EASTMAN A. WEAVER, Brookline, Mass., assignors, by mesne assignments, to Technicolor Motion Picture Corporation, Boston, Mass., a Corporation of Maine. Filed Aug. 20, 1921. Serial No. 493,824. 24 Claims. (Cl. 88—24.)

1. The method of printing complemental pictures on non-superposed sensitized printing spaces in uniform relationship to associated registering means which comprises simultaneously projecting the images on said spaces, and viewing both the images and the associated registering means in superposition.

1,541,316. AUTOMATIC TELEGRAPH SYSTEM. ERWIN P. BANCROFT, Brooklyn, and MARK B. KERR, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 1, 1920. Serial No. 393,393. 11 Claims. (Cl. 178—53.)

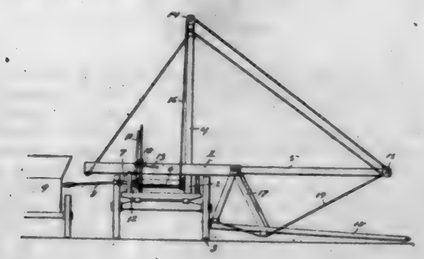
1. The method of synchronizing two rotatable members operatively interconnected by a transmission line and operated by independent sources of motion, which consists in sending a predetermined signal from one station over the transmission line to another station, causing said last-mentioned station to repeat said predetermined signal back to the originating station to operate a mechanism therent for indicating the line lag.



1,541,317. SEPARABLE BUTTON. PAUL J. BELLAVANCE, Attleboro, Mass., assignor of one-half to Joseph E. Gallant, Attleboro, Mass. Filed Mar. 5, 1925. Serial No. 18,207. 28 Claims. (Cl. 24—11.)

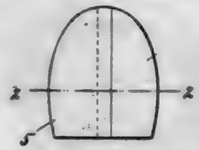
1. A separable button, comprising a pair of male and female coacting members, the female member comprising a base, a hollow shank and a flat head having a central socket opening and a U-shaped locking spring member non-rotatably contained therein, and the male member comprising a base, a hollow shank, a flat head having a central opening and an integral annular sleeve projecting downwards therefrom slidable within said shank having means thereon adapted to abut a stop on said shank to limit its upward movement, a stem mounted on said base extending through said shank and sleeve above said head having a cap mounted thereon terminating in an annular lower edge offset from said stem and a stop on the periphery thereof below said cap, an ejection spring extending between said base and the lower edge of the head sleeve and a sleeve slidable on said stem between said cap and stop having an annular ridge projecting substantially centrally from the periphery thereof, whereby on insertion of said female member on said male member and pressing said members together the sides of the U-shaped locking spring may register within the groove formed on said stem between the lower cap

edge and upper edge of the annular ridge on the slidable sleeve to retain said members together, on further pressing together of said members and consequent depression of said ejection spring, the sides of the U-shaped locking spring may ride over the annular ridge on the slidable stem to impinge upon the lower periphery of said stem sleeve, on release of pressure said ejection spring may cause the gripping sides of the U-shaped locking spring to carry said slidable stem sleeve upwards to close said groove, and on further pressure of said ejection spring the sides of said U-shaped locking spring may slide over said annular sleeve ridge and closed groove to abut the periphery of the cap stem to release said members.



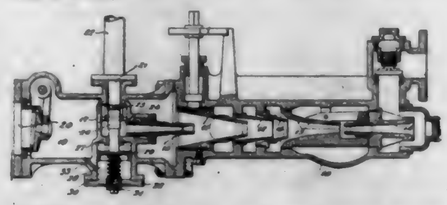
1,541,318. VALVE. FRANK R. BELLUCHE, Mansfield, Mass. Filed Aug. 20, 1924. Serial No. 733,241. 17 Claims. (Cl. 137—140.)

1. In a valve structure, the combination of a stator presenting two passages, a rotor having a bearing on said stator and presenting a chamber within which said passages terminate, and a body of liquid within said chamber normally covering the terminal orifice of one of said passages.



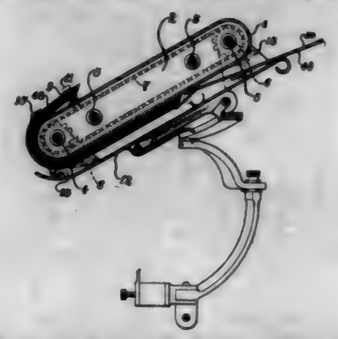
16. A valve structure comprising, in combination, a body of liquid constituting a valve, means presenting a port normally closed by said valve, and means to cause rotation of said valve to open said port and to stop rotation of said valve to close said port.

1,541,319. HAYING TABLE. OTTO BERGER, Mesa, Ariz. Filed July 9, 1924. Serial No. 725,088. 1 Claim. (Cl. 214—80.)



In a haying table, a platform, a rod supported along one side of the platform, a boom pivoted on the rod, a bracket pivoted on the rod, tines supported on the bracket and normally resting on the ground, a brace connecting the bracket and the boom, a mast rising from the platform, pulleys on the ends of the mast and the boom, a cable attached to the end of the mast and trained over the pulleys on the boom and the mast, and a drum for winding the cable so as to lift the boom and deposit the hay on the tines onto the platform.

1,541,320. SHOE AND HEEL THEREFOR. FRANK R. BRIGGS and GEORGE T. MCLEOD, Brookline, Mass., assignors to Thomas G. Plant Company, Roxbury, Mass., a Corporation of Massachusetts. Filed July 19, 1922. Serial No. 576,105. 2 Claims. (Cl. 36—35.)

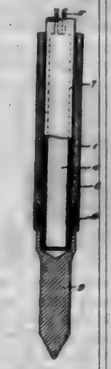


1. An improved arch supporting boot or shoe, having a heel structure formed with a relatively resilient section on the outer edge of the heel, and a relitively non-resilient section on the inner edge of each heel, in combination with a resilient toplift section.

1,541,321. EXHAUST-STEAM INJECTOR. BENJAMIN BROIDO, New York, N. Y., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 30, 1923. Serial No. 671,810. 7 Claims. (Cl. 162—1.)

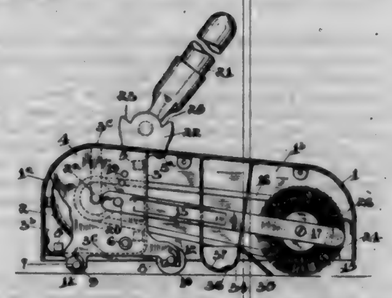
1. The combination with an exhaust steam injector having a plurality of conduits connected therewith for supplying water, exhaust steam from an engine, and live steam, to said injector, of means for automatically controlling the admission of live steam to said injector, said means comprising a valve for closing the live steam conduit, and fluid pressure actuated means in communication with the interior of said injector for controlling said valve in accordance with the working conditions within said injector.

1,541,322. COPYING PROCESS AND APPARATUS FOR TYPEWRITERS. CLARENCE H. CALDWELL, Oak Park, Ill. Continuation of application Serial No. 411,519, filed Sept. 20, 1920. This application filed Sept. 18, 1922. Serial No. 588,754. 5 Claims. (Cl. 120—81.)



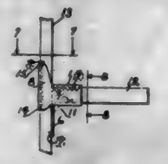
1. The method of handling leaves flexibly connected together at one end, which consists in clamping together all but the top leaf thereof, then causing them to travel in an unbroken path, and at the completion of each cycle of movement unclamping the top clamped leaf only.

1,541,323. COFFIN. GIACOMO CARTASSO, Oakland, Calif. Filed Sept. 27, 1924. Serial No. 740,284. 1 Claim. (Cl. 27—6.)



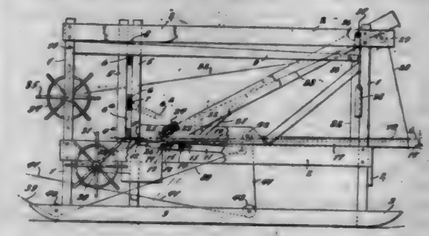
A coffin, comprising a metallic box, a rim secured to the upper edge of said box, said rim having a pair of grooves formed therein, a transparent cover adapted to fit in one of said grooves, a packing in said grooves, a second cover adapted to extend into the second of said grooves, and a packing in said second groove.

1,541,324. ELECTRIC SOLDERING IRON. CLARENCE M. CHAPMAN, Terryville, Conn., assignor to The Chapman Machine Company, Plymouth, Conn., a Corporation of Connecticut. Filed Nov. 19, 1924. Serial No. 750,775. 4 Claims. (Cl. 219—26.)



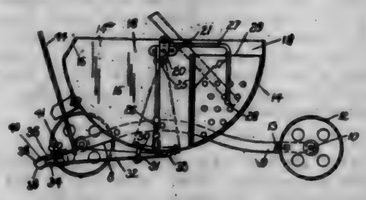
1. An electrical soldering implement comprising a handle, a tubular shank extending from the handle, a heating element contained in the shank and extending to substantially the point end thereof, a metallic sleeve screwed upon the shank and surrounding the heating element, and a copper point having a hollow base screwed into the sleeve and surrounding the end of the tubular shank that extends from the handle and the heating element in said shank.

1,541,325. FLOOR-TREATING APPARATUS. THOMAS H. CLARKSON-JONES, Toronto, Ontario, Canada. Filed Apr. 7, 1923. Serial No. 630,455. 6 Claims. (Cl. 15—49.)



1. In floor treating apparatus, the combination of a carriage; a horizontal motor secured to the carriage and provided with a pulley; a pair of movable radius arms; a brush horizontally journalled on the radius arms and provided with a pulley; pivots for the radius arms located at opposite sides of the carriage above a plane intersecting the axis of the brush and the axis of the motor; and a driving belt passing round said pulleys, said belt owing to the location of the pivots of the radius arms tending to press the brush against the floor.

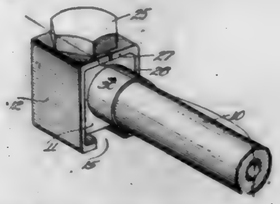
1,541,326. LADDER. ALFRED N. CLOUGH, San Jose, Calif. Filed Mar. 28, 1923. Serial No. 628,294. 1 Claim. (Cl. 228—58.)



A support comprising a sheet metal body portion adapted to be clamped around a step end, an ear adapted to engage the inner side of a ladder leg below the step to be supported, and a pair of ears rising from said body portion and adapted to be clamped around a ladder leg adjacent to said step end, said support having a boss formed therein in the angle formed by said body portion and said first mentioned ear.

1,541,327. BENDING MACHINE. CLARENCE S. CRANE, Champaign, Ill., assignor of one-half to Eugene I. Burke, Champaign, Ill. Filed Dec. 27, 1923. Serial No. 682,901. 12 Claims. (Cl. 153—16.)

1. In a bending machine, a pair of clamping elements between which the strip to be bent is fed and at intervals clamped therebetween, a pivoted rocker member along which the strip passes, a guide for said strip hingedly connected to said rocker member at a distance from the pivot of the latter, and means for operating said rocker member to carry the guide to one side of the plane of the clamped portion of the strip, whereby a bend will be placed in the strip.



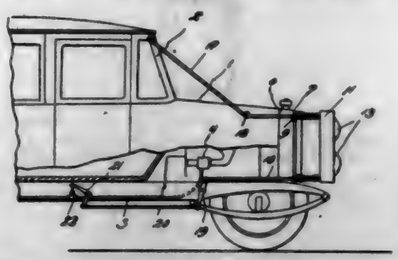
1,541,328. GROUND LINE MARKER. ARTHUR JOSEPH DALBY, Concord, near Sydney, New South Wales, Australia. Filed Jan. 30, 1924. Serial No. 689,437. 6 Claims. (Cl. 91—43.)

1. An improved ground line-marker comprising a carriage, a container thereon having two compartments, one of said compartments having an outlet, an agitat-

ing device, and a mixing device operatable by the draught wheels for mixing and agitating powder and fluid, said mixing device movable over said outlet, and combined therewith an under launder having devices for adjusting its inclination having a discharge end and nozzle having control devices for raising and lowering itself and having devices for regulating a flow of the contents from said container on adjustment of the inclination of said launder as and for the purposes set forth substantially as herein described and explained.

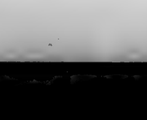
1,541,329. COUPLING. ERNEST W. DAVIS, Oak Park, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 14, 1921. Serial No. 444,932. 4 Claims. (Cl. 285—107.)

1. A coupling comprising a body member, a metal strap bent around said body member, one portion of said strap extending in adjacent parallel relation to the side of said body member and having a notch cut in one edge thereof for receiving the neck of a lubricant receiving nipple, the ends of said strap lying in opposed relation against the opposite side of said body member, said body member having a bore extending therethrough, one end of which registers with said notch, the walls of said bore at the last mentioned end having an inwardly extending flange, a perforated gasket seating on said flange, a plug threaded into the opposite end of said bore and having an overhanging head for clamping the opposed ends of said strap to said body member, and a spring interposed between said plug and said gasket.



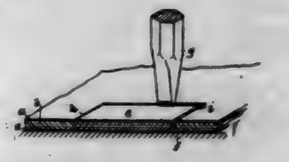
1,541,330. NURSING BOTTLE. WILLIAM MORE DECKER, Buffalo, N. Y. Filed May 14, 1923. Serial No. 638,797. 6 Claims. (Cl. 28—252.)

3. A breast-nipple for a food-cell, provided on its outer side with a stop arranged to seat against the base portion of the breast, when the latter is partly collapsed, and on its inner side with means arranged to enter and contract the mouth of the food-cell in a partly collapsed condition of the breast, said inner contracting means being spaced from the upper end of the cell in the normal, uncollapsed condition of the breast nipple.



1,541,331. AUTOMOBILE BUMPER. FERDINANDO DE SANTIS, Framingham, Mass. Filed July 2, 1924. Serial No. 723,765. 2 Claims. (Cl. 180—83.)

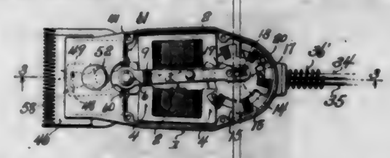
1. A bumper for automobiles, comprising a perforated plate mounted on the front of the radiator of the automobile, a relatively thick cushion bumper, a plurality of rods projecting rearwardly from said bumper and slidably mounted in said plate, means for normally retaining said bumper in projected relation in front of said plate, a cut-off valve, in the fuel feed pipe of said



automobile, and connections between said bumper and cut-off valve, operable for shutting off the flow of fuel in said pipe, upon the movement of said bumper member, toward said plate.

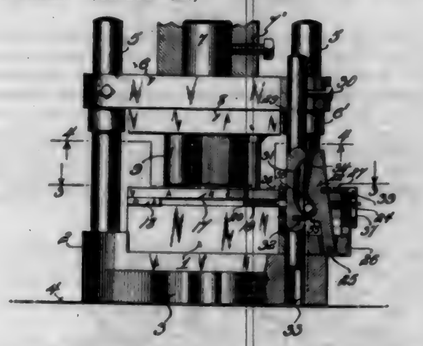
1,541,332. WALL BOARD. WILLIAM B. DOE, Skyland, N. C., assignor of one-half to Edwin W. Grove, St. Louis, Mo. Filed Apr. 6, 1923. Serial No. 630,368. 4 Claims. (Cl. 72—116.)

2. A wall board comprising a body of pithy substance having a plaster-receiving face and numerous coarse fibers surrounded by said pithy substance, said fibers being severed to provide end portions whereby the plaster is anchored, and said end portions being extended from said body of pithy substance.



1,541,333. REPAIRING PANELS OF VEHICLE BODIES. PETER DOWLING, Paterson, N. J. Filed Oct. 11, 1924. Serial No. 743,170. 3 Claims. (Cl. 296—30.)

1. The hereindescribed method of patching an apertured panel having a metal outer layer and compressible material backing the same, which consists in fitting a patching piece of paneling having a metal outer layer and compressible material backing the same into the aperture of the panel and so that the metal layers and the backing material of the panel and piece are in coincident planes, then while supporting the panel and piece peening inward the metal at the contiguous edge portions of the layers and thereby forming a depression, and then depositing a bonding substance in said depression.



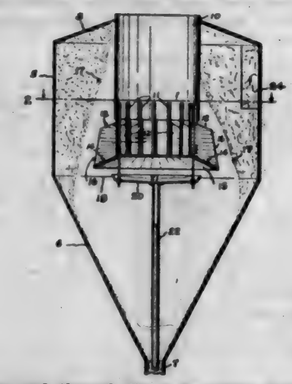
1,541,334. ELECTRIC HAIR CLIPPER. ALBERT J. DREMEL, Racine, Wis. Filed Jan. 13, 1925. Serial No. 2,097. 14 Claims. (Cl. 30—1.)

14. A clipper comprising a stationary blade, a movable blade, electromagnetic mechanism including a vibratory armature connected to said movable blade, a pivot pin supporting said armature, a spring carried by said pin and having one end bearing upon said movable

blade, a tilting washer having a portion bearing against the other end of said spring, and means for tilting said washer.

1,541,335. AUTOMATIC SPACING AND LOCKING MEANS FOR PRESSES. ROBERT W. EASTMAN, Racine, Wis. Filed Aug. 23, 1924. Serial No. 733,791. 5 Claims. (Cl. 164—21.)

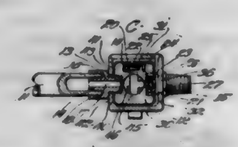
1. The combination with a press having a reciprocatory head and a bed plate, of a device having a die block secured to said bed plate, a reciprocatory member having a tool and adapted to be rigidly secured to said press head, and locking means actuated from said reciprocatory member for positively locking said work throughout the entire working stroke of said tool and for releasing said work during a portion of the retracting stroke of said tool.



1,541,336. COLD-MOLDED PRODUCT AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J., assignor to Ellis-Foster Company, a Corporation of New Jersey. Filed Feb. 14, 1923. Serial No. 619,063. 7 Claims. (Cl. 18—55.)

1. A molded article shaped in the cold and hardened, by baking containing a rosin phthalic glycerol resinous complex serving as a binder, said resinous complex having a low acid number.

6. The process of making a molded article which comprises incorporating a solution in a volatile solvent of a resin phthalic glycerol resinous complex having a low acid number, with a major proportion of a mineral filler comprising asbestos, drying to remove most of the solvent to obtain a non-sticky but coherent material, subjecting in a cold mold to a high pressure, removing the shaped article from the mold, drying at 70° C. and then baking at a temperature gradually increasing to approximately 300° C.



1,541,337. CINDER PRECIPITATOR. ERNST FELX, Tacoma, Wash. Filed Oct. 13, 1924. Serial No. 744,460. 6 Claims. (Cl. 183—87.)

1. In a device of the class described, a drum having a conical bottom portion, tangential air inlet means connected with said drum, a centrally arranged air discharge conduit open at both ends and extending downwardly into said drum from the top end, and radial vanes projecting outwardly beyond said air inlet conduit below

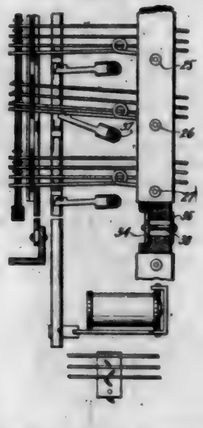
the bottom end thereof, the outer edges of said vanes being inclined outwardly from top to bottom relative to the axis of the drum.

1,541,338. COUPLING MEMBER. DOUGLAS F. FRELER, Evanston, Ill., assignor to The Bassick Manufacturing Co., Chicago, Ill., a Corporation of Delaware. Filed Feb. 14, 1921. Serial No. 444,960. 2 Claims. (Cl. 251—109.)

1. A coupling comprising a body member having a plurality of bores formed therein the inner ends of which meet at a common point and the outer ends of which respectively open through faces of said body member disposed at angles to each other, means at the outer end of each bore for forming a detachable sealed connection with a second coupling, said means being formed in part by a continuous strip passing around said body member and having openings therein for receiving said second coupling, and a valve positioned at said common meeting point for controlling the flow of fluid through said bores, said valve comprising means for connecting two of said bores together as and for the purpose described.

1,541,339. HARNESS HAME HOOK. CHARLES W. FINCH, Vanleer, Tenn. Filed Apr. 18, 1922. Serial No. 554,718. 1 Claim. (Cl. 54—1.)

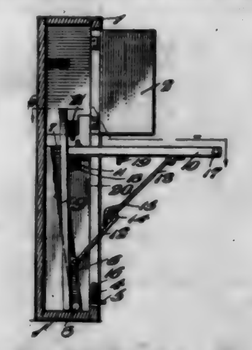
In a harness hame connector of the class described, a body portion, a pair of spaced arms extending therefrom at an obtuse angle thereto providing therebetween



an elongated slot for the reception of a trace extending vertically, hooks at the outer free ends of said arms for engagement with a hame, said body portion being provided with an angularly disposed slot for receiving a backing strap.

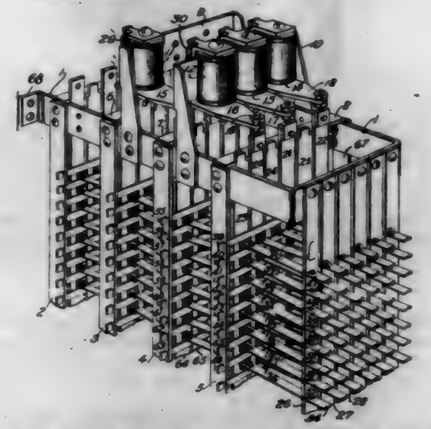
1,541,340. BADGE FASTENER. MORRIS FOLKMAN, Cleveland, Ohio, assignor of one-half to Joseph Folkman, Cleveland, Ohio. Filed Aug. 22, 1924. Serial No. 733,562. 4 Claims. (Cl. 40—1.5.)

1. In a fastener for badges or the like, a body portion arranged upon the back of the badge and having a pair of relatively off-set shoulders and an opening between the shoulders, a locking bar slidable between the shoulders, a pivoted pawl carried by the body, and a jaw on the pawl to frictionally engage the locking bar and co-act with the shoulders to hold it against movement.



1,541,341. CONTACT BANK FOR COORDINATE SWITCHES. OSCAR F. FORSBERG, Yonkers, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 23, 1923. Serial No. 620,629. 7 Claims. (Cl. 179—27.5.)

1. In a switch structure, the combination of a block of insulating material, sets of contacts anchored therein, a plurality of grooves therein for locating a plurality of supporting springs, and an abutment at each end of said block integrally formed therewith for locating said block on its supporting bar in the switch frame.

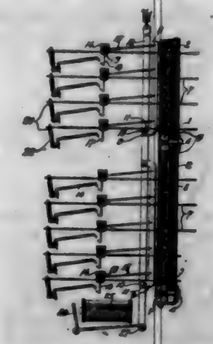


1,541,342. COMBINATION IRONING BOARD AND SERVING TABLE. ALOYSIUS I. FRIEL, Philadelphia, Pa. Filed Aug. 28, 1924. Serial No. 734,597. 3 Claims. (Cl. 45—51.)

1. In an article of the character stated, the combination of a closet having a cover hinged midway of its height to open outwardly and upwardly, said cover being U-shaped and having a lower rail, means to secure the lower end of said cover to the closet, an ironing board support movably secured to the lower rail of said cover and having nested relation with said U-shaped member,

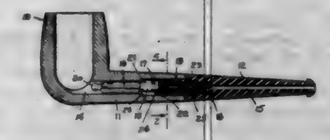
an ironing board within the closet, said support being pivoted at its top to said ironing board and means within said closet for guiding said ironing board to horizontal position during outward movement of said support.

1,541,343. SWITCHING DEVICE. HAROLD W. GOFF, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 12, 1921. Serial No. 507,282. 7 Claims. (Cl. 179—27.5.)



1. In a switching device, a plurality of stationary terminals, a plurality of movable terminals each carrying a plurality of resilient contact elements arranged in co-operative relation respectively with said stationary terminals, means for moving a portion of a movable terminal to cause one of the contact elements thereon to move with a flexing action into engagement with a particular stationary terminal, the flexing action of the contact element causing a relative movement between such contact and said particular stationary terminal.

1,541,344. SWITCHING MECHANISM. HAROLD W. GOFF, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 27, 1922. Serial No. 571,191. 8 Claims. (Cl. 179—27.5.)

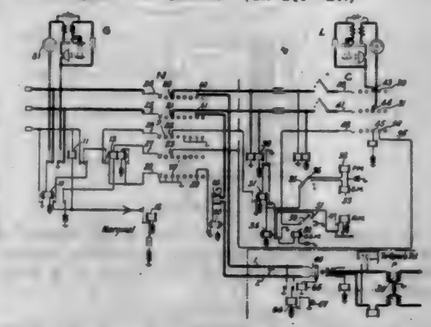


1. In a switching mechanism, a plurality of sets of active contacts arranged in groups each of which forms a unit, a common operating member for said groups, an operating member for each of said groups controlled by

said common operating member, means for removably supporting each group in operative relation to said common operating member, a plurality of sets of passive conductors arranged in parallel rows coordinately disposed to said sets of active contacts each of said sets of passive conductors being adjacent to one of said

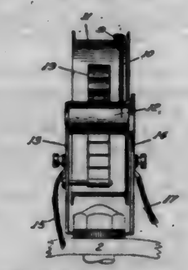
sets of active contacts, a plurality of operating link bars corresponding in number to the said plurality of passive conductor sets, and means operable under the conjoint operation of said common operating member and one of said link bars to effect a connection between a set of active contacts and its adjacent set of passive conductors.

1,541,345. TOBACCO PIPE. HARRY E. GOLDVOGEL, New York, N. Y., assignor to Dasco Import Co., Inc., New York, N. Y., a Corporation of New York. Filed May 7, 1924. Serial No. 711,528. 3 Claims. (Cl. 131—12.)



1. A smoking pipe comprising a bowl, a stem, and a mouth piece removably fitted in the stem, means for reinforcing said mouth piece, and a cleaning device removably mounted in said means and having smoke-conducting passages communicating at opposite ends in the stem and mouth piece, said cleaning device having also longitudinal scraping ribs the spaces between which form smoke-conducting channels communicating at opposite ends with the bowl and a point adjacent the stem ends of said passages.

1,541,346. CLEANING ATTACHMENT FOR TOBACCO PIPES. HARRY E. GOLDVOGEL, New York, N. Y., assignor to Dasco Import Co., Inc., New York, N. Y., a Corporation of New York. Filed May 7, 1924. Serial No. 711,529. 3 Claims. (Cl. 131—12.)

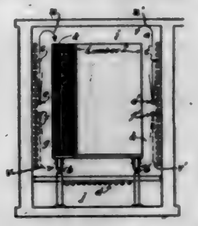


1. A cleaning attachment for the mouth-piece of a smoking pipe having a bowl and pipe stem, comprising a rear portion removably fitting into the mouthpiece, a reduced intermediate portion to provide a cooling chamber, and a forward portion extending into the bowl and having helically disposed scraping ribs.

1,541,347. TELEPHONE-EXCHANGE SYSTEM. CHARLES L. GOODRUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 1, 1920. Serial No. 393,889. 12 Claims. (Cl. 179—27.)

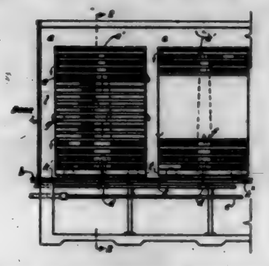
3. In a telephone system, a calling and a called line, a trunk line, a non-numerical switch and a numerical switch, subscriber controlled means for operating said switches to interconnect said calling and called lines, and means responsive to a predetermined setting of said numerical switch for releasing said numerical switch and for establishing a connection between said calling line and said trunk line through said non-numerical switch independently of said numerical switch.

1,541,348. DIRECTION SIGNAL FOR MOTOR VEHICLES. JAY L. GOODWIN, Fresno, and ALMON B. WASHBURN, Hanford, Calif. Filed Dec. 6, 1921. Serial No. 520,218. 1 Claim. (Cl. 173—367.)



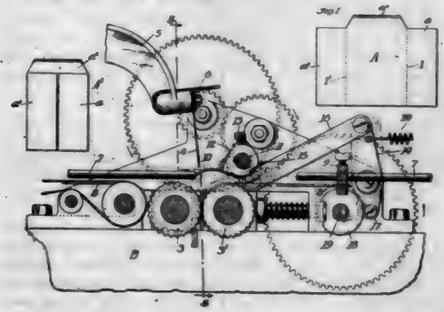
A reel structure comprising a pair of spaced conductor-arms, a shaft journaled in one arm, a sleeve about the shaft and journaled in the other arm, an insulation bushing between the shaft and sleeve, a drum provided with the sleeve in spaced relation thereto, and a double-wire cable wound on the drum, one wire of the cable being connected direct to the drum and the other wire passing through the drum and sleeve in insulated relation thereto and being then connected to the shaft.

1,541,349. METHOD AND MEANS FOR DRYING LUMBER. OLIVER P. M. GOSS, Seattle, Wash., and RALPH H. RAWSON, Portland, Oreg. Filed Sept. 6, 1923. Serial No. 661,217. 3 Claims. (Cl. 34—46.)



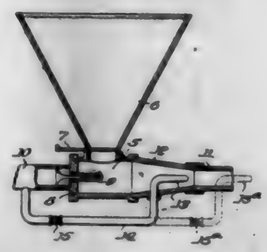
1. The method of kiln drying consisting in so stacking the material in a chamber as to provide a space at the top, the bottom, and the sides of the stack, and vertical spaces between the units of the material composing the stack, injecting sprays of moist heated fluid in one vertical direction along the vertical sides of the chamber from a line lying between the top and the bottom of said stack, then discontinuing said sprays and injecting other sprays of moist heated fluid in the opposite vertical direc-

tion along the vertical sides of the chamber from a line lying between the top and the bottom of said stack, heating the interior of the chamber by an agency located at its sides simultaneously with the injection of said sprays



in an upwardly direction, and heating the bottom of the chamber under the bottom of said stack simultaneously with the injection of said sprays in a downwardly direction.

1,541,350. METHOD AND MEANS FOR DRYING LUMBER. OLIVER P. M. GOSS, Seattle, Wash., and RALPH H. RAWSON, Portland, Oreg. Filed Sept. 18, 1923. Serial No. 663,422. 4 Claims. (Cl. 34—19.)



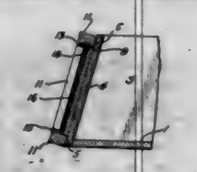
3. In a kiln of the character described, means for supporting the material spaced from the floor of the kiln chamber, a source of moist heating fluid under pressure, horizontally extending heating means located in the bottom of the kiln chamber, a spray pipe located in the bottom of the kiln chamber, such pipe having upwardly discharging vents and being connected to said source of fluid, baffles located in the bottom of the chamber over portions of said heating means and being spaced from said spray pipe.

1,541,351. FOLDING MACHINE. AUGUST W. HALL, Chicago, Ill. Filed Nov. 13, 1923. Serial No. 674,478. 6 Claims. (Cl. 270—61.)

1. In folding mechanism, the combination of folding rolls, a folding knife, actuating means therefor, a movably supported guide for conducting the advancing free edges of pre-folded marginal flaps of blanks delivered to the folding rolls between said rolls, and actuating means for advancing said guide into operative position and for retracting it out of the path of blanks as they are fed to said folding mechanism.

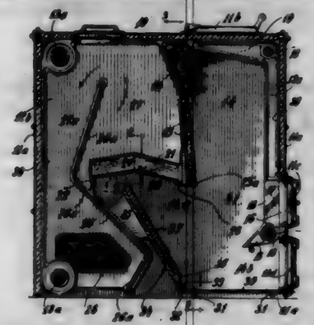
1,541,352. METHOD OF AND APPARATUS FOR MIXING MATERIALS. ERLE P. HALLIBURTON, Duncan, Okla. Filed Apr. 25, 1924. Serial No. 708,927. 15 Claims. (Cl. 83—73.)

1. The method of mixing cement and a liquid which comprises directing a high velocity stream of liquid through a mixing chamber, introducing a quantity of cement into said chamber into contact and intimate mixture with said stream of liquid to produce the fluent mixture of cement and such liquid and directing an auxiliary high velocity stream of liquid into the mixture for varying the consistency thereof without affecting the effectiveness of the initial mixing.



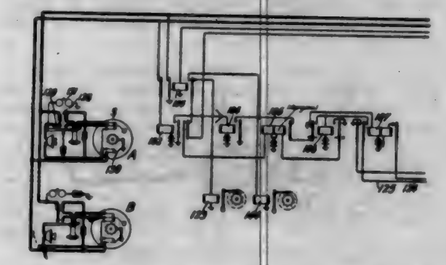
1,541,353. SMOKER'S ARTICLE. EDMUND J. Y. HAMMETT, Lansdale, Pa. Filed Apr. 14, 1923. Serial No. 632,027. 2 Claims. (Cl. 131—51.)

2. In a device of the character stated a receptacle of thin metal having an annular, outwardly flared wall, terminating in a flat rim extended beyond the receptacle proper, a central ash-receiving part having a central apertured portion extended above said receptacle top and having an outwardly flared skirt, said skirt and wall forming an annular continuous choke-channel of substantially V-shaped cross-section when said parts are in nested relation and also providing a cigar or cigarette support, a stud carried by said recetacle bottom and extended upwardly through said central apertured portion and a match-box holder seated upon said central portion and cooperatively engaging said stud to interlock the parts.



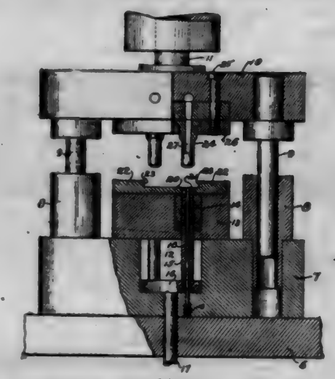
1,541,354. DISPLAY BOX AND SIGN HOLDER. HENRY HARRISON, Philadelphia, Pa. Filed May 9, 1924. Serial No. 711,978. 3 Claims. (Cl. 40—7.)

1. As a new article of manufacture, a display box comprising an upstanding card sign holder forming a side of the box, said holder being constructed to permit card signs to be removably held visible in the holder and the holder comprising a side member having a flat, sign back supporting portion formed with a margin reduced in thickness and also comprising a frame pro-



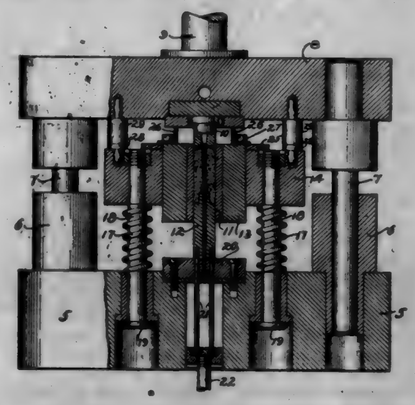
vided with a card receiving slot; the frame and the sign back supporting member being provided with interlocking means for holding them in assemblage.

1,541,355. BOILER. FRANK B. HOWELL, Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed Jan. 19, 1921. Serial No. 436,303. 13 Claims. (Cl. 110—30.)



1. A boiler comprising a fuel receptacle including a vertical water-backed rear wall, a flue at the rear of said receptacle, and a separately formed wall disposed in front of said vertical wall to form therebetween a passage for feeding secondary air to the products of combustion entering said flue; said separately formed wall having one side exposed directly to the radiant heat of the fuel, substantially as specified.

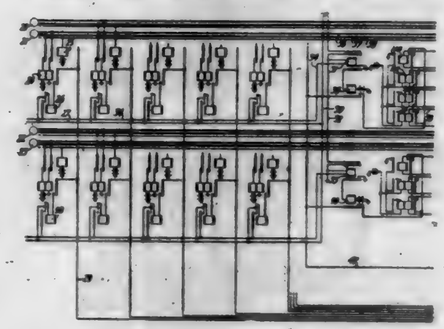
1,541,356. MESSAGE-REGISTER SYSTEM. FRANK S. IRVINE, Huntington, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 24, 1922. Serial No. 602,948. 11 Claims. (Cl. 179—9.)



1. In a telephone exchange system, a calling telephone line, a plurality of stations thereon, a message register for each station of the line, automatic switching means for extending a connection from the calling line, a circuit for operating the message registers, means common to a plurality of lines for testing the calling line to determine which station of the party line is calling, a switching device individual to the calling line controlled by said testing means for extending said circuit to the message register corresponding to the calling line, and means for closing said message register circuit to actuate said register.

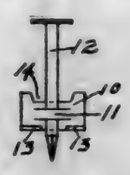
1,541,357. APPARATUS FOR MOLDING. JOSEPH E. JOHNSON, Meriden, Conn., assignor to The Connecticut Telephone & Electric Company, Incorporated, Meriden, Conn., a Corporation of Connecticut. Filed Sept. 20, 1922. Serial No. 589,293. 10 Claims. (Cl. 18—5.)

1. In a device of the character described, a mold block including a plurality of members rigidly secured together and having registering apertures therein for forming a mold cavity, the top member having an extended substantially flat surface flush with and surrounding the top of said cavity for holding moldable compound to be introduced into said cavity.



1,541,358. APPARATUS FOR MOLDING. JOSEPH E. JOHNSON, Meriden, Conn., assignor to The Connecticut Telephone & Electric Company, Incorporated, Meriden, Conn., a Corporation of Connecticut. Filed Sept. 20, 1922. Serial No. 589,294. 15 Claims. (Cl. 18—5.)

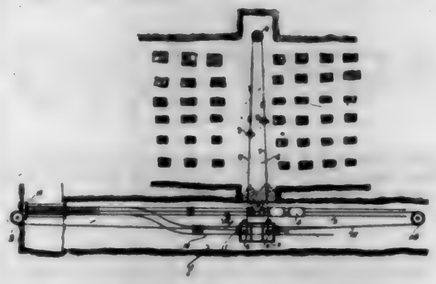
1. In a molding machine, a die jacket, a die pad, means for adjusting said jacket and pad in fixed position relatively to each other so as to form a mold cavity of such predetermined depth that when filled with compound substantially flush with the top thereof it will contain the requisite amount of material to form a molded article,



said mold cavity being filled by passing moldable compound over the top thereof and scraping the compound off substantially flush with the top of the cavity, retaining means fixed relatively to said mold cavity for preventing spilling of the compound while the cavity is being filled, and means for compressing moldable compound in said cavity to form a molded article.

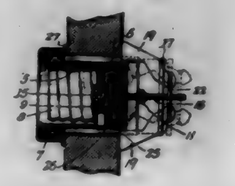
1,541,359. TELEPHONE SYSTEM. ALFRED F. KANE, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 10, 1924. Serial No. 631,132. 7 Claims. (Cl. 179—18.)

1. In a telephone system, a plurality of incoming lines, a group of link circuits, a relay common to all of said lines, a relay individual to a particular one of said lines, and means effective upon the conjoint operation of said relays to select one of said link circuits to cooperate with one of said lines in establishing a telephonic connection, and to render the selected link inaccessible for other connections until all the links in said group have been employed.



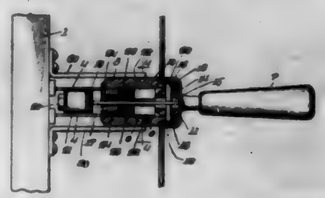
1,541,360. MEANS FOR SECURING PAPER AND METAL FABRIC TO WALL STRUCTURES. CHARLES ELWOOD KEAS and HARRY W. HAHN, Los Angeles, Calif., assignors to Economy Products Corporation, a Corporation of California. Filed Oct. 22, 1923. Serial No. 670,149. 5 Claims. (Cl. 72—118.)

1. A device of the character referred to and including a nail having a head, a body member having a struck up loop through which said nail is frictionally held, said body member having angularly disposed flat wall engaging portions at one edge and a recess at the opposite edge, for the purpose illustrated.



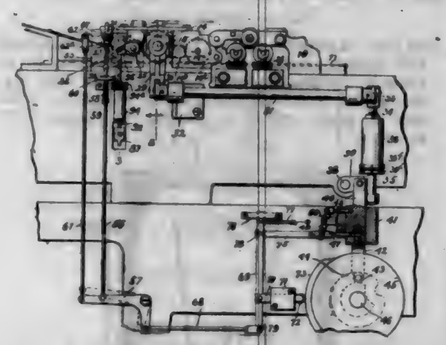
1,541,361. MINE-CAR LOADING AND HAULAGE MEANS. WILLIAM G. KNOWLES, Bessemer, Ala., assignor of one-half to Arthur T. Knowles, Bessemer, Ala. Filed Mar. 26, 1923. Serial No. 627,929. 2 Claims. (Cl. 37—115.)

2. A mine loading mechanism comprising, in combination, an entry track, a way parallel with said track, a portable winding machine movable along said way and comprising roof and ground anchors, cables leading in opposite directions endwise from said winding machine, pulleys at the ends of the entry track about which said



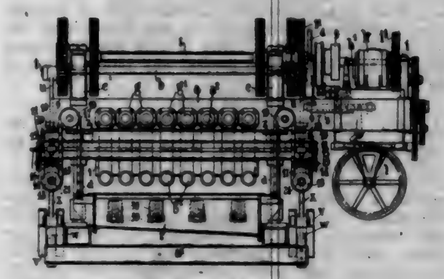
cables pass and connect to a trip of mine cars on said track, in combination with means controlled by the winding machine to load said cars.

1,541,362. ELECTRICAL FIXTURE. ALBERT R. LOCKE, Chicago, Ill. Filed Nov. 28, 1919. Serial No. 341,280. 1 Claim. (Cl. 85—3.)



A device of the character described comprising a relatively thick apertured wall; a cup-shape plug having an annular flange at one end for contact with the face of the wall, the other end inserted in said aperture; a screw extending thru the bottom of the plug beyond the wall; a threaded yoke supported on the screw and having apertures at each end; a pair of dogs removable from the plug and pivoted in said apertures; a spring yieldingly holding inner ends of the dogs to extend their outer ends, said dogs each having two shoulders engaging the yoke to prevent their outer ends spreading apart too far and a shoulder to take the thrust of the yoke.

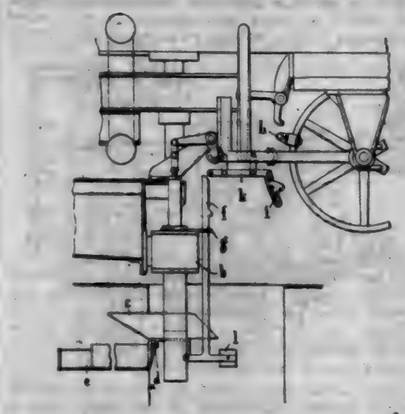
1,541,363. ELECTRIC SWITCH. ALBERT R. LOCKE, Chicago, Ill. Filed May 21, 1921. Serial No. 471,339. 4 Claims. (Cl. 200—17.)



3. An electric switch having a support with a threaded forward end for insertion through the wall of a fixture, a switch blade pivotally associated with the support and having an operating handle, and a threaded nipple for clamping the support to a fixture and securing the switch blade to the support.

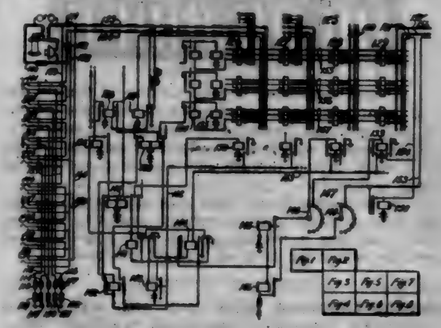
1,541,364. PRINTING PRESS. CLARENCE E. MCKINNEY, Cleveland, Ohio. Filed May 9, 1924. Serial No. 711,989. 30 Claims. (Cl. 101—284.)

1. In a printing press, a movable printing member adapted to be provided with a printing form, a movable impression member, and means for moving one of said members toward and from the other, said means including a power-operated actuating device and a yieldable element between it and the member to be moved whereby said members may be spaced different distances apart during the printing operations to compensate for different thicknesses of sheets or material fed between said members.



1,541,365. MERCERIZING MACHINE. DUNCAN M. MCLINTOCK, Paisley, Scotland, assignor to Clark and Company Limited, Paisley, Scotland. Filed Oct. 20, 1922. Serial No. 595,843. 12 Claims. (Cl. 8—20.)

1. A hank mercerising machine comprising in combination a frame member, a plurality of rollers carried thereby, a second set of rollers spaced in vertical relation to the first-mentioned rollers so that a hank may be passed vertically over each pair of said rollers, a beam carrying said second set of rollers, mechanically operated connecting rod mechanism for moving the beam vertically in relation to said frame member, and a mercerising tank suspended from and automatically movable with said beam.

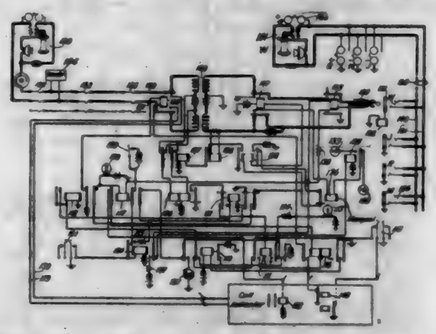


1,541,366. MERCERIZING MACHINE. DUNCAN MENZIES MCLINTOCK, Paisley, Scotland, assignor to Clark and Company, Limited, Paisley, Scotland. Filed Mar. 11, 1924. Serial No. 698,823. 6 Claims. (Cl. 8—19.)

6. A mercerizing machine comprising in combination a movable mercerizing tank having an outlet, a pivoted deflector associated with said outlet, a link secured to said deflector, a projection on said tank which on movement of the tank engages said link to move said deflector

and cam operated means for causing disengagement of said projection from said link independently of movement of the tank.

1,541,367. TELEPHONE-EXCHANGE SYSTEM. JAMES L. MCQUARRIE, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 28, 1923. Serial No. 621,705. 9 Claims. (Cl. 179—18.)



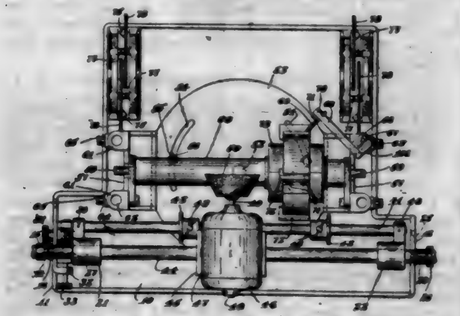
1. The combination in a telephone system of a coordinate selector switch having a plurality of contacts with operable links therebetween for establishing connections, a controlling mechanism for controlling the selective operation of said switch, and a plurality of sources of current to different character for setting said mechanism.

1,541,368. TELEPHONE-EXCHANGE SYSTEM. GEORGE R. MARTIN, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 19, 1923. Serial No. 681,588. 5 Claims. (Cl. 179—85.)

1. In a telephone exchange system, calling subscribers' lines, called subscribers' lines each serving a plurality of subscribers' substations, an operator's position, a plurality of trunks at said operator's position each terminating in a calling plug, means for extending a calling subscriber's line to one of said trunks, a plurality of jacks at said operator's position, each jack representing a called subscriber's substation, signaling means at the several substations of each line adapted to be operated by different characters of ringing current, means

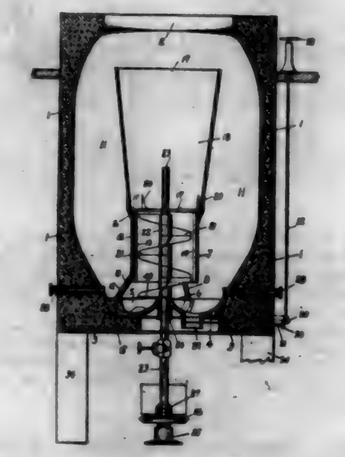
for generating said different characters of ringing current, a relay operated in response to the insertion of a plug in a jack to select a particular character of ringing current, means to apply said current to said called line to operate certain of said signaling means on that

line, and a second relay under the control of said operator for opening the circuit of said first relay to apply a different character of current to the called line to operate others of said signaling means on that line.



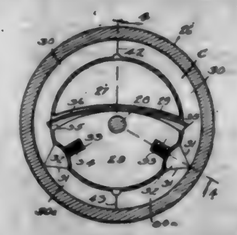
1,541,369. TOY FENCE. HARRY H. MARTIN, Pittsburgh, Pa., assignor to The Liberty Novelty Company, a Common Law Trust of Pennsylvania. Filed Mar. 27, 1923. Serial No. 627,062. 10 Claims. (Cl. 256—19.)

1. A fence comprising a body portion of flexible material, reinforcing members clamped on the edges thereof, and post members having slots therein and secured to said reinforcing members by projecting portions of the latter which extend through said slots and are bent to engage said posts.



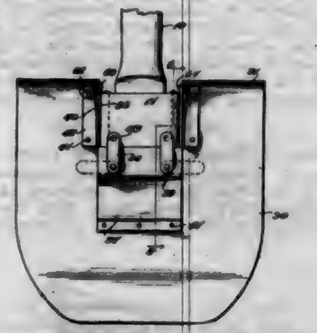
10. A miniature fence comprising a plurality of independent movable, self-supporting sections, each of which comprises a central portion and a plurality of posts for supporting it in an upright position.

1,541,370. SETTING, GRINDING, AND BALANCING MACHINE. LOUIS T. MEDHOLDT, Winthrop, Mass., assignor to H. C. Dodge Company, South Boston, Mass., a Corporation of Massachusetts. Filed Oct. 8, 1923. Serial No. 667,237. 3 Claims. (Cl. 51—220.)



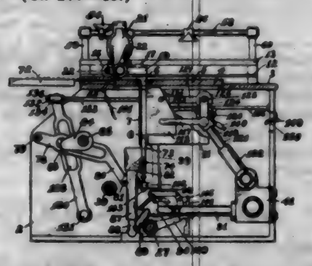
1. An improved knife grinding machine for grinding a plurality of knives mounted in a cutter head, comprising a base, a pivotally frame thereon, a member slidably mounted in said frame and transversely of the base, a rotatable abrasive wheel carried on said member, and means for mounting a cutter head on said frame in operative relation to the abrasive wheel.

1,541,371. METHOD AND APPARATUS FOR BLEACHING PULP. ALBERT D. MERRILL, Watertown, N. Y., assignor to The Stebbins Engineering & Mfg. Co., Watertown, N. Y., a Corporation of New York. Filed Mar. 9, 1925. Serial No. 14,102. 13 Claims. (Cl. 8—2.)



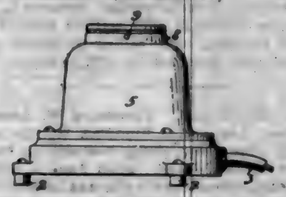
8. In pulp bleaching, a main tank, circular in cross-section, contracting at its upper and lower ends but still retaining a circular form, an inner uptake tank circular in cross-section arranged centrally within said main tank, said uptake tank provided with an impeller screw and being widest at its top and spaced from the top of the outer tank, a series of pulp impeding vanes arranged in said tanks to prevent any rotary action of the pulp mass.

1,541,372. SECTIONAL PACKING RING. RICHARD W. MEWES, Des Moines, Iowa. Filed Jan. 9, 1924. Serial No. 685,155. 3 Claims. (Cl. 74—109.)



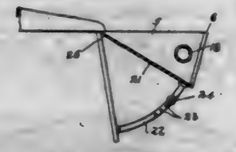
1. In a device of the class described, a casing element having a horizontal base, a sliding member therein having a peripheral groove, and a groove extending across one face, communicating at its ends with the first groove, a packing ring structure comprising a resilient plural segment ring received in said first groove, provided with notches as shown and a spring in the second groove having its ends received in said notches, for thus supporting the weight of the upper part of the ring on the sliding member and exerting resilient outward pressure thereon substantially as described.

1,541,373. COMBINATION TOOL. RICHARD MICHE, Lester, Colo., assignor of one-half to Paul A. Wayt, Walsenburg, Colo. Filed Nov. 28, 1923. Serial No. 677,551. 4 Claims. (Cl. 7—1.)



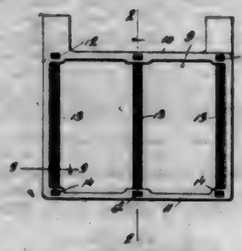
1. In a combination tool, a tool holder adapted to support a plurality of tool members, said tool holder including a handle, an adapter permanently secured on the handle, and means for detachably securing any of the tool members on the adapter, said securing means including tongue and groove elements on the adapter and tool members respectively, said tool members including a blade, some of the elements having hinge connection with the blade, and guides on the blade adapted to engage the hinged elements between them.

1,541,374. TOWEL-FOLDING MACHINE. LAWRENCE F. MUSTEE, Cleveland, Ohio, assignor to Joseph H. Miller. Filed Oct. 21, 1922. Serial No. 596,064. 15 Claims. (Cl. 270—69.)



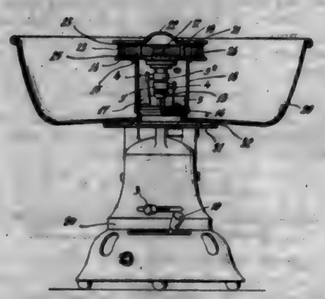
1. In a towel folding machine, the combination of a suction-head adapted to move horizontally, a suction-head adapted to move vertically, means for moving said suction-heads, the suction-heads being connected with suction means, valves for controlling the suction through said suction-heads, means for retaining the valves in their closed or open positions, means for opening said valves, and means for closing said valves, substantially as described.

1,541,375. HEATER FOR SHAPING EYEGLASS FRAMES. HERMAN NEUWIRTH and JACOB BERNSTEIN, Brooklyn, N. Y. Filed June 17, 1924. Serial No. 720,515. 4 Claims. (Cl. 219—21.)



1. A heater of the class described comprising a base or bottom member having a chamber therein, a heating unit in said chamber, and a hollow, frustro-conical mandrel detachably secured to said base so that its interior will receive the heat from said base chamber.

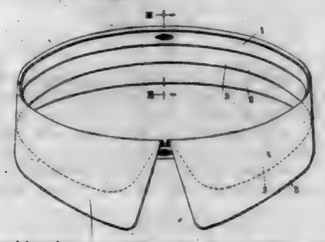
1,541,376. VISOR LIGHT. ARTHUR B. NOCK, Cleveland, Ohio. Filed Aug. 6, 1923. Serial No. 655,876. 10 Claims. (Cl. 240—7.)



1. In an article of the character described, the combination of a base member, means for securing the said base member to a motor vehicle adjacent the plane of the top in a position to project forwardly and downwardly therefrom to form a sun and rain visor, a top section cooperating with said base member to form a casing and an illuminating element housed within said casing.

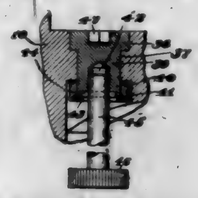
1,541,377. STORAGE BATTERY. RICHARD B. OWEN, Washington, D. C. Filed Dec. 22, 1919. Serial No. 346,555. 6 Claims. (Cl. 136—29.)

1. An electrode for storage batteries comprising a grid having a pair of spaced abutments, and a separator insulating element arranged upon the face of the grid and having the extreme outer ends of its terminals engaging said abutments to resist buckling of the grid and to prevent accidental vertical movement of said insulating element with respect to the grid.



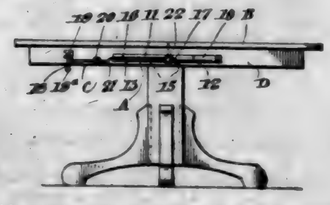
1,541,378. CONFECTION APPARATUS. JOHN PARCELL, New York, N. Y. Filed Feb. 16, 1924. Serial No. 693,281. 6 Claims. (Cl. 219—43.)

1. In a machine of the class described, the combination with a power circuit and a heating circuit, of a single controlling switch therefor having a series of contacts and at one contact assuming a position whereby at first both circuits are interrupted; at additional contacts assuming other positions whereby the power circuit is closed and continuously and progressively en-



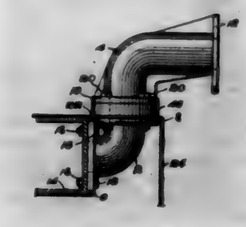
ergized; at another contact assuming another position whereby at a predetermined point the heating circuit will be closed and both circuits will receive the maximum charge of the currents controlled by the switch; and at other contacts assuming other positions by which the heating circuit is opened and the power circuit is continuously and decreasingly energized and finally opened.

1,541,379. COLLAR. WILLIAM E. PEARL, Brooklyn, N. Y. Filed Apr. 15, 1922. Serial No. 553,003. 1 Claim. (Cl. 2—129.)



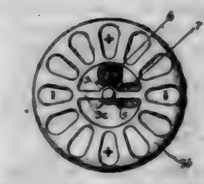
In combination, a collar band, a strip of material initially folded intermediate its ends over and suspended by said band, and constituting thereby a pair of collars of different styles, one of said collars being deeper and longer than the other of said collars, said longer and deeper collar and said band being secured together by stitching together their adjacent upper edges whereby the longer of said collars may be folded backwardly upon itself to substantially the point of the stitching and thereby overlying and concealing the shorter of said collars.

1,541,380. PRIMER CHAMBER FOR FUSES. CHARLES H. PEARSON, Brookline, Mass. Filed June 13, 1923. Serial No. 645,046. 4 Claims. (Cl. 102—36.)



2. In a fuse, the combination of a base, a timing train mounted thereon, a detonating chamber formed in the bottom of the base, a passageway leading from the detonating chamber to the timing train, a removable primer holder located in said passageway, and a safety plate normally located between the primer holder and timing train.

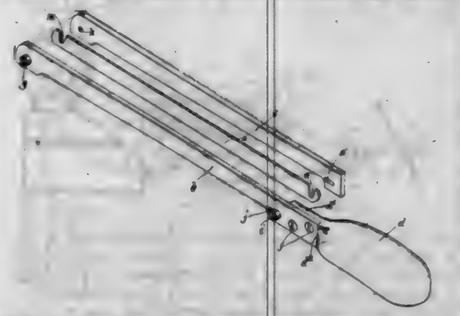
1,541,381. TABLE LOCK. ARTHUR PERRIN, New Liskeard, Ontario, Canada. Filed May 16, 1922. Serial No. 561,369. 1 Claim. (Cl. 45—9.)



A table lock of the character described, comprising a plate adapted to be attached to one section of the table and presenting a horizontal portion formed with a series of longitudinally spaced notches, a crank pivoted at one end to another section of the table, a locking rod rigidly secured at one end to an intermediate portion of the crank and equipped at its opposite end with means adapted to engage and disengage the notches of the said plate upon tilting of the locking rod in response to pivotal movement of the crank and a bracket provided with a slot loosely receiving the intermediate portion of the rod therethrough, said brackets serving to limit upward and downward tilting of the rod.

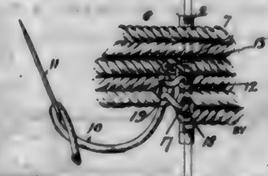
1,541,382. CARRIER. RICHARD E. PFENNIG and EDWARD D. WRIGHT, Boston, Mass., assignors of one-fourth to Arthur Willis and one-fourth to Lewis P. Kaufman, both of Boston, Mass. Filed May 18, 1922. Serial No. 562,013. 2 Claims. (Cl. 224—29.)

1. A wheel or rim carrier comprising a pair of arms each having tubular portions angularly related and provided with end flanges connectible end to end by bolts passing through spaced holes in said flanges, one of said arms having means enabling it to be attached to the frame of an automobile and the other arm having supporting means for a spare rim or wheel, a protecting vehicle shield secured between said arms, and an adapter consisting of an annulus adapted to increase the effective length of the carrier, said annulus having holes corresponding with those in said flanges for enabling the arm securing bolts to be passed through it to secure it in the desired position with reference thereto and to said shield.



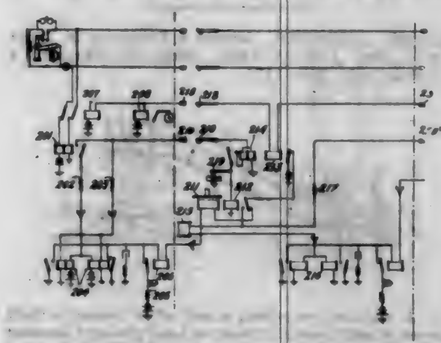
1,541,383. EDUCATOR TOY. FRANK M. PIERCE, Chicago, Ill. Filed Nov. 19, 1923. Serial No. 675,490. 6 Claims. (Cl. 273—138.)

1. In an educational toy, a rotatable cage having symbols and settling pockets, rolling elements in said cage adapted to be lodged in said settling pockets when the cage stops rotating, said rolling elements designating a numerical unit governed by said symbols.



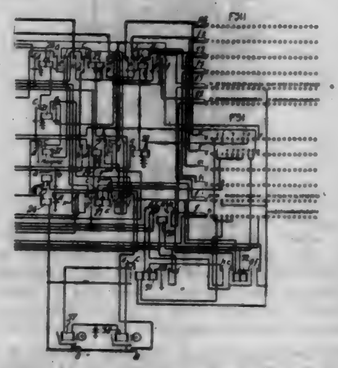
1,541,384. HACK SAW. FREDERICK W. PIERCE, Somerville, Mass., assignor to Frederick W. Pierce and Burt H. Macy, Copartners, doing Business as The-B-X-Saw Company, Boston, Mass. Filed June 6, 1923. Serial No. 643,616. 10 Claims. (Cl. 145—31.)

1. An armored wire cutting tool comprising a blade having teeth on one edge and a holder having side bars constructed to gear flatwise against the side of the blade and grip said blade throughout its length, said bars being cut away at one edge to expose the toothed edge of the



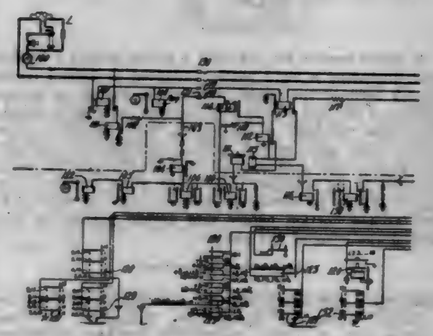
blade and said cut away edges being formed as stop shoulders projecting from the sides of the blade at right angles thereto.

1,541,385. REENFORCEMENT FOR SWEATERS AND METHOD OF MAKING THE SAME. ROY C. PISCITELLO, Boonton, N. J., assignor of one-half to Dominick N. Piscitello, Jersey City, N. J. Filed Sept. 30, 1922. Serial No. 591,459. 3 Claims. (Cl. 2—90.)



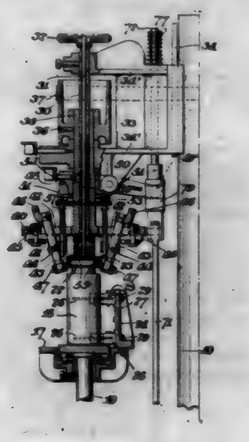
2. A garment composed of knitted members disposed edge to edge, a joining yarn passing through the loops of said members and itself knitted to form a continuation of the said members and a reenforcing strip extending crosswise of the wales of said members and secured thereto by the said joining yarn passing back and forth through said reenforcing strip between the points where said joining yarn interlocks with the loops of the said knitted sections.

1,541,386. MACHINE-SWITCHING TELEPHONE-EXCHANGE SYSTEM. LIPA POLINKOWSKY, New York, N. Y., and GERALD DEAKIN, London, England, assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 6, 1919. Serial No. 275,483. 10 Claims. (Cl. 179—27.)



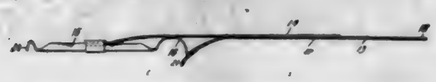
1. In a telephone system, a line, selective switches for extending said line, a register controlling mechanism for controlling said switches, means for associating the controlling mechanism with said line, means operated over the line to set said mechanism, an operator's position, a signal thereat, and means operated following the association of said mechanism with the line if said mechanism fails to undergo its setting operation for rendering said signal effective.

1,541,387. TELEPHONE SYSTEM. LIPA POLINKOWSKY, Antwerp, Belgium, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 5, 1923. Serial No. 610,752. 14 Claims. (Cl. 179—18.)



1. In a telephone exchange system, a group of switches at the same switching stage, means to place a particular one of said switches in one of a plurality of predetermined positions, means operated in accordance with the position taken by said switch to render any one of the group of switches operative, and means to operate said operative switch in the desired manner.

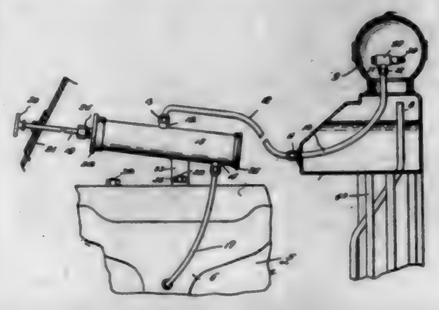
1,541,388. AUTOMATIC TELEPHONE-EXCHANGE SYSTEM. LIPA POLINKOWSKY, Antwerp, Belgium, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 13, 1923. Serial No. 645,066. 15 Claims. (Cl. 179—18.)



1. In a telephone exchange system, a calling line, selector switches for extending a connection from said calling line, a registering mechanism for controlling said switches, said mechanism comprising a primary register and a plurality of secondary registers, means under the control of the calling subscriber for setting said registers to record digits of the designation of a desired connection, and means whereby any one of said secondary registers may be selected directly through the operation of said primary register.

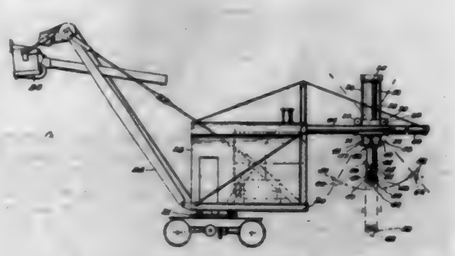
1,541,389. MACHINE FOR CAPPING JARS. ADOLPH POTDEVIN, Brooklyn, N. Y., assignor to Potdevin Machine Company, New York, N. Y., a Corporation of New York. Filed July 28, 1921. Serial No. 488,160. 4 Claims. (Cl. 226—87.)

2. The combination of a rotatable element, a bearing structure therefor, means for rotating said element, oscillatory levers carried by said element, said levers having weighted upper arms, spinners on the lower arms of the levers, vertically-movable lever controlling rods adjacent the respective levers, and means for moving said rods into close relation to the spinners to counteract the centrifugal force of the said levers.



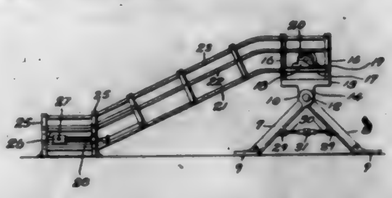
1,541,390. GUTTER HANGER. MAX RACHLIN, New York, N. Y. Filed Dec. 29, 1924. Serial No. 758,654. 1 Claim. (Cl. 108—29.)

A gutter hanger for use with a gutter having a beaded edge, including a rigid portion adapted to extend transversely between the upper edges of the gutter, an arched portion at one end of said rigid portion designed to snugly fit around the bead of the gutter, and a cradle portion joined with said arched portion designed to underlie the gutter, the free end of said cradle portion being adapted to be engaged with said rigid portion, said cradle portion extending at an acute angle in relation to said arched portion before said arched portion is bent around the bead of the gutter.



1,541,391. AIR MOISTENER. HERMAN RASMUSSEN and LOUIS LAWRENCE BORNHOLDT, Highmore, S. Dak. Filed Oct. 5, 1923. Serial No. 666,849. 1 Claim. (Cl. 123—25.)

An air moistener comprising a cylinder provided intermediate its ends with an intake port and adjacent one end with a discharge port, the inner surface of the wall of said cylinder being provided with a groove extending from said intake port toward one end of the cylinder, said groove gradually decreasing in depth from said intake, a valve reciprocable in said cylinder, and cooperative with said ports and groove, an operating rod for said valve, a conduit connected with said discharge port and adapted for connection to the intake manifold of an internal combustion engine, and a steam supply conduit having a suction-controlled spring-pressed check valve at

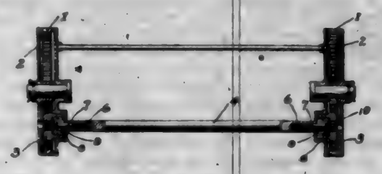


its inlet end connected with said intake port and adapted to have one end portion disposed within the steam space of an automobile radiator.

1,541,392. MECHANISM FOR BREAKING AND HANDLING STONES. JAMES REANEY, Ruxton, Md. Filed June 22, 1921. Serial No. 479,443. 4 Claims. (Cl. 262—9.)

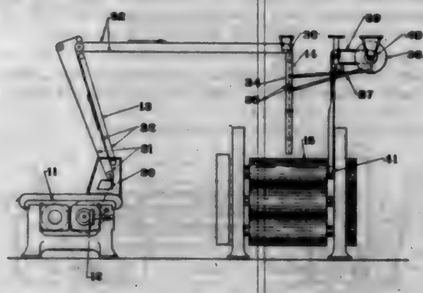
1. In a device of the character described the combination with a trackway, a carriage on the trackway, a cylinder pivotally carried by the carriage and depending from the latter, power means for inclining the cylinder with respect to the carriage, a piston in said cylinder, a power hammer sustained by said piston and means independent of said piston for actuating said hammer.

1,541,393. CONVEYER. AUGUST J. REESTOCK, St. Louis, Mo. Filed Aug. 25, 1922. Serial No. 584,246. 8 Claims. (Cl. 198—117.)



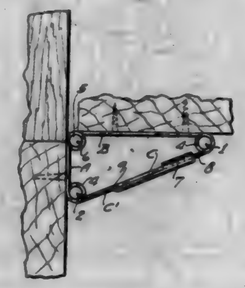
1. A conveyer comprising a pair of A frames, a shaft carried by said frames, a conveyer head pivotally mounted on said shaft, and means carried by said A frames for moving the lower ends of each frame to and from each other.

1,541,394. DEMOUNTABLE RIM FOR VEHICLE WHEELS. JOHN REIPAS, Sudbury, Ontario, Canada. Filed June 1, 1922. Serial No. 565,241. 2 Claims. (Cl. 301—35.)



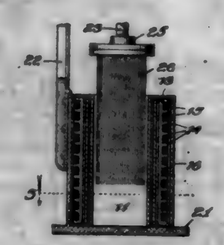
1. A demountable rim circumferentially split in two portions, each portion being provided with recesses, a metallic band engaging the two portions, and a plurality of locking elements formed with lugs, each engaging a recess in each portion, each locking element being formed with a bevelled edge designed to supply a grip for a tool to unlock the rim.

1,541,395. LAWN MOWER. ORANGE G. ROMIG, Akron, Ohio, assignor of one-half to T. Kolins, Akron, Ohio. Filed Oct. 25, 1923. Serial No. 670,779. 7 Claims. (Cl. 56—254.)



1. In a lawn-mower, the combination with a plurality of driving wheels and a rotatable blade-supporting spindle, of gears mounted upon the spindle in operative relation to the driving wheels, said gears being provided with two sets of oppositely faced ratchet members and adjustable means for selectively engaging the ratchet members.

1,541,396. CALENDERING. CLEMENT A. ROSSBACH, Milwaukee, Wis., assignor, by mesne assignments, to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Oct. 27, 1921. Serial No. 510,786. 4 Claims. (Cl. 18—10.)

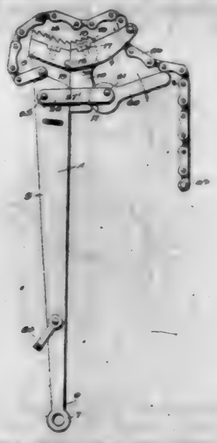


1. In combination, a warming mill, a calendar, means to spirally cut stock from said mill, and means to convey said stock to said calendar.

1,541,397. COMBINED DOOR HINGE AND BRACE. ADOLPH RUBIN, St. Louis, Mo., assignor to Silber Products Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed July 17, 1924. Serial No. 726,528. 11 Claims. (Cl. 16—138.)

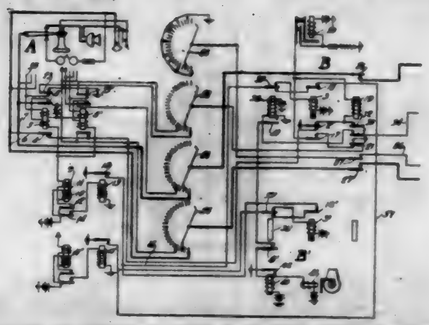
1. A combined door hinge and brace, composed of a stationary hinge member, a movable hinge member, and an extensible brace combined with said members and composed of two elements pivotally connected at their outer ends to said hinge members and maintained in telescopic relationship with each other by a bent portion on one of said elements that receives the other element.

1,541,398. RADIOFREQUENCY TRANSFORMER. HENRY K. SANDELL, Chicago, Ill. Filed Mar. 5, 1923. Serial No. 622,871. 5 Claims. (Cl. 171—119.)



3. A radio-frequency transformer comprising an aperiodic primary winding, a periodic secondary winding, said windings being substantially coaxial, a fixed soft iron core consisting of a plurality of small soft iron wires, the ends of each wire passing around said windings and being brought into substantially overlapping position, and a soft iron core movable into and out of inductive relation to said windings, whereby the frequency of the circuit in which the secondary winding is placed may be tuned.

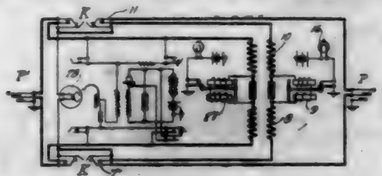
1,541,399. WRENCH. JOHN G. SAUNDERS, Cross Plains, Tex. Filed Oct. 17, 1923. Serial No. 669,167. 3 Claims. (Cl. 81—68.)



3. A wrench of the character described comprising an elongated shank, a jaw formed on the inner end of the shank, said jaw having a transverse groove formed in its inner edge, a companion jaw arranged to detachably engage the shank and form a continuation of the first mentioned jaw, a relatively short shank formed on the companion jaw for contact with the first mentioned shank having a cam seat formed therein, a pivoted yoke carried by the first mentioned shank, a pivoted cam carried by the yoke arranged to engage in the cam seat, the outer

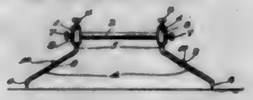
end of the companion jaw being provided with a slot, a chain seat formed in the inner walls of the slot, and a sprocket chain pivoted at one end to the first mentioned

shank for engaging about a pipe and having its opposite end passed through the slot, any one of the links of the chain being adapted to fit in said chain seat.



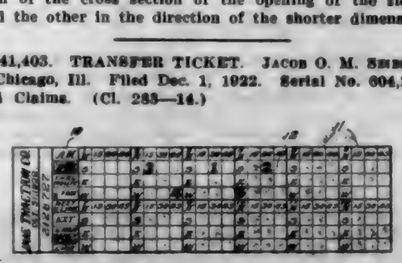
1,541,400. AUTOMATIC TELEPHONE SYSTEM. JOHN SAVIN, Liverpool, England, assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 12, 1921. Serial No. 436,664. 9 Claims. (Cl. 179—18.)

1. In an automatic telephone system, two groups of subscribers' lines, two link circuits at the exchange, a finder switch at one end of one link circuit having access to the lines in only one of said groups, a finder switch at one end of the other link circuit having access to the lines in the other group but not to the lines in the first group, and a connector switch at the opposite end of each link circuit, and wipers for each connector having access to all the lines of both groups and having movement in one direction only.



1,541,401. AUTOMATIC TELEPHONE SYSTEM. JOHN SAVIN and RICHARD MERCER, Liverpool, England, assignors to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 12, 1921. Serial No. 436,665. 8 Claims. (Cl. 179—27.)

1. In a telephone system, two classes of subscribers' lines, a selector switch accessible to lines of both classes, a trunk line accessible to said selector and having two branches at the other end thereof, two test wipers in said selector and corresponding test contacts associated with said trunk line, means whereby a calling subscriber can operate said selector to extend a connection over said trunk line via one of said branches, the branch used depending on which of said test wipers is used, and means

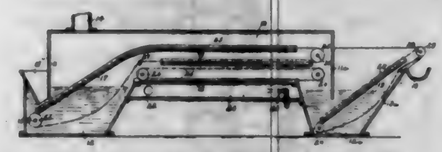


whereby if the calling subscriber is in one of said classes one of said test wipers will be used, and whereby if he is in the other of said classes the other of said test wipers will be used.

1,541,402. SAFETY DEVICE FOR LADDERS. FLETCHER A. SEAMAN, Rochester, N. Y. Filed July 31, 1922, Serial No. 578,560. Renewed Apr. 22, 1925. 2 Claims. (Cl. 228—60.)

1. A ladder attachment comprising a sleeve having an opening with a cross section elongated in one direction, a supporting arm having a straight central portion, two end portions extending from opposite sides of the central portion, one of said end portions being connected with the sleeve in line with the longer dimension of the cross section of the opening of the sleeve and the other end portion being pointed, and two clamping screws operating in said sleeve, one in the direction of the longer dimension of the cross section of the opening of the sleeve and the other in the direction of the shorter dimension.

1,541,403. TRANSFER TICKET. JACOB O. M. SEIBERT, Chicago, Ill. Filed Dec. 1, 1922. Serial No. 604,205. 4 Claims. (Cl. 283—14.)



1. A transfer ticket having marked thereon twelve principal divisions, each being designated by an hour symbol, each of said principal divisions being divided into subdivisons, and indicia in connection with the subdivisons whereby each of such sub-divisions indicates both a fraction of the hour and the direction of travel.

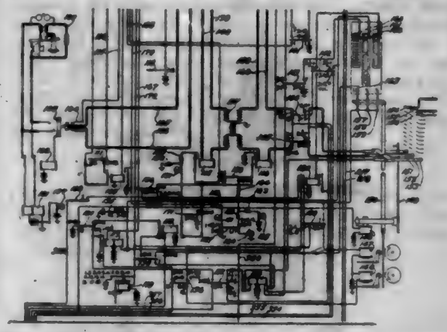
1,541,404. RETORT. BENJAMIN H. SMITH, Los Angeles, Calif. Filed Nov. 26, 1921. Serial No. 517,947. 4 Claims. (Cl. 202—14.)

2. A device of the character described including a heating plate having a series of parallel longitudinally extending relatively shallow corrugations, and means for moving layers of material longitudinally along said corrugations on the bases of the depressions thereof so that said layers of material are spaced apart by the peaks of the ridges of said corrugations projecting slightly above said layers of material, for direct heat radiation from said exposed ridges to the upper portions of the layers of material in said depression.

1,541,405. RETORT. BENJAMIN H. SMITH, Los Angeles, Calif. Filed May 15, 1922. Serial No. 639,208. 7 Claims. (Cl. 202—14.)

5. The combination in a retort of a heating plate having parallel corrugations extending the length of said plate, conveyors adapted to move along the respective corrugations of said plate, and abutment elements removably mounted on said conveyors and adapted to move therewith along said corrugations.

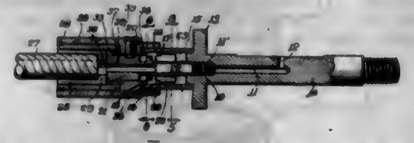
1,541,406. TRANSMISSION RELINING BAND. DOUGLAS B. SMITH, San Francisco, Calif. Filed May 21, 1924. Serial No. 714,896. 2 Claims. (Cl. 188—250.)



1. A liner for transmission bands comprising a flexible band having a friction facing, the ends of said band being adapted to be beat against the lugs of a transmission band, the opposite ends of said band being slotted and formed with the component parts of a hook and eye connection.

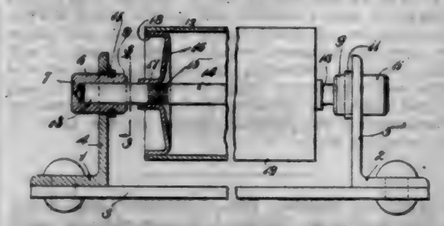
1,541,407. OPTICAL ELEMENT. KURT SPANGENBERG, Jena, Germany, assignor to the Firm Carl Zeiss, Jena, Germany. Filed July 20, 1923. Serial No. 652,843. 1 Claim. (Cl. 88—37.)

Optical element consisting of crystallized fluoride of sodium.



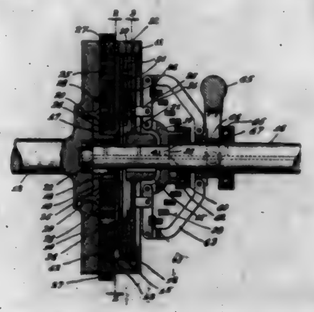
1,541,408. TELEPHONE-EXCHANGE SYSTEM. FRANKLIN A. STEARN, Paterson, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 11, 1921. Serial No. 460,318. 17 Claims. (Cl. 179—27.)

1. In a telephone system, an operator's position, a telephone set and a cord circuit thereat, selective switches, said cord circuit and switch serving to extend talking connections, a register sender for controlling the movement of said switches, a connecting relay for said cord circuit, means effective when the cord is taken for use to operate said connecting relay to connect the telephone set to said cord, means for associating said sender with the cord, disconnecting means operated by



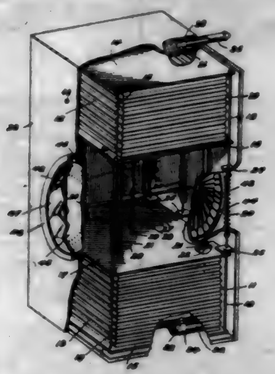
said sender to disconnect said telephone set, releasing means for said sender, and means operated by said disconnecting means for rendering the sender releasing means effective.

1,541,409. LUBRICATING COUPLING. FRANK D. WINKLEY, Madison, Wis., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 2, 1920. Serial No. 348,924. 3 Claims. (Cl. 284—18.)



1. In a lubricating coupling, the combination of an oil receiver having an end wall formed with an opening, a valve in said receiver normally completely filling said opening, an oil delivery nozzle formed with a central valve-displacing member slidably engageable with said opening and adapted to open said valve, a cam on the inner side of said end wall, and a radial projection on the forward end of said valve-displacing member adapted to cooperate with said cam under a turning movement of said nozzle to draw the latter into oil-tight contact with said receiver.

1,541,410. CONVEYER. JAMES T. COWLEY, Syracuse, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed May 4, 1923. Serial No. 636,629. 4 Claims. (Cl. 64—10.)



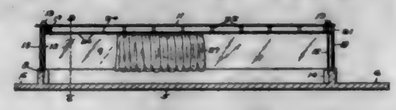
1. A conveyer comprising a support having an opening therein, a bearing sleeve removably mounted in the opening, said sleeve having an axial journal opening for the reception of a roller spindle and being provided with a circumferential groove in its outer surface, and a resilient split collar normally seated in said groove and constituting a stop to limit axial movement of the sleeve in one direction.

1,541,411. CLUTCH. LATTA O. DAVIS, Indianapolis, Ind., assignor to William M. Fogarty, trustee, Indianapolis, Ind. Filed Aug. 12, 1922. Serial No. 581,301. 29 Claims. (Cl. 192—55.)

1. In combination, a flywheel having a rim projecting axially to form a housing, a clutch located within said housing and having relatively movable clutch members which by such relative movement set and release the clutch, one of said clutch members having an axially projecting hub, a ring carried by said flywheel and providing a bearing for said hub, and a spiral spring between said hub and the rim of the flywheel.

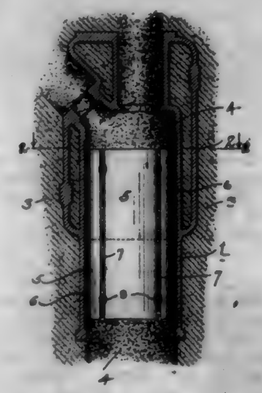
1,541,412. AIR-SPEED METER. GEORGE DE BOTHEZAT and IVAN I. ERBMEFF, Dayton, Ohio. Filed Mar. 9, 1922. Serial No. 542,518. 3 Claims. (Cl. 73—2.)

1. In an air speed meter, the combination with bellows arranged in spaced relation, said bellows having movable closure plates, of means rigidly connecting said plates for movement in unison, wires for guiding each of said plates, springs connecting the opposing ends of said wires, means influenced by air velocity connected to each of said bellows, an indicating device, and mechanism for communicating the resultant motion of said plates to the indicating device.



1,541,413. CARRIER FOR DEMOUNTABLE RIMS. EMIL R. DRAVER, Richmond, Ind., assignor, by direct and mesne assignments, of one-fourth to Richard E. Pfenning and one-fourth to Edward D. Wright, both of Boston, Mass., and one-fourth to Arthur Willis and one-fourth to Lewis P. Kaufman, both of Boston, Mass. Filed Mar. 14, 1923. Serial No. 624,957. 14 Claims. (Cl. 224—20.)

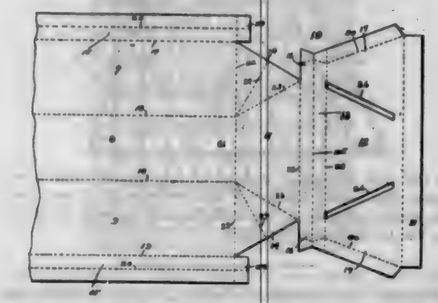
4. In an automobile spare rim or spare wheel carrier, in combination, two arms, means to secure one of said arms to the automobile with the upper end of said arm substantially flush with the under side of the skirt-guard, independent means to secure the other arm to said first



named arm with the skirt-guard therebetween, and means immovably to mount a spare wheel or rim upon said second arm.

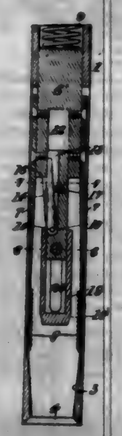
1,541,414. GRAVE-DECORATING STRUCTURE. CLINTON G. GOPLIN, Fargo, N. Dak. Filed Feb. 5, 1924. Serial No. 690,827. 4 Claims. (Cl. 211—25.)

1. A structure of the character described comprising a base, glass sides and ends, metallic hangers engaged over the upper edge of the glass sides, strips supported in said hangers and drapes supported from said strips inside of the structure.



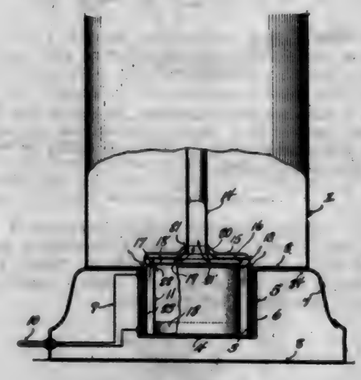
1,541,415. ENGINE CYLINDER AND METHOD OF MAKING SAME. THOMAS P. GREENHOW, Flint, Mich.; Annie K. Greenhow administratrix of said Thomas P. Greenhow, deceased. Filed May 31, 1922. Serial No. 564,977. 13 Claims. (Cl. 22—167.)

1. The herein described method of producing cast metal engine cylinders and the like consisting in forming a suitable core, embedding in the periphery of such core a plurality of segmental chill plates continuous in longitudinal direction from one end of the area to be



chilled to the other, and spaced circumferentially one from the other, and forming longitudinally disposed ridges of core material intermediate said chill plate, and separating them one from the other, positioning said core in a suitable mold and casting the cylinder from molten metal within said mold and around the core containing said chill plates, and removing the cast cylinder from the mold and the core and chill plates from the cylinder.

1,541,416. SHEET-METAL RECEPTACLE. HILDOR E. INGVOLDSTAD, Sioux City, Iowa. Filed Oct. 13, 1923. Serial No. 668,304. 14 Claims. (Cl. 220—62.)



1. A receptacle formed of a single piece of sheet material and including a bottom, side walls, end walls bent upwardly from the bottom and downwardly upon themselves, thus providing inner and outer end walls, and web portions joining the side walls and inner end walls folded upon themselves, the outer end walls being slotted, and said folded web portions being extended through the slots and folded against the outer end walls.

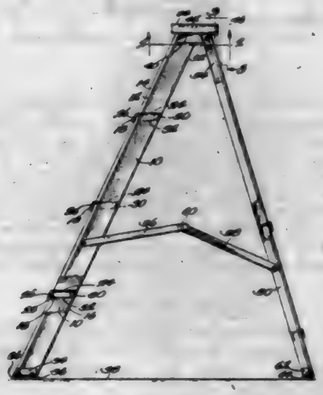
1,541,417. FISHING TOOL. GEORGE WILLIAM KELLER, Coalinga, Calif. Filed Oct. 8, 1923. Serial No. 667,126. 6 Claims. (Cl. 294—102.)

1. A fishing tool comprising a tubular body open at one end and provided adjacent said end with downwardly converging slip guiding surfaces, a plunger reciprocably mounted within said body, a pair of slips carried by said plunger with their free ends engaging said guiding surfaces, a spring within said tubular body engaging said plunger for forcing the slips carried thereby over said surfaces toward each other into part engaging position, a trigger mounting member within said body, a plunger engaging trigger pivotally carried by said mounting member, a trigger releasing member movable into engagement with the trigger to withdraw the same from engagement with the plunger to permit said spring to force said blocks into article engaging position, and a trigger releasing member reciprocably mounted on said trigger mounting member and adapted for engaging the trigger to withdraw the same from engagement with said plunger to permit said spring to force said slips into article engaging position.

1,541,418. ELECTRICALLY-HEATED PERCOLATOR. JOSEPH KOENIG and REMUS KOENIG, Manitowoc, Wis. Filed Dec. 3, 1923. Serial No. 678,178. 5 Claims. (Cl. 219—43.)

1. An electrically heated percolator comprising a main body portion provided with a bottom having a depressed portion provided with a vertical wall, an electric heating element surrounding said vertical wall, a closed compartment fitted within said depression and spaced from the vertical wall, and a tube extending upwardly and communicating with the space between said compartment and said vertical wall, whereby when steam is formed in the spacing between said compartment and wall, heated water will be projected upwardly through said tube.

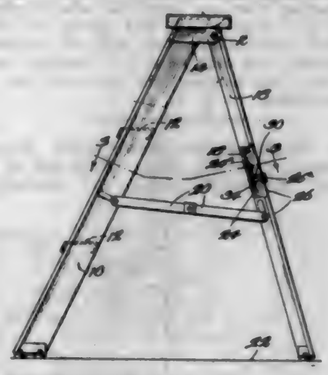
1,541,419. FOOTWEAR APPLIANCE FOR SWIMMING. EGBERTUS MARTINUS NICOLAAS KORVING, London, England. Filed Dec. 9, 1924. Serial No. 754,862. 1 Claim. (Cl. 9—21.)



A footwear appliance having an upper part made of strong material, fixed on to a flat piece of wood shaped to the outline of the sole, said piece of wood has on the underside two flaps longitudinally attached by means of hinges leaving a space between said flaps wherein is secured longitudinally a thin strip of wood on to said piece of wood forming the sole member, cooperating parts secured at widest part of the sole members and adjacent part of flap for securing at will said flaps in horizontal position.

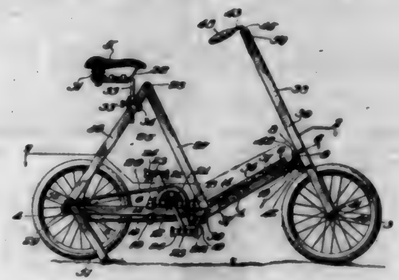
1,541,420. GOLF-PRACTICE APPARATUS. GEORGE H. LAMBERT, Asheville, N. C. Filed June 26, 1924. Serial No. 722,616. 10 Claims. (Cl. 273—35.)

1. In a golf practice apparatus, in which the ball is suitably secured to a leash or tether and the latter secured to a return spring, a telescopic casing or housing for the return spring.



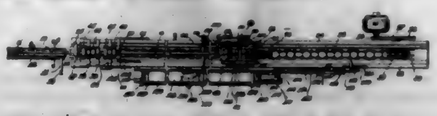
1,541,421. METAL STEPLADDER. FERNANDO J. LE BEAU, Niles Center, Ill., assignor of one-third to Erick Blaine Thelin and one-third to Titus L. Thelin, both of Chicago, Ill. Filed Jan. 17, 1924. Serial No. 686,759. 10 Claims. (Cl. 228—56.)

1. In mechanism of the class described, a pair of parallel separated upright normally inclined Z members with their lower flanges pointed inward toward each other, a straight bar across the upper flanges of said upright members, and an inverted U-shaped step filling the space between the uprights, having one flange over said bar from upright to upright and the other flange bearing on the rear flanges of the Z bar.



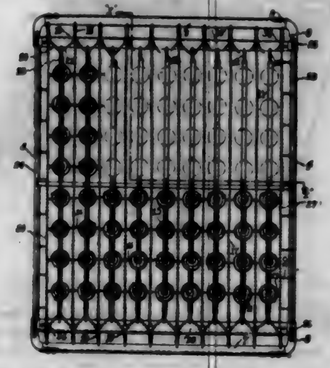
1,541,422. STEPLADDER BRACE. FERNANDO J. LE BEAU, Niles Center, Ill., assignor of one-third to Erick Blaine Thelin and one-third to Titus L. Thelin, both of Chicago, Ill. Filed Feb. 18, 1924. Serial No. 693,465. 2 Claims. (Cl. 228—56.)

1. In a device of the class described, a brace mechanism including two upright Z-members having flanges turned toward each other lying in a common plane, and two other flanges turned away from each other, lying in a different common plane; a Z-bar cross-connection between the uprights having its ends abutting the webs of the uprights and one flange resting upon and secured



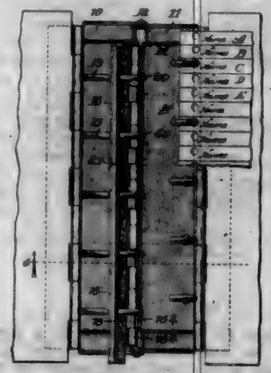
to the first mentioned flanges of the uprights and a bar under the second flange of the cross-member and over the second flanges of the uprights rigidly secured thereto, for the purposes set forth.

1,541,423. COMBINED BICYCLE AND SCOOTER. RICHARD G. LEDIG, Philadelphia, Pa., assignor to A. Mecky Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 30, 1924. Serial No. 740,719. 4 Claims. (Cl. 208—98.)



1. In a device of the character described, a lower frame comprising two coextensive frame members, having their rear portions spaced apart and substantially parallel to each other so as to form a rear fork, a rear wheel rotatably mounted in said fork near the rear extremities of said lower frame members, a crank shaft yoke straddling said two lower frame members and provided with transverse end bars secured thereto, and a crank shaft operatively connected with the rear wheel carried by said crank shaft yoke.

1,541,424. TUBE-DRAWING MACHINE. EMIL LINDERME, Cleveland, Ohio. Filed Dec. 10, 1920. Serial No. 429,638. 15 Claims. (Cl. 205—7.)

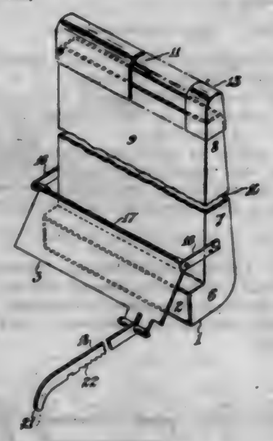


1. In a tube drawing machine, a die adapted to have a mandrel with a tube thereon pulled through said die to reduce the tube, a drawing carriage adapted to grip the mandrel and pull it through the die, swingable means actuated by said drawing carriage to support the mandrel and its tube while passing through the die, and tube loosening devices adjacent said die and adapted to loosen the tube on the mandrel as drawn from said die.

1,541,425. BEDSPRING. BENJAMIN F. LINDSLEY, Mansfield, Ohio. Filed Feb. 9, 1923. Serial No. 617,972. 1 Claim. (Cl. 5—248.)

In a bed spring, risers extending rearwardly from the body portions thereof, thence inwardly at the top, angle end bars, means to secure a pair of angle end bars to said risers in spaced apart relation vertically and longitudinally from each other, supporting bars yieldingly connected to one of each pair of the angle end bars, a plurality of conical springs removably mounted on said supporting bars, a series of chains connecting the top portions of said conical springs, whereby the top portion of the springs and chains provide the top of the bed spring, and side bars yieldingly and independently connected to the risers and positioned directly over the side rails of the bed spring, flexible connections between said side bars and the adjacent chains and connected to the latter intermediate the connections of said chains and springs, a brace bar underlying and connected to the supporting bars, and inclined brace members extending from the ends of such brace bar and connected to said side bars.

1,541,426. SHEET SHIFTER FOR PRONG FILES. ARTHUR J. LLOYD, Chicago, Ill., assignor to Accounting Devices Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 26, 1924. Serial No. 758,165. 7 Claims. (Cl. 129—17.)

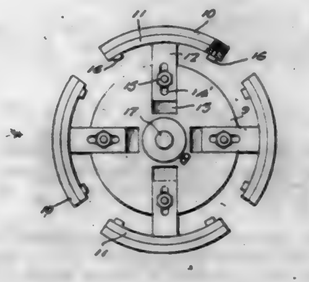


3. A file shifter adapted to be used in connection with a hinged non-shift prong file, said shifter comprising a member adapted to be removably held in fixed relation to one of the sets of prongs of said file while it is open, and a second member to which is attached a set of prongs facing one of said sets of prongs of the file, said second member being slidable longitudinally with respect to the first mentioned member, said members being hingedly connected along an axis substantially parallel to the axis of the file.

1,541,427. FASTENER FOR MAIL BAGS. ARCHIE EDGAR LOW, Ottawa, Ontario, Canada. Filed Oct. 15, 1924. Serial No. 743,832. 2 Claims. (Cl. 24—30.5.)

1. A bag fastener comprising a single piece of metal provided with cord-receiving holes at each end having inwardly bent sides designed to provide flanges to engage and grip ropes or the like passing through said holes.

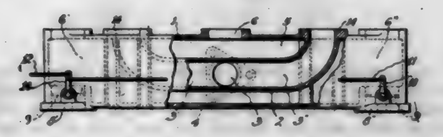
1,541,428. DRAFT THROAT FOR FURNACES. FRANCIS ALEXANDER LUKE, Albert Park, Victoria, Australia. Filed July 10, 1924. Serial No. 725,223. 1 Claim. (Cl. 110—73.)



In a furnace fire bridge, a built-in metal draft throat having a forwardly extending base inlet of about the full width of the fire bridge base and having its inlet end about flush with the face of the rear wall of the fire bridge, an upwardly extending body formed integral with the base portion and having converging front and rear walls and a laterally continuous outlet in the fire bridge body, the width of said throat being uniform from the inlet to the outlet; a deflecting removable hood controlling the outlet and formed with a curved wall serving to cause discharge of the draft forwardly into the furnace, a pair of brackets carried by the aforesaid body and projecting from the rear wall of the fire bridge, a flap for controlling the inlet having its other edge supported from said brackets and an adjustable pull rod extending from the flap to the exterior of the furnace.

1,541,429. BRICKMAKING MACHINE. KENNETH G. MCMILLAN, Milledgeville, Ga. Filed May 31, 1924. Serial No. 717,075. 1 Claim. (Cl. 25—1.)

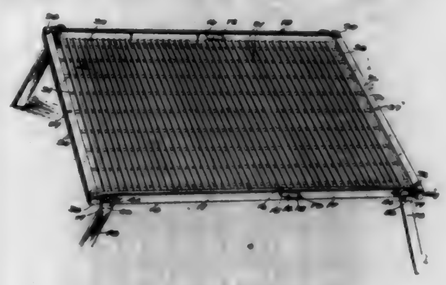
In a brick printing machine, the combination of a travelling clay bar from which the bricks are adapted to be cut, a printing member comprising a rotary carriage and a



plurality of circumferentially arranged printing plates, the circumference of the printing member being predetermined to exactly equal the length of the bar necessary to produce bricks equal in number to the number of printing plates on the carrier and said plates being adjustable relatively to one another to vary the circumference of the printing member to compensate for variation in the length of bricks cut from the bar and means for utilizing the travelling movement of the bar to drive said printing member at a rate of speed equal to the speed travel of the bar.

1,541,430. ART OF PURIFYING ESTER BODIES. MATTHEW D. MANN, Jr., Roselle, N. J., assignor to Standard Development Company, a Corporation of Delaware. Filed May 9, 1922. Serial No. 559,596. 5 Claims. (Cl. 260—106.)

1. The method of purifying oil-miscible esters when associated with water-soluble alcohols which comprises admixing mineral oil and water with such materials and permitting a layer separation of the resulting mixture.

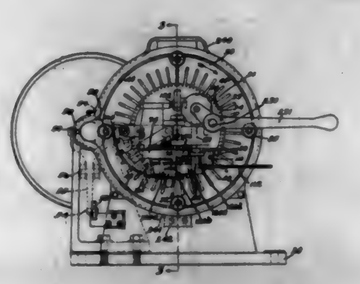


1,541,431. ENGINE MANIFOLD. ARTHUR C. MASON, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 29, 1920. Serial No. 369,564. 4 Claims. (Cl. 123—122.)

1. A manifold for internal combustion engines comprising an intake passage, an exhaust passage overlapping said intake passage at the ends, and outlet means for the exhaust passage so arranged that exhaust gases may be either chambered from each end toward the midportion of the manifold to heat the intake passage or may be permitted to escape near the ends of said manifold, directly into the surrounding atmosphere.

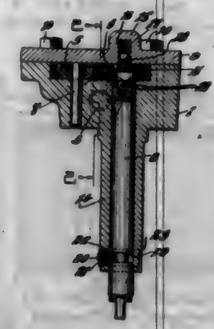
1,541,432. BED. RAY SQUIER MATTINGLEY, Rockport, Ind. Filed Nov. 19, 1923. Serial No. 675,729. 2 Claims. (Cl. 5—114.)

1. In a bed, a frame including side rails, each side rail including a pair of sections, a pair of links for the sections of each side rail, each pair of links being pivotally connected at one end to one section of a side rail and being pivotally connected intermediate its ends to the other section of the same side rail, a transverse pin carried by the links, said other section having an inclined slot receiving said pin in the extended position



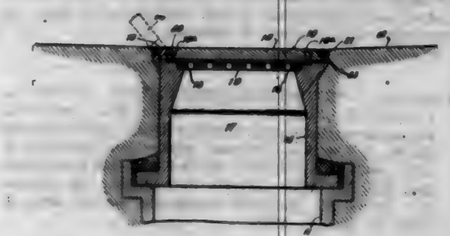
of the sections, said sections having abutting faces beveled on a plane inclined with respect to the vertical and extending transverse to the longitudinal axis of the side rail.

1,541,433. PROCESS OF PREPARING METALLIC SALTS OF DITHIOCARBAMIC ACID. YASUJURO NIKADO, Bay City, Mich., assignor to Michigan Chemical Company, a Corporation of Michigan. Filed Aug. 9, 1921. Serial No. 491,042. 7 Claims. (Cl. 260—11.)



1. The process of producing stable metallic salts of alkyl dithiocarbamic acid comprising passing the distillation-product formed by the destructive distillation of beet sugar residue into carbon bisulfid, separating therefrom a solution of the amino-ammonium salts of dithiocarbamic acid, acidifying the solution with a weak acid, adding a metal salt thereto, and recovering therefrom the metallic salts of dithiocarbamic acid.

1,541,434. MACHINE FOR WEAVING FRICTION MATERIAL ON CLUTCH DISKS. WILLIAM L. O BRIEN, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed July 20, 1923. Serial No. 652,847. 26 Claims. (Cl. 242—1.)

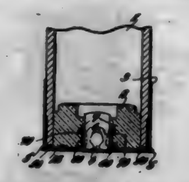


1. Apparatus for attaching cord to a toothed plate comprising, in combination, means for progressively forming loops in the cord; and means for moving the cord with the loops therein progressively from said loop forming means to and about the teeth of the plate.

1,541,435. ROTARY PUMP. EDWIN L. RELLER, St. Louis, Mo., assignor to Wiesler Instrument Company, St. Louis, Mo., a Corporation of Delaware. Filed Jan. 24, 1924. Serial No. 688,293. 5 Claims. (Cl. 103—126.)

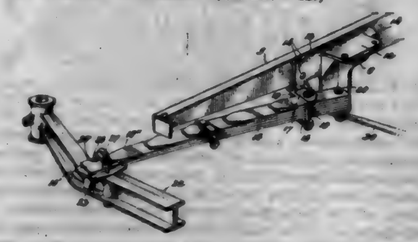
1. A rotary pump comprising, a casing, an element rotatable in said casing, a shaft having a loose driving connection with said element, and means for holding said element against the shaft end of said casing.

1,541,436. SEWER DRAIN. MIKLOS RESHAN, Whiting, Ind. Continuation of application Serial No. 677,865, filed Nov. 30, 1923. This application filed Dec. 31, 1923. Serial No. 683,570. 1 Claim. (Cl. 182—31.)



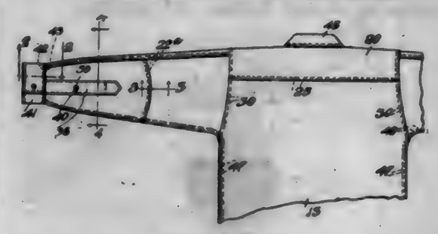
A sewer drain for preventing back flow of water and escape of sewer gas from a drain pipe and comprising a casing embedded in a floor or the like and having an opening substantially flush with the floor, a perforate plate disposed in the opening to strain water flowing through the casing, a gasket arranged in the opening, a cover pivotally secured to the casing and adapted to seat upon the gasket, and a tapered pin for locking the cover in a position wherein it is substantially flush with the floor and wherein it compresses the gasket to seal the opening, said pin being received in a recess in the floor.

1,541,437. BATTERY CUP AND METHOD OF MAKING THE SAME. GEORGE W. SCHAUERTE and JOHN M. OLIN, East Alton, Ill., assignors to Western Cartridge Company, East Alton, Ill., a Corporation of Delaware. Filed Sept. 4, 1923. Serial No. 660,867. 13 Claims. (Cl. 102—18.)



8. In a cartridge, a battery cup whose flash end is provided with slits crossing each other, said end being compressed to substantially close said slits.

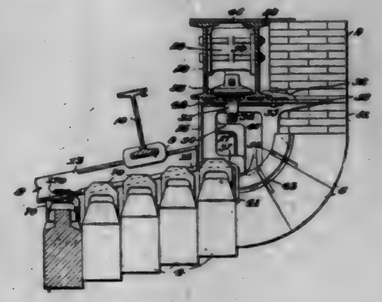
1,541,438. CARTRIDGE SHELL AND PROCESS OF MAKING THE SAME. GEORGE W. SCHAUERTE, Alton, Ill., assignor to Western Cartridge Company, East Alton, Ill., a Corporation of Delaware. Filed Oct. 6, 1923. Serial No. 666,916. 14 Claims. (Cl. 102—17.)



12. In the art of making cartridge shells, the process comprising placing over a battery cup and an anchor on the base, a base wad with the aperture taking freely over the cup and anchor, and condensing the wad to close on the cup and into interlocking engagement with the anchor.

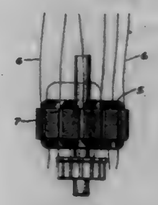
1,541,439. FRONT SPRING. CHARLES R. SHORT and ROSCOE N. HART, Dayton, Ohio, assignors to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 23, 1921. Serial No. 471,768. 6 Claims. (Cl. 267—41.)

5. The combination of a chassis frame member and a front axle having a spring seat, a spring bracket secured to the inner side of said member, a leaf spring secured at one end to said bracket and at the other end to said spring seat, said spring and seat having inter-fitting parts to prevent relative displacement laterally.



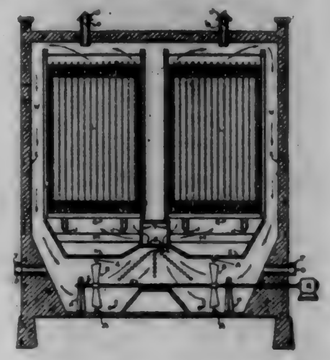
1,541,440. GARMENT. SAMUEL SPERO, Hollywood, Calif. Filed May 31, 1921. Serial No. 473,727. Renewed Oct. 31, 1924. 1 Claim. (Cl. 2—122.)

A garment, the sleeve portion of which is formed with a seam extending lengthwise thereof and a strip of reinforcing material positioned flatwise against the material forming the main portion of the sleeve at the elbow thereof extending therefrom toward the outer end of the sleeve, said sleeve being formed with a vent adjacent its outer end and presenting facings, said reinforcing strip extending across, and being stitched to, said facings to reinforce the latter, said sleeve also being provided with a cuff portion stitched thereto, said reinforcing strip and said material forming the main



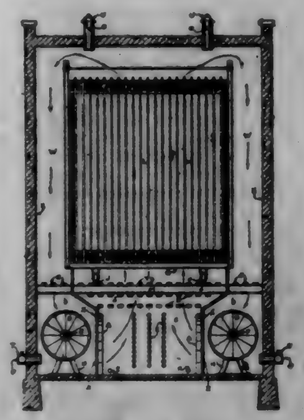
body portion of the sleeve extending into overlapped position relative to said cuff, with said stitching extending through said material, reinforcing strip and cuff, said reinforcing strip being stitched to the main portion of the sleeve along the seam which extends lengthwise of the latter.

1,541,441. FURNACE ARCH. FREDERICK C. STIMMEL, Chattanooga, Tenn., assignor to The Casey-Hedges Co., Chattanooga, Tenn., a Corporation of Ohio. Filed Oct. 19, 1923. Serial No. 669,511. 31 Claims. (Cl. 110—99.)



1. In a furnace arch of the character described, hanger beams having oppositely extending base flanges, pendulum hanger tiles, and tile clips for supporting said tiles from said beams, a pair of said clips having rocking engagement with each of said tiles and each pair of clips having hooked upper ends extending toward one another for engaging over the oppositely extending base flanges of the same hanger beam, the facing portions of each pair of clips being inclined downwardly and toward each other, whereby said pair of clips may have their hooked upper ends swung away from each other for disengaging them from the hanger beam under the action of said inclined portions engaging the base flanges of said hanger beam when a tile is pushed upward substantially as described.

1,541,442. METHOD OF WINDING ARMATURES. RAYMOND H. SULLIVAN, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 6, 1924. Serial No. 697,344. 1 Claim. (Cl. 242—13.)

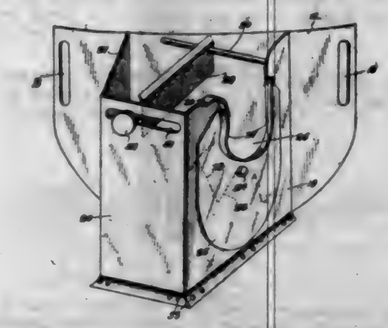


The method of winding an armature, which consists in winding overlapping coils in the armature-slots and leaving the terminal of each coil projecting at the rear end of the core until all coils have been wound: then drawing each such terminal around on top of all coils and through the appropriate slot to complete its respective coil and to bring the terminal into position for connection with the commutator.

1,541,443. REVERSIBLE CIRCULATION INTERNAL FAN KILN. ROLF THELEN, Madison, Wis.; dedicated, by mesne assignments, to the People of the United States. Original application filed Apr. 19, 1924, Serial No. 708,323. Divided and this application filed Mar. 7, 1925. Serial No. 14,423. 4 Claims. (Cl. 34—46.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. In a double track dry kiln arranged for edge stacking: a series of cross shafts; means for rotating said shafts in either direction to cause reversal of the circulation of the air and vapor in said kiln; two fans of opposite pitch mounted for rotation on each shaft; and an air distributing system comprising a main air distributor and two sets of diffusers.

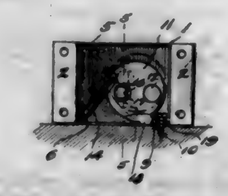
1,541,444. REVERSIBLE-CIRCULATION INTERNAL FAN KILN. ROLF THELEN, Madison, Wis.; dedicated, by mesne assignments, to the Citizens of the United States of America. Original application filed Nov. 7, 1923, Serial No. 673,240. Divided and this application filed Mar. 7, 1925. Serial No. 14,425. 14 Claims. (Cl. 34—46.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. In a single track dry kiln arranged for edge stacking: two series of fans; two shafts on which the fans are mounted for rotation; means for rotating said shafts in either direction to cause reversal of the circulation of the air and vapor in said kiln; and an air distributing system comprising side deflecting partitions, a main air distributor, and two sets of diffusers.

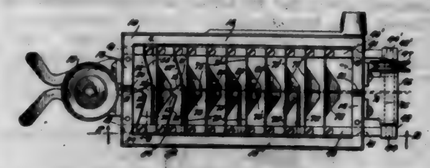
1,541,445. RIM FOR VEHICLE WHEELS. FRANK C. THELEN, Jersey City, N. J. Filed Dec. 12, 1924. Serial No. 755,690. 1 Claim. (Cl. 301—23.)

A demountable rim comprising two flanged ring sections, one of said ring sections being provided with a plurality of equidistantly spaced notches in its inner edge, a lug projecting into each notch adjacent the inner edge of the respective ring section, a plurality of equidistantly spaced hooks on the inner edge of the other ring section, the bills of said hooks being adapted to engage said lugs, when said hooks are seated in said notches, by rotating one of said ring sections relatively to the other, whereby said ring sections are secured against lateral movement, and a spring-pressed tongue in one of said notches, adapted to abut against the respective hook to prevent circumferential movement of one of said ring sections in relation to the other, the outer edge of said tongue being beveled to permit said tongue to be forced out of its notch when the respective hook is being seated in said notch.



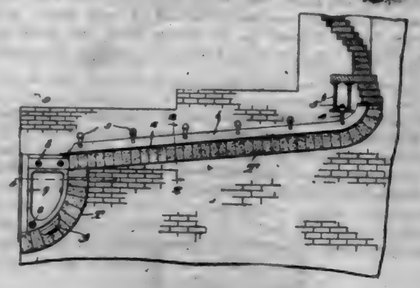
1,541,446. TEA GATHERING. CARL-HEINZ TILLMANNS, Bandoeng, Java, Dutch East Indies, assignor of one-third to Cornelis Johannes Roeters van Lennep, Bandoeng, Dutch East Indies. Filed Jan. 13, 1925. Serial No. 2,236. 9 Claims. (Cl. 146—1.)

1. A tea-gathering implement, comprising a carrier plate having means for enabling its attachment to the body of the user; and a knife plate secured to the carrier plate for severing the stalks of the gathered bundles of tea plants held in the hands of the user.



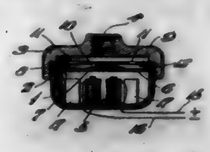
1,541,447. COMBINED SASH AND LIFT LOCK. EDMOND VAN DER ZWALEN, St. Charles, Ill. Filed Mar. 3, 1924. Serial No. 696,654. 2 Claims. (Cl. 292—127.)

1. In a device of the class described, a casing including a front wall having an elongated slot therein, a lift embodying a bolt penetrating said slot for movement therein, a disk eccentrically mounted within the casing, a bolt tangentially mounted on the periphery of said disk, said casing provided with an opening, a spring in said casing



normally holding the disk so that said bolt is disposed over said opening, said first mentioned bolt piercing the disk so that upon movement said disk will be rotated for moving the bolt away from the opening.

1,541,448. YARN CLEANER. HENRY E. VAN NESS, Elmira, N. Y. Filed Feb. 14, 1923. Serial No. 618,683. 16 Claims. (Cl. 28—66.)

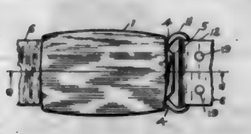


1. In a yarn cleaner for removing particles from a traveling yarn, the combination with means for guiding the yarn through the cleaner, of a blade extending transversely to the direction of the travel of the yarn through the cleaner and having an edge adjacent to the yarn, and means independent of the travel of the yarn across said edge for causing a rapid reciprocatory movement of said edge in directions approximately longitudinal of the yarn traveling through the cleaner.

1,541,449. SUPPORT FOR FURNACE ARCHES. CHARLES F. WAGNER, Atlantic City, N. J. Filed July 8, 1921. Serial No. 483,338. 1 Claim. (Cl. 122—6.)

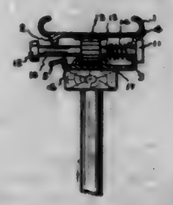
In a furnace structure a hollow bracket support having grooves in opposed faces thereof, hollow beams separate from but supported adjacent the bracket support, said beams having grooves in the opposite faces thereof, pipes connecting the bracket supports, pipes connecting the beams, tiles projecting into the grooves in the bracket supports and beams and held assembled by engagement therewith, and end supports connected to a pipe of each beam for supporting those ends of the hollow beams remote from the bracket supports.

1,541,450. RADIO LOUD-SPEAKER RECEIVER. HENRY WALKER, Wilmington, Del. Filed Feb. 29, 1924. Serial No. 695,884. 5 Claims. (Cl. 179—110.)



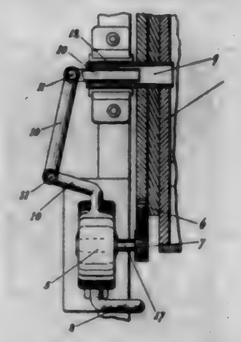
1. A radio loud speaker receiver, comprising a casing element having a magnet and coils therein, a casing element having a tone passage therein and spaced apart diaphragms clamped between said casing elements of which one diaphragm has a central stiffened portion and the other has a vibratory tongue in register with said stiffened portion.

1,541,451. VANITY CASE. EDWARD P. WALLACE, Waterbury, Conn., assignor to Risdon Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 13, 1924. Serial No. 712,952. 12 Claims. (Cl. 132—83.)



1. In a vanity case, a base, a cover, a hinge for pivotally connecting said base and said cover, said base and said cover both being adapted to contain powder compacts, a strap located between the cover and base and pivoted on the hinge connecting said cover and base, and a mirror pivoted on the free end of said strap, said mirror being adapted to be swung about its pivot for use with the compacts in either the base or the cover.

1,541,452. UNDERSWUNG CAM BUCKLE. WALFRID WALLENTHIN, Attleboro, Mass., assignor to W. W. Associated Attleboro Manufacturers, Inc., Attleboro, Mass., a Corporation of Massachusetts. Filed Apr. 17, 1923. Serial No. 632,788. 6 Claims. (Cl. 24—191.)



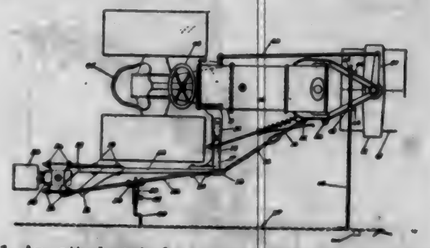
1. In a buckle, the combination of a binding member provided with pivot flanges on each side thereof and a cam member having pivotal lugs extending laterally therefrom near the inner end thereof, side flanges projecting forwardly from said lugs, a gripping portion having an extended surface of convex shape of slight curvature for gripping the free end of a belt against said binding member integrally attached to said side flanges and extending outwardly from said pivotal lugs and a bail extending integrally outwardly therefrom for permanent attachment thereto of a belt end, said cam member being pivoted on the flanges of the binding member.

1,541,453. DEMOUNTABLE RIM AND WHEEL FOR AUTOMOBILES AND OTHER VEHICLES. CLAYTON STUART WATKINS, Wichita Falls, Tex. Filed Dec. 20, 1922, Serial No. 607,981. Renewed Oct. 27, 1924. 3 Claims. (Cl. 301—17.)

1. The combination with a vehicle wheel comprising a felloe provided with side flanges, one of said flanges being inclined outwardly and the other flange being shaped to support a tire rim, a tire rim having a depending flange the edge of which is beveled to correspond with the inclined flange upon said felloe, said felloe and rim having cooperating locking wedges provided with coacting wedging faces, and means for rotating said rim relative to said felloe whereby to bring said wedges into locking relation, of a plurality of U-shaped brackets upon said felloe, and rollers in said brackets to support and guide said tire rim.

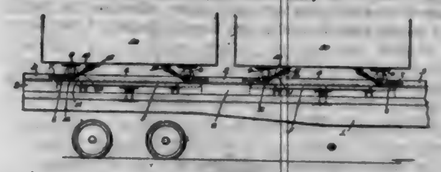
1,541,454. ELECTROPLATING MACHINE. WILLIAM WATSON WELLS, Toronto, Ontario, Canada. Filed Jan. 21, 1922, Serial No. 530,840. Renewed Sept. 2, 1924. 5 Claims. (Cl. 204—11.)

1. In an electroplating machine, the combination with the tank containing the electrolyte and the rotatable perforated drum containing the articles to be plated, of means for drawing off from the tank that portion of the electrolyte richest in metal and circulating it through the drum.



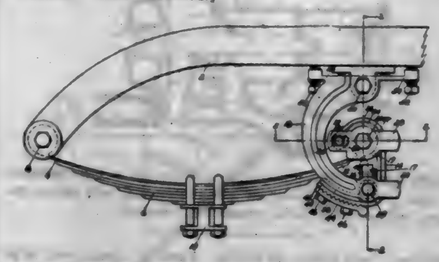
1,541,455. PLUMB AND LEVEL INSTRUMENT. GEORGE C. WHITE, Miami, Fla. Filed Apr. 14, 1924. Serial No. 706,447. 3 Claims. (Cl. 33—215.)

1. A device of the class described comprising a stock, a pendulum, and pivot means for the pendulum, the pivot means being carried by the stock, and the pendulum having an elongated opening wherein the pivot means is



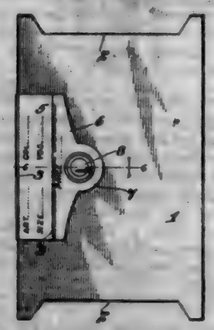
received, thereby permitting a shifting of the center of mass of the pendulum with reference to the pivot means, when the stock is turned end for end.

1,541,456. FURROWING DEVICE. HORACE R. WILSON, Harvey, Ill. Filed June 25, 1924. Serial No. 722,275. 15 Claims. (Cl. 37—98.)



1. An attachment for a road roller comprising a laterally disposed pivot secured to the side thereof, a furrow forming device rotatively secured on the pivot and means for adjusting the device around the pivot for the purpose set forth.

1,541,467. SYSTEM OF TRANSPORTATION. SIDNEY B. WINN, Lapeer, Mich. Filed July 2, 1923. Serial No. 648,964. 8 Claims. (Cl. 214—38.)

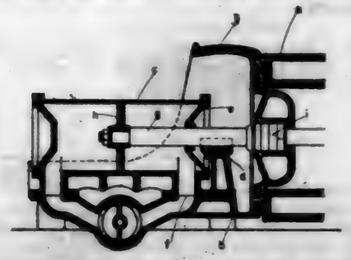


1. As a means for transporting commodities, etc., a traveling carrier having a trackway extending longitudinally of the carrier, said trackway being adapted to permit travel of wheeled carriers and containers thereover and including a plurality of individual turntables symmetrically disposed on the carrier and adapted to carry a portion of said trackway, said turn-tables being spaced apart relative to each other and arranged to provide the conditions of a continuous trackway or a trackway broken by movement of a turn-table, and co-operating means carried by the stationary and turntable portions of the car to maintain the trackway in its alined condition, whereby the trackway may contain a plurality of wheeled carriers or containers with the loading and unloading of the carriers or containers provided with the turn-tables in position to aline the trackway or with the continuity of the trackway broken to permit the carriers or containers to be moved to and from position on the travelling carrier in a regular succession or in an irregular order.

1,541,458. VEHICLE. FREDERICK W. WRIGHT, Danvers, Mass. Filed Jan. 9, 1924. Serial No. 685,214. 11 Claims. (Cl. 267—54.)

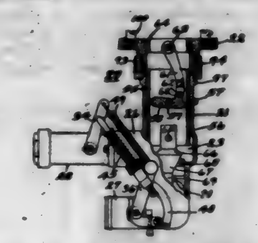
1. In a vehicle having relatively movable elements, one of which is the frame of the vehicle, a support for the other element, a portion of the said other element being disposed above an adjacent portion of the frame, and a tape, an intermediate portion of which extends around one of the said element portions and having portions on both sides of the said intermediate portion secured to the other of the said element portions.

1,541,459. BRAID-WINDING-CARD LABEL. CARL J. R. AHRENS, Weehawken, N. J. Filed Sept. 6, 1923. Serial No. 661,143. 1 Claim. (Cl. 40—2.)



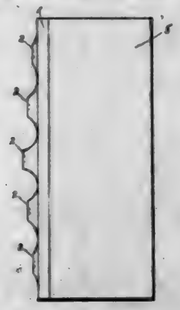
The combination with a braid winding card comprising a flat member having cut-away ends for receiving braid and the like, of a label comprising outer sections adhesively secured to the card, one of said sections being secured to one side of the card and overlapping an edge thereof between the two cut-away ends, the other of said sections being secured wholly on the other side of the card between the cut-away portions at the end of card, and a removable intermediate portion secured to the two outer sections of the label for bearing indicia indicating the contents on the card and positioned adjacent to the free edge thereof.

1,541,460. GAS ENGINE COMBINED WITH A SCAVENGING PUMP. ERICH ARENDT, Saarbrucken, Germany, assignor to Ehrhardt & Sehmer Aktiengesellschaft, Saarbrucken, Germany, a Corporation of Germany. Filed Mar. 9, 1925. Serial No. 14,251. 7 Claims. (Cl. 123—66.)



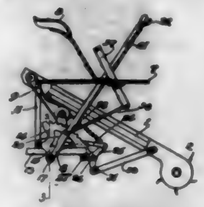
7. In a gas engine combined with a scavenging pump, an engine cylinder, a slide bed attached to said engine cylinder, a pump cylinder slidably mounted on said slide bed, a piston rod extending into both said cylinders, a pump piston which is carried and whose entire weight

is substantially taken by said rod, a bearing likewise adjustably mounted on said slide bed and arranged to support said rod, and a connecting member adapted to



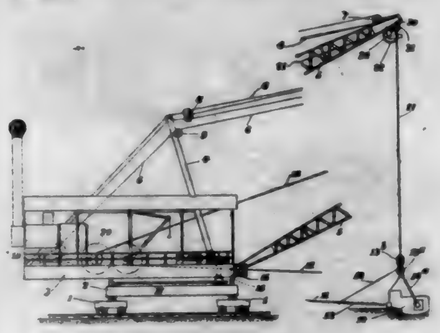
rigidly connect the pump piston with the pump cylinder, so that axial movement of the piston-rod will move the pump cylinder and said connected bearing.

1,541,461. MIXING DEVICE. FRED E. ABELTINS, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed July 2, 1923. Serial No. 648,892. 6 Claims. (Cl. 48—180.)



3. A mixer for internal combustion engines comprising in combination, a suitable casing containing a mixing chamber, and air and gas passages leading thereinto; a vertically movable hollow tubular sleeve fitting within said casing and guided within its movements thereby, an oscillation lift plate pivotally suported within said sleeve, and partaking of the movements thereof; and a lever, the upper end of which is pivotally connected with said casing, and the lower end of which is pivotally connected with said lift plate to one side of the pivotal support aforesaid therefor.

1,541,462. COMBINATION GOLF-TEE BLOCK. AMOS PIERCE AVERY, St. Petersburg, Fla. Filed Nov. 22, 1923. Serial No. 676,358. 1 Claim. (Cl. 773—33.)

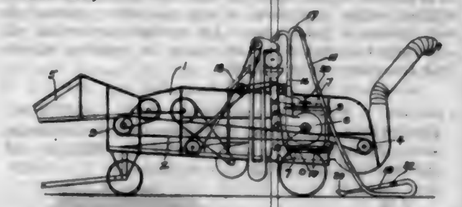


A golf tee block having a plurality of tees of different heights provided with depressions forming ball seats, said tee block comprising an embedded block and resilient tee base fixedly secured to the upper surface thereof, said tees being integral with said base.

1,541,463. SHEAF LOADER. WILLIAM ALBERT BALDWIN, of Winnipeg, Manitoba, Canada. Filed Oct. 8, 1923. Serial No. 667,361. 3 Claims. (Cl. 56—345.)

1. In a sheaf loader, the combination with a pickup conveyor and means pivotally supporting the upper end of said conveyor, of an adjusting lever adjustably supporting the forward end of the pickup conveyor in a set position in respect to the ground and a foot pedal connected with the forward end of the conveyor, said foot pedal being adapted to raise the conveyor to pass a ground obstruction without having to operate the lever.

1,541,464. DRAG-LINE EXCAVATOR. HUBERT OSWALD BEDGOOD, Glasgow, Scotland, assignor to Lobnitz & Company Limited, Renfrew, Scotland. Filed May 9, 1924. Serial No. 711,950. 6 Claims. (Cl. 37—116.)

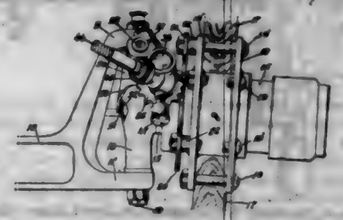


1. The combination with the boom of a drag-line excavator of a single pulley over which the bucket hoisting rope is adapted to pass, the pulley being pivotally connected to the boom at two places whereby the pulley can swing both laterally and longitudinally of the boom.

1,541,465. VALVE. WILLIAM L. BELKNAP, Fairfield, Conn. Filed Apr. 7, 1924. Serial No. 704,894. 6 Claims. (Cl. 251—27.)

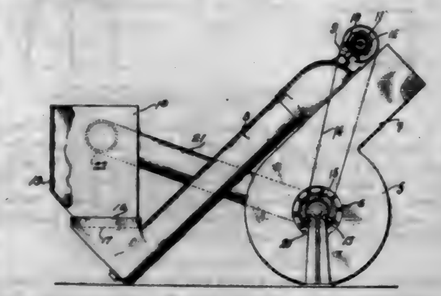
5. A valve construction of the character described, comprising a non-metallic and non-porous valve disc, a metal disc holder having a threaded stem, an interposed impressible member, means adapted to indent said member, and a nut mounted on the stem of the holder to force the valve disc and holder firmly against said interposed member to indent the same and seal the valve against escape of fluids when the valve is closed.

1,541,466. RACK-CLEANING DEVICE. ARTHUR JOHN A. BELL, Okotoks, Alberta, Canada. Filed May 12, 1924. Serial No. 712,835. 2 Claims. (Cl. 130—29.)



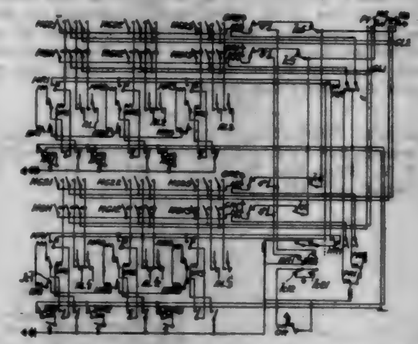
1. The combination with a grain separator having a driving belt, of a guide frame secured to the separator body, a blower having a drive belt adapted to be driven from the drive belt, said blower being slidably mounted upon the frame and means for moving the driving pulley into and out of contact with the driving belt.

1,541,467. HAND BRACE AND SIMILAR TOOL. BROR JOHANNES BENGTSSON, Kallered, Sweden. Filed June 6, 1923. Serial No. 643,814. 2 Claims. (Cl. 77—7.)



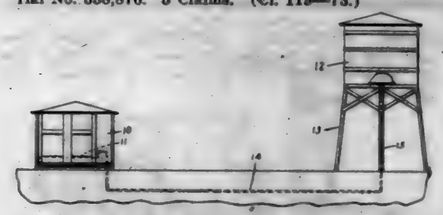
1. A hand brace including a body portion adapted to support a drill, guides on said body portion, a bar slidably mounted in said guides, resilient means for forcing said bar outwardly, adjustable studs on the bar for regulating the yielding amplitude of the latter, and a foot provided at the outer end of the bar and adapted to bear against the face of the work piece actuated upon by the drill.

1,541,468. SPEEDOMETER-DRIVING MECHANISM. JOSEPH BERGE and EDWIN A. GUSTAFSON, Flint, Mich., assignors to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed May 8, 1922. Serial No. 559,213. 5 Claims. (Cl. 74—7.)



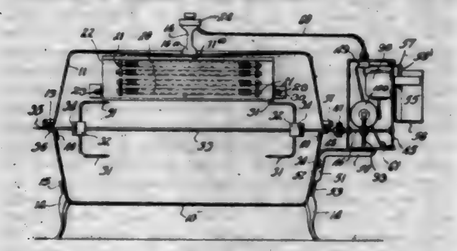
4. In a speedometer driving mechanism, a supporting bracket adapted to be mounted upon a steering knuckle of a vehicle and comprising a sleeve adapted to surround the knuckle and be clamped thereto, and means for positioning said sleeve on said knuckle.

1,541,469. PNEUMATIC CONVEYER. GEORGE BERNERT and JACOB BERNERT, Milwaukee, Wis. Filed June 3, 1921. Serial No. 474,746. 3 Claims. (Cl. 302—11.)



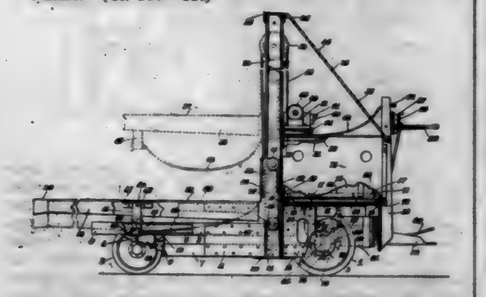
1. A pneumatic conveyer, comprising, in combination, a fan casing, a conveying duct extended from the fan casing, a blower fan in the casing for procuring a pressure of conveying current of air in the duct, air inlet means for the fan casing, an elongated conveyer casing having a discharge and a receiving point, means connecting the conveyer casing discharge point with the conveying duct ahead of the fan, mechanical conveying mechanism within the conveyer casing and adapted to convey material entering the conveyer casing at its receiving point through the casing to the conveying duct to be therethrough conveyed by the conveying current of air, and means connecting the inlet means of the fan casing with the interior of the conveyer casing, whereby any back pressure in the conveyer casing incidental to its connection with the conveying duct is relieved and carried off through the blower fan.

1,541,470. ELECTRICAL SWITCHING DEVICE. GOTTHILF ANSGARIUS BETULANDER, Sodertorns Villastad, Sweden, assignor to The Relay Automatic Telephone Company, Limited, London, England. Filed Aug. 17, 1921. Serial No. 493,131. 5 Claims. (Cl. 179—27.)



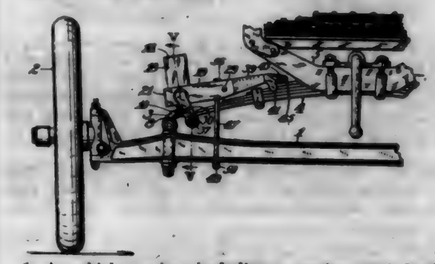
1. The combination with a system of electrical lines of two orders in which any line of the first order upon its electrical condition becoming modified is enabled for connection to an idle line of the second order and means for effecting the connections, of means whereby whilst the connecting means is dealing with a modified line subsequently modified lines are disabled from controlling the connecting means and whereby such subsequently modified lines are enabled and maintained in condition for connection and thereafter connected one at a time.

1,541,471. STOCK-WATERING APPARATUS. THOMAS W. BLACK, Eaton, Ind. Filed Feb. 24, 1922. Serial No. 538,876. 5 Claims. (Cl. 119—73.)



2. In a knock-down device of the character described, a side having an opening therein, a hinged closure for said opening, hinge means supported by said side adjacent the opening normally maintaining said closure in closed position but permitting forcible movement thereof, said means being tiltable into non-closing position adjacent the side for shipping purposes.

1,541,472. COOKING APPLIANCE. WILLIAM F. BORN, Lakewood, Ohio. Filed Nov. 30, 1923. Serial No. 677,748. 22 Claims. (Cl. 219—35.)

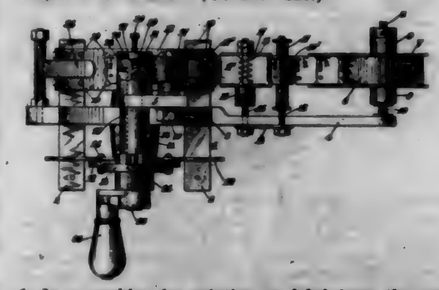


3. The combination of a pair of pans having flanges formed about the perimeters thereof, whereby one pan may be inverted and superimposed upon the other to form an enclosure, electrical heat radiating means carried by the top pan, a rotatable mechanism supported by a bearing formed at the meeting line of the two pans the bottom pan and disposed within said enclosure, said rotatable mechanism being adapted to rotatably carry food in juxtaposition to said electrical heat radiating means and power driven means connected to said rotatable mechanism and detachable therefrom by an endwise movement of said rotatable member and disposed exteriorly of the enclosure for driving said rotatable food supporting means.

1,541,473. INDUSTRIAL TRUCK. JULIUS M. BREITENBACH, New York, and WILLIAM SCHROEDER, Brooklyn, N. Y. Filed June 29, 1921. Serial No. 481,232. 10 Claims. (Cl. 187—11.)

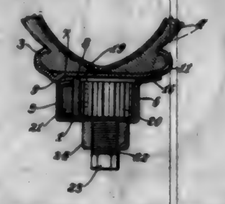
5. A truck having a guide, comprising an I-beam of standard form, a pair of rollers travelling within one of the channels of the I-beam and adapted to bear upon the flanges thereof, the rollers being of slightly less diameter than the distance between the inner faces of the flanges to afford clearance and being coned to conform to the taper of the inner faces of the flanges, a similar pair of rollers travelling within the other channel of said I-beam, a yoke, means for rotatably mounting all said rollers in said yoke, and means for securing to said yoke the object to be guided.

1,541,474. VEHICLE SPRING AND MOUNTING THEREFOR. DALMAR T. BROWNLEE, Indianapolis, Ind. Filed Jan. 27, 1922. Serial No. 532,210. 12 Claims. (Cl. 267—17.)



1. A vehicle spring including a spring seat having a pivot underneath it and having also a lateral controlling arm fixed thereon, a coil spring supported upon the spring seat, a hanger supported upon the coil spring and having a guide arm rigidly fixed thereto, and a loop connected substantially with the controlling arm and the guide arm.

1,541,475. CONSTRUCTION OF DAMS. CHRISTIAN BRYNOLDT, Pittsburgh, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed Oct. 25, 1922. Serial No. 596,816. 16 Claims. (Cl. 25—131.)

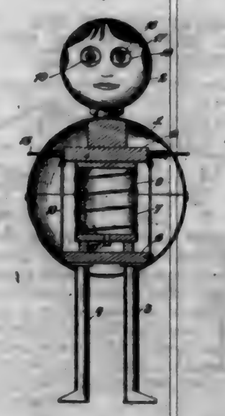


1. The method for constructing concrete dams and the like, which comprises constructing on the foundation or footing one or more longitudinal walls adapted to form part of the dam sections and to serve as a pathway and means of support in further operations, and then building out the dam section with loose green concrete from and beside such wall or walls.

1,541,476. MACHINE FOR PRINTING ON LABEL TAPE. EMIL F. BUSHONG, New York, N. Y., assignor to G. Reis & Bro., Inc., New York, N. Y., a Corporation of New York. Filed July 12, 1922. Serial No. 574,382. 4 Claims. (Cl. 101—228.)

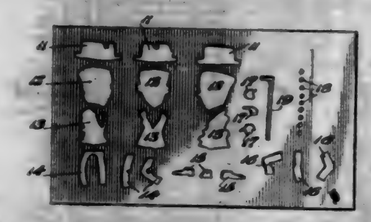
1. In a machine for printing on label tape, the combination of means for engaging the tape to positively feed it, a Geneva stop movement including a pin and a star wheel for driving the tape-feeding means to move the tape step by step, a rotary printing head co-operating with the tape and feeding means to print on the tape as it is moved step by step, and means for rotating the printing head synchronously with the pin, said printing head, star wheel and feeding means being relatively adjustable so that the parts can be so adjusted that the type will engage the tape and lie normal thereto when the pin is at the bottom of a slot in the star wheel.

1,541,477. DEMOUNTABLE RIM. THOMAS F. CARPENTER, St. Louis, Mo., assignor of one-fourth to Charles H. Schokmiller, St. Louis, Mo. Filed Apr. 17, 1922. Serial No. 553,842. 8 Claims. (Cl. 301—26.)



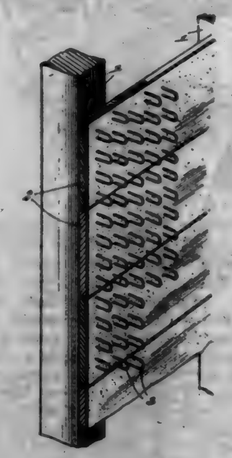
1. A wheel comprising, a felloe provided with a bearing flange, a rim adapted to take over said felloe and having a rib adapted to engage said flange, abutments on said rim, a clamping ring mounted on said felloe inside of and bearing against said flange, and cams on said ring cooperating with said abutments.

1,541,478. PAINT AND STAIN AND PROCESS OF PRODUCING THE SAME. GEORGE W. CARVER, Tuskegee, Ala. Filed June 13, 1923. Serial No. 645,199. 2 Claims. (Cl. 134—58.)



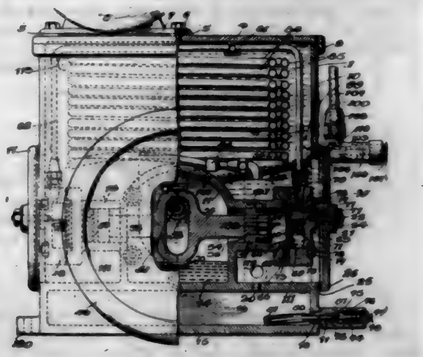
1. The process of producing pigment or the like which comprises boiling clay and metallic iron with acid and separating the coarser particles therefrom.

1,541,479. TOY WITH VOICE AND MOVABLE FEATURES. IRWIN E. COHN, New York, N. Y. Filed Oct. 6, 1924. Serial No. 742,049. 3 Claims. (Cl. 46—40.)



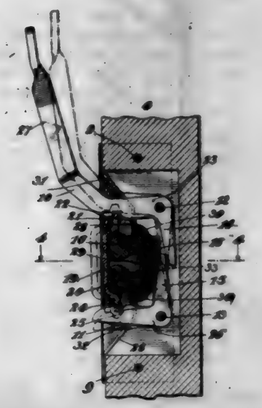
1. A hollow figure toy composed of rigid members telescopically interfitted for relative sliding movement, one of the rigid members being provided with a base adapted to rest upon a support and forming a supporting means for the other member, a pneumatic sound producing device in one of the movable members and in operative relation with the other rigid member, a resilient means for maintaining the second mentioned telescoping member in a normal upward position from the base member, the second mentioned movable member being depressible on the base member whereby one member slides into the other member to cause actuation of the sound producing device against the action of the resilient means.

1,541,480. TRANSPARENT STENCIL. MARSHALL S. COMPTON and EDWARD G. SCHREIBER, New York, N. Y. Filed Nov. 26, 1923. Serial No. 676,892. 1 Claim. (Cl. 35—2.)



An article of the character stated comprising a transparent stencil sheet having a plurality of individual cut-away portions therein denoting several postures of the major portion of a subject to be illustrated, said cut-away portions being arranged in disjointed and selected relation and showing various positions of activity whereby in use rough sketches of outlines only may be inscribed or traced from the same transparent stencil sheet of numerous postures of said subject, the disjointed outlines of which are to be subsequently completed by the artist.

1,541,481. WALL SHEATHING. CHARLES O. COWAN, Palo Alto, Calif. Original application filed June 22, 1923, Serial No. 647,081. Divided and this application filed Feb. 27, 1924. Serial No. 695,512. 2 Claims. (Cl. 20—4.)

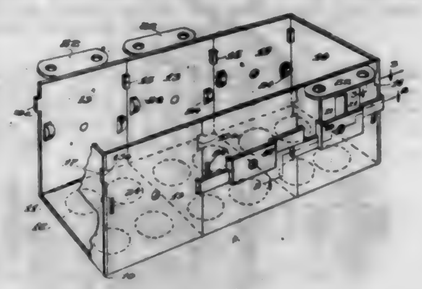


2. In a wall sheathing, the combination with a support, of building boards arranged against the support, means extending through said building boards into the supports for securing the building boards to the supports, said securing means projecting from the outer faces of the building boards, the projecting portions of said means being adapted to bind plaster or the like to said building boards.

1,541,482. REFRIGERATING APPARATUS. HOWARD PAUL CELVER, Parkersburg, W. Va., assignor of one-half to J. H. Randolph, Parkersburg, W. Va. Filed Apr. 29, 1924. Serial No. 709,731. 10 Claims. (Cl. 62—115.)

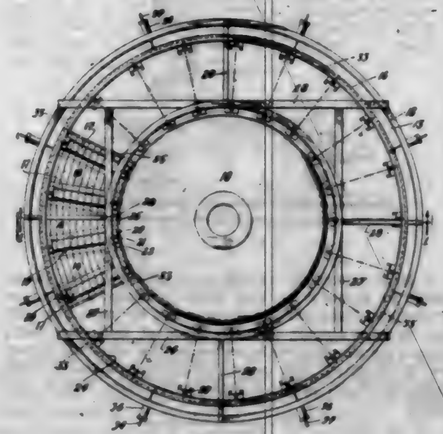
1. A refrigerating compressor condenser unit comprising a casting, a partition dividing the casting into a chamber for storing condensed gas and a chamber for cooling water, a crank case integrally formed with the casting in the cooling chamber, a pair of oppositely disposed compressor cylinders cast integrally with the crank case and supported above the partition in the cooling chamber by the crank case.

1,541,483. DOORLOCK. WALTER H. D'ARDENNE, Lawndale, Pa., assignor to Heintz Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 9, 1922. Serial No. 593,179. 5 Claims. (Cl. 292—31.)



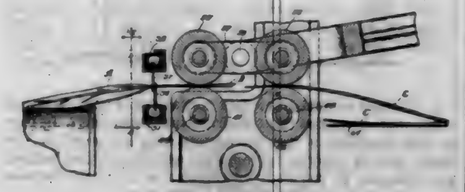
1. In a lock of the character described, the combination of a latch movable into and out of locking position, keeper means for said latch, and means, comprising a pad of resilient material, for holding said latch in locking position, said pad also constituting a buffer.

1,541,484. HIGH-VOLTAGE ELECTRON TUBE. WILHELM DAUMANN, Hamburg, Germany, assignor to C. H. F. Müller, Röntgenröhrenfabrik, Hamburg, Germany, a Corporation of Germany. Filed Feb. 7, 1922. Serial No. 534,695. 1 Claim. (Cl. 250—35.)



A high voltage electron tube, comprising a receptacle, an anticathode element located in said receptacle and having a flat face in the central portion of the receptacle and at a right angle to the longitudinal axis of the receptacle, and a filamentary cathode element likewise located in said receptacle and extending substantially lengthwise thereof, said cathode being bent sharply at its end or apex which faces the anticathode, such apex being located at the central portion of the receptacle and the space between such apex and the opposing face of the anticathode being unobstructed, and the distance between the flat face of the anticathode and the apex of the cathode element being at least about one-half of the median distance between said cathode element and the flat face of the anticathode.

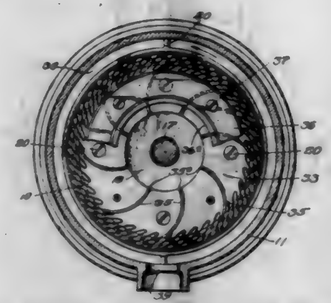
1,541,485. ELECTRIC SWITCH BOX. EARL DENNIS, Detroit, Mich. Filed Mar. 8, 1922. Serial No. 541,936. 6 Claims. (Cl. 247—16.)



1. In a switch box, a body section having a back and two sides, two end sections, a clamping member for each side of the body section adapted to extend transversely thereover and project beyond the edges at each end, each clamping member having its end portions offset substantially the width thereof to lie alongside the clamping member of an adjacent body section, the end portions of said clamping members provided with ears to engage an adjacent body section or an end section.

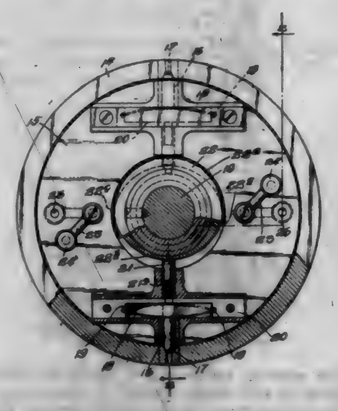
1,541,486. FURNACE ROOF. BRADLEY DOBIE, Elmhurst, N. Y., assignor to American Arch Company, a Corporation of Delaware. Filed Apr. 23, 1923. Serial No. 633,906. 16 Claims. (Cl. 110—99.)

1. In a furnace of the character described, the combination with an upright drum and a surrounding furnace wall, of a furnace roof around said drum sealed therewith and with said wall, but supported independently of either.



1,541,487. TOBACCO-STEMMING MACHINE. GEORGE F. ECKART, Mishawaka, Ind., assignor to Automatic Stemmer Company, Chicago, Ill., a Corporation of Delaware. Filed May 21, 1923. Serial No. 640,401. 5 Claims. (Cl. 131—57.)

1. A tobacco stripping machine comprising stripping members having notched edges, means for moving said members together with said notched edges in overlapping relation, a constantly rotating roller lying lengthwise of said members, a roller parallel to the first mentioned roller and normally held at a distance therefrom so that stems of tobacco leaves held between said members may be passed between said rollers, and means for moving said rollers together whereby the stems will be drawn through said members.

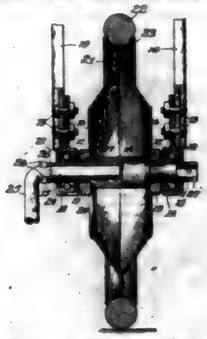


1,541,488. GRINDING BURR. BERNARD M. ELY, Marshall, Mich., assignor to Lambert Machine Company, Marshall, Mich., a Corporation of Michigan. Filed June 25, 1924. Serial No. 722,286. 10 Claims. (Cl. 83—8.)

4. A stationary burr and a runner burr, said burrs having on their peripheries interlocking concentric rows of teeth, the central portions of the faces of said burrs inside of said teeth being separated, and a plurality of

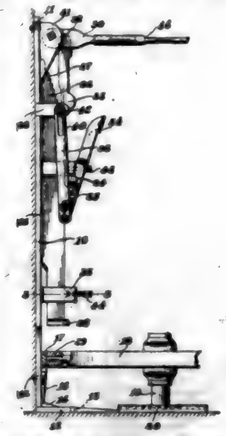
covered radial pockets on the runner burr having their outer ends lying adjacent the teeth and their inner ends open.

1,541,489. POWER-TRANSMITTING MECHANISM. BERNARD M. ELY, Marshall, Mich., assignor to Lambert Machine Company, Marshall, Mich., a Corporation of Michigan. Filed July 24, 1924. Serial No. 728,016. 7 Claims. (Cl. 64—30.)



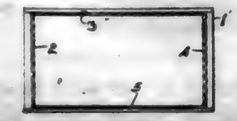
1. A device of the character described, comprising; a shaft; a loose disk mounted thereon; a tight disk on the shaft arranged adjacent the loose disk; a slidable driving pin carried by the tight disk, said pin adapted to be slid inwardly or outwardly; spring means for yieldingly holding said pin in its inner or outer position; a socket in the loose disk adapted to be engaged by the driving pin when in its outer position; and means for manually moving said pin from its inner to its outer position, said means including, a resetting pin adapted to move the driving pin and a rotatable collar surrounding the shaft having a cam surface adapted to engage the inner end of said resetting pin and force the same outwardly upon rotation of said collar.

1,541,490. PEDAL CAR. HOWARD J. FERRIS, Harvard, Ill., assignor to Hunt-Helm-Ferris & Company, Harvard, Ill., a Corporation of Illinois. Filed Dec. 17, 1923. Serial No. 681,122. 4 Claims. (Cl. 280—96.)



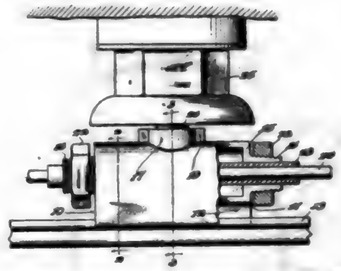
1. In toy wheel goods, a fork rotatably mounted for steering, bearings in the ends of said fork, a shaft jour-

nailed in said bearings, a wheel mounted on said shaft, axial holes in the ends of said shaft, cranks detachably



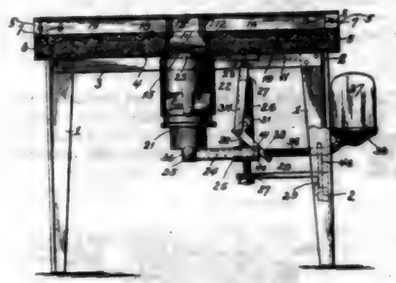
secured in said holes and means for transmitting power from said cranks to said shaft independently of the securing means.

1,541,491. TIRE REMOVER. FRANÇOIS ALFRED FORTIN, Pincher Creek, Alberta, Canada. Filed Nov. 6, 1924. Serial No. 748,172. 5 Claims. (Cl. 157—11.)



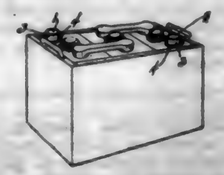
1. A tire remover comprising a supporting frame, a block carried by said frame adapted to support a wheel tire, a pressure-exerting felloes-engaged member slidably mounted in said frame, means for raising and maintaining raised or letting drop said member, and means for exerting pressure on the felloes through said member on the latter being lowered, and adjustable pivotal means for supporting the wheel.

1,541,492. METHOD OF PACKING FRESH FRUIT AND PAD THEREFOR. DARRELL JOSEPH GUENTHER, San Francisco, Calif., assignor to Schmidt Lithograph Company, San Francisco, Calif., a Corporation of California. Filed Aug. 19, 1924. Serial No. 732,948. 8 Claims. (Cl. 217—3.)



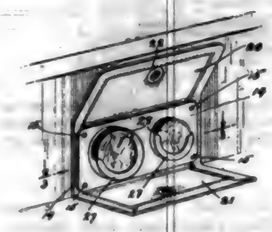
1. In a pad for packing fruit in boxes, a paper board, flat on one side and corrugated on the other side, the ridges of the corrugations having a material thereon to make them slide easily when packing box of fruit.

1,541,493. WIRE HANGER. ALBERT J. GUERNEY, Canton, Ohio, assignor to The American Mine Door Co., Canton, Ohio, a Corporation of Ohio. Filed June 14, 1924. Serial No. 720,073. 14 Claims. (Cl. 191—18.)



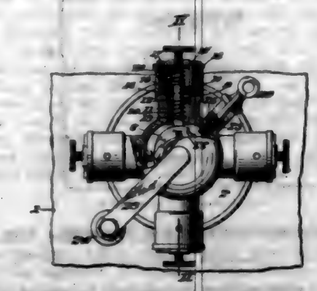
1. In a hanger of the character described, the combination of separate coacting jaws to engage a wire, one of the jaws being provided with means for mounting such jaw upon a support and the other of said jaws being formed for assembly with the former jaw after the former jaw is mounted, and means rotatably adjustable longitudinally of the jaws for drawing the jaws toward each other.

1,541,494. STOVE. OWEN L. HARRISON, Coleta, Ill. Filed May 7, 1924. Serial No. 711,670. 11 Claims. (Cl. 126—215.)



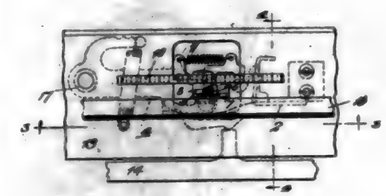
1. A stove comprising a pan containing a heat-resisting body, and a central heat-distributing chamber, a burner in said chamber, a top, heat-conducting elements on the under side of the top in communication with the burner, and dampers at the ends of the pan to cover or uncover the ends of the heat-conducting elements.

1,541,495. MEANS FOR PREVENTING CORROSION OF BATTERY POSTS AND TERMINALS CONNECTED THERETO. WILLIAM T. HASTING, Fort Worth, Tex. Filed Apr. 27, 1923. Serial No. 635,173. 2 Claims. (Cl. 136—135.)



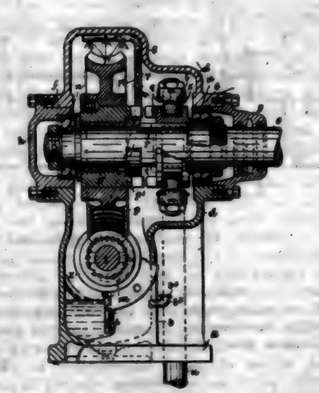
1. The combination with the posts of a battery and the terminal clamps, ferrules placed on the posts and bonded with the metal of the posts, and flanges on the lower edges of the ferrules to support the terminal clamps above and out of contact with the top of the battery box.

1,541,496. RECEPTACLE OR CONTAINER. LEOPOLD HAUSER, New York, N. Y., assignor to Hauser & Weil, New York, N. Y., a Copartnership composed of Leopold Hauser and Simon Weil, both of New York, N. Y. Filed June 9, 1924. Serial No. 718,686. 1 Claim. (Cl. 150—37.)



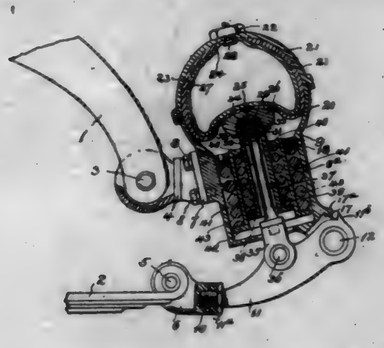
In combination a receptacle or container, a coin receiver attached thereto, said coin receiver comprising a perforated plate attached to the exterior of one wall of the receptacle or container, the perforation of said plate registering with a perforation in the wall of the container or receptacle, a cover for the receiver comprising a perforated strip clamped between the said plate and the perforated wall of the container with its perforation in register with the perforations in the container and receiver and carrying two flaps extending beyond the sides of said perforated plate, a coin supporting plate, a spring mounted in the perforation in the wall of the receptacle or container and adapted to resiliently support the coin-supporting plate, a stop formed on the perforated plate and co-operating with the coin-supporting plate whereby a coin may be clamped between the stop and the coin-supporting plate, the flaps of said cover being foldable into position to overlie the coin receiver.

1,541,497. SPARK TIMER. GUSTAVE L. HESS, New York, N. Y., assignor, by mesne assignments, to Ely Bernays, New York, N. Y. Filed June 22, 1921. Serial No. 479,532. 2 Claims. (Cl. 200—27.)



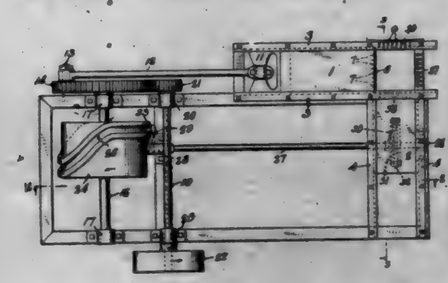
1. In a spark timer, a rotary cam, a rotatively adjustable housing, normally separated reciprocating radially alined outer and inner contact pieces carried thereby, and means for yieldingly holding both of the contact pieces at the limits of their inward movements with the inner contact piece spaced from the lower surface of the cam, said cam having a raised surface arranged to engage the inner contact piece and move it outwardly into contact with the outer contact piece.

1,541,498. TYPEWRITING MACHINE. FREDERIC W. HILLARD, Tottenville, N. Y. Filed June 29, 1923. Serial No. 648,500. 7 Claims. (Cl. 197—68.)



1. In a typewriter, the combination with the carriage and the main spring, of an escapement comprising a rack and a vibratory dog rocker, a normally engaged uninclined dog thereon and a normally disengaged dog on the rocker having its folding face, when engaged with the rack, inclined to the line of the rack feed, said rocker being pivoted on a rigidly fixed pivot positioned in close proximity to said line of feed and perpendicular thereto, whereby the force of the main spring acting on the inclined faced dog to disengage it from the rack, will be transmitted longitudinally through said rocker to said perpendicular pivot, substantially as described.

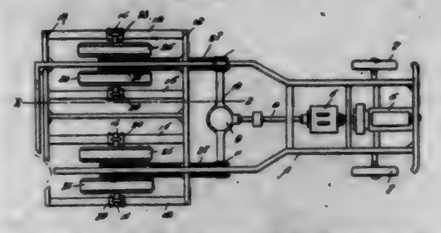
1,541,499. REDUCTION-GEAR UNIT. FLORENT HINNEKENS, Paterson, N. J. Filed July 10, 1923. Serial No. 650,630. 2 Claims. (Cl. 74—30.)



1. In combination, a substantially closed upright casing, a horizontal drive-shaft projecting into the casing and a horizontal driven shaft protruding from the casing at a right angle to and above the drive-shaft and both journaled in the casing, a worm fixed on the drive-shaft and a worm-wheel meshing therewith and revoluble on the driven shaft, means to disconnectively connect said worm-wheel and driven shaft including a clutch member beside the worm-wheel and slidable on the driven shaft, the casing being adapted to contain lubricant below the worm, and means to convey the lubricant up and deliver it onto working surfaces of the worm-wheel and first-named means in limited quantity.

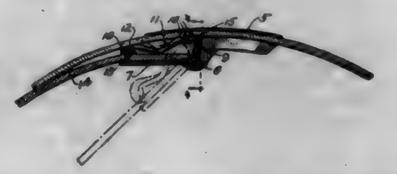
1,541,500. SHOCK ABSORBER. JOSEF HOFMANN, Baumaroche, Switzerland, assignor to Alfred Jeal & Co., Zurich, Switzerland. Filed Sept. 13, 1920. Serial No. 409,938. 14 Claims. (Cl. 267—23.)

1. In a shock absorber, two levers pivoted together, an air cushion and a coil spring between them, the leverage or amplitude of movement at said cushion and spring is less than the ratio of one to one compared to the points of connection of said levers to the vehicle body and body spring.



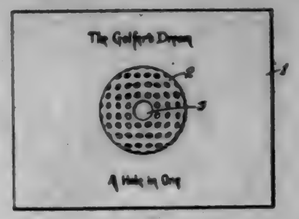
1,541,501. MACHINE FOR CUTTING VEGETABLES AND THE LIKE. ERNEST H. HOSTERMAN and WILLIAM DORN, Hartford, Wis. Filed Dec. 17, 1923. Serial No. 681,089. 9 Claims. (Cl. 146—76.)

1. In a machine for cutting vegetables and the like, the combination of two reciprocating plates guided and movable transversely to each other in parallel planes one above the other, the upper plate provided at one end with a cutting edge and adjacent and transversely thereto with downwardly extending parallel knives, and the lower plate provided adjacent one end with upwardly extending knives arranged transversely to the knives of the upper plate, and mechanism adapted to reciprocate the upper plate and to advance and withdraw the lower plate while the upper plate is over it in position to support the material to be cut.



1,541,502. DRIVE FOR MOTOR TRUCKS. LESLIE HOWE, Kenton, Ohio. Filed Nov. 21, 1922. Serial No. 602,406. 2 Claims. (Cl. 180—22.)

1. A motor vehicle including a frame having parallel side frame bars, a pair of spaced transversely extending bars mounted on said side frame bars, said transverse bars extending beyond each side of the frame, a pair of supporting springs mounted at each side of the vehicle frame having the ends connected with the transverse bars and arranged in spaced relation at each side of the side frame bars, supporting axles mounted on each pair of supporting springs in the central portion thereof between the transverse bars, and pairs of traction wheels mounted on each supporting axle between the respective



springs of each pair, said supporting springs having a pivotal connection with one of said transverse bars, and a swinging link connection with the other of said transverse bars.

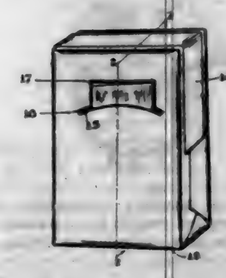
1,541,503. BUCKLE. ERNEST N. HUMPHREY, New Britain, Conn. Filed July 2, 1924. Serial No. 723,664. 4 Claims. (Cl. 24—191.)

4. In a buckle, a front plate, a lever plate pivotally mounted thereon, and a belt gripping plate pivotally mounted on said lever plate and serving to hold the fixed end of a belt thereon, said lever plate contacting with the free end of said belt gripping plate for supporting the latter, said belt gripping plate at a point adjacent the point of contact with said lever plate serving to hold a belt in adjusted position.

1,541,504. ADVERTISING NOVELTY. THEODORE A. HUNTER, Washington, D. C. Filed Nov. 20, 1924. Serial No. 751,150. 3 Claims. (Cl. 40—126.)

1. A device symbolizing a golf ball with a hole in it.

1,541,505. PAPER-ROLL-HOLDER ATTACHMENT. FRANK M. HURLEY, Leipsic, Ohio. Filed Feb. 21, 1923. Serial No. 620,446. 1 Claim. (Cl. 211—32.)



In a device of the class described, spaced upright bearing members having bearing seats formed in their opposed faces and opening through their upper ends, friction rolls mounted at their ends in the said seats one above the other, the upper roll being supported upon the lower roll whereby to frictionally engage and hold paper passed between the rolls, and a cutter comprising a plate secured upon the upper ends of the

bearing members and closing the upper ends of the seats formed in said members, and a rigid blade fixed to and extending downwardly and forwardly from the

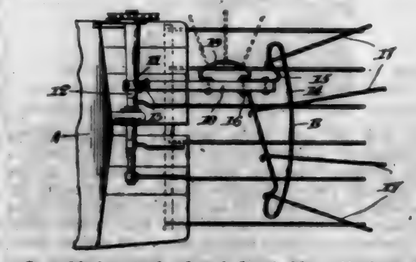
front edge of said plate with its cutting edge disposed in advance of the rolls whereby a free space is provided below the cutter and between the same and the rolls.

1,541,506. TOBACCO PACKAGE. FREDERICK B. JACK, Montreal, Quebec, Canada. Filed May 4, 1923. Serial No. 636,701. 1 Claim. (Cl. 206—47.)

In a package of the class described, an inner sealed wrapper of tinfoil and an outer wrapper of paper completely enveloping the inner wrapper, said outer wrapper being provided with a curved slot giving access to a pouch formed between the outer and inner wrappers, the position of the slot being such that the depth of the pouch is less than the length of the package of cigarette paper so that when such a package is inserted in the pouch an end of the package will project outwardly through the slot, the remaining end of the package being supported on that portion of the outer wrapper which forms the lower closed end of the pouch.

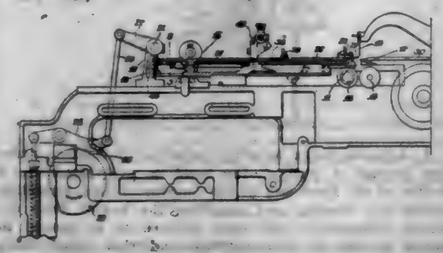
1,541,507. METHOD OF WELDING CAST IRON. JUSTIN JEFFERY, Chico, Calif. Filed Dec. 26, 1922. Serial No. 609,137. 9 Claims. (Cl. 219—8.)

1. A process of electric arc welding with cast iron as the welding electrode of the arc, consisting in causing a coating of mild steel to be formed and maintained on such electrode as the electric current passes therethrough.



1,541,508. TIRE. HARRY B. JOHNSTON, Seattle, Wash. Filed Jan. 16, 1920, Serial No. 351,942. Renewed Nov. 8, 1924. 5 Claims. (Cl. 152—21.)

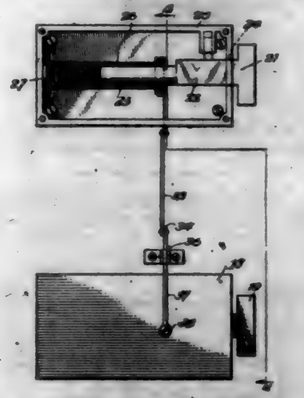
2. A single tube tire having a joint at its inner periphery and comprising thickened portions adjacent the rim, the thickened portions normally engaging the rim at the sides thereof, the thickened portions coming to-



gether to form the joint and being normally out of contact with the rim at the joint when the tire is deflated.

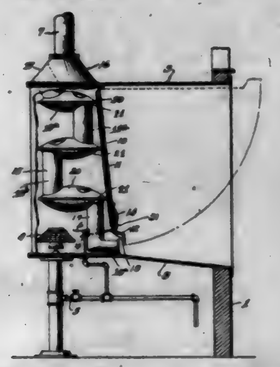
1,541,509. GRAIN AND FLAX ATTACHMENT FOR BINDERS. WILLIAM JOHN KENNEDY, Rosetown, Saskatchewan, Canada. Filed Dec. 29, 1923. Serial No. 683,387. 1 Claim. (Cl. 56—474.)

In a binder, a sheaf and flax holder attachment comprising a main supporting member pivotally mounted on the binder, a band iron having orifices therein rigidly secured at each end on opposite sides of the supporting member and intermediately bent to extend transversely of the end of the supporting member to form a carrier, a plurality of tines extending through the orifices in the band iron, a second carrier on the supporting member and at right angles to the first mentioned carrier and comprising a band member having orifices therein secured at each end to the supporting member and intermediately looped, means for adjusting the supporting member, and means to secure the band irons to the supporting member.



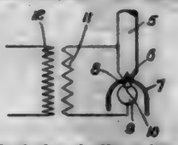
1,541,510. SHEET-FOLDING MACHINE. HOWARD K. KING, Philadelphia, Pa., assignor to Chambers Brothers Company, a Corporation of Pennsylvania. Filed Feb. 6, 1924. Serial No. 690,921. 19 Claims. (Cl. 270—75.)

1. In a sheet folding machine, the combination of means forming a slit, a folding blade for co-operating therewith, a plurality of longitudinally extending guide rods having ends normally terminating on each side of



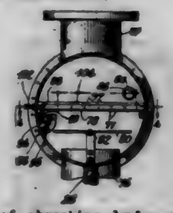
the slit to afford passage for the folding blade, and means for reciprocating certain of said rods to cause a periodic overlapping of said ends to facilitate the passage of the front edge of the sheet over the slit.

1,541,511. LOCK. EUGENE C. KINNEAR, Seattle, Wash., assignor to Anakin Lock Works, Chicago, Ill., a Corporation of Illinois. Filed May 7, 1920. Serial No. 379,454. 9 Claims. (Cl. 109—8.)



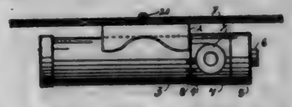
1. A lock for safe doors and the like, comprising in combination: a plurality of locking bars or bolts, a control member therefor and simultaneously moving them into and out of operative position, a normally operable setting mechanism for said control member, means projectable into locking contact with said control member to prevent movement thereof when said setting mechanism is disarranged, and pivoted locking means normally preventing said projectable means from being moved into contact with said control member.

1,541,512. GAS HEATER. ALBERT A. KNISELEY, Detroit, Mich. Filed Apr. 17, 1924. Serial No. 707,134. 5 Claims. (Cl. 126—90.)



1. A heater for a building comprising a housing opening through a wall of the building to atmosphere, a heater at the inner end of the housing, a door extending across the housing and shielding the heater from external atmosphere, said door adapted to be opened to expose the heater to atmosphere and when closed being spaced from the bottom wall of the housing providing for an ingress of air to the heater, said heater including a burner and a series of chambers and pipe sections connecting the same providing a conduit, the conduit opening to atmosphere below the door edge and discharging to the space to be heated, and an exhaust conduit for the gases of combustion leading to the exterior of the building.

1,541,513. ELECTRIC RESISTANCE WELDING. WILLIAM A. KNOOP, East Newport, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 4, 1920. Serial No. 363,121. 10 Claims. (Cl. 219—10.)



1. The method of electrically welding an element to a second element of lower resistance, which consists in pressing an electrode against the first mentioned element, pressing a second electrode against said second element in such manner that it contacts with a plurality of spaced surfaces on said second element, and passing a welding current through said electrodes.

1,541,514. PROCESS OF AND APPARATUS FOR RECOVERING GASOLINE OR OTHER HYDROCARBON LIQUIDS FROM NATURAL GAS. WILBUR G. LAIRD, New York, N. Y., assignor to Henry L. Doherty, New York, N. Y. Filed June 24, 1919. Serial No. 306,891. 6 Claims. (Cl. 183—114.6.)

1. A process of absorbing hydrocarbon vapors from natural gas comprising passing an absorbent liquid horizontally as a thin layer of foam and forcing natural gas through the layer of foam.

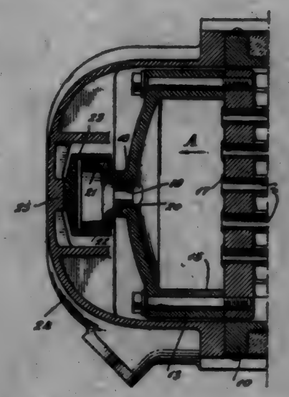
1,541,515. CASE FOR IDENTIFICATION PAPERS. WILLIAM H. LARAWAY, Grand Rapids, Mich. Filed Aug. 30, 1924. Serial No. 735,185. 2 Claims. (Cl. 256—1.5.)

1. In a case for storing and guarding identification papers in automobiles, an outer case having one end closed and the other end open, means for securely connecting said case to the implement board of an automo- a removable cap for covering the open end of the case, and a closed revoluble sleeve outside of the case near the open end thereof, a knob securely mounted in said outer sleeve and said inner sleeve, a slot in the inclosing case for the passage of the stem of the knob from the outer sleeve into the inner sleeve, T formed slots through the case and the inner sleeve near the open end of the case, a removable cap for covering the open end of the case, lugs formed to project inwardly at the rim of the cap and to interlock with the ends of the case and sleeve adjacent to the slots in the case and sleeve, a reel for storing the identification papers, and indexes on the outer sleeve and the case for identifying the locked position and the unlocked position of the said sleeve upon the case.

1,541,516. SHOE-POLISH BOX. STANLEY H. LINDGREN, Maywood, Ill., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 10, 1921, Serial No. 506,748. Renewed Oct. 17, 1924. 8 Claims. (Cl. 220—[illegible].)

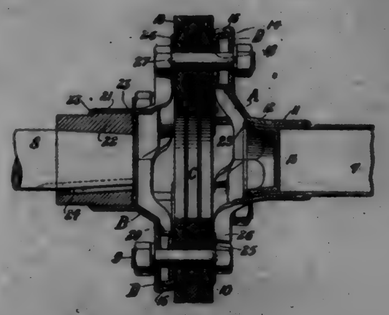
1. A container, comprising a body part having a wall provided with a limiting ridge beneath the top thereof, a cover adapted to frictionally engage the upper part of said wall and provided with an outwardly turned flange having an apertured humped portion with apertures in the top thereof, and an opening device extending down through the apertures in said humped portion and having a cam action on said limiting ridge to open the container.

1,541,517. DISPLAY DEVICE. FRANK X. LIST, New York, N. Y., assignor to National Card Mounting Company, New York, N. Y., a Corporation of New York. Filed Aug. 22, 1924. Serial No. 733,484. 8 Claims. (Cl. 211—24.)



1. A display device comprising a collapsible structure consisting of front and side sections, each scored along parallel lines to provide hingedly connected parts movable from a position in a common plane to positions in angular relation to each other, and spaced parts of said side sections being hingedly connected at one of their ends to relatively opposite ends of the correspondingly spaced parts of said front section whereby said side sections may be folded inwardly upon one side of said front section when the structure is collapsed, in which position the connected parts of each section will lie in a plane again.

1,541,518. THUMB OR WING SCREW. PAUL H. MCCAIN, Chicago, Ill. Filed Feb. 16, 1925. Serial No. 9,478. 5 Claims. (Cl. 85—9.)

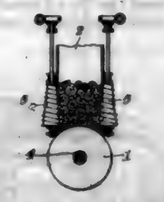


1. A new article of manufacture embodying a screw provided with an enlarged head having a kerf extending thereacross, a separate finger piece having depressions formed in the lateral faces of the finger piece adjacent one edge thereof, the portion of the finger piece having the depressions therein being disposed within the kerf of said head, portions of the head adjacent the said depressions being forced into the said depressions and into contact with the bottoms thereof.

1,541,519. FEED-WATER HEATER. NEAL T. MCKEE, Mount Vernon, N. Y., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 2, 1923. Serial No. 666,231. 5 Claims. (Cl. 257—225.)

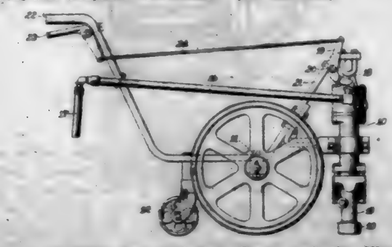
1. In a feed water heater having an outer steam casing, a main header and a floating header therein and a plurality of water tubes secured to and extending between said headers, said headers being provided with water chambers with which said tubes are in communication and means to transmit to said casing outward strains due to unbalanced water pressure within said floating header, whereby tension upon said tubes due to such unbalanced pressure is prevented.

1,541,520. FLEXIBLE JOINT. HARRY P. MACDONALD, Montclair, N. J., assignor to The Snead & Company Iron Works, a Corporation of New Jersey. Filed Dec. 16, 1919. Serial No. 345,292. 15 Claims. (Cl. 69—96.)



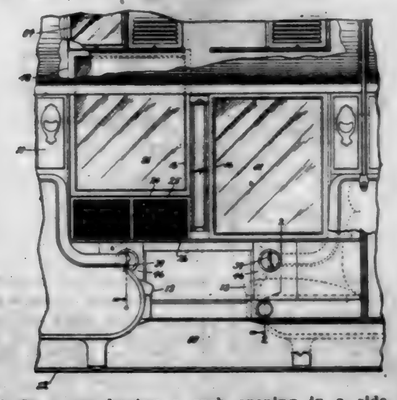
2. A spider member for torque transmitting joints for shafting comprising a sheet metal stamping having a hub portion adapted to receive the end of a shaft and provided with feet or securing members, the ends of the feet being cupped, and the remaining portions being channelled.

1,541,521. WOOD-GRINDING MEANS. GEORG NENZEL, Herischdorf, near Warmbrunn, Germany. Filed Aug. 25, 1924. Serial No. 734,036. 2 Claims. (Cl. 83—75.)



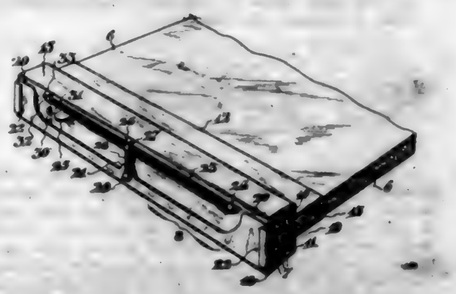
1. In a wood-grinding apparatus the combination with a rotating grinder of a wood container and a pair of

stationary rotating feeding screws partially projecting into the container at its front and back wall, said screws



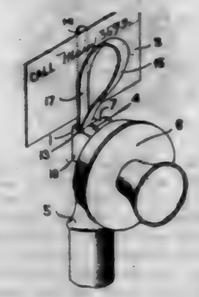
being inclined in opposite directions to grasp the column of wood during its movement toward the grinder, by the screw threads with gradually increasing incisions.

1,541,522. MACHINE FOR SURFACING CAR FLOORS AND THE LIKE. WILLIAM N. OEHM and GOMERT POWELL, Michigan City, Ind. Filed Oct. 31, 1921. Serial No. 511,849. 8 Claims. (Cl. 94—40.)



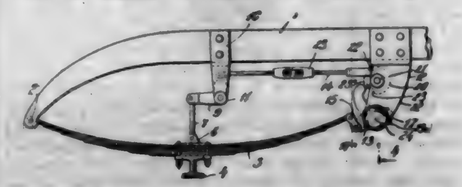
1. A machine for surfacing floors and the like, the combination of a carriage including a frame, longitudinal spaced wheels supporting the frame and one of them being swiveled to turn about a vertical axis, a pneumatic hammer mounted in fixed position on the frame forwardly of the wheels and carrying a set in position to operate on the floor to a level corresponding with the plane of the points supporting the wheels, an operating handle projecting rearwardly from frame, and means operable from the handle for controlling the hammer.

1,541,523. WINDOW ARRANGEMENT FOR RAILWAY CARS. PETER PARKE, Chicago, Ill., assignor to The Pullman Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 22, 1923. Serial No. 658,969. 11 Claims. (Cl. 20—52.1.)



1. In a car having a sash opening in a side wall thereof, a sash for said opening, a frame beneath said window for supporting the same, means beneath said sash for engaging said frame for raising and lowering said frame, and a screen detachably mounted in said frame.

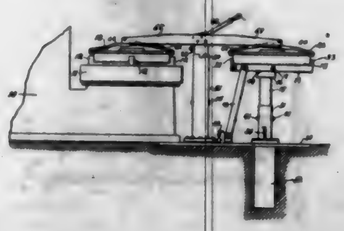
1,541,524. PAPER HOLDER OR CLIP. JOHN C. PATTERSON, Philadelphia, Pa. Filed May 31, 1923. Serial No. 642,446. 11 Claims. (Cl. 129—36.)



1. A holder or clip comprising a stationary jaw of substantially Z-section with one of the parallel legs extended to form a flange, a corresponding movable jaw, means preventing longitudinal displacement of said jaws, and an operating member adapted to latchingly retain the jaws in varied parallelism.

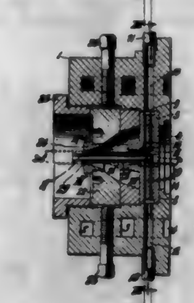
1,541,525. PAPER-HOLDING CLIP FOR TELEPHONES. WILLIAM H. S. PEARCE, Newton, Mass., assignor to Clement J. Robinson, Boston, Mass. Filed July 11, 1924. Serial No. 725,381. 3 Claims. (Cl. 40—10.5.)

3. A device of the class described comprising a U-shaped holding portion adapted to embrace the upper end of a telephone stand, the sides or cheeks of said holding portion being resilient and each having an opening to receive the rounded end of the pivot connection between the transmitter and the stand, and a paper-receiving portion comprising a relatively rigid arm rising from the holding portion, and a loop-shaped resilient member secured to the holding portion and yieldingly engaging said arm.



1,541,526. VEHICLE SUSPENSION. WINSLOW S. PIERCE, Jr., Bayville, N. Y. Filed Apr. 19, 1921. Serial No. 462,558. 3 Claims. (Cl. 267—19.)

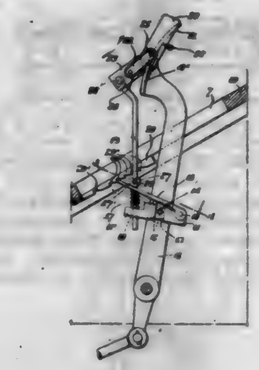
1. The combination with a vehicle having a chassis frame and axle, of a suspension comprising a resilient member mounted on the axle and pivotally connected to the frame, the frame having on the resilient member a



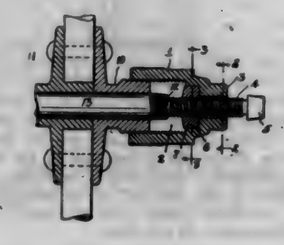
point of suspension movable with the axle relatively to the frame, and means connecting the point of suspension with a point on the resilient member which is constructed and arranged first to reduce the movement of the point of suspension through an arc centering at the pivotal point to less than its arc from the same center proportional to that through which the axle moves, and finally to reverse the movement of the point of suspension relatively to the axle.

1,541,527. HOISTING AND TRANSFERRING MECHANISM. GOMERT POWELL, Michigan City, Ind. Filed Sept. 8, 1924. Serial No. 736,416. 11 Claims. (Cl. 214—1.)

1. In combination, a machine table, a hoisting machine adapted to elevate work to be operated upon, means for tilting the work on said hoisting machine, and transferring mechanism for transferring said work from said hoisting machine to said table.



1,541,528. CORE BRIDGE FOR TUBING MACHINES. VERNON ROYLE, Paterson, N. J. Filed May 3, 1923. Serial No. 636,432. 25 Claims. (Cl. 207—5.)

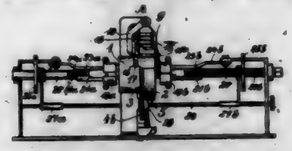


1. A device of the character described comprising, means for extruding the tubing, means for supplying a medium conveying a non-adhesive powder to said tubing, and means for exhausting any excess of said medium.

1,541,529. CLUTCH-PEDAL-CONTROL ATTACHMENT FOR AUTOMOBILES. RAYMOND D. SAYLOR, New Ringgold, Pa. Filed Aug. 30, 1922. Serial No. 585,137. 6 Claims. (Cl. 74—81.)

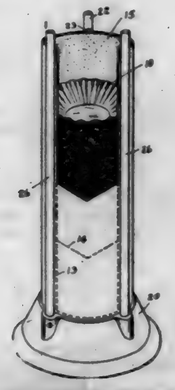
1. The combination with a clutch pedal, of a foot-rest connected therewith and having a rocking member at the heel thereof, a link pivotally connected with said rocking member, and pawl and ratchet mechanism having a member connected with said pedal, said link being connected with said member and operable to trip said mechanism.

1,541,530. WHEEL PULLER. FRANK J. SCHUMAN, Cleveland Heights, Ohio. Filed Jan. 9, 1923. Serial No. 611,562. 1 Claim. (Cl. 29—85.)



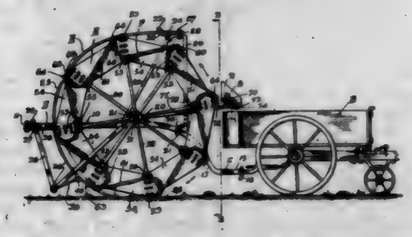
In a wheel puller, the combination of a circumferentially continuous tubular member provided with areas of polygonal shape adjacent its exterior central and outer portions for engagement by a wrench, and having a restricted axial opening adjacent one end, and a countersunk polygonal recess about the inner end of said restricted opening, an enlarged screw-threaded bore extending from the inner edge of said recess to the opposite end of said tubular member, said screw threads being adapted to engage the external threads of the hub of an automobile wheel, a screw having a polygonal head and adapted to have its lower end passed freely through the restricted opening in said tubular member and bear against the end of the wheel axle, and a nut engaged upon said screw and adapted to seat within said polygonal recess to supply a bearing for said screw when it is rotated to force its lower end against said axle.

1,541,531. TYING-UP OR BUNDLING MACHINE. FRITZ SEDLMAYR, Munich, Germany. Filed Jan. 17, 1925. Serial No. 3,093. 8 Claims. (Cl. 17—34.)



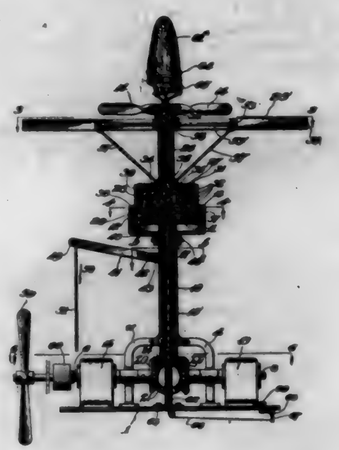
1. In apparatus for the purpose set forth the combination of a hollow cylinder having a longitudinal slot, a ring embracing said cylinder and having a gap, means for rotating said ring a reel holder on said ring, a loop-

ing lever, means for rocking said looping lever, whereby said lever is moved into and out of said gap when said



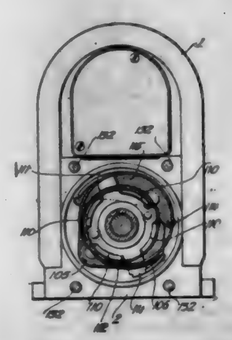
gap is over the cylinder slot, a lever having a hook, and means for vibrating said hooked lever whereby said hook is moved across the path of said looping lever.

1,541,532. PACKAGE AND DISPENSING DEVICE FOR PAPER DISHES. PAUL R. SIMMONS, Indianapolis, Ind., assignor to Peerless Paper Products Company, Indianapolis, Ind., a Corporation. Filed Jan. 11, 1924. Serial No. 685,600. 6 Claims. (Cl. 206—56.)



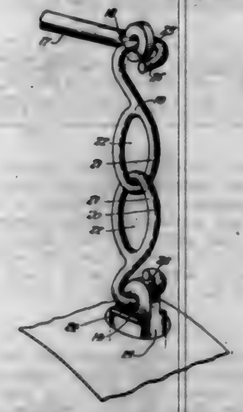
1. A container for paper dishes and the like, including a tube formed of paper board and the like with a vertical series of sections in one side of the wall thereof made independently removable by score lines for making an opening in the side wall of the container for the removal of the paper dishes from the top of the stack thereof, substantially as set forth.

1,541,533. STONE AND ROCK PICKING MECHANISM. EDWARD SMITH, Weyerhauser, Wis. Filed Sept. 9, 1921. Serial No. 499,515. 6 Claims. (Cl. 55—17.)



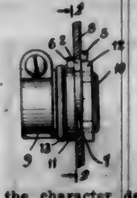
1. A machine for gathering stone comprising a frame, a plurality of arcuate tines carried by the frame and arranged to engage the ground, a rotatable wheel carried by the frame, and a plurality of hook shaped teeth carried by the wheel arranged to engage the ground to cause the wheel structure to rotate when the machine is pulled across the field, each of said teeth having a ground engaging bill and a shank, the shank being secured to the free end portion of the bill of an adjacent tooth and serving to brace the bill.

1,541,534. SAFETY-CONTROL HELICOPTER. FRANK P. SOUDEN, Bridgeton, N. J. Filed Jan. 21, 1925. Serial No. 3,734. 6 Claims. (Cl. 244—19.)



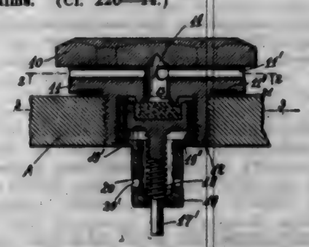
1. In a device of the character stated, a base, a motor carried by said base, a plurality of upright concentric shafts, one of which is driven by said motor, lifting propellers positioned on the upper ends of said shafts, a housing enclosing said shafts, a clutch housing rotatably mounted on said shaft housing, an inner clutch member, gearing and clutch discs contained in said clutch housing, and means for actuating said clutch discs for controlling the relative speed of rotation of said propellers.

1,541,535. MAGNETO. JOHN ROY STARK, Racine, Wis., assignor to Webster Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed Nov. 19, 1921. Serial No. 516,270. 7 Claims. (Cl. 123—149.)



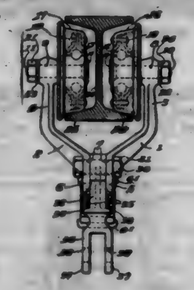
1. In a magneto, a driving shaft, a disc fixed thereto, laterally extending flanges on said disc, a spring positioned about said flanges, a driven shaft, a plate fixed thereto adjacent and substantially parallel to said disc, and a laterally extending finger carried by said plate arranged to overlie said flanges, one end of said spring being attached to one of said flanges, and the other end to said finger.

1,541,536. UNCOUPLING DEVICE. JOHN E. TRESTMAN, Chicago, Ill., assignor to Reliable Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 1, 1922. Serial No. 548,600. 8 Claims. (Cl. 213—106.)



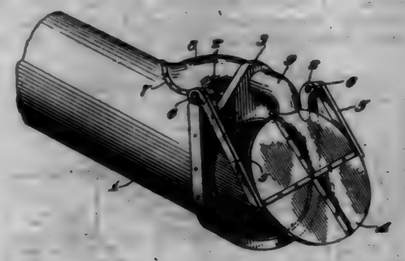
1. An uncoupling device comprising two members formed of bent rods of like shape and size, each rod having one end bent to provide an open scroll-like hook and having the other end bent to form a closed elongated loop, the elongated loops of the two members being loosely linked with each other.

1,541,537. ADAPTER FOR CONNECTING DEVICES. GEORGE C. THOMAS, Jr., Elizabeth, N. J., assignor to The Thomas & Betts Co., Elizabeth, N. J., a Corporation of New Jersey. Filed May 4, 1921. Serial No. 466,782. 4 Claims. (Cl. 247—25.)



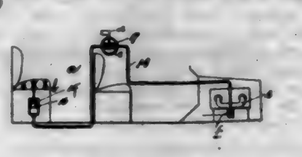
1. A device of the character described consisting of a substantially rigid, flat crescent-shaped body portion and a plurality of projections extending outwardly beyond its exterior periphery, two of said projections being offset axially in opposite directions to provide a space axially therebetween.

1,541,538. VALVED VENT. HARRY E. TUNNELL, New York, N. Y., assignor to Fire Gun Manufacturing Company, Inc., New York, N. Y., a Corporation of New York. Filed June 2, 1920. Serial No. 386,119. 8 Claims. (Cl. 220—44.)



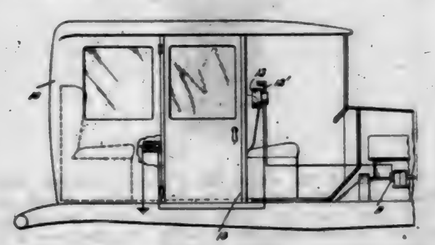
1. A device of the character described, comprising a body having a passage formed with an enlargement or chamber of circular cross section, and also having an annular valve seat projecting into said chamber and spaced from the surrounding wall of the chamber, a housing, having a portion of larger diameter than said valve seat, fitted removably into said chamber, a valve carrier having a head, likewise of larger diameter than the valve seat, guided within and by said housing and fitted with a valve to engage the said seat, said carrier also having a stem guided by the housing at a distance from the head, and a spring coiled around said stem within the housing and tending to seat the valve, said spring being of smaller diameter than the valve seat.

1,541,539. TROLLEY FOR CHAIN CONVEYERS. JERVIS B. WEBB, Detroit, Mich. Filed Sept. 23, 1924. Serial No. 739,258. 5 Claims. (Cl. 105—154.)



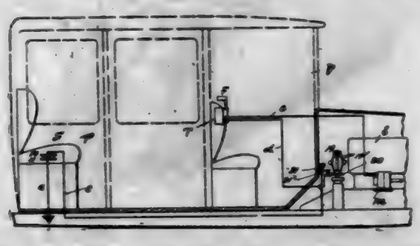
1. A trolley for supporting a chain conveyer, comprising oppositely disposed brackets having wheels secured upon the inner sides thereof which wheels are adapted to rest upon the opposite side portions of a trolley support, a device adapted to extend between the opposite sides of a link of a chain, and means for securing the lower ends of the said brackets to the upper end portion of the said device to effect retention of the latter in interlocked relation with the link.

1,541,540. ANTIFOULING TRAP VALVE. HARRY E. WEIR, Wildwood, N. J. Filed July 30, 1924. Serial No. 729,020. 3 Claims. (Cl. 182—26.)



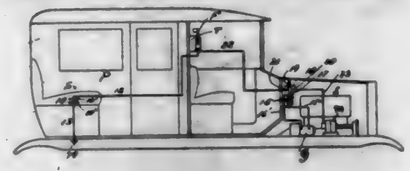
1. In apparatus of the character stated a storm water or sewage conduit, the discharge end of which has fitted thereover and fixed thereto a support, a flap valve pivoted to said support and normally maintained in open position by sewage discharge, and a by-pass connection in communication with said conduit and extended upwardly and forwardly upon a curved line from the top of said conduit and beyond the conduit discharge end the discharge mouth of said by-pass connection being arranged in a plane above the top of said conduit and being further arranged to deflect storm water or sewage downwardly in advance of said flap valve in its closed position.

1,541,541. ATTACHMENT FOR TAXIMETER VEHICLES. ABRAHAM WEISS, New York, N. Y. Filed June 25, 1923. Serial No. 647,432. 2 Claims. (Cl. 180—82.)



1. In a motor vehicle having a flag controlled taximeter, the combination with the feeding mechanism of the motor, of pneumatic means automatically operated by the occupant of the passenger compartment and adapted to control said feed and a flag operated valve for controlling said pneumatic means.

1,541,542. ATTACHMENT FOR MOTOR VEHICLES. ABRAHAM WEISS, New York, N. Y. Filed Nov. 9, 1923. Serial No. 673,795. 2 Claims. (Cl. 180—82.)

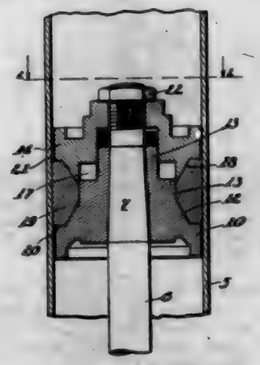


2. In a motor vehicle having a "flag" controlled fare register, a door and an electrically controlled gas ignition system, of a switch controlled through said door, a switch controlled through said "flag" and electric connection between said switches and the ignition system, such that when the door is open, while the "flag" is in "vacant" position, the ignition system will be ineffective.

1,541,543. ATTACHMENT FOR MOTOR VEHICLES. ABRAHAM WEISS, New York, N. Y. Filed May 27, 1924. Serial No. 716,094. 3 Claims. (Cl. 180—82.)

1. In a motor vehicle having a fare register and an electric motor controlling system, a switch controlled by the occupant of the passenger compartment, a switch controlled by the setting of said register, a speed controlled governor and a switch controlled by said governor, said switches being included in the circuit of the motor controlling system, such that when the passenger compartment of the vehicle is occupied, while the register is not set for occupancy, the motor of the vehicle will be affected on reaching a speed limited by the closure of the governor controlled switch.

1,541,544. TAXIMETER VEHICLE. ABRAHAM WEISS, New York, N. Y. Filed July 28, 1924. Serial No. 728,695. 11 Claims. (Cl. 180—82.)

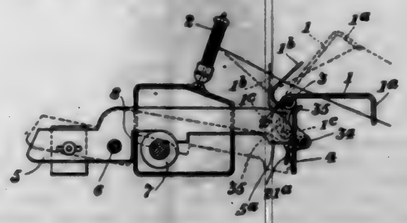


1. In a motor vehicle having a manually controlled fare register, the combination with the motor controlling means, of a passenger controlled means, a register controlled means and means intervening between said first named means and said other two means, such that when the vehicle is occupied and the register is not set for occupancy, said intervening means will affect the motor when the latter attains a certain speed.

1,541,545. CATALYTIC OXIDATION OF SECONDARY ALCOHOLS. ALFRED A. WELLS, Montclair, N. J., assignor, by mesne assignments, to Seth B. Hunt, trustee, Mount Kisco, N. Y. Filed May 18, 1918. Serial No. 235,249. 2 Claims. (Cl. 260—116.)

1. The process of forming oxidized products from secondary alcohols corresponding to the olefins of petroleum when in admixture with hydrocarbons, which comprises passing the vapors of the admixed alcohols and hydrocarbons together with air over a heated catalyzer comprising copper.

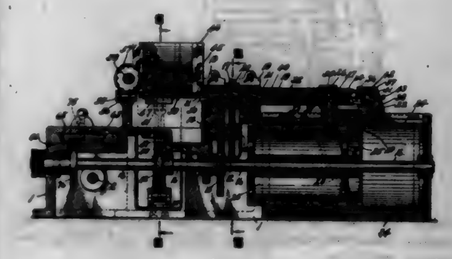
1,541,546. PISTON-PACKING-EXPANDING DEVICE. WILSON B. WIGLE, Long Beach, Calif., assignor to Mary R. Wigle, Los Angeles, Calif. Filed July 11, 1923. Serial No. 650,832. 1 Claim. (Cl. 74—109.)



In a piston construction, the combination of a piston rod having a cylindrical threaded upper end and a tapered portion therebelow, a cylindrical piston body having a centrally disposed tapered bore extending therethrough mounted on the tapered portion of the piston rod, said body being provided above its cylindrical portion with a conical surface and a cylindrical portion extending upwardly therefrom, an externally threaded centrally disposed hollow stud formed integrally with the upper end of said piston body, a cylindrical piston follower having a centrally disposed bore and a circular threaded recess therebelow, said recesses engaging the threaded stud of the piston body, the lower portion of said follower being provided with an inverted conical surface, the conical surfaces of the piston body and follower forming the walls of a packing recess, an expansible packing mounted in said recess, said follower being further provided with a cylindrical recess disposed below the threaded circular recesses formed therein and telescopically engaging the upper cylindrical portion of the piston body, and means to lock said follower in position after an expansion of the packing.

1,541,547. TRANSFER OF KNITTED FABRICS. LOUIS N. D. WILLIAMS, Ogonts, Pa. Filed Feb. 23, 1923. Serial No. 620,588. 15 Claims. (Cl. 66—32.)

1. The method of transferring knitted fabrics which consists in impaling the fabric stitches upon the needles of a knitting machine, and then shifting the stitches and needles relatively to insure engagement of the stitches within the needle hooks.

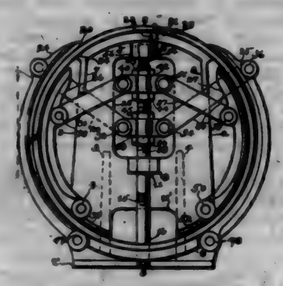


1,541,548. STOP MOTION. THOMAS WILSON and ARCHIBALD WILSON, Doagh, Ireland. Filed May 19, 1923. Serial No. 640,000. 14 Claims. (Cl. 117—28.)

1. A stop motion for machines used in treating threads or yarns, comprising a control spindle adapted to be driven from the machine and movable axially to disconnect the machine from its driving source, and means for effecting axial movement of the control spindle automatically on occasions when stoppage of the machine is desirable.

1,541,549. AUTOMATIC DRILL-MILLING MACHINE. CHARLES P. WINEMAN and WILLIAM G. CALKINS, Detroit, Mich., assignors to Detroit Twist Drill Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 29, 1922. Serial No. 547,658. 6 Claims. (Cl. 90—13.9.)

1. In a machine for fluting drill blanks, the combination with a hopper for holding drill blanks, a milling cutter, a chuck to receive and hold a drill blank, means for rotating and moving said chuck to feed the blank held thereby longitudinally across to the cutter and to operate the chuck to open and close the same, feeding means operated in timed relation to the reciprocation and rotation of the chuck, to feed blanks, one at a

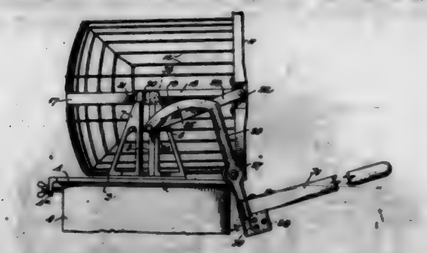


time, from said hopper laterally into the path of reciprocating movement of said chuck, and means for moving the milling cutter in timed relation to the movement of said chuck in feeding blanks to the cutter, to regulate the depth of flute cut by the cutter.

1,541,550. METHOD OF CAPPING BOTTLES. JOHN WYSOCKI, Brooklyn, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Dec. 29, 1921. Serial No. 525,809. 2 Claims. (Cl. 226—80.)

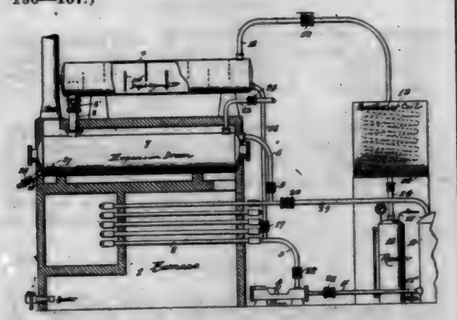
2. The method of capping a bottle comprising applying thereto a solution having a viscosity enabling it to spread uniformly over the surface, this solution containing the following ingredients in the following approximate relative proportions: Ether, 500 c. c.; alcohol, 500 c. c.; castor oil, 50 c. c.; aluminum powder, 30 grams; nitrocellulose, 100 grams.

1,541,551. DRUM-FORMING MACHINE. FRIDOLF F. BACKSTROM, Chicago, Ill. Filed Sept. 15, 1923. Serial No. 662,994. 6 Claims. (Cl. 144—258.)



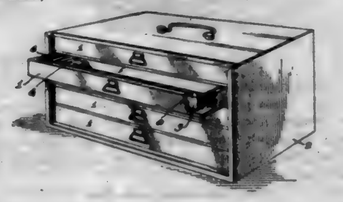
1. A drum-forming machine of substantially annular form, which form consists of a series of clamp-members movable toward and from each other, and a pair of diametrically arranged immovable anvils on inner and outer faces respectively, and means for moving said clamps simultaneously.

1,541,552. CLOTHES-BOILER ATTACHMENT. GEORGE W. BLAKE, Wyandotte, Mich. Filed Jan. 21, 1924. Serial No. 687,459. 10 Claims. (Cl. 68—30.)



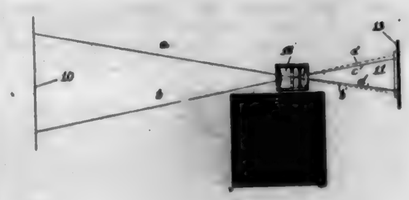
4. The combination with a wash boiler, of a frame, attached thereto, a tiltable clothes container suspended

from said frame and adapted to be elevated and tilted in a plane above the wash boiler, and a leverage mech-



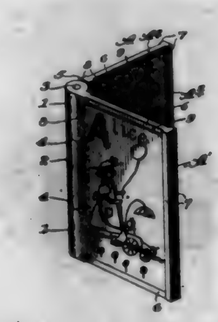
anism attached to said frame and connected to said clothes container adapted for elevating and tilting said clothes container.

1,541,553. APPARATUS FOR TREATING OIL. GUSTAV EGLOFF and HARRY P. BENNER, Independence, Kans., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Mar. 23, 1921. Serial No. 454,848. 2 Claims. (Cl. 196—107.)



2. In an apparatus for cracking oil, the combination with a heating coil disposed within a furnace, of an expansion chamber in communication with said coil receiving heated oil therefrom, a receptacle adapted to contain a supply of cool oil and valve control connections between said coil and said expansion chamber and receptacle whereby the passage of oil to the expansion chamber may be discontinued and a local circulation of oil through the coil and receptacle effected to cool the heating coil.

1,541,554. SCORE CARD AND TRAY TURNER FOR TILE GAME SETS. GORDON D. EVERITT, Detroit, Mich. Filed Dec. 3, 1924. Serial No. 753,584. 5 Claims. (Cl. 273—148.)

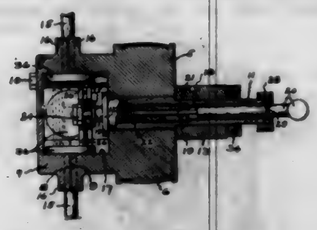


1. A reference card for use with tile game trays, comprising a card adapted to receive writing, said card being of a size approximating the tray with which it is to be used, and provided with a projecting handle at one edge thereof.

1,541,555. MAKING PHOTOGRAPHS FOR MAPPING AND OTHER PURPOSES. SHERMAN M. FAIRCHILD, Oneonta, N. Y., and HERBERT E. IVES, Montclair, N. J., assignors to Fairchild Aerial Camera Corporation, New York, N. Y., a Corporation of New York. Filed July 15, 1921. Serial No. 484,872. 5 Claims. (Cl. 95—5.)

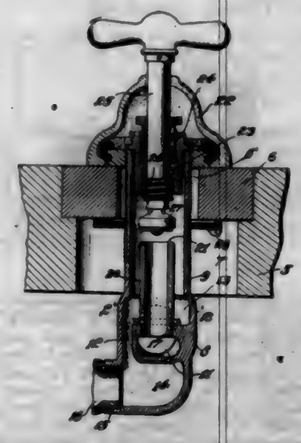
1. In the art of making photographic negatives on films or other sensitive surfaces, for mapping or other purposes, the improvement comprising projecting upon the plate or film the image which is to be recorded, through a reference pattern composed of lines, whereby an image of the reference pattern and the image of the ground or other object to be photographed are both recorded on the same film and are subjected to the same distortion due to shrinkage of the film in subsequent treatment thereof to produce a negative.

1,541,556. TOY BUILDING BLOCK. CHARLES DOUGLAS FISHER, New Rochelle, N. Y., assignor to The Toy Krofters, Inc., Beacon, N. Y., a Corporation of New York. Continuation of application Serial No. 562,662, filed May 22, 1922. This application filed Apr. 6, 1923. Serial No. 630,273. 9 Claims. (Cl. 76—35.)



1. A toy book adapted to serve as a building block and comprising two substantially flat, thick stiff leaves having complemental offset barrel-portions connected by a pivot, said barrel-portions forming the back of the toy book, said leaves having printed matter thereon and said parts being constructed, combined and arranged to serve as a building-block.

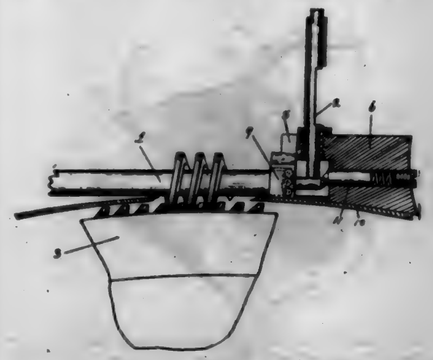
1,541,557. WEATHER FAN. IRA L. FULLER, Greenfield, Ind. Filed July 26, 1924. Serial No. 728,288. 2 Claims. (Cl. 170—163.)



2. In a variable pitch fan, a tubular shaft; a hub rotatably retained on the shaft, and defining a chamber within; a plurality of spindles rotatably mounted in said hub and entering said chamber; a head on each of said

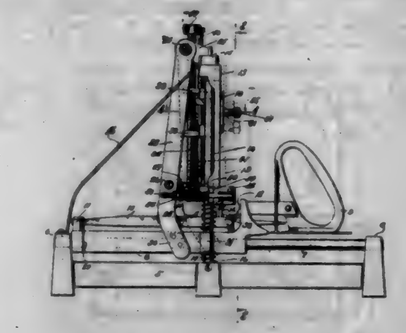
spindles within the chamber; a fan blade mounted on each of said spindles without the chamber; a bolt carried within said tubular shaft, screw-threadedly engaging

therewith, and projecting into said chamber; pivot means secured to said bolt within said chamber, said pivot means engaging each of said spindle heads; and means to turn said bolt.



1,541,558. VALVE. SAMUEL GADE, New York, N. Y. Filed Apr. 17, 1922. Serial No. 554,220. 3 Claims. (Cl. 251—155.)

1. A valve body provided with a tubular extension at one side thereof, said valve body being integrally formed with fluid inlet and outlet chambers each of which is bisected by a plane passing through the axial line of said tubular extension, said valve body being further formed at one side thereof with a passage affording communication between said chambers, one wall of said inlet chamber having an opening communicating with said passage, and valve seat members of relatively different lengths adapted to be engaged in said opening for co-operation with valves carried by different length valve spindles and adapted to be mounted in said tubular extension.

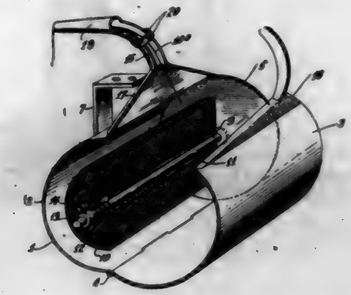


1,541,559. STARTER FOR GAS ENGINES. HARRY WILLIAM GAULD, Brandon, Manitoba, Canada. Filed Oct. 13, 1921. Serial No. 507,521. 4 Claims. (Cl. 74—7.)

1. In a gas engine starter, the combination with a toothed driven member associated with the engine, of a toothed driving member engageable with the teeth of the driven member, a motor driving the drive member, the said motor being pivoted to permit of the swinging of the drive member towards and away from the driven member, the teeth of said members being designed to swing the drive member away from and out of engagement with the driven member upon the driven member

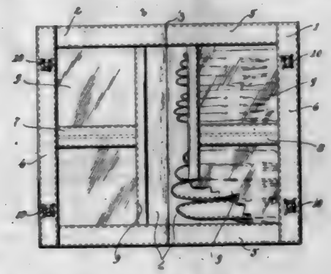
becoming a drive member, means for manually engaging the said members, and means for releasably locking the members in and out of engagement.

1,541,560. TOOL-SHARPENING DEVICE. ARTHUR F. GRISINGER, Milwaukee, Wis., assignor to Albert J. Holzbauer, Milwaukee, Wis. Filed Feb. 9, 1922. Serial No. 535,248. 15 Claims. (Cl. 76—35.)



1. A machine of the class described, comprising a support for a cutter to be sharpened, a support mounting a sharpening member, means reciprocally mounting one of said supports for movement on the same plane during each stroke, and means operable to engage the cutter carried by the first named support with the sharpening member carried by the other support only upon movement of the reciprocally mounted support in one direction.

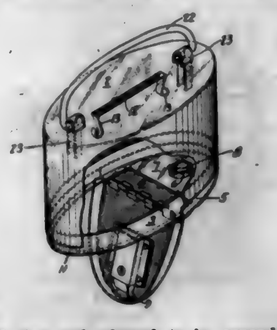
1,541,561. ZINC-OXIDE-RECOVERY PROCESS AND BY-PRODUCTS THEREOF. OSCAR GERLACH, La Salle, Ill. Filed Dec. 4, 1920. Serial No. 428,207. 1 Claim. (Cl. 23—148.)



The process for making cement and recovering zinc from silicious material containing zinc, the proportion of silica to the bases present being higher than that required for making cement, which consists in heating the material in the presence of oxygen, carbon and sufficient lime to form a clinker having a fusion point above the vaporization point of zinc, to a temperature at which the clinker sinters, collecting the zinc oxide fumes formed, cooling the clinker and grinding it.

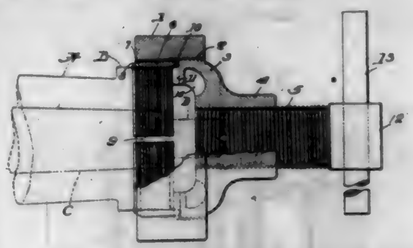
1,541,562. BOBBIN-THREAD-SUPPLY HOLDER AND GUIDE. MAX GILBERT, Bronx, and THOMAS GUIDA and SOLOMON KATZ, Brooklyn, N. Y. Filed May 1, 1924. Serial No. 710,238. 6 Claims. (Cl. 242—146.)

1. A device of the character described embodying a casing divided longitudinally into two lateral sections hinged together, an axle associated with the casing and adapted to support the roll or tubes of thread within the casing, a tubular outlet duct forming a passage for the thread and extending into proximity with a bobbin of the machine with which the device is adapted to be associated, said duct being parted into two sections which are respectively supported on the two hinged sections of the casing, and means for maintaining the sections of the casing and outlet duct normally in closed relation.



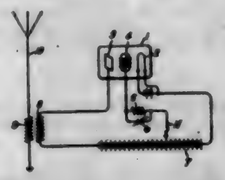
1,541,563. CASE FOR GLOVES AND THE LIKE. CHARLOTTE GRAHAM, New York, N. Y. Filed Feb. 11, 1921. Serial No. 444,078. 1 Claim. (Cl. 150—34.)

A folding case of the character described, comprising a single body piece of flexible material having ends and side edge portions turned in to form borders, fastenings located upon the said turned-in edges of the ends of the body piece whereby the same is held in its folded condition, sheets of transparent material passing under and being secured to the said turned-in edges of the said body piece at the ends and for a distance at the sides thereof, transverse pieces covering the edges of the said transparent sheets adjacent to the fold of the said body piece and upon opposite sides of the line of fold thereof, and intermediately disposed pieces attached to the said transparent sheets and to the said body piece whereby a plurality of pockets are formed opening upon opposite sides of the fold of the said body piece.



1,541,564. SAVINGS BANK. BUTLER F. GREER, San Francisco, Calif. Filed Mar. 19, 1923. Serial No. 626,000. 3 Claims. (Cl. 232—4.)

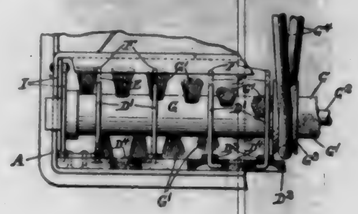
1. A savings bank comprising a shell open at one end, a webbed bushing ring secured within the open end of said shell and projecting beyond the edge thereof, a cover plate formed with a flange enclosing said projecting ring and having an flange projecting thru the



web of said ring and adapted to be expanded on the opposite side thereof to secure the cover plate and ring together.

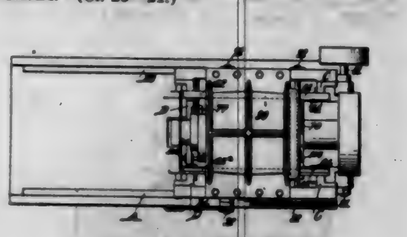
1,541,565. WHEEL PULLER. ROBERT B. HAINSWORTH, Maywood, Ill. Filed June 26, 1922. Serial No. 570,774. 7 Claims. (Cl. 29—85.)

1. A wheel puller comprising a compressible internally threaded member to fit upon a threaded wheel hub; a shell enclosing said member and having a threaded head with a jack screw centered therein to engage the end of an axle in the wheel hub, said compressible member having an externally tapered part, and the shell having an internally tapered part to cooperate therewith for compressing the threaded member upon application of longitudinal pressure by the jack screw, said shell and its head being separable to permit removal of the compressible member therefrom.



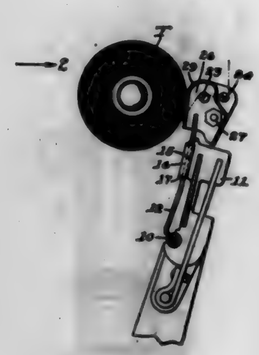
1,541,566. SYSTEM FOR PRODUCING OSCILLATIONS. ALBERT W. HULL, Schenectady, New York, assignor to General Electric Company, a Corporation of New York. Filed May 18, 1921. Serial No. 470,728. 9 Claims. (Cl. 250—36.)

5. The method of operating a generating system comprising an electron discharge device having an electron emitting cathode, an anode and a grid and plate and grid circuits circuits associated therewith which consists in producing an emission of secondary electrons from said



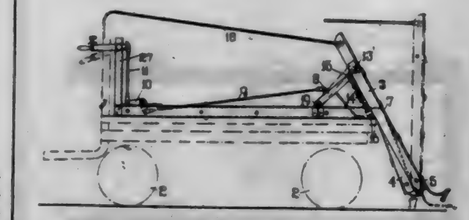
grid sufficient to produce a negative resistance characteristic in said grid circuit over a range of positive grid potential, producing oscillations in said grid circuit independently of any coupling between the circuits and supplying oscillations from the plate circuit to a work circuit.

1,541,567. ELECTRIC SUCTION CLEANER. HOWARD EARL HOOVER, Chicago, Ill., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Feb. 24, 1921. Serial No. 447,589. 12 Claims. (Cl. 15—157.)



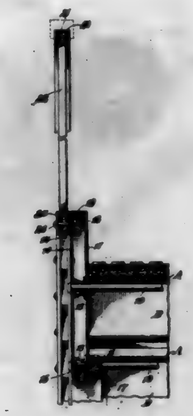
3. A brush guard for suction cleaner nozzles comprising a plurality of U-shaped fingers each separately mounted in the hood.

1,541,568. SEMIAUTOMATIC PLATE-FINISHING MACHINE. CHARLES E. HOPKINS, Plainfield, N. J.; The Plainfield Trust Company administrator of said Charles E. Hopkins, deceased. Original application filed Dec. 11, 1916, Serial No. 136,191. Divided and this application filed Sept. 26, 1922. Serial No. 590,607. 10 Claims. (Cl. 29—21.)



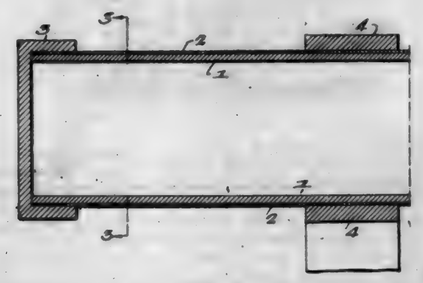
8. In a stereotype plate finishing apparatus, the combination with an arch and a finishing tool shaft concentric therewith, of a driving shaft, a clutch for connecting the driving shaft to rotate the finishing tool shaft, a spring for normally closing the clutch, said clutch having a circumferential channel, a rock arm having a roll engaging in said channel, a cam rotatable with the finishing tool shaft and adapted to swing the rock arm back so as to hold the clutch out when the machine is stopped, a pair of guides under the arch for the straight edges of the plate, one of said guides being movable, a pair of parallel rock shafts having parallel arms connected with the movable guide for lifting it and clamping the plate in the arch, and means whereby when said rock shafts are turned to clamp the plate the rock arm will be freed from the cam and the clutch will be allowed to close, a bar connecting the parallel arms on which the movable guide rests, a slide rod carried by said bar at one end and supported at the other end by the rock arm and having a projection on the end for engaging the cam and operating the rock arm.

1,541,569. YARN GUIDE FOR WINDING MACHINES. LEWIS T. HOUGHTON, Worcester, Mass. Filed Nov. 6, 1924. Serial No. 748,278. 8 Claims. (Cl. 242—157.)



1. The combination with a traverse frame and a guide holder movable along the frame, of a sheet metal bearing plate carried by the holder near the top at a point to engage the frame to receive the wear of the holder against the frame, said plate having integral side flanges detachably holding it on said holder.

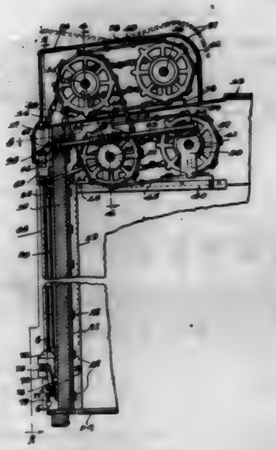
1,541,570. TRUCK FOR TRANSPORTING GOODS. HAROLD WALTON HOWE, Liverpool, England. Filed Mar. 26, 1924. Serial No. 702,100. 7 Claims. (Cl. 214—65.)



1. In a loading truck the combination of a load supporting platform, frame members detachably connected to said platform and depending to a point immediately adjacent the ground, an auxiliary platform comprising a loading base and a supporting member extending at right angles to said base, a pivotal support for said auxiliary platform mounted at the lowest point of said depending portion of said frame member and means for attaching said auxiliary platform to said pivotal support located at a point on the auxiliary platform substantially adjacent the connection of said base and said supporting member, whereby said auxiliary platform may tilt from load carrying position in close proximity to the ground into a position in substantial alignment with the ground.

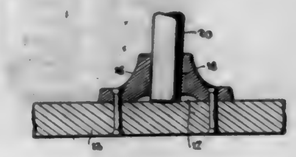
1,541,571. PRESSED-STEEL STRINGER. ARTHUR SHERIDAN HUGHES, Mansfield, Ohio. Filed April 24, 1922. Serial No. 556,191. 10 Claims. (Cl. 189—43.)

1. A stringer formed of a pair of members, each member having angular flanges at its upper and lower edges, the members being fitted together with the flanges placed one upon the other so that a hollow box-like structure is formed which is closed at the top and bottom by said flanges.



1,541,572. BUMPER BAR FOR AUTOMOBILES. ELLWOOD IVINS, Philadelphia, Pa. Filed Mar. 3, 1925. Serial No. 12,925. 3 Claims. (Cl. 293—55.)

1. A bumper bar for automobiles, and other vehicles, consisting of a tube of iron or steel enclosed within a drawn tube of nickel alloy.

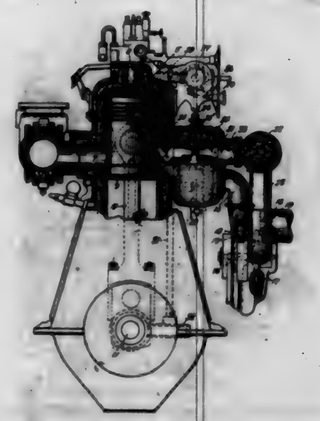


1,541,573. GRAIN DOOR. LOUIS F. JACKSON, Chebanse, Ill. Filed Nov. 20, 1924. Serial No. 751,117. 15 Claims. (Cl. 20—32.)

1. A device of the character described, comprising a pair of doors adapted to lie side by side for closing a single opening each composed of a series of hingedly connected sections, guide members for supporting said

doors in an operative position, and means for raising or lowering either door independent of the other.

1,541,574. RUDDER-SHAFT BEARING. VICTOR JARVINEN, Astoria, Oreg. Filed Aug. 27, 1924. Serial No. 734,465. 3 Claims. (Cl. 114—165.)

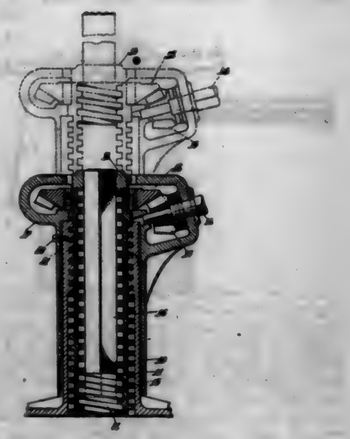


3. An attachment for vessels comprising a step for a rudder post adapted to be attached to the vessel and including a socket and an upwardly arching portion providing a channel through the step to prevent the lodgement of matter against the post.

1,541,575. INTERNAL-COMBUSTION ENGINE. WALTER B. JENNINGS, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 5, 1924. Serial No. 704,507. 6 Claims. (Cl. 123—65.)

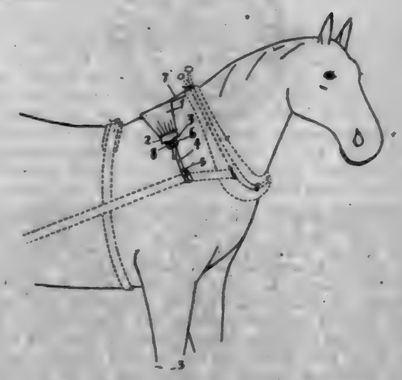
5. The combination with an internal combustion engine comprising a cylinder structure having scavenging and exhaust ports, of a scavenging air receiver, a pump for supplying scavenging air thereto, a turbine for operating the pump, a chamber for supplying actuating fluid to the turbine, ports in the cylinder structure which

are opened in advance of the exhaust ports and closed subsequently thereto, and means for connecting such ports



to the chamber during a portion of the power stroke and to the scavenging air receiver during a portion of the compression stroke.

1,541,576. CIRCULATING AND RADIATING HEATER. AXEL JOHNSON, Oakland, Calif. Filed July 1, 1924. Serial No. 723,508. 10 Claims. (Cl. 219—38.)

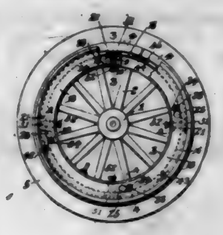


1. A circulating and radiating heater comprising a plurality of assembled sections, each section having a lower chamber, an upper chamber, and a connecting flue therebetween, said lower chambers of the assembly communicating with each other and having air inlet openings in their lower portions, and said upper chambers communicating with each other and having air outlet openings; and a heating member positioned within each of said lower chambers.

1,541,577. SCREW JACK. ALVIN L. JOHNSON, Springfield, Mass. Filed Mar. 24, 1925. Serial No. 16,031. 3 Claims. (Cl. 254—102.)

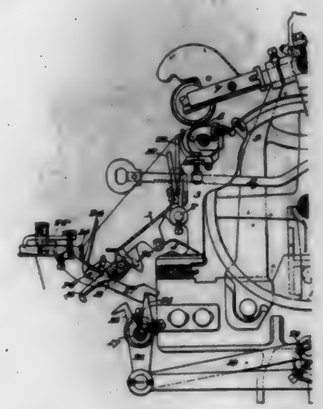
3. In a screw jack, the combination of a casing having an internal screw thread, a hollow screw movable up and down in said screw thread and provided with an internal screw thread, all the way to the bottom, a non-circular unthreaded plunger as long as the screw and located therein, a short screw on the bottom of the plunger fitting the internal thread, a gear fixed to the top of the screw for turning it, and a guide located above the gear and fitting the non-circular plunger, whereby the plunger is guided and stabilized at two points always at considerable distance apart.

1,541,578. NECK-WEIGHT-RELIEVING HARNESS ATTACHMENT. HOMER T. JONES, Ord, Nebr. Filed June 5, 1924. Serial No. 718,016. 1 Claim. (Cl. 54—18.)



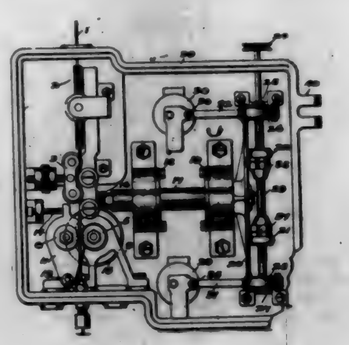
A neck weight relieving attachment comprising a flexible web adapted to hang over the withers of a horse, tucked portions on the ends of said web forming cup shaped hangers, fasteners attached to the ends of said web having offset portions engaging in the cup portions of the web and vertical side bars, strap retaining members slidable on said bars, straps retained by said retaining members, and means on said straps for engaging with the traces of the harness.

1,541,579. TOY AEROPLANE AND LAUNCHING DEVICE THEREFOR. ALEX KIKTA, Flint, Mich. Filed May 2, 1924. Serial No. 710,597. 11 Claims. (Cl. 301—28.)



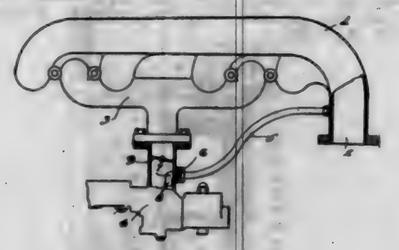
2. A toy comprising, an aeroplane having a central longitudinally extending keel at the forward part thereof provided with a notch in its rear edge, means to provide a pair of parallel members constituting a trackway, a launching carriage comprising, a substantially elongated plate member having the front and rear portions of each side edge rolled over one of said members to retain the carriage in sliding engagement with said members, spaced vertical plane supporting members carried by said carriage, means extending between said supporting members for engaging in the notch in said keel to carry the supported plane forward, a finger member depending from the under side of said carriage, and power means engaging said finger to swiftly draw the carriage forward to launch the plane carried thereby.

1,541,580. COLLAPSIBLE-RIM-SECURING MEANS. JOE LEON KILBY, Tyler, Mo. Filed July 11, 1924. Serial No. 725,431. 2 Claims. (Cl. 244—2.)



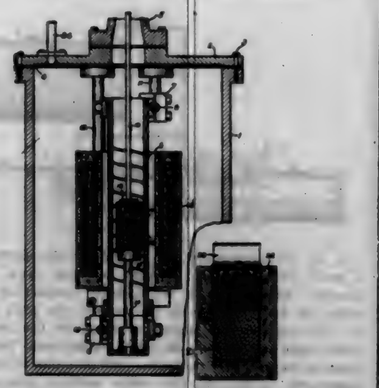
1. A demountable rim securing means comprising a stationary one-piece rim securing element having portions thereof extending at right angles with respect to each other and adapted to be position against the inner side and against the outer face of a felly and further including an intermediate portion connecting said angularly disposed portions together and constituting a rim abutting and attaching means projecting from the inner side of the felly, a shiftable rim securing element adapted to be positioned against the other side of the felly and having an outer projecting portion constituting a rim attaching means and opposing the rim attaching means on the stationary element, and retaining means common to said elements for fixedly securing the stationery element and releasably connecting the shiftable element to the felly of the wheel, said shiftable element and felly having coacting parts to permit of the shifting of said element against one side of the felly when connected thereto, said rim attaching means engaging with the flanges of the rim for securing the latter in position.

1,541,581. AUTOMATIC STARTER FOR WINDING-MACHINE STOP MOTIONS. JOHN O. MCKEAN, Westfield, Mass., assignor to Foster Machine Company, Westfield, Mass., a Corporation of Massachusetts. Filed May 2, 1924. Serial No. 710,609. 11 Claims. (Cl. 242—36.)



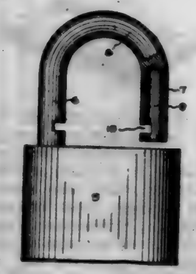
1. A winding machine stop motion including the kicker shaft, and a manually controlled automatic starter comprising a starting kicker on said shaft, and means arranged to be moved into the path of the kicker.

1,541,582. ARC-WELDING MACHINE. WILBUR L. MERRILL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 28, 1924. Serial No. 709,327. 8 Claims. (Cl. 219—8.)



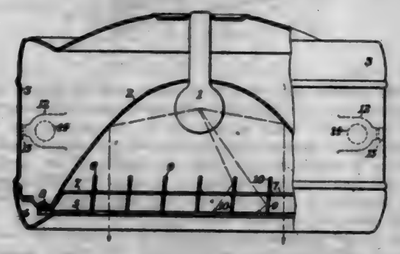
1. An arc welding machine comprising electrode feeding mechanism, means for operating said feeding mechanism comprising a rotatable disc, a friction roll for driving said disc, means for moving said roll into and out of engagement with the disk to control the speed at which said feeding mechanism is operated and means arranged and connected to control said roll moving means in accordance with an electrical characteristic of the arc which varies with the arc length and vary the rate of electrode feed to maintain the arc length substantially constant.

1,541,583. CARBURETOR HEATER. CHARLES C. MEES, Indianapolis, Ind. Filed Aug. 29, 1922. Serial No. 584,615. 3 Claims. (Cl. 123—119.)



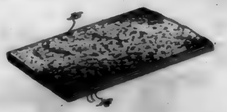
1. In an internal combustion engine, fuel mixture inlet means, a throttle valve therefor, exhaust gas outlet means, a conduit connecting said means, and an elbow extension on said conduit having a flaring opening into said fuel mixture inlet means on the supply side of said throttle valve.

1,541,584. PROCESS OF MAKING VITREOUS SILICA. LEVI B. MILLER, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Aug. 10, 1921. Serial No. 491,122. 3 Claims. (Cl. 49—78.1.)



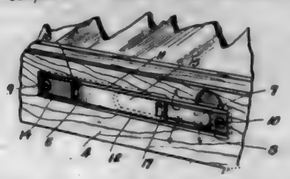
2. The method of producing clear vitreous silica or quartz glass which consists in heating quartz in the crystal state to a fusing temperature in a vacuum while mechanically supporting said quartz to prevent displacement of particles resulting from the cracking of said quartz when heated to a temperature of about 550° C.

1,541,585. RECORD-RECEIVING LOCK. HAROLD K. MORITZ, Seattle, Wash., assignor to Frank E. Best, Inc., Seattle, Wash., a Corporation of Washington. Filed Feb. 11, 1924. Serial No. 692,119. 6 Claims. (Cl. 70—108.)



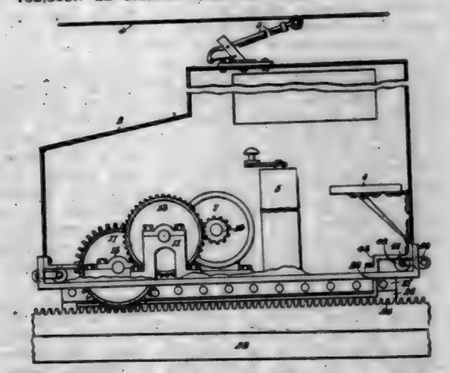
1. In a padlock, a housing, and a locking member operatively connected with said housing, said locking member having a record receiving recess formed therein and arranged to be closed when said locking member is in locked position.

1,541,586. VEHICLE HEADLIGHT. JAMES A. MURPHEY, Germantown, Pa. Filed Feb. 9, 1924. Serial No. 691,547. 6 Claims. (Cl. 240—48.4.)



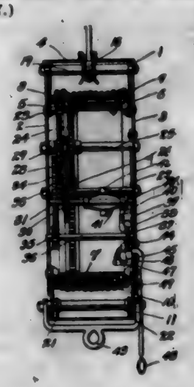
1. In a vehicle headlight, the combination with a light casing having means to hold it stationary upon the vehicle; of a source of light in said casing; a parabolic reflector fixed in said casing, in concentric relation with said source of light, arranged to normally project a portion of the light forwardly from said casing, parallel with the axis of said casing; means arranged to contemporaneously divert a portion of the light from said source laterally with respect to said casing and to the right hand side of the road traversed by the vehicle, and considerably in advance of the vehicle, including a dished plate formed of a single piece of pressed sheet metal comprising a plane annular portion extending transversely to the axis of said casing; a reflecting bar extending diametrically across the axis of said casing, in a plane at an acute angle to the axis of said casing, and merging at its ends into said plane annular portion; other reflecting bars upon respectively opposite sides of, and parallel with, said diametrical bar and in unitary relation with said dished plate, respectively merging at their ends into said transversely extending plane portion of said plate, and in unitary relation with an annular parabolic zone of said plate; and means arranged to hold said dished plate with said bars in vertical position, including an annular recess at the mouth of said parabolic reflector and an annular rib on said dished plate fitted to said annular recess; and means arranged to hold said dished plate in wedging engagement with said parabolic reflector, including a ring engaging said casing, exterior to said plate, and arranged to press the latter rearwardly.

1,541,587. TRIMMING THE INTERIORS OF VEHICLES AND THE LIKE. JOSEPH ROSENSTEIN, Chicago, Ill. Filed Sept. 7, 1922. Serial No. 586,594. 3 Claims. (Cl. 154—50.)



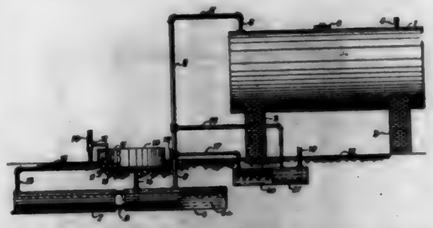
1. As a new article of manufacture, a panel for the purpose specified having sufficient strength to satisfactorily meet the requirements of service and sufficient pliability to be curved on the radii of automobile interior finishes, said panel comprising three sheets of fiber board adhered together by water proof adhesive, the exposed surfaces of the top and bottom sheets being coated with water proof material, and one exposed surface being embossed to simulate leather or the like, together with a suitable binder around the edge of the panel, substantially as described.

1,541,588. WINDOW LIFT AND VENTILATOR. ELLA M. RITTBAU, Liberty, Mo. Filed Feb. 11, 1924. Serial No. 691,994. 1 Claim. (Cl. 98—31.)



The combination with a window sash having a rail provided with an elongated opening therein, of a ventilator comprising a flat plate inset in the rail so that its outer face is flushed with the face of the rail, the plate having a length greater than the length of the opening in the sash rail and having an opening coinciding with the opening in the sash rail, the plate being provided with undercut grooves extending from end to end, the ends of the grooves being closed by the sash rail and a closure slide of less length than the plate movable longitudinally of the plate and received in the undercut grooves, the slide having movement in one direction to close the opening in the plate and in the rail.

1,541,589. MONORAIL SYSTEM. JOSHUA ROSSINI, Scranton, Pa. Filed Nov. 26, 1924. Serial No. 752,385. 22 Claims. (Cl. 105—29.)

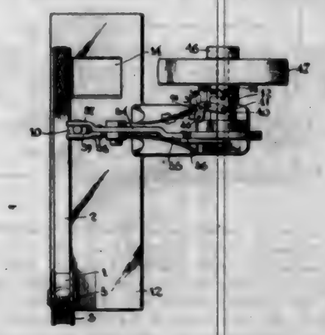


2. In a mono-rail railway, a single rail, a power car associated with the rail, rack teeth on the upper edge of the rail, motor driven gears on the power car meshing with the rack teeth on the rail, said rail embodying side walls with the horizontal teeth at the upper edges, and a guide block depending from the car and cooperating with the rail.

1,541,590. FIRE ESCAPE. CHARLES F. RYBA, Beardsley, Kans., assignor of one-third to Frank Ryba and one-third to Enoch Ryba, both of Beardsley, Kans. Filed May 10, 1924. Serial No. 712,889. 3 Claims. (Cl. 254—157.)

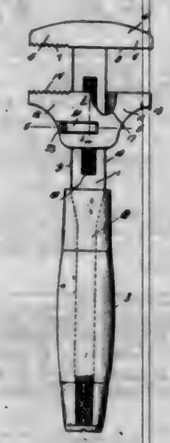
1. In a fire escape, a casing, a rotatable drum mounted in the casing, a gear carried by the drum, a train of gears driven by the first named gear, a shaft receiving its motion from the train of gears, a governor on the shaft, a second shaft driven by the fastest moving gear in the train and a brake disk on the last named shaft, and a shoe actuated by the governor to frictionally engage the disk.

1,541,591. VAPORPROOF STORAGE TANK. ARTHUR E. SADLER, Henrietta, Tex. Filed Mar 1, 1924. Serial No. 696,147. 4 Claims. (Cl. 220—85.)



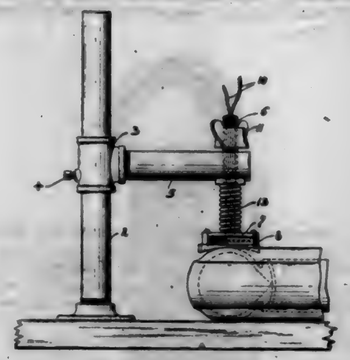
1. In an apparatus for storing hydro-carbon liquids, a main storage tank, a base for said tank, an intake therein, reservoirs; a main pipe connecting the tank with the reservoirs from the top of the tank to the top of the reservoirs, a water tank above the reservoirs, a pipe from the bottom of said water tank into and extending to a point adjacent the bottom of one of the reservoirs, a float in the water tank, a gas outlet pipe from the reservoirs to a distant point, a valve in said pipe adapted to be operated by the movement of the float in the water tank, a trap connected into the main pipe at its top and bottom, and a pipe extending from the trap to the surface of the ground.

1,541,592. SHEARING MACHINE. WALTER SCHWERKE, Beloit, Wis. Filed Feb. 21, 1924. Serial No. 694,351. 5 Claims. (Cl. 164—42.)



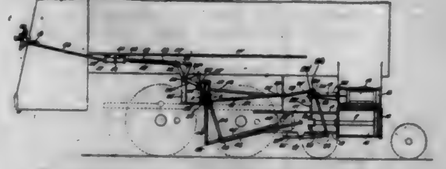
1. A machine for the purpose set forth comprising a slotted material support, a lengthwise slotted knife

operating through the slot of the support for shearing the material on the support, a guide pin carried by the support and operating in the slot of the knife, means connected to the forward end of the knife for imparting



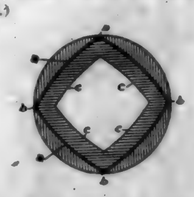
a downward and rearward movement thereto to provide for the shearing of the material by the knife, a pivoted lever slidably connected to said means, and means connected with the rear end of the lever for operating it.

1,541,593. WRENCH. RICHARD G. SCOTT, Edmonton, Alberta, Canada. Filed Apr. 1, 1924. Serial No. 703,429. 1 Claim. (Cl. 81—145.)



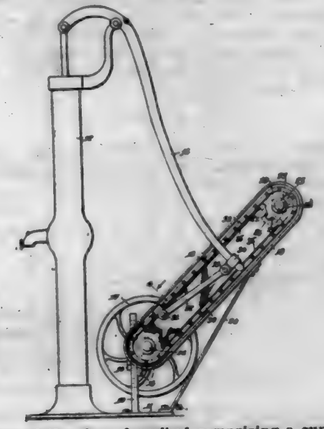
A wrench comprising a shank having a jaw fixed thereto, said shank having rectangularly disposed side surfaces, the opposite side surfaces being disposed parallel with relation to each other, two of the opposite side surfaces being knurled, and the other two intervening side surfaces being milled, a jaw movably mounted upon the shank and having an opening which loosely receives the shank, two of the opposite wall surfaces of the openings being provided with serrations adapted to engage the milled surfaces of the shanks, the said movable jaw being provided at its intervening sides with slots leading in from opposite edges of the said movable jaw, and spring fingers secured to the movable jaw and extending along the slot and having knurled surfaces adapted to resiliently engage the knurled surfaces of the shank.

1,541,594. VULCANIZING APPARATUS. CLYDE M. SEMLER, Akron, Ohio. Filed Apr. 2, 1923. Serial No. 629,827. 3 Claims. (Cl. 18—18.)



1. In a device for vulcanizing tires or tubes, a support for the object to be vulcanized, an arm extending over the support, a hollow stud mounted in said arm, a plate on the lower end of the stud, an electrical heating element in the plate, wires extending through the stud and connected to the heating element, yielding means adapted to press the object and plate together, and means for adjusting the support and the plate relatively to one another.

1,541,595. VALVE-GEAR MECHANISM. JOHN W. SHEPARD, Tucson, Ariz. Filed Apr. 1, 1921. Serial No. 457,598. 1 Claim. (Cl. 121—116.)

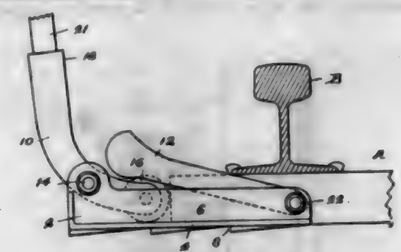


In a locomotive the combination with the valve cross heads and piston cross heads on the opposite sides of the locomotive, a transversely extending rock shaft formed of a pair of sections, one arranged within the other, each projecting from the other and from opposite sides of the locomotive and each having a slotted link at its outer end and a crank arm depending from its inner end and providing means whereby the valve motion on one side is partially derived from the opposite side of the locomotive, of a valved gear mechanism mounted on each side of the locomotive and consisting of a link pivotally connected to a piston cross head centrally of its bottom and extending forwardly therefrom, an upstanding lever pivoted at its lower end to the forward end of said link and further pivoted in proximity to the outer side of and extending above a valve cross head, a rod having its forward end pivotally connected centrally of the outer side of said piston cross head and extending rearwardly therefrom and connected to the crank arm of one of said shaft sections, a rearwardly extending link having its forward end pivoted to the upper end of said lever and a radius bar slidably connected with the link of the other shaft section and having its forward end pivotally connected to the rear end of the link which projects from said lever, and means connected with the shaft sections for effecting the shifting thereof to provide for the forward and backward movements of the engine.

1,541,596. FILAMENT FOR INCANDESCENT LAMPS OR OTHER VACUUM APPARATUS. FRANZ SKAUPY and FRITZ KOHEP, Berlin, Germany, assignors to General Electric Company, a Corporation of New York. Filed Nov. 3, 1924. Serial No. 747,573. 8 Claims. (Cl. 176—40.)

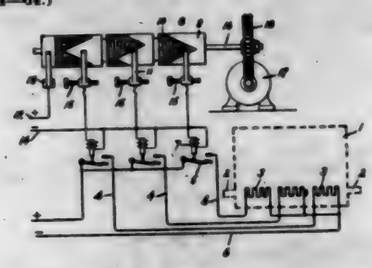
1. A macro-crystal filament of a refractory metal having a polygonal cross-section in its initial form, which filament when heated reduces to a filament having a second and different form having also a polygonal cross-section, the filament in the first form having one of its sides in a position at an angle to the position of any of the sides of the filament in its second form.

1,541,597. PUMP-OPERATING APPARATUS. LON W. SMITH, Maroa, Ill. Filed May 2, 1923. Serial No. 636,274. 1 Claim. (Cl. 74—14.)



A device of the class described comprising a supporting standard having a bearing sleeve formed with outwardly directed ears, a stub shaft rotatable in said bearing sleeve a shell device attached at one end to said ears, a stud supported in said shell near the other end thereof, chain wheels mounted respectively upon said stub shaft and stud, and endless chain operative over said chain wheels, a pin extending from one of the links of said chain, a link coupled at one end to said pin and adapted to be coupled at the other end to a movable body, and means for rotating said stub shaft.

1,541,598. METHOD OF TREATING TRANSMISSION BANDS. TROY J. SNIDER and WARD E. MARSHALL, Terrell, Tex. Filed Sept. 27, 1923. Serial No. 665,245. 2 Claims. (Cl. 87—9.)



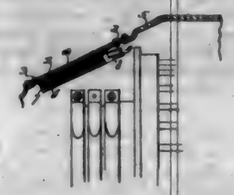
2. The method of treating textile brake or transmission bands which consists in the preparation of a composition consisting of a heavy tallow fat forming 75% of the composition, castor oil, forming 12½% of the composition, and a mineral lubricant of higher consistency than ordinary lubricating oils consisting of 12½% of the composition, immersing the transmission or brake bands in a boiling quantity of said composition, and permitting the same to remain therein from ten to fifteen minutes.

1,541,599. RAILWAY-TRACK LINER. HARRY N. STAMOS, Centerville, Iowa. Filed Nov. 12, 1924. Serial No. 749,478. 2 Claims. (Cl. 254—44.)

1. A device of the character described consisting of a base, a primary lever fulcrumed at one end of said base, a secondary lever fulcrumed at the other end of said base and having its free end overlapping the lower end of the primary lever, and an antifriction roller mounted in the lower end of the primary lever and arranged to travel along the underside of said secondary lever.

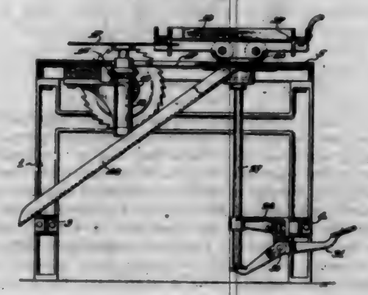
1,541,600. METHOD OF AND MEANS FOR OPERATING ELECTRIC FURNACES. CHRISTIAN STRENSTRUP, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 11, 1923. Serial No. 638,843. 6 Claims. (Cl. 204—64.)

1. The method of operating an electric furnace which comprises periodically admitting heating current to and cutting it off from the heating unit thereof and in varying said periods.



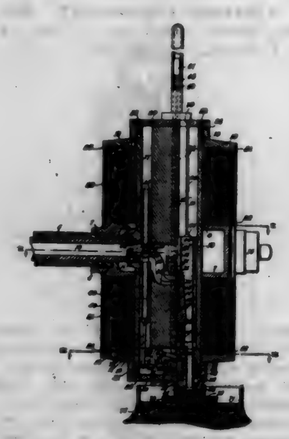
1,541,601. PIPE JOINT. ERNEST TRIBE, London, England; Charles Tribe, administrator of said Ernest Tribe, deceased, assignor to Victaulic Company Limited, London, England. Filed July 7, 1919. Serial No. 309,110. 9 Claims. (Cl. 285—198.)

1. A ring for forming a leak-preventing joint between the adjacent ends of two pipes, said ring comprising as a unitary structure a flexible body portion and flexible annular flanges extending inwardly from the edges of the body portion and forming with the body portion a reentrant fluid-receiving recess, said flanges having pipe-engaging walls projecting diagonally inwards toward the axis of the ring to form tapering



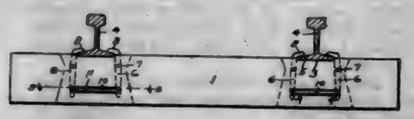
pipe-receiving openings the smaller portions of which openings are of smaller diameters than the diameters of the outer surfaces of the pipes to be received by them, and said flexible body portion forming a yielding backing for urging said flanges into sealing engagement with the outer surfaces of the pipes engaged by them.

1,541,602. OIL-FILTERING DEVICE. WILBER F. TRUMBO and WILBERT L. KIESTER, New Carlisle, Ohio. Filed June 25, 1923. Serial No. 647,714. 2 Claims. (Cl. 184—11.)



1. The combination with a transmission case having an opening and a cover for the opening, of a frame conforming to and fitting in the opening of said case and secured to the under face of the cover, a reticulated transversely arcuate receptacle secured to the frame under said opening, a plate at one end of the receptacle constituting a bottom for the receptacle into which the oil is received and passed to leave the sediment in the receptacle on the bottom of which it is deposited by gravity due to the position of the receptacle, and a shield provided at and secured to the opposite end of the receptacle, one side of the shield being cut away causing a space to be formed for the entrance of oil as it is thrown in the movement of the fly wheel, the opposite side of the shield having a rolled edge opposite said space and constituting a wing inclined over toward the transmission mechanism, serving to catch the oil and deflect it into the receptacle which overlies, covers and passes the oil over entirely all of the transmission drums.

1,541,603. ICE-CUBING MACHINE. FREAR TURNER, Detroit, Mich., assignor to Turner-Messenger Manufacturing Co., Detroit, Mich., a Corporation of Michigan. Filed May 11, 1923. Serial No. 638,290. 4 Claims. (Cl. 143—38.)



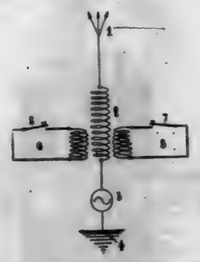
1. In an ice cubing machine wherein blocks of ice are adapted to be operated upon by sawing to provide kerfs by which cubes are released from the block of ice;—means adapted for manipulating the block of ice relative to said saws, said means comprising a shiftable frame, and a reciprocable turn table permitting of a block of ice being elevated and turned relative to said frame so that said frame may subject different faces of the block of ice to some of said saws.

1,541,604. ELECTRICALLY-OPERATED MEANS FOR SEALING VACUUM BOTTLES IN COMBINATION WITH AUTOMATIC PLUG-FEEDING MECHANISM. WALTER WAGNER, Chicago, Ill. Filed May 29, 1923. Serial No. 642,322. 13 Claims. (Cl. 220—1.)

1. An apparatus for the purpose described, comprising a connection for the air discharge opening of a vacuous chamber to enable a vacuum to be created therewithin, means for automatically feeding sealing elements into a proper position for being inserted into said opening, and means for driving one of said elements into said opening while the vacuum is maintained.

1,541,605. CROSSTIE. MARTIN L. WEAKS, Granite City, Ill., and JAMES W. CARY, Cumberland City, Tenn. Filed June 25, 1923. Serial No. 647,668. 1 Claim. (Cl. 238—357.)

A railroad tie having a plurality of rail locking levers disposed in a slot formed in the tie, pivot pins transversely spanning the slot and pivotally supporting the levers, the levers above the pivot pins being provided with hooked ends for engagement with the base of a rail seated on the tie and being further provided below the pivot pins with tails, a wedge key slidably mounted in a transverse slot formed in the tie and between the tails of said levers, said wedge key having converging side edges and being provided with a series of spaced perforations adjacent the narrower end, and a pin for selective engagement in said perforations to prevent recession of the wedge key.



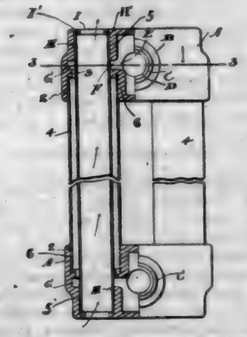
1,541,606. COMPOSITION OF MATTER FOR FACING CONCRETE BLOCKS. CYRUS S. WERT, Kendallville, Ind. Filed Aug. 31, 1921. Serial No. 497,142. 1 Claim. (Cl. 106—24.)

A facing mixture for concrete blocks consisting of a mixture of equal parts of cement, fine sand and marble dust with a small quantity of powdered hydrated lime mixed therewith, the mixture being wetted with water containing as much hydrated lime as it will dissolve and containing also water glass in the proportion of one pine of water glass to five gallons of the water containing the hydrated lime.

1,541,607. BELT TRANSMISSION GEAR. HEINRICH ZOELLY, Zurich, Switzerland. Filed Mar. 21, 1923. Serial No. 626,581. 3 Claims. (Cl. 74—62.)

1. A driving belt entirely of silk.

1,541,608. WIRELESS TELEGRAPHY. HENRI ABRAHAM, Paris, France. Filed Sept. 2, 1921. Serial No. 498,013. 7 Claims. (Cl. 250—9.)



1. A system of radiotelegraphy, for simultaneously transmitting several messages in the same direction from a single sending station, each message at full power so as to avoid decreasing the sending area, comprising a series of independent manipulating devices at the sending station so arranged that by manipulating one of said devices emissions are produced at the wave-lengths characteristic of that device, and that when another device is manipulated the emissions have wave-lengths which are characteristic of the second device and different from those of the first device; and a series of receiving devices at the receiving station equal in number to the manipulating devices at the sending station, each receiving device being so arranged as to be capable of receiving equally well at a predetermined series of different wave-lengths which are the same as those sent out by the sending station when a certain manipulating device is operated.

1,541,609. CONTACT BRUSH FOR ELECTRIC MOTORS AND GENERATORS. CHARLES W. ADAMS, Saginaw, Mich., assignor to The United States Graphite Company, Saginaw, Mich., a Corporation of Michigan. Filed June 14, 1924. Serial No. 720,130. 3 Claims. (Cl. 71—325.)

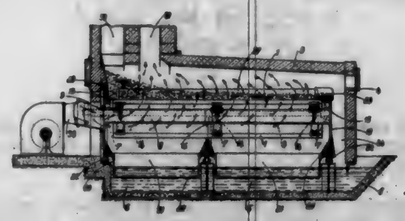
1. An electrical commutator brush composed of an alloy of copper and lead, with not less than about 40 per cent pead.

1,541,610. RADIATOR. DAVID JOHN ARCHER, Toronto, Ontario, Canada. Filed July 16, 1923. Serial No. 651,762. 1 Claim. (Cl. 257—142.)

A radiator comprising a top and bottom header each having a chamber provided with an inlet and an outlet, and each integrally formed, and each embracing two longitudinally-disposed cylindrical sections, the inner of which is of greater horizontal diameter than the outer one, and into each of which opens a passage-way which is part of said chamber, the outer end of each cylindrical section having an opening thereinto, and each of the said sections being counter-bored to provide extended packing surfaces; a grooved flange located at the opening into each of the smaller cylindrical sections; a tubular air conduit swedged at its ends in said smaller cylindrical sections, and having its extreme ends located in the associated grooved flanges; a grooved flange located at the inner end of the counter-bore of each larger cylindrical section and of greater diameter than said air conduit which passes therethrough, and communicating with its associated passage-way, and a heating-medium-conveying conduit swedged in each counter-bored larger cylindrical section and having its ends packed in the associated grooved flanges thereof.

1,541,611. BACKSAW. JOHN P. ARNOLD, Philadelphia, Pa., assignor to Henry Disston & Sons, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 18, 1923. Serial No. 681,401. 3 Claims. (Cl. 143—31.)

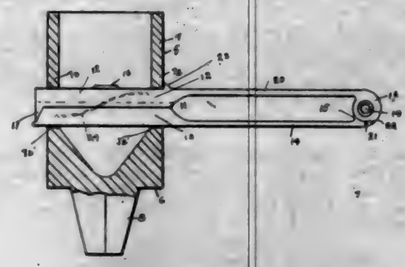
1. The combination in a back saw, of a blade; a handle secured to the blade; a back having a longitudinal groove to receive the blade, the blade having a slot at each end; pins on the back arranged to enter the slots, the back having a notch; and a catch on the handle arranged to enter the notch in the back when said back is in position on the blade.



1,541,612. COMBINATION LOCK. LOUIS V. ARONSON, Newark, N. J. Filed Nov. 20, 1924. Serial No. 751,157. 3 Claims. (Cl. 70—53.)

1. A combination lock comprising, in combination, a bolt, a pin journaled in said bolt, a pair of permutation elements mounted upon said pin, one of said elements mounted for free revolution and the other thereof fixed to said pin, a pawl carried by said fixed element, means carried by said free element to coact with said pawl upon revolution thereof in one direction, a spring mounted upon said bolt, having frictional engagement with said free element, said elements having gates adapted to be brought into registry, and a stationary fence coacting with said gates.

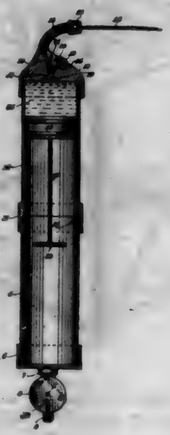
1,541,613. COMBUSTION OF FUEL IN FURNACES. JAMES STANLEY ATKINSON, Westminster, London, England; assignor to Société Anonyme des Appareils de Manutention & Fours Stein, Paris, France, a Corporation of France. Filed May 12, 1924. Serial No. 712,656. 6 Claims. (Cl. 110—40.)



1. A furnace structure comprising an endless fuel conveyor mounted in an inclined position in the furnace,

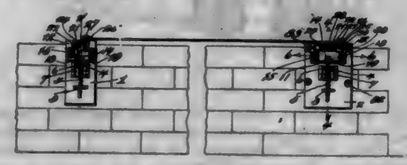
means for feeding fuel onto the conveyor at one side thereof, means for causing movement of the conveyor to

convey the fuel in an upward direction, and a clinker and ash take-off chute at the side of the conveyor opposite the fuel feed.



1,541,614. SASH-WEIGHT-CORE-FORMING DEVICE. WILLIAM M. BARNARD, Springfield, Mass. Filed Apr. 14, 1922. Serial No. 552,575. 2 Claims. (Cl. 22—13.)

1. A sash weight core forming device consisting of pair of members, one having a longitudinal channel, one of the members having sliding engagement with said channel, a spring carried and disposed in said longitudinal channel and bearing against the other member tending to separate said members, each member being provided with longitudinal handle, the rear ends of the handles being pivotally connected to each other, one of said members having a character thereon for imprinting the sand from which the sash is molded, the two members being so arranged that upon manual pressure of one end upon any portion of the handles the character will be moved inwardly to the sand and the device may be slidably withdrawn.

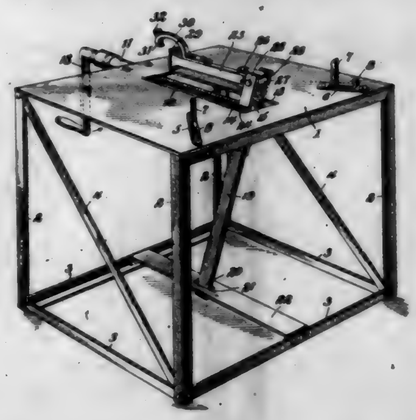


1,541,615. SYRINGE. ALFRED N. BESSESEN, Minneapolis, Minn. Filed Aug. 6, 1923. Serial No. 656,087. 3 Claims. (Cl. 128—218.)

1. In a syringe, a barrel portion, a removable cap carried by said barrel portion, said cap having a passage therethrough, a conical valve seat formed in said cap at one end of said passage, said cap having an opening extending therethrough from the valve seat, a second valve seat formed in said cap at the outer end of said opening, a rod movably positioned in said opening, a valve element carried by each end of said rod adapted to engage said valve seats one at a time, means associated with said rod for normally retaining one of

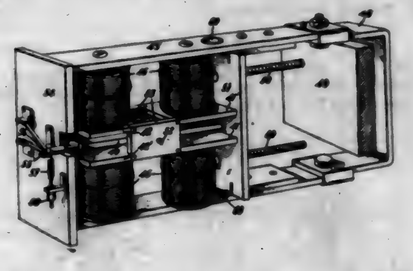
said valves in engagement with the first mentioned valve seat for closing said passage, and means carried by said rod for unseating this last mentioned valve and for seating the other valve.

1,541,616. BRICKLAYER'S GAUGE. BENJAMIN C. BOGGS, East Lake, Ala. Filed Sept. 7, 1923. Serial No. 661,476. 6 Claims. (Cl. 33—85.)



1. A bricklayer's gauge including a support, means for clamping the support on a brick in the wall, and a slide adjustably mounted upon the support and provided with means for leveling it in a direction longitudinally with and transversely of the wall.

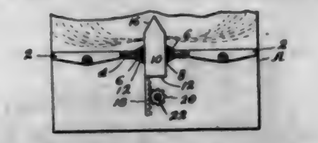
1,541,617. RIM EXPANDING AND CONTRACTING DEVICE. JULIUS M. BORN, St. Paul, Minn. Filed Dec. 27, 1921. Serial No. 525,066. 12 Claims. (Cl. 157—1.)



1. In a device of the class described, the combination with a table to support a rim with a tire thereon, of a plurality of stationary rim-engaging members mounted on the top of the table, a movable rim-engaging member operating above the top of the table, means for pivotally mounting said movable rim-engaging member so as to

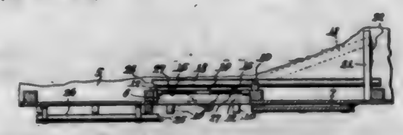
swing in both a vertical plane as well as a horizontal plane relatively to a rim on said table, and means for

moving said movable rim-engaging member in a horizontal plane toward or from the stationary rim-engaging members.



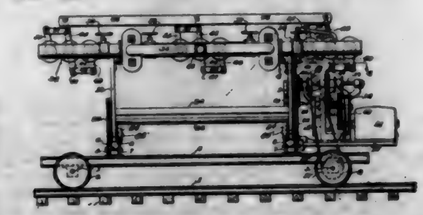
1,541,618. RELAY. HAROLD W. BROWN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 5, 1921. Serial No. 482,630. 11 Claims. (Cl. 200—13.)

10. A protective relay of the class described, comprising a magnetic structure having oppositely disposed polar projections, a winding on said structure adapted to produce a polarizing flux therein and thereby to magnetize said polar projections, a winding surrounding said armature adapted to produce a flux therein to cause movement of the same in one direction or the other in accordance with the direction of current in said winding, contacts controlled by said armature, and openings in said armature locally restricting the flux path of said second winding to cause the flux path thereof to become saturated on predetermined current therein whereby the retentivity of the magnetic circuit is reduced and abnormal currents in said second winding are prevented from reversing the polarities of said polar projections.



1,541,619. GRATE. CHARLES P. CALDWELL, Kansas City, Mo. Filed Mar. 10, 1921. Serial No. 451,272. 1 Claim. (Cl. 126—163.)

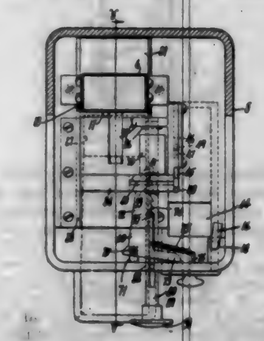
In a furnace grate, a stationary dead plate extending the length of the grate and having a plurality of vertical openings with surrounding pockets, packing in said pockets, tubular elements having air ports and extending through said openings and having smooth parallel sides snugly fitting within the packing, racks depending from said tubular elements, pinions intermeshing with



said racks to adjust the same vertically, a shaft upon which said pinions are fixed, and means for rotating said shaft.

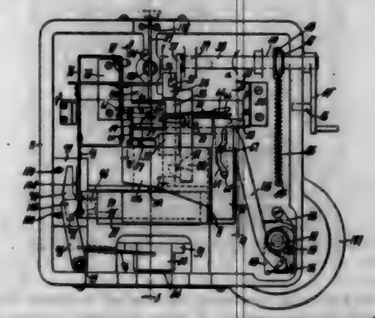
1,541,620. GRAIN DOOR. JOHN S. CAMERON, Elliott, Ill. Filed Jan. 6, 1925. Serial No. 862. 2 Claims. (Cl. 16—90.)

1. In a freight car door, a body portion, a door opening, a stationary track section mounted exteriorly of the door opening, a track section pivotally mounted within the body portion and adapted to move into engagement with the first mentioned track section to form a continuation thereof, a support extending inwardly from the wall of the car and having a slot, one end of the pivoted track section adapted to move in the slot, a spring member disposed adjacent to the slot and adapted to engage the pivoted track section to lock the pivoted track section against movement, and a movable door section supported on the pivoted track section.



1,541,621. SPRAYING MECHANISM FOR COKE OVENS. MARIO CARINI, Belle Vernon, Pa., assignor of one-half to Arthur Vannucci, Belle Vernon, Pa. Filed Apr. 23, 1924. Serial No. 708,480. 10 Claims. (Cl. 299—48.)

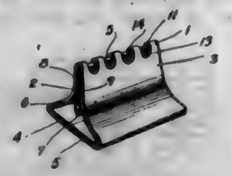
1. A device of the character described, comprising a truck having a plurality of cog-racks mounted transversely thereon, a plurality of metallic plate uprights provided with cog-gears engaging said racks, a beam connecting said uprights at their top portions, a series of spraying pipes resting on said beam, and means connected to one of said uprights and to each of the pipes for imparting a partial back and forth rotary movement to each of said pipes.



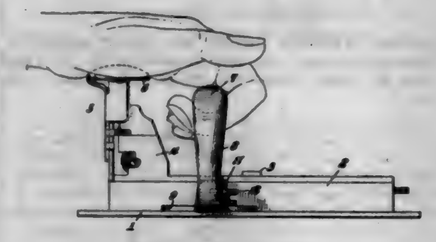
1,541,622. VENDING AND ADVERTISING MACHINE. DANIEL L. CHANDLER, Fitchburg, Mass., assignor, by mesne assignments, to Vend Ads Corp., a Corporation of Massachusetts. Filed Jan. 24, 1920. Serial No. 353,712. 13 Claims. (Cl. 194—80.)

1. A vending machine having, in combination, a casing, a magazine adapted to contain a column of articles of merchandise, a carrier slide movable beneath said column of articles adapted to receive the lowermost article in said column, an outlet chute provided in said casing having an inlet opening beneath the path of travel of said slide and an outlet opening extending outside said casing, and a manually operable actuating member slidable in said casing and in said slide, said

slide being provided with a vertical slot extending transversely of said actuating member, and said actuating member being provided with a coin-supporting notch extending transversely thereacross adapted to be brought into and out of alinement with said slots, whereby, upon the introduction of a coin into said slot, said slide may be locked to said actuating member.



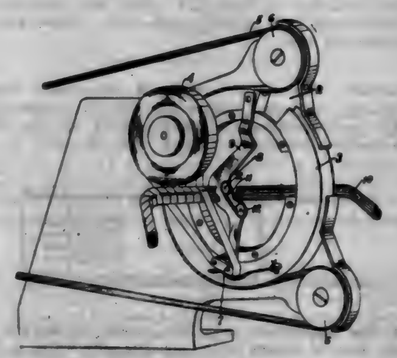
1,541,623. VENDING MACHINE WITH SPURIOUS-COIN DETECTOR. DANIEL L. CHANDLER, Fitchburg, Mass., assignor, by mesne assignments, to Vend Ads Corp., a Corporation of Massachusetts. Filed Dec. 7, 1921. Serial No. 520,682. 42 Claims. (Cl. 194—97.)



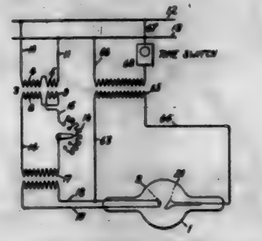
1. A vending machine having, in combination, a movable receptacle for an article to be vended, mechanism rendered effective only by the deposit of a coin of predetermined dimensions in said machine and adapted to move said receptacle to feed said article from said receptacle and out of said machine and mechanism adapted to eject said coin from said machine in the event of said article feeding mechanism failing to feed an article as set forth, said last named mechanism including a movable coin directing chute and means for moving said chute to direct said coin out of said machine.

1,541,624. THREAD CUTTER. ELIZABETH CHUTE, Minneapolis, Minn. Filed Dec. 15, 1924. Serial No. 755,828. 3 Claims. (Cl. 30—14.)

1. A thread cutter comprising a stand having a flat base and two upstanding converging walls joined together at their upper edges and provided with notches and a blade holder comprising two flat portions yieldingly connected at their lower edges and receivable in the space between the converging walls, the converging walls serving to clamp the holder in position, the width of the holder being less than the width of the blade which it is adapted to receive.



1,541,625. ATTACHMENT FOR STAPLING MACHINES. ISAIAH CHAPMAN, Eckelson, N. Dak. Filed Oct. 27, 1924. Serial No. 746,191. 6 Claims. (Cl. 1—2.1)

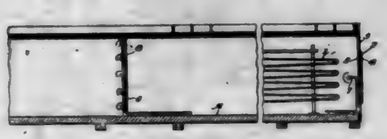


1. A stapling machine, comprising a base, a casing carried by the base, a depressible staple-setting plunger carried by said casing, and a loop handle carried by said base and elevated above the casing in rear of said plunger and adapted to be grasped by the fingers when the palm of the operator's hand rests upon the head of the plunger.

1,541,626. TAPING MACHINE. PENROSE E. CHAPMAN, St. Louis, Mo. Filed Apr. 13, 1922. Serial No. 552,204. 10 Claims. (Cl. 242—6.)

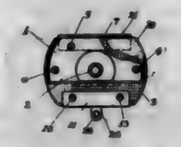
1. In a taping machine, the combination of a shuttle with a steady rest attached thereto.

1,541,627. X-RAY APPARATUS. WILLIAM D. COOLIDGE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Original application filed July 9, 1920, Serial No. 395,088. Divided and this application filed Apr. 26, 1923. Serial No. 634,864. 10 Claims. (Cl. 250—84.)



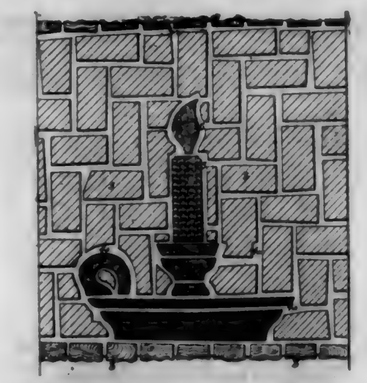
1. The method of obtaining a predetermined output of X-rays from an X-ray tube which is energized by a current of variable voltage which consists in regulating the electron emission at the cathode substantially inversely with the square of the voltage.

1,541,628. THREAD GUIDE FOR STOP MOTIONS. FRANK CRAWFORD, Sr., New Brunswick, N. J. Filed Aug. 31, 1923. Serial No. 660,331. 2 Claims. (Cl. 66—7.)



1. The combination in a thread guide for stop motions, of a casing having a bracket; a shaft under the bracket, the outer end of the shaft being supported by the bracket; a curved arm mounted on the shaft and rounded in cross section, said arm having a slot near its outer end; a plate secured to the bracket and bent downwards to form a guide; a beak-shaped end on the guide extending into the slot in the arm; and a projection acting as a guard to prevent the thread passing towards the shaft.

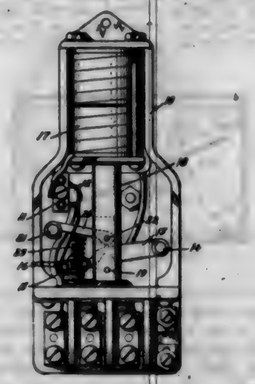
1,541,629. DRY KILN. FRANK M. CREIGHTON, Americus, Ga., assignor to Moore Dry Kiln Co., Jacksonville, Fla., a Corporation of Florida. Filed Apr. 12, 1924. Serial No. 706,180. 4 Claims. (Cl. 34—19.)



1. The combination of a kiln, means for heating the same, vertical sprays in the opposite side walls, a horizontal spray, said sprays all discharging in the general direction of air movement, and an air inlet regulating shutter or register, adjacent to which the horizontal spray is located.

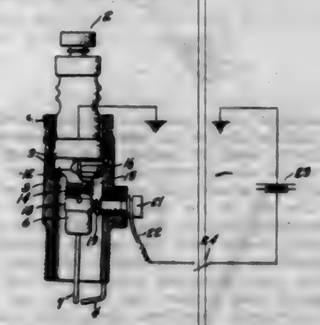
1,541,630. ELECTRICAL CONDENSER FOR IGNITION CIRCUITS. WILLIAM DUBILIER, New York, N. Y., assignor to Dubilier Condenser & Radio Corporation, a Corporation of Delaware. Filed Apr. 22, 1924. Serial No. 708,183. 6 Claims. (Cl. 250—41.)

1. A condenser comprising a casing having top and bottom plates of insulation, separated side plates joining the top and bottom plates and providing terminals, a stack comprising layers of conducting and insulating material, and carrying a terminal for part of the layers of conducting material, and another terminal for the remaining layers of conducting material, the stack being capable of insertion as a unit into the casing through either end thereof, to put each of its terminals into contact with one of the terminals of the casing, and being removable from the casing.



1,541,631. MOSAIC SURFACE AND METHOD OF MAKING IT. JAMES S. DUFFY, Rahway, N. J., assignor to Linomosaic Co. Inc., of New York, N. Y., a Corporation of New York. Filed Oct. 28, 1922. Serial No. 596,233. 5 Claims. (Cl. 72—18.)

1. The process of laying mosaic of resilient, flexible material which consists in first applying a cement to the surface to be decorated, then applying pieces of said flexible material in preformed condition to said cement so as to form a design, said pieces leaving open joint spaces between them, permitting said cement to set, and thereafter filling said joint spaces with a plastic cement which adheres to the sides of the pieces and to the surface which is being decorated.

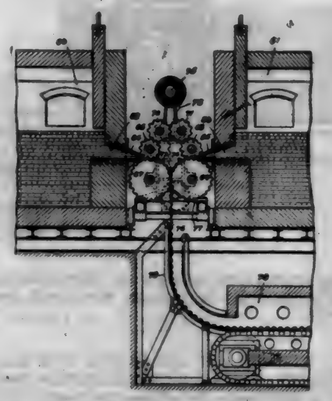


1,541,632. NORMALLY-CLOSED SWITCH. JOHN EATON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 12, 1920. Serial No. 373,062. 12 Claims. (Cl. 200—87.)

1. A switch of the normally closed type comprising a rigid switch contact and a cooperating movable contact, an actuating member for the movable contact biased to a position at which the contacts are closed, and connections between the actuating member and the said movable contact whereby the movement of the actuating member to its biased position moves the said contact angularly into engagement with the rigid con-

tact and then gives the contacts a wiping action, the said connections arranged to permit the contacts to be maintained closed during the rebound of the actuating member.

1,541,633. SPARK PLUG. ARTHUR F. FARMAN, Oakland, Calif. Filed Jan. 2, 1923. Serial No. 610,182. 1 Claim. (Cl. 123—169.)



A spark plug comprising a bushing, an insulating core removably positioned therein, an electric heating element arranged on the outer side said core and having one terminal electrically connected to said bushing, a conductor electrically connected to the other terminal of said element and encircling said core on its exterior, and a resilient contact mounted on and insulated from said bushing and arranged to engage said conductor.

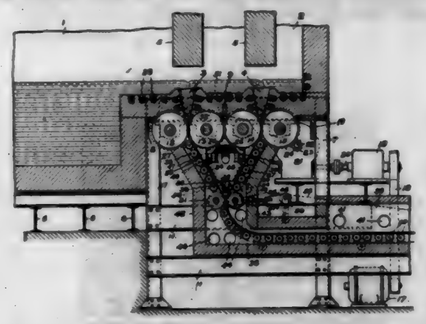
1,541,634. BREAD PAN. ERNEST B. FLETCHER, Toronto, Ontario, Canada, assignor to Fletcher Manufacturing Co. Limited, Toronto, Canada. Filed Dec. 18, 1924. Serial No. 756,761. 8 Claims. (Cl. 53—6.)

1. The combination with a pan having wired edges formed on its sides and ends, of a bracket having flanges rolled into the said wired edges along the adjacent sides of two adjacent pans and provided with tabs rolled into the said wired edges on the ends of the adjacent pans.

1,541,635. APPARATUS FOR MAKING CORRUGATED WIRE GLASS. JOHN H. FOX, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Sept. 26, 1922. Serial No. 590,638. 8 Claims. (Cl. 49—82.)

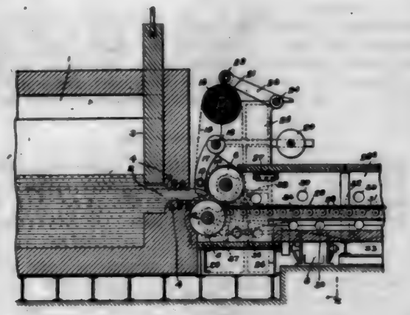
1. A process of making wire glass which consists in continuously flowing two ribbons of glass so that they converge and meet, corrugating the sheets during such movement, continuously corrugating a wire mesh, feeding it between the two ribbons as they meet and applying pressure to the outer faces of the ribbons to cause them to weld.

1,541,636. COMBINATION CHURN AND FREEZER. WARREN S. GAUNTT, Kansas City, Mo., assignor to Earle H. Roraback, Kansas City, Mo. Filed Mar. 24, 1924. Serial No. 701,870. 1 Claim. (Cl. 259—92.)



An apparatus of the character described consisting of a container, a lid thereto, supporting elements spaced about in the interior of said container, and an agitator mounted on said supporting elements and consisting of spring wire formed into an expansible split-ring for frictional engagement with the interior of said container and provided with interior coils, for the purpose described.

1,541,637. METHOD AND APPARATUS FOR MAKING WIRE GLASS. FREDERICK GELSTHARP, Tarentum, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Sept. 26, 1922. Serial No. 590,636. 5 Claims. (Cl. 49—82.)



3. In combination in apparatus for forming wire glass, a tank having a pair of parallel outlet slots, a pair of rollers at the exit end of each outlet adapted to receive

therebetween the glass flowing from the outlet, supporting and guiding means in advance of each pair of rollers arranged to bring the two sheets together, means for

supplying a metal mesh between the sheets and means for engaging the outer faces of the sheets and pressing them together.

1,541,638. METHOD AND APPARATUS FOR MAKING WIRE GLASS. FREDERICK GELSTHARP, Tarentum, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Sept. 26, 1922. Serial No. 590,637. 1 Claim. (Cl. 49—32.)

Apparatus for forming sheet glass comprising a tank containing a bath of molten glass and having an orifice leading through one of its side walls below the surface of the glass, a pair of cooled rolls opposite the orifice and spaced apart a distance corresponding to the thickness of the glass sheet to be produced, and with the upper roll spaced away from the tank, and a grid for guiding a wire mesh between the rolls pivotally mounted above the rolls, and having its lower end between the orifice and the rolls and projecting down into the stream of glass passing from the orifice to the pass between the rolls.

1,541,639. ANIMAL TRAP. WILLIAM S. GREGORY, Cincinnati, Ohio. Filed Oct. 31, 1921, Serial No. 511,924. Renewed Apr. 18, 1925. 1 Claim. Cl. 43—67.)

In an animal-trap, the combination of a receptacle having a fore opening or entrance, a platform or false bottom pivotally mounted within the receptacle longitudinally-back of the said entrance, a drop door or gate hinged along its outer edge to the outer end of the said platform but so as to fold beneath the latter when in normal position awaiting the entrance of the animal to be caught or entrapped, and adapted to automatically swing backwardly into said entrance when the animal has fully entered and with its fore part resting on and lowering the inner end of said platform and simultaneously raising or elevating the said outer end of said platform thereby, whereby the locking of said tilted platform is instantly effected on said full entrance of the animal, suitable cross-braces on the bottom of the receptacle to obstruct and prevent the accidental retreat

of the lower free end of said drop-door away from platform locking position, means for tempting and sustaining the animal in the trap and means for cushioning the fall of the inner end of the platform when the animal has entered the trap, substantially as herein shown and described.

1,541,640. DRAFT EQUALIZER. LOUIS W. GROHS, Racine, Wis. Filed Mar. 18, 1921, Serial No. 453,211. Renewed Jan. 27, 1925. 1 Claim. (Cl. 278—15.)

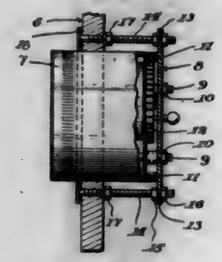
In combination a draft tongue, a lateral support having its inner end fixed thereto, an equalizing member mounted over and of a length to project from the ends of the support and the sides of the tongue, a pivot bolt extending through said member and support in close proximity to the outer end of the latter, that portion of said member extending inwardly from said bolt being of materially greater length than that portion extending outwardly therefrom, a flat rectangular, combined spacing and bearing plate interposed between and abutting directly against said support and member and further extended rearwardly therefrom, offset upper and lower retaining plates opposing respectively the top of said member and bottom of the support and abutting against the faces of said bearing plate at the rear thereof, and a forwardly directed outwardly inclined rigid rod having its forward end extending through and connected to the abutting portions of said plates and its rear end disposed parallel to and fixedly secured against one side edge of said tongue.

1,541,641. MANUFACTURE OF LAMINATED MATERIAL FROM SPINNABLE TEXTILE WOVEN FABRICS AND AN ADHESIVE BINDER. EMILE J. GUAY, Swampscott, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 8, 1924. Serial No. 705,111. 3 Claims. (Cl. 154—3.)

2. In the manufacture of material of the character described from spinnable textile woven fabric and an adhesive binder, the method of applying the adhesive binder to the fabric which comprises first saturating the fabric with a solution of the adhesive binder and then drying it in a vacuum to drive off the solvent and bring the adhesive binder primarily to the surface of the fabric.

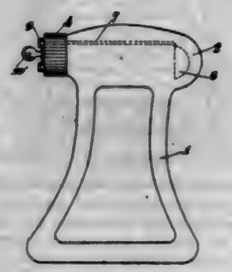
1,541,642. DEMOUNTABLE-RIM CONSTRUCTION. JAMES E. HALE, Akron, Ohio. Filed Oct. 22, 1921. Serial No. 509,755. 1 Claim. (Cl. 301—20.)

A demountable tire carrying rim adapted to receive the standard inextensible bead tire, comprising an endless one-piece rim, the rim being formed with integral outwardly curved side flanges and elevated ledges adapted to receive the base of the tire beads, the rim being provided with a relatively deep channel, the side walls of which are angularly arranged with respect to the ledges, the ledges being at such a distance that the tire will be substantially circular in cross-section and the distance between the vertical inner faces of the side flanges being not greater than three-quarters of the maximum sectional diameter of the tire, the innermost surface of the channel having a seating surface by which the rim may be demountably secured to the wheel body.



1,541,643. SAND SMOOTHING DEVICE FOR GOLF PLAYERS. HIRAM VIRGIL HENDRICKS, Oklahoma City, Okla., assignor of one-half to Guy A. Crooks, Oklahoma City, Okla. Filed Aug. 13, 1924. Serial No. 731,655. 5 Claims. (Cl. 273—32.)

1. A sand smoothing device for golf players' use, comprising a smoothing head round in cross section and of elongated form, a handle pivoted to the head intermediate of the ends of the latter, and means for binding the handle in any position relative to the head about the axis of its pivot.

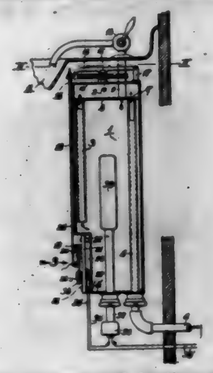


1,541,644. CLOCK MOUNTING. FREDERICK C. HERRMANN, Mount Vernon, N. Y., assignor to Phinney-Walker Company, New York, N. Y., a Corporation. Filed Nov. 26, 1924. Serial No. 752,370. 1 Claim. (Cl. 58—46.)

The combination with an instrument board having a hole therein, and a clock having a rotary case projecting thru said hole and a fixed plate behind said case and supporting the clock movement, of a ring at the front of the board, extending around the front end of the case and thru which said case projects so that it can be

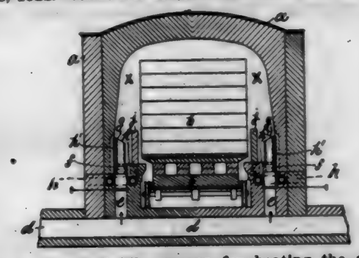
grasped for rotation, bolts extending thru said ring and instrument board, and clamping devices between the rear ends of the bolts and the rear plate.

1,541,645. BOTTLE FOR SUPPLYING LIQUIDS IN DROPS. JULES KRAENTZEL, Brussels, Belgium. Filed Sept. 25, 1924. Serial No. 739,806. 1 Claim. (Cl. 215—1.)



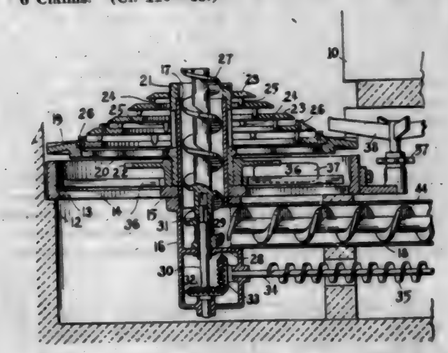
In an improved bottle for supplying liquids in drops, the combination with a bottle having a bell-shaped body and a head with two opposed outwardly projecting end-portions of which the first, fitted inside with a pierced cork plug, is closed and rounded while the second is open and cylindrical, of a metal cap fitted on said cylindrical portion of the head and provided with a hole for the admission of air and a hole for the passage of liquid situated symmetrically respectively above and below the centre of said cap, and air admission tube extending within the head of the bottle from the first-named hole towards the rounded end-portion of said head, a pivot-pin extending centrally through the cap and provided with an operating knob at its outer end, a spring coiled round the inner portion of said pivot-pin, a seat for one end of said spring on the inner end of said pivot pin, and a bridge piece secured on the outer portion of said pivot pin between the aforesaid cap and the operating knob, said bridge piece carrying two rubber or like stoppers capable of closing the holes in the cap.

1,541,646. ELECTRIC WATER HEATER. JULIUS J. KUHNER, Highland, Ill. Filed Oct. 2, 1920. Serial No. 414,290. 4 Claims. (Cl. 219—39.)



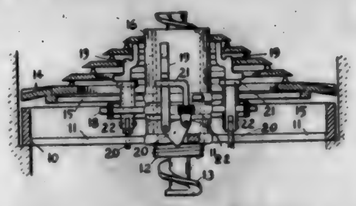
1. A heating container comprised of a pair of abutting compartments, one being arranged above the other, a cold water connection leading to said upper compartment,

a heating element associated with the lower compartment, a thermostatic regulator associated with said



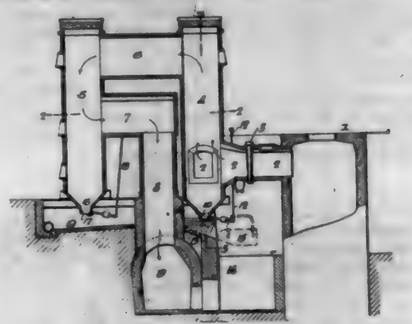
upper compartment and said heating element, and an outlet leading from said upper compartment to said lower compartment.

1,541,647. GAS-FIRED OVEN OR KILN. JOHN HENRY MARLOW, Stoke-on-Trent, England. Filed Mar. 16, 1921. Serial No. 452,870. 5 Claims. (Cl. 25—142.)



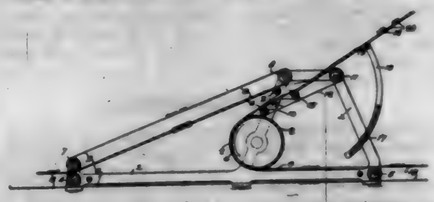
1. In a tunnel kiln, means for heating the same by gaseous fuel, comprising a transverse flue which is connected with a gas supply, gas supply openings between the flue and vertical burner tubes which communicate with the gas supply, ways having outlet openings on different horizontal planes for supplying air about the burner tubes, and a wall which extends vertically above the open upper ends of the burner tubes.

1,541,648. FURNACE. JOHN D. MARTIN, New Straitsville, Ohio. Filed Nov. 12, 1923. Serial No. 674,176. 6 Claims. (Cl. 110—45.)



1. In a furnace, a conical grate, an underlying ash-ring, a scraper with radiating arms for removing ashes from the ash-ring, and means for revolving the ash-ring and the scraper.

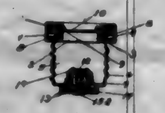
1,541,649. FURNACE GRATE. JOHN D. MARTIN, New Straitsville, Ohio. Filed May 10, 1924. Serial No. 712,248. 2 Claims. (Cl. 126—182.)



1. In a furnace, a conical grate consisting of a series of superimposed rings, means for revolving the grate, lifting elements carried with the revolving grate for separating the rings, and stationary elements which are engaged by the lifting elements.

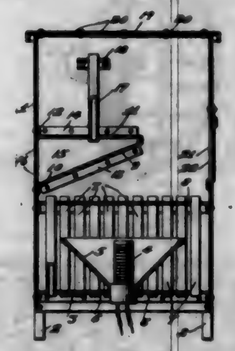
1,541,650. GAS EQUALIZER AND SOOT COLLECTOR FOR GAS PRODUCERS. JAMES H. MATHESON, Reading, Pa. Filed Nov. 28, 1921. Serial No. 518,195. 5 Claims. (Cl. 183—34.)

1. The combination in a soot collector for gas producing apparatus; of extended vertical uptake and downtake flues both closed at the top; a short horizontal flue connecting the upper ends of the said uptake and downtake flues; a horizontal gas supply duct connected to the uptake flue between its ends; a horizontal gas discharge duct located vertically below the aforesaid horizontal connecting flue and connected with the downtake flue between its ends; a vertical gas discharge duct located between the uptake and downtake flues and connected at its upper end with the horizontal discharge duct; and valved soot pockets at the lower ends of the said uptake and downtake flues.



1,541,651. APPARATUS FOR TURNING PAPER. ROBERT K. MATLACK, Milltown, N. J. Filed Aug. 9, 1923. Serial No. 656,507. 15 Claims. (Cl. 271—63.)

1. In an apparatus for carrying sheets of paper for inspection, the combination of a feeding conveyer and a delivery conveyer for the sheets of paper, each conveyer moving in the same direction and having a station at

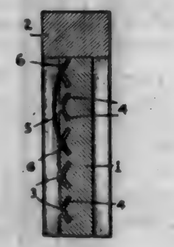


which the paper is entirely exposed for inspection; and apparatus located between the two conveyers for supporting the flat surfaces of the sheets of paper and turning them over to enable them to move forward onto the delivery conveyer so that both sides of the sheets of paper can be examined.

1,541,652. ELECTRICAL FUSE. ALBERT J. MATTER, Chicago, Ill. Filed Jan. 14, 1921. Serial No. 437,149. 17 Claims. (Cl. 200—130.)

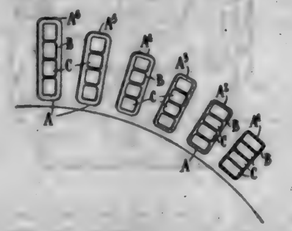
1. The combination of a metallic case having an inturned edge, a non-conducting cap permanently attached thereto, a fuse and a non-conducting plug carried by said metallic case adapted to hold the fuse between it and the inturned edge of the case.

1,541,653. HEATER. GEORGE L. MENK, St. Louis, Mo. Filed Nov. 19, 1923. Serial No. 675,548. 5 Claims. (Cl. 126—90.)



1. In a heater, a hollow shell, a heating element at the bottom of the shell, an upwardly flaring, reflecting flange surrounding said heating element, a series of vertical tubes surrounding and contiguous to said reflecting flange, said tubes being open at their lower ends through the bottom of the shell and extending up to a plane above the upper edge of said reflecting flange, and the shell having outlet openings in the upper portion thereof.

1,541,654. HITCH FOR ELECTRIC CORDS. WILLIAM C. O'BRIEN, Baltimore, Md. Filed Sept. 22, 1923. Serial No. 664,280. 2 Claims. (Cl. 24—129.)

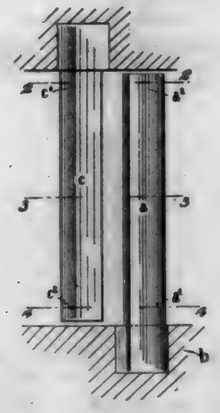


1. A hitch for electric cords comprising a short solid bar having spaced notches in one side adapted to permit the free entrance of the cord and having an opening extending through one end of the bar to the adjacent notch, said opening adapted to receive an attaching cord, and means on the bar for opening and closing the notches.

1,541,655. CHANGEABLE SIGN. GEORGE F. PARRIS, Los Angeles, Calif. Filed Aug. 22, 1924. Serial No. 733,583. 1 Claim. (Cl. 40—143.)

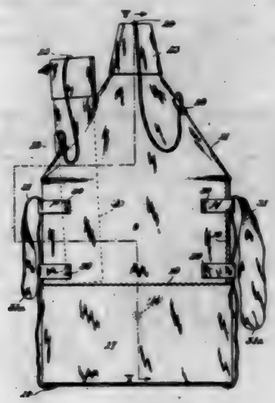
A changeable sign comprising a solid base provided on its front face with a series of relatively close parallel arbitrarily spaced longitudinal grooves, the walls of which being grooved at pronounced acute angles with the plane of the face of the base and diverging, the latter grooves of the walls of the first named grooves converging toward other latter grooves of an adjacent first named groove, the bottoms of the first named grooves being V-shaped, conforming to the second named grooves, and flexible letters provided with ear extensions engaging with the second named grooves, either with those which diverge or others that converge, the letters being retained therein by the resilience of the material of the letters.

1,541,656. DYNAMO-ELECTRIC MACHINE. CHARLES ALGERNON PARSONS and JESSEL ROSEN, Newcastle-on-Tyne, England; said Rosen assignor to said Parsons. Filed Nov. 15, 1923. Serial No. 674,866. 3 Claims. (Cl. 171—252.)



1. In combination in electrical apparatus, a member having therein a series of slots; electrically-associated conductors disposed in said slots and insulation also disposed in said slots and imbedding said conductors, the ratio of the cross-sectional area of said slots to the cross-sectional area of said conductors therein disposed varying progressively along said series, as set forth.

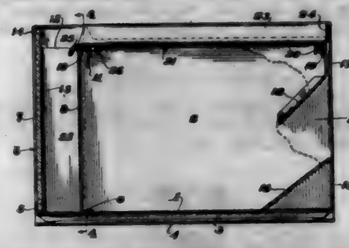
1,541,657. TURBINE BLADING. CHARLES ALGERNON PARSONS and FRANCIS WILLIAM GARDNER, Newcastle-on-Tyne, England; said Gardner assignor to said Parsons. Filed May 24, 1924. Serial No. 715,686. 7 Claims. (Cl. 253—77.)



1. In combination in a turbine, relatively rotatable co-axial blade-carrying elements, outwardly-projecting

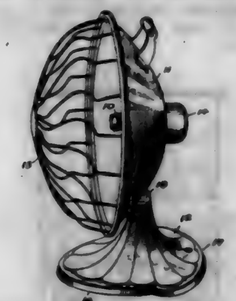
blades decreasing in thickness from root to tip carried by one of said elements, and co-acting therewith inward-

ly-projecting blades decreasing in thickness from tip to root carried by the other of said elements, as set forth.



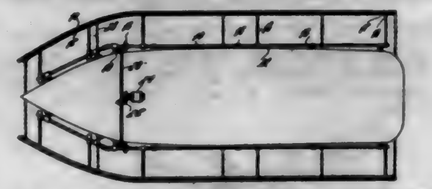
1,541,658. POWDER CAN. MIKE POLIK, Triadelphia, W. Va. Filed Aug. 29, 1924. Serial No. 734,955. 3 Claims. (Cl. 150—52.)

1. In a device of the type described, the combination with a metallic powder can having the form of a flask, of an insulating removable covering for entirely enclosing said can, said covering including a body portion, and a bottom having a portion of its edge permanently attached to said body portion, and having its remaining edge portion detachably attached to the body portion.



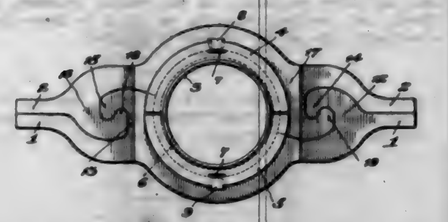
1,541,659. DISPENSING AND DISPLAY CONTAINER. SERENO J. RAMSAY, Algona, Iowa. Filed July 14, 1924. Serial No. 725,944. 4 Claims. (Cl. 211—25.)

1. A dispensing and display container for bulk candy or the like comprising a main receptacle having an outlet at the rear thereof, and provided with a pocket having a transparent front wall and located at the front of the receptacle, a separate tray forming the top of the main receptacle and removable therefrom to permit filling the same, said tray and said pocket being adapted to hold candy or the like independently of the main receptacle, said tray having its bottom wall at the front supported on the inner wall of the pocket and having its



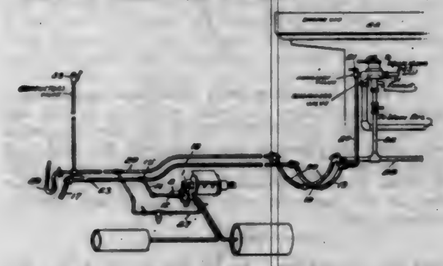
front end open and communicating with the top of the pocket to cause the candy in each to commingle and give the appearance of a full receptacle at all times.

1,541,660. ELECTRIC HEATER. CHARLES P. RANDOLPH, Oak Park, Ill., assignor to Edison Electric Appliance Company, Incorporated, Chicago, Ill., a Corporation of New York. Filed Nov. 30, 1923. Serial No. 677,866. 6 Claims. (Cl. 219—34.)



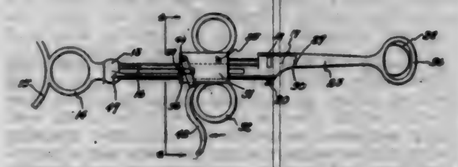
3. An electric heater comprising a radiant electric heating unit, a reflector for directing the heat radiated by said unit, a protruding guard for said reflector, and a base for said unit and reflector having an extension extending in the direction of the heat radiations, said base being otherwise so shaped that the heater when overturned assumes a position in which the heat radiations are directed upward.

1,541,661. SHIP PROTECTOR. AUGUSTO RIVELLI, Baltimore, Md., assignor of one-half to James D. Alaimo, Baltimore, Md. Filed Nov. 3, 1924. Serial No. 747,642. 2 Claims. (Cl. 14—240.)



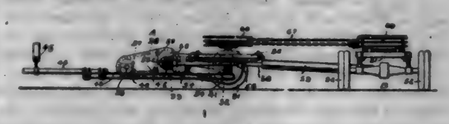
1. The combination with a ship, of a protector comprising a frame located upon each side of and spaced from the hull of the ship, shafts extending along opposite sides of the hull, arms having their ends rigid with the shafts and their outer ends pivotally secured to the frames, means whereby the shafts may be rotated to raise and lower the arms and raise and lower the frames and means for resisting pivotal movement of the frames when the latter are in lowered position.

1,541,662. CASING CLAMP. THOMAS B. ROBINSON, Tulsa, Okla. Filed Oct. 6, 1923. Serial No. 666,976. 2 Claims. (Cl. 24—263.)



1. A casing clamp for oil wells comprising a base formed of two equal size members having their intermediate portions adapted to surround an oil well casing, interlocking overlapping knuckles integrally formed on the inner walls of said members and adapted for cooperative engagement at diametrically opposite points with respect to the casing to form the sole means for securing the base members in assembled position.

1,541,663. AIR-BRAKE SYSTEM. HENRY SCHMARGE, Belen, N. Mex. Filed Jan. 15, 1925. Serial No. 2,622. 7 Claims. (Cl. 303—42.)

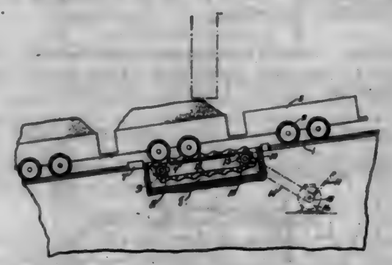


1. An air brake system comprising in combination a pair of pipe lines, a triple valve including a cylinder with an operating piston therein, a separate cylinder connected with said first mentioned cylinder and including a reciprocatory piston having an axial extension arranged to contact with a similar axial extension on said first mentioned piston and independent connections between said pipe lines and said cylinders whereby the stroke of said first mentioned piston may be positively shortened by increasing the pressure in said separate cylinder to protrude the axial extension on said reciprocatory piston in the path of said first mentioned piston for preventing undesired quick action of said triple valve.

1,541,664. TONSIL SNARE. HUGO W. SCHULTES, Brooklyn, N. Y. Filed Oct. 9, 1923. Serial No. 667,434. 1 Claim. (Cl. 128—320.)

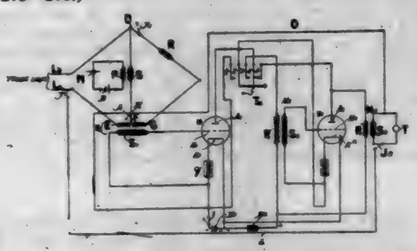
A tonsil snare comprising a slotted and hollow body, said slots being diametrically opposite each other, a screw rotatable in said body, a finger ring at one end of said screw for rotating the screw, a carriage slidable on said body, means removable from said carriage for locking the latter on the screw, comprising a sleeve mounted in said carriage, arms extending from said sleeve and being housed in the slots of said body, jaws at the ends of said arms, teeth formed on adjacent faces of said jaws, said jaws being movable in slits in the carriage and in the slots of the body, the arms of said jaws being resilient and normally urging the latter into disengaged position, a trigger, forked arms on said trigger pivoted on the sides of said carriage, curved faces on said jaws, said curved faces projecting through the slits in the carriage, the forked arms of the trigger being adapted to engage the curved surfaces of the jaws and urge the latter into engagement with the threads of the screw.

1,541,665. TRACTOR ATTACHMENT. BENJAMIN F. BROOKE SEWELL, Chula, Va. Filed Dec. 11, 1917. Serial No. 206,703. 4 Claims. (Cl. 180—16.)



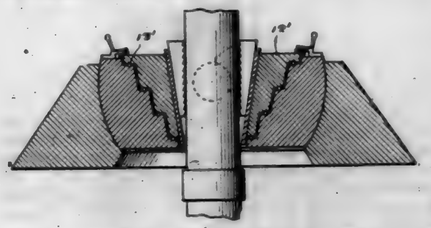
1. A traction attachment for motor vehicles having a central longitudinal swivel connection with the motor vehicle and rests at either side of said longitudinal center for engagement with the drive axle of said vehicle, the swivel connection consisting of a reach rod on the tractor and a swinging clamp on the vehicle.

1,541,666. SHUTTLE. JAMES SHAW, Paterson, N. J. Filed Dec. 18, 1924. Serial No. 756,805. 3 Claims. (Cl. 139—214.)



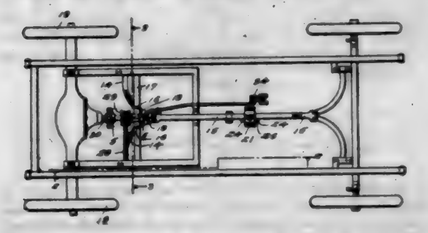
1. In a shuttle having a recess, a removable pin box disposed therein, said pin box comprising a pair of spaced connecting plates having aligning apertures, a plurality of pins loosely disposed in said apertures, and a thin casing adapted to be slipped over the box, and conforming in shape thereto, for the purpose of holding the pins in place.

1,541,667. CAR RETARDER. GLENN B. SOUTHWARD, Elkins, and CLYDE O. GALLAHER, Coalton, W. Va. Filed Jan. 24, 1925. Serial No. 4,595. 7 Claims. (Cl. 104—250.)



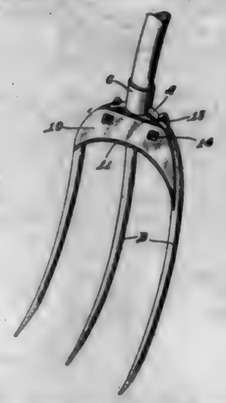
3. A means for retarding a car arranged in a gap between the rails of a track on which the car travels, and comprising endless elements having means for receiving and holding the wheels of the car thereon, means for imparting a longitudinal movement to the elevator, and braking means for said endless elements.

1,541,668. AMPLIFIER FOR SUBSCRIBERS' STATIONS. SIGMUND STRAUSS, Vienna, Austria. Filed June 1, 1922. Serial No. 565,121. 15 Claims. (Cl. 179—170.)



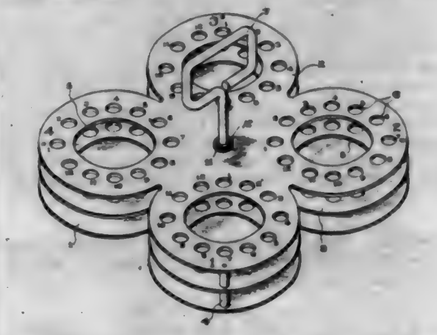
1. In a telephone system comprising telephone lines, and a subscriber's station at the ends of the lines having a microphone, a telephone and an induction coil, an amplifier for amplifying the incoming speech currents, a telephone repeater having a primary and a secondary, a connection including an artificial resistance substantially equal to the line resistance connecting said primary with the telephone lines, means for connecting said microphone to the primary of said repeater whereby the currents from said microphone remain unamplified, a second telephone repeater operatively connected with the amplifier and having a secondary operatively connected with the subscriber's telephone, and a connection between the secondary of said repeater and the middle of the primary of the first telephone repeater.

1,541,669. CASING SPIDER. ROBERT B. SUMMERS, Tulsa, Okla. Filed Nov. 10, 1924. Serial No. 749,070. 6 Claims. (Cl. 24—263.)



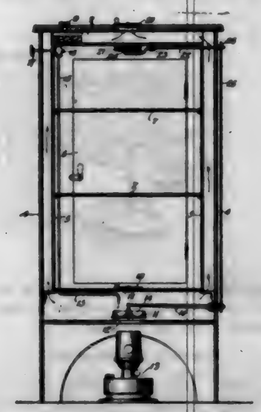
1. A device of the class described comprising a supporting member, a bowl movably mounted therein, means for preventing rotary movement of the bowl in the member, means carried by the bowl for gripping a casing, such means comprising a ring of tapered shape engaging the tapered interior of the bowl and tapered slips in the ring for engaging the casing.

1,541,670. VEHICLE PARKING ATTACHMENT. OLIVER L. THOMPSON, Tulsa, Okla. Filed June 10, 1924. Serial No. 719,152. 3 Claims. (Cl. 180—1.)



3. A vehicle parker comprising folding standards, a clevis pivoted to each of the standards, an actuating bar, longitudinally slotted links connecting said bar and clevises, pins co-acting with the slotted links, operating means for the said bar, wheels at the lower end of the standards, connecting means between one of the wheels and the drive mechanism of the vehicle including a clutch, and operating means for the clutch to throw the attachment into or out of gear as required.

1,541,671. PITCHFORK ATTACHMENT. ARTHUR B. TOMLINSON, Portage, Wis. Filed June 29, 1923. Serial No. 648,551. 3 Claims. (Cl. 30—14.)



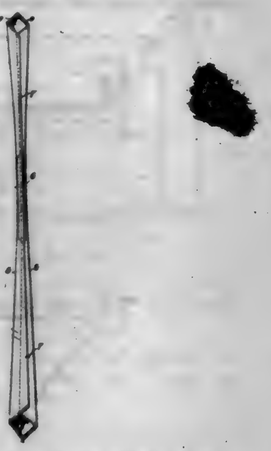
1. A knife attachment for a pitch fork, comprising a blade disposable upon the head portion of a fork and having its edge toward the ends of the tines sharpened, and means for clamping the blade upon the head, said means including a plurality of hook bolts passed through the blade with their hooked ends engaging the outermost tines of the fork and with their other ends carrying clamping nuts.

1,541,672. CARRIER. FRANK TULAY, St. Louis, Mo. Filed Mar. 16, 1923. Serial No. 625,524. 1 Claim. (Cl. 224—48.)

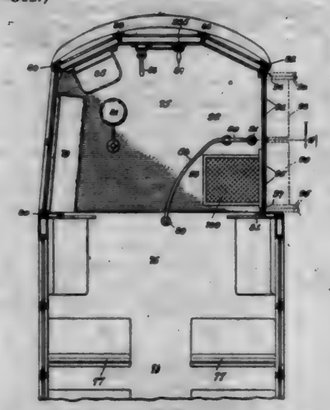
A carrier for water glasses, medicaments and clinic thermometers, comprising superimposed plates having rounded corners all of which, except the bottom plate having rounded openings therethrough and having numbered apertures arranged in spaced relation circumferentially of the openings, a sleeve centrally connecting the outer plate and the plate adjacent thereto, posts holding all of the plates in spaced relation, a handle having a shank passing through the sleeve, and means sustaining the shank from longitudinal movement through the sleeve and permitting the device being revolved thereround.

1,541,673. HEATING CABINET. JOHN A. VALENTA and JOE KOVAR, Taylor, Tex. Filed Mar. 11, 1924. Serial No. 698,575. 3 Claims. (Cl. 126—20.)

1. In a heating cabinet, outer and inner spaced casings each having heat inlet openings, a damper controlling the opening in the outer casing, a liquid supply tank in said cabinet, means for controlling the flow of liquid from said tank to said damper, and a heating element located beneath said damper to vaporize the liquid fed to said damper from said tank and to supply heat to the inner casing through the opening therein.



1,541,674. GOLF STICK. OLGA C. WEVER, West Suffield, Conn. Filed Nov. 8, 1924. Serial No. 748,693. 3 Claims. (Cl. 273—80.)

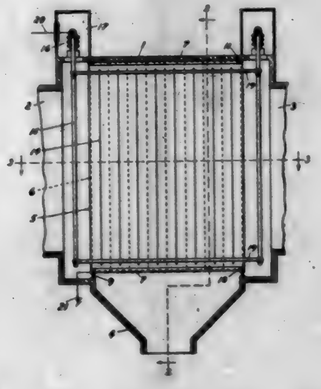


2. A golf stick comprising a pair of foldable sections, a socket in one of said sections for telescopically receiving one end of the other of said sections, a plunger slidable in said socket, a link pivotally connected to said plunger and last mentioned section, a spring within said socket and acting against said plunger, and means for locking said sections in axial alignment, said last means including a slidable sleeve carried by one section and having bayonet slots for co-action with pins on the other section.

1,541,675. NECKTIE. ISADORE D. WOLFSON, New York, N. Y. Filed Oct. 30, 1924. Serial No. 748,880. 2 Claims. (Cl. 2—146.)

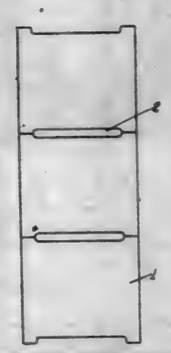
1. A four-in-hand necktie composed of two thicknesses of material and substantially the same size and shape secured together at both side edges and at both ends, said tie folded upon two longitudinal fold lines extending throughout the length of the tie and said folds permanently secured to the body of the tie in the neck band portion thereof, and fragile means connecting the folds in the tying ends of the tie, said folds being otherwise free in the tying ends to permit ironing of the tying ends out flat when the fragile connecting means have been broken.

1,541,676. VEHICLE. HARRY H. ADAMS and CHARLES GORDON, Chicago, Ill., assignors to National Pneumatic Company, a Corporation of West Virginia. Filed Sept. 11, 1922. Serial No. 587,405. 68 Claims. (Cl. 105—341.)



1. A vehicle having entrance and exit-ways, and barrier means for preventing persons boarding the vehicle through said exit-way operable for opening by the act of a passenger combined with an act of the operator of the vehicle and automatically returnable to barrier-forming position when the passenger leaving the vehicle reaches a certain position.

1,541,677. APPARATUS FOR ELECTRICAL PRECIPITATION OF SUSPENDED PARTICLES FROM GASES. EVALD ANDERSON, Alhambra, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed April 24, 1924. Serial No. 708,800. 8 Claims. (Cl. 183—7.)



1. An electrical precipitator comprising a collecting electrode formed of a body of semi-conducting material, parallel conducting members extending in said body

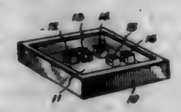
of semi-conducting material, and insulated discharge electrodes extending parallel to the collecting electrode and to the conductor members therein and arranged in alternate or staggered relation to the conducting mem-

bers in the collecting electrode and equidistant from opposing conductor members so as to be opposite the spaces between said conducting members for the collecting electrodes.

1,541,678. COLLECTING ELECTRODE FOR ELECTRICAL GAS-CLEANING APPARATUS. WILHELM JOHANNES LORENZ BAUER, Frankfort-on-the-Main, Germany, assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Jan. 8, 1924. Serial No. 685,065. 6 Claims. (Cl. 183—7.)

ELECTRODE MEMBER CONSISTING OF SEMI-CONDUCTING NON-METALLIC MATERIAL AND CARBON

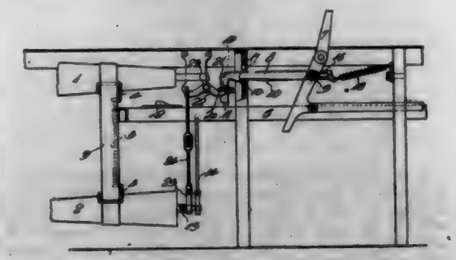
1. A collecting electrode for an electrical gas cleaning apparatus comprising an electrode member consisting throughout of a mixture of semi-conducting non-metallic material and carbon.



1,541,679. TELEPHONE ATTACHMENT. HERBERT A. BRINK, Cedar Rapids, Iowa. Filed Dec. 4, 1924. Serial No. 753,933. 2 Claims. (Cl. 40—10.5.)

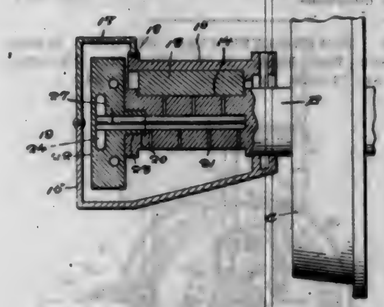
1. In a telephone attachment, a blank adapted to be folded upon itself to form two superimposed sections, the upper of the sections terminating a substantial distance short of the lower of the sections, corresponding openings spaced from the ends of the sections to receive the mouthpiece of the telephone which is adapted to clamp the sections together to form a card holding

clasp, a pencil clasp formed integrally with the sections, means on said lower section to receive a pad, and clips formed integrally with the sections.



1,541,680. GAME. HENRY V. BERDQUIST, New York, N. Y. Filed Feb. 5, 1925. Serial No. 7,079. 3 Claims. (Cl. 273—109.)

1. A game apparatus comprising a plurality of dice marked with the letters of the alphabet, no one die having the same letter as any other die of the series.



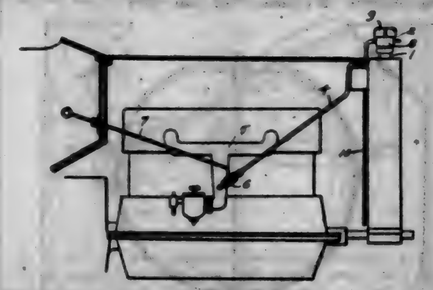
2. A game apparatus which comprises a series of five dice, four of said dice having five letters of the alphabet thereon and the fifth die having six letters thereon, the letters on any one die being different than the letters on any other die.

1,541,681. STOPPING MECHANISM FOR ROVING AND THE LIKE MACHINES. ADONIAS D. BOLDUC, New Bedford, Mass. Filed July 28, 1923. Serial No. 653,314. 9 Claims. (Cl. 192—129.)

1. In combination, a machine having a knock-off lever, a pivoted latch for normally holding said lever against movement, and manually controlled means for releasing said latch from a remote point; a normally held emergency actuator for said knock-off lever movably connected with the latter to permit operation thereof independently of said actuator when said latch is released, means for automatically releasing said actuator upon unusual operation of the machine, means operated by said actuator for automatically releasing said latch when said actuator is released, and means for automatically operating said lever when said latch is released.

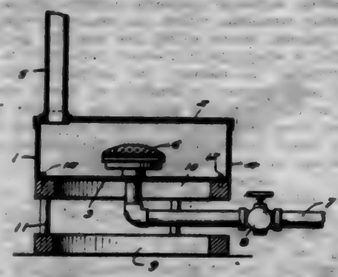
1,541,682. LUBRICATING SYSTEM. CHARLES A. BOWEN, Portsmouth, Ohio. Filed Apr. 17, 1922. Serial No. 553,885. 3 Claims. (Cl. 308—127.)

1. In a car truck including an axle carrying a wheel, a journal box for the end of the axle including a casing having lower and upper sections, the lower sections constituting an oil reservoir and the upper section constituting a cover therefor, a bearing brass removably mounted within the journal box, means on the upper section of the box and on the axle for preventing longitudinal displacement of the bearing brass, a disk detachably mounted on the end of the axle and rotating within the box, the axle having a bore and the disk having a chamber communicating therewith, the axle having a plurality of staggered holes extending from the bore to the outer periphery, and passages in the disk extending from the periphery to the chamber, and a deflector cruciform in cross section mounted within said bore.



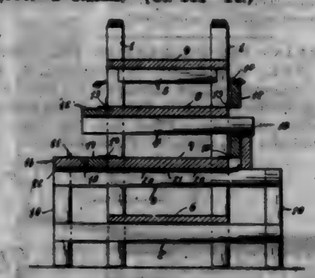
1,541,683. LIFE, HEAVING, AND OTHER TYPES OF LINES. PHILIP H. BURBLES, Washington, D. C. Filed Oct. 4, 1921. Serial No. 505,488. 4 Claims. (Cl. 242—1.)

1. The method of preparing a line adapted to be dropped or hurled free from twists, kinks and the like which consists in imparting an initial twist to the line, then winding said twisted line in a direction which will result in an opposite twist being imparted to the line, and finally applying means upon said line for re-taining the same in twisted and wound condition, said means being dropped with the line for maintaining the coils thereof in position up to the time of their release and during the descent of the line.



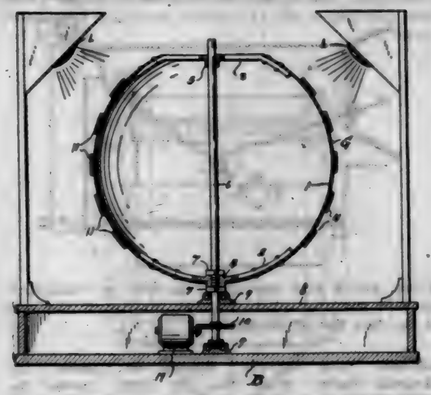
1,541,684. FUEL ECONOMIZER. FERDINAND W. BUSCH, Berlin, N. Dak. Filed Dec. 30, 1921. Serial No. 525,855. 2 Claims. (Cl. 123—25.)

1. In combination with a filling tube of a radiator in an internal combustion engine cooling system, and a detachable cap for the tube, a ring attachable to the tube and adapted to detachably receive



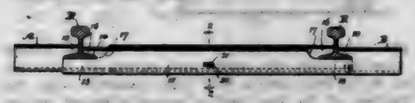
the cap, and a pipe carried by the tube in communication with the atmosphere and the interior of the tube and the fuel line of the engine.

1,541,685. GAS STOVE. HORACE M. CAWOOD, Los Angeles, Calif. Filed Nov. 22, 1924. Serial No. 751,682. 1 Claim. (Cl. 126—40.)



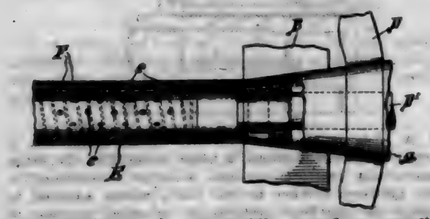
A gas stove comprising a stand, a shallow hollow body mounted upon the stand and having an inlet air opening in its front and a vent pipe connected with the rear portion of its top, and a burner disposed within the body, the stand comprising similar upper and lower frames and connecting posts, and said stand having dowels or pins projecting from its top to enter openings in the bottom of the stove body to hold the parts when properly assembled.

1,541,686. STOREROOM RACK. CHARLES A. CLINE, Marion, Iowa. Filed June 19, 1924. Serial No. 721,060. 2 Claims. (Cl. 211—14.)



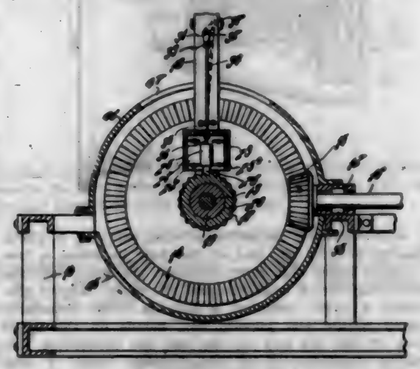
1. A rack of the character set forth, comprising a shelf, a sectional platform, a hinge connecting the inner edges of the platform sections, a hinge connecting the inner platform section to the shelf, means adapted to support the platform sections in extended position in the plane of the shelf, and spring means adapted to support the platform sections folded one against the other at an angle to the shelf.

1,541,687. ILLUMINATING DEVICE. CHARLES C. COEY, Sioux City, Iowa. Filed Dec. 27, 1923. Serial No. 683,089. 2 Claims. (Cl. 240—10.)



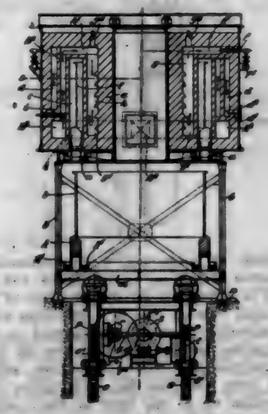
1. An illuminating device comprising a hollow base, an upstanding vertically disposed member having its lower portion extending within the base and rotatably supported thereby, means within the base for rotating said member, a substantially globular body fixed to the upper portion of the member, the peripheral wall of said body being opaque, a plurality of facets secured exteriorly to the peripheral wall of the globular body, said facets being reflective, and lamps supported in a position to direct rays of light upon the globular body from above and at opposite sides thereof.

1,541,688. RAILROAD TIE. GEORGE B. COX, Wray, Colo. Filed Jan. 16, 1925. Serial No. 2,912. 4 Claims. Cl. 238—39.)



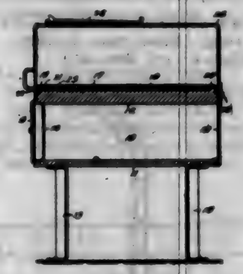
1. A rail tie comprising a pair of telescopically associated inverted substantially U-shaped sections, each of said sections having recessed inner end and complementary recessed portions adjacent its outer end adapted to respectively coact with each other upon inward relative shifting movement to embracingly clamp about the rail base flanges and capable of relative shifting movement in an outward direction to disengage and release the rails and means extending through the medial portion of said sections for retaining the same against relative outward shifting movement.

1,541,689. MEANS FOR DECREASING THE VISIBILITY OF THE WAKE OF AUTOMOBILE TORPEDOES. CLELAND DAVIS, Englewood Cliffs, N. J., assignor to National Torpedo Company, Augusta, Me., a Corporation of Maine. Filed Nov. 28, 1923. Serial No. 677,463. 1 Claim. (Cl. 114—20.)



An attachment for automobile torpedoes propelled by compressed air or other gas, comprising an expansion chamber carried at the rear of the torpedo having a plurality of perforations in its outer walls, the said perforations being inclined outward and rearward to facilitate the exhaust, whereby the escaping air or gas is divided into a number of fine streams issuing in divergent directions.

1,541,690. POWER-DEVELOPING DEVICE. ALBERT H. DRAKE, West Valley, N. Y. Filed May 16, 1924. Serial No. 713,820. 2 Claims. (Cl. 74—54.)

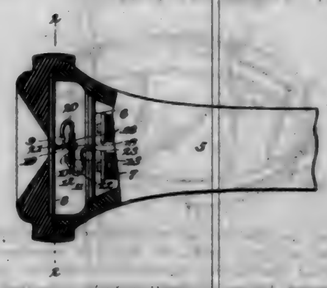


1. In a device of the character described, a frame, a shaft journaled therein, gears rotatable on said shaft, a driven gear between and meshing with both of said gears and mounted on a shaft, an oscillating lever pivoted on said shaft between the first named gears, ratchets carried by said first named gears, pawls on the lever cooperating with said ratchets, and means for adjusting the positions of said pawls to compensate for wear on the gears and ratchets.

1,541,691. FURNACE FOR HEATING HOLLOW CYLINDERS. ARTHUR MCDOUGALL DUCKHAM, London, England. Filed Apr. 16, 1923. Serial No. 632,475. 4 Claims. (Cl. 263—42.)

4. An annular muffle furnace, a framework carrying the furnace, an annular muffle chamber in the furnace, a ring constituting the bottom of the muffle chamber, rams on which the said ring rests, a truck adapted to pass between the rams and to carry the ring and means for operating the rams to lower the ring and to deposit it upon the truck.

1,541,692. KITCHEN FURNITURE. ROBERT B. ELLISON, Roebling, N. J., assignor of one-half to Lewis W. Williams, Roebling, N. J. Filed July 18, 1923, Serial No. 652,446. Renewed Apr. 22, 1925. 4 Claims. (Cl. 146—215.)



3. In kitchen furniture, a hollow cylindrical body having its top of reduced diameter provided with a concentric recess in its upper face, a resilient pad mounted within the recess, an annular element fitting up over the reduced upper end and having an inwardly projecting flange engaging the pad for retaining the same in the recess, securing means passing through the annular element and anchored in the body and a hinged cover fitting over the reduced upper end.

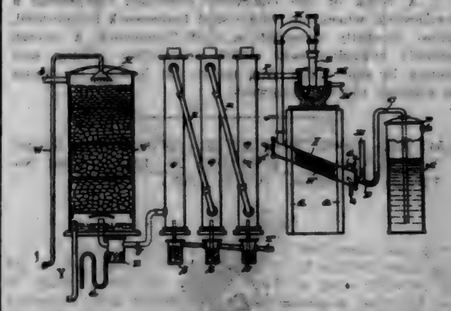
1,541,693. COATING COMPOSITION AND VARNISH REVIVER. CARLETON ELLIS, Montclair, N. J., assignor to Chadeloid Chemical Company, New York, N. Y., a Corporation of West Virginia. Filed Feb. 3, 1921, Serial No. 442,245. Renewed Nov. 19, 1924. 18 Claims. (Cl. 134—24.)

2. A composition adapted for use as a varnish reviver comprising chlorinated rubber, a solvent therefor and a resinous homogenising agent.

1,541,694. AMPLIFIER. GUSTAVE ENGLER, New York, N. Y. Filed Aug. 26, 1922. Serial No. 584,484. 8 Claims. (Cl. 179—108.)

1. A sound amplifier comprising a plurality of spaced diaphragms, and means for transferring pulsations from one of said diaphragms to the other of the diaphragms and for accelerating the action of the pulsations against the latter, said means including lever arms having operative connection with both diaphragms, and means for changing the relative lengths of said lever arms.

1,541,695. PIN TOOL. LA ROY E. FAUCHER and WILLIAM M. DIXON, Richmond, Calif. Filed July 25, 1924. Serial No. 728,235. 2 Claims. (Cl. 29—86.2.)



1. A tool of the character described including a pair of jaws adapted to be moved toward and away from each other, one of said jaws having notches in two of its adjacent edges, and a pair of prongs adapted to be received by said notches when the jaws are moved toward each other, each prong being tapered and slightly protruding forwardly of said jaw for the purposes specified.

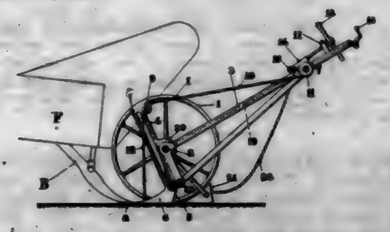
1,541,696. BOOKBINDER. FRANCIS L. FISHER, San Francisco, Calif., assignor of one-half to William H. Smith, San Francisco, Calif. Filed Dec. 8, 1923. Serial No. 679,368. 10 Claims. (Cl. 129—12.)

1. In a book binder, the combination of a back, of posts secured thereto, a cover having two perforated stripe hinged in series thereto at one edge through one or both of which the posts may be passed, and means to secure said stripe together when the book is to be made permanent.

1,541,697. TREATMENT OF HYDROCARBONS. GEORGE FREDERICK FORWOOD and JOHN GILBERT TAPLAY, London, England, assignors to United Kingdom Oil Company Limited, London, England. Filed July 5, 1921. Serial No. 482,552. 5 Claims. (Cl. 196—58.)

1. The process of treating hydrocarbon oils, having boiling points of 140° C. or more to obtain an oil or spirit suitable as motor fuel, consisting in atomising the oil in a retort, mixing the same with water vapor or steam passed into said retort from a different direction to that at which said oil is introduced, passing the mixture over carbon in a light porous form maintained at a temperature varying from 550° C. to 950° C. according to the boiling point of the oil, the vapor of which is being treated.

1,541,698. GATE. MATHEW H. FRANK, Stockett, Mont. Filed Sept. 28, 1922. Serial No. 591,151. 1 Claim. (Cl. 39—66.)



A device of the class described comprising a plurality of upright posts, a track having inclined portions mounted near the top of the posts, the highest point of said track being arranged intermediate adjacent posts, stop means made integral with the track and arranged above the same near its ends and intermediate its ends, a frame movably mounted on the track, a gate associated with the frame and cable means connected to the gate to move the frame along the track to a predetermined point, where it will be moved direct away by gravity.

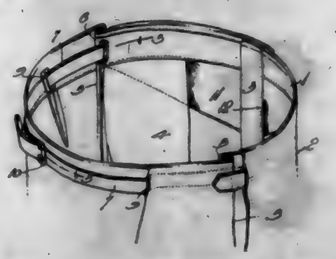
1,541,699. ALKALINE ACCUMULATOR. FRANCIS ARTHUR FREETH and LESLIE ALEXANDER MUNRO, Hartford, England. Filed Oct. 2, 1922. Serial No. 591,921. 1 Claim. (Cl. 136—29.)

In a battery, the combination of electrodes of nickel and iron with an alkaline solution of sodium silicate containing a large excess of soda.

1,541,700. TRUCK FOR USE IN MANEUVERING AIRCRAFT. JEAN GALLAND, Boulogne-sur-Seine, France. Filed Dec. 11, 1924. Serial No. 755,312. 6 Claims. (Cl. 214—66.)

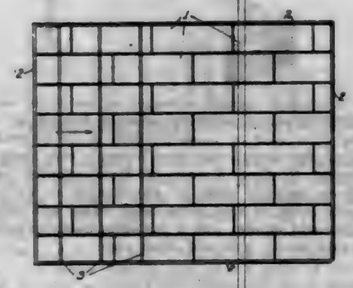
1. A truck of the character described comprising a framework, wheels on which said framework is mounted, slides pivotally mounted in said framework, a trough slidably engaging said slides, means for raising said trough in said slides, and means for locking the slides in relation to the framework.

1,541,701. HOSE SUPPORTER. MARTIN FOX GAUNT, New York, N. Y. Filed July 29, 1924. Serial No. 728,966. 8 Claims. (Cl. 24—245.)



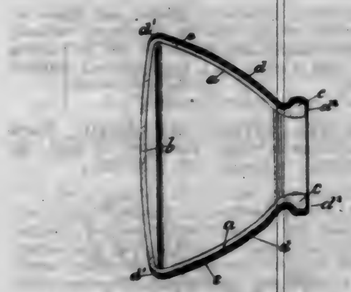
1. A hose supporter, comprising a body formed with a bar spaced from the body, an encircling member provided with a looped end adapted to be slipped over said bar, said body being provided with a plurality of spaced slots and arranged to receive the free end of said encircling member which is fitted into said slots so as to assume a serpentine structure, and means projecting from the lower end of the body for connecting the hose to the body.

1,541,702. LAWN SPRINKLER. GEORGE GEISENDORFER, Warrenton, Oreg. Filed Sept. 1, 1922. Serial No. 585,760. 3 Claims. (Cl. 299—67.)



1. A lawn sprinkler of the character described comprising a tubular base section having a fluid inlet for attachment to a source of supply and means for removably attaching a supporting leg, a plurality of tubular sections supported by said base section, including a stationary section and a rotatable section swiveled thereon, a sleeve surrounding the jointure of said stationary and rotatable sections, and a clamping element having a substantially U-shaped arm adapted to fit over said sleeve and adjustable clamping bands at each end of said arm for attachment to the stationary and rotatable sections respectively whereby the rotation of said rotatable section is controlled.

1,541,703. ADJUSTABLE WAISTED AND ABDOMEN-SUPPORTING GARMENT. FRANK W. GERLACH, Kenton, Ohio. Filed Apr. 7, 1924. Serial No. 704,832. 1 Claim. (Cl. 2—237.)

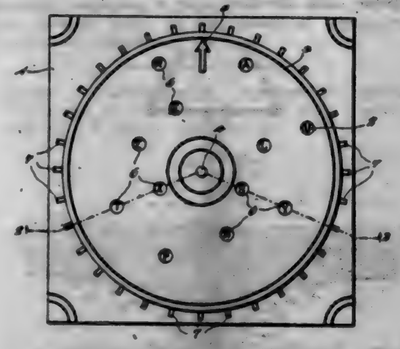


A garment having a waist-encircling portion and a hip-encircling portion, loops secured to the sides of the waist-encircling portion of the garment to lie substantially over the hips, straps secured at one of their ends to said waist-encircling portion in rear of said loops, said straps being carried forwardly to and through said loops and then rearwardly around the rear part of said waist-encircling portion, means for adjustably coupling the other ends of said straps together, and abdomen-supporting strips disposed inside of the front part of said waist and hip-encircling portions, said strips being secured at their rear ends to the sides of said waist-encircling portion at substantially the points where said straps are secured to the same, and at their front ends to the front of said waist and hip-encircling portion, whereby tightening of said straps will draw said waist-encircling portion tight around the waist and also draw upon said abdomen-supporting strips.

1,541,704. SEMICONDUCTING COLLECTING ELECTRODE FOR ELECTRICAL PRECIPITATORS. JAKOBUS GIES, Frankfort-on-the-Main, Germany, assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Jan. 8, 1924. Serial No. 685,068. 5 Claims. (Cl. 183—7.)

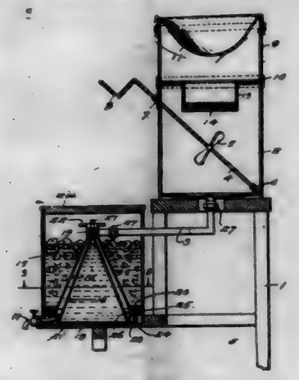
1. A collecting electrode for electrical precipitators consisting of a plurality of sections, each section consisting wholly of molded semi-conducting material in the form of a plate section and said sections being supported in contact with one another.

1,541,705. LAMP SUITABLE FOR USE ON VEHICLES. CLAUDE E. GOODYEAR, Kidderminster, England. Filed Sept. 3, 1924. Serial No. 735,807. 1 Claim. (Cl. 240—41.)



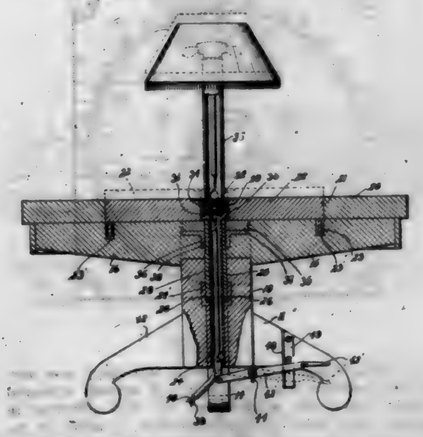
A reflecting lamp body for use on vehicles, said body being composed of glass or other frangible and substantially transparent material and having an integral closed front and further provided on its exterior surface with a coating of reflecting material, and also provided with a splinter confining armor coating applied exteriorly of said reflecting coating by deposition, said armor coating terminating in a flange which extends inwardly and around the front to serve as an abutment to prevent rearward derangement of the armor coating and being also extended inwardly at the rear in order to anchor the armor coating in relation to the lamp body and prevent forward derangement of said coating.

1,541,706. HEADLIGHT LENS. EDWARD GEORGE HAMBURG, Philadelphia, Pa. Filed Dec. 26, 1924. Serial No. 758,234. 4 Claims. (Cl. 240—4.94.)



4. A lens comprising a plurality of transversely extending arcuate sections, the alternate sections being transparent and the sections between the alternate sections being opaque, and a relatively small eccentrically disposed lens in said first named lens, and of a color in direct contrast to the color of the first named lens.

1,541,707. GAME. FRANK G. HANBACK, Allegany, N. Y. Filed Sept. 24, 1923. Serial No. 664,585. 2 Claims. (Cl. 273—142.)

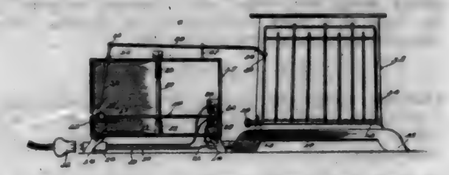


2. A game comprising a relatively stationary base having on its opposite faces a plurality of symbols arranged in radial rows, the symbols on one face differing in character from those on the other face, a series of radial stopping points on said opposite faces of the base, one of said points being disposed at the end of each radial row of characters, a removable pivot pin secured in said base, a disc mounted for rotation on said pin and spaced a slight distance from said base, said disc having apertures formed therein at predetermined points and through which the characters on said base are exposed and an arrow arranged on said disc to cooperate with the stopping points on said base for aligning said apertures with said symbols.

1,541,708. MILK COOLER. FOSTER HARNESS, Oilton, Okla. Filed Mar. 8, 1924. Serial No. 697,822. 2 Claims. (Cl. 257—201.)

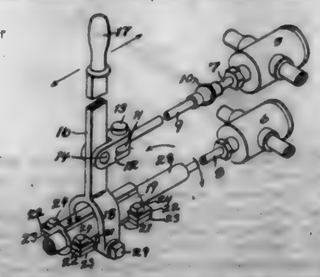
1. A cooler of the class described having inner and outer shells providing a space between them through which the material to be cooled is adapted to pass, the inner shell being substantially conical and at its base extending outwardly and upwardly to provide first and second flanges, a gasket seated on the first flange, the second flange extending above said gasket, the outer shell resting on said gasket and being surrounded by the second flange, a screw-threaded stem at the apex of the inner shell, a nut threaded on said stem and engaging the adjacent end of the outer shell, and means to bring a refrigerant into contact with the outer shell.

1,541,709. TABLE. THOMAS J. HICKMAN, St. Cloud, Fla. Filed Oct. 13, 1923. Serial No. 668,408. 2 Claims. (Cl. 45—31.)



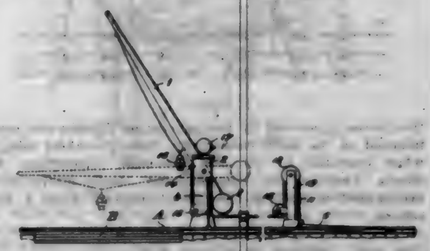
1. In a table, a pedestal, a top mounted on the pedestal and having a central opening, a rotatable element, increasing the available surface of the top, a tubular device passing through the pedestal and mounting the rotatable element, a spindle for guiding the tubular device, a second tubular device engaging that first named and constituting a bearing therefor, and foot operated means for moving said tubular devices and rotatable element upwardly.

1,541,710. BRUSH HANDLE. MALCOLM W. HILL, Baltimore, Md. Filed Sept. 11, 1922, Serial No. 587,470 Renewed May 5, 1925. 2 Claims. (Cl. 15—143.)



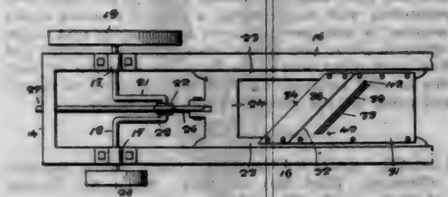
1. In a brush, a handle arranged at an angle to the base of the brush, a securing member formed of wire consisting of a pair of loops adapted to be secured to the base of the brush, the wire forming said loops being extended to form a pair of arms adapted to be arranged on opposite sides of the handle at an angle thereto, the ends of said arms being offset and extending toward said handle, and a fastening member passing through said handle and said offset ends.

1,541,711. ELECTRIC TOASTER. GEORGE E. V. HITZROTH, Hamilton, Ontario, Canada. Filed July 16, 1923. Serial No. 651,898. 4 Claims. (Cl. 161—16.)



3. In combination, an electric toaster, and means actuated by current flowing through the toaster whereby an object being toasted may be moved out of toasting relation with said toaster at a predetermined moment.

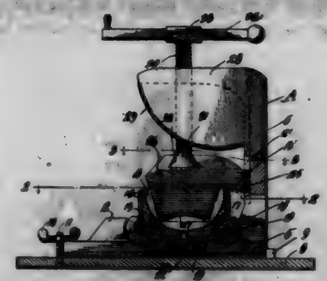
1,541,712. POWER-CONTROL MECHANISM. FLOYD C. HORN, Los Angeles, Calif. Filed Feb. 17, 1923. Serial No. 619,688. 1 Claim. (Cl. 137—144.)



In a device of the character described, a lever, said lever having a bifurcated extremity, a collar secured within said bifurcated extremity and pivoted thereto, a shaft extending through said collar and means for holding said shaft against rotation with respect to said collar, a plurality of valves adapted to control a power medium, a stem extending from each of said valves one of said stems being connected to said shaft so as to be rotated thereby, the other of said stems being connected to said lever, at a point above its pivotal connection with said collar and adapted to be reciprocated by said lever.

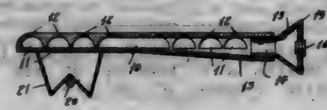
1,541,713. CROSSING PROTECTOR. JASPER EDISON HORNER and GEORGE BARNARD WOLF, Toledo, Ohio. Filed May 16, 1924. Serial No. 713,797. 1 Claim. (Cl. 246—293.)

Railroad crossing protecting means comprising gates, weighted means for holding the gates in raised position, a spring pressed latch member having its upper end adapted to pass under the weighted end of a gate when the gate is lowered to prevent the weight from opening the gate again, the other end of the latch member extending to a point close to one of the rails of the track so that it will be struck and depressed by a wheel of the train which moves the latch member to releasing position, a pedal lever adjacent the track adapted to be depressed by the passage of a train over the same, a system of levers actuated by the pedal lever, flexible means for connecting the system to the gates and guiding means for the flexible means.



1,541,714. BATTERY-SEPARATOR-PLATE MACHINE. WILLIAM M. HUMBERT, Marshfield, Oreg. Filed Dec. 22, 1923. Serial No. 682,313. 6 Claims. (Cl. 144—12).

1. In a machine of the character described, a supporting frame including an inclined guide way, an abutment member located transversely of and mounted upon the guide way and adapted to support a block of wood, a frame longitudinally movably mounted within the guide way, means for reciprocating the frame, a plate mounted on and forming part of the frame, said plate being formed with a diagonal slot, a diagonally arranged blade parallel with and mounted above the plate adapted to cut through a block of wood for forming a slice at the lower side thereof, and a second blade mounted within said slot and having a toothed edge projecting therabove for grooving the under side of the slice.



1,541,715. VISE. BEN M. JOHNSON, Chicago, Ill. Filed May 20, 1924. Serial No. 714,717. 1 Claim. (Cl. 81—16.)

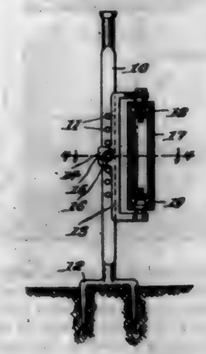
In a vise, a base, an upstanding post formed on the base, a head formed on the outer end of the post arranged in spaced parallel relation to the base, a jaw, a dovetail-shaped guide head formed on one side of the jaw, a dovetail-shaped guideway formed on the inner face of the post receiving the said dovetail-shaped guide head, an operating screw carried by the head formed on the post, a handle for operating the screw, means detachably

associating the inner end of the screw with the jaw, an inner jaw including a pair of sections, means pivotally securing the sections intermediate their ends to the base, and springs engaging the meeting ends of the sections of the inner jaw for normally holding the same in a raised position relative to the base.

1,541,716. GAS BURNER. ERVIN J. JOHNSON, Kankakee, Ill. Filed Apr. 3, 1924. Serial No. 704,024. 1 Claim. (Cl. 158—99.)

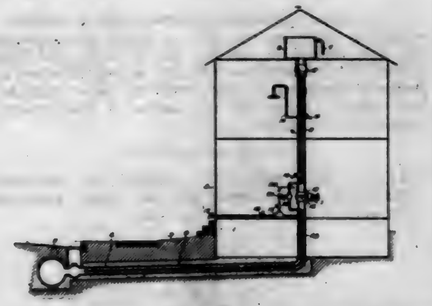
A cast metal gas burner provided with a plurality of concentric chambers, the sides of which slope upwardly and have outlets in the top, and a radial fuel-supply passage in communication with the several chambers and gradually increasing in depth from the center outwardly, said passages being the sole means of communication between the chambers.

1,541,717. BLACKBOARD. EVERETT H. KEICHUM, Jamestown, N. Y. Filed Nov. 20, 1922. Serial No. 602,044. 2 Claims. (Cl. 45—89.)



1. A combination desk and blackboard comprising legs, a deskboard pivotally mounted upon said legs, a cross bar connecting said legs above said desk board, a plate secured to the back of said legs and said bar the lower edge of said plate extending below said cross bar and a pocket carried by said plate below said bar and above said desk board accessible in all positions of said board.

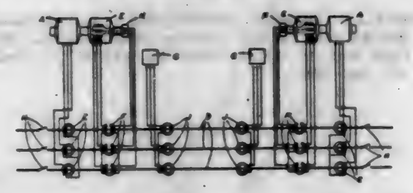
1,541,718. BELT GUIDE. ELMER A. KILMER, Hiram, Ohio. Filed Oct. 18, 1924. Serial No. 744,449. 1 Claim. (Cl. 74—51.)



A device of the character described comprising a standard having a vertical series of spaced openings, a pair of spaced parallel prongs depending from the lower end of the standard, forming an integral part thereof, and

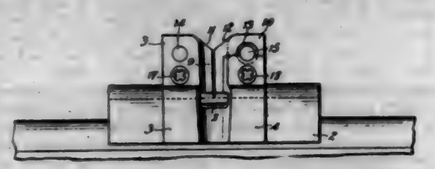
adapted to be driven into the ground, a substantially U-shaped member arranged vertically with relation to the standard, an apertured lug projecting from the intermediate portion of the said U-shaped member, and adapted to be attached to the standard, a fastening element adapted to be passed through said lug and any one

of said openings of the standard, whereby the said U-shaped member is capable of adjustment on said standard, a roller journalled between the parallel extremities of the U-shaped member, ball bearings for said roller and means for adjusting all of said bearings to compensate for wear.



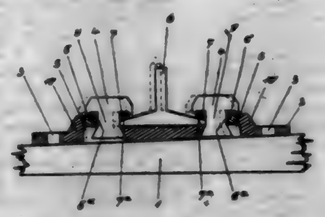
1,541,719. WATER FLOW SYSTEM. HONORÉ LACOURCIÈRE, Brooklyn, N. Y. Filed Sept. 27, 1923. Serial No. 665,185. 3 Claims. (Cl. 137—79.)

1. A water system to be disposed between a dwelling house and the watermain in the street, which includes a service pipe of substantial diameter extending from the main into the house and to a point near the top of the house, a tank to which the upper end of said service pipe is connected, a high pressure valve in said service pipe, and an auxiliary pipe disposed within the service pipe, said auxiliary pipe being open always to a definite degree to permit a definite flow of water therethrough independently of the condition of the high pressure valve in the service pipe.



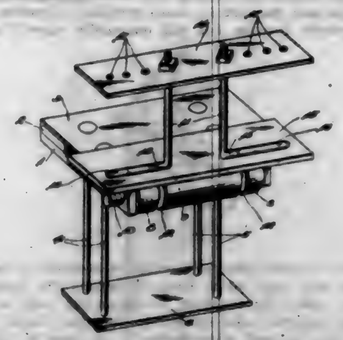
1,541,720. PROTECTIVE ARRANGEMENT FOR ALTERNATING ELECTRIC CURRENT SYSTEMS. BRUCE HAMER LESSON, Tynemouth, and REGINALD WILLIAM BILES, Balcombe, England, assignors to Electrical Improvements Limited, Newcastle-upon-Tyne, England, a British Company. Filed Oct. 22, 1923. Serial No. 670,150. 7 Claims. (Cl. 175—294.)

1. In a protective arrangement for an alternating electric current system the combination with the conductors of the system to be protected, of devices for generating electro-motive-forces having a frequency different from that of the main supply, means for supplying power from the main conductors to the generating devices whereby the frequency of the electro-motive-forces generated bears a definite synchronous relation to that of the main supply, means whereby the electro-mo-



tive-forces generated by the generating devices are superimposed on the main conductors, circuit-breakers adapted when operated to cut out the main conductors, and means whereby the superimposed electro-motive-forces are caused to operate the circuit-breakers when a fault occurs.

1,541,721. TRAVERSE GUIDE AND THREAD CLEANER. DAVID LEWIS, Scranton, Pa. Filed May 20, 1924. Serial No. 714,647. 4 Claims. (Cl. 28—70.)



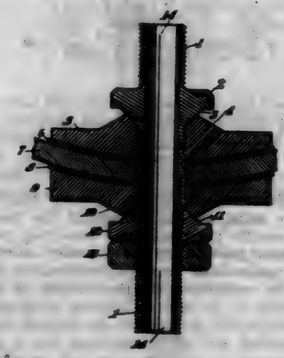
1. A thread guide for spooling and winding machines, comprising a body adapted to fit on the traverse bar of the machine, said body having a pair of spaced upstanding members, said members being bifurcated, the opening between said members extending downwardly into said body, said body having a slot in the upper part registering with said opening, a pair of cleaning blades mounted in said opening, means for clamping said blades rigidly in place, said blades being adjustable toward and from each other, and a porcelain bar arranged on each side of said body and in such a position as to receive and guide the silk passed between said blades.

1,541,722. RAIL FASTENING. OTTO LIEBER, Dresden, Germany. Filed July 29, 1924. Serial No. 728,884. 1 Claim. (Cl. 238—345.)

Rail fastenings characterized by a tie plate provided with openings, double-headed hooks in said openings, and keys cooperating with the hooks to take up the vertical and horizontal forces, the said keys being driven between the upper heads of the hooks and the base of the rail and between the stem of the hooks and one shoulder of the plate.

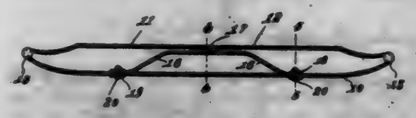
1,541,723. HINGE. THOMAS L. LILLY, Minonk, Ill. Filed Sept. 16, 1922. Serial No. 588,677. 4 Claims. (Cl. 298—17.)

1. In a device as set forth, supporting plates, means for adjustably connecting said supporting plates to the frame of a vehicle chassis, a pintle bolt supported by said plates, hinge bolts adjustably mounted upon said pintle bolt, means for preventing accidental adjustment of said hinge bolt along said pintle bolt, a clamping plate resting upon said first named plates and provided with slots through which said hinge bolts extend, and a second clamping plate adjustably mounted upon said hinge bolts.



1,541,724. FISHING FLOAT. ROBERT C. MCELEAR, Dallas, Tex., assignor of one-half to Thomas A. Waggoner, Dallas, Tex. Filed Aug. 7, 1923. Serial No. 656,291. 3 Claims. (Cl. 43—49.)

1. In a fishing float, or the like, a housing, a cover for said housing, a bulb, a bulb socket, a battery, a tube of non-conductible material conductible liquid means within the tube, a cylindrical means of hollow construction within the tube above the liquid means, connecting means from the liquid means to the battery thence to the bulb, connecting means from the bulb socket to the cylindrical means, said liquid means making contact with said cylindrical means and said battery connecting means, to flash the bulb when the float is suddenly actuated vertically or actuated to other than a vertical position.

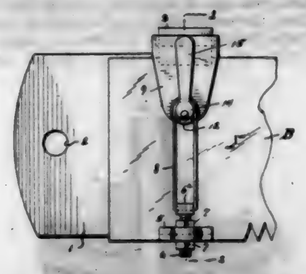


1,541,725. ADJUSTABLE TANK CONNECTION. JAMES NELSON MARTIN, Barnsdall, Okla. Filed Feb. 23, 1923, Serial No. 620,740. Renewed Dec. 5, 1924. 4 Claims. (Cl. 285—30.)

1. An adjustable tank connection or flange as described, comprising a hollow pipe helically threaded externally, having a hexagonally headed nut permanently attached thereto a short distance from the end of said pipe inside the tank, the portion nearest the wall of the tank conically shaped, said cone fitting into a round disc or flange bevelled from the outer edge to a hole in the center surrounding said pipe, a gasket of fibre or other suitable material inside the wall penetrated, another like gasket

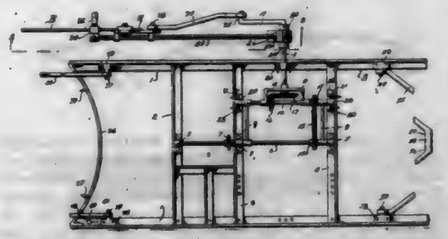
outside said wall, another disc or flange bevelled oppositely said first one, a hexagonally headed nut helically threaded having one side conical in form fitting into said last described bevelled flange, securely tightening all of said parts on said outwardly threaded pipe, and a hexagonal helically threaded lock-nut to hold said parts in place.

1,541,726. BUMPER. WILLIAM P. MARTIN, Monongahela, Pa. Filed Aug. 2, 1924. Serial No. 729,822. 4 Claims. (Cl. 293—53.)



1. A bumper of the character described comprising spaced upper and lower bars, and an intermediate sectional bar arranged rearwardly of the first mentioned bars, means connecting the corresponding outer extremities of all of said bars, means for connecting the respective sections of the intermediate bar together, and means connecting the inner extremities of said sections with said spaced bars.

1,541,727. PIPE COVER. CHARLES H. MEYER, San Francisco, Calif. Filed May 29, 1922. Serial No. 564,425. 1 Claim. (Cl. 131—12.)



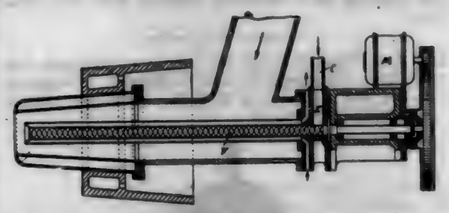
A pipe covering adapted to be positioned on the bowl of a pipe, said cover being made of rubberized, foldable material and embodying in its construction a cap, a sleeve secured at one extremity to said cap and terminating at its opposite extremity in a bead.

1,541,728. SAW HEAD. KENNEY F. MILES, Portland, Oreg. Filed May 9, 1924. Serial No. 710,875. 8 Claims. (Cl. 143—156.)

1. In combination with a saw blade, a head therefor comprising a plate, an end portion of the blade being adapted to overlie the plate, said overlying portion of the blade being provided in its opposite margins with recesses, an outstanding bracket carried by the plate and adapted to be received within the recesses of the blade when the blade is in applied position with respect to the head, the plate of the head at the opposite side thereof being provided with an outstanding lug, a plate disposed transversely of the first plate and provided at its outer end with a depending flange adapted to be received within the second recess of the blade, said flange having a depending loop through which the lug is freely disposed to permit said second plate to have movement toward or from the first named plate and to an extent to free the flange carried by said second plate from the adjacent recess in the plate, and coacting means carried by the bracket and second plate for moving said second plate inwardly of the first plate.

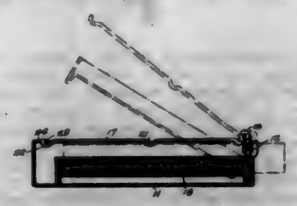
1,541,729. DRAG SAW. KENNEY F. MILES, Portland, Oreg. Filed May 10, 1924. Serial No. 712,290. 7 Claims. (Cl. 143—68.)

1. A saw machine of the class described comprising a supporting structure, a driven shaft carried thereby, a second shaft angularly related to the first named shaft, means for supporting said second named shaft for swinging movement about the first named shaft as an axis, an operative connection between both of the shafts, guiding means carried by the second shaft, a saw head slidably engaged with said guiding means, an operative connection between the saw head and the second shaft, a movable member engaged with the supporting structure for swinging movement about an axis transverse to that of the first named swinging movement, and a bearing carried by said movable member and engageable with the second shaft to hold said second shaft in one position.



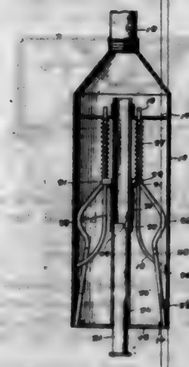
1,541,730. FORK. JUSTUS MISENER, Bay City, Mich. Filed Oct. 24, 1923. Serial No. 670,523. 1 Claim. (Cl. 294—105.)

A hay fork having its head formed with a rearwardly extending tongue and its ends formed with rearwardly extending ears, a stem having a bifurcated end receiving the tongue, a pivot connecting the stem with the tongue, a spring influenced dog carried by the stem engageable with the tongue for holding the latter in alignment with the stem and the fork in closed position, a flexible releasing element for the dog, an outwardly curved member



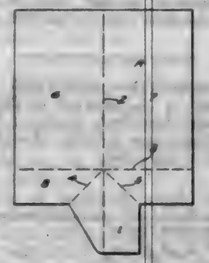
having a forked inner end which is secured to the sides of the stem and which projects beyond the outer face of the frame for the fork, a supporting rope attached to said member, and oppositely rounded plates having their ends secured respectively to the ends of the mentioned member and to the ears of the fork head.

1,541,731. TREATMENT OF ORE IN BLAST FURNACES. CLAUDE MUGUET, Paris, France, assignor to Société Anonyme de Commentry, Fourchambault & Decazeville, Paris, France. Filed Sept. 28, 1923. Serial No. 665,419. 6 Claims. (Cl. 266—28.)



1. A process of treatment of iron ore in blast furnaces, which consists in injecting into the blast furnace, at the level of the blast nozzles, powdered fuel which is entirely consumed to carbon dioxide, and adding to the charges of ore introduced into the furnace a quantity of coke which is necessary to insure the permeability of the charges to the gases and the reduction to carbon monoxide of the total amount of carbon dioxide produced by the combustion of the said powdered fuel.

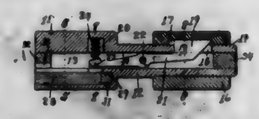
1,541,732. COMBINED HOLDER AND ASH TRAY. JOSEPH NAGY, New York, N. Y. Filed Dec. 20, 1923. Serial No. 681,812. 4 Claims. (Cl. 131—51.)



4. In a device of the class described, a receptacle having oppositely disposed gripping fingers extending from one end thereof and capable of engagement with a holder, a tray formed of wire mesh supported in said receptacle and having its major portion spaced from said receptacle to provide an air space about said tray, and a supporting member secured to said tray and having its extremities bent to provide pivots engageable with the receptacle to pivotally support the tray therein.

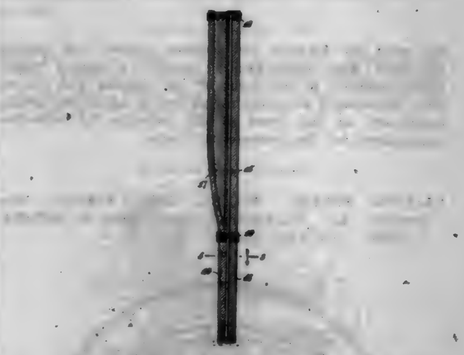
1,541,733. TOOL. THOMAS H. NELSON, Coalinga, Calif. Filed Nov. 25, 1924. Serial No. 752,240. 4 Claims. (Cl. 294—110.)

1. A well fishing tool comprising a casing, a centrally located longitudinally disposed guide within the casing, downwardly and laterally disposed guides within the casing around the central guide, hooks normally disposed within the casing, means for slidingly connecting the hooks and guides, spring means for forcing the hooks longitudinally without the casing, means for forcing the outer ends of the hooks inward toward one another during their longitudinal movement, means for holding the hooks against longitudinal outward movement and means for automatically releasing the hook holding means.



1,541,734. PAPER FOLD. STANLEY NOWAK, New York, N. Y., assignor of one-half to Hyman L. Roth, Brooklyn, N. Y. Filed Dec. 18, 1924. Serial No. 756,784. 1 Claim. (Cl. 46—87.)

A paper fold, comprising a blank having an extension at one end and having a single longitudinal and a single transverse fold line intersecting each other, and forming a point of juncture at the crossing of said lines, the longitudinal fold line extending through the extension, and diagonal fold lines extending from the point of juncture of the longitudinal and transverse fold lines to the edge of the blank at the point of juncture of the edges of the extension with the main portion of the sheet substantially as and for the purpose stated.



1,541,735. LOCKING DEVICE. JOHN E. OSBORN, Taft, Calif. Filed Mar. 7, 1924. Serial No. 697,581. 1 Claim. (Cl. 70—17.)

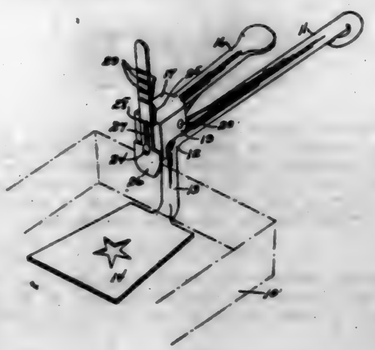
In a device of the character described, a head, an extension formed integral therewith, a central bore extending through said head and said extension, said extension having a slot formed therein and communicating with said bore, a dog pivotally mounted in said bore, said dog having an enlarged end extending through said slot, the opposite end of said dog having a spring in contact therewith so as to force said enlarged end through said slot, a retainer adapted to threadedly engage said extension, said retainer having a slot formed

therein and adapted to be engaged by the head of said dog, a rotatable key guide positioned in said head, and a key adapted to be inserted in said guide so as to pass beneath said dog for the purpose of counter-acting the action of said spring when the head of said dog is to be withdrawn from the slot in said retainer.

1,541,736. SHAFT FOR POLO MALLETS AND THE LIKE. HENRY C. OVERIN, Weehawken, N. J. Filed Sept. 8, 1923. Serial No. 661,611. 2 Claims. (Cl. 273—67.)

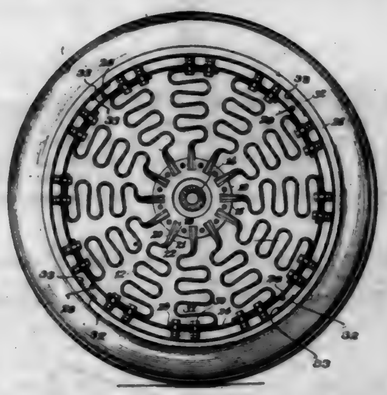
1. A shaft for polo mallets and the like, comprising two members secured together and having a metallic rod interposed between them, a block inserted in one member at the handle end thereof, whereby an enlargement on one side of the handle end will be formed, a wrapping about said handle end, and braiding applied to the shaft.

1,541,737. RAILWAY-GATE-OPERATING DEVICE. ANDREW PETERSON, Brooklyn, N. Y. Filed Apr. 19, 1924. Serial No. 707,711. 1 Claim. (Cl. 246—293.)



An automatic railway gate operating device having a series of pivoting levers said series of levers being coacting and so spaced that a train in passing will substantially at all times engage one of said levers.

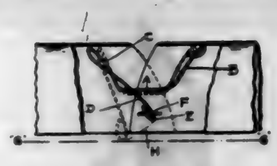
1,541,738. LIFTER. WILLIAM W. PEYTON, Carlisle, Ark. Filed Jan. 19, 1925. Serial No. 3,459. 2 Claims. (Cl. 294—29.)



1. A lifter of the character described comprising a pair of pivotally associated handle members, retractile means interposed between the inner sides of the handle

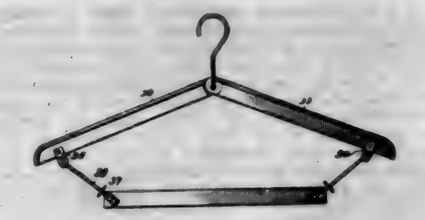
members for returning the same to their normal positions, a lower handle member being substantially offset and providing a downwardly and outwardly inclined portion, a substantially flat reduced portion extending from the lower end thereof and in a plane parallel with that of the handle, an upper handle including a hous-

ing upon the forward end portion thereof, and having its front wall substantially beveled, a spring finger rigidly secured to the front of the housing and spaced from the beveled wall, and reciprocating adjustable means positioned on the front of the housing for selective engagement for the purpose set forth.



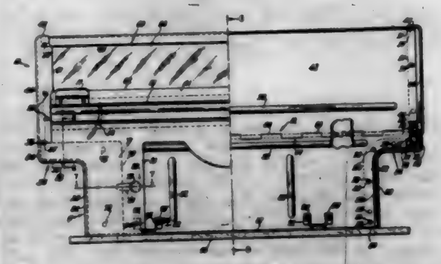
1,541,739. SPRING WHEEL. KARL PIESCH, New Orleans, La. Filed Mar. 7, 1924. Serial No. 697,605. 1 Claim. (Cl. 152—50.)

In a spring wheel, a hub having a ring element formed with transverse dove-tail grooves at the periphery, a rim, radially disposed springs between said hub and rim, said springs having zig-zag bends and the spring inward of the innermost bend having a plurality of laminations, one of which laminations follows the line of the adjacent bends of the springs.



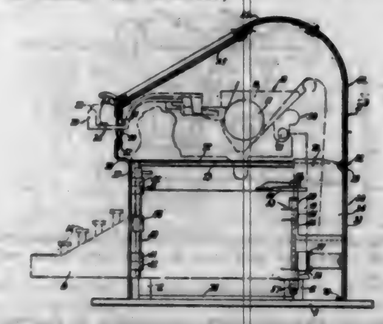
1,541,740. NECKTIE-TYING DEVICE. GEORGE PONAMOUSE, San Francisco, Calif. Filed June 29, 1922. Serial No. 571,703. 1 Claim. (Cl. 24—56.)

A fastener of the character described formed from a single strand of wire bent to provide a horizontal portion, converging side pieces rising from the horizontal portion, an arm extending downwardly from one of the side pieces in spaced parallel relation therewith and



terminating below the horizontal portion in a loop adapted to receive a collar button as and for the purpose specified.

1,541,741. GARMENT HANGER. JOSEPH A. SHOEMAKER, Brooklyn, N. Y. Original application filed Apr. 22, 1921, Serial No. 463,452. Divided and this application filed Jan. 7, 1922. Serial No. 527,580½. 3 Claims. (Cl. 211—13.)



1. A garment hanger including a pair of pivoted bars, a pair of suspended links attached to the outer end of the bars and movable to either side thereof, a pair of clamping bars connected to the opposite ends of the links, said pivoted bars and clamping bars being adapted for relative movement so that they lie in parallelism and contiguous to each other when the hanger is collapsed.

1,541,742. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 4, 1921. Serial No. 475,061. 22 Claims. (Cl. 197—186.)

1. In a casing for a typewriting machine, the combination of a body part and a cover therefor, the body part comprising overhanging lateral extensions and a releasable front plate having rearward projections to engage under the lateral extensions and assist in supporting the latter, the cover being supported on the ends of the lateral extensions and forming therewith extensions of the casing to accommodate the travel of the carriage.

1,541,743. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 11, 1921. Serial No. 476,765. 18 Claims. (Cl. 197—186.)

1. A sound-deadening casing for a typewriting machine having a carriage, said casing comprising a body-part having lateral overhangs to accommodate the travel of the carriage, and a cover extending from end to end of said overhangs and hinged to the body-part to swing from closed position to permit access to the work, said body-part being collapsible to permit it to be swung about the hinge into the cover when the casing is not in use.

1,541,744. MEDICINAL TABLET. BRUCE K. WIBEMAN, Indianapolis, Ind., assignor to Eli Lilly and Company, Indianapolis, Ind., a Corporation of Indiana. Filed Feb. 18, 1924. Serial No. 693,506. 8 Claims. (Cl. 167—7.)

8. A medicinal tablet, comprising a mixture of a desired drug with a form of lactose containing less water than that represented by one molecule of water of crystallization.

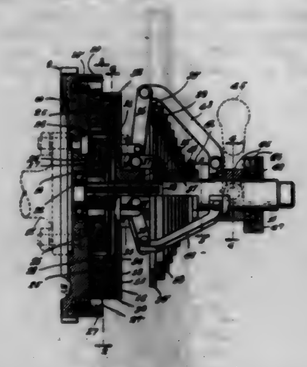
9. A medicinal tablet having its body portion comprised of an anhydride of milk sugar to facilitate the increased solubility of the same.

1,541,745. MANUFACTURE OF STEEL. CHARLES CUMINGS, Chicago, Ill., assignor to Commercial Steel Company, a Corporation of Illinois. Continuation of application Serial No. 282,579, filed Mar. 12, 1919. This application filed Dec. 23, 1919. Serial No. 347,004. 30 Claims. (Cl. 75—4.)

1. The process of preparing metal which comprises subjecting a molten bath of the metal to an agitation in the nature of a sudden shock of sufficient intensity to produce a substantial improvement in the tensile strength and other physical properties of the finished product.

1,541,746. MANUFACTURE OF STEEL. ALBERT H. ACKERMAN, Chicago, Ill., assignor to Commercial Steel Company, a Corporation of Illinois. Filed Dec. 23, 1919. Serial No. 346,976. 13 Claims. (Cl. 75—27.)

1. The process of preparing metal which comprises subjecting a molten bath of the metal to a series of agitations in the nature of sudden shocks, said shocks being of sufficient intensity so that their combined effect may produce a substantial improvement in the tensile strength and other physical properties of the finished product.



1,541,747. FENCEPOST. RICHARD B. BEVERLEY, Hebardsville, Ga.; Julia Beverley administratrix of said Richard B. Beverley, deceased. Filed Mar. 26, 1924. Serial No. 701,927. 1 Claim. (Cl. 256—53.)

A fence post of concrete construction, rectangular in cross section and hollow at its center, and having a plurality of aligned and spaced lugs along one face thereof, the said lugs being formed with vertically aligned tie-rod holes; main reinforcing wires embodied in the corners of the post; lug reinforcing wires tied to the main

reinforcing wires and looped out through the several lugs; and a tie-rod to slidingly engage the said tie-rod holes, the tie-rod being long enough to extend into the ground.

1,541,748. CLUTCH. LATTA O. DAVIS, Indianapolis, Ind., assignor to William M. Fogarty, trustee, Indianapolis, Ind. Filed May 9, 1923. Serial No. 637,798. 5 Claims. (Cl. 192—55.)

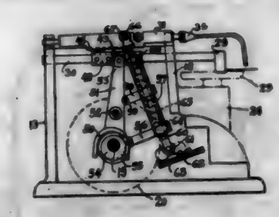
1. In combination, a clutch having a plurality of engageable and disengageable members, a member co-axial with said clutch, and a plurality of inter-coiled spiral springs between one of said clutch members and said co-axial member, the outer ends of said springs being connected to one and the inner ends to the other of the two members connected by said springs, the outer end of each spring being formed into an eye, and a pin projecting through each eye into the part to which such outer end is connected to provide a pivotal mounting for such outer end, the part connected to said outer spring-ends being provided with a rim which peripherally overhangs said springs, and said rim being cut away where the eyes in the outer ends of the springs are located to provide gaps of sufficient width to receive such eyes and permit their turning therein.

1,541,749. METHOD OF MAKING BARRELS. JOSEPH M. HOMMEL, Detroit, Mich. Filed Feb. 12, 1923. Serial No. 618,717. 16 Claims. (Cl. 217—9.)

1. In a package, staves extending longitudinally to the axis thereof, there being a spiral groove formed in

the outer surface of the staves, and a metal band or strip of substantially V shaped form in cross section

seated in the groove and flattened to force the edges of the strip into the walls of the groove.



1,541,750. TIRE GAUGE. ABRAHAM G. PARK, Baltimore, Md. Filed Oct. 1, 1924. Serial No. 741,002. 3 Claims. (Cl. 73—11.)

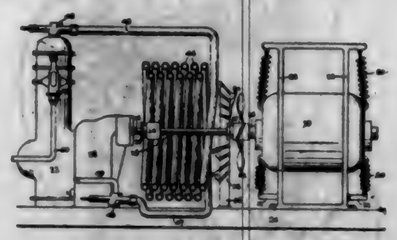
1. A gauge of the class described comprising a casing, a tubular member mounted therein having both ends open, an inflatable member arranged within the tubular member and having its lower end open and its upper end closed, means for holding the inflatable member in position, such means being perforated to admit pressure to the inflatable member, a second tubular member enclosing the first mentioned tubular member and having its end closed and covering the closed end of the inflatable member, a spring within the casing for resisting movement of the second mentioned tubular member and indicating means associated with said second member.

1,541,751. FUR-SEWING MACHINE. HARRY ROSS, Brooklyn, N. Y., assignor of one-half to Louis Spire, New York, N. Y. Filed Dec. 19, 1923. Serial No. 681,485. 8 Claims. (Cl. 112—16.)

1. A fur sewing machine comprising a looper, a looper bar in which the looper is held, a drive shaft, an eccentric on said drive shaft, a cam, a pivoted member having its lower end connected to and operated by said eccentric and its upper end connected to the looper bar whereby the latter is advanced and retracted, and an

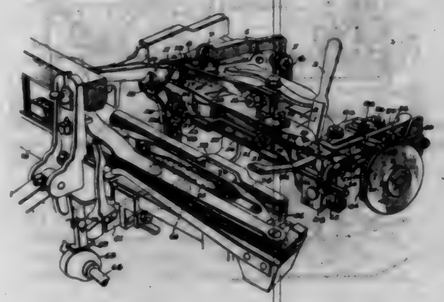
operating plunger in the pivoted member, the lower end of which rides over said cam to raise and lower said looper bar.

1,541,752. GARAGE LIGHT. ARCHIBALD T. SAMPSON, Lynn, Mass., assignor to Sampson Axcess System, Inc., Lynn, Mass., a Corporation of Massachusetts. Filed Apr. 7, 1923. Serial No. 630,474. 1 Claim. (Cl. 240—81.)



A portable adjustable lighting fixture comprising a demountable base, a supporting pipe mounted thereon, a curved rigid arm, a universal joint interposed between said pipe and said arm and connecting the arm to the base for movement in any direction with respect thereto, and a flexible light carrying cable attached to the rigid arm and movable with respect to both the base and rigid arm.

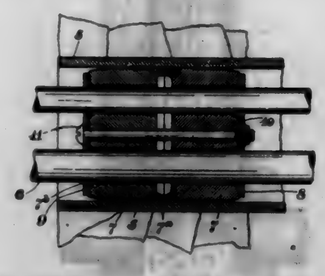
1,541,753. PROCESS OF MAKING AN INSECTICIDE AND A FUNGICIDE. GEORGE ETHELBERT SANDERS, Annapolis Royal, Nova Scotia, Canada, assignor to Riches, Piver & Co., a Corporation of New Jersey. Filed Dec. 28, 1920. Serial No. 432,692. 4 Claims. (Cl. 167—6.)



4. The process of making an insecticide and fungicide, comprising the hydration of calcium oxide with a solution of arsenic acid and adding copper sulphate thereto, while hydrating, the calcium oxide being kept always in excess to an amount sufficient to cause a dehydration of the copper sulphate, producing a mixture in dry powder form containing arsenate of lime and dehydrated copper sulphate.

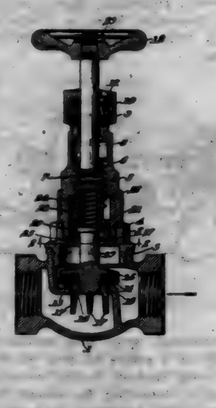
1,541,754. REFRIGERATING APPARATUS. CHARLES C. SPEER, Detroit, Mich., assignor, by mesne assignments, to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed June 23, 1924. Serial No. 721,618. 1 Claim. (Cl. 62—115.)

In combination, a compressor adapted to be inserted in a refrigerating system to compress the refrigerant, a motor adapted to drive said compressor and spaced from said compressor, a drive connecting said motor to said compressor, a fan operated by said motor, a condensing coil also adapted to be inserted in said refrigerating system and positioned between said motor and said compressor about said drive and in the path of the current set up by said fan, a plurality of supporting members positioned about said motor, a plurality of springs entirely supporting said motor from said supporting members, and a deflector interposed between said fan and said coil and effective to direct said current over said coil in any normal position in which said motor is supported by said springs.



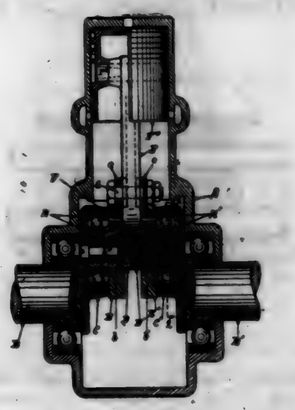
1,541,755. LOOM. EDWARD S. STIMPSON, deceased, late of Hopedale, Mass., by Wallace I. Stimpson, executor, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Sept. 13, 1924. Serial No. 737,467. 14 Claims. (Cl. 139—270.)

1. In a loom, the combination of a cam follower, a feeler to detect the condition of the filling in the shuttle, a device for holding the feeler in a frontward position, and means actuated from the cam follower for freeing the feeler from said device at intervals that the feeler may have periods of activity and inactivity during weaving with the same supply of filling in the shuttle.



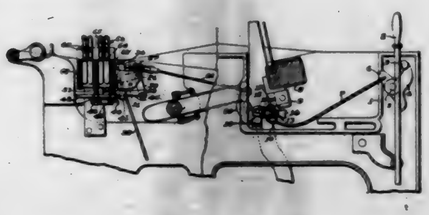
1,541,756. CLOSURE FOR CONDUITS. OZE H. WILLIAMS, Columbus, Ohio, assignor to The Lancaster Tire and Rubber Company, Columbus, Ohio, a Corporation of Ohio. Filed Jan. 17, 1924. Serial No. 686,925. 1 Claim. (Cl. 137—76.)

Means for plugging conduits for electrical conductors comprising, in combination, a septum of elastic material for the conduit composed of two parts having lips facing each other, said septum provided with eccentrically located perforations for the reception of the electrical conductors, said septum, having annular inwardly projecting lips at said perforations, central compression members of inelastic material for the parts of said sep-



tum, and means engaging said compression members for drawing and holding them together to expand the first mentioned lips into pressing contact with the inner wall of the conduit and the lips of the eccentrically located perforations in pressing contact with the conductors in said perforations.

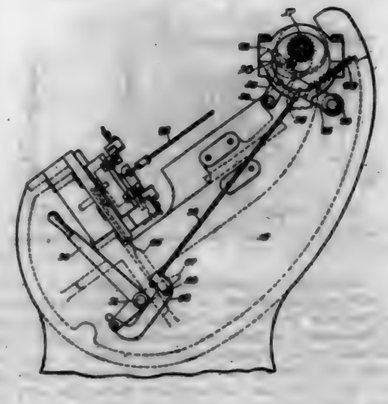
1,541,757. VALVE. CHARLES B. ALLEN, Wadsworth, Ohio, assignor to The Ohio Injector Company, Wadsworth, Ohio, a Corporation of Ohio. Filed Mar. 5, 1924. Serial No. 697,021. 2 Claims. (Cl. 251—154.)



2. In a valve, a bonnet, a body provided with a seat, a disk arranged for cooperation with said seat and adapted to be seated thereon by the influence of fluid pressure in said valve and having a headed stem, a spindle having screwthreaded engagement with said bonnet and having an integral housing enclosing the head of said stem and providing a lost motion connection therewith, a hub interposed between and connecting said body and bonnet, a stop formed in said hub for limiting the valve closing movement of said spindle, said spindle capable of imparting positive unseating movement to said disk but capable only of imparting seating movement thereto to an extent sufficient to permit it to seat under the influence of said pressure, and a resilient member interposed between the spindle and the head of the stem for assisting fluid pressure in seating the disk.

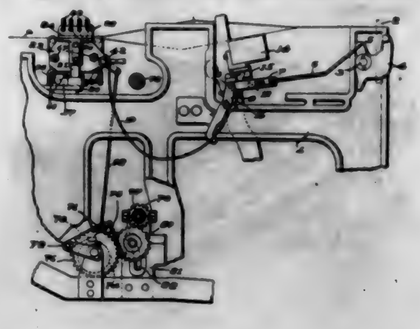
1,541,758. CRANK-SHAFT AND CONNECTING-ROD MECHANISM. WILLIAM E. BAKER, Erie, Pa. Filed Mar. 3, 1924. Serial No. 696,543. 5 Claims. (Cl. 74—38.)

1. In a connecting rod mechanism, a sleeve adapted to be placed on a wrist-pin, a radial disc on said sleeve, an opening through said disc, a connecting rod, a stud-post on said connecting-rod adapted to project into said opening, and means to clamp said connecting rod against the face of said disc.



1,541,759. WARP STOP MECHANISM FOR LOOMS. CARL D. BROWN, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Aug. 2, 1924. Serial No. 729,770. 24 Claims. (Cl. 139—360.)

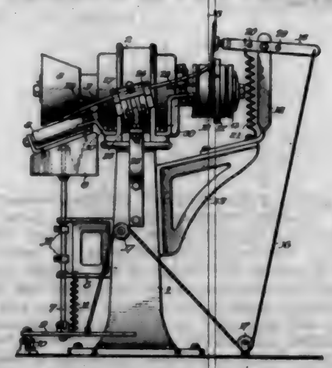
1. In a mechanical warp stop mechanism for looms, the combination of a series of drop wires normally supported by the warp threads during weaving, a drop wire detector having a detecting movement, means actuated by the drop wire when it fails to be supported by a warp thread for securing the detector to a fixed part to thereby arrest its detecting movement, and means for stopping the loom when the detector is secured to the fixed part and its movement is thereby arrested.



1,541,760. AUTOMATIC DIE PRESS. WILLIAM CAMERON, Chicago, Ill., assignor to Cameron Can Machinery Company, Chicago, Ill., a Corporation of Illinois. Original application filed Oct. 13, 1919, Serial No. 330,284. Divided and this application filed Mar. 18, 1920. Serial No. 366,893. 7 Claims. (Cl. 102—12.)

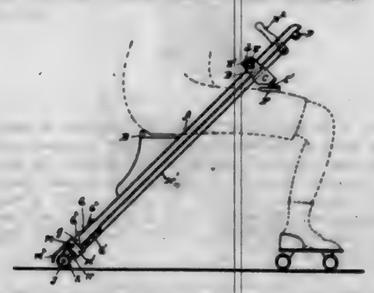
1. In a machine of the class described, the combination of a shaft, a driving wheel rotatably mounted thereon, a clutch, including a pin, for connecting said wheel and shaft, and yielding means positioned to engage the end

of said pin upon withdrawal of the same for automatically stopping said shaft in predetermined position.



1,541,761. WARP STOP MECHANISM FOR LOOMS. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 2, 1924. Serial No. 741,152. 11 Claims. (Cl. 139—367.)

1. In a warp stop mechanism, the combination of a series of drop wires, a detector frame having side members, fixed guides for the detector frame enclosed by the side members, and flat drop wire detectors extending between the side members.

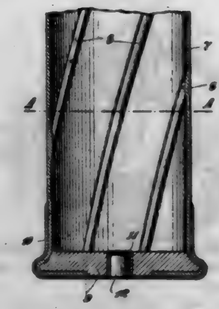


1,541,762. BEAD-BUFFING MACHINE. HAROLD A. DENNIRS, Akron, Ohio, assignor to The General Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 9, 1924. Serial No. 725,019. 8 Claims. (Cl. 82—1.)

1. In a machine for the uses and purposes set forth, the combination of a motor having a shaft, a bead driving drum upon one end of the motor shaft and a supporting drum on the other end of the shaft, a spring elevated roller beneath the driving drum and a spring

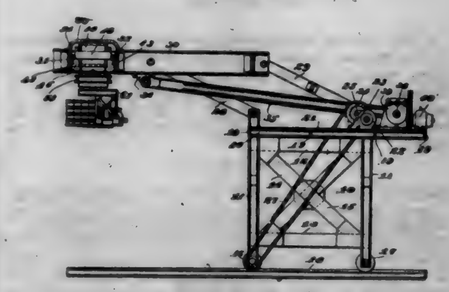
depressed roller above the supporting drum, the bead being received between the rollers and the drum, and a brush in the path of the bead.

1,541,763. COASTER SKATE. DAVID W. DUNBAR, New York, N. Y., assignor to Coaster Skate Manufacturing Company, Inc., Erie, Pa. Filed Feb. 24, 1925. Serial No. 11,361. 3 Claims. (Cl. 208—182.)



1. In a device for use as described, a bar adapted to rest upon the ground, a seat secured intermediately of the length of said bar, a cross-piece, means to secure the same to said bar, and a plate pivoted on said cross-piece adapted for horizontal self adjustment.

1,541,764. WRIST-WATCH BRACELET. GEORGE D. HARRISON, North Attleboro, Mass., assignor to Providence Stock Company, Providence, R. I. Filed Feb. 9, 1924. Serial No. 691,790. 2 Claims. (Cl. 63—5.)

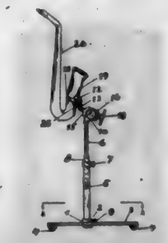


2. In a bracelet, a mesh fabric band, a hollow link on the band at one end thereof having an aperture in the inner side wall thereof, a clasp slidably connected to the link, a spring in the link for tensioning the clasp having one end connected to the latter, the other end of the spring and a part of the mesh fabric band extending across the aperture, and a plug of solder filling the aperture and surrounding the part of the spring in register with the aperture and extending through the interstices of the mesh fabric band adjacent to the opening to anchor both the spring and the band to the link.

1,541,765. CARTRIDGE SHELL. HOWARD D. HODGE, New York, N. Y., assignor of one-half to George Ramsey, New York, N. Y. Filed Nov. 12, 1919. Serial No. 337,513. 9 Claims. (Cl. 102—12.)

1. As an article of manufacture, a charge of encased ammunition comprising a shell having a single tube of extruded aluminum provided with a smooth exterior and with longitudinally extending spirally inclined ribs on the interior of a portion of said tube and adapted to increase the longitudinal strength of said tube and thereby preventing "cut-offs," the inclination of said ribs being such that a plane parallel to and including the axis of the tube will intersect a plurality of said ribs whereby longitudinal splits in said tube are also prevented, and means to retain the powder gases within the shell until a predetermined pressure is developed.

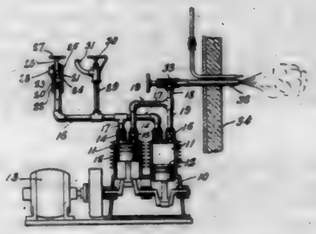
1,541,766. TRAVELING CRANE. GRAFTON E. LUCE, Chicago, Ill. Filed Nov. 23, 1923. Serial No. 676,556. 3 Claims. (Cl. 212—9.)



1. In a brick setting machine, the combination of a platform, a pair of beams spaced apart from each other and located above said platform, tracks extending between said beams near one end thereof, a parallel link connection between the beams and the platform, a pair of rack beams and means for operating the same to cause movement of said pair of beams with respect to the platform, a windlass mounted on said tracks for movement transversely of said beams and a brick setting platform suspended from said windlass

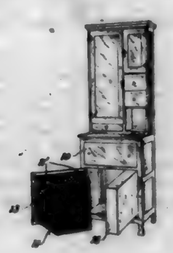
---

1,541,767. MUSICAL-INSTRUMENTS SUPPORT. AUGUST MORTENSEN, San Francisco, Calif., assignor to The "Frisco" Manufacturing Co. Inc., San Francisco, Calif. Filed Aug. 25, 1924. Serial No. 733,081. 7 Claims. (Cl. 248—40.)



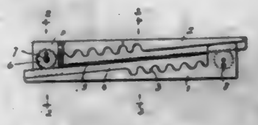
7. A base, a vertically adjustable member detachably positioned on said base, means for holding said member

in rigid relation to said base, a circular shaped off-set formed on the free end of said member, said off-set being bifurcated to engage a horizontally disposed clamp-



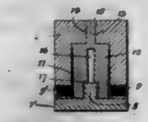
ing device, said clamping device being composed of separate parts co-operating with said off-set in different positions of adjustment.

1,541,768. OIL BURNER. GEORGE A. DILLER and PETER F. PETERSON, Milwaukee, Wis.; said Peterson assignor to said Diller. Filed Apr. 11, 1924. Serial No. 705,794. 3 Claims. (Cl. 158—36.)



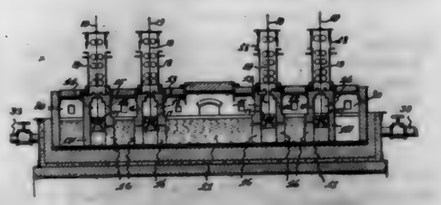
1. The method of preparing and treating fuel mixtures for oil burners of the character mentioned which comprises mixing oil and air, compressing the mixture to increase the temperature thereof, utilizing the heat of compression to vaporize the oil in the mixture, and delivering the mixture through a discharge passage to be burned.

1,541,769. CABINET WITH SECRET COMPARTMENT. ORVAL R. PLATTER, North Vernon, Ind. Filed Dec. 20, 1923. Serial No. 681,810. 3 Claims. (Cl. 45—5.)



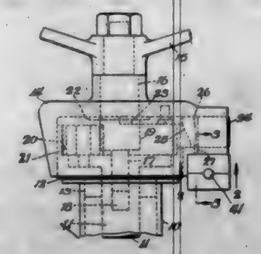
1. The combination in a cabinet of a hamper mounted to swing into and out of the same, a tray-like compartment within the cabinet between the back wall of the same and the adjacent wall of the hamper, said compartment being normally disposed with one of its broad faces against the back of the cabinet, and turnable and slidable means on which the said compartment is mounted for opening and withdrawal.

1,541,770. QUOIN. JAMES J. CURTIS, New York, N. Y. Filed Mar. 28, 1924. Serial No. 702,694. 4 Claims. (Cl. 254—42.)



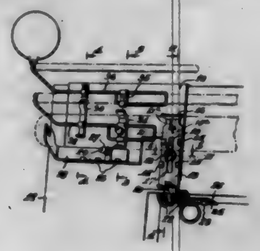
1. A device of the character described, comprising a pair of co-acting identically constructed quoins, each quoin having a toothed tongue and a groove adjacent one end of the tongue, the groove in one quoin being adapted to receive the tongue of the opposite quoin, a gear wheel rotatably mounted in each quoin and adapted to continually engage the teeth on the tongues, and means co-acting with each gear wheel for locking independently the respective gear wheels against rotation whereby the quoins are prevented independent movement in respect to each other while in contact.

1,541,771. QUOIN. JAMES J. CURTIS, New York, N. Y. Filed Mar. 28, 1924. Serial No. 702,695. 4 Claims. (Cl. 254—42.)



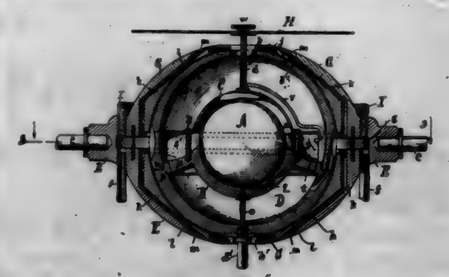
1. In a device of the character described, a pair of quoins, each quoin being provided with a groove and a tongue, the tongue of one quoin fitting into the groove of the opposite quoin, a substantially U-shaped clamping member carried by one of the quoins, said U-shaped clamping member being fitted into said grooves, and means for causing said clamping member to grip the tongue of the other quoin.

1,541,772. GLASS FURNACE. JULES J. QUERTINMONT, Point Marion, Pa. Filed Feb. 7, 1925. Serial No. 7,600. 6 Claims. (Cl. 49—56.)



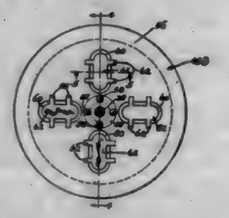
1. A glass furnace for drawing continuous sheets of glass, comprising a melting furnace, a drawing tank communicating with said melting furnace and divided into a series of alternating drawing and reheating chambers in communication with each other and the melting furnace, and terminating with a drawing chamber, a separate and independent heating chamber adjacent to the end drawing chamber and not in communication with said drawing tank or melting furnace to revitalize the chilled molten glass passing into the end drawing chamber.

1,541,773. MEANS FOR LOCKING AUTOMOBILES AGAINST THEFT. FRANKLIN W. STEWART, Chicago, Ill. Filed Feb. 27, 1924. Serial No. 695,614. 23 Claims. (Cl. 200—55.)



1. In a device of the class described, a housing having a locking element, a two-circuit snap-switch which maintains one of said circuits closed, having no neutral position, said switch being accessible to the operator, and a member coacting with said switch and said locking element whereby either circuit is opened or closed automatically during the actuation of said locking member.

1,541,774. COMBINED CURTAIN AND SHADE SUPPORT. STANLEY JOHN KUEHL, Holyoke, Mass. Filed Feb. 8, 1924. Serial No. 691,414. 8 Claims. (Cl. 156—24.)



3. A device of the character described including a base plate capable of engagement with a window frame, a slide member adjustable on said base plate, a supporting member formed of a single length of wire having its intermediate portion interposed between said base plate and slide member and held in position thereby, other portions of said supporting member being bent to provide coil springs, and a clamping member pivotally connected to the extremities of said wire and engageable with a portion of the window frame to clamp said base plate in position thereon.

1,541,775. BALL-CONTROLLED MARITIME AND SCIENTIFIC INSTRUMENT. ROYAL E. BIBBINS, New York, N. Y., assignor to Bibbins Ball Compass, Inc., a Corporation of Delaware. Filed Apr. 7, 1922. Serial No. 550,258. 4 Claims. (Cl. 74—78.)

1. A ball-controlled maritime and scientific instrument which comprises a spinning ball supported and driven by compressed air, a floating vessel enclosing said ball,—an encircling ball surrounding said vessel,—and means whereby compressed air, sufficient in quantity and pressure, is supplied to support and steady said encircling ball and said vessel in a true vertical and horizontal position, and to support and drive said spinning ball and impart thereto a directive force for the proper functioning of said instrument.

1,541,776. COMPRESSOR UNIT. WILLIAM D. MERCER, Detroit, Mich., assignor, by mesne assignments, to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed June 23, 1924. Serial No. 721,711. 1 Claim. (Cl. 170—168.)

A flywheel fan comprising a rim, a hub, a web connecting said rim and said hub and provided with a plurality of apertures therethrough, and a plurality of blades each positioned within said apertures and extending at an angle to the plane of said web with its two lateral edges projecting on opposite sides of said web, and means securing each such lateral edge to said web.

Patents Nos. 1,541,777 to 1,542,807.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 335—No. 3. TUESDAY, JUNE 16, 1925. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Disposition of Patent Office Models.

The act of Congress, approved February 12, 1925, provides a commission "to select such of the Patent Office models and exhibition exhibits as may be deemed to be of value and of historical interest * * * and cause the remainder of the said models and exhibits to be disposed of by public auction, gift to Federal, State, or private museums or institutions, or returned without expense to the Government to the original depositors or their representatives, where demanded in writing by them." * * *

The commission hereby gives notice to all Federal, State, or private museums or institutions, and to all other parties entitled to receive any of the models or exhibits under said act of Congress, that claim thereto must be made in writing to the commission on or before July 15, 1925; otherwise the models may be sold or destroyed, as authorized by the act.

Claims should be addressed to the Patent Office, Washington, D. C.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

Class Orders.

The Office receives subscriptions for copies of patents, as issued weekly in subclasses. The expense of keeping the records, selecting the proper copies for the order, entering the charge, and mailing is so great that the Office feels compelled to make a charge therefore, which will be nominal in each instance.

Beginning with July 1, 1925, in addition to the statutory price of 10 cents each for the copies furnished, there will be charged $1.00 per year for entry of the order and the first subclass and 10 cents per year for each additional subclass.

A list of patents issued, arranged by subclasses, is printed each week in the OFFICIAL GAZETTE, so that patents desired may be selected and ordered separately.

ADJUDICATED PATENTS.

(D. C. N. Y.) The Fessenden patents, Nos. 1,050,441 and 1,050,728, for method and apparatus for heterodyning. *Held* infringed. *Westinghouse Electric & Mfg. Co. v. Taub*, 4 F. (2d) 605.

(D. C. N. Y.) The Armstrong patent, No. 1,113,149, for audion amplifier, *Held* infringed. *Westinghouse Electric & Mfg. Co. v. Taub*, 4 F. (2d) 605.

(U. S. C. C. A. Wash.) The Carson patents, Nos. 1,149,495 and 1,202,807, for metallurgical furnaces, *Held* valid and infringed. *Carson v. American Smelting & Refining Co.*, 4 F. (2d) 463.

(D. C. N. Y.) The Mitchell and White patents, Nos. 1,423,956 and 1,423,957, for improved tipless incandescent electric lamp and method for making same, *Held* valid and infringed. *General Electric Co. v. Save Electric Corporation*, 4 F. (2d) 584.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,397,492, J. Good, Automobile-engine fuel supply, decided May 2, 1925, claim 1.

Pat. 1,433,612, P. H. Gaskins, Lubricating system, decided April 7, 1925, claims 1 and 2.

Pat. 1,458,120, H. B. Williamson, Magnet and dynamo electric machine structure, decided March 19, 1925, claims 1, 9, and 17.

Pat. 1,484,927, Beaner and Heise, Storage-battery separator and process of making the same, decided April 30, 1925, claims 1, 2, and 3.

Pat. 1,528,169, W. Sands, Cover fastener, decided May 22, 1925, claims 1, 2, 3, 4, 5, 8, and 9.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

FROLASET CORSET COMPANY *v.* THE BOYSHFORM BRASSIERE CO.

Decided March 17, 1925.

1. TRADE-MARKS—DECEPTIVE SIMILARITY "BANDO"—"BANDOBELT."

Where registrant's mark consists of "Boyshform" written across the outline figure of the upper portion of the body of a woman, below which appears "Bando", *Held* that the word "Bando" forms such a prominent part of the registered mark and is so similar to petitioner's mark "Bandobelt" that confusion is probable.

2. SAME—CANCELLATION—ACT OF 1920.

A mark registered under the act of 1920 canceled because of the prior use by another of a deceptively similar mark, registered under the act of 1905, the goods being of the same descriptive properties.

3. SAME—SAME—OBJECTIONS RAISED FIRST TIME ON APPEAL.

Registrant's objection to the admission of petitioner's depositions on the ground that the notice did not give the names and addresses of some of the witnesses could not be made for the first time on appeal.

4. SAME—SAME—DELAY IN FILING PRINTED RECORD—POSTPONEMENT OF HEARING.

Where through inadvertence petitioner did not print its record on time, but on objection by registrant the hearing was postponed, so that the printed record was filed in advance of the actual hearing, *Held* that there was no error in considering the record.

APPEAL from Examiner of Interferences.

Mr. Parker Cook and *Mr. George H. Cook* for Frolaset Corset Company.

Mr. George C. Heinicke for The Boyshform Brassiere Co.

FENNING, *Assistant Commissioner:*

The Boyshform Brassiere Co. appeals from the action of the Examiner of Interferences canceling its Trade-Mark No. 173,558, registered under the act of March 19, 1920, for brassières. The mark consists of "Boyshform" written across the outline figure of the upper portion of the body of a woman, below which appears "Bando."

Frolaset Corset Company, petitioner for cancellation, owns two trade-marks registered under the act of 1905, "Bandobelt," No. 138,244 and No. 176,019, the goods being indicated as diaphragm confiner, corsets, corset waists, brassières, bandeaux, girdles, and belts for personal wear.

[1, 2] It is too clear to need argument that the goods of the parties are goods of the same descriptive properties, so that the purchaser of brassières would expect them to come from the same source as the other goods mentioned. The record clearly discloses that the Frolaset Company used its mark prior to any date of the Boyshform Co. The word "Bando" forms such a prominent part of the registered mark and is so similar to "Bandobelt" that confusion is probable, and this is sufficient, as pointed out in *Macy & Co., Inc.*, v. *The Macey Company, Inc.*, 1922 C. D. 2; 295 O. G. 468; and *Interwoven Stocking Company* v. *David Harris & Eisner*, 329 O. G. 11.

[3] In its brief here registrant objects to the petitioner's depositions being admitted, on the ground that the notice did not give the names and addresses of some of the witnesses. That objection was not made below and can not be made for the first time on appeal.

[4] Through an inadvertence petitioner did not print its record below in sufficient time in advance of the hearing originally set. On objection by registrant the hearing was postponed, so that the printed record was actually filed in advance of the actual hearing, the time prescribed by the rules. Under those conditions there was no error in considering the record below.

The Examiner of Interferences is affirmed.

Court of Appeals of the District of Columbia.

GLADYS V. H. PHILLIPS, ADMINISTRATRIX, ETC., *v.* CARLSSON ET AL.

No. 1,893. Decided February 2, 1925.

INTERFERENCE—FOREIGN APPLICATION—CONCEPTION AND CONSTRUCTIVE REDUCTION TO PRACTICE.

Where C. and T. established a constructive filing date by filing a Swedish application for the same invention, and P. conceived before but did not reduce the invention to practice until after C. and T.'s constructive filing date and was lacking in diligence, *Held* that C. and T. were entitled to their constructive filing date for conception and constructive reduction to practice, and priority was awarded to C. and T.

APPEAL from Patent Office. Affirmed.

Mr. F. A. Bower and *Mr. C. V. Edwards* for Phillips.

Mr. Sam'l. Herrick for Carlsson et al.

Before MARTIN, Chief Justice, ROSS, Justice, and BARBER, Judge U. S. Court of Customs Appeals.

ROSS, *J.:*

This is an appeal from a decision of the Patent Office in an interference proceeding awarding priority to the senior party.

The claims, two in number, relate to a process of increasing or maintaining the amount of nitrocotton dissolved in nitrocellulose solutions, while maintaining a degree of fluidity sufficient to permit the use of the solution as a spray or lacquer. There are two important limitations; that the claims involve a process for dealing with highly concentrated solutions and for changing them to a fluidity sufficient for their use as a lacquer or spray. Claim No. 1 is sufficiently illustrative and reads as follows:

1. A process for making highly concentrated solutions of nitrocellulose having sufficient fluidity to be used as a lacquer or spray, which consists in treating a mixture of nitro-cotton and solvent with heat and pressure.

It clearly appears that the senior party established a constructive filing date of December 6,

1918, by reason of the filing of a Swedish application for the same invention. He therefore is entitled to, and was given, that date for conception and constructive reduction to practice.

The Examiner of Interferences held that Phillips, while first to conceive, was the last to reduce to practice and was lacking in diligence, and therefore awarded priority to the senior party. The Board found that Phillips conceived and reduced to practice in 1914 and that, as he neither abandoned nor concealed the invention thereafter, he was entitled to an award of priority, and so ruled. The Assistant Commissioner, in a carefully prepared opinion, concurred in the findings of the Examiner of Interferences, and, after an examination of the record in the light of appellant's argument and brief, we are convinced of the correctness of the conclusion reached. The opinion of the Assistant Commissioner is so comprehensive and satisfactory that we adopt it without further discussion and therefore affirm the decision.

Affirmed.

Court of Appeals of the District of Columbia.

THEO. WEISS & CO., INC., *v.* STUART, KEITH & CO., INC.

No. 1,600. Decided March 2, 1925.

TRADE-MARK—INTERFERENCE—TRADE-MARK USE—ACCESSORY PORTION OF COMPOSITE MARK.

Where in support of its allegation of trade-mark use appellee produced a ticket bearing a composite mark in which the phrase for which registration was sought was merely accessory to the other and dominating features, *Held* that this showed no use of the mark whatever.

APPEAL from Patent Office. Reversed.

Mr. Cyrus Kehr for Theo. Weiss & Co., Inc.

Mr. Wm. F. Hall for Stuart, Keith & Co., Inc.

Before MARTIN, Chief Justice, ROBB, Justice, and BARBER, Judge U. S. Court of Customs Appeals.

ROBB, *J.:*

Appeal from a Patent Office decision in a trade-mark interference proceeding in which priority and the right of registration were awarded the junior party, appellee here.

The appellee, in its verified petition for registration, alleged that it had continuously used the mark for which it sought registration since September 7, 1910, and that it had applied the mark "directly to the goods by printing or stamping the same thereon" and also had applied or affixed it to the goods by placing thereon, or on the package containing them, printed labels on which the mark was shown. We here reproduce the sample of the mark filed with the Patent Office:

JUST LIKE DADS

To substantiate the averments of its petition, the testimony of four witnesses was taken by appellee. The first witness, its president, testified that the corporation manufactured overalls for men and boys, and he thereupon produced a sample of the goods of the latter class. He then testified in part as follows:

Q. 7. Do you distinguish this garment by any means to designate it as being different from your other line of goods?
A. We do.
Q. 8. How?
A. With a ticket and with the wording "Little Man's Overall Just Like Dad's."
Q. 9. Will you produce such a ticket referred to in your last answer?
A. We will.

We here reproduce the ticket referred to by this witness, which was marked Exhibit 2:

The witness then testified that garments of this style were shipped into various States of the Union and that appellee—

got up in 1912 the ticket which is now attached to the garment and which bears the phrase, "Just Like Dad's."

He then was asked:

I note from these records to which you have referred that reference is made to garments bearing the "Little Man's Ticket." Is this the garment referred to?

He replied "It is" and was asked:

Did these garments bear a ticket similar to that of Exhibit 2?

After he had replied "They did", he was further asked:

Has the use of this ticket as Exhibit 2 on goods as Exhibit 1 been continuous by Stuart, Keith & Co., Inc., since the date set out in the production of these exhibits?

His response was, "It has."

The testimony of the other witnesses did not differ materially from that of the first.

The foregoing testimony falls short of showing such trade-mark use of the "ticket" referred to by the witnesses as is contemplated by the registration statute. *Hump Hairpin Co.* v. *De Long Co.*, 190 O. G. 1032; 1913 C. D. 393; 39 App. D. C. 484. But, even assuming such use, the position of appellee is not bettered, for it has sought the registration of a mark as to which the testimony shows no use whatever. In other words, one mark is claimed and the use of another shown. The dominating features of the ticket produced clearly are the words "Little Man's Overall" and the representation of a boy or "Little Man." The phrase "Just Like Dad's" is nothing more than accessory, the attempt to register which, upon a showing of the composite mark, is directly in conflict with the ruling of this court in *Plasten* v. *Canton Pharmacy Co.*, 143 O. G. 1113; 1909 C. D. 408; 33 App. D. C. 268. In that case we said that a party might not segregate his trade-mark—

and, by registering each of its features separately, thereby prevent the registration by another of any particular part of the mark as actually used,

when such registration and use by another would cause no confusion to the trade or prejudice to the first user. We further said:

A firm may have one or a dozen marks, but, owing to the nature and objects of trademarks, it seldom happens that more than one mark is used by any dealer to designate a particular article. Thus the record shows that Planten has used the registered mark to designate the goods to which the mark of the application *de said* to apply. In contradiction of the statement in his application, he filed with his application not the mark of the application, but the mark previously registered. The Trade Mark Act confers the right of registration upon "the owner of a trademark used in commerce with foreign nations, or among the several States, or with Indian tribes," providing the applicant complies with various requirements stated in the act, and files a verified declaration that the conditions entitling him to the benefit of registration exist. Statutory use of the mark is a prerequisite to the right of registration. * * * In other words, proof of the use of the words "Planten's C. & C. or Black Capsules." in a case where those words have been registered as a trademark, does not establish the use of the words "Black Capsules" as a trademark, for the words eliminated from the registered mark are, under the prior application, an essential part of that mark.

In *Quaker City Flour Mills Co.* v. *Quaker Oats Co.*, 214 O. G. 684; 1915 C. D. 113; 43 App. D. C. 260, 263, a somewhat similar situation was presented and the court said:

But the difficulty here is that "the mark as claimed" has not been used. It is only part of the mark which actually designated the product to which it was applied.

In re Fitzpatrick Bros., 257 O. G. 1081; 1918 C. D. 217; 48 App. D. C. is to the same effect, and in *Beckwith* v. *Commr. of Patents*, 274 O. G. 613; 1920 C. D. 471; 252 U. S. 538, 545, the Supreme Court said:

The commercial impression of a trademark is derived from it as a whole, not from its elements separated and considered in detail. For this reason it should be considered in its entirety * * *.

It follows that appellee was not entitled to an award of priority.

The Patent Office has found, and in that conclusion we concur, that the evidence in behalf of appellant established adoption and use since 1918 of the mark claimed by it, here reproduced:

JUST LIKE DAD'S

An ocular examination of appellee's Exhibit 2 ticket and appellant's mark convinces us that there is no likelihood of confusion from their concurrent use. It results that the decision must be reversed and priority awarded appellant.

Reversed.

PATENT SUITS.

Ser. No. 197,396. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HERMANN SCHMIDT, doing business as Goiter Remedy Company, Buffalo, N. Y. Filed May 21, 1924.

Vegosal

Particular description of goods.—Preparation for Treating Goiter.

Claims use since about Mar. 14, 1924.

Ser. No. 197,698. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BERTOL DRUG CORP., Jamaica, N. Y. Filed May 28, 1924.

Y-COUGH

No claim is made to the word "Cough" apart from the mark as shown.

Particular description of goods.—Liquid Preparation for Coughs, Colds, Hoarseness, Croup, Asthma, and Affections of the Bronchial Tubes and Lungs.

Claims use since Mar. 17, 1919.

Ser. No. 198,199. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WILLIAM TAGGART, Ballysillan, Belfast, Ireland. Filed June 6, 1924.

WI-TA

Particular description of goods.—Alteratives, Analgesics, Anaphrodisiacs, Anesthetics, Anodynes, Antacids, Anthelmintics, Antichlorotics, Antiemetics, Antiepileptics, Antigalactagogues, Antigonorrheics, Antihidrotics, Antilithics, Antineuralgics, Antiparasitics, Antiperiodics, Antiphlogistics, Antipyretics, Antirheumatics, Antisialagogues, Antispasmodics, Antizymotics, Aperients, Aphrodisiacs, Astringents, Cardiac Sedatives, Cardiac Stimulants, Carminatives, Cathartics, Cerebral Depressants and Stimulants, Cholagogues, Constructives, Counter-irritants, Demulcents, Deodorants, Deoxidizers, Depilatories, Depressants, Diaphoretics, Digestives, Discutients, Disinfectants, Diuretics, Ecbolics, Emetics, Emmenagogues, Errhines, Escharotics, Expectorants, Galactagogues, Gastric Tonics, Hemostatics, Hypnotics, Irritants, Laxatives, Motor Depressants, Motor Excitants, Mydriatics, Myotics, Narcotics, Nervines, Nutrients, Oxytocics, Ptyalagogues, Purgatives, Pustulants, Refrigerants (Medicinal), Resolvents, Respiratory Depressants, Respiratory Stimulants, Restoratives, Rubefacients, Sedatives, Sialagogues, Soporifics, Sternutatories, Stimulants (Cardiac, Cerebral Hepatic), Stomachics, Styptics, Sudorifics, Taniafuges, General Tonics, Vasoconstrictors, Vasodilators, Vascular Sedatives, Vermicides, Vesicants; Chemicals and Drugs—Namely, the following: Acacia, Acetanilide, Acetone, Acetphenetidine; Acids—Namely, Acetic, Acetic Anhydride, Glacial Acetic, Acetylsalicylic, Arsenous; Arsenic, Trioxide; Benzoic, Boric, Carbolic, Chromic, Citric, Gallic, Hydriodic, Hydrobromic, Hydro-

chloric, Hydrofluoric, Hypophosphorus, Lactic, Molybdic, Nitric, Nitrohydrochloric, Oleic, Oxalic, Phosphoric, Glacial Phosphoric, Phosphotungstic, Pyrogallic, Salicylic, Stearic, Sulphuric; Sulphuric, Aromatic; Sulphurous, Tannic, Tartaric, Trichloracetic, Aconite Root, Aconitine Crystals; Alcohol, Dehydrated; Alcohol, Methyl; Allspice (Pimenta) for Medicinal Purposes, Aloes, Aloin, Althea; Aluminum Compounds—Namely, the Following: Alum, Ammonium; Alum, Exsiccated; Alum, Chrome; Alum, Ferric; Aluminum Acetate, Aluminum Nitrate, Aluminum Sulphate; Ammonia and Ammonium Compounds—Namely, Ammonia Water; Ammonium Benzoate, Bromide, Carbonate, Chloride, Chromate, Citrate, Hypophosphite, Iodide, Molybdate, Nitrate, Oxalate, Persulphate, Phosphate, Salicylate, Sulphate, Sulphocyanate, Tartrate, Valerate; Amyl Acetate, Amyl Nitrate, Amylopsin, Anise; Antidote, Arsenic; Antimony and Potassium Tartrate, Antipyrine, Aqua Ammonia, Arnica Flowers and Arnica Root, Aromatized Castor Oil, Arsenic Iodide, Asbestos Wool, Aspirin, Atropin, Atropine Sulphate, Baking Powder; Balsam Peru, Balsam Tolu; Barium Compounds—Namely, Barium Acetate, Carbonate, Chloride, Dioxide, Hydroxide, Nitrate, Sulphate; Belladonna, Benzaldehyde, Benzoin, Benzol (Benzene), Benzonaphthol, Betanaphthol, Betanaphthol Benzoate; Bismuth Compounds—Namely, Bismuth Milk, Bismuth Citrate, Nitrate, Oxide, Oxychloride, Oxyiodide, Subcarbonate, Subgallate, Subnitrate, Subsalicylate, Bismuth and Ammonium Citrate, Bloodroot, Borax, Buchu, Burow's Solution, Cacao Butter for Medicinal Purposes, Cadmium Iodide, Cadmium Nitrate, Cadmium and Potassium Iodide, Cadmium Sulphate, Caffeine, Caffeine Benzoate; Caffeine, Citrated; Caffeine Hydrobromide, Caffeine and Sodium Benzoate, Caffeine and Sodium Salicylate; Calcium Compounds—Namely, Calcium Acetate, Bromide, Carbonate, Chloride, Glycerophosphate, Hypophosphite, Lactate, Lactophosphate, Oxide, Phenolsulphonate, Phosphate, Sulphide; Calendula, Calisaya Bark, Calomel, Calumba, Camphor; Camphor, Monobromated; Cantharides, Capsicum, Carbon Disulphide, Carbon Tetrachloride, Cardamom, Cardamom Compound, Cascara Sagrada, Caustic Potash, Caustic Soda, Cerium Oxalate; Chalk, Precipitated; Camomile, Charcoal; Chloral, Camphorated; Chloral, Hydrated; Chloramine T, Chlorosane, Chlorinated Eucalyptol, Chloroform, Cinchona, Cinchona Compound; Cinchona, Red; Cinchonidine, Cinchonidine Salicylate, Cinchonidine Sulphate, Cinchonine, Cinchonine Sulphate, Cinnamon, Cassia, Cloves, Cobalt Chloride, Cobalt Nitrate, Cocaine and Cocaine Salts, Cochineal, Codeine and Codeine Salts, Colchicine, Cold Cream, Collodion, Confection Senna, Copper Acetate, Copper Sulphate, Corrosive Sublimate, Creosote (Wood), Creosote Carbonate, Cresol, Cubeb, Cudbear, Diacetylmorphine, Diastase from Malt, Diastase from Pancreas, Dichloramine T, Digitalin, Digitalis, Digitoxin, Eriodictyon, Ether; Ether, Acetic; Ethyl Bromide, Ethyl Chloride, Eucalyptol, Eucalyptus, Eugenol, Fennel, Food Allergens, Foxglove, Gentian, Gentian Compound, Ginger for Medicinal Purposes, Glycerin, Glycerites, Glycyrrhiza (Licorice Root), Gold Chloride, Gold and Sodium Chloride, Guaiac Resin, Guaiacol Carbonate, Gum Arabic, Gum Benjamin, Hairone Tablets; Hellebore, American; Hemoglobin, Henbane, Hexamethylenamine, Hydrastine, Hydrastine Hydrochlorid, Hydrogen Peroxide, Hyoscyamus, Hypodermic Tablets, Iodine, Iodoform, Ipecac; Iron and Iron Compounds—Namely, Iron, Reduced; Iron Albuminate, Arsenate Cacodylate, Carbonate; Carbonate, Saccharated; Chloride, Ferric; Ferrocyanide, Glycerophosphate, Hydroxide with Magnesium Oxide, Hypophosphite, Lactophosphate; Oxide, Red, Saccharated; Peptonate, Peptonate with Manganese, Phenolsulphate, Phosphate, Pyrophosphate, Subcarbonate, Subsulphate, Sulphate, Iron and Ammonium Citrate, Iron and Ammonium Sulphate, Iron and Ammonium Tartrate, Iron and Manganese Peptonate, Iron and Potassium Tartrate, Iron and Quinine Citrate; Iron, Quinine, and Strychnine Citrate; Iron and Strychnine Citrate, Jalap; Kaolin, Medicinal; Kaolin Poultice, Krameria, Lanolin; Lard, Benzoinated; Laudanum, Lavender Compound, Lead Acetate, Lead Carbonate, Lead Nitrate, Lead Oxide, Lead Peroxide, Leucocyte, Licorice, Lime for Medicinal Purposes; Lime, Chlorinated; Lime, Hydrated; Lime, Sulphureted; Liquid Petroleum, Lithia Tablets, Lithium Benzoate, Lithium Bromide, Lithium Carbonate, Lithium Citrate, Lithium Glycerophosphate, Lithium Salicylate, Lithium Tartrate, Litmus Paper, Lobelia, Lupulin, Mace, Magma Bismuth, Magma Magnesia; Magnesium Compounds—Namely, Magnesia; Magnesium Carbonate, Chloride, Citrate, Glycerophosphate, Hypophosphite, Phosphate, Salicylate, Sulphate; Magnesium and Ammonium Phosphate; Manganese Compounds—Namely, Manganese Chloride, Citrate, Dioxide, Glycerophosphate, Hypophosphite, Oxide, Sulphate; Marigold, Matricaria, Menthol; Mercury and Mercury Compounds—Namely, Mercury; Mercury, Ammoniated; Mercury Bromide, Chloride, Iodide, Oleate, Oxide, Salicylate, Subsulphate, Sulphide, Tannate; Mercury and Ammonium Chloride, Mercury with Chalk; Methyl Acetate, Methyl Salicylate, Methylthionine, Milk of Bismuth, Milk of Magnesia, Morphine, Morphine Salts, Mustard for Medicine Purposes, Myrrh, Nickel Nitrate, Nickel Sulphate, Nickel and Ammonium Sulphate, Nutmeg for Medicinal Purposes, Nux Vomica; Oil Betula, Oil Bitter Almond; Oil, Camphorated; Oil, Castor; Oil, Castor, Aromatised; Oil, Cod Liver; Oil, Ethereal; Oil Peppermint for Medicinal Purposes, Oil Theobroma, Oleoresin Capsicum, Oleoresin Cubeb, Oleoresin Ginger, Oleoresin Male Fern, Ophthalmic Tablets, Opium, Opodeldoc, Orange Peel for Medicinal Purposes, Ox Gall, Pancreatin, Paprika for Medicinal Purposes, Paraldehyde, Paregoric, Pareira, Pepper for Medicinal Purposes, Pepsin; Pepsin, Saccharated; Peptone, Peptonizing Powder, Peptonizing Tubes; Petrolatum, Liquid; Phenazone, Phenolphthalein, Phenyl Salicylate (Salol), Phenylacetamide, Physostigmine (Eserine), Physostigmine Salicylate, Physostigmine Sulphate, Pilocarpine Hydrochloride, Pilocarpus (Jaborandi), Pimenta, Podophyllin; Potassium Compounds—Namely, Potassa, Sulphureted; Potassium Acetate, Benzoate, Bicarbonate, Binoxalate, Bisulphate, Bitartrate, Bromate, Bromide, Carbonate, Chlorate, Chloride, Chromate, Citrate, Dichromate, Ferricyanide, Ferrocyanide, Glycerophosphate, Hydroxide, Hypophosphite, Iodide, Nitrate, Oxalate, Permanganate, Persulphate, Phenolsulphate, Phosphate, Sulphate, Sulphide, Sulphocarbolate, Sulphocyanate, Tartrate; Potassium and Sodium Tartrate; Protargentum, Pyrogallol, Quinine; Quinine Salts—Namely, Quinine Bisulphate, Dihydrochloride, Glycerophosphate, Hydrobromide, Hydrochloride, Hypophosphite, Phosphate, Salicylate, Sulphate, Tannate, Valerate; Quinine and Urea Hydrochloride, Resanin, Resin Jalap, Resin Podophyllum, Resin Scammony, Resorcinol, Rhatany, Rhubarb, Saccharin, Salol; Salt, Carlsbad, Artificial; Salt, Kissingen, Artificial; Salt, Vichy, Artificial; Sanguinaria, Santonin, Scopolamine Hydrobromide, Seidlitz Powder, Senna; Silver, Colloidal; Silver Nitrate, Silver Protein; Sodium Compounds—Namely, Sodium Acetate, Acid Phosphate, Arsenate, Arsenite, Benzoate, Bicarbonate, Biphosphate Bisulphate, Bisulphite, Bitartrate, Borate, Bromide, Cacodylate, Carbonate, Chlorate, Chloride, Citrate, Cyanide, Glycerophosphate, Glycerosbolate, Hydroxide, Hypophosphite, Iodide, Nitrate, Nitrite, Nitroprusside, Oxalate, Phenolsulphonate, Phosphate, Phosphate Compound, Pyrophosphate, Salicylate, Sulphate, Sulphite, Tartrate, Thiosulphate, Sodium and Ammonium Phosphate, Solargentum, Spartein Sulphate, Squill; Strontium Compounds—Namely, Strontium Acetate, Arsenite, Bromide, Chloride, Iodide, Lactate, Nitrate, Salicylate; Strophanthin, Strychnine Salts and Compounds, Sugar of Milk, Sulphonethylmethane, Sulphonmethane, Sulphur, Suppositories, Suprarenals, Tartar Emetic, Terpin Hydrate, Theobromine, Theobromine and Sodium Salicylate, Thiosinamine, Thromboplastin, Thymol, Thymol Iodide; Thyroid Gland, Dried; Tin Chloride, Stannous; Toluol (Toluene), Tragacanth, Uranium Acetate and Nitrate, Urease, Valerian, Vanillin, Veratrum Viride, White-Pine Bark, White-Pine Compound, Wild Cherry, Yerba Santa; Zinc Compounds—Namely, Zinc Acetate, Bromide, Carbonate Chloride, Iodide, Oxide, Phenolsulphonate, Stearate, Sulphate, Sulphide, Valerate; Biological Products—Namely, the Following: Antitoxins, Serums, Bacterial Vaccines, Smallpox Virus, Antirabic Vaccine, Leucocyte Extract, Thromboplastin, Veterinary Products, Ophthalmic Mallein, Mallein Solution. The Above Mentioned Products May Be in Any One or Another of the Following Forms: Ampuls, Crude Drugs, Crystals, Elixirs, Extracts, Gases, Liquids, Lozenges, Mixtures, Ointments, Powders, Serums, Solids, Solutions, Spirits, Sirup, Tablets, Tinctures, Troches, and Vaccines.

Claims use since Feb. 3, 1923.

Ser. No. 198,427. (CLASS 39. CLOTHING.) HOYT E. SLAYTON, Manchester, N. H. Filed June 11, 1924.

BEACON

ADJUSTABLE ARCH SHOE

The words "Adjustable Arch Shoe" are disclaimed apart from the mark as shown in the drawing.

GOLD BOND

Particular description of goods.—Lubricating Oils.

Claims use since Apr. 5, 1914.

335 O. G.—37

Ser. No. 207,438. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) AMERICAN GROCER COMPANY, Little Rock, Ark. Filed Dec. 30, 1924.

The word "American" is disclaimed apart from the other features of the trade-mark shown in the drawing.

Particular description of goods.—Rice, Wheat Flour, Corn Meal, Corn Chops, Shorts, Poultry Feed, Chick Feed, and Stock Feed.

Claims use since Aug. 1, 1924.

Ser. No. 207,439. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) AMERICAN GROCER COMPANY, Little Rock, Ark. Filed Dec. 30, 1924.

The word "American" is disclaimed apart from the other features of the trade-mark shown in the drawing.

Particular description of goods.—Rice, Wheat Flour, Corn Meal, Corn Chops, Shorts, Poultry Feed, Chick Feed, and Stock Feed.

Claims use since Aug. 1, 1924.

Ser. No. 207,578. (Class 46. FOODS AND INGREDIENTS OF FOODS.) JOHN F. JELKE COMPANY, Chicago, Ill. Filed Jan. 2, 1925. Under ten-year proviso.

HOLSTEIN BRAND

The word "Brand" is disclaimed apart from the mark as shown in the drawing.

Particular description of goods.—Oleomargarine.

Claims use since May 1, 1894.

Ser. No. 207,693. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) GEORGE MADISON STUBBLEFIELD, doing business as Egroeg Chemical Co., Kirksville, Mo. Filed Jan. 5, 1925.

EGROEGS

Particular description of goods.—Vaginal Suppositories.
Claims use since Jan. 1, 1911.

Ser. No. 207,814. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) EDW. FOX BAKING CO., York, Pa. Filed Jan. 8, 1925.

No claim is made to the words "Patent Bread Edw. Fox Baking Co." or the representation of the goods apart from the mark as shown.
Particular description of goods.—Bread.
Claims use since Dec. 10, 1924.

Ser. No. 207,904. (CLASS 15. OILS AND GREASES.) THE J. R. WATKINS COMPANY, Winona, Minn. Filed Jan. 9, 1925.

J. R. Watkins

The trade-mark is a portrait of J. R. Watkins, deceased, and a facsimile of his signature.
Particular description of goods.—Sewing-Machine Oil and Motor Oil.
Claims use since Jan. 11, 1894.

Ser. No. 208,090. (CLASS 39. CLOTHING.) AMERICAN MAID UNDERGARMENT CO., New York, N. Y. Filed Jan. 14, 1925.

Particular description of goods.—Ladies' and Misses' Gowns, Bloomers, Step-Ins, Chemises, Princess Slips, and Pantalets.
Claims use since about Jan 5, 1925.

Ser. No. 208,097. (CLASS 15. OILS AND GREASES.) GENERAL PETROLEUM CORPORATION, Los Angeles, Calif. Filed Jan. 14, 1925.

GENERAL

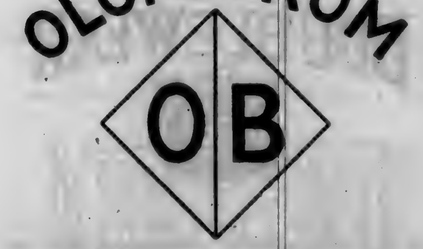
Particular description of goods.—Oils and Greases having a Mineral Base, including Burning Oils, Motor Fuels, Fuel Oils, and Lubricants.
Claims use since Dec. 6, 1923.

Ser. No. 208,216. (CLASS 39. CLOTHING.) M. ALPERIN & SONS, INC., Memphis, Tenn. Filed Jan. 17, 1925.

Applicant disclaims the exclusive use of the words "Wears Best" apart from the trade-mark shown.
Particular description of goods.—Hosiery and Underwear of Knitted and Textile Fabrics.
Claims use since Jan. 1, 1924.

Ser. No. 208,286. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) THE FAULTLESS RUBBER COMPANY, Ashland, Ohio. Filed Jan. 19, 1925.

FOUR SQUARE



Particular description of goods.—Golf Balls.
Claims use since Jan. 8, 1925.

Ser. No. 208,302. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SAMUEL LEWIS, New York, N. Y. Filed Jan. 19, 1925.

Trade-mark consists of the words "Clear-Awl."
Particular description of goods.—Cleansing Solvent for Drains.
Claims use since July 1, 1918.

Ser. No. 208,497. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) AKTIEBOLAGET SEPARATOR, Stockholm, Sweden. Filed Jan. 23, 1925.

Particular description of goods.—Enameled Hollow Ware for Cooking and Household Purposes—Namely, Basins, Bowls, Brush Holders, Covers, Chambers, Colanders, Cups, Dippers, Dishes, Ewers, Funnels, Kettles, Jugs, Ladles; Milk, Grain, and Vegetable Boilers; Trays, Dish Pans, and Spittoons, Mugs, Pans, Pitchers, Plates, Pots, Saucers, and Skimmers.
Claims use since on or about Sept. 9, 1924.

Ser. No. 208,582. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) FREIBIG, WHITON & CO. INC., Boston, Mass. Filed Jan. 24, 1925.

TRUE-TINT -TINT

Particular description of goods.—Cotton and Linen Sheetings, Drills, and Drapery Cloths of Cotton, Silk, Wool, Artificial Silk, and Combinations of the Same.
Claims use since Jan. 6, 1923.

Ser. No. 208,643. (CLASS 33. GLASSWARE.) FRANKLIN NOVELTIES, INC., Philadelphia, Pa. Filed Jan. 26, 1925.

No claim is made to the words "Franklin Novelties" apart from the mark as shown.
Particular description of goods.—Salad Sets, Cosmetic Jars, Powder-Puff Sets, Tea Tiles, Tray Sets, Lemon Sets, Lamp Shades, Lamp Shields, Butter, Sugar, and Cream Sets, made of Glass.
Claims use since June 12, 1924.

Ser. No. 208,689. (CLASS 15. OILS AND GREASES.) UNITED OIL COMPANY, Pittsburgh, Pa. Filed Jan. 26, 1925.

UNITEOLINE

Particular description of goods.—Lubricating Oils and Greases made from Crude Petroleum or from Crude-Petroleum Products and other Mineral, Vegetable, and Animal Products.
Claims use since Sept. 9, 1921.

Ser. No. 208,908. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHN MARTIN GLOVER, Augusta, Ga. Filed Jan. 31, 1925.

"Glover's."

The name appearing on the drawing is a facsimile of the signature of applicant. No claim is made to the name "Glovers" except in the manner as written.
Particular description of goods.—Medicine for Whooping Cough.
Claims use since 1895.

Ser. No. 208,978. (CLASS 39. CLOTHING.) GRIP BOW TIE COMPANY, Omaha, Nebr. Filed Feb. 2, 1925.

CROSS PUZZLE

Particular description of goods.—Neckties.
Claims use since Jan. 12, 1925.

Ser. No. 209,115. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) R. C. WILLIAMS & COMPANY, INC., New York, N. Y. Filed Feb. 4, 1925.

Robin Hood

Particular description of goods.—Canned Salmon, Tunny Fish, Sardines, Herring, Roe, and Dried Codfish.
Claims use since 1905.

Ser. No. 209,270. (CLASS 39. CLOTHING.) MAX BACON, New York, N. Y. Filed Feb. 9, 1925.

Bonnie Boy

Particular description of goods.—Boys' Blouses and Jumpers.
Claims use since Feb. 19, 1921.

Ser. No. 209,329. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) D. R. BINGHAM, Sevastopol, Wis. Filed Feb. 10, 1925.

Bingham's WONDERLAND BRAND Apples

Disclaimer is made to the words "Bingham," "Brand," and "Apples" apart from the mark, as shown in drawing.
Particular description of goods.—Fresh Apples Packed in Barrels, Boxes, or other Packages.
Claims use since Sept. 15, 1923.

Ser. No. 209,396. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FRANK A. GARDNER, doing business as F. A. Gardner & Co., Riverside, Calif. Filed Feb. 11, 1925.

MANZANITA

Particular description of goods.—Cream for Sunburn, Tan, Chapped Hands, Face, and Lips.
Claims use since July 10, 1912.

Ser. No. 209,397. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FRANK A. GARDNER, doing business as F. A. Gardner & Co., Riverside, Calif. Filed Feb. 11, 1925.

NAVAJO

Particular description of goods.—Hair Tonic, Cold Cream, and Cold Tablets.
Claims use since Sept. 10, 1912.

Ser. No. 209,512. (CLASS 39. CLOTHING.) THE VOLLMAN, LAWRENCE CO., Cincinnati, Ohio. Filed Feb. 12, 1925.

"Correct. That's All"

No claim is made to the word "Correct" apart from the mark shown in the drawing.
Particular description of goods.—Women's Leather Shoes.
Claim use since June 4, 1924.

Ser. No. 209,524. (CLASS 39. CLOTHING.) BLUM & SPIEGELMAN, New York, N. Y. Filed Feb. 13, 1925.

DOUBLEWEAR

The words "Double Wear" are disclaimed apart from the mark shown.
Particular description of goods.—Men's Suits and Overcoats.
Claims use since November, 1919.

Ser. No. 209,562. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) COMMUNIGRAPH COMPANY, INC., New York, N. Y. Filed Feb. 14, 1925.

COMMUNIGRAPH

Particular description of goods.—Electrical Typewriting Machines and Parts thereof.
Claims use since Dec. 27, 1924.

Ser. No. 209,585. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) HENRY T. NICHOLS, Spokane, Wash. Filed Feb. 14, 1925.

XL-O

Particular description of goods.—Polishes for Automobiles, Pianos, Furniture, Woodwork, and All Varnished Surfaces.
Claims use since March, 1919.

Ser. No. 209,671. (CLASS 15. OILS AND GREASES.) THE KUNS OIL CO., Minneapolis, Minn. Filed Feb. 16, 1925.

GOLD MEDAL

The words "Gold Medal" are disclaimed apart from the mark shown in the drawing. Also the words "The Best in the World" are disclaimed.
Particular description of goods.—Gasoline, Kerosene, Lubricating Oils, and Greases.
Claims use since Jan. 15, 1910.

Ser. No. 209,756. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ROBERT J. VAUGHAN, doing business as Children's Clinical Laboratory, Baker, Oreg. Filed Feb. 17, 1925.

KIDDIESKIT
FOR TEETH AND GUMS

Applicant disclaims the exclusive right to use the words "For Teeth and Gums" apart from the mark shown.
Particular description of goods.—Dental Preparations for Cleaning and Treating the Teeth and Gums.
Claims use since Jan. 1, 1925.

Ser. No. 209,837. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MOUNTAIN VIEW FRUIT ASSOCIATION, Ontario, Calif. Filed Feb. 19, 1925.

BLUE ENSIGN

Particular description of goods.—Fresh Citrous Fruits—Namely, Oranges, Lemons, Grapefruit; and Fresh Deciduous Fruits—Namely, Pears, Apricots, Fresh Grapes.
Claims use since July, 1901.

Ser. No. 209,937. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa. Filed Feb. 20, 1925.

RUSTICON
BANISHES BOILER RUST

The conventional lining in the drawing is intended to indicate the color red. No claim is made to the words "Banishes Boiler Rust" apart from the mark shown on the drawing.
Particular description of goods.—Silicate of Soda Used to Prevent Rust and Corrosion in Boilers, Radiators, and Hot-Water Systems of All Sorts.
Claims use since Oct. 11, 1924.

Ser. No. 209,985. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) GOODALL WORSTED CO., Sanford, Me. Filed Feb. 21, 1925.

NUROTEX

Particular description of goods.—Mohair Piece Goods and Piece Goods of Combinations of Cotton, Wool, Mohair, Alpaca, Camel's Hair, Silk, and Artificial Silk.
Claims use since Jan. 26, 1925.

Ser. No. 210,089. (CLASS 49. DISTILLED ALCOHOLIC LIQUORS.) EGON BRAUN, Hamburg Germany. Filed Feb. 24, 1925.

Egonbra

Particular description of goods.—Brandies, Liqueurs, Punches, Alcoholic Essences, and Extracts for Making Alcoholic Beverages.
Claims use since 1922.

Ser. No. 210,101. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) TURNER DAY & WOOLWORTH HANDLE COMPANY, Louisville, Ky. Filed Feb. 24, 1925.

The letters and words "Made in Louisville, Ky., U. S. A," "Perfection," and "Turner Day & Woolworth Handle Co." are disclaimed apart from the mark shown.
Particular description of goods.—Wooden Tool Handles.
Claims use since Jan. 1, 1910.

Ser. No. 210,104. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) TURNER DAY & WOOLWORTH HANDLE COMPANY, Louisville, Ky. Filed Feb. 24, 1925.

The words and letters "Made in Louisville, Ky., U. S. A.," "Peerless," and "Turner Day & Woolworth Handle Co." are disclaimed apart from the remainder of the mark as shown by drawing.
Particular description of goods.—Wooden Tool Handles.
Claims use since Jan. 1, 1910.

Ser. No. 210,111. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BEVIL, INC., New York, N. Y. Filed Feb. 25, 1925.

The words "Fifth Ave." and "New York" are disclaimed apart from the trade-mark shown in the drawing.
Particular description of goods.—Nail Polish.
Claims use since on or before Dec. 9, 1924.

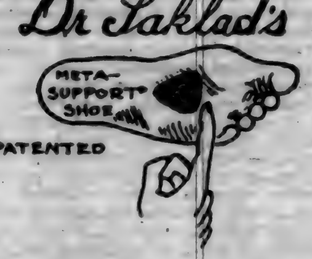
Ser. No. 210,133. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MAURICE MURPHY, doing business as Murphy Remedies Company, Pittsburgh, Pa. Filed Feb. 25, 1925.

Renatone

Particular description of goods.—Medicinal Preparation Exercising a Remedial Effect in Disorders of the Kidney and Bladder.
Claims use since Nov. 1, 1924.

Ser. No. 210,256. (CLASS 39. CLOTHING.) THE TRAVELER SHOE COMPANY, Boston, Mass. Filed Feb. 27, 1925.

TRAVELARCH
A Shoe Maker
Traveler Shoe Co.



Applicant hereby disclaims exclusive right to the use of the word "Maker," also individual name "L. Wit," and also to the use of the corporate name "Traveler Shoe Co." except in the association shown on its said mark filed herein.
Particular description of goods.—Men's, Women's, and Children's Shoes Made of Leather or Leather in Combination with Rubber, or Leather in Combination with Canvas.
Claims use since Nov. 10, 1924.

Ser. No. 210,292. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DALEY ELECTRIC CHEMICAL COMPANY, Newark, N. J. Filed Feb. 28, 1925.

DECCO

Particular description of goods.—Fluid for Storage Batteries.
Claims use since on or about May 17, 1924.

Ser. No. 210,317. (CLASS 39. CLOTHING.) WILLIAM SAKLAD, Boston, Mass. Filed Feb. 28, 1925.

Applicant disclaims exclusive right to the use of the words "Dr. Saklad's," "Patented," and "Shoe" except in the particular connection and association shown in the mark.
Particular description of goods.—Shoes Made of Leather, Rubber, or Fabric, or of Combinations of These Materials.
Claims use since Jan. 15, 1923.

Ser. No. 210,387. (CLASS 39. CLOTHING.) HARRIS & TIPOGRAPH, INC., New York, N. Y. Filed Mar. 2, 1925.

The words "Genuine Non-Soil Leather" are claimed only in connection with the other features of the mark.
Particular description of goods.—Sweatbands.
Claims use since about 1920.

Ser. No. 210,398. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NEPTUNE SEA FOOD COMPANY, San Diego, Calif. Filed Mar. 2, 1925.

GUERRIERO

TONNO

The descriptive word "Tonno" is hereby disclaimed apart from the mark as shown in the drawing.
Particular description of goods.—Canned Fish.
Claims use since December, 1924.

Ser. No. 210,450. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LEHN & FINK, INC., New York, N. Y. Filed Mar. 3, 1925.

Thespis

Particular description of goods.—Vanishing Cream.
Claims use since Sept. 20, 1921.

Ser. No. 210,461. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LEHN & FINK, INC., New York, N. Y. Filed Mar. 3, 1925.

REGULOL

Particular description of goods.—Mineral Oil for the Treatment of Chronic Constipation and Intestinal Stasis.
Claims use since December, 1915.

Ser. No. 210,466. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LEHN & FINK, INC., New York, N. Y. Filed Mar. 3, 1925. Under ten-year proviso.

Lehn & Fink

Particular description of goods.—Absorbents, Alteratives, Analgesics, Anaphrodisiacs, Anesthetics, Anodynes, Antisyphilitics, Antacids, Antiarthritics, Anthelmintics, Antichlorotics, Antiemetics, Antiepileptics, Antigalactogogues, Antigonorrheics, Antihydropics, Antilithics, Antineuralgics, Antiparasitics, Antiperiodics, Antiphlogistics, Antipyretics, Antirheumatics, Antiseptics, Antisialogogues, Antispasmodics, Antisymotics, Aperients, Aphrodisiacs, Aromatics, Aromatic Bitters, Astringents, Bitters (Simple), Calefacients, Cardiac Depressants, Cardiac Sedatives, Cardiac Stimulants, Carminatives, Cathartics, Caustics, Cerebral Depressents and Stimulants, Cholagogues, Constructives, Correctives, Counterirritants, Demulcents, Deodorants, Deoxidizers, Depilatories, Depressants, Depresso-Motors, Depurants, Detergents, Diaphoretics, Digestives, Diluents, Discutients, Disinfectants, Diuretics, Drastics, Ecbolics, Emetics, Emmenagogues, Emollients, Errhines, Escharotics, Evacuants, Excitants, Expectorants, Febrifuges, Galactagogues, Gastric Tonics, Hemostatics, Hydrogogues, Hypnotics, Irritants, Laxatives, Local Anesthetics, Motor Depressants, Motor Excitants, Mydriactics, Myotics, Narcotics, Nervines, Neurotics, Nutrients, Nutriants, Oxytocics, Peristaltics, Prophylactics, Protectives, Ptyalagogues, Purgatives, Pustulants, Refrigerants (Medicinal), Resolvents, Respiratory Depressants, Respiratory Stimulants, Restoratives, Revulsants, Rubefacients, Sedatives, Sialogogues, Soporifics, Sorbefacients, Specifics, Sternutatories, Stimulants (Cardiac, Cerebral, Hepatic), Stomachics, Styptics, Sudorifics, Tenicides, Tenifuges, General Tonics, Vasoconstrictors, Vasodilators, Vascular Sedatives, Vermicides, Vermifuges, Vesicants; Acids—Namely, Acetic,

Acetic Anhydride, Glacial Acetic, Acetyl Salicylic, Aconitic, Arsenous, Benzoic, Boric, Butyric, Cacodylic, Camphoric, Carbolic, Cresylic, Cubebic, Chromic, Chrysophanic, Cinnamic, Citric, Creosotic, Diethylbarbituric, Formic, Gallic, Glycerinophosphoric, Hydrobromic, Hydrochloric, Hydriodic, Hydrocyanic, Hydrofluoric, Hypophosphoric, Hypophosphorus, Lactic, Monochloracetic, Nitric, Nucleinic, Oleic, Oxalic, Oxybenzoic, Palmitic, Phosphoric, Phosphoric Glacial, Phenylcinchoninic, Phthalic, Picric, Pyrogallic, Pyrosulphuric, Rosolic, Salicylic, Silicic, Stearic, Succinic, Sulphuric, C. P., Sulphuric Commercial, Sulphurous, Tannic, Tartaric, Valerianic, Chemicals and Drugs—Namely, Abscess Root, Acetanilid, Acacia, Acetphenetidin, Acetyl Chloride, Acid Sodium Oleate, Acid Sodium Phosphate, Aconite Leaves, Aconite Root, Aconite Herb, Aconitine Crystals, Aconitine Nitrate, Aconitine Amorphous, Aconitine Hydrobromide, Adeps Lanæ, Adonidin, Adonis Vernalis, Adrenalin, Æsculin, Agaric White, Agaricin, Agar-agar, Agrimony, Egg Albumen, Albargin Powder, Aletris, Alkanet Root, Althea Root, Allspice, Allyl Isosulphocyanate, Almonds (Bitter and Sweet), Almond Meal, Aloin, Aloes Cape, Aloes Curacao, Aloes Socotrine, Alpha Naphthol, Aluminum Acetate, Aluminum and Potassium, Nitrate Salt, Alum, Aluminum Hydroxide, Alum Ammonia, Aluminum Chloride, Aluminum Nitrate, Aluminum Sulphate, Ambrol; Ammonia and Ammonium Compounds—Namely, Benzoate, Bromide, Carbonate, Acetate, Chloride, Citrate, Ferric Alum, Ferric Sulphate, Hypophosphite, Iodide, Muriate, Nitrate, Oxalate, Persulphate, Phosphate, Picrate, Salicylate, Sulphocyanate, Spirits, Sulphocyanide, Sulphate, Sulphide, Valerate, Ammonia Water; Ambergris Gray, Amyl Acetate, Amyl Nitrite, Amyl Valerate, Amylopsin, Amylene Hydrate, Anemonin, Anethol, Angelica Root, Angelica Seed, Angostura Bark, Anise, Star Anise; Antimony Compounds—Namely, Arsenate, Arsenite, Black, Chloride, Oxide, Sulphide Golden, Sulphurated Tartrate; Antipyrine, Apomorphine Hydrochloride, Apomorphine Hydrobromide, Apomorphine Apocynum, Apocynum Cannabinum, Apple-Tree Bark, Apiol Green, Agaric, Arbutin, Areca Nuts, Arecoline, Arecoline Hydrobromide, Arecoline Hydrochloride, Arbor Vitæ, Aristol, Arnica Flowers, Arnica Root, Argyrol, Aristochin, Arrhenal, Arsenic, Arsenic Chloride, Arsenic Sulphide, Arsenic Trioxide, Arsenic Bromide, Arsenic Iodide, Arsenous Iodide, Arsenous Chloride, Asafetida, Asparagin, Asparagus Root, Asparagus Seed, Atoxyl, Atropine, Atropine Sulphate, Atropine Valerate, Avens Root, Avenin Legumin, Avenin Alcohol, Benzyl Alcohol, Dehydrated Alcohol, Methylic Alcohol, Isobutylic Alcohol, Denatured Alcohol, Bael Fruit, Balm Gilead Buds, Balmony, Balsam Copaiba, Balsam Light, Balsam Fir, Balsam Para, Balsam Peru, Balsam Sulphur, Balsam Tolu, Balsam Cur-Jun, Bamboo Brier Root, Barberry Bark, Barbital Sodium, Barbital; Barium and Its Compounds—Namely, Chloride, Carbonate, Dioxide, Hydroxide, Crystals, Iodide, Nitrate, Peroxide, Sulphate, Sulphide, Sulphite; Bay Laurel, Bayberry Bark, Bear's-Foot Root, Belladonna Leaves, Belladonna Herb, Belladonna Root, Beeswax, Benzaldehyde, Benzoin, Benzole, Benzyl Chloride, Benzyl Benzoate, Benzyl Succinate; Berberin and Salts—Namely, Bisulphate, Hydrochloride, Phosphate, Sulphate, Acid Sulphate, Nitrate; Berberis Aquifolium, Beta Naphthol, Beta Naphthol Benzoate, Beth Root, Bismuth Beta Naphthol, Biebrick Scarlet Red, Birch Bark; Bismuth and Compounds—Namely, Citrate, Ammonium Citrate, Nitrate, Oxide, Subcarbonate, Oxiodide, Subgallate, Phosphate, Salicylate, Subsalicylate, Subcarbonate, Subnitrate, Subsulphate, Trioxide; Bitter Root, Bittersweet Bark, Bittersweet Herb, Bittersweet False, Black-Ash Bark, Blackberry Juice, Blackberry Bark of Root, Black Haw, Black Cohosh, Block Hellebore, Black Pepper, Black-Willow Bark, Black-Willow Buds, Black-Walnut Hulls, Bladder Wrack, Blessed Thistle, Bloodroot, Blue Cohosh, Blue Flag, Blue Mallow, Blue Mass, Bluestone, Boldo Leaves, Boneset, Borage Leaves, Borax, Boxwood, Brain Substance, Bone Black, Bromine, Brompipin, Bromoform, Broomcorn Seed, Broom Tops, Brucine, Bryonia, Bryonin, Buchu, Buckbean Leaves, Buckbean Root, Buckhorn Brake, Buckeye Bark, Buckthorn Bark, Buckthorn Berries, Bugleweed, Burdock Root and Seed, Butterfly Root, Buttornut Bark, Button Snakeroot, Cactin, Cactoid, Cactus Grandiflorus, Caffeine, Caffeine Hydrochloride, Caffeine Citrated, Caffeine Hydrobromide, Caffeine Muriate, Calabar Bean, Calamine, Calamus Root, Calcidin, Calcium Bromide, Calendula, Calcium Chloride; Calcium and Its Compounds—Namely, Cyanamid, Creosote, Formate, Fluoride, Glycerophosphate, Hypophosphite, Hydroxide, Iodide, Lactate, Lactophosphate, Nitrate, Peroxide, Phenosulphonate, Phosphate, Oxylate, Oxide, Permanganate, Salicylate, Sulphate, Sulphide; Calomel, Camphor, Camphor Monobromated, Canella Bark, Cannabin Tannate, Cannabis American, Cannabis Indica, Cantharidine, Cantharides, Capsicum, Capreolin, Carsca, Cocoa Beans, Caramel, Caraway Seed, Carbon Disulphite, Carbon Tetrachloride, Cardamon Seed, Caroba Leaves, Cascara Bark, Casein, Cascara Amarga, Cascara Sagrada, Cascarilla Bark, Cassia, Cassia Fistula, Cassia Ceylon, Caustic Soda (Nitrous), Catechol, Castor Beans, Castor Fiber, Castor Leaves, Castor Oil, Castor-Oil Seeds, Catechu, Catnip Herb, Cayenne, Celandine (Garden), Celery Seed, Celery Root, Celloidin, Centaury Americana, Centaury Minor, Centaury Flowers Blue, Cerium Nitrate, Cerium Oxalate, Cerrhalysin, Cetonine Muriate, Chalk, Chamomile Flowers (German, Roman, and Hungarian), Chaparro Amargoso, Charcoal (Animal, Willow, Short Purified, and Blood), Checkerberry, Chekan Leaves, Cherry Laurel Water, Chestnut Leaves, Chelonoid, Chickweed Red, Chicory Root, Chillies Zanzibar, Chinoidine, Chiretta, Chloral Hydrated, Chloroform, Chlorophyll, Chlorestrin, Chromium Sulphate, Chrysarobin, Cinchona Calisaya, Cinchona Pale, Cinchona Bark Red, Cinchona Yellow; Cinchonidine, Cinchonidine Bihydrobromide, Cinchonidine Hydrobromate, Cinchonidine Salicylate, Cinchonidine Sulphate, Cinchonine, Cinchonine Salicylate, Cinchonine Sulphate, Cinnamon Bark, Cinnamon Saigon, Cinnamic Aldehyde, Citral, Cloavers, Clover (Red and White), Cloves, Cobalt Nitrate, Cacao Butter, Cocaine, Cocaine Hydrochloride, Cocaine Sulphate, Cochineal, Cocillana, Cacao Leaves, Coculus Indicus, Codeine, Codeine Acetate, Codeine Hydrochloride, Codeine Nitrate, Codeine Phosphate, Codeine Sulphate, Codeine Salicylate, Colchicum Root, Colchicum Seed, Colchicine, Colchicine Salicylate, Cocillanna, Collodion, Colocynth Apple, Colocynth Pulp, Coltsfoot, Colombo Root, Comfrey Root, Condurango, Conline, Conline Hydrobromide, Conline Hydrochlorate, Coninum Leaves, Convallemarin, Coolwort, Copper Arsenite, Copper Acetate, Copper Nitrate, Copper Oxide Black, Copper Phosphate, Copper Sulphate, Copper Sulphocarbolate, Cotton-Root Bark, Coriander Seed, Corn Silk, Corpus Luteum, Smut, Corrosive Sublimate Coto Bark, Cottonseed Oil, Couch Grass, Cowhage, Cramp Bark, Crane's-Bill, Cream Tartar, Creosote Beechwood, Creosote Carbonate, Cresol, Cresolis Compound, Cubeb, Cube Gambier, Cudbear, Culver's Root, Cumarin, Cutch, Damiana Leaves, Dandelion, Deer-Tongue Leaf, Dewberry, Dextrine Powder, Dextrose, Diacetyl Morphine, Diastase, Diastase Malt, Digitalin, Digitalis Leaves, Digitoxin, Dittany, Diuretin, Dog-Grass, Dogwood, Duotal, Duboisine Sulphate, Dwarf-Elder Root, Etchinacea Root, Elaterin, Elaterium, Elder Bark, Elder Flowers, Elecampane Root, Elder-Flower Water, Elm Bark (Slippery), Emetine Hydrochloride, Ergot, Eserine, Eserine Salicylate, Eserine Sulphate, Ether, Ether Nitrous Concentrated, Eucalyptol, Ethyl Acetate, Ethyl Bromide, Ethyl Formate, Ethyl Iodide, Eucalyptus Leaves, Euphorbia Pilulifera, Evergreen, Euphorbia Hypericifolia, Euonymin Green, Evening Primrose, Extract of Pine Needles, Extract of Malt, Eyebright Herb, Fennel Seed, Feverfew, Fishberries, Figwort, Five-Flower Gentian, Fleabane, Flaxseed Meal, Fenugreek Seed, Formaldehyde, Formin, Fringe-Tree Bark, Frostwort, Fumitory, Fustic, Guduol, Galangal Root, Guarana, Gambier, Gamboge, Garlic, Garden Lettuce, Gelatin, Gelseminine, Gelseminine Hydrobromide, Gelsemium, Gentian, Ginger (African and Jamaica), Giant Ragweed, Ginger Wild,

Gingerine, Ginseng Root, Glauber Salt, Glucose, Glycerin, Glycyrrhizin, Glycyrrhizin Ammoniated, Goat's Rue, Gold Bromide, Gold Chloride, Gold and Sodium Chloride, Gold Iodide, Gold Tribromide, Goldenrod, Golden Seal, Green Soap, Goldthread, Gravel Plant, Grindelia Robusta, Guaiac, Guaiacol, Guaiacol Carbonate, Guarana, Guaranine; Gums—Namely, Ammoniac, Acacia, Catechu, Chicle, Damar, Euphorbium, Ghatti, Guarana, Galbanum, Kino, Mastic, Myrrh, Opium (Red), Olibanum Tears, Sagapenum, Sandarac, Senegal, Tragacanth, Turpentine; Haircap Moss, Hardhack, Hawthorn Berries, Hellebore (Black and White), Helonias, Hematoxylin, Hemlock, Hemogallol, Hemoglobin, Hemp American White, Henbane, Henna Leaves, Heroin, Heroin Hydrochloride, Histamine Hydrochloride, Horsaria Herb, Hexamethylenetetramine, Homatropine, Homatropine Hydrobromide, Holocaine, Honey, Hops, Horehound Herb, Horse-Chestnut Bark, Horsemint, Horse-Nettle Berries, Horse-Radish Leaves, Horse-Radish Root, Hound's-Tongue, Huckleberry Leaves, Hydrangea, Hydrastine Alkaloid, Hydrastine Hydrochloride, Hydrastine Sulphate, Hydrastin, Hydroquinine, Hydroquinine Hydrochloride, Hydrogen Peroxide, Hyoscine, Hyoscine Hydrobromate, Hyoscine Hydrochloride, Hyoscine Sulphate, Hyoscyamine, Hyoscyamine Hydrobromide, Hyoscyamine Sulphate, Hypophysics, Hyssop, Ichthalbin, Ignatia Bean, Black Hemp, White Hemp, Canadian Hemp, Indian Turnip, Iodine, Iodoform, Insect Flowers, Iodole, Iodalbin, Ionone, Ipecac; Iron and Its Compounds—Namely, Acetate, Albuminate, Ammonia, Arsenate, Arsenite, Arsenite with Ammonium Citrate, Bromide, Dihydrogen, Cacodylate, (Ammonia Citrate), Carbonate Precipitated, Carbonate Mass, Carbonate Saccharated, Chloride, Chloride Solution, Citrate Solution, Citrate scales, Citrate Insoluble, Citrate and Ammonia, Citrate and Manganese, Citrate and Quinine Soluble, Citrate and Quinine Insoluble, Citrate and Strychnine, Citrate-Quinine and Strychnine, Citrate Insoluble Powder Dialyzed, Ferrocyanide, Formate, Glycerophosphate, Hydrocyanate, Hydroxide, Hypophosphate, Hypophosphite, Hyposulphite, Iodide, Lactate, Nitrate Solution, Oxalate, Oxide Powdered, Oxide Saccharated, Oxide Anhydrous, Oxide Hydrate, Oxide Metallic, Peptonized, Peptonate, Phosphate Soluble, Phosphate Precipitated, Protochloride, Protobromide, Pyrophosphate Soluble, Protocarbonate, Pyrophosphate Solution Reduced, Subcarbonate, Subsulphate Solution, Subsulphate, Succinate, Sulphate Ferric, Sulphate Crystals, Sulphate Dried Powdered, Sulphide, Sulphuret, Tartrate and Potassium, Terpinhate, Valerate Ferric, Ironwood, Iron Ivy American, Irish Moss, Jaborandi Leaves, Jalapin, Jalap, Jambul Seed, Jequirity Seed, Jersey Tea, Johnswort Herb, Judas-Tree Bark, Juniper Berries, Kamala, Kaolin, Kava Kava, Kino, Kieselguhr, Kola Nuts, Kousso Flowers, Lactucarium, Lady's-Slipper, Lard Benzoinated, Laurel Leaves, Larkspur Seed, Lavender Flowers, Lead Acetate, Lead Carbonate, Lead Oxide, Lead Metallic, Lead Nitrate, Lead Oxide Red, Lead Oxide Yellow, Lead Peroxide, Lecithin, Lemon Balm, Lemon Peel, Lettuce Leaves, Lettuce Wild, Liverwort Herb, Licorice Root, Licorice-Root Compound Powder, Life Everlasting, Life Plant, Lily Root, Lily of the Valley, Lime Juice, Linden Flowers, Lippa Mexicana, Litharge, Lithia Benzoate, Lithia Benzosalicylate, Lithia Bitartrate, Lithia Bromide, Lithia Carbonate, Lithia Citrate, Lithia Iodide, Lithia Salicylate, Lithia Tartrate, Liverwort, Lobeline Sulphate, Liquor Cresolis Compound, Lobelia Herb, Lobelia Seed, Logwood, Lovage Leaves, Lovage Root, Lungwort, Lupulin, Lycopodium, Red-Rose Leaves, Magnesia Bromide, Magnesia, Magnesia (Calcined), Magnesia (Heavy and Light), Magnesia Citrate, Magnesia Carbonate (Heavy and Light), Magnesia Chloride, Magnesia Formate, Magnesia Glycerophosphate, Magnesia Hypophosphite, Magnesia Iodide, Magnesia Lactate, Magnesia Oxide, Magnesia Nitrate, Magnesia Peroxide, Magnesia Phosphate, Magnesia Phosphate and Ammonia, Magnesia Salicylate, Magnesia Silicate, Magnesia Sulphate, Magnesia Sulphite, Malt, Maidenhair, Magnolia Bark, Malefern Oleoresin, Malva Flowers Blue, Manaca Root, Mammary-Gland Substance, Mammary Gland Desiccated, Mangrove Bark, Mandrake, Mannite; Manganese and Its Compounds—Namely, Citrate Soluble, Carbonate, Citrate, Chloride, Dioxide, Glycerophosphate, Hypophosphite, Iodide, Lactate, Oxide Black, Oxide Heavy, Nitrate, Peptonized, Peptonate, Phosphate, Sulphate, Salicylate; Manna, Manzanita Leaves, Marigold, Marjoram Sweet, Marshmallow (Leaves and Flowers), Marshmallow-Root, Marsh Rosemary, Matico, Mayapple, Menthol; Mercury and Its Compounds—Namely, Ammoniated Benzoate, Bromide, Bisulphate Cyanide with Chalk, Iodide Green, Iodide Red, Iodide Yellow, Nitrate, Oxide Red, Oxide Yellow, Oxide White, Oleate, Oxycyanide, Salicylate, Succinimide, Sozoiodole, Tannate; Mercurous Iodide Yellow, Meta Cresol, Methylene Blue, Methyl Iodide, Methyl Salicylate, Mezereon Bark, Mezereum Bark, Milkweed, Mountain Mint, Mistletoe, Membasa Chillies; Morphine and Its Compounds—Namely, Acetate, Bimeconate, Bromide, Citrate, Diacetyl, Diacetyl Hydrochloride, Diacetyl Hydrobromide, Hydrochloride, Bimeconate, Phosphate, Phthalate, Hydrobromide, Tannate, Sulphate; Valerianate, Tartrate; Motherwort Leaves, Motherwort Herb, Mountain Laurel, Mullein Flowers, Mullein Leaves, Mugwort, Muirapuama, Musk Root, Musk Tonquin, Musk Artificial, Mustard Seed, Myrrh, Moss (Haircap, Iceland, Irish), Mercurial Ointment, Naphthalene, Naphthol Alpha, Naphthol Beta, Naphthol Beta and Bismuth, Naphthol Beta Benzoate, Naphthol Hydrochloride, Narceine, Narcotin, Nettle, Nickel Bromide, Night-Blooming Cereus, Nitroglycerin, Novocain, Novocain Hydrochloride, Nutgalls, Nutmeg, Nux Vomica, Oak Leaves (Jerusalem and Poison), Oak Bark (Red and White), Oats, Oil Apricot Kernels, Oil Almonds Bitter, Oil Almonds True, Oil Almonds Sweet, Oil Amber, Oil Animal, Oil Anise, Oil Staranise, Oil Bay, Oil Balm, Oil Bergamot, Oil Betula, Oil Birch, Oil Cade, Oil Camphor, Oil Cajuput, Oil Calamus, Oil Cardamom, Oil Caraway, Oil Canada Snakeroot, Oil Cassia, Oil Castor, Oil Cedarwood, Oil Celery Seed, Oil Camomile, Oil Chaulmoogra, Oil Cinnamon Ceylon, Oil Cloves, Oil Cod Liver, Oil Chloroform, Oil Copaiba, Oil Coconut, Oil Coriander, Oil Cottonseed, Oil Croton, Oil Cubebs, Oil Cumin, Oil Erigeron, Oil Ethereal, Oil Eucalyptus, Oil Fennel, Oil Geranium, Oil Hazelen, Oil Hemlock, Oil Horsemint, Oil Hyssop, Oil Juniper Berries, Oil Laurel, Oil Lard, Oil Lavender, Oil Linseed, Oil Lemon, Oil Lobelia, Oil Lemon Terpeneless, Oil Mineral, Oil Mustard, Oil Mirbane, Oil Marjoram, Oil Myristica, Oil Neroli, Oil Nutmegs, Oil Olive, Oil Origanum, Oil Attar of Rose, Oil Orange Bitter, Oil Orange Sweet, Oil Orris Root, Oil Parsley Seed, Oil Peanut, Oil Pennyroyal, Oil Pepper Black, Oil Peppermint, Oil Pimento, Oil Pinus Pumilionis, Oil Pine Needles, Oil Rosemary, Oil Sandalwood, Oil Sassafras, Oil Savin, Oil Saw Palmetto, Oil Spearmint, Oil Sesame, Oil Spice, Oil Thuja, Oil Tansy, Oil Tar, Oil Thyme, Oil Turpentine, Oil Verbena, Oil Wine, Oil Wintergreen, Oil Wormwood, Oil Wormseed, Orange-Flower Water, Orange Peel Bitter, Orange Sweet, Orchic Gland Desiccated, Orchic Extract, Orris Root, Orthoform Powder, Opium, Osier Bark (Green), Ovarian Substance Desiccated, Oxgall Powdered Extract, Oxgall Purified Powder, Ovarian Glands Desiccated; Oleoresins, as Follows: Black Pepper, Buchu, Capsicum, Cubeb, Ginger, Lupulin, Malefern, Matico, Parsley Seed, Kava Kava, Saw Palmetto, Panerestin, Pancreas Substance Desiccated, Pancreatin Saccharated, Papain, Paraformaldehyde, Paraldehyde, Pareira Brava, Parilla Yellow, Parsley Root, Parsley Seed, Passion Flower, Pawpaw, Pelletierine, Pellitory Root, Pencil Root, Pennyroyal Leaves, Pepper Black, Pepper White, Peppermint Herb, Pepsin Powder 1:3000, Pepsin Granular 1:3000, Pepsin Glycerole, Pepsin Lacticated, Persimmon, Petrolatum, Petroleum (Amber, Crude, Liquid, White), Phenacetine, Phenolphthalein, Phosphorus Trichloride, Phosphorus Oxychloride, Phosphorus Pentachloride, Phosphorus Spirit N., F., Phosphorus Amorphous, Pichi, Picrotoxin, Pilocarpine, Pilocarpine Hydrochloride, Pilocarpine Nitrate, Pimpinella, Pimento Powdered, Pineal Substance Desiccated, Pinkroot, Pinus Candadensis, Pitcher Plant, Pituitary Substance, Pituitary Gland, Piperazine, Pituitary Anterior Substance, Piperine, Pipsissewa, Plantain,
